Under its new department of sanitation New York City was carrying forward with increased expedition a programme of garbage and refuse disposal by incineration of the mixed refuse that would completely supplant what remains of dumping the material at sea. Across the continent San Francisco was still working on its disposal problem, which was complicated by the long-standing practice of collection and disposal by private scavengers, under a system of charges to householders established by ordinance. The scavengers operated an old incinerator owned by the city, the closing of which by injunction under a nuisance lawsuit had been hanging over the city for months. The latest plans were to have a new incinerator built and operated by private expense, eventually to become the property of the city. Data on garbage collection and disposal for many cities of over 4500 population, gathered late in 1929 and published in *The Municipal Index*, 1930, show that of the three leading methods of garbage disposal in vogue feeding to hogs was far in the lead while incineration and disposal on land were nearly tied. A dozen cities reported disposal by reduction, or by converting the garbage into grease and fertilizer base. Of 667 cities reporting, 110 had no organized system of collection. Detailed figures for the 557 cities, including population, area, methods of collection and disposal and other items are tabulated in the *Index* but no summaries were given.

A canvas of both garbage and refuse disposal practice in some 1200 places of less than 4000, briefly summarized in *Public Works* for December, 1930, indicated that about half of the places in this class leave householders to get rid of the wastes indicated as they see fit. Disposal by "dumping," with no definition of the word, was reported by 363 places, while 7 dump in pits, 10 into rivers, 10 use the material for filling and 18 bury it. Feeding to hogs comes next, with 48 places reporting that method and 20 others apparently making use of it. Incinerators were reported by 26 places, and 64 report burning in the open, evidently on land dumps. It was probable that only a small part of the population was

served in many of the communities whose methods went into the summary. Centralized disposal of the refuse of the cities of London and Westminster, England, and of the 27 boroughs comprising the county of London, instead of having the work done separately, as now, was advised in a report made by the Ministry of Health Committee on London Cleansing, abstracted in the *London Surveyor* of July 11, 1930. Each city would collect its own mixed refuse (garbage, miscellaneous wastes and ashes) but final disposal, including haulage from the several municipalities to the point or points of disposal, would be done by the county.

GAS, ILLUMINATING AND FUEL. According to the annual statistics of the manufactured gas industry in the United States, compiled by the American Gas Association, the total production of gas in the United States for 1929 was 352,059,700 thousand cubic feet, of which Water Gas totaled 223,910,500 M.C.F.; Retort Coal Gas, 45,516,000 M.C.F.; Oil Gas, 33,819,200 M.C.F.;

per cent. In this connection it is interesting to indicate the distribution of consumers to whom the gas was distributed. This is indicated in the accompanying table.

According to a preliminary tabulation of data collected in the U. S. Census of Manufactures taken in 1930, the total value of products made in 1929 by establishments in the United States engaged primarily in the manufacture of gas for heating and illuminating purposes amounted to \$507,318,729, a decrease of 1.8 per cent as compared with \$516,705,170 reported for 1927, the last preceding census year. The 1929 production for sale was made up as follows: 405,240,540 M cubic feet of gas, valued at \$433,691,561; 3,430,782 short tons of coke, \$20,815,108; 162,445,627 gallons of tar, \$8,105,682; 36,181,246 pounds of ammonia (NH₃ content), \$2,169,285; all other by-products (including screenings and breeze, crude light oil and derivatives, drip and holder oil, and naphthalene), \$3,281,865; receipts for service charges and rents and sales of lamps and appliances, \$32,201,243; miscellaneous receipts, \$1,053,985.

U.S. CENSUS SUMMARY FOR THE MANUFACTURED GAS INDUSTRY: 1929 AND 1927

| | 1929 | 1927 | Per cent of increase or decrease (—) |
|---|---------------|---------------|--------------------------------------|
| Number of establishments | 715 | 828 | — 13.6 |
| Wage earners (average for the year) * | 42,853 | 48,497 | — 11.6 |
| Wages ^b | \$ 59,723,708 | \$ 68,356,448 | — 12.6 |
| Cost of materials, fuel, and purchased electric current ^b .. | 185,984,354 | 211,785,523 | — 12.2 |
| Products, total value ^b | 507,318,729 | 516,705,170 | — 1.8 |
| Gas sold, value | 433,691,561 | 446,244,677 | — 2.8 |
| By-products, value | 40,371,940 | 38,854,865 | 3.9 |
| Miscellaneous products and receipts | 33,255,228 | 31,605,628 | 5.2 |
| Value added by manufacture ^c | 321,334,375 | 304,919,647 | 5.4 |

* Not including salaried employees. The average number of wage earners is based on the numbers reported for the several months of the year. This average somewhat exceeds the number that would have been required for the work performed if all had been continuously employed throughout the year, because of the fact that manufacturers report the numbers employed on or about the 15th day of each month, as shown by the pay rolls, usually taking no account of the possibility that some or all of the wage earners may have been on part time or for some other reason may not actually have worked the entire month. Thus in some cases the number reported for a given month exceeds the average for that month.

^b Manufacturers' profits cannot be calculated from the census figures because no data are collected for certain expense items, such as interest on investment, rent, depreciation, taxes, insurance, and advertising.

^c Value of products less cost of materials, fuel, and purchased electric current.

and Coke Oven Gas, 48,814,000 M.C.F. As the total figures for 1928 aggregated 362,889,300 M.C.F., there was a decrease of 3 per cent, this being particularly evident in the case of water gas, where there was a decline of 159,958,700 M.C.F. In addition to the gas produced by gas companies in the United States, there was purchased, for distribution to consumers, a total of 226,244,700 M.C.F., of which 118,159,400 M.C.F. was coke oven gas, and 108,085,300 M.C.F. was natural gas. In other words, the manufactured gas industry distributed to consumers in 1929 a total of 578,304,400 M.C.F., as against 537,193,300 M.C.F. in 1928, or an increase of 7.7

MANUFACTURED GAS INDUSTRY IN THE UNITED STATES—SALE OF GAS TO CONSUMERS [American Gas Association]

| Gas sales (M. C. F.) | 1929 | 1928 |
|--|-------------|-------------|
| Domestic | 335,800,000 | 325,700,000 |
| House heating | 23,100,000 | 17,800,000 |
| Industrial and commercial | 163,100,000 | 147,600,000 |
| Miscellaneous | 2,100,000 | 3,900,000 |
| Total sales | 524,100,000 | 495,000,000 |
| Total consumers | 12,139,000 | 11,848,000 |
| Gas sales per consumer (M. C. F.) | 43.17 | 41.77 |
| Gross revenue from sales of gas to consumers ... | 528,900,000 | 511,400,000 |
| Average price of gas per M. C. F. | 1.00 | 1.03 |

For the year 1930 the Statistical Department of the American Gas Association reported a slight decrease in gas utility sales as indicated by the comparative operating reports of manufactured and natural gas utilities. Reports from companies representing over 90 per cent of the manufactured gas industry indicated sales of 353,832,087 thousand cubic feet during 1930, as compared with 354,268,765 thousand cubic feet during the year previous, a decline of one tenth of 1 per cent. The revenues of these companies totaled \$376,885,239 for the year, as compared with \$376,682,611 during 1929. The declining trend in water gas production continued during 1930, production averaging nearly 5 per cent under the previous year. The quantities of coke oven gas produced and purchased, however, increased 4.4 per cent.

During the year most of the gas companies in the United States maintained their schedules of construction, and, as far as possible, sought to anticipate them. The result was that public utilities and the gas industry particularly were able to employ, even in a time of depression, more people than was the case in the previous year. At the same time the territory served by the gas industry was extended materially, and the useful purposes for which gas might be adapted for fuel increased considerably. This was due in

a measure to the increased activity in research at the Cleveland Laboratory of the American Gas Association and the valuable cooperation of various technical schools.

GAS, NATURAL. The natural-gas industry of the United States in 1929 more than maintained the steady growth which had characterized it for a number of years. During that year, according to G. R. Hopkins, economic analyst of the U. S. Bureau of Mines, a total of 1,917,693,000,000 cubic feet of gas was produced and marketed. This represents a gain of 22 per cent over the 1928 production as compared with an increase of 8 per cent for 1928 over 1927, and with an average annual increase of 10 per cent for the previous 10 years. This unusual growth resulted primarily from the completion of a number of new distributing systems entering several States and reaching many towns and cities not previously served with gas. From the standpoint of domestic consumers, or meters in domestic service, there was an increase of 772,000, or 18 per cent in 1929. Deliveries of natural gas to Canada and Mexico increased from 160,000,000 cubic feet to 242,000,000 cubic feet, which, when deducted from the total 1929 production, gave 1,917,451,000,000 cubic feet as the total consumption for the year. This consumption was divided between 359,853,000,000 cubic feet, or 19 per cent, for domestic purposes, and 1,557,598,000,000 cubic feet, or 81 per cent for all industrial purposes. The industrial consumption included the following items; 705,083,000,000 cubic feet, or 45 per cent, used for field purposes, that is, as a fuel for boilers and engines in oil and gas field operations, and for operating natural gasoline plants; 261,107,000,000 cubic feet, or 17 per cent, burned in the manufacture of carbon black; 112,707,000,000 cubic feet, or 7 per cent, burned as fuel by public-utility power plants; 103,729,000,000 cubic feet, or 7 per cent, burned as fuel at petroleum refineries and 374,972,000,000 cubic feet, or 24 per cent, used for general industrial purposes.

Texas, by virtue of a 54 per cent gain in output, became, for the first time, the leading natural-gas producing State with 464,928,000,000 cubic feet. This resulted primarily from a material increase in production in the Panhandle area. Oklahoma with 357,893,000,000 cubic feet, was second, with California, with 342,214,000,000 cubic feet third. Louisiana, 261,138,000,000 cubic feet, and West Virginia, 167,333,000,000, which rank fourth and fifth respectively, reported increases in output in 1929.

There were 5,116,000 domestic consumers on December 31, 1929, as compared with 4,344,000 at the beginning of the year. California showed a 61 per cent gain in number of consumers and displaced Ohio as the first-ranking State in this respect. A large part of the gain in consumers in California was due to the completion of the San Francisco line the latter part of the year. Nearly all of the States showed an increase in number of consumers over 1928 and no State reported a decrease. California and Ohio ranked well ahead of the other States in number of consumers and their totals, 1,239,000 and 1,214,000 respectively, are nearly double that of Pennsylvania, the third-ranking State. The total consumption of natural gas for domestic purposes in 1929 amounted to 359,853,000,000 cubic feet as compared with 320,877,000,000 cubic feet in 1928, an increase of 12 per cent. The average consumption per domestic consumer, which has been de-

clining steadily in recent years, fell off materially in 1929 when it amounted to only 70,300 cubic feet as compared with 73,900 cubic feet in 1928.

The gas burned for domestic consumption in the United States in 1929 was valued at a total of \$223,172,000 or an average of 62.0 cents per thousand cubic feet, the same as the average reported for 1928. This was the first time since 1908 that the average annual price had not increased over the preceding year. In only one State, Michigan, was the average value above \$1 per thousand cubic feet in 1929. Domestic consumers in West Virginia paid the lowest price for gas—34.6 cents per thousand cubic feet.

The consumption of natural gas for field purposes easily retained first rank among the various classes of consumption. During 1929 a total of 705,083,000,000 cubic feet was utilized in the operation of natural gasoline plants and burned under boilers or used as fuel for gas engines incident to the drilling and pumping of wells. The increase in field consumption in 1929 checked quite closely with the increase in number of wells completed and with gains made in natural-gasoline production. Oklahoma and California were the leading users of gas for field purposes in 1929. Texas, the leading State from the standpoint of completions in 1929, was third, an explanation of which might be a more widespread use of oil for fuel in that State.

The use of natural gas in the manufacture of carbon black ranked next to field use in importance in industrial use. This accounted for a consumption of 261,107,000,000 cubic feet in 1929, an increase over 1928 of 49 per cent. Texas became the leading carbon-black producing State in 1929.

A further decline in the use of natural gas as refinery fuel was noted in 1929 when the total consumed was 103,729,000,000 cubic feet as compared with 114,950,000,000 cubic feet in 1928. Although in some cases the price situation may have been a factor, the chief reason underlying the decreased use of natural gas by refineries was an increase in the supply of other fuels, notably, fuel oil and refinery gas. Fuel oil was very low in price in 1929 and some of it, particularly residual fuel oil from cracking stills, could not be disposed of except as fuel under boilers and stills. Furthermore, increased cracking and more efficient refining methods led to a material gain in the recovery of still gas and to a similar increase in its use as refinery fuel.

The United States Geological Survey reported the consumption of natural gas as a fuel in the generation of electric power by public-utility plants in 1929 as 112,707,000,000 cubic feet, an increase over 1928 of 35,381,000,000 cubic feet, or 46 per cent. Texas continued to rank first from the standpoint of natural gas used in the generation of electricity.

The average price paid for natural gas at the wells in 1929 was 8.2 cents per thousand cubic feet as compared with 8.9 cents in 1928. This decline reflected the material increase that occurred in the use of low-priced gas in carbon black manufactured in the Texas Panhandle. At points of consumption, the average price of natural gas in 1929 was 21.6 cents per thousand cubic feet as compared with 23.2 cents in 1928 and 22.0 cents in 1927. This decrease, after 2 years of successive increases, reflected the decline in value in Texas.

Interstate transportation of natural gas grew rapidly in importance in 1929 following the com-

pletion of several large lines traversing a number of States. The total transported between States in 1929, that is, from the State of origin to the State of final distribution, amounted to 325,021,000,000 cubic feet. This is equivalent to 17 per cent of the total production and represents an increase over 1928 of 35 per cent. The movement of gas from West Virginia to consuming centres in Ohio continued to be the largest single item, although other interstate movements, for example, those from Texas to Oklahoma and from Louisiana to Texas, showed larger increases in 1929.

In 1930 natural gas companies representing more than 85 per cent of the public utility distribution of natural gas reported sales for the year in excess of 572 billion cubic feet, a decrease of 1.4 per cent from the year 1929, according to the American Gas Association. The revenues of these companies aggregated \$258,209,100 during 1930, compared with \$264,296,075 during the preceding year. For comparison with other fuels, the production of bituminous coal during 1930 declined by nearly 14 per cent from the preceding year, anthracite coal production dropped more than 5 per cent, crude petroleum output was down 11 per cent, coke production down nearly 15 per cent, while the production of electric power declined by 1.8 per cent. In response to the generally depressed condition of trade and business, natural gas sales for industrial purposes declined by nearly 8 per cent, but the major portion of this loss was offset by the industry's programme of expansion into new territory.

While final figures covering the entire production and consumption of natural gas during 1930 had not become available, preliminary estimates indicated that production aggregated more than 1940 billion cubic feet, an increase of 1.1 per cent over the year 1929. A significant feature of natural gas utilization was indicated by the fact that while the total production of electric power during 1930 declined by 1.8 per cent from the previous year, the use of natural gas for the generation of electric current revealed a marked increase. Consumption of all other fuels by the electric industry decreased considerably during the year, and the production of hydroelectric energy dropped 5.3 per cent, but the use of natural gas by electric utilities during 1930 increased 6.7 per cent over the previous year.

GEOGRAPHICAL SOCIETY, AMERICAN. The oldest geographical society in the United States, founded in 1852, "to collect and disseminate geographical information by discussion, lectures, and publications; to establish in the chief city of the United States a place where may be obtained accurate information concerning every part of the globe; and to encourage such exploring expeditions as seem likely to result in valuable discoveries in geography and related sciences." Within recent years the society has taken an active part in the encouragement of exploration, the scientific work of Sir Hubert Wilkins in the Arctic and Antarctic and of Rear Admiral Richard E. Byrd in the Antarctic having been carried out under its auspices.

The society's periodical is the *Geographical Review*, a quarterly, in which appear original articles and notes dealing with exploration and geographical research and reviews of the more significant geographical books. The maps, books, and pamphlets issued by the society fall into six series: *Research Series*, comprising specialized monographs; *Special Publications*, having a more general appeal; *Library Series*, devoted primarily to the collections of the society; *Outing Series*, including trampers' guides entitled *The Palisades Interstate Park* and *New York Walk Book*; a map of Hispanic America published in conformity with the International Millionth Map of the World and accompanied by geographical monographs (this map will consist of 100 sheets, of which more than 30 have been completed); and *Oriental Explorations and Studies*, comprising six volumes on the explorations of Prof. Alois Musil in northern Arabia.

The society maintains a geographical library and sponsors six regular lectures annually by distinguished explorers or geographers. Contributions to the development of geographical science and exploration are recognized in the society's election to honorary and corresponding memberships and in the bestowal of medals. The David Livingstone Centenary Medal for scientific achievement in the field of geography of the southern hemisphere was awarded during 1930 to José M. Sobral, director-general of the Dirección de Minas, Geología, e Hidrología, Ministerio de Agricultura, Buenos Aires, Argentina, whose bureau has for many years been conducting geographical and geological studies; and to Laurence M. Gould of the University of Michigan, for his explorations in the Antarctic as geologist and geographer of the Byrd Expedition, 1928-30.

The Charles P. Daly Medal was awarded in 1929 and 1930 to Filippo de Filippi, secretary-general of the International Geographical Union, in recognition of his explorations in central Asia; to Émile Félix Gautier of the University of Algiers, for geographical investigations in northern Africa and the Sahara; to Joseph Burr Tyrrell, president of the Canadian Geographical Society, for scientific explorations in Canada; to Nelson Horatio Darton of the U. S. Geological Survey, for studies in the physical geography of the western United States; and to Laue Koch of Copenhagen, Denmark, for explorations in northern and eastern Greenland. Awards of the Cullum Geographical Medal for 1929 and 1930 were as follows: To Hugh Robert Mill, the British meteorologist, for researches in geophysics; to Jean Brunhes, late professor of geography at the Collège de France, whose *La géographie humaine* is one of the outstanding geographical books of our time; to Alfred Hettner, professor of geography at the University of Heidelberg, for work in regional geography; to Jules de Schokalsky, professor of oceanography at the Leningrad State University, for research in oceanography, hydrography, and cartography; and to Curtis Fletcher Marbut, chief of the division of soil surveys of the U. S. Department of Agriculture, for geographical studies of soils. The president of the society was John H. Finley, LL.D., and director, Isaiah Bowman, Ph.D. Headquarters are at Broadway and 156th Street, New York City.

GEOGRAPHIC SOCIETY, NATIONAL. An organization for "the increase and diffusion of geographical knowledge," founded in Washington, D. C., in 1888. During 1930 it had a number of

expeditions in the field. One of these was led by Dr. Robert F. Griggs, who visited Kodiak Island in the Alaska Peninsula to study the processes of revegetation that have taken place since the great eruption of Mt. Katmai in 1912. When Dr. Frederick V. Coville, chairman of the research committee of the society, recommended the sending out of the several expeditions under the leadership of Dr. Griggs, which resulted in the first study of the crater of Mt. Katmai, the discovery of the Valley of Ten Thousand Smokes, and the establishment of the Mt. Katmai National Monument, he wrote: "A study of the means by which vegetation establishes itself under the adverse conditions presented by such a raw mineral soil (a blanket of pumice exclusively of mineral origin and differing fundamentally from older soils in having no humus) will throw much light on the history of the earth and its preparation by plants for the habitation of animals and man." Dr. Griggs' findings on his 1930 expedition fulfilled the prediction of Doctor Coville that here would be found an area undoubtedly representative of vast areas that have existed in past ages of the geological history of the earth, where one could determine what species of plants are the effective pioneers in the process of revegetation and how they accomplish it. Doctor Griggs brought back to Washington some cultures of liverworts so as to study what this plant actually does to the ash and how it gets its nitrogen compounds.

The society placed in the field a Brazilian-Venezuelan expedition, under the leadership of Dr. Ernest G. Holt, to make a study of geographic conditions in the little-known area lying athwart the Brazil-Venezuela boundary and to collect specimens of rare fauna and flora. This expedition was to work in conjunction with the joint official engineering party of the Brazilian and Venezuelan governments, engaged in the demarcation of the international boundary. Doctor Holt previously led an expedition to Venezuela for the study of migratory birds which spend their summers in the United States and their winters in Venezuela. The fauna and flora collected for the society on this expedition, as on the former one, will be presented to the Smithsonian Institution.

Returning to Washington in the spring of 1930, Dr. Joseph F. Rock brought to a successful conclusion the work of the society's 1927-30 Asiatic expedition. Doctor Rock brought back a notable collection of plant and animal specimens and native wares. He explored a large area in the territories of and surrounding the semi-independent Lama kingdom of Muli, in the Chinese province of Szechwan, including the great Konkaling snow peaks and Mt. Minya Konka, which had heretofore constituted a puzzling geographic riddle. The expedition followed the gorges of the Yatung River and found them at one place more than two miles deep.

To make an aerial survey of the east coast air routes to South America an expedition, whose personnel included Frederick Simpich, Jacob Gayer, and Capt. Albert Stevens, flew from Washington to Santiago, Chile, via Buenos Aires, making many stops en route. The expedition studied and photographed the deltas of the Orinoco and the Amazon. It secured a remarkable motion picture of a waterspout in action taken from all sides, and made pictures also of Mt. Pelee's crater from the air.

Dr. Maynard O. Williams, Melville Chater, Hans Hildenbrand, Wilhelm Tobien, Gustav Heur-

lin, Bernard Wakeman, and Arthur Pillsbury were in the field in Europe, Africa, Asia, and the South Sea Islands, making ethnographic surveys with color cameras and getting accurate studies of life and conditions in the areas covered, in the closing year of the second decade of the twentieth century.

Participation in a trans-Asiatic expedition across Asia, to be led by Georges-Marie Haardt, was announced by the president of the society. The French Government was to sponsor the expedition, and its French patron was André Citroën. It was to make its way in the spring of 1931 with eight caterpillar cars across Asia from the Mediterranean coast of Syria to Peiping (Peking), China, keeping to the north of the Himalayas. Returning it was to pass through Indo-China, Siam, Burma, India, Baluchistan, Persia, and Arabia. A scientific staff, covering a dozen fields of research, was to accompany the expedition. Dr. Maynard O. Williams was to represent the National Geographic Society on this expedition.

The special gold medal of honor of the society was awarded to Rear Admiral Richard E. Byrd for the first flight to the South Pole and for his discoveries in the Antarctic continent. President Hoover made the presentation on June 20, 1930. The society had awarded Byrd a grant of \$25,000 when he faced a crisis in his preparations and another like grant on the eve of his departure from Little America bound for the Pole. Another grant was added after his return to the United States.

The work of the society in 1930, in the realization of its chartered object of diffusing geographic knowledge, continued along the lines of previous years. Bulletins giving the geographic background of current events were issued to more than 550 larger daily newspapers and also to 1200 smaller dailies and weeklies. More than 40,000 school teachers used the weekly bulletins issued as an aid in the preparation of their geographical courses. During the year work was continued on a series of maps of various parts of the world. Those published during 1930 included Florida and Louisiana. Maps of the Antarctic regions, giving the results of all the recent expeditions there, and a map of the State of Illinois were in preparation. The chief activity of the society during the year continued to be the publication of the *National Geographic Magazine*, which is distributed to the 1,275,000 members of the society.

The officers of the society for the year 1930 were: President and editor, Gilbert Grosvenor; vice-president and associate editor, John Oliver La Gorce; secretary, O. P. Austin; associate secretary, George W. Hutchison; treasurer, John Joy Edson; assistant treasurer, Herbert A. Poole; chairman, committee on research, Frederick V. Coville; assistant editors, J. R. Hildebrand, Ralph A. Graves, and Frederick Simpich; chief, illustrations division, Franklin L. Fisher; chief, research division, William Joseph Showalter; assistant chief, illustrations division, Melville Bell Grosvenor; chief cartographer, Albert H. Bumstead; chief, foreign editorial staff, Maynard Owen Williams; chief, photographic laboratory, Charles Martin. Headquarters are in Washington, D. C.

GEOGRAPHY, GEOGRAPHICAL EXPLORATION. See EXPLORATION; POLAR RESEARCH; ANTHROPOLOGY.

GEOLOGY. It is impossible to single out any one branch of geology for particular emphasis in our record for the year. The science continues to

grow from the side of micropaleontologic research to trace oil-bearing formations and structures, and detailed microscopic study of rocks and ores on the one hand, to field reconnaissance and the mapping of large areas on the other. New theories and generalizations develop to keep pace with the increasing detailed knowledge of the structure and history of the earth. This is best exemplified, perhaps, in the growing attention paid to the immediate and the ultimate causes of mountain building and the major structural features of the globe. Conclusions accepted for years are no longer considered final while the variety of postulated causes reflects active research and speculation.

The inability of geologists to keep up with the development of all branches of the science and the increasing difficulty of making certain that they are masters of the literature pertaining to their own particular field have led to the establishment of committees to sift this mass of information and to bring men together for collective effort. The Division of Geology and Geography of the National Research Council (q.v.) is one agent that is performing this task. The reports of its technical committees are either summaries of the year's progress in some particular subject, or else the results of intensive coöperative study of problems concerning which there is wide difference of opinion. The *Annotated Bibliography of Economic Geology* represents their effort, combined with that from other sources, to furnish brief summaries of the world's literature in economic geology.

The following summary is limited to an account of a few of the subjects discussed at various scientific meetings throughout the past year and brief abstracts of some of the publications taken from among many important ones. It is hoped in this way to direct the reader's attention to the more complete sources of information.

SOCIETIES: *The Geological Society of America* held its forty-second annual meeting at Washington, D. C. on Dec. 26 to 28, 1929, and commemorated at the same time the fiftieth anniversary of the founding of the U. S. Geological Survey. The address of the retiring president of the Society, delivered by Prof. Heinrich Ries of Cornell University, was on "Some Problems of the Non-Metallic Minerals." Professor Ries stated that the origin and many of the other problems involved in the study of the non-metals had been very generally neglected. Lack of economic value cannot account for this neglect since even exclusive of the mineral fuels the non-metals which comprise clay, building stones, salt, gypsum, sulphur, graphite, asbestos, and many other mineral substances, equal the value of the metallic minerals, ores of iron, copper, gold, silver, lead, etc. If the fuels coal, petroleum, and natural gas are included then the yearly production of the non-metals has four times the value of that of the metals.

Professor Ries ascribed this general neglect to the greater attractiveness of the metallic minerals to students, and the greater demand for men in the metal mining industry than in the others. He pointed out that where it could be proved that knowledge of the origin of such materials had value in dollars and cents, as in the case of petroleum and gas, large sums of money could be immediately procured to prosecute any amount of research. He then proceeded to discuss the genetic problems connected with certain ones of the non-metallic minerals in a more detailed manner.

The Paleontological Society of America held its twenty-first annual meeting at the same time and place. Some of the topics discussed are mentioned below.

The Mineralogical Society of America also held its tenth annual meeting on these same dates. Prof. A. L. Parsons of Toronto, retiring president, addressed the joint session of the societies on "Iridescent Color in Peristerite." He stated that the iridescence is due to the light refracted and reflected from the closed spaced planes of atoms in the minerals combining in various ways with the light reflected from the mineral surface. The phenomena involved are governed by the same laws as X-ray reflections from the interior of crystals and give the same iridescent effect as does a film of oil on water. See MINERALOGY.

A paper by Prof. Charles Schuchert of Yale University presented to the Geological Society of America discussed the "Stratigraphy and Three-Fold Orogeny of the Northern Appalachians." He said in part:

Greater Acadia, or the area of the New England States and the Maritime Provinces of eastern Canada, constitutes a structural crustal unit quite distinct from any other in North America, in that its major folds, inherited from Proterozoic times, were refolded in late Ordovician (Taconic) and Devonian (Acadian) times, and partially crossed by the Appalachian orogeny.

The inherited structure is that of (1) the St. Lawrence geosyncline, occupying the western and northern half of the area; (2) the narrow New Brunswick geanticline; (3) the smaller, eastern, Acadian geosyncline; and (4) the outer wide borderland or geanticline Novascotis, now very largely warped and faulted into the Atlantic. These fundamental structures were in existence as early as late Lower Cambrian time, and were accentuated as sinking or rising fields until the Middle Devonian, when all of Greater Acadia was transformed into land. Almost all later Paleozoic deposition (except the late Lower Carboniferous marine beds) was of continental type, and spread as flat-lying strata from Novascotis widely across the peneplaned Acadian folds, the New Brunswick geanticline, and a part of the St. Lawrence geosyncline.

The three-fold anchoring of the area into permanent dry land by the deformations progressed from the interior outward, as follows: (A very local movement at the close of the Cambrian, as yet known only in northernmost Vermont.) (1) The Taconic isoclinal intense folding and overthrusting, with areas of nappes, which is very widespread in the western part of the St. Lawrence geosyncline through eastern New York, the Taconic, Green, and inner or northern side of the Notre Dame mountains, thence across the Gulf of St. Lawrence and central Newfoundland into the Atlantic; this disturbance continues south in the Appalachian geosyncline as far as central eastern Pennsylvania. (2) The Acadian revolution, when the remainder of the St. Lawrence geosyncline, the New Brunswick geanticline, the Acadian trough, and the borderland Novascotis were folded almost wholly into permanent dry land; later, however, in Windsor (late Lower Carboniferous) time, the ocean invaded one of the intermontane valleys (Northumberland channel) from the northeast across central Newfoundland, the New Brunswick geanticline, and the Acadian trough into the Bay of Fundy. (3) The Appalachian revolution, which elevated epirogenically, faulted, and locally cross-folded (best seen in the Long Range Mountains of Newfoundland) the Maritime Provinces, and refolded (crossed) the southwestern part of the Acadian geosyncline from the Bay of Fundy across southernmost Maine and eastern Massachusetts.

Prof. William B. Scott of Princeton University, speaking on "The Extinction of Pleistocene Mammals," stated that the presence of Pleistocene Mammals is not necessarily proof that the deposit in which the fossil occurs is of Pleistocene date for the various species died out at very different times and places and several of them, in both North and South America, persisted until what, in the Old World, were historic times. Discoveries made recently in Ecuador prove that the American *Mastodon* continued to exist until after the Christian Era, and the cavern at Last Hope inlet,

in Patagonia, has yielded the famous skin-fragments of an extinct ground sloth and an extinct species of horse and cat that cannot be more than a few centuries old.

The subject of the length of geologic time received some attention. A few geologists still abide by the older estimates that allow only between eighty and one hundred million years since the beginning of the Paleozoic. Others prefer Barrell's scale which allows six hundred million years for the same events. According to Dr. F. E. Matthes of Washington, D. C., this vast discordance of ideas which reflects unfavorably upon geological science is no longer justified. Though it may never be possible to compute accurately the duration of any one division of geologic time, geomorphologic data are now on hand that rule out decisively the shorter time scales and call for figures of the high order of magnitude of those based upon radioactive disintegration in rocks.

The final melting away of the great ice cap that a short time ago covered so much of northern North America was long believed to have everywhere resulted in its slow withdrawal along a continuous line. As soon as melting at the end of the ice overcame its forward motion this "retreat" began and continued as though some force were pulling the ice back where it came from. Recently evidence has been found that in the hilly and mountainous northeastern United States the front of the ice did not move slowly northward in this way but that forward motion all but ceased and the great cap melted in place. The hills and mountains first showed through. The continuous cap then split up and left isolated, stagnant masses in the protected valleys. R. F. Flint proved this mode of dissipation by "stagnation" for Connecticut. Others have advocated it for parts of New York State, and now T. C. Brown of Fitchburg, Mass., shows that the deglaciation of the Nushua Valley in Massachusetts took place in the same way.

Prof. W. H. Hobbs of the University of Michigan spoke of the prevailing notion that normal or gravity faults must of necessity imply an origin in tensional stress conditions where they are formed. He pointed out, however, that geological phenomena at the time of great earthquakes indicate that such faults come into existence simultaneously with a reduction of area and indicate a compressional rather than a tensional stress condition. The evidence cited involves the observed behavior of rails, pipes, bridges, etc., which are crossed by such fault lines. The above conclusion involves a seeming paradox but it is explained when earthquake phenomena are considered with reference to the earth as a whole.

F. A. Melton of Norman, Okla., and M. K. Hubbert of Chicago, Ill., presented a critical review of isostasy. They reviewed the gravitational theory underlying the conception, the relations between the different kinds of anomalies, and the geologic data pertinent to the question and concluded that:

1. Regions of the order of size of a physiographic province, and larger, seem to be usually in a state of approximate isostatic balance.

2. Local isostatic balance as defined in the publications of the U. S. Coast and Geodetic Survey seems to be far from the truth.

3. The "depth of compensation" had still best be considered an unknown quantity which may or may not have any real physical significance.

Dr. Karl Ver Steeg of Wooster, Ohio, showed that profiles drawn along the ridge crests in east-

ern Pennsylvania show pronounced slopes towards the wind and water gaps, from divides which were established on the Kittatinny peneplain. He concluded that all peneplains will show on their ridge crests, these long, gentle slopes towards the wind and water gaps or towards the stream valleys. And that these old fossil divides, which occur as remnants on peneplains are frequently misinterpreted for warped areas due to the uplift of the peneplain.

The forty-third annual meeting of the Geological Society of America, the twenty-second annual meeting of the Paleontological Society of America, the eleventh annual meeting of the Mineralogical Society of America, and the meeting of the Society of Economic Geologists were held at the University of Toronto, Dec. 29-31, 1930.

The Society of Economic Geologists met at Charlottesville, Va., on Apr. 24 and 25, 1930, and combined the technical sessions and the reading of papers with short field excursions in the neighboring region. M. R. Campbell of the U. S. Geological Survey delivered the presidential address entitled "Coal as a Recorder of Incipient Rock Metamorphism" (published in *Economic Geology*, vol. 25, November, 1930, pp. 675-696). The speaker pointed out that even when the term metamorphism is employed in the restricted sense of important changes produced in rocks as the result of pressure and heat, the metamorphic changes begin early in the history of the rock. The alterations produced in ordinary sedimentary rocks, the shales, limestones, and sandstones, during these incipient metamorphic stages are barely recognizable. On the other hand the hydrocarbon compounds, which are of common occurrence, are readily affected. The petroleum compounds, due to their volatile nature, leave little or no residue to mark the stages through which they have passed and therefore are of little value. Coal is a much more promising material. Its mode of origin is almost universally recognized as definitely known. It is readily affected by pressure and heat and it is not destroyed by the agent that produces the changes.

The speaker proceeded to show that the quality of a coal is related to the geologic structure of the region in which it is found. The rank of the coal agrees with the intensity of compression to which it has been subjected. Certain physical changes are also marked. In other cases the stresses applied to the coal have been too slight to change materially the percentage of volatile matter and the fixed carbon but have been adequate to reduce the content of moisture.

The various stages of incipient metamorphism in coal were then related to the ranks of coal and the speaker concluded by pointing out that eight such stages can be recognized, six of which have been accompanied by so few changes in the associated sediments that they can be considered as incipient stages of rock metamorphism clearly recorded by coal alone.

A. N. Murray of the University of Illinois presented the preliminary results of an investigation of limestone as a reservoir rock for oil (Project 23 of the American Petroleum Institute Research) in a paper entitled "Limestone Oil Reservoirs of the Northeastern United States and of Ontario, Canada" (published in *Economic Geology*, vol. 25, August, 1930, pp. 452-469). The conclusion is reached that only secondary porosity, owing to openings in a limestone developed after the rock has been deposited and indurated,

is of importance in forming oil reservoirs. It is significant that the author rejects the conception very generally held, that the process of dolomitization is responsible for the porosity so frequently characteristic of dolomite. He could find no criteria recorded in the literature by which porosity by dolomitization could be distinguished from primary porosity or porosity developed by leaching and solution. He believes that dolomitization molecule for molecule, which would undoubtedly result in decrease of volume, would produce fractures similar to those produced in igneous rocks upon cooling or in sediments upon dehydration, and perhaps even a decrease in the thickness of the beds, but not porosity as generally understood. The peculiar, erratic occurrence of porosity in dolomites and the rapid passage of highly porous into non-porous phases as well as the way in which other rocks are affected by shrinkage all indicate that the porosity is developed through leaching and solution. The dolomitization proper must then be owing to a volume for volume replacement.

It was then shown that the porous limestone reservoirs in the eastern United States and Ontario have all, with the possible exception of those of Traverse age in Michigan, been eroded before the formations that now overlie them were deposited. Leaching of the more soluble calcite at and above a water table is therefore believed to account for the porosity and consequently for the existence of limestone oil reservoirs.

J. L. Gillson and J. E. A. Kania discussed the "Origin of the Emery Deposits at Peekskill, New York" (*Econ. Geol.*, vol. 25, August, 1930, pp. 506-527) and concluded that they were formed by contact metamorphic post-consolidation processes rather than by a reaction between the basic magma and the aluminous wall rock. The emery occurs both in the endometamorphosed igneous rock and the exometamorphosed schist. Many thin bands of the ore occur so far within the schist as to preclude the possibility of their formation by magmatic reaction. The existence of quartz and corundum in the same thin sections of the igneous rock, the sequence of mineralization and the presence of tourmaline, rutinated quartz with cavities that contain air bubbles, deuterite magnetite, etc., prove an origin by emanations.

Prof. A. M. Bateman presented the results of his study of copper ores of Northern Rhodesia (published in *Econ. Geol.*, vol. 25, June-July, 1930, pp. 365-418) and concluded that the Northern Rhodesian Copper Belt will in the future be the greatest copper mining centre of the world. The ore is contained in the Roan series, 3000 to 4000 feet of continental clastic sediments of late pre-Cambrian age, that rests unconformably upon a pre-mineral basement complex. The sediments lie in simple pitching folds truncated by erosion that has removed the anticlines, and are intruded by younger granites and basic igneous rocks. The granite intrusions probably account for the metallization. One or more beds of the Roan series have been rather uniformly metallized with minute specks of copper sulphides. Sparse and erratic deep oxidation occurs in all the mines and some have little but oxidized ores. The ore beds are between 25 and 100 feet thick and remarkably continuous. Chalcocite is the dominant sulphide and since much of it is hypogene there is no reason for marked diminution in tenor of copper below the zone of supergene enrichment.

Three other papers of considerable general im-

portance were the "Genetic Classification of the Idaho Ore Deposits," by Clyde P. Ross; "Summary of Nitrate Deposits in the United States," by G. R. Mansfield; and "Antimony Deposits of the World," by F. C. Schrader.

The American Institute of Mining and Metallurgical Engineers held its yearly New York meeting in February, 1930. An important contribution, issued subsequently as *Technical Publication No. 335*, Class I, No. 31, is the "Occurrence of Quicksilver Ore Bodies," by C. N. Schuette of San Francisco, California. Deposits of cinnabar are peculiar in that it is difficult to fit them into ordinary classifications. They have no definite prevailing form and though undoubtedly formed at or near the surface, they differ from the widespread epithermal vein type of deposit. The author considers that quicksilver bodies the world over present certain geological group characteristics of great importance to prospecting and mining. They are all primary concentrations from magmatic solution and should be sought where the most favorable conditions for concentration occur. That is where some impervious stratum causes a concentration of the ore-bearing solutions. The major part of the paper deals with data accumulated during personal visits to all the quicksilver mines in the United States and a review of the world's literature on the subject. It is a valuable summary.

IMPORTANT PUBLICATIONS: *The New Evolution, Zöbgenesis*, by Austin H. Clark (Baltimore, Md., 1930), emphasizes the intimate interrelations of the entire organic world, living and fossil, and presents the conclusion that the major groups of animals have risen simultaneously and have or have had no connecting links. Prof. Charles Schuchert (review in *American Journal of Science*, August, 1930) believes that this conception is hardly tenable in the light of our present knowledge.

Living Africa, by Bailey Willis (N. Y., 1930), was an interesting account of journeys through the "Rift Valley" and volcanic regions of Africa sponsored by the Carnegie Institute of Washington in order to study the origin of the so-called rifts. The book is largely a transcript of letters written from the field and though it recurs continuously to the object of the trip, it is strictly non-technical. The first part sets forth "The Question" to be solved and shows how an explanation of the valley led deep into the explanation of the continents themselves. The end of the book is a chapter setting forth "The Answer." These two parts are more scientific in their treatment. The author discards the rift or downfaulting hypothesis in favor of the idea of progressive, differential uplift of the whole mass of the continent and the lagging behind of the valleys themselves. In the case of the valley occupied by Lake Tanganyika, the bottom of which is 1600 feet below sea level, a great depression must have occurred.

Sons of the Earth, by Kirtley F. Mather (N. Y., 1930), is a popular presentation of man's relation to the Earth and its other inhabitants. It gives a brief and lucid outline of the methods by which Historical Geology has been developed and the geological time scale constructed, then traces the development of life through the higher vertebrates to man. Much of the book is devoted to geological and archaeological traces of man on the earth. This carries the reader further along towards modern man than is customary in purely

geological treatises and presents the modern knowledge of early American savages and civilization.

Geologic History of the Yosemite Valley, by Francois E. Matthes (U. S. Geol. Service p. 160), is a beautifully illustrated discussion of all phases of the geology of a region famous for its scenery. So many people have visited this region and wondered about the origin of the valley that this professional paper should serve a larger public than is usual for such writings.

Cave Number.—*Journal of the Tennessee Academy of Sciences*, July, 1930, is a popular and well-illustrated treatment of caves and cave forms that describes their origin, extent, the living things that inhabit them, and their relation to human history.

"Origin of Limestone Caverns" is an important paper by W. M. Davis published in the *Bulletin of the Geological Society of America* (vol. 41, September, 1930, pp. 475-628). It considers the method of initiation of caverns and the cycle through which they pass and refers to many cavernous regions particularly in North America. The change from solution, which excavated the cavern, to deposition which lined it with dripstone forms, has always been difficult to explain. This is generally regarded as due to the fact that the cavern, after it is opened out, admits much air; and the water that is dissolving calcium carbonate in its course through the solid body of the rock, maybe only a few feet away, deposits the same because of evaporation or loss of carbon dioxide when it emerges into the comparative open of the cave. The author with his "two-cycle" theory proposes to consider: "the possibility, which has very likely occurred also to others, that large caverns are ordinarily excavated by ground-water solution during an epoch when the body of limestone in which they occur lies below the water table of its district; and that the change from this epoch of solution excavation to the following epoch of depositional replenishment takes place when the water table sinks below the cavern level in consequence of regional elevation or other effective cause. After such change the ground water, which had completely filled the cavern during the progress of its excavation, is drained away and its place is taken by ground air, the presence of which provokes evaporation of percolating vadose water and escape of carbon dioxide from it, and thus compels it to deposit calcite and form dripstones on the cavern roof and floor.

"The sinking of the water table in consequence of regional elevation or other effective cause as a means of dividing cavern history into two epochs is therefore an essential feature of the above proposal." It was recognized, however, that this theory failed to explain certain types of caverns.

Chapters of the Geology of Scotland, by the late B. N. Peach and the late John Horne; edited by M. Macgregor (Ox. Univ. Press, 1930), is a posthumous presentation of the work of these two masters of Scottish geology. A significant contribution to our knowledge of the geology of a very complicated region.

"Upper Ordovician and Lower Devonian Stratigraphy and Paleontology of Percé, Quebec," by C. Schuchert and J. A. Cooper, appeared in the *American Journal of Science*, September and October, 1930. Recent fossil collecting and stratigraphic work have proved the presence of thick Upper Ordovician and Lower Devonian formations in this region, but the Silurian is lacking.

This paper also presents the local faunas of the Upper Ordovician in the vicinity of Percé.

The Titanotheres of Ancient Wyoming, Dakota, and Nebraska, by Henry Fairfield Osborne (U. S. Geol. Survey Monograph 55, 2 vols., Wash. 1930), is an exhaustive monograph on the Perrissodactyla, with special reference to the Titanotheres, that considers all the allied forms of life as well. The origin of the Titanotheres is traced to a small, late Cretaceous or basal Eocene quadruped in central Asia from which the nine perrissodactyl families of Europe and North America developed. The known titanotheres are sharply limited as to geographic distribution and their geologic range is confined to the 600,000 to 1,000,000 years between the end of the early Eocene and the lower Oligocene.

"Some Problems of Mountain Structure and Mountain History," by C. R. Longwell, published in the *American Journal of Science*, June, 1930, is a brief paper summarizing the modern trends of research and speculation in a fundamental but so far highly conjectural branch of geology. It considers briefly three questions: "(1) Is diastrophism periodic? (2) Do folding and thrusting result directly in mountain uplift? (3) What is the rôle of isostasy in relation to mountain making?" The author concludes that diastrophism is *recurrent* rather than periodic; that considerable initial uplift is characteristic of many folded mountain zones; and that both geologic and geodetic evidence "leads us squarely back to the conclusions of Barrell that the crust is strong enough to bear loads of considerable size." We must recognize "the effects of enormous horizontal forces on the one hand, and a play of vertical movement to preserve isostatic balance on the other."

Die Oszillations-Theorie, eine Erklärung der Krustenbewegungen von Erde und Mond, by Erich Haarman (Stuttgart, 1930), is discussed by C. R. Longwell in the *American Journal of Science* (September, 1930). This work combats the contracting earth theory of diastrophism and maintains that folds, thrusts, etc., are the secondary effects of large vertical movements, which constitute primary diastrophism and which have been frequently repeated in geological time. Major uplifts are *geotumors* and subsided areas are *geodepressions*. Sediments collect in the *geodepressions*. They are plastic and easily deformed by their own weight. They are crowded from the margins towards the middle and form folds that become more pronounced downward. This is "full-trough gliding" and gives rise to regular, upright folds and steep thrusts.

On the other hand the overturned folds and low angle thrusts characteristic of most mountain zones are the result of "free-gliding" off the rising slopes of a growing and migrating "geotumor." Recumbent folds and thrusts so produced are later raised by migration of the "tumor" to the position of the old trough. Haarman sees a sufficient cause for these distortions of the earth in polar wandering. Longwell finds this theory difficult to apply to Appalachian structure but sees many valuable suggestions in the book.

F. B. Taylor presented a "Correlation of Tertiary Mountain Ranges in Different Continents" (*Bull. Geol. Soc. Am.*, vol. 41, September, 1930), in which he traces the main ranges from the western Americas through Asia to south and central Europe and shows many similarities in their details of character and position. He then relates the force that caused this epoch of intense mountain

building to a general equatorward movement of the great continental sheets on the Earth's surface, a movement initiated by a sudden increase in the centrifugal force acting upon the Earth's crust. The mountain making began the world over during the same geological period. This sudden beginning and the intensity of the force, along with other considerations, lead him to postulate that the moon was captured by the earth at that time and its tidal effect produced the observed effects. This hypothesis automatically excludes itself as an explanation of all preceding mountain building and seems therefore on very shaky ground but the paper gives a good analysis of mountain trends.

Re-Study of the Geology of the Saratoga Area and the Problem of the Mineral Waters, by R. J. Colony in the Report of the Saratoga Springs Commission to the New York Legislature of 1930, represents a check-up on that part of the previously mapped geology of the area which is connected with the valuable mineralized springs, and additional observations upon the origin of the water, of the dissolved substances in the water, and the amount available. The author makes only minor changes in the geology of the area. He traces most if not all of the mineralized water to a meteoric source in the Adirondack Mountains and the dissolved substances, excepting the iron, alumina, silica, lime, and magnesia, to exhalations from a subjacent igneous mass. There is a double system of ground water in the region. The upper, normal ground water, which owes its origin to precipitation on the local water shed; and the lower mineralized ground water, derived from the limestone underlying the area. The two are separated by impervious shale beds and rarely mingle and then only because of special local conditions. All available analyses of the mineralized waters are compared and discussed. Their peculiar lack of sulphates and magnesium chloride, their high content of sodium chloride, their supersaturation with carbon dioxide, and the presence of lithium chloride point to an origin connected with igneous phenomena.

"Changes in Hornblende at about 800° C.," by V. E. Barnes (*Amer. Mineralogist*, Sept. 1930), is a study made to determine the relation between the changes that occur in green hornblende when it is heated and the natural basaltic hornblende. It was found that "green hornblende, when heated in air, changes to brown hornblende, which has the same optical properties as basaltic hornblende." "The iron poor hornblendes do not change on heating." "Oxidation of ferrous to ferric iron causes the changes in optical properties observed upon heating common hornblende" and "heated hornblendes in general have a more complete change of ferrous to ferric iron than basaltic hornblendes."

"Basis for Computing the Age of a Radioactive Mineral from the Lead Content," by A. F. Kovarik (*Amer. Journal of Science*, August, 1930, pp. 81-100), considers the corrections that must be made in the usual procedure in order to allow for the presence of "ordinary" lead and the isotopes radium G, thorium D, actinium D and presents an approximate formula which makes it possible to calculate the amount of ordinary lead present without knowing the age of a mineral, which formula can be used as a correction in the formula in vogue to calculate the age of the mineral.

"Differentiation in the Cape Spencer Flow," by Richard J. Lund (*American Mineralogist*, Decem-

ber, 1930), dealt with the method of differentiation that has accounted for the observed differences in mineral and chemical composition at different horizons within an extensive diabase flow about 550 feet thick. The conclusion was reached that differentiation is due to the crystallization of plagioclase and pyroxene with relative movement of pyroxene and, to a less extent, plagioclase. No progressive enrichment in the tenor of iron in the residual liquid is indicated in the study of this flow.

In "The Heavy Mineral Suites and Correlation of the Granites of Northern Brittany, the Channel Islands, and the Cotentin," by A. W. Groves (*Geological Magazine*, vol. 67, No. 791, 1930), the nearly uniform character of the heavy mineral suites of granites studied over a distance of nearly 200 miles convinces the author that considerable importance should be attached to correlations by this method. The results obtained in this particular study are discussed and the general problems involved in the method as well as the objections that have been raised against it are thoroughly reviewed and commented upon by the author in this article.

"The X-Ray Method Applied to a Study of the Constitution of Portland Cement," by L. T. Brownmiller and R. H. Bogue (*Amer. Journal of Science*, October, 1930), describes the X-ray method, shows its limitations, and indicates that the results agree with those obtained by phase equilibria, chemical, and microscopical methods. Together they define the major constituents of Portland cement clinker as tricalcium silicate and beta dicalcium silicate together with tricalcium aluminate, tetracalcium aluminoferrite and magnesia. Free CaO is not normally present in amounts as great as 2.5 per cent. A bibliography is attached.

Annotated Bibliography of Economic Geology, Prepared under the Auspices of the National Research Council (vol. II, Nos. 1 and 2, 1930) is the second volume of a compilation that seeks to make the world's literature in economic geology available to all who can read English. Brief, succinct abstracts accompany all the titles listed.

Fluorspar Deposits of Canada, by M. E. Wilson (Geol. Surv. of Canada, Econ. Geol. Ser. 6, Ottawa, 1930), is a report which considers the deposits according to provinces and describes their general character and origin. *Borate and Associated Minerals from the Kramer District, Mohave Desert, California*, by W. T. Schaller (U. S. Geol. Survey Prof. Paper 158.1, 1930), describes the deposits of borates and discusses their origin and peculiarities. *Limestones, Their Origins, Distribution and Uses*, by F. J. North (London, 1930), is a summary of the literature of limestone that reviews the geology, geographic distributions, and utilization of the rock. It is limited to a discussion of British limestones but contains much data of interest to students of limestones anywhere in the world.

Summarized Data of Gold Production, by R. N. Ridgeway (U. S. Bureau of Mines, Economic Paper No. 6, 1930), gives the amounts and percentages for all the important gold-producing countries from 1493 to 1927. The distribution is tabulated. "Chemical Composition of Peat and the Role of Microorganisms in its Formation," by Silman A. Waskman (*Amer. Journal of Science*, January, 1930), points out that the progress made in the understanding of peat has passed from a geological through a botanical, physico-chemical,

and chemical, to a microbiologic point of view. The microscopic population plays a most important rôle and must be understood in order to comprehend the formation and transformation of this valuable substance. An exhaustive bibliography is attached.

"Hydrothermal Origin of the Rand Gold Deposits—Part I. Testimony of the Conglomerates," by L. C. Graton (*Ec. Geol. Supplement*, May, 1930), is a complete summation of the evidence that points to the conclusion indicated in the title. The author uses the method of showing first what the placer theory would demand, second, "how the placerists have seen the facts in a way to meet this demand," and finally of showing "that in reality the facts do not meet those demands but instead are incompatible with them." On the other hand the facts are believed to be compatible throughout with a hydrothermal theory of origin. It is well written and convincing, but so is the other, or placer theory, to those who know the ore deposit only through the literature. Whichever side finally proves to be right this volume is a worth while and much needed contribution.

Potash found in Government test holes. The thirteenth and fourteenth test holes drilled by the U. S. Geological Survey in New Mexico passed through many beds of polyhalite, several of which are thick enough and rich enough to have potential commercial value. Sylvite, kainite, and several other potash bearing salts were encountered in small quantities. The thirteenth test hole was churn-drilled 850 feet to the top of the salts and core drilled 1289 feet deeper. It encountered many beds of salt, including nine beds of polyhalite, each more than 2 feet thick and each containing more than 10 per cent of K_2O . The fourteenth test hole encountered a 6-foot 5-inch bed of polyhalite at a depth of 1658 feet containing 12.04 per cent of K_2O and a 3-foot 10-inch bed at a depth of 1740 feet with 13.43 per cent K_2O . The latter two are the most important sources of K_2O yet encountered in the region. The fifteenth and sixteenth holes, reported on subsequently, encountered a number of thin beds of polyhalite but no other potash-bearing minerals. This latter occurs in sufficient quantity at several depths to have a potential value. The seventeenth and eighteenth test holes in Lea County, N. Mex., and Loving County, Tex., were also analyzed later in the year.

The U. S. Geological Survey has completed a preliminary examination of the metalliferous deposits of western Oregon. The State of Oregon was coöperating in the investigation which was to include the non-metallic as well as the metallic resources of the State. Mining began in Oregon about 1852 with the discovery of gold placers near Jacksonville in the southwestern part of the State. Gold quartz lodes were soon uncovered but up to 1928 the placers yielded more than two-thirds of the gold production. Cinnabar was observed in the sluice boxes soon after placer mining began and was easily traced to its source. A desultory production has continued ever since. Increase in price during the past two years, the result of the cartel among Spanish and Italian producers, has stimulated prospecting and development.

Copper lodes, though small compared to the leading copper deposits of the United States, are among the most promising deposits in Oregon. Deposits of silver, lead, and zinc are also known and some platinum is produced as a by-product of placer gold-mining operations in the State.

The search for a commercial source of manga-

nese in the United States continued. Combined exploration under private auspices and the U. S. Geological Survey proved the existence of enormous quantities of manganese as nodules in the Pierre shale outcrops on both sides of the Missouri River near Chamberlain, South Dakota. The quantity of manganese per cubic yard of shale was, however, much lower than in any material so far treated as a source of manganese. It does not seem justifiable to include this in estimates of national reserves of manganese though in a great emergency, when cost is a secondary consideration, it may be of considerable value.

The U. S. Geological Survey continues to publish reports on the surface water supply of many districts in the United States and its outlying possession as an important part of its work of recording the natural resources and geologic conditions of this area. A few of those published during 1930 are listed below: *Water Supply Paper 636-C*, "The New England Flood of November, 1927," by H. B. Kinnison; *Water Supply Paper 615*, "Surface Water Supply of Hawaii, 1924-1925," by Grover and Carson; *Water Supply Paper 616*, "Geology and Water Resources of the Kau District, Hawaii" (including parts of Kilauea and Mauna Loa volcanoes), by Stearns and Clark; *Water Supply Paper 618*, "The Green River and its Utilization," by R. R. Wooley; *Water Supply Paper 636-D*, "Surface Water Supply of the San Joaquin River Basin, California, 1815-1927," by H. D. McGlashan.

New Books: *College Textbook of Geology, Part II, Historical Geology*, by T. C. Chamberlin and R. S. Salisbury, re-written and revised by R. T. Chamberlin and Paul MacClintock (New York). An up-to-date revision of a standard and much used textbook. Weakest in its one-sided presentation of theories of earth origin. *Outlines of Physical Geology*, by Pirsson, revised and rewritten by C. R. Longwell (New York). Essentially a briefer presentation of the material of the recently revised Pirsson and Schuchert *Textbook of Geology*, 3d ed. It loses none of its clarity and is well adapted to a short course in geology. *Guide to the Study of Non-Metallic Mineral Products (except building stones)* by W. S. Bayley (New York), a valuable summary of knowledge in an important field. Contains many references. Chapter II is a genetic classification of the materials discussed and serves to emphasize geologic mode of formation. The classification is not followed in the body of the book. *Economic Geology*, 6th ed. by H. Ries (New York), the latest edition of a standard textbook. References and material brought up to date. *Petrographic Methods and Calculations*, by A. Holmes (London). A second impression without any important changes. *Elements of Optical Mineralogy, Part III, Determinative Tables*, by N. H. and A. N. Winchell, entirely rewritten and much enlarged by A. N. Winchell (New York). Long awaited to complete the second edition of this important textbook of optical mineralogy. A valuable textbook *Elements of Topographic Drawing*, by Sloane and Montz (New York), is designed for a course of instruction and as a reference book for the topographic draughtsman. Contains suggestions for office practice and pictures and descriptions of useful tools and accessories. *Increasing the Recovery of Petroleum*, two volumes, by W. H. Osgood (New York), a valuable compilation of the available information concerning methods which will enable the operator to recover considerably more oil from a given field

than at present. *Methods in Geological Surveying*, by E. Greenly and W. Howel (London), describes the aims and methods of geological map making and considers the geological map as an end in itself. Shows how and where to draw geological boundaries.

The Mineral Industry of the Far East, by Boris P. Torgasheff (Shanghai, China), is a compilation rendered extremely difficult because of the great number of sources from which the material had to be gathered and therefore all the more valuable. It is only a first step in developing accurate knowledge of the resources of this vast area but done as thoroughly as the material would permit. Considers general outlines of the mineral industry; metals (except iron); non-metals; coal, iron and oil; market conditions and general information. *Oil Fields in the United States*, by W. A. Ver Wiebe (New York), aims to set before the student the geological details of every important oil-producing area in the United States. *Introductory Economic Geology*, by W. A. Tarr (New York), is a simple presentation of the earth materials used by man for the student with only a general knowledge of geology, or for the interested layman.

Lehrbuch der allgemein Bodenkunde, by A. Stebutt (Berlin), is a textbook of general soil science. The subject is not strictly geological but is closely allied. The first part considers the origin and properties of the soil; the minerals from which the soil is formed; the composition of the outer crust of the earth; the origin of clastic sediment; the loose soil as a disperse system; colloid systems; porosity of soils; and the relation of soils to water, air, organic matter, and to heat. Parts two to four take up soil dynamics, soil genesis, and the theory of soil fertility.

Alluvium, by Kurd von Bülow (Berlin, 1930), considers the principles of the geology of the youngest epoch in earth history, or post-glacial time.

GEORGETOWN UNIVERSITY. A Roman Catholic institution of higher education for men in Washington, D. C.; founded in 1789. In the autumn of 1930, 2695 students were enrolled, with a distribution as follows: Arts and sciences, 962; medical, 567; dental, 208; dental hygiene, 11; law, 493; foreign service, 425; and graduate school of arts and sciences, 29. The faculty numbered 383. The Riggs Memorial Library contained 163,427 volumes; the Hirst Library, 10,252 volumes; and the individual libraries maintained by the professional schools, many additional volumes. In September, 1930, the school of dental hygiene was opened in connection with the university school of dentistry. President, the Rev. W. Coleman Nevils, S. J., Ph.D., D.D.

GEORGE WASHINGTON UNIVERSITY, THE. A nonsectarian institution of higher learning for men and women in Washington, D. C.; founded in 1821. The enrollment for the first semester of 1930-31 was 6165, distributed as follows: Junior college, 2116; Columbian College, 1350; graduate school of letters and sciences (accepted as candidates for the degree of Ph.D.), 68; school of medicine, 297; law school, 814; school of engineering, 407; school of pharmacy, 51; school of education, 675; school of government, 65; division of library science, 128; division of fine arts, 134. The 1930 summer sessions had an enrollment of 1691. The faculty numbered 390. The endowment amounted to \$1,616,661, from which the income for 1930 was \$73,907. The total

income from all sources was \$1,313,057. The total number of volumes in the university library, the law school library, and the library of the school of medicine was 89,000.

During 1930-31 fundamental changes in organization became operative. An autonomous junior college was created, underlying the work of the senior (Columbian) college of letters and sciences and all of the professional schools. Upon the completion of the two-year course in the junior college, Columbian College offered junior and senior courses leading to the bachelor's degree and one year of graduate study leading to the master's degree. The faculty of Columbian College was organized into four divisions of study—languages and literature, mathematics and the physical sciences, the natural sciences, and the social sciences—through which it was to exercise complete educational control. To foster the development of creative ability in the individual student, the university also instituted an independent study plan through which upper classmen who were adjudged capable of profiting thereby might undertake special study projects under the personal supervision of an instructor and freed of formal class routine. A council for graduate study directed doctoral research. President, Cloyd Heck Marvin, Ph.D., LL.D.

GEORGIA. POPULATION. According to the Fifteenth Census of the United States, the population of the State on Apr. 1, 1930, was 2,908,506. The population on Jan. 1, 1920, was 2,895,832. The capital is Atlanta.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------------|------|-----------|--------------------------|---------------|
| Cotton .. | 1930 | 3,903,000 | 1,625,000 ^a | \$106,255,000 |
| | 1929 | 3,782,000 | 1,343,000 ^a | 39,125,000 |
| Corn | 1930 | 3,729,000 | 45,494,000 | 44,399,000 |
| | 1929 | 3,656,000 | 50,458,000 | 10,814,000 |
| Tobacco . | 1930 | 127,000 | 104,994,000 ^b | 16,806,000 |
| | 1929 | 110,000 | 89,870,000 ^b | 7,130,000 |
| Hay | 1930 | 685,000 | 452,000 ^c | 7,078,000 |
| | 1929 | 710,000 | 437,000 ^c | 12,679,000 |
| Peanuts . | 1930 | 565,000 | 384,200,000 ^b | 13,415,000 |
| | 1929 | 607,000 | 394,550,000 ^b | 7,072,000 |
| Sweet potatoes | 1930 | 115,000 | 9,430,000 | 9,424,000 |
| | 1929 | 124,000 | 11,780,000 | 5,403,000 |
| Peaches .. | 1930 | | 4,698,000 | 3,312,000 |
| | 1929 | | 2,880,000 | 6,127,000 |
| Oats | 1930 | 360,000 | 8,280,000 | 7,632,000 |
| | 1929 | 424,000 | 9,540,000 | 2,030,000 |
| Potatoes . | 1930 | 20,000 | 1,624,000 | 2,191,000 |
| | 1929 | 20,000 | 1,565,000 | 794,000 |
| Wheat ... | 1930 | 49,000 | 588,000 | 1,318,000 |
| | 1929 | 85,000 | 850,000 | |

^a Bales. ^b Pounds. ^c Tons.

Farms in the State numbered 256,252 in 1930, as against 241,095 in 1925 and 310,732 in 1920.

MINERAL PRODUCTION. Stone and clay products, as usual, furnished in 1928 about two-thirds of the total value of minerals produced in the State. The quantity of the divers sorts of stone produced rose, for 1928, to 1,028,060 short tons, from 849,290 for 1927. The value of the total, however, diminished, for 1928, to \$5,854,226, from \$6,146,613 for 1927. The total value of the clay products was \$3,656,489 for 1928, as against \$4,879,736 for 1927. Cement, third of the products in order of yearly total value, was not separately reported as to totals. The value of raw clay produced, largely used in clay products, was, for 1928, \$1,687,654; for 1927, \$1,537,378. Fuller's earth, of which the State afforded about one-third of the domestic production year by year, was produced

in Georgia to the quantity of 100,406 short tons in 1928, and to the value of \$1,572,041. Secondary mineral products included sand and gravel, iron ore, coal, coke, barite, and manganiferous ore. These and others helped bring the total value of the yearly mineral product of the State up to \$14,740,431 for 1928; for 1927 it was \$16,758,390.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 6762.26. No additional construction of line in 1930 was reported.

EDUCATION. The educational issue was involved in the submission to the popular vote, in the November election, of the proposed constitutional amendment to permit the State to levy an income tax of not over 5 per cent, and to require a reduction of the ad-valorem State tax. This proposal, as the State already had an income tax without the proposed limit, was regarded by the promoters of expenditure for public education, as likely, if adopted, to impede the educational programme. They accordingly opposed it and contributed to its defeat.

FINANCE. State expenditures for the year ended Dec. 31, 1929, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$17,180,829 (of which \$5,466,803 was for local education); for operating public service enterprises, \$6946; for interest on debt, \$323,566; for permanent improvements, \$10,220,700; total, \$27,732,041 (of which \$11,954,022 was for highways, \$2,456,922 being for maintenance and \$9,497,100 for construction). Revenues were \$28,135,650. Of these, property and special taxes furnished 28 per cent; departmental earnings and compensation to the State for officials' services, 6; sale of licenses, 53.7 (including taxation of sales of gasoline, amounting to \$7,678,994). The funded debt outstanding on Dec. 31, 1929, was \$8,035,595; the net debt slightly less. On a property valuation of \$1,311,069,248 were levied in 1929 State taxes of \$6,555,346.

POLITICAL AND OTHER EVENTS. A pipe line conveying natural gas from the Monroe and Richland fields of Louisiana through Alabama into Georgia was put in operation by the Southern Natural Gas Company. Gas was delivered to Atlanta beginning with the latter part of January, on contract with the gas company serving the city. Other communities in the State were served also. There occurred a conflict between Atlanta and the Federal Census authorities over the issue whether the population of Atlanta as officially rendered should be that of the incorporated city proper, as the Census Bureau contended, or that of Greater Atlanta, a group of municipalities of which the Legislature of 1929 had by act authorized the future consolidation. Atlanta sought in the Supreme Court of the District of Columbia in September a writ of mandamus to compel the Census Bureau to give under "Atlanta" the population of the greater unit, which was set forth as 360,692 or some 90,000 in excess of Atlanta proper. The answer alleged that the Greater Atlanta, consolidation not having yet been effected, was not a political unit in the sense common to other American cities.

The political habit of liberating prisoners threw Atlanta into confusion when during the absence of Mayor I. N. Ragsdale the acting Mayor, J. A. Couch, ordered the release of the city's 268 prisoners on Independence Day. Upon the Mayor's return the prisoners as far as possible were re-

captured and put back in confinement. The proponents of the Stone Mountain Confederate Memorial project renegotiated in August and September for the reappointment of the original sculptor, Gutzon Borglum, to resume the work.

A special legislative session was called by Governor Hardman to assemble on May 1, but the session was not held. Its purpose was to have been the establishment of a balance between State revenue and outgo; but the Governor, postponing the session indefinitely on April 18, declared that he would make further investigation of the expected revenue from the statutory income tax. This tax, which had been impugned in the courts, was declared by the State Supreme Court on April 17 to be constitutional.

The State tax on chain stores, imposing a yearly payment of \$50 for each shop of a chain of five or more, enacted by the Legislature of 1929, was contested in the courts, as discriminatory and as designed to hinder the development of stores of that type. The State Supreme Court ruled on July 22 that the operation on a Sunday of a moving picture theatre was unlawful, if admission were charged, even though, in the case specified, the profits went to a charitable purpose. The same court ruled on June 17 against a practice, employed in the public schools of Emanuel County, of giving separate and inferior schooling to children whose parents failed to pay a monthly tuition fee; it was declared that the State guaranteed to each child an equal opportunity of education.

Lynchings were somewhat numerous in Georgia in the course of the year, as in some other Southern States. One was reported in February and three occurred in September and early October.

ELECTIONS. Richard B. Russell, Jr., Democratic candidate for Governor, and the usual Democratic State ticket were elected on November 4, unopposed. U. S. Senator William J. Harris, Democrat, also unopposed, was reelected. Twelve Democratic Representatives, of whom only one had a Republican opponent, were sent to the Seventy-second Congress. The voters rejected a proposal to amend the State constitution so as to give the Legislature authority to levy a State income tax, graduated as to its rates, up to a maximum of 5 per cent. The opponents of this proposal held that a decision of the State Supreme Court, upholding the constitutionality of the questioned existing income-tax law, had rendered the amendment unnecessary.

OFFICERS. Governor, L. G. Hardman; Secretary of State, George H. Carswell; Attorney-General, George M. Napier; Treasurer, W. J. Speer; Auditor, Tom Wisdom; Comptroller-General, W. B. Harrison; Superintendent of Education, M. L. Duggan; Commissioner of Agriculture, Eugene Talmage; Commissioner of Commerce and Labor, H. M. Stanley.

JUDICIARY. Supreme Court: Chief Justice, Richard B. Russell; Assistant Justices, Marcus W. Beck, Samuel C. Atkinson, H. Warner Hill, S. Price Gilbert, James K. Hines.

GEORGIA, UNIVERSITY OF. A State institution of higher education for men and women in Athens, Ga.; chartered in 1785 and opened in 1801. The enrollment in the 1930 summer session was 2446 and for the autumn term, 1869. The faculty numbered 118. The productive funds of the university amounted to \$425,000, and the income for the year from the State and other sources was \$400,000. The library contained

64,000 volumes. President, Charles M. Snelling, Sc.D.

GEORGIA (GEORGIAN SOCIALIST SOVIET REPUBLIC). One of the three Transcaucasian republics established after the Russian Revolution of 1917. The Social Democratic republic proclaimed May 26, 1918, was replaced in February, 1921, by a Soviet government, which in 1922 united with Armenia and Azerbaijan to form the Transcaucasian Socialist Federated Soviet Republic, affiliated with the Union of Soviet Socialist Republics (see RUSSIA). Georgia is bounded on the north by the Caucasus, on the east by Azerbaijan, and on the south and southwest by Armenia and Turkey. Capital, Tiflis. Area, 26,381 square miles; population, according to the census of 1926, 2,660,963. The chief cities with their populations are Tiflis, 294,000; Kutais, 48,196; and Sukhum, 61,974. At the end of 1925, there were 211,210 pupils attending the public schools.

Agriculture engages about 90 per cent of the people. Corn, vine growing, and the raising of fruits are the principal agricultural pursuits. Silk production and the beekeeping are long-established activities. The chief mineral production is that of manganese, around Tchiaturi, where the greatest deposits of this mineral in the world are found. Other mineral deposits are coal, naphtha, copper ore, lead, and iron ore. The territory contains valuable forests. All the basic industries were nationalized by the Soviet government. The railways total 570 miles. Another line from Akhal-Senaki through Sukhum to Tuapse was under construction.

GEORGIA SCHOOL OF TECHNOLOGY. An institution for the scientific and technical education of men in Atlanta, Ga., founded in 1888. The enrollment for the autumn of 1930 was 2365, while that in the summer session was 574. The faculty numbered 150. The endowment amounted to \$420,000, and the income from appropriations and fees, to \$650,000. There were 25,000 volumes in the library. In 1930 a grant of \$300,000 for the establishment of an aeronautical engineering centre was received from the Daniel Guggenheim Fund for the Promotion of Aeronautics. President, Marion Luther Brittain, LL.D.

GERMANIC LANGUAGES. See PHILOLOGY, MODERN.

GERMAN LITERATURE. The economic depression and political unrest of Germany during the year 1930 seemed to have paralyzed the creative urge of the outstanding figures of her literary world. The men and women who had been the real leaders in fiction, drama, and poetry seem to have spent themselves in their recent works and their latest efforts did not add to their fame. An astonishing number of newcomers, however, produced some works of unusual interest. Though they lack in clarity and what was once considered indispensable in literature as other forms of art, beauty of contents and form, they held out promise of a new life.

FICTION. The older generation of Germany's novelists is represented by Arthur Schnitzler's *Therese*, the record of a woman's life, more depressing, more morbid than any of his previous stories. The pathological viewpoint of the physi-

cian-author overrules his æsthetic sense. A number of historical novels deserve mention: Hermann Stegemann's *Die letzten Tage des Marschalls von Sachsen*; Wilhelm von Scholz's story of Breslau of the year 1452: *Der Weg nach Ilok*; Grete Auer's novel of the wars of the Vendee, *Bonvouloir*, a novel of the French Revolution by a newcomer; Hans Flesch, who has made Therioigne de Merincourt, one of the prominent participants, the heroine of *Die Amazone*. Klaus Mann's *Alexander* is rather immature in psychology; Wilhelm Bölsche, the master in the art of welding science, lore, and poetry into fascinating books, has written a Teutonic folk-tale on the origin of beer, entitled *Der Zauber des Königs Arbus*. Heinrich Hauser's *Schwarzes Revier* is a nature story in which the adventures of a little river recall George Ponsot's delightful *Roman de la Rivière*. Alfred Bock, the dean of Hessian writers, published *Wege im Schatten* and was honored by an *Alfred Bock Buch*, compiled by his friends. Other stories of varying merit were Victor von Kohlenegg's quaint *Das Paradies*, Walter von Molo's divorce story *Die Scheidung*, Rudolf Presber's *Die Wittve von Ephesus*, Rene Schickeles *Symphonie für Jazz* with its sidelights upon Berlin life, Arnold Zweig's *Die Novellen um Claudia*, Hermann Hesse's *Narziss*, Arnold Ulitz's *Worps*, a story of mental deficiency, Alfred Neumann's *Der Held*, and Cuno Hofer's delightfully humorous *Meine Geschichte und die meiner Gäste*.

Biography enters into *Franz Liszt: himmlische und irdische Liebe*, by Jos. Aug. Lux and *Manet's Leben* by Albert Flament. Josef Ponten's *Volga, Wolga und Volk auf dem Wege* treat the German Wanderlust. Ina Seidel's *Rene und Rainer* seem remote descendants of Wilhelm Meister, and *Das Wunschkind* reflects her poetic trend. Echoes of the war ring through Paul Blum's *Menschen im Zwinger*, P. M. Claden's *Desirée Dannacker*, and Ernst Ottwalt's *Ruhe und Ordnung*. Heinz Stegweits *Der Tumult um den Schüler Sadowsky* harks back to Wedekind. Erich Ebermayer's *Der Kampf um Odilienberg* is an Alsatian story of today and Richard Hubenbeck's *China frisst Menschen* one of China.

At the head of books of short stories stands the posthumous *Klabund-Lesebuch*. Others are Ruth Schaumann's *Der blühende Stabshort*, Heinrich Mann's *Sie sind jung*, Paul Ernst's *Geschichten zwischen Traum und Tag*, Hans Grimm's African stories, *Der Richter in der Karu*, Wilhelm Speyer's *Sonderlinge*, Oscar Walter Cisek's prize-crowned *Der Tatarin*, Alex. Gregory's *Die P. kehrt zurück*, Paul Wertheimer's *Plakate*, Kasimir Edschmid's *Hallo Welt*, and Waldemar Bonsels' *Vagabunden*.

A survey of the last publications of the year proves as the most valuable pictures of post-war German life *Die grosse Sache* by Heinrich Mann, and *November 18* by that unexcelled chronicler of Berlin life, Georg Hermann. Gerhart Hauptmann's *Die Spitzhacke* is autobiographical, dealing with the demolition of his parental home in Silesia; *Die Jünglingszeit des Johannes Schattenhold* is the story of the youth of Jakob Schaffner, who is ranked with Switzerland's greatest authors, Gottfried Keller and Conrad Ferdinand Meyer. A dedicatory letter to Galsworthy in place of preface adds additional interest to Felix Salten's latest animal book, *Gute Gesellschaft*. Rudolf Hans Bartsch's *Die Verführerin* and Rudolf Greinz's *Der Turm des Schneigens* are in the customary vein of those popular authors,

while Karl Hans Strobl in his *Od* touches upon the occult. Max Dreyer's *Der Weg durchs Feuer* presents economic problems of the present in a variety of characters.

DRAMA. Among the most important plays of the year, though they were not all stage successes, three had Napoleon as the central character: Stefan Zweig's *Das Lamm der Armen*, Heinrich Lilienfein's *Nacht in Polen 1812*, and Wilhelm Speyer's *Stern und Dämon*. Other historical dramas were Ernst Lissauer's *Luther und Thomas Münzer*, Hans Kyser's *Columbus*, Hans Rehberg's *Cecil Rhodes*, Hans Sassmann's *Metternich*, Ferdinand Bruckner's *Elisabeth von England*, Reinhard Goering's *Die Südpolexpedition des Kapt. Scott*, and Dietzschmidt's powerful Judas tragedy: *Verräter Gottes*. An interesting miracle play was Hermann Heinz Ortner's *Sebastianlegende*.

The marriage problem is treated in George Kaiser's *Clairvoyance*, and plays by John Henry Mackay and Alfred Döblin. Lion Feuchtwanger unsuccessfully attempted Shavian wit in *Wird Hill amnestiert?* Karl Schönherr returned to his old manner in *Kraftmensch*, but in *Herr Doktor, haben Sie zu essen?* he had an eye on the cinema. Wedekind's influence was apparent in Peter Martin Lampel's *Pennäler*; while Max Halbe's *Präsidentenwahl* treated an Ibsen problem with French technique. Franz Theodor Czukor's *Gesellschaft der Menschenrechte* has Georg Büchner as chief character. Max Brod's *Lord Byron aus der Mode*, and Hermann Stegemann's *Daniel Juno* did not add to their reputation, while the veteran Ludwig Fulda's adherence to outworn dramatic traditions in *Die verzauberte Prinzessin* and *Fräulein Frau* was decidedly naïve.

Two plays about war prisoners were Paul Wanner's *P.G.* and Werner Ackermann's *Flucht nach Shanghai*. China furnishes the background of Gerhart Menzel's *Fein-Ost* and Klaus Mann's *Gegenüber China* with its sallies against America. Other new plays were Robert Hohlbaum's *Kriegsminister*, Fritz von Unruh's *Phaea*, E. G. Kolbenheyer's *Jagd ohne Mensch*, Leonhard Frank's *Hufnägels*, Herbert Eulenberg's *Industrie*, Bruno Frank's *Sturm im Wasserglas*, Fritz Schwiefert's *Marguerite*, Friedrich Wolf's *Cyankali*, and Lola Landau's interesting *Die Wette mit dem Tod*. Ernst Toller, one of the most conspicuous figures in post-war German literature, wrote a play about the sailor revolt in the German navy in 1918: *Feuer aus den Kesseln*.

Georg Kaiser's *Mississippi* presents an improbable story of a flood menacing New Orleans while a fanatical religious sect prays for the destruction of the sinful city. Eberhard Wolfgang Möller added another to the many plays on the subject of the *Panama-Skandal*. The greatest dramatic work of the year was Franz Werfel's powerful panorama of the Hussite Wars, *Das Reich Gottes in Böhmen*, with its subtitle *Tragödie eines Führers*.

POETRY. As in other countries, the post-war state of mind in Germany did not favor purely poetical production. Anthologies are numerous; among them are Ernst Bender's *Deutsche Dichtung der Neuzeit*; Ferdinand Avenarius's *Handbuch deutscher Lyrik*; George Ellinger's *Die neulateinische Lyrik in Deutschland in der ersten Hälfte des 16. Jahrhunderts*; Alex. von Bernus' *Das Irdische Paradies*, translations of English lyrics of the 18th and 19th centuries; and Friedrich Bruns's *Die amerikanische Dichtung der Gegenwart*. Hans Mühle's *Das proletarische*

Schicksal is an anthology of contemporary labor poetry. Christian Morgenstern is represented by *Auswahl*, selections from his works. New volumes have been published by Heinrich Federer, *Ich lösche das Licht*; Hermann Stegemann, *Von Leben zu Leben*; Siegfried von der Trenck, *Heraclitus-Christus*; and Max Reuschle, a disciple of Stefan George, *Begrenzung*. Two women show a distinct personality: Erika Mitterer in *Dunst des Lebens* and Ruth Schaumann, *Die Kinder und die Thiere*. Friedrich Sacher's *Neue Gedichte* contains some interesting verse.

LITERATURE. Every year brings new histories of German Literature. Among the latest are R. F. Arnold's colossal work in 250 volumes; Paul Wiegler's first volume, ending with the death of Goethe, and Hans Kindermann's *Die deutsche Literatur nach Entwicklungsreihen*. Ernst Berkowsky's *Die deutsche Romantik* is an interesting work. Hans Naumann's *Die deutsche Dichtung der Gegenwart vom Naturalismus zum Expressionismus*, Heinz Kindermann's *Das literarische Anklitz der Gegenwart*, Moritz Heymann's posthumous collection of critical essays: *Dichtung von Dichtern gesehen*, and Walter Musch's *Psychoanalyse und Literaturwissenschaft*, lead up to the present, as does Gerda Eichbaum's unique work dealing with the problems of modern youth in the period 1880-1914: *Die Krise der modernen Jugend im Spiegel der Dichtung*. Other books of literary content and interest are Josef Bickermann's *Don Quichote und Faust*, Otto Baltzer's *Judith in der deutschen Literatur*, and Alfred Folgar's critical essays.

BIOGRAPHIES, LETTERS, DIARIES. Emil Ludwig, whose *Lincoln* was published in Germany, while commended for his unretouched realism, was not highly ranked by German critics as historian or biographer. Rudolf Craemer's *Gladstone als christlicher Staatsmann*, and Kurt Kersten's *Bismarck und seine Zeit* are of general interest. Hans Kohn's *Martin Buber: sein Werk und seine Zeit* is a tribute to a writer, ranking high among scholars specializing on Hebrew lore and literature. Hermann Stegemann's *Persönlichkeit und Werk* is a testimonial for the sixtieth birthday of the Alsatian historian, novelist, poet, and politician. A beautiful tribute of friendship is Jacob Wassermann's *Hoffmannsthal als Freund*. E. F. Podach offers the first authentic account of Nietzsche's breakdown in *Nietzsche's Zusammenbruch*.

Max Dauthendey's letters to his wife, *Mich ruft Dein Bild*, pathetically recall the life of a poet prominent in the literary "revaluation" of the eighties. Delightful additions to musical biography are *Die kleine Chronik der Anna Magdalene Bach* and Elsa Reger's *Mein Leben mit und für Max Reger*. Other noteworthy works were H. von Maltzahn's *Karl August von Weimar* and Otto Flake's *Marquis de Sade*. A Schlange-Schönige presents among his *Führer und Völker*, Clémenceau, Lloyd-George, and Woodrow Wilson.

Of unusual interest to musicians is *Franz Liszt als Lehrer*; edited from the notes of a pupil by his granddaughter, Daniela Thode-Bülow. The letters of *Napoleon und Josephine* appeared in German. Heinrich Otto Meissner is the editor of Kaiser Friedrich III's diaries from 1848 to 1866. The charming personality of the poet and novelist Marie von Ölfers is reflected in her letters and diaries.

HISTORY. Joh. Ziekursch contributed to modern German history *Das Zeitalter Wilhelm II*, which

may find a supplement in Count Robert Zedlitz-Tritschler's *Zwölf Jahre am deutschen Hofe*. Julius Petersen's *Die stürmischen Generationen* and Arthur Feiler's *Das Experiment des Bolshevismus* are of general interest. Other works deserving attention are Annette Kolb's volume on Briand, and Fritz Dietrich's *Die Gandhi-Revolution*.

PHILOSOPHY, RELIGION, ETC. An unusually interesting personality was introduced to German readers in the Polish author of remote Scotch descent, Louis F. Anderson, whose *Das Logische, seine Gesetze und Kategorien, Die Seele und das Gewissen*, and *Gottes logische Welt* were creating keen interest among German philosophers. Books on mysticism were multiplying on the book-market; of recent publications the most noteworthy were A. Curtius's *Die neue Mystik*, Fried. Markus Huebner's *Zugang zur Welt; Magische Deutungen*, Karl Joel's *Wandlungen einer Weltanschauung*, and Karl Gruber's *Okkultismus und Biologie*. Breder Christiansen's *Das Gericht unserer Zeit* is a book to make our generation think. Other books belonging to this group are Paul Tillich's *Protestantismus als Kritik und Gestaltung*, Curt Horn's *Das Christusbild unserer Zeit* and Coudenhove-Kalergi's *Wesen des Antisemitismus*.

MISCELLANEOUS. A book touching new ground was Martin Beradt's *Der deutsche Richter*. The pessimistic egotism of the period is treated in Wilhelm Michel's *Das Leiden am Ich*. Ernst Robert Curtius and Arnold Bergstrasse collaborated on *Frankreich*, a work on French culture, economics, and politics, which was compared with Wilhelm Dibelius's *England*. M. J. Bruns wrote *Die Kultur der Vereinigten Staaten von Amerika*, Kuno Francke on *Deutsche Arbeit in Amerika*, Kurt Ziemche, *Die neue Türkei*; and Otto Heller, *Sibirien-ein neues Amerika*. Less serious but enjoyable were the numerous travel books of Wilhelm Hausenstein, among them *Drinnen und Draussen* and *Badische Reise*. Oscar C. H. Schmitz justly entitles his essays on the problem of Germany's position in Europe's cultural community *Wespennester*. Tim Klein's *Im Kampfe der Zeit* and Joseph Wittig's *Aussichten und Wege* had timely interest. Walter von Molo's *wischen Tag und Traum* and Gustav Schüler's *Von Tieren und Narren* are delightful reading, and Franz Blei's *Männer und Masken* is a fair specimen of his brilliant prose. Max Dvorak's collected essays on art history are stimulating.

Intensely stimulating, although sketchy in form, is Annette Kolb's book of reminiscences of travel, meetings with great contemporaries, tributes to Romain Rolland, Gerhart Hauptmann and others, under the title *Kleine Panfare*. Count Keyserling's *Amerika: der Aufgang einer neuen Welt*, suggesting in that country the dawn of a new world, and Arthur Holitscher's *Wiedersehen mit Amerika* are books of personal impressions leading to interesting deductions. Artists will welcome Arthur Möller Van den Bruck's *Die italienische Schönheit*, revised and condensed from a previous book on the evolution of Italian culture, and Georg Gronau's comprehensive study of *Giovanni Bellini*. Of unusual interest to students of literature is Margarete Süßmann's *Die Frauen der Romantik*, with its portraits of Bettina von Arnim, Caroline and Dorothea Schlegel, Rahel Varnhagen and Karoline von Günderode. Alfred Kerr's *Spanische Rede von dem deutschen Drama* with its subtitle *Das Theater der*

Hoffnung adds to the author's brilliant essays.

TRANSLATIONS. The Germans lead in translations from all languages. Among the American and English writers that appeared in German translations during the year are Prof. James T. Shotwell, Sinclair Lewis, E. Thompson-Seton, Jack London, Mary Johnston, R. C. Sheriff, Hugh Walpole, Bertrand Russell, John Cowper Powys, Chesterton, and others. A valuable addition to the innumerable translations into German is Heinrich Lützelers's *Die symbolische Franziskus-legende* admirably done from the Latin. See **PHILOLOGY, MODERN**.

GERMAN NEW GUINEA. The name applied to all the former German territories in the western Pacific. See **NEW GUINEA**.

GERMANY. A federal republic of central Europe, constituted after the abdication of Emperor William II on Nov. 9, 1918; and organized under the constitution adopted July 31, 1919, by the National Assembly at Weimar; formerly the German Empire. It is bounded on the north by the Baltic Sea, Denmark, and the North Sea; on the west by the Netherlands, Belgium, Luxemburg, and France; on the east by Lithuania and Poland, whose Danzig corridor isolates East Prussia from the rest of Germany; and on the south by Switzerland, Austria, and Czechoslovakia. The German Empire consisted of 25 Federal States and the Imperial Reichsland; the Federal Republic consists of 18 republics. Capital, Berlin.

AREA AND POPULATION. At the census of Oct. 8, 1919, the area of the Republic, including the

AREA AND POPULATION

| States of the Empire | Area English sq. miles | Population June 16, 1925 | Pop. per sq. mile 1925 |

| German Republic (with Saar District) * | 181,723 | 63,178,619 | 348 |

* Excluding the Saar and including Waldeck, absorbed by Prussia Apr. 1, 1929.

* The figures for the population of the Saar District, in which the census of 1925 could not be taken, are estimates.

Saar Valley, was 182,213 square miles and the population, 59,852,682, of whom 28,496,419 were males and 31,356,263 females. The accompanying table from the *Statesman's Year Book* for 1930 gives area and population according to the census of June 16, 1925. The estimated population in 1929 was 64,036,000, excluding the Saar Basin, with 770,030 inhabitants in 1927.

That the German population would reach a maximum of about 65,000,000 in 1935 and thereafter drop sharply to about 46,000,000 in 1975, was predicted by Ernst Kahn, a Frankfurt stat-

istician, on the basis of population studies completed in 1930. He pointed out that while marriages per thousand of the population increased from 8 to 9.2 between 1900 and 1929, births fell from 2,000,000 to 1,100,000 annually, indicating a decline in children per marriage from more than 4 to 1.9 in the same period. In Berlin, figures showed that between 56 and 61 per cent of the marriages remained childless. The decrease in the birth rate was only less marked in the smaller cities and even in Catholic Bavaria and Upper Silesia. Emigration in 1928 totaled 57,241, of whom 45,504 went to the United States and 8269 to other American countries (total for 1927, 61,379). Cities having more than 500,000 inhabitants at the census of 1925 were: Berlin (including suburbs), 4,024,165; Hamburg, 1,079,126; Cologne, 700,222; Munich, 680,704; Leipzig, 679,159; Dresden, 619,157; and Breslau, 557,139.

EDUCATION. Elementary education is compulsory between the ages of 6 and 14. A census in 1926-27 showed 52,785 public elementary schools, with 6,659,769 pupils; 572 private elementary schools, with 36,991 pupils; 1574 *Mittelschulen*, with 263,992 pupils; and 2532 secondary schools, with a total of 813,017 students (including 934 schools for girls, with 292,293 students). There were also 10 fully equipped technical high schools, with 20,495 students in 1928, and various other professional schools, besides 23 universities, with 5406 instructors and 83,172 students in 1928. The student enrollment in the respective universities was as follows: Berlin, 10,691; Bonn, 5085; Breslau, 3545; Cologne, 5532; Erlangen, 1551; Frankfurt, 3657; Freiburg, 3829; Giessen, 1496; Göttingen, 3578; Griefswald, 1534; Halle, 1962; Hamburg, 2605; Heidelberg, 3257; Jena, 2750; Kiel, 2422; Königsberg, 2513; Leipzig, 2309; Marburg, 3293; Munich, 8158; Münster, 3265; Rostock, 1405; Tübingen, 3288; Würzburg, 2447. The total university enrollment included 12,037 women and 4073 foreigners.

AGRICULTURE. There were in Germany in 1928, according to official estimates, 51,556,972 acres of arable land, 20,165,876 acres of grass, meadows, and pasture, and 204,575 acres of vineyards. About 61 per cent of the cultivated area produces grain and legumes, while 21 per cent produces

and south German states, while large estates prevail in the northeast. The area and production of the principal crops in 1929 are given in the accompanying table.

The yield of cereal crops in 1930 was considerably reduced by adverse weather conditions. This with the low prices prevailing for agricultural products increased agrarian discontent and demands for Government aid. The national farm indebtedness in 1928 was estimated at 11,400,000,000 marks (about \$2,715,000,000). Official estimates placed the 1930 wheat yield at 3,500,000 tons and the rye yield at 7,600,000 tons. The wheat crop in 1929 totaled about 9,000,000 tons. Livestock in Germany on Dec. 1, 1929, included 18,008,000 cattle, 19,920,000 swine, 3,611,000 horses, 3,475,000 sheep, and 2,620,000 goats.

FORESTS AND FOREST PRODUCTS. The forested area in 1927 totaled 31,035,443 acres, of which 10,328,563 acres were state and partly state forests, 4,914,498 acres communal forests, and the remainder privately owned. Germany was the leading paper producer in Europe in 1929, the output reaching 2,112,500 metric tons (2,088,500 in 1928). Production of chemical pulp was 1,203,958 metric tons, of mechanical pulp, 845,000 tons; of boards, 427,000 tons. Imports of pulpwood supplies in 1929 amounted to 2,533,872 metric tons.

MINING. Prussia supplies the great bulk of the minerals raised in Germany, the chief mining areas being in the districts of Westphalia, Rhenish Prussia, and Silesia (coal and iron), Central Germany (brown coal), the Harz (iron and copper ore), and the Westerwald (iron ore). In 1925 there were 2942 mines in Germany, employing 808,593 persons. Primary horse power directly applied in mining operations was 1,416,750 in 1925 and 1,104,673 in 1907; the horse power of electric motors was 1,672,915 in 1925 and 244,903 in 1907. It was estimated (1929) that in the Ruhr district alone coal reserves within 1000 meters of the surface totaled 28,500,000,000 tons; those within a 1500-meter depth, 75,000,000,000 tons; and those within the limit of coal occurrence, about 250,000,000,000 tons. With an annual output of 100,000,000 tons, the 1000-meter reserves would last about 280 years.

In 1929 the coal output increased 8 per cent to 163,400,000 tons, the coke output 13.9 per cent to 38,500,000 tons, and the lignite output 5.4 per cent to 174,458,000 tons, the highest figure since the World War. Coal exports in 1929 totaled 26,796,000 tons, or 11 per cent more than in 1928. Production in metric tons of other minerals and mineral products in 1929 was: Briquets, 47,823,000; potash, 1,401,000; pig iron, 13,401,000; crude steel, 16,246,000.

INDUSTRY. Difficult conditions obtaining in foreign markets for new capital, the weakening of the home market, and an abnormally severe winter, which crippled activity in a number of lines during the first quarter of the year, were some of the adverse factors facing German industry in 1929. Despite the marked decrease in long-term German loans contracted abroad and the increase in bankruptcies from 11,000 in 1928 to 15,000, industry as a whole continued to develop. The comprehensive programme for reëquipement and technical rationalization was virtually completed and its benefits began to make themselves felt. Production was maintained at the 1928 level, new foreign markets being found for the increasing proportion of products which could not be disposed of in the depressed home market.

GERMAN CROPS: AREA AND PRODUCTION

| Crop | Area ^a | | Production ^b | |
|--------------------------------|-------------------|--------|-------------------------|-----------|
| | 1928 | 1929 | 1928 | 1929 |

° Unit, gallon of wine.

potatoes, sugar beets, and cattle turnips. The average size of individual farms in Germany (leaving out of consideration the very smallest) was 28.65 acres, as compared with 144.8 acres in the United States. The small farms predominate in the west

In 1930 manufacturing for home consumption steadily declined and unemployment increased as the world-wide economic depression and fall in commodity prices made itself felt. German exports, however, continued to expand, taking up some of the slack in the domestic market. The general index of industrial production, based on 100 as the 1928 average, fell to 84.6 in the second quarter of 1930, as compared with 109.1 for the second quarter of 1929. Unemployment increased steadily during the year, the official report for the month of September placing the total at 3,088,000, of whom about 2,000,000 received unemployment insurance benefits. The number of registered unemployed was approximately twice as great as for the same month of 1929. See UNEMPLOYMENT.

The Ruhr is the centre of the steel industry, while iron production centres mainly in the Ruhr, the Saar, Upper Silesia, Hanover, Bavaria, and Saxony. Other leading manufacturing lines are the chemical, electrical, textile, beet sugar, potash, glass, porcelain, earthenware, clock, wood ware, and brewing industries. Beet sugar production in 1928-29 totaled 1,841,356 metric tons (preliminary figures), with 329,002 tons of molasses as by product. A total of 54,997,000 hectoliters (1 hectoliter equals 22 gallons) of beer was brewed in Germany in 1928, mostly in Bavaria. Production figures of some of the leading industries in 1928 and 1929, with comparative figures for 1913, are given in the accompanying table.

INDUSTRIAL PRODUCTION OF GERMANY

| | 1913 | 1928 | 1929 |
|----------------------------------|---------|---------|---------|
| Pig iron . . . 1,000 metric tons | 10,916 | 11,804 | 13,397 |
| Crude steel do . . . | 11,768 | 14,517 | 16,246 |
| Rolling-mill products . . do . . | 9,520 | 10,568 | 11,285 |
| Rayon metric tons | 3,500 | 18,000 | 20,000 |
| Cotton consumption * | | | |
| million lb. | 1,333 | 740 | 753 |
| Vessels launched | | | |
| gross tons | 465,226 | 376,416 | 249,079 |

* Includes linters.

The steel output in 1929 was exceeded only in the boom year of 1927, while pig iron production showed a large gain. Exports of iron and steel products were the highest since 1913, and imports were the lowest since 1926.

FISHERIES. The North Sea fisheries yielded 232,808,666 kilos of fish in 1928 (214,086,508 in 1927), and the Baltic fisheries 38,094,329 kilos.

COMMERCE. German exports in 1929 rose to 14,456,000 marks (1 mark equaled \$0.238) from the 1928 total of 12,307,500,000 marks, while imports declined to 13,986,200,000 marks from 14,968,100,000 marks in 1928. The balance of trade was favorable (by 47,600,000 marks) for the

GERMAN FOREIGN TRADE IN 1928 AND 1929

* Figures for 1928 corrected by Reich Statistical Office under improved system of computing trade returns.

second time since the World War. Deliveries in kind on reparations account, which are included in the export total, increased by 130,319,000 marks to a total of 799,141,000 marks.

Changes in values of Germany's foreign trade by main commodity groups in 1928 and 1929 are shown in the accompanying table issued by the U. S. Department of Commerce.

The general increase in world trade, energetic efforts of German exporters, the industrialization of several of the leading export markets, and lessened domestic demand were important factors in the growth of exports in 1929. With a few minor exceptions, practically all items in the finished-goods group were exported in greater quantities, while imports were generally lower than in 1928.

The United States continued to be the principal source of German imports, followed by Great Britain, Argentina, the Netherlands, and France. While Argentina remained in third place, Great Britain advanced from fourth to second place, and France dropped from second to fifth. Imports from all leading sources of supply showed a downward trend, while German exports to all leading customer nations increased over 1928. The Netherlands replaced Great Britain as the most important market for German goods, while the United States supplanted France as the third important market. The trade balance, which favored the United States by 1,230,700,000 marks in 1928, remained favorable to that country by 796,700,000 marks in 1929.

Germany's favorable balance of trade increased to 1,642,000,000 marks in 1930. Surplus exports and foreign services were thus sufficient to cover her entire reparation payments for the year of 1,800,000,000 marks. Exports declined to 12,035,000,000 marks in 1930, while imports of 10,393,000,000 marks represented an even greater decline from the 1929 figure. The large increase in the favorable balance was due to the fact that prices of imported goods declined more than prices of exports and that depressed domestic trade conditions reduced the demand for foreign raw materials.

FINANCE. Budget estimates for the fiscal year ended Mar. 31, 1930, balanced revenues and expenditures at 11,039,100,000 Reichsmarks, including estimated ordinary receipts and expenses of 10,750,000,000 Reichsmarks. Actual returns showed a deficit in the ordinary budget of 399,000,000 marks and a surplus in the extraordinary budget of 133,000,000 marks. The surplus in the extraordinary budget was created entirely by borrowing. The total uncovered deficit at the end of the year was 1,284,000,000 marks, of which 1,059,000,000 marks were carried over from previous years. Chief items of expenditure in the budget estimates for 1929-30 were: Payments to States and communes, 3,467,000,000 marks; reparation under the Dawes Plan, 2,500,500,000 marks; general administrative expenses, 2,479,900,000 marks; war and civil pensions, 1,719,400,000 marks; debt service, 465,600,000 marks; internal charges arising out of the World War, 252,400,000 marks; and unemployment relief, 154,300,000 marks. For the 1930-31 budget and political repercussions of the Government's financial policies, see below under *History*.

The debt of the Reich on Mar. 31, 1930, totaled 8,453,000,000 marks, as compared with 8,417,000,000 marks on Mar. 31, 1929. The aggregate debts of the Reich, the Federal States, and the munic-

ipalities at the beginning of 1930 totaled 20,598,000,000 marks, or 6,000,000,000 marks more than in March, 1928. The municipal debt constituted 43 per cent of the total. The total public debt (Federal, State, and municipal) in 1913 amounted to 32,000,000,000 marks. Foreign loans secured by Germany in 1930 were estimated by the Reichskredit Bank at 1,403,000,000 marks, of which 887,000,000 marks represented Germany's share of the Young Plan loan and the Swedish Match Company's loan. The total foreign indebtedness, excluding reparations, was estimated at \$6,200,000,000 in September, 1930, while German capital abroad amounted to about \$2,000,000,000.

COMMUNICATIONS. Railway lines on Jan. 1, 1929, totaled 36,255 miles, of which 33,406 miles were owned by the Federal government and operated by the German Railways Company, a private concern. In 1929, the German Railways Company lines hauled 1,980,300,000 passengers and 485,920,000 tons of freight; gross revenues were equivalent to \$1,274,204,000 and operating expenses totaled \$1,069,453,000, leaving a net revenue of \$204,751,000. Comparative figures for 1928 were: Passengers, 2,009,400,000; freight, 480,966,000 tons; gross revenue, \$1,227,890,000; operating expenses, \$1,022,067,000; net receipts, \$205,822,000. Effective Sept. 1, 1930, the Government approved passenger-rate increases of from 3 to 8 per cent, and also increases on express baggage and odd-lot freight to offset the severe decline in revenues. Railway revenues in 1930 were estimated at \$190,000,000 less than in 1929.

There were 7614 miles of inland waterways (1928), of which 1412 miles were canals. In the same year the inland waterways fleet comprised 19,105 vessels of 6,630,342 tons and carried 107,700,000 tons of goods. In 1930 work was under way on a 380-mile canal, navigable for 1500-ton ships, linking Aschaffenburg on the Main with Passau on the Danube. The total cost was estimated at \$185,000,000. In 1928, German air lines carried 120,700 passengers and the planes flew an aggregate of 7,116,062 miles (107,620 passengers and 6,196,392 miles in 1927), while air mail carried in 1929 totaled 385 tons. On Apr. 1, 1930, the Luft Hansa company opened an air taxi service with 150 planes, the fare to any point in Germany being about 42 cents a mile. The postal, telephone, telegraph, and radio broadcasting services are operated by the Federal government. Gross receipts of the Federal Post Office for the fiscal year ended Mar. 31, 1930, totaled 2,281,000,000 Reichsmarks (2,205,000,000 in 1928-29) and net receipts were 222,700,000 Reichsmarks (235,860,000 in 1928-29). The number of subscribers to the radio broadcasting service on Mar. 31, 1930, was over 3,000,000. See **CANALS**.

SHIPPING. The German merchant marine on June 30, 1929, totaled 4,092,552 registered gross tons, as compared with 5,459,296 tons in 1914. Vessels under construction in German shipyards on Mar. 1, 1930, numbered 109, with a total tonnage of 328,000, most of which were for German account. Pooling of the operations of the Hamburg-American and the North German Lloyd Lines to eliminate duplications of tonnage and passenger transportation was undertaken following an agreement reached between the two companies in March, 1930. A total of 49,090 merchant vessels, aggregating 21,613,088 net tons, passed through the Kaiser Wilhelm (Kiel) Canal in 1929. The

German Baltic mercantile fleet in 1930 totaled 423,800 gross tons, as compared with 436,500 gross tons in 1929 and 544,133 tons in 1914. The decrease of the Baltic fleet was attributed to the concentration of German shipping interests on the transoceanic trade. See **SHIPPING, MERCHANT**.

For **ARMY AND NAVY**, see under **MILITARY PROGRESS AND NAVAL PROGRESS**.

GOVERNMENT. Under the constitution of the Republic adopted July 31, 1919, and promulgated Aug. 11, 1919, executive power is vested in the President elected by the people for seven years, and in a ministry appointed by him and responsible to the Reichstag, or lower house of Parliament. Legislative power is vested in the Reichstag, consisting of 575 members (following election of Sept. 14, 1930), who are elected by universal, equal, direct, secret franchise of male and female voters, on the principle of proportional representation; and in a federal council, the Reichsrat, consisting of 68 members (Prussia, 26; Bavaria, 11; Saxony, 7; Württemberg, 4; Baden, 3; other states, 15). The consent of the Reichsrat is required to all bills before their introduction into the Reichstag, but the latter body may pass a bill over the heads of the former by a two-thirds vote. The composition of the Reichstag at the beginning of 1930, ranging in the order named from the reactionary Right to the radical Left, was: National Socialists (Hitler), 12; German Nationalists (Hugenberg), 64; Bavarian People's party, 17; German Peasants' party, 8; Economic party, 23; Centre, 61; People's party, 45; Democrats, 25; Social Democrats, 152; Communists, 54; four other small parties, 36; total, 491.

The Ministry at the beginning of 1930 was constituted as follows: Chancellor, Hermann Müller (Social Democrat); Foreign Affairs, Dr. Julius Curtius (German People's party); Interior, Karl Severing (Social Democrat); Finance, Dr. Paul Moldenhauer (German People's party); Economic Affairs, R. Schmidt (Social Democrat); Labor, R. Wissell (Social Democrat); Justice, Theodor von Guérard (Centre); Defense, Lieut.-General Wilhelm Groener; Posts, Dr. G. Schätzkel (German People's party); Transport, Dr. A. Stagerwald (Centre); Food and Agriculture, Hermann Dietrich (German Democratic party); Minister for Occupied Provinces, Dr. J. Wirth (Centre). President in 1930, Paul von Hindenburg, elected Apr. 26, 1925; assumed office, May 12, 1925.

HISTORY

Two major issues shaped the course of events in Germany in 1930. Financial stringency, with its related problems of industrial depression, unemployment, and farm relief, led to the collapse of the Müller Coalition Cabinet on March 27. And a resurgent nationalism, demanding the abandonment of both parliamentary government and Stresemann's policy of peace, made phenomenal gains in the elections of September 14.

RATIFICATION OF THE YOUNG PLAN. The year opened with the attention of the nation focused upon the international conference at The Hague, where on January 20 a final agreement was reached among the German and Allied delegations upon the somewhat modified Young Plan for the payment of German war reparation (see **REPARATIONS**). The negotiations at The Hague were featured by the announcement of Dr. Hjalmar Schacht, president of the Reichsbank, that the bank would refuse to cooperate in the estab-

lishment of the Young Plan unless the plan was restored to its original form. This action by Dr. Schacht, who had been called to The Hague in an advisory capacity by the German delegation, threatened the success of the conference. The Reichsbank president was forced to reverse his position, however, when the German government provisionally arranged for other German banks to contribute the needed capital for the establishment of the Bank of International Settlements.

The Cabinet on February 11 introduced bills for putting into effect the Young Plan and separate agreements for the liquidation of Polish-German debts and the debts owing to the United States. These bills immediately became involved in the controversy as to financial policy among the parties forming the Government coalition—a struggle which seriously weakened the position of the Cabinet. The Catholic Centre party insisted upon definite determination of the Reich's future financial policy as the price of its support for the Young Plan. The Socialists demanded a special tax on salaried workers for one year to raise 100,000,000 marks needed for a more comprehensive unemployment insurance scheme. This measure the People's party bitterly opposed as detrimental to industry, already heavily taxed. On March 5, Finance Minister Moldenhauer reconciled these conflicting demands in a compromise scheme for raising some 475,000,000 marks (\$118,750,000) in new taxation needed to meet the Young Plan annuities and to balance the budget. A larger unemployment insurance reserve (\$62,500,000) was to be accumulated; partly out of reserves of the Bank for Industrial Obligations, which was to cease functioning when the Young Plan came into effect, partly through the sale of German railway company preference shares, and partly through a one-fourth of 1 per cent increase in insurance fees paid by both employers and employees. Increased taxes on beer, coffee, tea, mineral waters, and gasoline were to provide further revenues.

With the somewhat hesitant support of the coalition parties thus assured, the Cabinet secured the Reichsrat's approval of the Young Plan on March 5. The bill had passed its first reading in the Reichstag when Dr. Schacht on March 7 suddenly resigned as president of the Reichsbank on the ground that he was unwilling to accept the responsibility for the execution of the Young Plan, as modified by the two Hague conferences. His dramatic effort to torpedo the Young Plan strengthened opposition to it in the Reichstag temporarily. But on March 11 the Reichstag approved the bill on its second reading by a vote of 251 to 174, at the same time electing Dr. Hans Luther, former Chancellor and former Finance Minister of the Reich, as Dr. Schacht's successor. The following day the Young Plan was ratified on its final reading, the Centre party having been forced into full support by a warning from President Hindenburg that he would not sign the bill unless it was ratified by a substantial majority. The President signed the Young Plan bill on March 13, at the same time issuing an appeal to his countrymen to rise above their party differences for the good of the Fatherland. The supplementary agreements with the United States and Poland were signed on March 13 and 18, respectively.

REPARATION REPORT. The financial difficulties, which gave rise to the Government's chief problems in 1930, were attributed by S. Parker Gil-

bert, Agent-General for Reparations, in his final report of June 15, 1930, to the Reparations Commission, to the Government's unwillingness to live within its income. (For other details of report see REPARATIONS.) Revenues, Mr. Gilbert said, had been sufficient for all legitimate requirements. Despite important reductions in taxation during the first years of the Dawes Plan, the Government's income had risen to an estimated total of 10,061,000,000 marks (\$2,394,418,000) in 1929-30, as compared with 7,757,000,000 marks (\$1,846,166,000) in 1924-25.

Notwithstanding these increases, the Government "for the past four years has spent more than it has received and at times, especially in 1929-30, it has made commitments to spend even more than it could borrow," the report stated. Mr. Parker attributed much extravagance to the system of divided responsibility under which the States and communes spent the taxes collected and distributed to them by the Reich. He also criticized the obscurity of the budget as encouraging unsound financial practices, and considered the existing derangement of public finances one of the chief reasons for the recession in the volume of production and trade. Mr. Gilbert pointed out that social expenditures, including unemployment insurance, rose from 259,000,000 marks (\$61,642,000) in 1924-25 to 1,345,000,000 marks (\$320,011,000) in 1929-30, and that there had been little effort to keep the unemployment insurance system on a self-sustaining basis.

FAIL OF THE MÜLLER CABINET. The compromise agreement on the unemployment insurance fund and other financial measures which united the Government coalition (excepting the Bavarian People's party) in support of the Young Plan, soon broke down under the strain of the intense party feeling aroused during the Young-Plan debate and the subsequent discussion of financial reforms for 1930. The Social Democrats, who with 152 votes formed the largest group in the Reichstag, overwhelmingly voted to withdraw their support from the Cabinet rather than accept the less drastic reform in the system of unemployment insurance advocated by the other Government parties.

The Cabinet resigned immediately (March 27) and President von Hindenburg entrusted Dr. Heinrich Brüning, Centrist leader in the Reichstag, with the formation of a new Ministry. Dr. Brüning's Cabinet, confirmed on March 30, was drawn from the conservative and middle-class parties, omitting the Social Democrats, who now became the most powerful of the Opposition groups. Membership of the Ministry was as follows: Chancellor, Heinrich Brüning; Foreign Affairs, Julius Curtius; Interior, Joseph Wirth; Finance, Paul Moldenhauer; Agriculture, Martin Schiele; Labor, Adam Stegerwald; Transportation, Theodor von Guérard; Justice, Johann V. Bredt; Economics, Hermann R. Dietrich; Posts, George Schätzel; Defense, General Wilhelm Groener; Minister Without Portfolio, Gottfried R. Treviranus.

The Cabinet represented the Catholic Centre, the Democratic, Economic, and Bavarian People's parties, and included also one German Nationalist, Dr. Schiele, and the leader of the newly formed Conservative People's party, Dr. Treviranus, who had broken away from Dr. Hugenberg's German Nationalists. The inclusion of Dr. Schiele, who was spokesman for the agrarian interests in the Reichstag, was attributed to President von

Hindenburg's insistence upon the extension of financial relief to the hard-pressed agriculturalists of eastern Germany. Dr. Schiele's participation had the effect of splitting the ranks of the German Nationalists, although he resigned from the party to avoid committing it to the Government's programme. Under the leadership of Dr. Alfred Hugenberg, the Nationalists had been prepared to oppose the Brüning Government. The Ministry commanded only 199 votes out of 491 and its existence depended upon the support of some of the Nationalists.

President von Hindenburg, taking a serious view of the crisis, authorized the Chancellor to dissolve the Reichstag if the Cabinet failed of a vote of confidence and to conduct the Government under Article 48 of the Constitution, which gives the President virtually absolute power "if public safety and order be seriously disturbed or threatened." Dr. Brüning's programme, outlined to the Reichstag on April 1, was similar to that of his predecessor—loyal execution of Germany's international obligations, immediate relief for agriculture (to cost \$100,000,000), financial and treasury reforms, and strict economy. That the late Dr. Strösemann's foreign policy of coöperation in the reconstruction of Europe would be continued was insured by the presence in the Cabinet of Dr. Curtius. The Government survived its first test in the Reichstag on April 3, when a Socialist "no-confidence" motion was defeated 252 to 187. Only a last-minute shift in the Nationalist ranks prevented Brüning's downfall.

TAXATION AND FARM RELIEF. The difficulties of framing a taxation measure to secure the additional income needed for agricultural relief and financial reform arose immediately to plague the Government. Each proposal of the Finance Minister was met in turn by objections of the groups most likely to be affected by it. By bargaining with each of the protesting parties, the Cabinet finally framed a tax measure which provided for additional income of approximately 534,000,000 marks (about \$127,198,000) from the following sources: Beer, 150,000,000 marks; gasoline, 77,000,000; tobacco and sugar, 30,000,000; mineral waters, 40,000,000; tea and coffee, 50,000,000; tax on industry, 50,000,000; turnover tax, 110,000,000; special tax on large department stores, 27,000,000.

The farm relief bill, submitted to the Reichstag along with the tax reform bill, provided for the upward revision of import duties on a long list of agricultural products sufficient to give Germany one of the highest tariffs in Europe. Export bounties were granted German farm products and a sliding tariff on grain was provided whereby the Cabinet might increase the rate to maintain the price of the domestic product. On April 14, Chancellor Brüning won a substantial majority for the agrarian measure and secured the passage of the tax reform bill by the narrow margin of six votes. Both bills were signed by President von Hindenburg April 30, after ratification by the Reichsrat. The Cabinet was saved again only by a split within the Nationalist party. A majority of the Nationalist deputies, led by Count Westarp, defied Hugenberg, the official party leader, and voted in support of the Government.

The new agricultural tariff had brought strong protests from Poland and Rumania and threats of retaliatory measures from various European countries. In Germany, also, the tariff was bit-

terly criticized by the Association of German Industry, while the Socialists and Trade Unionists threatened to abrogate existing wage scales because of the expected rise in the cost of living.

THE PARLIAMENTARY DEADLOCK. The budget for the fiscal year ending Mar. 31, 1931, as submitted to the Reichstag on May 2, made no provision for meeting the accumulated deficit of 1,284,000,000 marks (about \$305,592,000) outstanding at the end of the 1929-30 fiscal year. Appropriations aggregated about 11,277,000,000 marks (\$2,685,000,000), or 352,800,000 marks (\$84,000,000) more than in 1929-30. The methods proposed for raising this sum failed to win the approval of the various parties forming the Government coalition, however, and for two months Chancellor Brüning negotiated with the party leaders in an effort to secure an agreement necessary to the passage of a budget. In the meantime the deficit was constantly growing, due to enlarged expenditures for unemployment relief. It was estimated in August, on the basis of existing taxation, that the deficit for 1930-31 would total over 760,000,000 marks (about \$180,000,000). Finance Minister Moldenhauer resigned June 18 because of opposition to his budget proposals, and was succeeded June 26 by Herman Robert Dietrich, Democratic Reichstag leader.

The budget measure finally brought to a vote on July 16 provided for increases in the income and poll taxes, and curtailment of the period for payment of tobacco taxes. It was accompanied by notice from President Hindenburg that if rejected by the Reichstag he would make the budget effective through the application of Article 48 of the Constitution, which grants the President extraordinary powers in case of emergency. Nevertheless the budget was rejected by a vote of 256 to 193, with the Nationalists, National Socialists, Social Democrats, and Communists voting in opposition. Rather than resign or request the dissolution of the Reichstag and new elections, the Ministry chose to put the budget into force under the President's "emergency" decree. The Social Democrats countered two days later with a bill annulling the emergency law, and the bill was passed 236 to 221, with the same parties supporting it as had opposed the budget measure, except for 23 Nationalists under Count Westarp, who again defied the party leader, Hugenberg, and voted with the Government forces. As provided by the Constitution, President Hindenburg was forced to sanction the annulment of his decree. He then dissolved the Reichstag, ordering new elections for September 14.

The Brüning Cabinet, saved from immediate defeat, again invoked Article 48 and adopted a budget on July 26, with the President's approval, which differed only in minor respects from that rejected by Parliament. The new budget, effective September 1, cut expenditures by \$40,000,000 and increased revenues by a 5 per cent raise on the general income tax, a 10 per cent increase on the income tax of bachelors, and a special additional levy of 2½ per cent on civil employees. It also gave the communes authority to increase the beer and head taxes and provided for the relief of agriculture.

FASCISM'S ELECTORAL TRIUMPH. The elections of September 14 were remarkable chiefly for the immense gains registered by Herr Adolph Hitler's National Socialist (Fascist) party on an extremely nationalistic platform calling for the scuttling of both parliamentary government in

Germany and the entire foreign policy of Stresemann and Curtius, based on coöperation with the League of Nations and with the European Powers in the economic reconstruction of Europe. Opposing the Versailles Treaty, Young Plan, League of Nations, and Locarno Pact, the Hitlerites demanded the return of territory, including the colonies, severed from Germany by the peace treaty, withdrawal of "the war-guilt lie," union of Germany and Austria, and the elimination of foreign elements, and particularly Jews, from German national life. In the economic sphere, they favored heavy taxation of the rich in the interests of the working man, the poor, and the small middle-class shopkeeper, abolition of unearned income, repayment of war profits, nationalization of the great trusts, a share for the government in all large business undertakings, and the communalization of great department stores.

On this programme, the National Socialists polled a vote of 6,401,210 out of a total of 34,942,854, as compared with 809,980 out of 30,724,478 votes cast in 1928. They increased their representation in Parliament from 12 to 107, ranking next to the Social Democrats as the second group in the Reichstag. The Communist gains were only less sensational, their vote increasing to 4,587,708 from 3,263,354 in 1928, and their parliamentary delegation to 76 from 54 in 1928. The Social Democrats polled 8,572,016 votes, as compared with 9,150,533 in 1928, and held only 143 seats instead of 152 in the previous Reichstag, but still remained the strongest party. The Centre and Bavarian People's parties registered slight gains, while the German People's, Economic, and State parties lost ground. The extremist gains were undoubtedly due to widespread bitterness at difficult economic conditions, which were attributed partly to the Versailles Treaty and the Young Plan and partly to the lack of energetic leadership in Parliament.

Among the consequences of the election was the dissolution of the Democratic party, organized in 1918 by Dr. Hjalmar Schacht, Theodor Wolff, and others, and the formation of a new State party of liberal and moderate tendencies. Attempts made by Dr. Scholz of the People's party to form a new party incorporating all conservative middle-class groups failed. A third party, the Conservative People's party, was reorganized by Herr Gottfried Treviranus and Count Westarp, but lost all except five of its 19 seats in the former Reichstag. Treviranus himself was eliminated from the Reichstag.

THE NEW REICHSTAG. The newly elected Reichstag convened October 13 amid riotous demonstrations by Fascist and Communist mobs outside the Parliament building and adjourned after a week of stormy sessions until December 3. It was composed as follows: Social Democrats, 143; National Socialists, 107; Communists, 76; Centrists, 68; Nationalists (Hugenberg), 41; German People's party, 29; Economic party, 23; State party, 20; Bavarian People's party, 19; Landvolk, 18; Christian Socialists, 14; German Peasants, 6; Conservative People's, 5; Hanoverians, 3; Land Union, 3; total, 575. The parties in Opposition to the Brüning Government now held a safe majority, but the Social Democrats were won over to a policy of benevolent neutrality and indirect support of the Ministry. With their aid the Government secured the Reichstag's approval of its emergency decrees by a margin of 119 votes.

By unexpectedly large majorities, Chancellor Brüning pushed through a measure establishing an amortization fund out of which the Reich's floating debt was to be liquidated in the succeeding three years, shelved motions demanding the cessation of reparation payments by referring them to the Foreign Relations Committee, and secured tacit approval of the 1930 budget measure. The amortization fund was supported by a credit of \$125,000,000, negotiated with a syndicate of American and other foreign bankers, which the Reichstag approved also.

THE 1931-32 BUDGET. In the interim between the October and December sessions of the new Reichstag, the Brüning Cabinet formulated its budget plans for the fiscal year commencing Apr. 1, 1931. As approved by the Ministry, October 24, the ordinary budget estimates balanced at 10,400,000,000 marks (about \$2,475,000,000), while extraordinary income and outgo were estimated at 237,773,000 marks (about \$56,590,000) additional. The proposed budget was 1,134,000,000 marks (about \$270,000,000) less than the 1930 budget decreed in July. Social welfare disbursements and transfers to the Federal States and municipalities were each reduced by about \$100,000,000, while appropriations for the various Ministries were cut about \$75,000,000.

The budget was approved by the Reichsrat on November 20. Subsequent developments, including the withdrawal of the Economic party's Minister from the Cabinet, convinced Dr. Brüning that his budget programme would meet defeat if submitted to the Reichstag. Accordingly, President von Hindenburg on December 1 again invoked Article 48 of the Constitution and decreed the enactment into law of the finance programme. Confronted with this *fait accompli* upon reconvening December 3, the Reichstag voted by a majority of 38 to sustain the decrees. Their rejection would have meant either resignation of the Government and the possible formation of a Right cabinet including the National Socialists or the dissolution of Parliament and new elections. Rather than face these alternatives, the Social Democrats voted to support the Government.

NATIONAL DEFENSE LAW. A new and more drastic national defense law, designed to check the growing agitation against the Republic by Communists on the one hand and by Monarchists and National Socialists (Fascists) on the other hand, was adopted by the Reichstag March 15, the vote being 265 to 151. Insults or agitation directed against the flag or Constitution of either the Reich or its constituent States, or insults against the President and Government officials in their public capacities were made punishable by not less than three months' imprisonment. The same penalty was provided for those who urged or praised treason against the Republic. Police were authorized to break up any anti-republican meeting which threatened to disturb the peace.

Passage of the bill followed numerous violent Communist demonstrations in the industrial centres, the discovery of widespread Communist propaganda in the army, and an official warning issued by Minister of Defense Groener on March 8 that the danger of a Communist uprising was imminent.

Fascist and Communist gains in the elections of September 14, the Leipzig trial late in September, and the so-called "Frick Affair" increased the alarm of the republican elements. The Leip-

zig trial involved the cases of three army officers who were convicted of treason for plotting a Fascist *putsch* in collaboration with National Socialist leaders. The National Socialists seized the opportunity for a great Fascist demonstration. Adolph Hitler, called as a witness, startled the country and Europe by predicting that if his party gained control, the heads of the German Social Democratic and middle-class leaders who signed the Versailles Treaty would "roll in the sand." He said, however, that Fascist plans would be executed only within legal channels. Fascist threats against the Social Democrats and pacifists were repeated during the tumultuous sessions of the Reichstag in October. They promised a war to free the Reich of the burdens imposed by the Versailles Treaty, if "legal" methods failed. Earlier in the year, the openly Fascist activities of Herbert Frick, a Cabinet official of the conservative State of Thuringia, caused Minister of Interior Severing to discontinue Federal contributions to the government of that State. Frick was forced to promise that he would not allow his Fascist sympathies to dictate appointments to the State police force.

The *Stahlhelm*, or monarchist military organization, was ordered dissolved by the Social Democratic government of Prussia in its provinces of Rhineland and Westphalia early in the year on the ground that its activities were illegal. The ban was withdrawn in June, however, when President Hindenburg, who was honorary president of the organization, threatened to omit his scheduled visits to these provinces in connection with the celebration of the final liberation of the Rhineland from foreign occupation.

EVACUATION OF THE RHINELAND. In accordance with the agreement reached at the Hague Reparation Conference, French and Belgium troops evacuated the final zone of occupation of the Rhineland on June 30, 1930, five years before the date fixed in the Treaty of Versailles. The jubilant celebration of their departure by the Rhineland population was marked by attacks upon Germans who had advocated the separation of the Rhineland from the German Reich following the World War. A proclamation by President Hindenburg voiced the nation's gratitude to those who had suffered "through arbitrary foreign rule" because of their allegiance to Germany. French troops were cheered as they left Mainz, however. Hindenburg's official visit to the liberated districts was cancelled July 23, following a disaster which marred a reception celebration at Coblenz. A small bridge crowded with spectators collapsed, costing the lives of about 40 people, mostly women and children. Evacuation of the last Allied troops in Germany, consisting of 250 railway police in the Saar, took place Dec. 12, 1930.

FOREIGN RELATIONS. The recrudescence of aggressive nationalism in Germany, evidenced by Fascist election gains and anti-separatist riots in the Rhineland, aroused much anxiety in France, Poland, and the countries of the Little Entente, particularly after Premier Mussolini placed Italy at the head of the nations demanding the revision of the peace treaties. A counter-wave of nationalism swept France and her allies, threatening Foreign Minister Briand's policy of peace and arousing forebodings of another European war (see articles on each country under *History*). The tension was increased during August by unauthorized speeches made by Gottfried Treviranus, the German Minister for Occupied Areas,

in which he demanded revision of the eastern frontier and the elimination of the Polish Corridor. Subsequently, however, both Chancellor Brüning and Foreign Minister Curtius pledged Germany to a continuance of Stresemann's policy of peaceful cooperation with the other European Powers. German liberals remained cool toward Premier Mussolini's offer of assistance in securing a revision of the peace treaties. Nevertheless, the Government's response to Briand's proposal for a political and economic federation of European states made it plain that a revision of the European political structure must precede Germany's adherence to such a federation.

Friction between guards along the German-Polish border led to an armed clash on June 7, in which a Polish officer was killed. A Polish and German Mixed Commission appointed to conduct an inquiry was unable to agree upon a joint report and finally presented separate reports jointly to both Governments. For relations with Russia, see *RUSSIA* under *History*.

GERMAN-AMERICAN DEBTS. The agreement for the settlement of the debt to the United States, ratified by the Reichstag on March 12, was approved by the American House of Representatives May 22 and by the Senate June 5.

It provided for the payment by Germany of the costs of the American army of occupation and of awards of the Mixed Claims Commission, amounting to approximately \$753,400,000 including interest, over a period of 52 years. The agreement was negotiated during 1929 as an aid to the work of the Young Commission in fixing German reparation payments. As compensation for the seizure of 94 German vessels during the World War by the United States government, James W. Remick, war claims arbiter, on June 10 awarded German shipowners sums aggregating \$74,243,000. The chief claimants were the Hamburg-American Line, which received \$38,801,000, and the North German Lloyd, which obtained \$27,311,000.

American claims of \$40,000,000 for the alleged destruction by German agents of the Black Tom and Kingsland munitions plants in 1916 and 1917 were heard by the German-American Mixed Claims Commission at The Hague in September. An interesting development was the admission by Dr. Karl von Lewinski, chief counsel for Germany, that German agents had violated American neutrality in 1915 and 1916 by hiring men to infect horses and mules destined for the Allied armies with anthrax, to foment strikes, and to place bombs on the piers used by Allied vessels. He denied any connection between the activities of German agents and the munitions explosions. The commission rejected the American claims by a unanimous decision issued Nov. 14, 1930. On Dec. 10, 1930, the famous Blücher Palace on Unter den Linden was purchased by the United States Government for the use of the American Embassy and other official missions of the United States in Berlin.

OTHER EVENTS. Two great mine disasters occurred in Germany in 1930. Explosions in the Wenceslaus mine at Neurode, Lower Silesia, on July 10, and in the Anna mine at Alsdorf, Rhenish Prussia, on October 21 cost the lives of nearly 300 miners. A law placing further restrictions upon the sale of liquor in Germany was passed by the Reichstag April 8 and became effective July 1. See *LEAGUE OF NATIONS, NAVAL PROGRESS, and FRANCE, ITALY, and POLAND* under *History*.

GIBRALTAR. A British possession consisting of a small peninsula on the southwest coast of Spain. The Rock of Gibraltar commands the entrance to the Mediterranean Sea. Area, $1\frac{3}{4}$ square miles; population, at the census of 1921, 20,638, of whom 2932 were military and 546, naval men. The civil population on Jan. 1, 1929, was estimated at 15,719, excluding about 1212 aliens. The inhabitants are chiefly descendants of Spanish and Italian settlers. In 1928-29 there were 13 government-aided elementary schools with 2681 pupils, and five secondary schools. The revenue in 1928 was £164,180 and the expenditure, £165,993. There was no public debt. Trade is mainly transit. Vessels entered in 1928 numbered 3478 of 6,712,702 tons; cleared, 2045 of 5,562,527 tons. Cables connect with the Continent, with eastern Mediterranean ports, and with England. Gibraltar is under a governor who is also commander-in-chief. He is assisted by an executive council, established in 1922. Governor in 1930, General Sir Alexander J. Godley, appointed October, 1928.

GIFTS AND BENEFACTIONS. See UNIVERSITIES and COLLEGES.

GILBERT, S. PARKER, AGENT-GENERAL FOR REPARATION PAYMENTS. See REPARATIONS; GERMANY under *History*.

GILPIN, CHARLES SIDNEY. An American Negro actor, died at Eldrid Park, near Trenton, N. J., May 6, 1930. He was born in Richmond, Va., Nov. 20, 1878, and attended the St. Francis School there. At the age of 14, he began to work in a printing office in Richmond, occasionally appearing in music halls. In 1903 he joined the Canadian Jubilee Singers at Hamilton, Ontario, and in 1905-06 toured with Williams and Walker's Abyssinia Company, and Gus Hill's Smart Set Company. He was a member of the Pekin Stock Company of Chicago in 1907-08; he was with the Pan-American Octette in 1911-13; he toured in *Old Man's Boy* in 1913; and he appeared in vaudeville in Canada in 1914. In 1916 he was appointed producer at the Lafayette Theatre in New York, where he was at the head of the first dramatic stock company in that city. He played the rôle of William Custis in Drinkwater's *Abraham Lincoln* in 1919 and he was cast for the part of Brutus Jones in O'Neill's *The Emperor Jones*, produced in New York by the Provincetown Players in 1920. His interpretation of the rôle of Brutus Jones, the pullman car porter who became a ruler in the West Indies, received unusual praise from the New York dramatic critics. From 1920 to 1924, he played in *The Emperor Jones* and, thereafter, in revivals of the play. Because of ill health, he retired in 1929.

GIPSY MOTH. See ENTOMOLOGY, ECONOMIC.

GIRL SCOUTS. A nonsectarian movement for girls, started in Savannah, Ga., in 1912 by Mrs. Juliette Low and adapted from the scouting programme begun in England in 1907 by Sir Robert Baden-Powell. It is a leisure-time programme which supplements and interprets the all-too-frequently scattered and puzzling experiences of the "teen-age" girl in home, school, church, and neighborhood. It rests upon the development among girls of ideas of growth and service, and the full, happy, and useful employment of their

interests and capacities in work and play with other girls in their respective communities.

The working membership unit of the Girl Scouts is the troop, consisting of from 8 to 32 members. This, in turn is divided into patrols, consisting of from four to eight girls in each patrol. The adult leader of the troop is known as the captain. There are three ranks in Girl Scouting: Tenderfoot; second class; and first class. The requirements for these and for some 50 proficiency badges and for the Golden Eaglet award are described in the *Girl Scout Handbook*. In each community women interested in the movement are organized as local councils, community committees, or troop committees to help support and develop the local Girl Scout activities.

The active, paid-up memberships in the Girl Scouts as of Oct. 31, 1930, totaled 197,021, with an additional enrollment of 8456 Brownies (girls between 7 and 9) and 30,983 leaders. In 1930, 13 national training schools, as well as courses in many colleges and universities, were conducted for Girl Scout leaders and young women who were interested in training for volunteer leadership. On Jan. 1, 1930, the national organization entered upon a five-year plan, aiming to increase the membership and enlarge the influence of the Girl Scout movement and to develop and enrich its whole programme.

The national organization is a member of the World Association of Girl Guides and Girl Scouts, which in 1930 included 28 countries. At the sixth world conference held in Foxlease, England, in July, 1930, Lady Baden-Powell was elected chief guide, and an international Girl Scout and Girl Guide flag—a gold trefoil on a blue background—was adopted. The next biennial world conference was to be held in Poland in 1932.

The official organ for girls is *The American Girl Magazine*, and for leaders, *The Girl Scout Leader*, each a monthly publication. The officers elected at the national convention held in Indianapolis, Ind., Oct. 1-4, 1930, were: Honorary president, Mrs. Herbert Hoover; chairman of the board of directors, Mrs. Nicholas Brady; president, Mrs. Frederick Edey; corresponding secretary, Mrs. Julius H. Barnes; treasurer, Mrs. Edgar Rickard; national director, Miss Josephine Schain. National headquarters are at 670 Lexington Avenue, New York City.

GLACIERS. See EXPLORATION under *Asia*.

GLADSTONE, glád'stūn, HERBERT JOHN GLADSTONE, FIRST VISCOUNT. An English statesman, youngest son of William Ewart Gladstone, died in Hertfordshire, Mar. 6, 1930. He was born in London, Jan. 7, 1854, and was educated at Eton and at University College, Oxford University. After lecturing in history at Keble College in 1877-80, he entered Parliament as a Liberal member for Leeds (1880-85), after which he represented Leeds, West, until 1910. He was private secretary to his father in 1880-81, Junior Lord of the Treasury during 1881-85, and Financial Secretary to the War Office in 1886. He was Under-Secretary of the Home Office in 1892-94 and First Commissioner of Works in 1894-95. From 1899 to 1906, he served as chief whip to the Liberal party and, from 1905 to 1910, was Secretary of State for Home Affairs. In 1910 he was created viscount and Knight of the Grand Cross of St. Michael and St. George. Later in the same year, he was appointed High Commissioner and first Governor-General of the new Union of South Africa, an office which he held until 1914. In these

years, he successfully established the new Government, for which services he was made Knight of the Grand Cross of the Bath. During the World War, Lord Gladstone was head of the War Refugees Organization in England. He attracted popular notice in 1925, when he defended his father's name against attacks made upon it by Captain Peter Wright in his book, *Portraits and Criticisms*. Lord Gladstone was the author of *W. G. O. Gladstone* (1918) and *After Thirty Years* (1928), also a biography of his father.

GLANDS. See MEDICINE, PROGRESS OF.

GODDARD ROCKET. See AERONAUTIC ROCKET EXPERIMENTS.

GODOY, JOSÉ FRANCISCO. A Mexican diplomat, lawyer, and writer, died in Mexico City, July 29, 1930. He was born in Tampico, Mexico, Aug. 9, 1851, and received his education in Mexico City and San Francisco, Calif. On being admitted to the bar, he practiced for a number of years in California and Mexico. He also edited *The Railroad* and *The Mexican Commercial Review* (in English and Spanish) and was on the staff of *The Two Republics*, *La Patria*, and other dailies. After serving as chargé d'affaires of Mexico in the Central American republics during 1893-96, he became first secretary of the Mexican Embassy in Washington, where he was stationed until 1903. He was then appointed Minister of Mexico to the Central American Republics and, in 1905, to Cuba, holding the latter post for more than 15 years. His best-known work was *Tratado de Extradición* (1896), used as a textbook in many Latin-American schools. He wrote, in collaboration, *A Few Facts about Mexico*, *Mercantile and Legal Hand Book of Mexico*, *The Prominent Men of Mexico*, *Biography of President Porfirio Díaz*, and *La Ciudad de San Francisco*, and edited *Today's Diplomatic and Consular Review*.

GOLD. The U. S. Bureau of the Mint, with the cooperation of the Bureau of Mines, issued the accompanying preliminary estimate of refinery production of gold in the United States during the calendar year 1930 based on arrivals at U. S. Mints and Assay Offices and at private refineries.

UNITED STATES GOLD PRODUCTION, 1930

| States | Ounces | Value |
|--------------------------|------------------|---------------------|
| Alaska | 394,779 | \$ 8,160,800 |
| Alabama | 10 | 200 |
| Arizona | 151,428 | 3,130,300 |
| California | 438,912 | 9,073,100 |
| Colorado | 214,195 | 4,427,800 |
| Georgia | 203 | 4,200 |
| Idaho | 20,748 | 428,900 |
| Illinois | | |
| Maine | 29 | 600 |
| Michigan | | |
| Missouri | | |
| Montana | 45,724 | 945,200 |
| Nevada | 134,410 | 2,778,500 |
| New Mexico | 29,576 | 611,400 |
| North Carolina | 184 | 3,800 |
| Oregon | 13,975 | 288,900 |
| Pennsylvania | 639 | 13,200 |
| South Dakota | 402,422 | 8,318,800 |
| Tennessee | 1,030 | 21,300 |
| Texas | 1,122 | 23,200 |
| Utah | 200,103 | 4,136,500 |
| Vermont | | |
| Washington | 3,720 | 76,900 |
| Wyoming | 450 | 9,300 |
| Philippine Islands | 178,934 | 3,698,900 |
| Total | 2,232,593 | \$46,151,800 |

Comparison with 1929 production indicates an increase in 1930 of \$500,400 in gold. Comparison with the year of largest production, 1915, when gold amounted to \$101,035,700, gives a reduction of \$54,883,900 in gold.

Considering the figures in the above table, it will appear that California continued in 1930 to be the largest producer with an output of 438,912 ounces, which may be compared with 409,020 ounces in 1929. This increase came from the lode mines and practically all the larger mines recorded a greater output. There was again a decrease in placer mining carried on mainly by dredging, but the active mining of copper during the first half of the year served to increase the gold production. In South Dakota the Homestake Mine at Lead, which was the largest gold producing mine in the United States, showed a gain of \$1,900,000 over 1929, notwithstanding a serious fire which occurred in July. In Colorado gold output was 214,195 ounces as compared with 220,285 in 1929, Cripple Creek production being valued at \$2,526,667, and that of San Juan County at \$658,357. The decrease of gold production in Utah from 237,211 ounces in 1929 to 200,103 ounces in 1930 was accounted for by reduced operations of the Utah Copper Company. Nevada also showed a decline from \$3,384,211 in 1929 to \$2,729,000 in 1930. Various improvements in the metallurgy of gold were scored during the year and are discussed in the article METALLURGY (q.v.).

WORLD PRODUCTION. Unlike most metals, there was an increased output in the world production of gold in 1930 over 1929 represented by approximately 1,000,000 fine ounces or over \$20,000,000. This carried out the well-known fact that gold mining attracts labor and capital when business conditions are generally unfavorable, but the significance was considered of no special importance by competent authorities. Cost of production did not show any particular decline during the year, although in Africa it was reported that native labor would soon be in a position to supplant white workmen underground and that other economies would be introduced in the mining and milling of low-grade ores. Looking at the production figures for 1929 and 1930 the accompanying tabulation from the *Engineering and Mining Journal* is of interest in this connection.

WORLD PRODUCTION OF GOLD, 1929 AND 1930 [In Fine Ounces]

| Country | 1929 | 1930 |
|--------------------------|-------------------------------|-------------------------------|
| Transvaal | 10,414,066 ^a | 10,719,760 ^a |
| United States | 2,208,386 ^b | 2,232,593 ^b |
| Canada | 1,928,308 ^c | 2,089,766 ^c |
| U. S. S. R. (Russia) ... | 835,918 ^d | 868,068 ^d |
| Others | 4,126,152 ^e | 4,589,813 ^e |
| Total | 19,512,830^b | 20,500,000^e |

^a South African government sources.

^d Non-ferrous Metals Trust, U. S. S. R.

^e Estimate by *Engineering and Mining Journal*.

The gold production from Ontario mines for 1930 was \$35,385,274, being a net gain of some \$2,000,000 over the 1929 output of \$33,383,169, and forming a record for the Province. Total gold production for the Dominion of Canada was stated by the Dominion Bureau of Statistics at 2,089,766 fine ounces valued at \$43,199,000 as against 1,928,308 ounces and \$39,861,663 in 1929.

The gold mining industry in South Africa not only enjoyed a new record for production in 1930, but was unusually prosperous. It is the most important and most stable form of commercial activity in this British Dominion, and in 1930, due to over-production and general depression, resulting in lower prices for the farmers, there was more

native labor available for the gold mines so that they could be worked adequately and economically, a condition that had not previously prevailed. As a result, in 1930 the gold production of the Transvaal was valued at £45,558,980, as compared with £44,236,141 in 1929. At the end of the year the native labor engaged totaled over 200,000, the largest number ever employed in the mines. Furthermore, commercial conditions enabled the mines to purchase supplies including food stuffs for the laborers lower than ever before, while improvements in operation, especially in connection with the low grade mines, served to increase production. The Government was sympathetic toward mining in general and low grade propositions in particular, and some development was in progress during the year. This prosperity in the Rand was also of interest, as it developed discussion as to the life of the South African properties and whether there would not be at the prevailing rate of production a considerable decrease within a decade. The exhaustion of these fields would naturally affect world production with the various economic consequences that might ensue. Whether a reduced output of gold would affect the financial situation of the world or not was a matter of discussion during the year with diversified views held by various authorities. See FINANCIAL REVIEW; SOUTH AFRICA, UNION OF.

In Rhodesia the gold mining industry was estimated to have maintained its normal output or about 550,000 ounces, a few thousand ounces less than in 1929. Some of the mines closed down during the year, while others opened or reopened. In Southern Rhodesia the Sherwood-Starr Mine was being developed and the government was granting concessions over a large area for exclusive prospecting rights. Similar work had been done with advantage in Northern Rhodesia.

The withdrawal in 1930 of the Lena Goldfields Company from its concession for the production of gold and other minerals in the Soviet Union (see RUSSIA under *History*) was considered an unfavorable factor in the immediate outlook for the Russian gold-mining industry. The company, which was British-managed and financed, produced about 35 per cent of the gold mined in the Soviet Union in 1929, and had made plans for important extensions in its operations. Other developments, however, promised an eventual substantial increase in Russian production. A large new gold-bearing field, about 750 kilometers long and 250 kilometers wide, was discovered late in 1929 by an expedition of the Soviet Academy of Sciences in the vicinity of the Indigirka and Kilyma Rivers in the Yakutsk Republic, Siberia. A special administrative unit to develop the non-ferrous metal, gold, and platinum industries of the Soviet Union was organized early in 1930. Later, an institute to carry on technical and economic research in the use of gold, platinum, and rare metals was established under the Council of Labor and Defense. The institute's activities were to include prospecting, mining, the special treatment of minerals, and the training of specialists. Completely equipped experimental laboratories and plants were to be provided.

The *Economic Review of the Soviet Union* for July 1, 1930, reported that the Soviet gold industry, with headquarters at Irkutsk, Siberia, had employed a number of American technicians, including eight engineers, a dredge superintendent, and an instructor in dredge operation. Four American consulting engineers and geologists

were employed by the *Tzvermetzoloto* (United Nonferrous and Precious Metals Industry).

GOLD COAST. A British African territory extending 334 miles along the Gulf of Guinea between the French Ivory Coast and Togoland; comprising, in addition to the colony proper, Ashanti and the Northern Territories. The area of three divisions is estimated at about 80,000 square miles; population at the census of 1921, 2,078,043, including 2165 Europeans. Accra, with 38,000 inhabitants, is the capital and chief town. In 1928-29, 35,976 pupils were enrolled in 28 Government schools and 246 assisted schools.

Staple products and chief exports are cacao, palm oil, kola nuts, palm kernels, lumber, india rubber, manganese, gold, and diamonds. Including bullion and specie, imports for 1928 totaled £12,200,045 and exports, £13,824,875. Cacao shipments represented 90 per cent of the value of exports. Mineral exports ranked next in value as follows: Gold, £684,815; manganese, £610,209; diamonds, £584,279. The manganese deposits are among the richest known. For the year ended March 31, 1929, revenues amounted to £4,703,967, and expenditures to £5,419,732. The public debt March 31, 1929, stood at £11,791,000. The railway mileage operated in 1929 was 495 miles; main highways, 1530 miles; secondary highways, 3157 miles. Telegraph and telephone lines extended 4298 and 5758 miles, respectively. Of the 5,462,930 tons of shipping entered and cleared in 1928, 2,891,152 were British. The harbor of Takoradi, opened in March, 1928, offers complete shelter for ships of over 30-foot draft.

Ashanti, annexed by Great Britain in 1901, is under the Governor of the Gold Coast. It has an area of 24,560 square miles; population, census of 1921, 407,000, including 400 Europeans. Government schools enrolled 1025 pupils and mission schools, 4251, in 1928. Valuable forests in the western part yield mahogany, cedar, fruits, oil, rubber, and gum copal. The gold output (1928-29) was valued at £456,533. Local receipts (1928-29), £171,715; expenditures, excluding railways, posts and telegraphs, £503,015.

The Northern Territories, constituted a British protectorate in 1901, also are under the Governor of the Gold Coast but locally administered by a commissioner, with his headquarters at Tamale. Area, 35,000 square miles; population at the census of 1921, 527,914, of whom only 49 were Europeans. Navrenko is the chief town with a population of about 15,000. The chief crops are yams, millet, maize, rice, Guinea corn, and tobacco. Local revenue in 1928-29 totaled £20,687; expenditure, £131,519. Governor of the Gold Coast in 1930, Sir Alexander R. Slater; Chief Commissioner of Ashanti, John Maxwell; Chief Commissioner of Northern Territories, Maj. A. H. C. Walker-Leigh.

GOLD MOVEMENTS. See BANKS AND BANKING; FRANCE under *Finance*.

GOLF. The year 1930 was notable in golf history for the scintillating achievement of Robert Tyre Jones Jr., of Georgia, in capturing all four of the premier golf championships of the world—the United States and the British open and amateur titles. The feat had never before been performed. At the end of the season, Jones, who had won 12 major golf titles since 1923, announced his retirement from competitive golf.

In the International Walker Cup matches at Sandwich, England, Jones paired with Dr. Willing of Portland, Ore., to defeat Torrance and Hartley

in the foursomes, 8 and 7, and defeated Roger Wethered in the singles, 9 and 8. He then won the British Amateur title, the only major championship he had never held, by again defeating Roger Wethered in the final, 7 and 6, at St. Andrew's, Scotland. At Hoylake, England, on June 20, he added to his laurels the crown of British Open golf champion, with an aggregate of 291 strokes for 72 holes. He retained his United States Open title in July on the Interlachen Club course, Minneapolis, though closely pressed by Macdonald Smith. His victory in the United States Amateur contest came when he defeated Gene Homans 8 up and 7 to play in the final at the Merion Cricket Club course, Ardmore, Pa., September 27. It was the fifth time he had annexed the American Amateur title. To climax his sensational career, Jones was awarded the James E. Sullivan Memorial Medal for 1930 as the American who had done most to advance the cause of sportsmanship during the year.

Miss Glenna Collett, of Greenwich, Conn., retained the Women's United States title by defeating Miss Virginia Van Wie in the final of the tournament at Los Angeles, October 18. Tommy Armour, of Detroit, won both the Professional Golfers' Association championship at the Fresh Meadow Country Club, New York, on September 13, and the Canadian Open golf crown at Ancaster, Ontario, July 30. To win the latter event, Armour defeated Leo Diegel by three strokes in a 36-hole play-off made necessary when he and Diegel tied with scores of 277 in the 72-hole championship contest proper the week previous. The 1930 champions in the other Canadian golf events were: Amateur, C. Ross Somerville, London, Ont.; professional, Willie Lamb, Thornhill, Ont.; Women's Open, Miss Maureen Orcutt, New York. The Women's British title went to Miss Diana Fishwick, of England, who defeated Miss Collett, and the British Professional title to C. A. Whitcombe, of England. George von Elm, American Amateur Open champion in 1926, captured the French Open Amateur crown at Versailles and C. A. Whitcombe won the Irish Open championship at Portrush. Both the French and Irish tournaments were held in June.

The Intercollegiate title of the United States went to George T. Dunlap Jr., of Princeton, who defeated Lawrence Moller, of Notre Dame, in the final. Princeton also won the Intercollegiate team championship. Other title winners of the year were: Western Open, Gene Sarazen, of New York; Western Amateur, Johnny Lehman, Chicago; United States Seniors, Dr. George T. Gregg, Oakmont, Pa.; United States Women's Seniors, Mrs. Samuel S. Laird Jr., of the Westchester Country Club.

GOLLANCZ, SIR HERMANN. A British rabbi and educator, died in London, Oct. 15, 1930. Born in 1852, he attended the Jews' and University colleges, London, and received in 1897 the highest rabbinical diplomas (Hatarath Horaah) from the chief rabbis in Galicia and in 1899 the D.Litt. degree from the University of London. For more than 50 years (1892-1923) he was preacher at the Bayswater Synagogue. He also held the Goldsmid professorship of Hebrew at the University College from 1902 to 1924, and was nationally known as a social worker, serving on the committees of many philanthropic and educational institutions and founding several synagogues for the industrial classes. In 1913 he was appointed a member of the Birth-Rate Commission, and in

1917 served on the Cinema Commission. He was president of the Jewish Historical Society of England during 1905-06 and of the Union of Jewish Literary Societies during 1925-26. In addition to many translations from Hebrew, Aramaic, and Syriac, his important works are: *Russia and the Alien Question* (1905) and *The Foundation of Religious Fear* (1915).

GOLLANCZ, GOL'ANKS, SIR ISRAEL. A British scholar and educator, died in Hampstead London, June 23, 1930. He was born in London, July 13, 1863, and studied at the City of London School; University College, London; and Christ's College, Cambridge. He became Quain English student and lecturer at University College, London, in 1892; university lecturer in English at Cambridge in 1896; and professor of English language and literature in King's College, University of London, in 1906. He also acted as fellow and secretary of the British Academy from its foundation in 1903 until his death, and was president of the Philological Society during 1919-22. He was knighted in 1919. Besides critical editions of numerous medieval alliterative poems he edited and translated many Old and Middle English texts, as the *Pearl* (1891); *Cynewulf's Christ* (1892); and the *Exeter Book of Anglo-Saxon Poetry* (1895). He was general editor of *The Temple Classics*; *The King's Library*; *The Medieval Library*; and *The Temple Shakespeare*. His other contributions to Anglo-Saxon and Elizabethan scholarship include: *The Parliament of the Three Ages* (1897); *Hamlet in Iceland* (1898); *The Book of Homage to Shakespeare* (1916); *The Sources of Hamlet* (1926); and *The Caedmon Manuscript of Anglo-Saxon Biblical Poetry* (1927).

GOLOVIN, ALEXANDER JAKOWLEWITSCH. A Russian painter, died in Detskoie, Russia, Apr. 17, 1930. He was born in Moscow in 1863 and received his art education at the Moscow Art School, studying also under Il. M. Prjanishnikoff. His first important work was "The Descent from the Cross" (1889). During 1895-97 he traveled through Italy and Spain, exhibiting on his return a collection of landscapes and folk-studies. He also exhibited at the Universal Exposition in Paris in 1900. His principal works are mural paintings in the Moscow Opera House and theatres in Leningrad, and portraits of his contemporaries, including Count Kankrin, the poet Kusmin, the painter N. C. Roerich, Mlle. Smirnoff, Mme. Makowsky, and the singer Chaliapin. Several of his portraits are found in the Tretjakoff Gallery in Moscow, as is also a genre work entitled "The Workshop of the Icon Makers." Prior to his death the title of the People's National Artist was conferred on him by the Soviet Government.

GOODWILL CONGRESS. See INTERNATIONALISM.

GORDON BENNETT CUP COMPETITION. This annual international competition for aërostats or freely flying balloons is described under AERONAUTICS.

GORDONITE. See MINERALOGY.

GOUCHER COLLEGE. A nonsectarian college for women in Baltimore, Md.; founded in 1885. The enrollment for the first semester of the year 1930-31 was 879. The faculty had 106 members. The endowment funds of the college amounted to \$2,393,318. The library contained 51,000 volumes. President, David Allan Robertson, who was elected to the office in May, 1930.

GRAND ARMY OF THE REPUBLIC, THE. A patriotic order formed in 1866 in Decatur Ill., among a number of former soldiers who had served in the Civil War. The first post (No. 1) was organized in Springfield, Ill., receiving its charter from Dr. B. F. Stephenson who had been active in securing the formation of the organization and who became the department commander of the States. The purpose of the society is to "enjoy a companionship made sacred by common sufferings and sacrifices"; its corner stones, "Fraternity, Charity, and Loyalty," demand the care and protection of sick and helpless comrades and their widows and orphans; the upholding of all comrades in their worthy endeavors; and loyalty to the flag and laws of the Republic. Auxiliary orders are the Woman's Relief Corps, Ladies of the G. A. R., Sons and Daughters of Union Veterans, and their auxiliaries. The maximum strength of the organization was in 1890 a membership of 409,487. On Dec. 31, 1929, there were 2238 active local posts with a membership of 21,080.

The sixty-fourth national encampment was held in Cincinnati, Ohio, Aug. 24-29, 1930, while Des Moines, Iowa, was selected for the 1931 encampment. Delegates to the national encampment are chosen by the department encampments and those to the department encampments, held in June, by the posts. The officers elected for 1930-31 were: Commander-in-chief, James E. Jewel, Fort Morgan, Colo.; senior vice commander-in-chief, Jacob Secrest, Cincinnati, Ohio; junior vice commander-in-chief, Charles H. Lewis, Pawtucket, R. I.; surgeon-general, Edward H. Cowan, Crawfordsville, Ind.; chaplain-in-chief, Henry Hilton Wood, Long Beach, Calif.; quartermaster-general, Cola D. R. Stowits, Buffalo, N. Y.; and adjutant-general, David N. Heizer, Colorado Springs, Colo. National headquarters are in the First National Bank Building, Fort Morgan, Colo.

GRANT, REAR ADMIRAL ALBERT WESTON, U. S. N., RET. An American naval officer, died in Philadelphia, Pa., Sept. 30, 1930. He was born in East Benton, Maine, Apr. 14, 1856, and was graduated from the U. S. Naval Academy in 1877. Commissioned an ensign in the U. S. Navy in 1881, he was promoted through the ranks to rear admiral in 1915. During the Spanish-American War he served on the battleship *Massachusetts*, and in 1902 became executive officer of the *Oregon*. Later, after serving as commander of the gunboat *Frolic* (1903-05) and of the *Arcthusa* (1907-08), he was appointed chief of staff of the Atlantic fleet during the cruise of the American battleships around the world. On his return in 1909 he was given command of the battleship *Connecticut*, and the following year was assigned to duty at the Philadelphia Navy Yard. In 1914, after having supervised the construction of the *Texas*, he became commander of that vessel, and in 1915 was made head of the submarine force of the Atlantic Fleet. Following the declaration of war with Germany in 1917, he was made commander of Battleship Force One, and in 1918 he commanded the United States Fleet in the Western Atlantic. The next year he was assigned to the Navy Yard in Washington and retired in 1920.

GRAPES. See HORTICULTURE.

GRAPHITE. In the U. S. Tariff Act of 1930 the graphite industry asked for increased protection, but the scheduled results were too small to be of material assistance, especially in the depression of the year. By the Act of 1930 amorphous graphite had to pay 10 per cent ad valorem; crystalline lump, chip, or dust 30 per cent ad valorem; and crystalline flake, 1.65 cents per pound. The reason for the decline of the year in consumption and prices lay in the widespread slump in the metal industries where graphite crucibles, and also linings for furnaces figure. In 1929 the total natural graphite sold or used by producers was 6458 short tons valued at \$310,891, an increase of 15 per cent in quantity and 5 per cent in value compared with 1928. This total included 3555 tons of amorphous graphite valued at \$46,650 in 1929, and 2903 tons of crystalline valued at \$264,241. The amorphous graphite was used largely in paint manufacture while the crystalline was used in batteries, carbon electrodes, crucibles, lubricants, and stove polish. In 1929 there were imported 23,961 short tons valued at \$1,065,186 and in 1930, 16,725 tons valued at \$122,426. Mexico supplies the larger part of the United States imports, together with Madagascar, Ceylon, and Canada, all of which are large producers.

At the end of 1930 there was a difference of opinion in the United States regarding the future of the American graphite industry, with a few operators believing that they could compete with producers abroad, while others maintained that the crystalline graphite industry of the United States was practically dead. Mines in Texas and Alabama, belonging to a company which was the principal producer in the United States for a number of years, closed down at the end of 1920 and did not reopen in 1930. Two other Alabama graphite plants operated only a portion of the year, while a third was organized to take over existing properties and operate in the future. The same condition prevailed at other plants, while the Canadian Graphite Corporation closed its plant and the Black Donald mine at Calabogie, Ontario, was in operation during part of the year. There was a slight decline in production of Mexican amorphous graphite, while Ceylon was feeling the competition of producers in Madagascar. The Korean amorphous graphite industry operated about as usual.

GRASSHOPPERS. See ZOÖLOGY.

GREAT BRITAIN. UNITED KINGDOM OF GREAT BRITAIN AND NORTHERN IRELAND. A constitutional monarchy comprising England, Scotland, Wales, Northern Ireland, the Channel Islands, and the Isle of Man. Capital, London; ruling sovereign in 1930, George V. The term Great Britain literally applies only to the island including England, Scotland, and Wales, but is often extended to include the other units of the United Kingdom. The British Empire comprises the United Kingdom, India, the dominions of Australia, Canada, Irish Free State, Newfoundland, New Zealand, and South Africa, and the various colonies, protectorates, dependencies, and other territories subject to the ultimate control of the British Parliament.

AREA AND POPULATION. The area of England, Scotland, Wales, the Isle of Man, and the Channel Islands is 89,041 square miles and that of Ireland, 32,586 square miles. (See IRELAND,

NORTHERN, and IRISH FREE STATE.) The estimated population of England, Scotland, and Wales on June 30, 1929, was 44,491,000, as compared with 44,375,000 on the same date in 1928 and 42,919,710 at the census of 1921. The growth of the population from 1925 to 1929 is shown in the accompanying table. It excludes the army, navy, and merchant seamen abroad.

BRITISH POPULATION, 1925 TO 1929

| Year (30 June) | England and Wales | Scotland | Total of Great Britain |
|-------------------|----------------------|-----------|---------------------------|
| 1925 | 38,890,000 | 4,893,032 | 43,783,032 |
| 1926 | 39,067,000 | 4,897,000 | 43,964,000 |
| 1927 | 39,290,000 | 4,895,000 | 44,185,000 |
| 1928 | 39,482,000 | 4,893,000 | 44,375,000 |
| 1929 * | 39,607,000 | 4,884,000 | 44,491,000 |

* Provisional figures.

The steady decline of the birth rate continued in 1929. Births in England and Wales totaled 643,673, as compared with 660,267 in 1928, while the rate per 1000 of population fell to 16.3 from 16.7 in 1928. Illegitimate births numbered 29,307; deaths, 532,525; marriages, 313,316; divorces, 3396. The Scottish population in 1929 continued to decrease. The small surplus of births over deaths was more than offset by emigration. Scottish births were estimated at 92,876; deaths at 70,917, and marriages at 32,992. The birth rate per 1000 of population was 19, as against 19.8 in 1928, and the death rate was 14.5 (13.3 in 1928). British emigration to places other than Europe in 1929 totaled 143,686 (136,834 in 1928), while 56,217 persons of British nationality entered Great Britain for permanent residence (59,105 in 1928). The surplus of British and alien emigrants over immigrants was 121,467. Of British subjects leaving the United Kingdom, 65,588 went to British North America, 30,709 to the United States, 18,377 to Australia, 6265 to India and Ceylon, 5766 to British South Africa, and 4700 to New Zealand. Emigrants assisted under the Empire Settlement Act increased from 47,855 in 1928 to 72,213 in 1929.

The population of London proper in 1929 was 4,430,000, as compared with 4,484,523 at the census of 1921. Greater London in 1928 had 7,849,000 inhabitants. The estimated populations of other English cities on June 30, 1928, with census populations of 1921 in parentheses, were: Birmingham, 968,600 (919,444); Liverpool, 872,600 (802,940); Manchester, 755,900 (730,307); Sheffield, 515,440 (490,639); Leeds, 476,500 (458,232). In 1929 Glasgow, Scotland, had 1,061,900 inhabitants (1,034,174 in 1921) and Edinburgh, 429,600 (420,264).

The British Empire, including the United Kingdom and adjacent islands, India and its dependencies, the various British dominions, colonies, and protectorates, the Anglo-Egyptian Sudan and territories administered under mandate of the League of Nations, had a total area of about 13,355,426 square miles and a population approximating 449,583,000 in 1928.

EDUCATION. Elementary education was free and compulsory between the ages of 5 and 14. In the year 1929 there was in England and Wales a total of 20,747 ordinary public elementary schools, with accommodation for 7,099,609 pupils and an average attendance of 4,909,404 pupils. In Scotland (1927-28), there were 2919 primary schools, with an average attendance of 586,440. The number of certified secondary and technical schools in England and Wales in 1928-

29 was 1812, with 460,736 pupils; in Scotland there were 252 secondary schools, with an average attendance of 155,368. The universities enrolled an aggregate of 48,645 students in 1928-29, of whom 33,871 were in 11 English institutions, 11,831 in four Scottish universities, and 2943 in the University of Wales.

AGRICULTURE. Arable land in England, Scotland, Wales, the Isle of Man, and the Channel Islands in 1929 totaled 13,133,000 acres; permanent pasture, 17,069,000 acres; and rough grazing land, 14,896,000 acres. The land was divided into 476,707 holdings, of which 219,180 were from 5 to 50 acres in extent, 151,427 from 50 to 300 acres, 91,293 from 1 to 5 acres, and 14,807 over 300 acres. The acreage and the yield, in tons, of the principal crops for the whole of Great Britain in 1928 and 1929 are shown in the accompanying table from the 1930 *Europa*.

ACREAGE AND PRODUCTION OF BRITISH CROPS, 1928 AND 1929

| | Acreage | |
|--------------------------|---------------|---------------|
| | 1928 Acres | 1929 Acres |
| Wheat | 1,453,756 | 1,380,918 |
| Barley | 1,296,905 | 1,220,806 |
| Oats | 2,640,546 | 2,742,572 |
| Beans | 160,653 | 147,272 |
| Peas | 69,305 | 78,692 |
| Potatoes | 633,045 | 663,578 |
| Turnips and Swedes | 1,098,696 | 1,069,154 |
| Mangolds | 298,883 | 299,901 |
| Hay | 6,635,159 | 6,795,806 |
| | Production | |
| | 1928 Tons | 1929 Tons |
| Wheat | 1,328,000 | 1,329,000 |
| Barley | 1,122,000 | 1,099,000 |
| Oats | 2,147,000 | 2,277,000 |
| Beans | 133,500 | 112,600 |
| Peas | 58,025 | 64,090 |
| Potatoes | 4,545,000 | 4,743,000 |
| Turnips and Swedes | 16,613,000 | 14,909,000 |
| Mangolds | 5,776,600 | 5,711,800 |
| Hay | 7,302,000 | 6,286,000 |

Livestock in England and Wales on June 4, 1929, included 16,105,453 sheep, 5,957,594 cattle, 2,366,543 swine, and 999,273 horses; in Scotland, 7,555,520 sheep, 1,232,945 cattle, 161,005 horses, and 142,217 swine. The agricultural production falls far short of supplying domestic needs and large quantities of cereals, potatoes, sugar, coffee, beans, cotton, flax, wool, and dairy products are imported annually.

FISHERIES. The catch of British fishing vessels in 1929 totaled 1,053,218 tons, valued at £19,151,429 (provisional figures, excluding shell-fish), as compared with 1,002,596 tons, valued at £17,897,438 in 1928. A total of 13,574 boats and 52,474 men were employed in the fisheries of Great Britain and Northern Ireland in 1928.

INDUSTRY. British industrial activity increased 5.8 per cent in 1929, as against a decrease of 1.2 per cent in 1928, according to the Board of Trade's index of industrial production. Based on production in 1924 at 100, the general index number (for manufacturing and mining industries combined) was 106.8 for 1927, 105.5 for 1928, and 111.6 for 1929. Corresponding indexes for specific commodity groups were as follows for 1928 and 1929, respectively: Mines and quarries, 89.2 and 96.6; iron and steel and manufactures thereof, 102.3 and 114; nonferrous metals, 119.3 and 120.5; engineering and shipbuilding, 113.1 and 120.9; textiles, 99.9 and 98.5; chemical and allied trades, 110.3 and 112.5; leather and boots

and shoes, 102 and 98.5; food, drink and tobacco, 101.9 and 106; gas and electricity, 126 and 135.7.

The output, in thousands of metric tons, of the principal mineral and metallurgical industries in 1929, with comparative figures for 1928 in parentheses, was as follows: Coal, 260,832 (241,284); coke, not available for 1929 (12,035); pig iron, 7704 (6720); steel ingots and castings, 9804 (8664); lead, 10.9 (8.7); zinc, 59.4 (56.3). The output of cotton yarn in 1929 was estimated at 1,269,600,000 pounds (1,299,600,000 in 1928); of rayon, 56,904,000 pounds (54,240,000 in 1928); of motor cars, 239,000 (212,000 in 1928). The tonnage of new ships launched was 1,524,000 (1,444,000 in 1928) and the gross tonnage under construction Dec. 31, 1929, was 1,560,000 (1,243,000 at the end of 1928). Units of electricity generated in 1929 totaled 10,878,981, as compared with 9,927,851 in 1928. In 1930, steel production declined to 7,298,300 tons and the pig-iron output to 6,196,800 tons.

Due to the boycott in India and the curtailment of demand in other foreign markets the British cotton-manufacturing industry in 1929 and 1930 was extremely depressed. It had lost ground steadily since the boom year of 1920, however. British cotton spinning and weaving companies declined from 1974 in 1920 to 1805 in 1929; the number of spindles, from 60,079,394 to 59,133,966; and the number of looms, from 798,083 to 739,887. The number of looms idle at the close of 1929 was estimated at 96,000 or about 13 per cent of the total. The shipbuilding industry in 1929 had the best year since 1920, with the exception of the abnormal period of 1927, but the output of shipping tonnage in 1929 was approximately 20 per cent below the pre-war average. Rationalization of the British shipbuilding industry through the scrapping of superfluous or obsolete shipyards was undertaken by the National Shipbuilders Security, Ltd., organized Feb. 28, 1930, with a board of directors representing the principal shipbuilding companies of the Kingdom. Although Great Britain in 1930 was building more than 50 per cent of the world's tonnage, the decline in naval construction, and the increasing size of ships, entailing a smaller number of berths for the same tonnage, resulted in the agreement for orderly curtailment of redundant facilities. See SHIPBUILDING.

A scheme for the rationalization of the coal-mining industry in Cheshire and Lancashire was agreed upon Oct. 27, 1930, by the owners of 140 pits producing about 18,000,000 tons of first-grade coal annually. Progress in electrification of industry continued. The first unit of a national system of electrical power generating plants and transmission lines, with which the Central Scotland Electricity Board planned to link virtually all the communities of Scotland, was inaugurated the first week in May when a \$4,000,000 plant-extension project at the Portobello power station was formally opened. The first unit of the Lochaber hydro-electric power project in Scotland was inaugurated also in 1930; this project was the largest undertaking of its kind in the kingdom and included a 15-mile rock tunnel. The available water-power resources of Great Britain are estimated at 900,000 horse power, of which 210,000 horse power were developed in 1922.

At the end of 1929 there were 6,378,000 members of coöperative retail distributive societies in the United Kingdom. Sales for the year totaled \$1,095,000 and the net surplus was \$132,000,000.

For business conditions in 1930 and political repercussions, see below under section on *History*.

COMMERCE. Total British imports in 1929 rose to £1,221,591,000, an increase of nearly £26,000,000, or 2 per cent, over 1928, while the total exports and reexports amounted to £839,297,000, a decrease of £4,500,000, or one-half per cent. The adverse trade balance of £382,294,000 was over £30,500,000, or nearly 9 per cent, larger than in 1928. As compared with 1928, the volume of trade was greater than indicated, as price levels in 1929 were lower. There was little indication of a definite recovery in the export trade, however. Coal exports, totaling £48,617,000, showed a marked increase, a gain which was more than offset by the £10,000,000 decline in exports of cotton manufactures which were valued at nearly £135,500,000, or 18½ per cent of the total exports. While exports of British products showed a slight increase, reexports of imported merchandise declined to £109,742,000, a figure £10,500,000, or nearly 9 per cent, lower than in the previous year.

British foreign trade in 1930 declined more than \$1,670,000,000, according to preliminary figures of the Board of Trade. Exports totaled \$2,852,764,730, a decrease of \$793,981,000 from 1929, and imports amounted to \$5,224,200,000, a decline of \$879,625,000. The heaviest declines were recorded in export items in cotton yarns and manufactures, iron and steel, silk and other textiles, machinery, chemicals and dyes, and coal. Exports of ships and aircraft showed an increase.

Reduced shipments to India were chiefly responsible for the decline in cotton exports in 1929 although Brazil, Switzerland, Germany, and British West Africa each took about £1,000,000 less than in 1928. The decline in the industry is illustrated by comparative figures for 1924, when cotton manufactures were valued at £200,000,000, or about 25 per cent of all exports. Other leading exports in 1929 were: Woolen manufactures, £53,000,000 (£57,000,000 in 1928); vehicles (including locomotives, ships, aircraft), £50,000,000 (£47,00,000); iron and steel, £68,000,000; non-ferrous metals and manufactures, £18,000,000; machinery, £54,500,000; electrical goods and apparatus, £13,000,000; chemicals, £26,500,000 (£25,500,000).

Of the total exports of the United Kingdom in 1929, 44.5 per cent went to other parts of the Empire, as compared with 45.3 per cent in 1928, and 46 per cent in 1927. British India, Australia, and the United States, in the order named, were the leading purchasers of British goods, their respective percentages of the total exports being 10.7, 7.4, and 6.2, as compared with comparative percentages for 1928 of 11.0, 7.7, and 6.4. Exports to the United States were valued at £45,581,000, or £1,084,000 less than in the previous year. Other leading customers, with the percentages of the total exports taken in 1929 and 1928 (in parentheses), were: Germany, 5.1 (5.7); Irish Free State, 4.9 (4.8); Canada, 4.8 (4.7); Union of South Africa, 4.5 (4.4); France, 4.3 (3.5); Argentina, 4 (4.3); Netherlands, 3 (3); New Zealand, 2.9 (2.7); Belgium, 2.7 (2.4); Italy, 2.2 (2); China, 1.9 (2.2); Japan, 1.8 (2); Egypt, 1.7 (1.5); Spain, 1.6 (1.4); Denmark, 1.5 (1.3); Sweden, 1.4 (1.3).

Among imports, the class of commodities including food, drink, and tobacco, comprising about 44 per cent of the total, increased by £5,300,000, or 1 per cent; raw materials and arti-

cles mainly unmanufactured increased by £4,900,000, or nearly 1½ per cent; and articles wholly or mainly manufactured, expanded by £16,500,000, or nearly 5 per cent. The value of imports of manufactures was higher than for any year since 1920.

The United States was again the leading source of imports, furnishing 16 per cent of the total (15.7 per cent in 1928) as against 6.7 per cent from Argentina (6.4 per cent in 1928), the second important source. Imports from other parts of the British Empire comprised 29.5 per cent of the total in 1929, as compared with 30.4 per cent in 1928, and 32.5 per cent in 1927. Other countries supplying British imports, with percentages for 1929 and 1928, respectively, were: Germany, 5.6 (5.3); British India, 5.2 (5.4); France, 4.6 New Zealand, 3.9 (3.9); Canada, 3.8 (4.8); Irish Free State, 3.7 (3.8); Belgium, 3.6 (3.6); Netherlands, 3.5 (3.6); Russia, 2.2 (1.8).

Bullion and specie movements, not included in the above figures, were the largest since 1920, with imports totaling £70,744,000 and exports, £86,682,000.

While the visible trade figures for 1929 showed an excess of imports over exports of £366,300,000, the Board of Trade estimated that invisible exports totaled about £517,000,000, leaving a total credit balance of £151,000,000, as compared with a corresponding balance of £152,000,000 in 1928 and £114,000,000 in 1927. Estimates of the various invisible items of trade in 1920 included: Excess of Government receipts from overseas, £22,000,000; net national shipping income, including disbursements by foreign ships in British ports, £130,000,000; net income from overseas investments, £285,000,000; net receipts from short interest and commissions, £65,000,000; net receipts from other sources £15,000,000. The total figures do not include the lending and repayment of capital.

Tourist expenditures in Great Britain in 1929 were estimated at over \$100,000,000, of which approximately \$40,000,000 was attributed to 142,000 American tourists who visited the country during the year. Preliminary returns for 1930 showed an increase of American tourists over 1929.

FINANCE. Due largely to a supplementary grant of £10,000,000 for unemployment relief, the Treasury operations for the fiscal year ended Mar. 31, 1930, resulted in a deficit of £14,523,000, instead of the surplus of £4,096,000 anticipated by the former Chancellor of the Exchequer, Winston Churchill, in his budget. Total ordinary revenue amounted to £734,188,748, as compared with the estimate of £746,060,000. Actual ordinary revenue in 1928-29 totaled £758,104,055, or £23,915,307 more than in 1929-30. Ordinary expenditure (1929-30) amounted to £748,712,000, including a Sinking Fund payment of £47,748,000, as compared with the estimate of £741,964,000.

Among revenue items, the stamp tax yielded only £25,670,000, against an estimate of £31,000,000, the decline being chiefly due to the Stock Exchange depression. To the diminution in consumption of alcoholic beverages was attributed the falling off of the excise tax yield from the £130,330,000 estimate to £127,500,000. The income tax produced practically the same amount as in 1928-29, the surtax fell short of the estimate by £1,500,000, while customs revenue was £1,000,000 higher than in the previous year. Post

Office receipts increased by £1,100,000, and motor duties by £694,000. Of the total expenditures, the service of the national debt took £307,251,685, as compared with the estimate of £304,600,000 and with actual payments of £311,490,566 in 1928-29.

Including self-balancing revenues and expenditures of the Post Office and road fund (£80,782,000) and other miscellaneous items the grand total of receipts in 1929-30 was £821,391,000 and of expenditures £1,065,710,000 (including the Exchequer balance on Mar. 31, 1930, of £6,125,000).

Much interest was attached to the first budget of the Labor Government, submitted to the House of Commons, Apr. 14, 1930, by the Chancellor of the Exchequer, Philip Snowden. He estimated that revenues for 1930-31 would amount to £789,445,000 (about \$3,836,700,000) and that expenditures would total £787,209,000 (about \$3,825,835,000), leaving an anticipated surplus of £2,236,000 (about \$10,857,000).

Under the budget, some £49,800,000 in additional revenues, required to meet increased expenditures for unemployment relief and other social insurance and to offset expected declines in beer, spirits, sugar, and other internal taxes, was to be raised chiefly through the following increases in direct taxation: Income tax, £21,000,000; surtax £7,500,000; estate duties, £3,000,000; customs and excise, £2,570,000; appropriation from rating relief suspense account, £16,000,000. The tax on the larger incomes, affecting about one-fourth of the 2,225,000 income-tax payers of the United Kingdom, was raised from 20 to 22½ per cent; the surtax and estate duties were raised proportionately and an additional tax of two cents a gallon was levied upon beer. The McKenna duties on motor cars, clocks, watches, motion picture films, and musical instruments were retained temporarily owing to the financial stringency, although at variance with Mr. Snowden's free trade theories. Various other "safeguarding," or protectionist, duties, were to be allowed to expire in the normal way, rather than repealed immediately. For the political aspect of the Snowden budget, see below under *History*.

The above figures for 1930-31 exclude the self-balancing Post Office and road funds, estimated to aggregate £83,835,000, and rating relief suspense account, which was calculated to balance at £20,103,000. Returns for the first half of the fiscal year 1930-31 showed an excess of expenditure over income of £58,218,866, as compared with a deficit of £50,861,376 in the first half of 1929-30.

The total national debt on Mar. 31, 1929, stood at £7,620,800,000, of which £6,536,100,000 represented the domestic debt and £1,084,700,000 the foreign debt. On Mar. 31, 1928, the total debt stood at £7,631,000,000. War debts payable to Great Britain in 1930 amounted to £17,700,000 and German reparation payments, £16,800,000, making a total of £34,500,000. In the same year, British debt payments to the United States totaled £33,038,000. Up to the end of 1929, Great Britain had paid the United States £279,564,000 in war debts and had received from her debtors £135,025,000, leaving a balance of £144,539,000 (about \$700,000,000) in excess payments to America over receipts from her debtors.

The total of foreign loans floated in Great Britain in 1929 was only \$130,000,000 short of the total floated in the United States, whereas in 1928 the United States was about \$500,000,000 ahead, according to a study made for the Finance

and Investment Division of the U. S. Department of Commerce. The foreign loans floated in Great Britain totaled \$541,468,153 in 1929 and \$768,300,000 in 1928. Comparative American totals were \$671,230,806 in 1929 and \$1,250,959,000 in 1928. Great Britain's net national wealth in 1930 was estimated by Sir Josiah Stamp at \$90,225,000,000, as compared with \$71,550,000,000 in 1914.

SHIPPING. The net tonnage of vessels cleared from British ports in 1929 amounted to 68,684,201 tons, as compared with 64,444,282 tons in 1928 and 63,500,026 in 1927. The net tonnage entering and clearing the Port of London in 1929 (including foreign, Empire, and coastwise trade) was 57,500,000 as compared with 32,750,000 in 1919. Pooling of the facilities of the six largest British ship lines on the North Atlantic in order to eliminate wasteful competition was announced early in November, 1930. The pool, which was considered an answer to the previous rationalization programme of the larger German ship lines, comprised the Cunard, White Star, Anchor, Red Star, Canadian Pacific, and Atlantic Transport lines.

At the beginning of 1929, vessels registered as belonging to the United Kingdom numbered 18,048, of 12,259,203 net tons, as compared with 17,981 of 11,853,329 net tons registered a year earlier. Of the 1929 total, 12,640 vessels of 11,763,192 net tons were steam and motor vessels. The contract for a new Cunard liner of 73,000 tons, to cost between \$4,000,000 and \$5,000,000, was awarded Dec. 1, 1930. The liner was regarded as a British effort to recapture the Atlantic speed record from Germany. It was to be completed in three years. See **SHIPPING**.

INTERNAL COMMUNICATIONS. Railway lines open for traffic at the beginning of 1929 totaled 20,386 miles, divided principally among the four great railway systems, as follows: London, Midland and Scottish, 7464 miles; London and North-Eastern, 6464 miles; Great Western, 3765 miles; and Southern, 2129 miles. Railway revenues in 1929 totaled \$950,427,000, a sum \$6,330,000 larger than the revenues for 1928 but \$34,000,000 smaller than those for 1927. Of the 1929 income, \$736,000,000 was devoted to expenditure, representing a decrease of about \$10,000,000 from the expenditure in 1928 and of \$43,800,000 from that of 1927. Net receipts in 1929 were about \$214,500,000, or \$17,000,000 more than in 1928 and \$9,733,000 above those of 1927. Dividend payments made by the four British railway companies on outstanding stock for the year 1929 represented in every case an increase over disbursements made on the same shares in 1928. The Great Western in 1930 received Government approval for the expenditure of £3,000,000 for further improvements to its dock system in the southern part of Wales.

Light railways open for traffic in 1928 totaled 2514 miles and there were about 3825 miles of canals (3641 miles in England and Wales). Registered motor vehicles in the country in September, 1929, numbered 1,434,256 (1,309,333 in September, 1928), and registered civil aircraft in 1929, 453. Air routes of the British Empire totaled 19,000 miles in 1929, as compared with 11,000 miles in 1928, and were expected to aggregate 35,000 miles at the end of 1930, according to Lord Thomson (q.v.), Secretary of State for Air. The 1929 mileage was divided as follows: Canada, 6500 miles; Australia, 5500; South

Africa, 1500; India, 715; and Great Britain, 5000. Two great trunk lines linking South Africa, and India and Australia with the United Kingdom via Egypt were being developed.

ARMY AND NAVY. The military system of the United Kingdom provides for a regular and territorial army and a reserve. Troops in the army serve both at home and abroad. Territorial troops serve only at home in peace times. The regular army in 1929-30 totaled 206,655, of whom 59,987 were in India. The strength of the territorial army on Jan. 1, 1930, was 6864 officers and 129,066 of other ranks, exclusive of the permanent staff. (See **MILITARY PROGRESS**.) The accompanying table from the *Statesman's Year Book* for 1930 shows the number of classes of the more important units of the British fleet, including the ships and vessels of the dominions. See **NAVAL PROGRESS**.

BRITISH NAVY: BY CLASSES OF SHIPS

| Class | Completed by end of | | |
|------------------------------------|---------------------|------|------|
| | 1927 | 1928 | 1929 |
| Battleships and battle cruisers .. | 20 | 20 | 20 |
| Cruisers | 50 | 50 | 54 |
| Aircraft carriers and tenders ... | 7 | 7 | 7 |
| Flotilla leaders and destroyers .. | 174 | 157 | 150 |
| Submarines | 56 | 51 | 53 |

The Royal Air Force in March, 1929, comprised 65 regular and eight Special Reserve or Auxiliary Air Force squadrons, each squadron consisting of 12 airplanes.

GOVERNMENT. The head of the state, George V, was born June 3, 1865, and succeeded to the throne May 6, 1910. The Cabinet in 1930 was composed as follows: Prime Minister and First Lord of the Treasury, James Ramsay MacDonald; President of the Council, Lord Parmoor; Chancellor, Lord Sankey; Privy Seal, Vernon Hartshorn; Chancellor of the Exchequer, Philip Snowden; Home Affairs, John Robert Clynes; Foreign Affairs and Deputy Leader of the House of Commons, Arthur Henderson; Dominions, J. H. Thomas; Colonies, Lord Passfield; War, Thomas Shaw; Air, Lord Thomson (killed in the R-101 disaster and succeeded Oct. 14, 1930, by Lord Amulree); Secretary of State for India, William Wedgwood Benn; Admiralty, Albert Victor Alexander; President of the Board of Trade, William Graham; Health, Arthur Greenwood; Agriculture and Fisheries, Christopher Addison; Education, Sir Charles Philips Trevelyan; Labor, Margaret Bondfield; Works, George Lansbury; Secretary of State for Scotland, William Adamson.

The composition of Parliament following the general election of May 30, 1929, was as follows: Labor, 288; Conservatives, 260; Liberals, 59; Independents, 8.

HISTORY

Foreign and domestic problems of unprecedented magnitude confronted Great Britain and the Empire on every hand in 1930, testing to the utmost the statesmanship of Premier MacDonald and his Labor government. Industrial depression and increasing unemployment placed heavy burdens upon the Ministry, while four important conferences—the London Naval Conference, the Imperial Conference, the Round Table Conference on India, and the negotiations with the Egyptian Nationalist delegation for revision of British-Egyptian treaty relations—focused the attention of the world upon the British capital.

The Government attacked its problems courageously. Yet its prestige steadily declined as the industrial depression grew more acute and the Imperial Conference adjourned without bringing the expected economic benefits. Municipal and by-elections during the year showed a strong trend toward Conservatism, and particularly toward the protectionist wing of the Conservative party. That the Labor government lived throughout 1930 was due to divisions in the ranks of both Conservatives and Liberals and to the reluctance of the Opposition to assume the responsibilities of government while the Indian and unemployment problems appeared unlikely of immediate solution. The overthrow of Labor and a new general election was generally anticipated for 1931.

It was recognized that the stresses and strains of the year were symptomatic of a radical reshaping of not only the political fabric of the Empire but also of the social and economic organization of the British nation. Labor extended the process, already inaugurated by its Conservative and Liberal predecessors, of taxing the landed aristocracy out of existence. "Gradually but very surely," wrote Sir Philip Gibbs in June, "Britain is being changed into a middle-class, bourgeois nation like Belgium or Holland."

Tension upon the political structure of the Empire was most powerful in India, Egypt, Iraq, Palestine, and Malta (see articles on each under *History*), politico-religious developments in the latter possession giving rise to a serious quarrel with the Vatican. Diplomatic relations with Soviet Russia, established late in 1929, were maintained despite repeated Conservative protests, and a temporary trade agreement was concluded in April which extended most-favored-nation treatment to both parties and authorized the establishment in Britain of a Soviet trade delegation having diplomatic privileges and immunities. But the deep-seated hostility between the two nations was nourished by the activities of the Communist International in India and other parts of the Empire, by Russia's invasion of additional British markets, and by Soviet fears of British aggression. The broadcasting of inflammatory communistic appeals to British workers from Soviet radio stations evoked sharp protests from Foreign Secretary Henderson in December.

In contrast to these threats to the Empire's peace and security were the termination of the naval rivalry with the United States through the treaty negotiated at the London Conference early in the year and the settlement of the reparations problem in accordance with the terms demanded by the Chancellor of the Exchequer (see *REPARATIONS*). Labor statesmen distinguished themselves as leaders in the movement toward the peaceful stabilization of Europe under the aegis of the League of Nations.

DOMESTIC PROBLEMS. The revival of British industry and trade was the major political issue throughout 1930, taking precedence over the immensely important developments in India and at the London Naval Conference. The Government failed utterly to redeem its election promises to reduce unemployment. On the contrary, the number of unemployed increased to 2,176,191 on October 6, the largest total in the preceding eight years and 768,966 more than on Oct. 6, 1929 (see *UNEMPLOYMENT*). The economic situation was almost continuously under discussion in Parliament, the press, and political meetings.

The Government carried out its other election promises of important social and economic legislation in the amended widows' pension and unemployment insurance laws, a housing bill giving local authorities power to eliminate slum areas, and a coal mines bill (finally approved July 23) which not only improved working conditions but made possible the first steps toward the reorganization of that industry. Another bill, which had not been passed by the end of the year, would raise the school-leaving age from 14 to 15. The Consumers' Council bill promised protection against excessive prices of household necessities, and the 1930-31 Labor budget (see page 325 under *Finance*), in the words of Premier MacDonald, "laid on the backs of those better fitted to bear it the burden that resulted from our predecessors' failure to meet their bills." Conservatives interpreted the budget differently, predicting an even more serious financial and economic crisis unless the process of "robbing a hard-working Peter to pay an unemployed Paul" was checked.

In its struggle with industrial depression, the Labor Cabinet enlisted the coöperation of "the city," or London financial interests. The Bank of England, abandoning its traditional policy of isolation, sponsored organizations to assist manufacturing firms and entire industries in rationalization and the acquisition of new capital. A national economic advisory council to assist the Government in its plans for economic reconstruction was appointed by Premier MacDonald on February 12. In addition to the Prime Minister, Chancellor of the Exchequer, Lord Privy Seal, president of the Board of Trade, and Minister of Agriculture and Fisheries, the board included Sir Arthur Balfour, Ernest Bevin, secretary of the Transport and General Workers' Union; G. D. H. Cole, Oxford economist; Sir Andrew Duncan, a director of the Bank of England; and Sir Josiah Stamp and J. M. Keynes, economists.

Labor's economic policies were strenuously opposed by the Conservatives and some Liberals. On July 9, the Government escaped defeat by only three votes during a discussion of Mr. Snowden's budget. The radical group within the Labor party, however, considered the Premier's programme far too moderate. Their demands for "socialism in our time" precipitated a schism within the Labor ranks. On February 17 Premier MacDonald withdrew from active participation in the Independent Labor party, controlled by the Left Wing. An ultimatum from the Parliamentary Labor party on March 26 demanded that the Government announce new plans for the alleviation of unemployment within two weeks. The Cabinet accordingly increased expenditures on roads and other public works and authorized the borrowing of \$250,000,000 instead of the contemplated \$200,000,000 for distribution in unemployment benefits. Disappointment with the provisions of the Snowden budget led to another Left Wing resolution on April 19. It called for a 100 per cent tax on large estates, state acquisition and operation of the Bank of England, and reconstruction of the Parliamentary Labor party so that its votes in Parliament would be in line with the party platform. Complete independence for India and Egypt was also urged. Despite Left Wing and Conservative objections, the budget measure was passed May 1, 255 to 139, with the Liberals supporting the Government and many Conservatives abstaining from voting.

On May 20 Premier MacDonald faced a new revolt within his party. Sir Oswald Mosley, Chancellor of the Duchy of Lancaster, who had been associated with Mr. Thomas in dealing with unemployment, resigned in protest at what he considered the Government's half-hearted measures. The Prime Minister's unemployment programme, however, was sustained, 210 to 29, at a Labor party meeting May 22, and again, by a majority of 29, during a debate in the House of Commons May 28, in which the Conservatives demanded protection as a cure for unemployment.

That criticism of his unemployment and other policies had not passed unnoticed, was evidenced when Premier MacDonald ended his first year in office by reorganizing his Cabinet. On June 3 he created a new Cabinet post by appointing J. H. Thomas as Secretary of State for the Dominions. Lord Passfield, who until then had served as Secretary of State for the Dominions and Colonies, remained in charge of colonial affairs. The Premier stated that the Imperial Conference scheduled for September made the division of work of the Ministry of Dominions and Colonies imperative. Mr. Thomas's work as Minister for Employment was taken over by a committee, in which he assumed the important task of persuading the Dominions to give further opportunities for the improvement of British trade and for British unemployed. On June 5, Vernon Hartshorn, Labor member on the Simon Commission, was appointed to succeed Mr. Thomas as Lord Privy Seal. Dr. Christopher Addison, once Minister of Health in the Lloyd George Cabinet, became Secretary of Agriculture, replacing Noel Buxton, who was elevated to the peerage. Ben Turner was succeeded as Secretary of State for Mines by Emanuel Shinwell, who held the same office in the Labor Government of 1924. Major Clement Richard Attlee, another member of the Simon Commission, was appointed Chancellor of the Duchy of Lancaster as successor to Sir Oswald Mosley.

A radical trend among British trade unionists was indicated at the Trades Union Congress at Nottingham in September. The Congress went on record as favoring a 44-hour week, an adequate state pension for all persons reaching the age of 60, and the assumption by the Government of the Bank of England's power to finance national undertakings. Suspicion of the movement toward rationalization of industry was revealed in the debates.

Internal strife was not confined to the Labor party alone. The old Liberal schism between the followers of the late Lord Asquith and of David Lloyd George reappeared to end the truce arranged between the factions previous to the general elections in May, 1929. Lloyd George's leadership was repudiated by Viscount Grey of Falloiden, former Foreign Secretary, speaking before the Liberal Council on January 14. He declared that unless Lloyd George stepped out before the next general election, the Liberal Council, composed of Asquith's former supporters, would fight under its own organization. Lloyd George replied January 20 with a conciliatory appeal for unity, but without offering to resign.

EMPIRE FREE TRADE. The Conservative policy of "safeguarding," consisting of moderate protective duties on a few imports from both the Dominions and foreign countries, evolved toward a policy of Empire free trade as a result of a bitter party struggle during the year. Empire

free trade had been vigorously advocated by Lord Beaverbrook in his chain of newspapers, as a remedy for Britain's economic ills. He proposed the development of the Empire as a single economic unit, with free trade between its component parts and with a general Empire tariff within which the Dominions would be allowed local tariffs to protect nascent industries. Conservative leaders at first received the proposals without enthusiasm, pointing out the difficulties of persuading India and the Crown Colonies to discriminate against foreign manufactures and the Dominions to withdraw their industrial tariffs on behalf of British manufactures.

Provoked by this lack of response, Lord Beaverbrook on February 17 launched the United Empire party, a new political party pledged to promote the Empire Free trade policy. He was joined by Lord Rothermere, owner of another great newspaper chain. Their powerful influence was directed toward unseating former Premier Stanley Baldwin as leader of the Conservative party. Baldwin sought to reconcile conflicting opinion in his party by extending his "safe-guarding" plan while pledging the party not to impose food taxes without first securing the consent of the country by referendum. He further promised to call an Imperial Conference to consider the whole question of Imperial relations, if the Conservatives returned to power at the next election. At a party meeting June 24, he won a vote of confidence on his plan for a national referendum on food taxes. His compromise policy failed to satisfy his critics, however, and in by-elections during the summer and autumn the United Empire candidates made serious inroads into the Conservatives' electoral strength. The general trend of sentiment seemed to be away from the traditional policy of free trade, espoused by both Labor and Liberals, and toward a policy of high protective tariffs and greater economic unity within the Empire. Despite strong opposition, Mr. Baldwin's leadership was confirmed at a meeting of Conservative members of Parliament and prospective candidates on October 30, when a resolution demanding his resignation was defeated 462 to 116.

The movement toward tariff protection found vigorous supporters in both the Liberal and Labor parties and the issue was widely debated in non-political circles. A group of British bankers on July 4 issued a pronouncement in favor of free trade within the Empire and a protective tariff on imports from all other countries. On August 31 a larger group of bankers and manufacturers, headed by Viscount Grey, demanded the retention of free trade.

The Labor Government's refusal to accept a preferential tariff at the Imperial Conference (see below) was sustained by the House of Commons, 299 to 234, in a test vote November 27. The House of Lords, however, on December 2 censured the Government's conduct of the Imperial Conference by a vote of 74 to 10. That the Liberals would continue to support Labor on the tariff issue was promised by Lloyd George in a speech before the Liberal candidates for Parliament on December 5. He declared that a general election at that time would shackle Britain for a generation with "a disastrous protectionist policy." In return for Liberal support, the Government indicated its intention of introducing an electoral reform measure satisfactory to the Liberals early in 1931. Foreign Minister Henderson asserted

that the bill would probably enable Labor to remain in office for an additional two years. The interim previous to the adjournment of the Commons on December 19 was marked by Sir Oswald Mosley's proposal of December 6 for the establishment of an emergency cabinet of five members, composed without regard to party affiliations, to extricate Britain from her economic slough. Late in November, the Government intervened in a dispute between miners and coal owners which threatened a nation-wide coal strike when the new Mines Act became effective December 1. The strike was confined mainly to the Scottish fields.

THE IMPERIAL CONFERENCE. The Labor government was forced to face the tariff problem at the quadrennial Imperial Conference, which convened in London October 1 and adjourned November 14. Premier Bennett of Canada proposed (October 8) that all members of the British Commonwealth of Nations raise by 10 per cent their tariffs on imports from non-British nations. His proposal was supported by the Premiers of Australia, New Zealand, the Irish Free State, Newfoundland, and South Africa, and by the Conservative leader, Mr. Baldwin, but was flatly rejected on November 12 by the Labor Government of Great Britain, due principally to the unyielding opposition of Mr. Snowden. A section of the Labor Cabinet was reported to have favored acceptance of Premier Bennett's scheme. Counter proposals of the MacDonald Government for bulk purchases abroad by Government boards were rejected by the Dominions as a basis for awarding preference to imports from the Mother Country.

A price stabilization scheme and a quota system for the distribution of British purchases of wheat among the Dominions in return for tariff concessions were discussed also, the wheat quota plan being provisionally approved by the Canadian delegation. The only immediate trade advantage offered the Dominions was a promise to extend by three years the existing tariff preferences accorded them by Britain—a heritage from the Baldwin government which Mr. Snowden had repeatedly threatened to repeal at the first favorable opportunity. This concession was considered of such trifling importance that only South Africa agreed to extend her existing tariff preferences to Britain for the same length of time. Some of the Dominions, however, concluded limited tariff agreements among themselves. Canada accorded preference to South African sugar. Further consideration of the Empire's economic policy was postponed to an Imperial Economic Conference to be held in Ottawa within the next 12 months.

Failure of the conference to achieve economic unity within the Empire was a serious blow to the prestige of the Labor government. The conference, however, initiated far-reaching changes in the political relations between the United Kingdom and the Dominions, placing all on a basis of complete equality. It was agreed that the Governor-Generals of the Dominions, theretofore appointed by the King on recommendation of the British government, were henceforth to be appointed by the King in consultation with the Dominion governments alone. This left the way open for the appointment of native-born subjects of the respective Dominions, if desired. New legislation, to be known as the "statute of Westminster," was to give legal effect to the independent status of the Dominions won in 1926.

Thus the only remaining legal bond between the Dominions and the United Kingdom was a common allegiance to the throne. Sir Muhammad Shafiq, spokesman for the Indian delegation, voiced the hope that India would soon be admitted to a similar status. See AUSTRALIA under *History*.

The extension of complete equality to the Dominions was made in response to the demands of South Africa and the Irish Free State. Premier Hertzog, the Nationalist leader in South Africa, asked that as a primary condition of all relationship with the Empire, South Africa should be accorded the unqualified right to secede at will. He did not advocate secession, but recognition of the right to do so. No formal recognition of this right was made by the conference, the general opinion being that it was implied in the recognition of the equality of the Dominions by the Imperial Conference of 1926. Speaking for the Labor Government, J. H. Thomas, Minister for the Dominions, declared in an interview September 29 that "nobody questions that right."

Foreign Minister Patrick Gilligan of the Irish Free State, addressing the opening session of the conference, said that for his country "the recognition of our position as a free and sovereign state comes before all other considerations." "While certain elements of the old system of imperial control were maintained," he continued, "even though it was only in form, the will to co-operate was correspondingly weakened. We most earnestly urge upon the present conference the need of removing finally those last obstacles to harmonious and easy intercourse."

No decision was reached on the Irish demand for abolition of appeals from the Dominions to the Privy Council in Great Britain. It was agreed, however, that justiciable disputes between members of the Commonwealth might be submitted, if desired, to *ad hoc* tribunals of five qualified persons, instead of to the Privy Council. Other decisions of the conference were listed in press reports as follows: (1) an act giving Dominion Parliaments full equality with the British Parliament was to supersede the 1865 colonial laws validity act; (2) Consent of all seven Parliaments of the Commonwealth must precede any change in the succession to the British throne or in royal titles; (3) Common British citizenship remained unaffected, but all Dominions were to enjoy the right, already exercised by Canada, of determining their own nationals; (4) The Dominions received full authority to legislate over all ships in their territorial waters as well as over their own ships in extraterritorial waters; (5) Acceptance of amendments to the League of Nations Covenant discussed at the 1930 Assembly were recommended, with the stipulation that their effectiveness be conditioned on the entry into force of a general treaty for reduction and limitation of armaments. See LEAGUE OF NATIONS.

Agreement was reached at the Imperial Conference also on the completion of the Royal Air Force airbase at the Singapore naval base, the completion of existing work on the new Singapore dockyard, and the postponement of additional work on the purely naval projects at Singapore for five years. The Admiralty announced that up to July, 1930, \$12,500,000 had been spent on the base out of an estimated total expenditure of \$43,000,000 needed to complete the project.

COLONIAL GOVERNORS' CONFERENCE. While the relations of the larger units of the Empire were thus drastically readjusted, the link between the various British colonial possessions was drawn closer by recommendations adopted at a conference of colonial governors held in London during July. These included proposals for the creation of a colonial service, corresponding to the diplomatic service, from which administrators were to be drawn; the establishment of a film censorship, particularly in the colonies of tropical Africa; and the inauguration of an Empire broadcasting scheme.

LONDON NAVAL CONFERENCE. The five-power conference for the limitation of naval armaments, called by the British government following the conversations between Premier MacDonald and President Hoover in Washington in 1929, convened in the British capital Jan. 21, 1930. Three months later (on April 22) a treaty was signed which terminated, temporarily at least, the naval building rivalry between the United States, Great Britain, and Japan. France and Italy, the other Powers represented, could not agree upon the limitation of the main categories of naval vessels involved and signed only four of the five parts of the treaty, which was signed in full by the delegates of the other three Powers. For details of the treaty, see NAVAL PROGRESS.

Despite the opposition of Winston Churchill and ranking naval officers, the naval treaty was ratified by the House of Commons on July 24 and by the House of Lords July 29. Ratifications by the United States and Japan were deposited in London early in the autumn, bringing the three-power pact into effect. A British White Paper on the results of the Naval Conference issued April 15 estimated that the treaty would save the country about £67,000,000 from 1930 to 1936. Of this £50,000,000 represented the cost of new battleships authorized by the Washington Treaty, £4,000,000 the economy due to immediate reduction of the battleship fleet to 15 vessels; and £13,000,000 the saving on cruisers, destroyers, and submarines, as compared with the final British proposals at the unsuccessful naval conference held in Geneva in 1927.

OTHER EVENTS. On June 5 Premier MacDonald announced that the Government had decided against the channel tunnel project, which had been approved earlier in the year by the Government's economic committee and later rejected by the committee of Imperial defense on "strategic grounds." Despite the Ministry's opposition, a resolution favoring construction of the tunnel failed of passage in the House of Commons by only nine votes.

The desperate economic situation brought about in the British West Indian possessions and in British Guiana by the low world prices for sugar resulted in an appeal for financial assistance to the Labor Government. The Government extended aid through the Colonial Development Fund but in amounts considered inadequate by the various colonies. See TRINIDAD, BRITISH GUIANA, BARBADOS, WINDWARD ISLANDS, LEEWARD ISLANDS, and JAMAICA. Reports reaching Washington during the year that Great Britain was seeking to buy Greenland from Denmark were denied by the Danish Premier.

GREECE. A republic in southeastern Europe, comprising the lower Balkan peninsula and many islands in the Aegean Sea; formerly a constitutional monarchy. King George II was forced to leave Greece, Dec. 18, 1923, and the Republic was established Apr. 13, 1924, as the result of a plebiscite. In continental Greece are included Southern Macedonia, Western Thrace, and Epirus; the chief island possession is Crete. Capital, Athens.

AREA AND POPULATION. Greece increased her area by 20,730 square miles as a result of the Balkan Wars of 1912-13 and by an additional 3182 square miles under the Treaty of Lausanne (1923), the total area in 1930 being 49,912 square miles. The population at the census of May 15, 1928, was 6,204,684, as compared with 5,021,790 on the same territory in 1920. About 1,400,000 Greek refugees from Turkey were finally established in industry and agriculture by 1930. The chief cities, with their populations in 1928, are Athens, 452,919; Peiraeus (Piræus), 251,328; Saloniki, 236,524; Patras, 61,278.

EDUCATION. School attendance for children between the ages of 7 and 12 is nominally compulsory. In 1927-28, there were 344 infant schools, with 16,728 pupils; 8277 primary schools, with 645,353 pupils; 690 high schools, with 100,663 pupils; 27 commercial schools, with 3215 pupils; and 15 agricultural schools, with 534 pupils. There were three universities (two at Athens and one at Saloniki), with 133 professors and 6491 students in 1928. At the census of 1921, 37 per cent of the males and 70 per cent of the females were illiterate.

PRODUCTION. Primarily an agricultural country, Greece is mainly dependent for her prosperity upon her two main export crops—tobacco and currants. Only about 11 per cent (3,440,710 acres) of the total area was cultivable in 1928, of which 2,813,330 acres were devoted to cereals. The production, in quintals, of the cereal crops in 1929 was: Wheat, 3,805,000; barley, 1,753,000; oats, 1,041,000; maize, 1,561,000. Preliminary returns for the other crops in 1929, with comparative figures for 1928, were: Tobacco, 176,000,000 pounds (129,000,000); currants, 250,000,000 Venetian pounds (280,000,000). The almond, walnut, and filbert crops were larger than in 1928. Rice, grapes, and cotton are other products. Livestock in the country in 1928 included 6,920,361 sheep, 4,919,118 goats, 910,203 cattle, 419,524 swine, 290,306 horses, 342,870 asses, and 149,610 mules. Rapid progress on the

Republic's extensive land reclamation, drainage, and irrigation programme was reported in 1929. Completion of the first stage of the Saloniki Plain scheme reclaimed 15,000 acres of arable land. A similar project for the Struma River Valley was initiated.

There are more than 4,000,000 acres of publicly-owned and almost 2,000,000 acres of privately-owned forests. The production of timber in 1928 was valued at \$697,750, according to the Forestry Bureau. Mineral and metallurgical production in 1927 was valued at 266,855,857 drachmas. Iron ore, iron pyrites, lead, magnesite, chromites, emery, zinc, lignites, and salt are the principal minerals worked.

The value of industrial production in 1929 was estimated at about 5,716,105,000 drachmas (1 drachma equalled about \$0.013 in 1929), as compared with 6,640,000,000 drachmas in the previous year. Olive-oil production was estimated at 90,000 metric tons (107,000 metric tons in 1928). The rug industry experienced a difficult year and conditions of industry were generally less favorable than in 1928. Wine, textiles, leather, and soap are other industrial products.

COMMERCE. As compared with 1928, imports in 1929 showed an increase of 7 per cent in value and exports an increase of 11.2 per cent. Nevertheless, the adverse balance increased slightly to 6,290,335,000 drachmas, as against 6,127,047,000 drachmas in 1928. The total value of imports was 13,275,531,000 drachmas (\$171,254,000) and of exports 6,985,196,000 drachmas (\$90,109,000). Corresponding figures for 1928 were: Imports, 12,409,122,000 drachmas (\$161,319,000); exports, 6,282,075,000 drachmas (\$81,667,000). Shipments of tobacco, olive oil, raisins, olives, and figs increased in value, while exports of currants decreased. In 1930, imports declined to 10,851,000,000 drachmas, exports to 5,918,000,000, and the excess of imports to 4,933,000,000.

The United States was again the principal source of imports, furnishing 15.8 per cent of the total (15.8 in 1928). Great Britain followed with 12.5 (14.5); Germany, 9.4 (8.6); France, 6.8 (7.0); Italy, 5.6 (5.2); and Canada, 5.4 (7.1). Exports went principally to Germany, which took 23.1 per cent of the total in 1929 (25.9 in 1928); Italy, 18.3 (16.5); United States, 15.9 (20); United Kingdom, 11.8 (13.2). Imports from the United States were valued at 2,090,933,000 drachmas (\$26,973,000) in 1929 and 1,957,454,000 drachmas (\$25,447,000) in 1928. Exports to the United States totaled 1,114,048,000 drachmas (\$14,371,000) in 1929 and 1,256,219,000 drachmas (\$16,331,000) in 1928.

FINANCE. The budget for the fiscal year ended Mar. 31, 1930, anticipated receipts of 9,855,000,000 drachmas and expenditures of 10,437,000,000 drachmas. Preliminary returns indicated a substantial increase in actual receipts and expenditures over the estimates. For 1930-31, revenues were estimated at 10,534,378,073 drachmas and expenses at 10,525,652,925 drachmas. Of the revenues, 4,446,182,000 drachmas were to come from indirect taxation. The chief item of expenditure was an appropriation of 3,156,025,500 drachmas for the service of the public debt. The International Financial Commission reported that the gross returns from Greek mortgaged revenues in the calendar year 1929 totaled 4,231,302,300 drachmas, as compared with 4,063,836,200 drachmas in 1928. Tobacco-tax receipts increased by 64,238,000 drachmas and customs returns

by 112,407,300 drachmas over 1928 returns.

The public debt on Jan. 1, 1930, stood at 38,139,124,147 drachmas, of which 32,340,932,889 drachmas represented the funded debt, 3,403,863,410 drachmas the floating debt, and 2,394,327,848 drachmas the railway debt. On Jan. 1, 1929, the total debt amounted to 36,783,938,000 drachmas (\$478,191,000), or about \$80 per capita. The foreign debt was held chiefly in Great Britain, the United States, and France. In 1930, the Swedish match firm of Kreuger & Toll loaned the Hellenic government £1,000,000 at 85 with 6 per cent interest, repayable in 24 years. The proceeds were to be used for the erection of public school buildings. A total of 425,000,000 drachmas of new token coins were issued in 1930.

COMMUNICATIONS. There were nine railway systems with an aggregate length of 1991 miles of line in 1929, of which 884 miles were operated by the state. A deficit of 19,522,349 drachmas was incurred by the state railways in 1928. In 1929 there were about 8611 miles of highway in Old and New Greece and 570 miles were under construction. The Greek merchant marine in September, 1929, consisted of 535 steamships of 1,304,844 tons, including 115 passenger vessels of 78,276 tons. In 1928, a total of 25,776 steamers of 17,232,521 tons and 6692 sailing vessels of 352,729 tons entered the ports of the republic. Telegraph and telephone systems are owned by the Government. A new Ministry of Aeronautics, combining supervision of both military and civil aviation, was established in December, 1929. In the same year a regular weekly air service for mail and passengers was inaugurated by an Italian company between Brindisi, Patras, Athens, and Istanbul (Constantinople).

FOR ARMY AND NAVY, see MILITARY PROGRESS AND NAVAL PROGRESS.

GOVERNMENT. The Republic of Greece was established by a plebiscite on Apr. 13, 1924. The constitution, published on Sept. 22, 1926, was revised by the Chamber elected on Nov. 7, 1926. The new constitution proclaimed on June 3, 1927, provides, among other things, that a second House (Senate) consisting of 120 members shall be established, that Parliament shall be elected by direct, universal, and secret voting, and that the Senate shall be elected partly by the people, partly by the Parliament and Senate in a common meeting, and partly by the corporations of the different professions. President in 1930, Alexander Zaimis (elected Dec. 14, 1929). The Cabinet constituted June 7, 1929, was composed at the beginning of 1930 as follows: Premier, Minister of Health, and Minister of Air, Eleutherios Venizelos; Foreign Affairs, Andreas Michalakopoulos; War, Themistocles Sophoulis; Marine, V. Botzaris; Interior, G. Sideris; National Economy, P. Vourloumis; Agriculture, D. Spyrides; Social Insurance, E. Emmanouelides; Justice, C. Digas; Finance, George Maris; Communications, B. Karapanyotis; Education, A. Papandreou.

HISTORY

THE GRECO-TURKISH ENTENTE. While Greece on Mar. 25, 1930, celebrated the 100th anniversary of liberation from Turkish rule, negotiations were under way which a few months later terminated the long-standing enmity between the two nations, confirmed the *status quo* in the eastern Mediterranean, and settled the difficult problems arising from the Anatolian War of 1921. Significant of the changed attitude of the two

nations was the participation of the Turkish Minister to Greece and his staff in the anniversary celebration. The official Turkish attitude was that the Turkey of 1930 was a different country from that of 1830 and that the modern Turkey proclaims liberty instead of repressing it.

A preliminary Greco-Turkish accord, replacing the unsatisfactory agreement of December, 1926, was signed June 10, 1930, and ratified by the Turkish Grand National Assembly on the last day of its summer session. It provided for the final liquidation of the large-scale exchange of populations between the two countries arranged at the Lausanne Conference of 1923. The new agreement stipulated that Greece was to pay \$2,100,000 to the League of Nations Mixed Commission to be distributed in part to Turks who formerly owned property in Western Thrace, in part to Greeks whose property in Anatolia was confiscated, and the remainder to Greeks who left Turkey before the Treaty of Lausanne and who owned property in Istanbul. The Commission was authorized also to settle the question of the property left behind by Turks and Greeks who were exchanged, both Governments having agreed to compensate their respective nationals. The treaty recognized as established residents of Istanbul some 20,000 Greeks whose status had been in doubt for seven years.

The signing of the accord brought immediate protests from representatives of Greek refugees from Turkey, but Premier Venizelos on June 15 declared that his Government was determined to ratify the treaty. He announced that he would carry the issue to the country and call new elections, if opposition became serious. The agreement proved to be a preliminary to the still more important developments to follow. In the last days of October, Premier Venizelos and Foreign Minister Michalakopoulos paid an official visit to Istanbul and to the Turkish capital, where they signed two additional agreements with Turkey. One of these was a Convention pertaining to commerce, navigation, and Consular representation. The other was a treaty of friendship and arbitration, providing for the neutrality of either of the contracting parties in the event of the other being attacked by a third Power. A protocol attached to the arbitration pact provided for the maintenance of the existing naval equilibrium between the two countries, requiring each to give the other six months' warning of its intention to construct any new warship. Details of the naval agreement were to be worked out by Greek and Turkish naval experts. Only the question of the Turkish minority in Western Thrace and of the Greek minorities in Istanbul and the islands of Imbros and Tenedos remained as a possible cause of friction. The Greek Ministry of War on November 10 ordered the disposal at auction of a number of destroyers, two torpedo boats, one mine layer, one mine-sweeper, three gunboats, and two naval training ships.

While the healing of Greco-Turkish enmity was attributed in large part to the statesmanship of the veteran Premier of Greece, the conclusion of the pact of arbitration and friendship was proclaimed an Italian triumph in the struggle with France for predominance in the eastern Mediterranean. The Greco-Turkish entente was considered by Italy an indispensable preliminary to an Eastern Mediterranean compact including all three Powers and having for its object the maintenance of peace and of the *status quo* in that

region. Italy had previously concluded similar treaties of non-aggression and friendship with both Turkey and Greece. Turkish and Greek statesmen acknowledged publicly their indebtedness to Premier Mussolini for assistance in the conclusion of the new pact. In some circles, however, the Greco-Turkish pact was viewed as an effort to resist Italian pressure on both countries and Russian pressure on Turkey. The agreement was ratified by the Greek Chamber of Deputies on December 20.

THE BALKAN CONFERENCE. Preliminary steps toward greater economic unity and peace in the Balkans were taken during a conference held the first weeks in October in Athens. The conference was attended by unofficial representatives of Greece, Albania, Bulgaria, Rumania, Turkey, and Jugoslavia, and each delegation was accompanied by the Foreign Minister of its respective country. The United States, Russia, and the League of Nations were represented by observers. A plan for the union of Balkan states was adopted in principle October 9. Approximating in form the German Confederation previous to 1870, the proposed union would constitute an alliance of sovereign states within the League of Nations. The confederation was to be based on the unconditional exclusion of war among the members, economic coöperation, and cultural union. Minorities were to enjoy satisfactory protection.

Another resolution adopted by the conference requested the Foreign Ministers of Balkan states to meet annually to discuss means of promoting Balkan solidarity. The Balkan governments were urged to consider the proposals for mutual outlawry of war, peaceful settlement of all disputes, and mutual assistance in case of violation of the obligation to abstain from war. Provision was made for a special committee to examine the proposed pact and report at the next conference.

OTHER EVENTS. The absence of Premier Venizelos in Turkey was seized upon by adherents of the former dictator and President, Gen. Theodore Pangalos, to attempt a military *coup d'état* in Athens. The police discovered the conspiracy in time and arrested General Pangalos along with some 200 army officers and numerous civilians on October 29. The conspirators ascribed their plot to resentment at the conclusion of the Greco-Turkish pact. Shortly before, General Pangalos had been sentenced by a special court of the Chamber and Senate to two years' imprisonment and the loss of civil rights for five years on a charge of violating the law of Ministerial responsibility during his régime as dictator. The entire Cabinet resigned on December 21 and was reorganized the next day on a strictly Venizelist basis.

Russian and Bulgarian monks on Mount Athos complained to the League of Nations during the year that Greece had confiscated the greater part of the ecclesiastical property on the mountain.

GREENE, FRANK LESTER. A United States Senator, died Dec. 17, 1930, in St. Albans, Vt., where he was born Feb. 10, 1870. After working with the Central Vermont Railway, he became reporter (1891), assistant editor (1892), and editor (1899-1912) of the *St. Albans Daily Mes-*

senger. In the Spanish-American War he recruited Company B, 1st Regiment, Vermont Volunteer Infantry, and at the close of the war was commissioned colonel and aide-de-camp on the staff of the Governor of Vermont. He was a member of a commission to prepare and propose amendments to the Vermont Constitution, delegate-at-large to the Republican National Convention (1908), and chairman of the Republican State Convention (1914). Sent to Congress in 1912 from the 1st Vermont District to fill the unexpired term of David J. Foster, he was reelected for five terms (1913-23). In 1922 he was elected to the U. S. Senate and reelected in 1928 for the term ending Mar. 3, 1935. Norwich University conferred the honorary M.A. degree on him in 1908 and the LL.D. degree in 1915. In 1917-23 he was a regent of the Smithsonian Institution in Washington.

GREENLAND. Exceeded in size only by Australia among the islands of the world, Greenland is situated in the North Atlantic to the north and east of Canada. The total area is estimated at 839,782 square miles and the population in 1928 of the settled area (46,740 square miles) was 15,660, including 310 Europeans, mostly Danes. The settled area along the southern coasts, which constitutes the only Danish colonial possession, is divided into the provinces of North, South, and East Greenland, with 6640, 8206, and 814 inhabitants, respectively. In 1917, Denmark extended its sovereignty over the whole of Greenland, but this claim is not recognized by Norway. The interior is largely unknown and consists of a plateau from 6000 to 9000 feet above sea level, covered with a thick layer of ice and snow.

Syðproven, with 901 inhabitants, is the largest settlement. Godthaab and Godhavn are the centres of administration for South and North Greenland, respectively. Trade, which is chiefly in seals, sealskins, fox skins, and oil, is a monopoly of the Danish government. In 1927 it amounted to 8,960,000 kroner (about \$2,392,320), of which 6,910,000 kroner were exports to Denmark and 2,050,000 kroner, imports from Denmark. Administration of the colony is in the hands of a director, who resides in Copenhagen. Director in 1930, J. Daugaard-Jensen. See *POLAR RESEARCH*, and *DENMARK* under *History*.

GRENADEA, gre-nā'dā. An insular possession of Great Britain in the Windward group of the West Indies. Area, 133 square miles; population at the census of 1921, 66,302; estimated in December, 1928, 75,214. Grenada includes half the Grenadine Islands, the other half being administered from St. Vincent. The capital is St. George with a population of about 5000. The chief products, which are also the chief exports, are cacao, spices, lime juice, cotton, and cottonseed. The production of sugar was rapidly increasing. In 1928, the revenue was £153,870 and the expenditure, £134,184; public debt, £252,809; imports, £429,279; exports, £445,266. A total of 558,902 tons of shipping, mostly British, entered the ports (1928). The colony is under the Governor of the Windward Islands, whose headquarters are at St. George, but has its own institutions. Governor and Commander-in-Chief of the Windward Islands in 1930, Sir Frederick Seton James; Colonial Secretary for Grenada, H. Ferguson.

GRINNELL COLLEGE. A coeducational, non-sectarian institution of higher learning in Grinnell, Iowa; founded in 1846. The enrollment for

the autumn of 1930 was 661, while that for the summer session was 150. There were 65 faculty members. The productive funds amounted to \$1,400,000, and the income for the year, exclusive of dormitories, was \$315,000. The library contained 85,000 volumes. President, John Hanson Thomas Main, Ph.D., LL.D.

GRISWOLD, THE RT. REV. SHELDON MUNSON. Protestant Episcopal Bishop of the Diocese of Chicago, died in Chicago Nov. 28, 1930. He was born in Delhi, N. Y., Jan. 8, 1861, and was graduated from Union College in 1882 and from the General Theological Seminary in 1885. On ordination, he served as rector in Ilion (1885-88), Little Falls (1888-90), and Hudson, N. Y., (1890-1902). In 1902 he was elected, and the following year consecrated, first missionary Bishop of Salina, founding in western Kansas one of the strongest missionary districts of the Protestant Episcopal Church. He was made suffragan Bishop of the Diocese of Chicago in 1917, and Bishop in February, 1930, on the death of the Rt. Rev. Charles Palmerston Anderson (q.v.). The D.D. degree was conferred on him by Union College in 1900 and by the General Theological Seminary in 1903.

GUADELOUPE, gu'dā-lōōp'. A French insular possession in the Lesser Antilles in the West Indies, consisting of two islands separated by a narrow channel, the one on the west being Guadeloupe proper or Basse-Terre, and the one on the east, Grande-Terre. Total area, including five small dependent islands, 688 square miles; population in 1926, 243,243. Basse-Terre is the capital, with a population of 8379; chief town and port, Pointe-à-Pitre, with 26,455 inhabitants.

The chief products for export are cacao, coffee, sugar, and rum. Bananas, sweet potatoes, maize, tobacco, manioc, and various vegetables are grown also. Imports (1927) totaled 157,590,795 francs and exports, 182,299,044 francs. The budget for 1929 balanced at 39,510,275 francs; the public debt on Jan. 1, 1928, was 499,078 francs. There is communication with France by means of two steamship companies, and a wireless station at Destrellan. At the head of the government are a governor and an elected council. The colony sends to the French Parliament at Paris one senator and two deputies. Governor in 1930, M. Tellier, appointed in 1927.

GUAM, gwām. An insular possession of the United States, situated at the southern end of the Mariana, or Marianne, Islands in mid-Pacific about 1500 miles from Manila and 5053 miles from San Francisco. The largest and most populous island of the Mariana group, it has an area of 210 square miles. The native population at the census of 1930 was 17,592, as compared with 9675 in 1901. Including the military establishment, the 1930 population was 18,509. Capital, Agaña, with about 8500 inhabitants.

The public-school registration in 1930 numbered 3753 pupils. Education is compulsory between the ages of 7 and 12. Spanish and English are spoken in addition to the native Chamorro. Cacao, coffee, copra, corn, rice, sugar, sweet potatoes, and timber are the chief products of the island, but only copra and coconut oil are exported. The trade of the island is principally with the United States and Manila. For the year ended June 30, 1930, imports totaled \$603,260 and exports, \$200,593. The harbor of Apra is closed to foreign naval and commercial vessels, except in special cases. Piti is the port of entry

Guam is a United States naval station, of which the governor, who is appointed by the President, is commander. Medical care for the entire population is provided by the Navy, as there are no private hospitals or doctors in private practice. Governor in 1930, Commander Willis W. Bradley, U. S. N.

GUATEMALA, gwä'tä-mälä. A republic of Central America lying between the Caribbean Sea and the Pacific Ocean, south of Mexico, west of British Honduras, and north of Salvador and Honduras. Capital, Guatemala City.

AREA AND POPULATION. Guatemala has an approximate area of 42,353 square miles. The population totaled 2,004,900 at the census of 1920 and was estimated at 2,177,255 in 1929. About 60 per cent are pure Indian, the remainder being largely mestizos. The chief cities, with their populations in 1928, were: Guatemala City, 120,707; Quezaltenango, 30,125; Coban, 26,774; and Zacapa, 18,094.

EDUCATION. About 80 per cent of the population are illiterate. The school age is nominally from 5 to 17 years. There were 2632 schools of all kinds in 1928, with 118,986 pupils registered, including 1042 rural schools, with 24,298 pupils, and 1491 city schools, with 87,348 pupils.

PRODUCTION. Agriculture is the principal industry and coffee is the chief crop cultivated, furnishing about 80 per cent of the value of all exports. Sugar and bananas are other leading export crops, while wheat, corn, potatoes, and rice are produced for domestic consumption. The continued decline in the world price of coffee led to a depression in the middle of 1929 which grew worse during 1930. The coffee crop for 1928-29 was estimated at 110,000,000 pounds, and the sugar crop at 33,400 metric tons. Bananas exported in 1928 were valued at \$3,096,333, clean coffee at \$22,349,220, and coffee, in parchment, at \$713,313.

Guatemala is the leading source of chicle, used in chewing gum. The forests, covering 1,316,482 acres, are rich in mahogany and dye woods. Silver, gold, copper, iron, and lead are mined in comparatively small quantities. There were 140 manufacturing plants in 1929, representing a capital investment of about \$18,600,000. Investments by United States citizens in the country in 1930 were estimated by the U. S. Department of Commerce at \$69,979,000. Germans control nearly 40 per cent of the coffee plantations.

COMMERCE. According to the Guatemalan Customs Service, imports during 1929 were valued at 24,458,632 quetzales (1 quetzal equals \$1), or 313,359 quetzales (1.3 per cent) greater than in 1928. Exports were valued at 24,928,229 quetzales, a decrease of 3,283,343 quetzales (11.6 per cent) from the previous year. Imports exceeded exports in value for the first time in many years in 1929. In 1930, both imports and exports experienced a decided slump. Both the United States and Germany increased their share of the import trade in 1929, furnishing 57 and 14.2 per cent of all imports, respectively, as compared with 55 and 13.8 per cent in 1928. Imports from Great Britain and France remained at practically the same level.

Imports from the United States in the fiscal year ended June 30, 1930, fell off 25 per cent, from \$12,930,599 in 1928-29 to \$9,761,809, while exports to the United States declined 3.33 per cent, from \$8,315,768 in 1928-29 to \$8,038,391.

FINANCE. For the fiscal year ended June 30,

1929, preliminary figures placed Government revenues at 15,398,824 quetzales and expenditures at 16,370,747 quetzales, leaving a deficit of 971,923 quetzales, despite an increase in revenues over 1927-28 of 1,133,073 quetzales. Expenditures had shown a steady increase in previous years, the total for 1923-24 being 8,095,573 quetzales. The budget as enacted for 1929-30 provided for expenditures of 15,554,614 quetzales. A deficit was forecast by the Minister of Finance in his report of March 1, 1930. The preliminary expenditure budget for 1930-31 amounted to 13,628,786 quetzales.

The total outstanding debt at the end of 1929 was 15,556,018 quetzales, according to the President's message of March 1, 1930. A new 7 per cent loan of \$2,500,000 was obtained from the Swedish Match Company in 1930 in return for a 30-year monopoly of the match business of the country. Of the proceeds of the loan, \$2,000,000 was to be set aside for the formation of a mortgage bank for farmers and the rest was to be spent on public works. A National Mortgage Bank was established at Guatemala City by executive decree of Dec. 4, 1929.

COMMUNICATIONS. Official opening of the link of the International Railways of Central America connecting the Guatemalan and Salvadorean railway systems and affording Salvador direct access to the Caribbean through Puerto Barrios, Guatemala, took place Dec. 28, 1929. The International Railways had 498 miles of line in operation in Guatemala in 1928. An electric railway linking Quezaltenango, the second city in size in the Republic, with San Felipe, a junction point on the International Railways of Central America, was placed in operation March 30, 1930. The total cost was about 4,992,500 quetzales for 33 miles of line. There were 1396 miles of highway in 1929, affording access by motor to nearly all parts of the republic during nine months of the year. Air-mail and passenger service connects Guatemala City with Quezaltenango, La Libertad, Mexico City, Zacapa, and Puerto Barrios, lines to the latter two points having been inaugurated June 10, 1930. The government-owned telegraph and telephone systems in 1929 had 4430 and 4960 miles of wire, respectively.

GOVERNMENT. The executive power is vested in the President elected for six years and legislative power in the National Assembly, consisting of representatives elected for four years, and the Council of State of 13 members, part of whom are elected by the National Assembly and part appointed by the President. President in 1930, General Lázaro Chacón, elected December, 1926, for a term expiring Mar. 15, 1933. A convention signed by the Foreign Ministers of Guatemala, Honduras, and Salvador on May 27, 1927, bound the three countries to a unified foreign policy.

THE REVOLUTION. Unrest in Guatemala due to economic depression and charges of corruption leveled against the alleged dictatorship of President Lázaro Chacón produced the expected uprising when the President was suddenly stricken with a cerebral hemorrhage on Dec. 12, 1930, and confined to his bed. A statement signed by eight physicians declared him to be incapacitated for his official duties. On December 13, Baudillo Palma, Second Designate (vice president), was appointed President by the Council of Ministers pending General Chacón's recovery and confirmed by the National Assembly. On December 15, President Hoover cabled his felicitations to Acting

President Palma, thereby implying recognition. On the following day Palma's new Government was overthrown by a military *coup d'état* in Guatemala City led by Gen. Manuel Orellana. Fifty-seven persons were killed or wounded in street fighting, before the diplomatic corps arranged a truce between the rival factions and brought the brief revolution to a close.

General Orellana, named Acting President by the Assembly, immediately assumed control of the government and formed a new cabinet, in which Foreign Minister Alfredo Skinner Klee remained the sole holdover from the previous Ministry. On December 30, General Orellana was notified by the American Minister in Guatemala City that he would not be recognized by the United States. The following day he resigned, and José María Reyna Andrade, a Liberal member of Congress, was appointed Provisional President. Former President Lázaro Chacón resigned his claim to the office at the same time as General Orellana. Indications were that a presidential election would be held early in 1931.

Upon the constitutional question involved, the United States took the stand that Orellana had illegally ousted Baudillo Palma from the Presidency. Orellana, in turn, charged that Palma had usurped the office from the former First Designate, Gen. Mauro de León. The latter, who was Minister of War in the Lázaro Chacón Cabinet, was killed in the fighting. Since the Constitution prohibited the First Designate from holding office in the administration, the State Department at Washington held that de León could not legally have succeeded Lázaro Chacón. The United States adheres to an agreement among the Central American states not to recognize governments which obtain power in that region by revolution or other unconstitutional methods.

The revolt caused little property loss or interruption of business. Banks and business houses in Guatemala City opened a day or so afterward, constitutional guarantees were maintained, and the various garrisons and civil authorities throughout the republic accepted the new régime peacefully. The political upheaval, however, was expected to have an unfavorable effect upon Guatemala's efforts to negotiate a loan in New York.

OTHER EVENTS. Arbitration of the 90-year-old boundary dispute between Guatemala and Honduras was agreed upon by a treaty signed by representatives of the two countries at Washington July 17, 1930, after six months of negotiation. The treaty contained a supplementary convention providing for the delimitation of the boundary in accordance with the decision to be handed down by the arbitral commission. Chief Justice Charles Evans Hughes of the United States was named chairman of the arbitral commission. The texts of both the treaty and the supplementary convention were withheld from publication at the request of the negotiators.

The region under dispute, known as the Montagua Valley, lies on the Atlantic slope of the southeastern border of Guatemala. A rich banana-growing region, it became an active source of contention after 1915 when rival American banana companies, one operating under a concession from Guatemala, which held actual possession, and the other under Honduran authority, besought the support of the respective governments for their claims. Armed clashes ensued in 1915 and again in 1927, but in each case the

United States mediated to prevent the outbreak of what threatened to become a general war.

Relations between Mexico and Guatemala were strained as a result of an attack by Guatemalan forest guards upon a chicle plantation at La Fama, in the Mexican State of Chiapas, late in February. Three Mexicans were killed and six others taken prisoner. The Guatemalan Government expressed its regrets, stating that the forest guards thought La Fama was on Guatemalan territory and that the Mexicans operating there were chicle smugglers. The Mexican Foreign Office announced June 1, 1930, that the invasion of Mexican territory had been satisfactorily explained. Claims for the loss of life and property damage were presented.

For reasons not stated, the collective resignation of the Cabinet was presented to President Lázaro Chacón on Aug. 30, 1930. The President accepted only three resignations. He appointed Dr. Alfredo Skinner Klee as Foreign Minister, succeeding Aguirre Velazquez; Gen. Federico Aguilar Valenzuela as Minister of Commerce, Agriculture, and Public Works, succeeding Col. Daniel Hernandez; and Dr. Castillo Monteroso, Minister of Interior and Justice, succeeding Dr. Rodolfo Sandoval. On Sept. 11, 1930, the state of siege instituted a year earlier was lifted and the Constitutional guarantees suspended at the same time were restored. A presidential decree issued during the year amplified the restrictions placed in 1927 upon immigration from Turkey, Palestine, Lebanon, Arabia, and Syria. Immigration restriction was made applicable to native or naturalized citizens of Armenia, Egypt, Afghanistan, Poland, Greece, Bulgaria, Rumania, Russia, Persia, Yugoslavia, India, the nations formerly part of the Russian Empire, and immigrants from the northern shore of Africa.

GUGGENHEIM, DANIEL. An American capitalist, died near Port Washington, Long Island, N. Y., Sept. 28, 1930. He was born in Philadelphia, Pa., July 9, 1856, and entered upon his business career at the age of 17, being in charge from 1873 to 1884 of the Swiss branch of the lace concern developed by his father in Philadelphia. When the elder Guggenheim became interested in mining, the son transferred his activities to that field. He was a member of the firm of Guggenheim Brothers, which was engaged in development of copper mines in Alaska, Mexico, and Chile, and in the improvement of the nitrate industry of Chile. They were also interested in the development of tin mining in Bolivia and of diamond mining and forestry in the Congo region of Africa. Later on the merging of the Guggenheim firm with the American Smelting & Refining Co., he became president, holding that office or acting as chairman of the board over a period of 20 years. He was also on the directorates of many mining, smelting, banking, and mercantile concerns. In 1919 he received the decoration of Commander of the Order of the Crown of Belgium, and in 1930 the honorary degree of Doctor of Commercial Science from New York University. His most notable philanthropy was his contribution to the development of aviation, establishing in 1925 the school of aeronautics at New York University and in 1926 the \$2,500,000 Daniel Guggenheim Fund for the Promotion of Aeronautics. He also endowed in 1924 the Daniel and Florence Guggenheim Foundation to promote "through charitable and benevolent activities the well-being of mankind throughout the world."

GUGGENHEIM FOUNDATION. See AERONAUTICS; UNIVERSITIES AND COLLEGES.

GUIANA. See under DUTCH GUIANA; BRITISH GUIANA; FRENCH GUIANA.

GUTHRIE, SIR JAMES. A Scottish painter, died in Row, Dumbartonshire, Sept. 6, 1930. He was born in Greenock, near Edinburgh, June 10, 1859. After attending the University of Glasgow he studied painting, first in Edinburgh and later in London under John Pettie. His trend towards realism evinced his sympathy with the French impressionists and Whistler, and it was in Paris that he first attained recognition. He later received awards at the salons in Munich and Berlin. After 1890 he abandoned genre painting to devote himself to portraiture, becoming one of the most distinguished portrait painters of the twentieth century and leader of the Glasgow school. The most significant of his portraits are those of his mother, Archbishop Eyre, Professor Jack, Major Hotchkiss, Mrs. Fergus, and Mrs. Watson. Important among his gallery exhibitions are: "Mid-Summer," in the Edinburgh Museum; "A Burial in the Scottish Highlands," in the Glasgow Gallery; "Schoolmates," in the Ghent Gallery; "Charles Barrie," in the Museum of Victoria, Australia; and the group, "Some British Statesmen of the War," in the National Portrait Gallery. In the United States he was known chiefly through his contributions to the exhibitions of the Carnegie Institute in Pittsburgh. He was elected an associate of the Royal Scottish Academy in 1888 and a member in 1892, and served as president of this society from 1902 to 1919. He was also a trustee for the National Galleries of Scotland from 1906 to 1920; secretary of the Société Nationale des Beaux Arts in Paris; and honorary member of the royal academies of London, Dresden, and Munich. He received the LL.D. degree from the University of Glasgow (1906), Edinburgh (1913), and St. Andrews (1922), and was knighted in 1903.

GYMNASTICS. The outstanding gymnast in the United States in 1930 again was Alfred Jochim, of the Swiss Turn Verein of Union City, N. J., who won the all-around title for the sixth successive year at the National A. A. U. competition in Los Angeles. Jochim also finished first on the long horse, in free calisthenics, and on the horizontal bar. The Los Angeles Athletic Club was awarded the national team title. The intercollegiate all-around title was annexed by Herman Witzig, of New York University, and the intercollegiate team title by the U. S. Naval Academy.

GYPSUM. The quantity of gypsum mined in the United States in 1929, according to the U. S. Bureau of Mines, was 5,016,132 short tons, a decrease of 86,118 tons, or 2 per cent, compared with 1928, but greater than that of any year prior to 1924 and more than twice as large as that of 1919. The total value of the calcined and uncalcined gypsum sold by producers was \$31,292,969, a decrease of \$743,194, or 2 per cent, compared with 1928. The quantity of gypsum sold by producers without calcining in 1929 was 1,065,697 short tons, an increase of 66,285 tons, or 7 per cent, over 1928, and was valued at \$2,096,779, or \$1.97 per ton, an increase of \$194,745, or 10 per cent, in value and of 7 cents per ton; the quantity of calcined gypsum sold by producers was 3,361,580 tons, a decrease of 279,805 tons, or 8 per cent, and was valued at \$29,196,190, a decrease of 3 per cent in total value compared with 1928. The production of crude gypsum in New

York in 1929 was 1,254,338 tons, a decrease of 15 per cent from that of 1928, but 26 per cent of the entire quantity, mined in the United States. New York, marketed 298,793 tons without calcining, or 28 per cent of the United States total, and 859,147 tons calcined, or 26 per cent of the total. These figures represent an increase of 11 per cent in the uncalcined and a decrease of 20 per cent in the calcined gypsum compared with 1928. Other important States in the production of crude gypsum in 1929 in tons were Michigan, 898,547; Iowa, 718,503; Texas, 520,519; Ohio, 374,008; Oklahoma, 369,433; and Nevada, 225,514.

In 1929 eight importers with 13 plants in 10 States, namely, California, Connecticut, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Vermont, Virginia, and Washington, reported to the Bureau of Mines that they imported 1,017,791 short tons of crude gypsum, an increase of 7 per cent compared with 1928.

In 1930 gypsum industry continued to be affected by business depression, which, began in 1929. With both production and imports below those of the previous year, the latter coming mainly from Canada and amounting to 801,377 tons, valued at \$916,663 suffering comparatively less than the production of the United States. Imports in 1929 were 925,344 tons. About 1,000,000 tons of gypsum were used in the manufacture of cement as a retarder, so that this side of the industry held up through the use of cement on road construction.

HADLEY, ARTHUR TWining. An American educator and economist, former president of Yale University, died in Kobe, Japan, Mar. 6, 1930, while on a cruise around the world. He was born in New Haven, Conn., Apr. 23, 1856. After his graduation from Yale College in 1876 he took post-graduate courses in political science at Yale and at the University of Berlin, receiving the Ph.D. degree from the latter institution in 1879. Upon his return to the United States, he became tutor at Yale College and served in that capacity until 1883, when he became university lecturer on railroad administration. In 1886 he was appointed professor of political science in the graduate department, and in 1891 professor of political and social economy in the academic department. From 1885 to 1887 he served as commissioner of labor statistics for Connecticut and published two reports which established for him a reputation as a statistician and a careful student of the labor problem. He was elected president of Yale in 1899, being the first layman to hold that office. His administration was considered the most successful, from the standpoint of growth and material gain, that the university had ever enjoyed, the resources being more than quadrupled, the endowment doubled, and educational policies reconstructed so as to make for the widest intellectual expansion. During 1907-08 he was Theodore Roosevelt Professor of American History and Institutions at the University of Berlin, and in 1914 lectured at Oxford University. He resigned from the presidency in 1921 to devote himself still further to the study of economic problems and to writing and lecturing.

Aside from his educational administrative work Dr. Hadley's main contribution to the intellectual life of the United States was in the field of economics, particularly in railroad organization and transportation where, with the publication of *Railroad Transportation: Its History and Its Laws* in 1885, he became a recognized

authority. The same year he was summoned as expert witness before the Cullom Senate Committee which drafted the Interstate Commerce Law. He also acted as associate editor of the *Railroad Gazette* from 1887 to 1889, and was appointed director of the New York, New Haven & Hartford Railroad and of the Atchison, Topeka & Santa Fe Railway to represent the interests of the general public. In 1910 President Taft named him chairman of the commission which investigated the propriety of bringing future issues of railway securities under the regulation of the Interstate Commerce Commission. He was president of the American Economic Association, 1898-99, and was a member of the American Academy of Arts and Letters. His other publications include: *Economics: An Account of the Relations between Private Property and Public Welfare* (1896); *The Education of the American Citizen* (1901); *The Relations between Freedom and Responsibility in the Evolution of Democratic Government* (1903); *Baccalaureate Addresses* (1907); *Standards of Political Morality* (1907); *Some Influences in Modern Philosophic Thought* (1913); *Undercurrents in American Politics* (1915); *The Moral Basis of Democracy* (1919); *Economic Problems of Democracy* (1923); and *The Conflict between Liberty and Equality* (1925).

HADRAMAUT, THE. See ARABIA.

HAFFKINE, häf'kin, WALDEMAR MORDECAI WOLFF. A Russian bacteriologist, died in Lausanne, Switzerland, Oct. 27, 1930. He was born in Odessa, Russia, Mar. 15, 1860, and was educated at the Berdiansk Classical College and at the University of Odessa. After research work at the zoölogical museum in Odessa (1883 to 1888), he was assistant professor of physiology in the medical school of the University of Geneva (1888-89) and later assistant to Pasteur in Paris during 1889-93. In 1893 he began his important bacteriological studies under the auspices of the government of India, founding three years later in Bombay the Government Research Laboratory (later known as the Haffkine Institute). During 1893-94 he used the method of inoculation against cholera which he had discovered, treating 42,000 persons in 28 months with no bad effects. In 1897 he introduced into India an effective and successful system of inoculation against plague, the prophylactic fluid being a culture of the *bacillus pestis* rendered virulent by special methods. He retired from the Indian service in 1915. His publications consisted of articles on general microbiology in Russian and French periodicals (1885-90), on cholera in French and English periodicals (1892-1913), and on plague, cholera, typhoid fever, and pneumonia in English periodicals and pamphlets (1897-1915).

HAGEN, hä'gen, JOHANN GEORG. An Austrian astronomer, died in Vatican City, Italy, Sept. 6, 1930. He was born in Bregenz, Austria, Mar. 6, 1847, and attended the University of Münster and Bonn. He became a member of the Society of Jesus, and from 1880 to 1888 taught mathematics and physics at Prairie du Chien, Wis. He then became director of the Georgetown University observatory, where he remained until 1906 when he was called to Rome to take charge of the Vatican observatory. His publications include: *Synopsis der höheren Mathematik* (3 vols., 1891-1905); *Index Operum Leonardi Euleri* (1896); *Atlas Stellarum Variabilium* (6 series, 1899-1908); *Beobachtungen veränderlicher Sterne*

von Heis und Kruger (1903); *La rotation de la terre* (1911); *Die veränderlichen Sterne* (vol. i, 1912-21; vol. ii, 1924).

HAGUE REPARATION CONFERENCE.

HAGUE TRIBUNAL. See ARBITRATION, INTERNATIONAL.

HAITI, hä'tê. A West Indian republic, comprising the western third of the island of Haiti, the other part forming the Dominion Republic, or Santo Domingo (see DOMINION REPUBLIC). Capital, Port-au-Prince.

AREA AND POPULATION. The area has been variously estimated at from 10,204 to 11,072 square miles; population, estimated, 1927, 2,550,000, excluding 3000 foreign white residents and the military and naval forces of the United States. The capital, Port-au-Prince, had a population of approximately 80,000 in 1929, excluding suburbs; Cape Haitien, about 12,500; Aux Cayes, 12,500; Gonaives, 10,000; St. Marc, 8000; Jacmel, 7500; and Port-des-Paix, 5000. The inhabitants are Negroes and mulattoes. The language is a dialect known as Creole French.

EDUCATION. Primary instruction is free and has been nominally compulsory since 1910. In 1927-28 there were 1179 schools with 107,551 pupils enrolled. Of the total school enrollment, about 10,000 were in the American-directed agricultural and vocational schools in 1929, and 95,000 in Haitian-controlled schools which offer the usual academic education. In recent years, the rural schools have been much improved. Secondary education is provided by national lycées and by private institutions. The University of Haiti was established in 1921.

PRODUCTION. A preponderantly agricultural country, Haiti produces coffee, cotton, tobacco, logwood, sugar, and cacao for export. The national prosperity is dependent mainly, however, on coffee production and prices. Of total exports amounting to \$16,723,833 in 1928-29, coffee shipments were valued at \$12,898,781, cotton at \$2,070,709, and logwood at \$502,216. The depression resulting from declining coffee prices, which commenced in 1929, continued throughout 1930. The cultivation of sisal and pineapples has been introduced with some success in an effort to reduce the republic's dependence upon the coffee crop.

Mineral resources are considerable although undeveloped. They include copper, coal, and iron, for the working of which some concessions have been granted; also gold, silver, antimony, tin, sulphur, kaolin, limestone, porphyry, nickel, and gypsum. In 1928 there were two sugar mills, a logwood factory, a cottonseed-oil plant, and a number of smaller manufacturing plants supplying local requirements. The per capita circulating wealth in December, 1929, was estimated at \$1.09, as compared with \$1.46 in December, 1928.

COMMERCE. For the fiscal year ended Sept. 30, 1930, Haiti's foreign trade totaled approximately \$26,986,000, as compared with \$33,962,000 in 1928-29. The visible favorable balance of trade in 1929-30 was \$1,303,000, as against an unfavorable balance of \$514,089 in 1928-29, but the excess of exports over imports was offset by the current mercantile debt, as well as ocean freights and profits on foreign investments. Exports in 1929-30 were valued at \$14,144,600 (\$16,723,833 in 1928-29) and imports at \$12,842,000 (\$17,238,000). Leading exports were coffee, \$10,406,400; cotton, \$1,571,800; cacao, \$395,000; logwood, \$488,300; and sisal, \$42,900. The volume of each

of these exports was greater than in 1928-29 but prices received were considerably lower.

France remained Haiti's best customer, taking 49.7 per cent of all exports. Italy was second, with over 9 per cent; United States, third, with 9 per cent; followed by Belgium, 7.5 per cent; Germany, 7 per cent; Denmark, 6.9 per cent; and the United Kingdom, 4.6 per cent. The United States supplied 70 per cent of all imports; the United Kingdom, 7.3 per cent; France, 6.6 per cent; Germany, 4.3 per cent; and Curacao, 3.2 per cent.

FINANCE. The ordinary budget for the fiscal year ended Sept. 30, 1930, as passed in July, 1929, calculated revenues and expenditures at 40,100,000 gourdes and 40,090,990 gourdes, respectively (1 gourde was equivalent to \$0.20). Actual receipts fell below the estimates and early in 1930, the Government took steps to reduce expenditures below the budget figures.

In the fiscal year 1928-29, actual receipts totaled 42,521,528 gourdes and expenditures were 44,119,504 gourdes, leaving a deficit of 1,597,976 gourdes. Customs receipts in 1928-29 declined 21.81 per cent, as compared with 1927-28, Government revenues dropped 15.66 per cent, and expenditures increased 7.66 per cent. The gross public debt was reduced from 94,438,115 gourdes at the end of September, 1928, to 88,677,396 gourdes on Sept. 30, 1929. At the end of February, 1930, the gross public debt had been further reduced to 83,880,000 gourdes.

COMMUNICATIONS. In 1929 there were 135 miles of railway line, all privately owned. A highway system of 930 miles connected almost all of the principal towns and production centres and provided the leading means of transportation. Much of the system is suitable for automobile travel. A Government telegraph system of 1490 miles of wire connects the principal towns. Telephone cables extend 1200 miles. An air-mail line connecting Haiti and other Caribbean countries with the United States was inaugurated in January, 1929.

GOVERNMENT. The Constitution adopted June 12, 1918, provided for a national assembly, consisting of a senate and house of representatives. The National Assembly was elected for the first time on Oct. 14, 1930 (see below under *History*), legislative functions having been carried on in the interim by a council of state of 21 members appointed by the President. As amended in 1928, the Constitution vested executive power in a President elected for six years and ineligible for reelection. The President at the beginning of 1930 was Louis Borno, who was elected Apr. 10, 1922, and reelected in 1926. Under a treaty between the United States and Haiti concluded in November, 1915, the constabulary, finances, public health, public works, and agriculture of the Republic are supervised by American advisers appointed by the President of Haiti on recommendation of the President of the United States.

HISTORY

The year 1930 witnessed a drastic reorientation of American policy in Haiti, the outstanding results of which were the restoration of constitutional government, the elimination of President Borno from the political scene, and the replacement of the American High Commissioner by an American Minister and a military attaché. First steps also were taken toward the gradual withdrawal of American marines and the progressive

replacement of Americans by Haitians in all branches of the government.

On March 20 an Assembly of People's Delegates, 34 in number, met in Port-au-Prince and nominated Eugene Roy, a nonpartisan banker of that city, as temporary President. On April 21 M. Roy was elected successor to President Borno by the Council of State and on May 15 he was inaugurated temporary President, under the pledge that he was to call popular elections for members of the Senate and the Chamber of Deputies. M. Roy fulfilled his pledge by calling a national election for October 14. The Haitian Parliament of 15 Senators and 36 Deputies, elected on that date, was composed for the most part of those opposed to a continuance of the American occupation. Some 200,000 registered voters were reported to have taken part in the election. American forces remained neutral, the 800 marines in Haiti being confined to their barracks on election day by order of Secretary of State Stimson. Order was maintained by the Garde d'Haiti.

The newly-elected Parliament convened at Port-au-Prince November 10. Its anti-American attitude was demonstrated by the election on November 18 of Stenio Vincent, a leading opponent of the occupation, to succeed M. Roy as permanent President. A few days previous, Joseph Holibois Jr., a leader of the Labor party who had denounced the American occupation during a tour of Latin America in 1929, was named president of the House of Deputies. A lawyer who had seen service as President of the Senate, Minister of Interior, and Minister to Paris, Berlin, and The Hague, M. Vincent was editor of the anti-American *Haiti Journal* and during the Borno régime was a member of the extreme opposition. He was inaugurated as President on the same day as his election, M. Roy retiring amid the acclamations of the excited populace.

The platform on which M. Vincent was elected to the Senate, previous to his selection as President, named as immediate objectives the termination of the American occupation, education, and material progress. Other planks called for the gradual elimination of foreign enterprises from Haiti, stimulation of agriculture by means of long-term loans, irrigation of the plains, and restoration of the gourde to its "true value."

Gen. John H. Russell, the American High Commissioner in Haiti, terminated his work previous to the election of the new Parliament and his office was abolished. Dr. Dana Munro was appointed American Minister to Haiti, taking over much of the work formerly handled by the High Commissioner. These developments and the establishment of constitutional government in Haiti were in line with recommendations submitted to President Hoover by a commission appointed by him Feb. 8, 1930, to study the problem of how and when to terminate the military occupation of Haiti. Acceptance of the commission's recommendations by the Hoover Administration as "the basis of its policy in Haiti" was announced by the President March 28, in making public the report.

In addition to those put into effect, the commission's recommendations included: The addition of at least one year to the existing three-year detail of naval and marine officers assigned to Haitian services, adoption of a continuing appropriation for road work by the Haitian Government, the granting of American consent to moderate reduction of customs duties and internal

revenue taxes when the condition of the Treasury warranted, employment of an American adviser in each Haitian administrative department, and the construction of an adequate American legation building in Port-au-Prince. The first of these suggestions was designed to build up a force of American doctors, engineers, and police officers, who would be familiar with the language and conditions of Haiti and who would "be available for continued assistance to the Haitian Government" at the expiration of the treaty with the United States in 1936.

With regard to immediate steps to be taken to relieve the tense situation in Haiti, the commission recommended that only American officials free of strong racial antipathies be retained for duty there, that the United States recognize the temporary and permanent Presidents if legally elected in accordance with the plan formulated by the commission, that the United States limit its intervention to affairs specifically provided for by treaty or agreement, and that the new American Minister be charged with the negotiation of further modifications of the existing treaty.

President Hoover had recommended the dispatch of a commission of inquiry to Haiti in his regular message to Congress of Dec. 4, 1929. On December 7, following outbreaks at Port-au-Prince and Aux Cayes (see 1929 YEAR BOOK), he urgently requested a \$50,000 appropriation from Congress for that purpose. This was authorized by Congress in January and on February 8 the President announced the appointment of a commission including W. Cameron Forbes, former Governor-General of the Philippines, chairman; Henry P. Fletcher, former Ambassador to Mexico, Chile, Italy, and Belgium; Elie Vezina, James Kerney, and William Allen White.

Advised that the election of a new president by President Borno's hand-picked Council of State, scheduled for Apr. 14, 1930, would probably result in new rioting and bloodshed, the commission sailed almost immediately for Haiti. Hearings were begun on March 1. On March 15, through the mediation of the commission, an agreement for the reestablishment of representative government was signed by President Borno and leaders of the factions opposed to his régime. That night the commission sailed for home, having completed its labors in an unprecedentedly short time.

During its stay in Haiti the commission heard numerous members of the Haitian "élite" denounce the American occupation as destructive of the republic's distinctive civilization and as the main support of the Borno dictatorship. Witnesses admitted the material benefit of American intervention, but expressed the view that the deprivation of such self-government as had formerly existed was too great a price to pay. The Roman Catholic hierarchy in Haiti, largely of French nationality, urged the restoration of Haitian independence.

The commission also heard Gen. John H. Russell, the American High Commissioner, and other American officials in defense of the intervention. The treaty officials were convinced that order depended upon immediate termination of the electoral impasse.

While praising many of the accomplishments of the intervention, the commission in its report deplored the fact that acts and attitudes of treaty officials had given the impression that the occupation would continue indefinitely and that

measures for the preparation of Haitians for the political and administrative responsibilities of government had been inadequate. The commission ascribed Haitian antagonism to the intervention mainly of the "élite," or upper 5 per cent of the population, who saw their leadership menaced by American efforts to create an influential middle class and to "broaden the base of the articulate proletariat." It pointed out that the government before American intervention "was more democratic and representative in name than in fact" and added: "Until the basis of political structure is broadened by education—a matter of years—the government must necessarily be more or less unstable and in constant danger of political upheavals."

The visit of the Forbes Commission to Haiti was followed in June and July by that of a second commission, appointed by President Hoover in February to study and recommend changes in the Haitian educational system. The educational commission was headed by Dr. R. R. Moton, principal of Tuskegee Institute, and included Dr. Mordecai W. Johnson, president of Howard University; Professor Leo M. Favrot, field agent of the General Education Board; B. F. Hubert, president of Georgia State Industrial College; and Dr. W. T. B. Williams, dean of Tuskegee College. Its report, made public by Secretary of State Stimson November 30, declared that there was substantial ground for Haitian complaints against the "service technique," or separate vocational school system established during the American occupation. It recommended articulation of the "service technique" with the national school system of Haiti and the extension of financial and administrative aid by the United States in developing an adequate system of education.

A reminder of the rôle of the "service technique" in Haitian politics was given August 14, when the provisional Cabinet resigned, ostensibly in protest against the nomination by President Hoover of Carl Colvin as director of the service to succeed Dr. George F. Freeman. The Ministers said the agreement with the United States called for the appointment of an agricultural engineer to the post and that Mr. Colvin did not qualify. In a statement issued the following day, the State Department announced that its official reports indicated the resignation of the Cabinet had been forced by the Haitian press in connection with the political campaign then under way. A new Cabinet was appointed by President Roy on August 20. A military training school for the development of native officers to replace Americans in the Garde d'Haiti was opened at Port-au-Prince September 20. The commandant was Maj. Oscar R. Cauldwell, a graduate of the U. S. Naval Academy and an officer in the Marine Corps.

The cost of the military intervention of the United States in Haiti from 1915 to 1930 was placed at more than \$23,000,000 by American officials, according to an Associated press dispatch of Apr. 2, 1930.

Consult Henry Prather Fletcher, "Quo Vadis, Haiti?" in *Foreign Affairs* (July, 1930).

HALL, ASAPH, JR. American astronomer, died in Philadelphia, Pa., Jan. 12, 1930. Born in Cambridge, Mass., Oct. 6, 1859, he graduated from Harvard in 1882, and was assistant at the U. S. Naval Observatory in Washington, where his father was professor of mathematics. From 1885

to 1889, he was at the Yale Observatory, the university conferring on him the Ph.D. degree in the latter year. He then returned to the Naval Observatory and remained until 1892, when he went to the University of Michigan as professor of astronomy and director of the observatory. In 1905 he was appointed assistant astronomer at the Naval Observatory and became professor of mathematics, in 1908. On his retirement in 1929, he became professor of astronomy at the University of Pennsylvania.

HALL, THE RT. REV. ARTHUR CRAWSHAY ALLISTON. Protestant Episcopal Bishop of the Diocese of Vermont, died in Rockpoint, Vt., Feb. 26, 1930. He was born in Binfield, Berkshire, England, Apr. 12, 1847, and was graduated from Christ Church College, Oxford, in 1869. After his ordination in the Church of England as deacon in 1870 and as priest in 1871, he became a licensed preacher in the diocese of Oxford as a member of the Society of St. John the Evangelist (Cowley Fathers). In 1873 he was sent to Boston to help establish the American branch of the order, and three years later became a naturalized American citizen. He served as assistant rector of the Church of the Advent in Boston from 1874 to 1882 and as rector of the mission church, St. John the Evangelist, in Boston from 1882 to 1889. The year 1889-90 was spent in mission work among the miners and lumbermen of Manitoba. The following year he returned to England in response to a summons from his superiors in the Society of St. John the Evangelist. In 1893 he was elected Bishop of Vermont and was consecrated Feb. 2, 1894. He was considered a conservative Anglo-Catholic, being opposed to the adoption of the doctrine of transubstantiation and the substitution of the term Mass for the service of Holy Communion. The D.D. degree was conferred on him by Oxford University in 1893 and by Trinity College in 1894; the University of Vermont honored him in 1904 with the LL.D. degree and Columbia University in 1916 with the S.T.D. degree. Bishop Hall was one of the most eloquent preachers in the Protestant Episcopal Church. His published works include numerous lectures and other writings mainly of a devotional character.

HALPERT, SAMUEL. An American painter, died in Detroit, Mich., Apr. 5, 1930. He was born in Russia, Dec. 25, 1883, and was brought to the United States as a child. From 1899 to 1902 he attended the National Academy of Design in New York City and then studied for a year at the École des Beaux-Arts in Paris, after which he traveled extensively in Europe. He belonged to the post-impressionistic school, placing emphasis in his work on form rather than on light and color. Among his representative paintings are: "Boats, St. Tropez" (1914); "A Town in Portugal" (1915); "Trees" (1917); "Madison Square" (1919); "Interior" (1920); and "Her First Book of Lessons" (1921). He was a member of the faculty of the Master Institute of United Arts in New York City and a vice-president and director of the Society of Independent Artists.

HAMILTON COLLEGE. A nonsectarian institution for the higher education of men in Clinton, N. Y., founded in 1812. A total of 450 students was registered for the 1930 autumn session. There were 43 members of the faculty for the year 1930-31. The productive funds of the college were approximately \$4,320,000, and the income for the year 1929-30 was \$400,349. The

library contained 135,896 volumes and 30,600 pamphlets. The most important item of the building activity during 1930 was the enlargement and equipment of the chemistry building at a cost of \$275,000. President, Frederick C. Ferry, Ph.D., Sc.D., LL.D.

HAMPTON NORMAL AND AGRICULTURAL INSTITUTE. An institute founded in 1868 in Hampton, Va., for the education of Negroes and Indians. The enrollment for the autumn term of 1930 was 1060, while that for the summer school was 1007. The faculty numbered 149. The endowment for the fiscal year ending June 30, 1930, was \$9,500,324, from which the income was \$469,583. Gifts to the endowment and investment funds amounted to \$131,184. There were 57,000 volumes in the library. During the year Du Pont Hall, a science building, the gift of Coleman du Pont, was opened for use. The President during the year 1930 was Arthur Howe.

HANDBALL. Alfred Banuet, National A. A. U. four-walls singles champion, successfully defended his title in 1930, defeating George Nelson of Baltimore in the final round of the tournament, which was held in St. Louis, Mo. Banuet and A. Woodman Paynter, also of the Olympic Club, won the doubles championship. Squash handball title holders: Singles, Harold Hooper, Hollywood A. C., Cal.; doubles, Fred Keller and Mort Kline, Los Angeles.

HARBORS. See PORTS AND HARBORS.

HARDING, WILLIAM P. G (OULD). An American banker and first governor of the Federal Reserve Board, died in Boston, Mass., Apr. 7, 1930. He was born in Greene Co., Ala., May 5, 1864, and was graduated from the University of Alabama in 1880. After a year of graduate study he entered the bank of J. H. Fitts & Co. in Tuscaloosa, Ala., and from there went, in 1886, to the Berney National Bank in Birmingham. In 1896 he became associated with the First National Bank of Birmingham as vice-president, and in 1902 was made president. Under his direction this bank became the largest banking institution in the State of Alabama, actively identified with the commercial revival of the South. In 1914 he was appointed a member of the newly-organized Federal Reserve Board to represent the banking interests of the Southern States, and two years later was elevated to the position of governor of the board by President Wilson. Through his wise management the Federal Reserve system was successfully established and carried through its critical early years, but he was later severely criticized for the deflation policy which he adopted during the post-war period. On the expiration of his term as a member of the board he became, in 1923, governor of the Federal Reserve Bank of the First District, in Boston. He also was managing director of the War Finance Corporation during 1918-19.

In 1922 Governor Harding visited Cuba and advised the Cuban government as to the reorganization of its finances. Two years later he declined an offer by the League of Nations to be financial receiver of Hungary, but he visited that country unofficially and assisted in an advisory capacity. He also visited Poland unofficially in 1926 and advised the financial leaders of that country in regard to floating a large loan in an effort to stabilize the currency. The LL.D. degree was conferred on him by the University of Alabama in 1916 and by Harvard and Columbia uni-

versities in 1922. He was the author of *The Formative Period of the Federal Reserve System* (1925).

HARDY, ARTHUR SHELBURNE. An American author and diplomat, died in Woodstock, Conn., Mar. 13, 1930. He was born in Andover, Mass., Aug. 13, 1847. On his graduation from the U.S. Military Academy in 1869, he was commissioned second lieutenant to the 3d Artillery stationed at Dry Tortugas Island off the Florida coast, then used as a military prison. In 1871 he resigned from the Army to become professor of civil engineering at Iowa (later Grinnell) College, which awarded him the M.A. degree the following year. In 1873 he received the same honor from Dartmouth College, and the Ph.D. degree from Amherst College. During 1873-74 he studied at the *École des Ponts et Chaussées* in Paris, and on his return to the United States was appointed professor of civil engineering at Dartmouth College. In 1878 he became professor of mathematics at that institution, remaining there until 1893 when he accepted the editorship of the *Cosmopolitan Magazine*. His diplomatic career began in 1897 with his appointment as Minister and Consul-General to Persia. From 1899 to 1901 he was Minister to Greece, Rumania, and Serbia; from 1901 to 1903, Minister to Switzerland; and from 1903 to 1905, Minister to Spain. He resigned from the diplomatic service in 1905 on account of a disagreement with President Roosevelt, and devoted most of his time thereafter to travel and writing.

Dr. Hardy's publications of a technical nature include: *Elements of Quarternions* (1881); *Imaginary Quantities* (1881); *New Methods in Topographical Surveying* (1883); *Elements of Analytic Geometry* (1889); and *Elements of Calculus* (1890). He was better known, however, for his fiction, including *But Yet a Woman* (1883); *Wind of Destiny* (1886); *Passe Rose* (1889); *His Daughter First* (1903); *Aurèle* (1912); *Diane and Her Friends* (1914); *Helen* (1916); *No. 13, Rue du Bon Diable* (1917); and *Things Remembered* (1923). He was also the author of two poetical works, *Francesca of Rimini* (1878) and *Songs of Two* (1900), and of the *Life and Letters of Joseph II. Nescima* (1891).

HARNACK, här'nák, ADOLF VON. A German theologian, died in Heidelberg, June 10, 1930. He was born in Dorpat, Estonia, May 7, 1851, and was graduated from the University of Dorpat in 1872. After serving as lecturer at the University of Leipzig for two years, he was appointed professor extraordinary of church history there in 1876. Three years later he accepted the position of ordinary professor of church history at the University of Giessen. In 1886 he was called to the University of Marburg and in 1889 to the University of Berlin, where he held the chair of church history until his resignation in 1924. A man of strong and inspiring personality, his lectures at Berlin were attended by hundreds of students from both Europe and America. He was also general director of the Prussian State Library from 1905 to 1921, chairman of the Evangelical-Social Congress from 1902 to 1912, and president of the *Kaiser Wilhelm Gesellschaft* from 1911 until his death. He was a member of the Prussian Academy of Sciences, of which he was the historian, and was the recipient of honorary degrees from the Universities of Glasgow, Oslo, and Athens. In 1914 he was raised to the Prussian hereditary nobility by Kaiser Wilhelm II.

Dr. von Harnack was dean of the modern German school of theology, founded by Albrecht Ritschl. His great contribution was to disassociate Christianity from Greek philosophy and other alien subject matter and to show that its eternal substance, as set forth in the Gospels, was independent of any ecclesiastical structure. He developed these ideas in *Lehrbuch der Dogmengeschichte* (3 vols., 1886-90; trans., *History of Dogma*, 1894-99), an encyclopedia on Christian dogma from the first century to the Reformation, and *Das Wesen des Christentums* (1900; trans., *What Is Christianity?* 1901), considered one of the notable books of the century in the position which it defined for the Christian religion.

Dr. von Harnack was the author of more than 1500 books, pamphlets, and treatises, outstanding titles among which are: *Zur Quellenkritik der Geschichte des Gnosticismus* (1873); *Die Zeit des Ignatius* (1878); *Das Mönchtum, seine Ideale und seine Geschichte* (1881; trans., *Monasticism, Its Ideals and Its History*, 1895); *Martin Luther in seiner Bedeutung für die Geschichte der Wissenschaft und der Bildung* (1883); *Grundriss der Gogmengeschichte* (1889; trans., *Outlines of the History of Dogma*, 1893); *Das apostolische Glaubensbekenntnis* (1892; trans., *The Apostles' Creed*, 1901); *Geschichte der altchristlichen Literatur bis Eusebius* (3 vols., 1893-1904); *Das Christentum und die Geschichte* (1895; trans., *Christianity and History*, 1896); *Die Mission und Ausbreitung des Christentums in den ersten drei Jahrhunderten* (1902; trans., *The Expansion of Christianity in the First Three Centuries*, 1904); *Beiträge zur Einleitung in das Neue Testament* (4 parts, 1906-11; trans., *New Testament Studies*, 1907-11); *Entstehung und Entwicklung der Kirchenverfassung und des Kirchenrechts in den ersten drei Jahrhunderten* (1910; trans., *Constitution and Law of the Church in the First Three Centuries*, 1910); *Der Kirchengeschichtliche Ertrag der exegetischen Arbeiten des Origenes* (1918); *Marcion: das Evangelium von fremden Gott* (1921); and *Die Briefsammlung des Apostel Paulus* (1926). He joined Oskar von Gebhardt and Theodore Zahn in bringing out *Patrum Apostolicorum Opera* (3 vols., 1867-78) and edited, with Emil Schürer, the *Theologische Literaturzeitung* from 1881 to 1910 and, with Oskar von Gebhardt and Karl Schmidt, the *Teste und Untersuchungen zur Geschichte der altchristlichen Literatur* from 1882 to 1930.

HARNES RACING. See RACING.

HARRIS, J(AMES) ARTHUR. An American botanist and statistician, died in Minneapolis, Minn., Apr. 24, 1930. He was born Sept. 20, 1880, in Plantsville, Ohio, and was graduated from the University of Kansas in 1901 and from Washington University, with the Ph.D. degree, in 1903. In 1908-09 he studied biometry at the University of London. He was botanical assistant at the Missouri Botanical Garden of St. Louis in 1901-03 and librarian there in 1904-07. During 1903-07 he was also instructor in botany at Washington University and, from 1907 to 1924, botanical investigator at the Station for Experimental Evolution, Carnegie Institution, at Cold Spring Harbor, Long Island, N. Y. After 1924, he was head of the department of botany at the University of Minnesota. Dr. Harris engaged in experimental work in Jamaica, W. I., in South Florida, and in the cotton experimental fields of the Southwest. After 1918, he collaborated with

the Bureau of Plant Industry of the U. S. Department of Agriculture. He was awarded the Weldon Medal and Memorial Prize by the University of Oxford in 1921.

HARRISON, HENRY SYDNOR. An American novelist, died in Atlantic City, N. J., July 14, 1930. He was born in Sewanee, Tenn., Feb. 12, 1880, and was graduated from Columbia University in 1900. From 1900 to 1910 he was successively book reviewer, columnist, and chief editorial writer on the *Richmond Times-Despatch*. He saw service during the World War as an ambulance driver in France and Belgium in 1915 and with the United States Naval Reserve Force during 1917-19. In 1913 an honorary M.A. degree was conferred on him by Columbia University, and the following year he was elected a member of the National Institute of Arts and Letters. He published his first novel, *Captivating Mary Carstairs*, under the pen name "Henry Second" in 1910. With *Queed* the following year he achieved great popularity, and repeated his success with *V. V.'s Eyce* in 1913. His other novels are: *Angela's Business* (1915); *When I Come Back* (1919); *Saint Teresa* (1922); and *Andrew Bride of Paris* (1925).

HARRISON, (THOMAS) ALEXANDER. An American genre and landscape painter, died in Paris, France, Oct. 13, 1930. He was born in Philadelphia, Pa., Jan. 17, 1853, and studied at the Pennsylvania Academy of Fine Arts and later under Gérôme at the Ecole des Beaux-Arts and under Bastien-Lepage, but was most strongly influenced by the works of Cazin and Bernard. Although frequently visiting the United States, he took up his residence in Paris, where he came to rank among the highest of the colony of American artists. He was made Officer of the Legion of Honor in 1901 and Officer of Public Instruction by the French Government. He was also a member of the National Academy of Design, the Société Nationale des Beaux-Arts, National Institute of Arts and Letters, and the Royal Institute of Painters in Oil Colors. His work was characterized by grace of line and by luminous color, delicate in its effect. He was especially noted for his marines, which were rendered with broad surfaces that well expressed the transparency of the ever-changing color of water and sky. Among his chief works are: "L'Arcadie" and "Solitude" in the Luxembourg Museum, Paris; "The Wave" in the Pennsylvania Academy of Fine Arts, Philadelphia; "Crepuscle" in the St. Louis Museum and in the Corcoran Gallery, Washington; "Sables et Lune" in the Quimper Museum, France; "Les Amateurs" in the Art Institute of Chicago; "Nude" in the Royal Gallery, Dresden; "A Festival Night," "Boys Bathing," "East Hampton," "Le Grand Miroir," and "Marine" in the Wilstach Gallery, Philadelphia; and "Castles in Spain" in the Metropolitan Museum of Art, New York City.

HART, JULIUS. A German poet and critic, died July 7, 1930. Born in Münster Apr. 9, 1859, he was educated there and in Berlin. In addition to translations from English, American, Spanish, and Persian poets, his publications include two volumes of poems, *Samsara* (1878) and *Homo Sum* (1896), and the dramas, *Don Juan Tenorio* (1881), *Der Rächer* (1884), and *Der Sumpf* (1885). In collaboration with his brother Heinrich he wrote: *Die neue Gemeinschaft* (1901), *Geschichte der Weltliteratur und des Theaters* (1894-97), and *Die neue Welterkenntnis* (1897).

HARVARD UNIVERSITY. A nonsectarian institution of higher education for men in Cambridge, Mass.; founded in 1636. The number of students enrolled for the year 1930-31 was 8442, distributed as follows: College, 3240, including 600 seniors, 723 juniors, 839 sophomores, 1005 freshmen, and 73 out of course. Graduate schools: Arts and sciences, 1051; business administration, 1074; education, 283. Professional schools: Engineering (under-graduate and graduate), 260; theology, 98; law, 1590; medicine, 517; dentistry, 119; public health, 31; architecture, 68; landscape architecture, 42; city planning, 7; special students, 44; Bussey Institution (agriculture and horticulture), 12. For the summer session of 1930, the registration was 2409.

The officers of instruction for 1930-31 numbered 1592, of whom 272 were professors, 90 associate professors, and 148 assistant professors. Among those who assumed permanent chairs during the year were: John Franklin Ebersole, professor of finance; Truman Lee Kelley, professor of education; Otto Oldenberg, professor of physics; Alexander Hamilton Rice, professor of geographical exploration; Sumner Huber Slichter, professor of business economics; P'itirim Alexandrovich Sorokin, professor of sociology; Willard Cole Rappleye, associate professor of medical economics; and Frank DeWitt Washburn, associate professor of real estate. Harry Ellsworth Clifford, Gordon McKay professor of electrical engineering, became dean of the engineering school; John Livingston Lowes was elected Francis Lee Higginson professor of English literature; and Ralph Barton Perry was elected to the chair of Edgar Pierce professor of philosophy.

Visiting professors and lecturers during the year included Edmond Joachim Vermeil, professor of German literature at the University of Strassburg, who came as exchange professor from France for the second half-year; Arthur Mayger Hind of the British Museum, who came as Charles Eliot Norton professor of poetry for the entire year; Oliver Elton, King Alfred professor of English literature, emeritus, at the University of Liverpool, who came as lecturer on English for the academic year; Ivor Armstrong Richards, university lecturer in English and fellow of Magdalene College, Cambridge, who was visiting lecturer in English for the second half-year; Adolph Goldschmidt, professor at the University of Berlin, who served as Kuno Francke professor of German art and culture for the year; Josef Alois Schumpeter, professor of political economy at the University of Bonn, who was lecturer on economics throughout the academic year; and Karl Menger, professor of mathematics at the University of Vienna, who was lecturer on mathematics during the first half-year. Norway was represented by Halvdan Koht, professor of history at the University of Oslo, as lecturer on history for the first half-year; Holland by Jan Arnoldus Schouten, professor of mathematics and mechanics at the Technische Hoogeschool of Delft, as lecturer on mathematics during the first half-year; China by Philippe de Vargas, associate professor of church history at Yenching University, as lecturer on Chinese for the second half-year; and Estonia by Ernest Julius Opik, astronomer at the astronomical observatory in Tartu University, as lecturer on astro-physics for the entire year.

Among the lecturers from American colleges and universities were: Raymond Clare Archibald

of Brown University, in mathematics; Alfred Newton Richards of the University of Pennsylvania, as visiting professor in the school of public health; David Wight Prall of the University of California, in philosophy; Howard Rollin Patch of Smith College, in English; Frederick Binkerd Artz of Oberlin College, in history; Roswell Magill of Columbia University, in law; and John Dewey of Columbia University, as William James lecturer in philosophy. Rufus Matthew Jones, professor of philosophy at Haverford College, was William Belden Noble lecturer in the field of religion; and Julius Seelye Bixler, chairman of the department of religion and Biblical literature at Smith College, was Ingersoll lecturer on the immortality of man.

The Western exchange professors from Harvard, chosen for the second half-year of 1930-31, were Oliver D. Kellogg, professor of mathematics, to lecture at Carleton and Knox Colleges and at the University of Colorado, and Gustavus H. Maynard, assistant professor of English, to Beloit, Grinnell, and Pomona Colleges. Charles Hall Grandgent, professor of romance languages, was chosen as exchange professor to France for the second half-year.

The total productive funds of the university in June, 1930, were \$108,087,463; and the total income for the year, including gifts for immediate expenditure, was \$13,927,402. The operating expenses for the year ending June 30, 1930, were \$12,248,176 and were budgeted from the following sources of income: Funds and gifts, \$5,406,216 and operating receipts, \$6,841,959, including tuition fees, \$3,130,617; dormitory rentals, \$773,840; income of dining halls and Harvard Union, \$862,749; income from athletic sports, \$1,189,948; and other operating income, \$884,804.

Building activity during the year included the completion of two units of the Harvard House Plan, Dunster and Lowell Halls, bearing the names of the earliest and latest Harvard presidents; a biological laboratory; a third building to complete the physics laboratories; three freshman dormitories in the Harvard Yard; an addition to the Vanderbilt Hall medical dormitories; a faculty club; and the Dillon Field House. A building to house the newly-founded school of geography, under the directorship of Dr. A. Hamilton Rice, was also under construction. The object of the school was the teaching of the fundamentals of geographical science, emphasizing the central position geography occupies among the sciences concerned with the study of the earth and those sciences having to do with life and man. In 1930 graduation from college with distinction was made the criterion for admission to the Harvard graduate school of arts and sciences. The change was made because of the rapid increase in enrollment in the graduate school in recent years. The library contained 2,971,600 volumes and pamphlets. President, Abbott Lawrence Lowell, LL.B., LL.D.

HARVEY, SIR ROBERT. An English mining engineer, died in Falmouth, Cornwall, Mar. 14, 1930. He was born Oct. 2, 1847, at Truro in Cornwall and was educated there. From 1875 to 1881, he was an engineer for the nitrate works in Peru and engineer-in-chief and inspector-general of the nitrate fields in Tarapaca, Chili, for Peruvian and Chilean governments. He then became a partner in the firm of North and Harvey, manufacturer of nitrate of soda and iodine. He was also, at one time, chairman of the Nitrate Railways

Co., the Tarapaca Water Works Co., vice chairman of the Anglo-South American Bank, and director of the Antofagasta and Bolivia Railway Co. In addition to contributions to the Institute of Chemical Engineers on the manufacture of iodine and of nitrate of soda, he wrote *Nursing Homes, a Warning and Short History of Peru and Its Inscribed Stones*. He was knighted in 1901. He had been high sheriff of Cornwall.

HAVEMEYER COLLECTION. See ART EXHIBITIONS; ART MUSEUMS.

HAVERFORD COLLEGE. An institution of higher education under the control of the Society of Friends in Haverford, Pa.; founded in 1833. Registration for the autumn term of 1930 totaled 300 students. There were 37 members on the faculty. The productive funds of the institution amounted to \$3,912,691 (book value), and the total income for 1929-30 was \$528,762. The library contained 118,283 volumes. President, William Wistar Comfort, Ph.D., Litt.D., LL.D.

HAWAII, hā-wī'ē. A territory of the United States, consisting of a group of islands in the north central Pacific Ocean; formally annexed, Aug. 12, 1898. The nine inhabited islands with their respective areas in square miles are as follows: Hawaii, 4015; Maui, 728; Oahu, 599; Kauai, 547; Molokai, 261; Lanai, 139; Niihau, 97; Kahoolawe, 69; Midway, 2.7. Capital, Honolulu, on the island of Oahu. The population according to the census of 1930 was 368,336, as compared with 255,912 in 1920. On June 30, 1929, the Board of Health estimated the population at 357,649, of whom 236,577 were American citizens and 121,072 aliens. The population was divided by race and nationality as follows: American, British, German, Russian, 38,006; Japanese, 137,407; Filipino, 63,869; Portuguese, 29,717; Chinese, 25,211; Hawaiian, 20,479; Caucasian-Hawaiian, 16,687; Asiatic-Hawaiian, 10,598; Porto Rican, 6923; Korean, 6993; Spanish, 1851; others, 508. In the fiscal year ended June 30, 1930, there were 10,873 births and 3976 deaths. The population of Honolulu at the census of 1930 was 137,582 (83,327 in 1920); that of Hilo, 19,468 (10,431 in 1920). To perpetuate the Hawaiian race, the Federal government in 1930 approved a second appropriation of \$1,000,000 to establish natives on farms on the Island of Molokai.

EDUCATION. The public-school system is under the direction of a superintendent of education and commissioners appointed by the Governor. In 1930, there were 181 public schools, with 2563 teachers and 73,180 pupils, of whom 39,115 were Japanese. In the school year 1928-29, there were 11,075 students in private schools, and 1994 in the University of Hawaii. English is the language of instruction.

PRODUCTION. Agriculture and cattle raising are the chief industries of the islands. Raw sugar and canned pineapples are the chief exports, although considerable quantities of molasses, fresh pineapples, bananas, honey, coffee, tallow, and beeswax are shipped annually. For the crop year 1929-30, raw sugar production was estimated at 930,000 short tons (913,670 in 1928-29) and pineapple production at 11,000,000 cases of 24 cans each (9,000,000 cases in 1928-29). With the market for canned Hawaiian pineapples constantly expanding, new areas are being brought under cultivation. Shipments of molasses to the United States in 1929 totaled 23,370,000 gallons, valued at \$1,016,000; of pineapple alcohol, 52,391 gallons (25,459 in 1928). The coffee crop in 1929-

30 amounted to 7,000,000 pounds. Livestock on the islands in 1928 included 140,000 cattle, 23,000 swine, 24,000 sheep, and 23,000 horses, mules, and asses.

Manufacturing is confined largely to the processing of pineapples and sugar. Other manufactured products include meats, tin cans, iron and steel, machinery, and ice. A business recession became evident in 1930, causing considerable unemployment among white collar workers. Important Federal projects and local construction provided employment for skilled and unskilled labor.

COMMERCE. Commerce is mainly with continental United States. In 1929, exports from Hawaii to the mainland totaled \$106,312,833, as compared with \$116,950,090 in 1928. The recession was due to falling price levels, especially in sugar, rather than to a decline in volume. Imports from continental United States increased in 1929 to \$82,661,424 from \$77,762,940 in the preceding year. The more important articles imported are vegetable food products, beverages, textile products, lumber, nonmetallic metals, oils, machinery, automobiles, and chemicals. In the same year, imports from foreign countries amounted to \$9,752,667 (\$10,361,293 in 1928) and exports to foreign countries, chiefly canned pineapples, were valued at \$2,126,270 (\$2,523,745 in 1928).

FINANCE. For the fiscal year ended June 30, 1930, revenues totaled \$12,530,357 and expenditures \$11,666,956, as compared with revenues of \$11,927,000 and expenditures of \$11,310,000 in the previous fiscal year. Capital outlays in 1928-29 were reduced to \$628,000 from the 1927-28 total of \$3,130,000. The public debt on June 30, 1929, was \$29,760,000, as against \$28,585,000 on the same date in 1928. Bond issues for public improvements caused the increase.

COMMUNICATIONS. For the fiscal year ended June 30, 1929, a total of 1321 vessels of 10,142,000 tons called at Hawaiian ports, an increase of 54 vessels and 434,000 tons over the preceding fiscal year. Steamship arrivals at Honolulu in the calendar year 1929 numbered 865 of 7,180,000 gross tons, a decline of approximately 136,700 tons from 1928. All the principal islands have railway lines, the traffic on 374 miles of line in operation in 1928-29 totaling 2,233,000 tons of freight and 891,000 passengers. In addition there are many miles of private plantation lines. Besides 1717 miles of public highways, there were in 1928, 1377 miles of improved plantation highways open to the public. Of the public highways, 804 miles were paved. There were 72,353 miles of telephone wire (1929) and 22,738 instruments, operated by four companies. Interisland steamship and airplane services are maintained. Nawiliwili Harbor, on the island of Kauai, was formally opened in 1930.

GOVERNMENT. The Governor and Secretary of the Territory are appointed for four years by the President of the United States. There is a legislature of two houses, the Senate of 15 members, elected for four years, and the House of Representatives of 30 members, elected for two years. A delegate, elected biennially, represents the Territory in the Congress of the United States. Governor in 1930, Lawrence M. Judd, appointed in 1929; Secretary, Raymond C. Brown.

In the general election of Nov. 4, 1930, the Republicans captured 95 and the Democrats 5 of the 100 offices filled. The composition of the new Territorial Senate was: Republicans, 14; Demo-

crats, 1; of the Assembly, Republicans, 28; Democrats, 2. Victor S. K. Houston was reelected delegate to Congress. See AGRICULTURAL EXPERIMENT STATIONS.

Consult Littler, *The Governance of Hawaii, A Study in Territorial Administration* (Stanford University Press, 1929).

HAWTHORNE, CHARLES WEBSTER. An American genre and portrait painter, died in Baltimore, Md., Nov. 29, 1930. Born in Maine, Jan. 8, 1872. He studied at the National Academy of Design and at the Art Students' League in New York and under William M. Chase. His winters were spent in Paris and New York, his summers in Provincetown, Mass., where he owned the Cape Cod School of Art. He was a member of the National Institute of Arts and Letters, the American Water Color Society, the National Society of Portrait Painters, and Société Nationale des Beaux-Arts. His technical facility was remarkable, and his interpretations of sitters and types showed unusual ability to analyze character. Among his works are: "The Trousseau" in the Metropolitan Museum of Art, New York City; "Mother and Child" in the Syracuse (N. Y.) Museum of Fine Arts; "Fisherman's Daughter" in the Corcoran Gallery, Washington; "The Family" in the Buffalo Fine Arts Academy; "Refining Oil" in the Detroit Institute of Arts; "Madonna of the Fishermen" in the City Art Museum, St. Louis; "Little Sylvia," "The Three Selectmen of Provincetown," and "Motherhood Triumphant" in the Art Institute of Chicago; "The Mother" in the Boston Museum of Art; "The Children" in the Cincinnati Museum; and "Madonna of the Harbor" in the High Museum, Atlanta.

HAY. The United States produced a short hay crop in 1930 as a result of reduced acreage and low yields due in part to dry weather in the late summer of 1929 but mainly to the long and severe drought in many sections during the growing season of the year. The Department of Agriculture estimated the 1930 hay crop at 94,767,000 tons and the area at 72,609,000 acres, the average yield being 1.31 tons. The production of 1929 was 113,658,000 tons, the area 74,203,000 acres, and the average yield 1.53 tons per acre. The production of tame hay of all kinds in 1930 was estimated at 82,656,000 tons compared with 100,893,000 tons the year before, and the production of wild hay from prairie, marsh and other native or wild grasses at 12,111,000 tons compared with 12,765,000 tons in 1929. The average farm price of all hay on Dec. 1, 1930, was \$11.98 per ton, or 20 cents above the price on Dec. 1, 1929, and computed at these prices the total value of the 1930 crop was \$1,135,294,000 and of the preceding crop \$1,336,946,000.

The crop of alfalfa hay produced largely outside of the drought area was reported as only 4 per cent below the production of 29,745,000 tons the preceding year. (See ALFALFA.) Clover hay produced largely in the Central States suffered severely from the dry season and gave a crop of only 8,005,000 tons as compared with 13,784,000 tons in 1929. The mixed clover and timothy crop was also short, the yields for 1930 and 1929 being 19,335,000 tons and 26,581,000 tons respectively. The timothy hay crop was 7,669,000 tons in 1930 and 10,028,000 tons in 1929 and the sweet clover hay crop was estimated at 1,895,000 tons compared with 2,368,000 tons the year before. Due to the short hay crop larger acreages of small

grain were used for hay. In 1930, 4,023,000 acres were cut to produce 5,315,000 tons of hay while in the previous year this acreage was 3,420,000 acres and the hay production 4,410,000 tons. Soy beans, cowpeas and peanuts also were used to a greater extent, the acreage being increased from 4,056,000 acres in 1929 to 4,365,000 acres in 1930. The yield, however, was only 3,864,000 tons in 1930 while in the preceding year 4,290,000 tons were produced on the smaller acreage. For 1930 the production of hay from millet, sudan, red top and other sources was estimated at 7,712,000 tons compared with 9,265,000 tons in 1929. The production of sweet sorghum grown largely for hay and forage in the Southern States but not included in the hay estimates was reported at 3,876,000 tons in 1930 and 4,395,000 tons in the preceding year.

The leading tame hay-producing States reported the following yields: California, 5,729,000 tons; Wisconsin, 5,672,000 tons; New York, 5,584,000 tons; Iowa, 4,986,000 tons; Nebraska, 3,818,000 tons; and Illinois, 3,752,000 tons. The yields of the more important wild hay-growing States were given as follows: Nebraska, 2,616,000 tons; Minnesota, 2,010,000 tons; South Dakota, 1,631,000 tons; and North Dakota, 1,105,000 tons. In response to an increased demand for hay inspection the Department of Agriculture during the year entered into agreements for such service with the State departments of agriculture of California and Nebraska and the Arizona Farm Bureau Federation.

HAYTI. See HAITI.

HAZEN, ALLEN. An American civil engineer, died in Miles City, Mont., July 26, 1930. He was born in Hartford, Vt., Aug. 28, 1869, and attended the New Hampshire College of Agriculture and Mechanic Arts and the Massachusetts Institute of Technology. From 1888 to 1893 he was in charge of the experimental station of the Massachusetts State Board of Health in Lawrence, Mass., where, as a result of severe typhoid epidemics in Lawrence and vicinity, he studied the application of filter sands to water filtration. He was engaged in private practice in Boston with Albert F. Noyes from 1894 to 1897, and in New York City with George C. Whipple, George W. Fuller, and others from 1897 until his death. In 1900 he was chief engineer in the construction of the Albany water filtration plant, which was the first slow sand filter plant with continuous filtration in the United States. He served other municipalities and States in a similar capacity, his last important appointment being as hydraulic expert to the Commission of Flood Control in New Jersey. The Sc.D. degree was conferred on him by Dartmouth College and the New Hampshire College of Agriculture and Mechanic Arts. He was the author of *The Filtration of Public Water Supplies* (1895); *Hydraulic Tables* (with Gardner S. Williams, 1905); *Clean Water* (1907); and *Meter Rates for Water Works* (1917).

HEATON, AUGUSTUS GOODYEAR. An American historical and portrait painter, died in Washington, D. C., Oct. 11, 1930. He was born in Philadelphia, Pa., Apr. 28, 1844, and was the first student from the United States admitted to the ateliers of painting of the École des Beaux-Arts, Paris (1864). He studied under Cabanel there, and afterward became a pupil of Bonnat (1878-80). Among his historical works are: "Washington at Fort Duquesne" (1881), owned by the

Union League, Philadelphia; "The Recall of Columbus," which was bought by Congress for the Capitol in 1883 and was engraved on the 50-cent World's Fair stamp in 1893; "Hardships of Emigration," which was engraved on the 10-cent stamp celebrating the Trans-Mississippi and International Fair in Omaha in 1898; and "Baron Steuben at Valley Forge," which was exhibited at the Jamestown Exposition in 1907. His best-known portraits include those of Bishop Bowman (Cornell College) and Paul Tulane (Tulane University). He wrote *The Banner of Freedom* as a national anthem and published *The Heart of David—The Psalmist King* (1900); *Coinage of the United States Branch Mints* (1893); and *Fancies and Thoughts in Verse* (1904).

HEIMWEHR. An Austrian private military organization, composed of monarchist, Fascist, and conservative Roman Catholic elements. See AUSTRIA, under *History*.

HEJAZ or HEDJAZ. See ARABIA.

HENDRICK, ELLWOOD. An American chemist, died in New York City, Oct. 20, 1930. He was born in Albany, N. Y., Dec. 19, 1861, and attended the University of Zurich, Switzerland, studying chemistry under Victor Meyer. On his return to the United States in 1881 he became manager of the Albany Aniline and Chemical Works. In 1884 he turned his attention to fire insurance, and in 1900 became engaged in stock brokerage in New York City. He resumed his interest in chemistry in 1917, when he became a member of the staff of the industrial research establishment of Arthur D. Little, Inc., in Cambridge, Mass. In 1924 he was appointed curator of the Chandler Chemical Museum at Columbia University. The Sc.D. degree was conferred on him by Franklin and Marshall College in 1921, and during 1922-23 he was president of the American section of the Société de Chimie Industrielle. Besides many articles on scientific and philosophical subjects in popular magazines, he was consulting editor from 1918 to 1923 of *Chemical and Metallurgical Engineering* and published *Everyman's Chemistry* (1917); *Opportunities in Chemistry* (1919); *Percolator Papers* (1919); *Life of Lewis Miller* (1925); and *Modern Views of Physical Science* (1925).

HENRY FORD SCHOLARSHIPS. See UNIVERSITIES AND COLLEGES.

HENSHAW, HENRY WETHERBEE. An American ornithologist, died in Washington, D. C., Aug. 1, 1930. He was born in Cambridge, Mass., Mar. 3, 1850. During 1872-79 he was a member of the Wheeler Survey, in the West. He then became associated, in an administrative capacity, with the Bureau of Ethnology until 1893, part of which time he was editor of the *American Anthropologist*. From 1894 to 1904 he was engaged in a study of the biology of the Hawaiian Islands, and then became administrative biologist in 1905 and chief in 1910 of the Biological Survey of the U. S. Department of Agriculture. In addition to numerous papers on ornithology and ethnology, he was the author of a report on *Ornithology of Nevada, Utah, California, Colorado, New Mexico, and Arizona* (1875); *Animal Carvings from Mounds of the Mississippi Valley* (1883); *Birds of the Hawaiian Islands* (1902); and, among other bulletins of the U. S. Department of Agriculture, *The Mammals of Bitterroot Valley, Mont.* (1911).

HEREDITY. See ZOOLOGY.

HERSCHEL, CLEMENS. An American engineer, died in Glen Ridge, N. J., Mar. 1, 1930. Born in Boston, Mass., Mar. 23, 1842, he was graduated in 1860 from the Lawrence Scientific School of Harvard University and, in 1863, from the Karlsruhe Technical School, Germany, after studying three years there and in France. He first turned his attention to bridge building, during which time he served as railroad commissioner of Massachusetts (1881-83). In 1875 he published *Continuous Revolving Drawbridges*. From 1879 to 1889, he was hydraulic engineer for the Holyoke (Mass.) Water Power Company, and during these years, rebuilt the Holyoke dam across the Connecticut River, put the sale of water for power to the local mills on a scientific basis, constructed and operated the Holyoke testing flume, and devised the Venturi meter for measuring the flow of water in conduits of any conceivable size. For designing this meter, named in honor of the Italian who established the principle on which it is based, Mr. Herschel was awarded the Elliott Cresson Gold Medal of the Franklin Institute of Philadelphia, and his paper on the subject, in 1888, won the Rowland Prize of the American Society of Civil Engineers. In 1889 he became engineer and superintendent of the East Jersey Water Company and built works to provide an additional water supply for Newark and adjoining New Jersey municipalities. After 1900 he practiced privately with offices in New York City. He worked with power companies at Niagara Falls (1884-1904) and was consultant on the deep-pressure tunnel which continued the Catskill aqueduct beneath New York City, as well as for many other projects. He contributed to engineering journals and, in 1897, published *115 Hydraulic Experiments*. Mr. Herschel's translation of *Two Books on the Water Supply of the City of Rome*, by Sextus Julius, the manuscript of which he found in an Italian monastery, appeared in 1899. In his will he established a trust fund of \$50,000 for the construction of a hydraulic research laboratory at Harvard University.

HILL, FREDERICK TREVOR. An American lawyer and author, died in Yonkers, N. Y., Mar. 17, 1930. Born in Brooklyn, N. Y., May 5, 1866, he was graduated from Yale University in 1887 and from the law school of Columbia University in 1889. Commissioned a captain in the Quartermasters' Reserve Corps in February, 1917, he went to France with the staff of General Pershing, serving in the A. E. F. until 1919. He was promoted to major to the Quartermasters' Reserve Corps in December, 1917, and to lieutenant-colonel in the U. S. army in 1918. In July, 1919, he was re-commissioned lieutenant-colonel in the Reserve Corps and, in 1920, was appointed on the General Staff of the U. S. Army, initial eligibility list. He was cited by General Pershing for exceptionally meritorious service (1919) and was awarded membership in the Legion of Honor by France. Mr. Hill wrote articles and books on legal subjects, and essays, novels, stories, and plays. His works include *Miniatures of Balzac*,

with S. P. Griffin (1893); *The Case and Exceptions*, short stories (1900); *The Care of Estates* (1901); *The Minority* (1902); *The Web* (1903); *The Accomplice* (1905), all novels; *Lincoln the Lawyer* (1906); *Decisive Battles of the Law* (1907); *The Story of a Street* (1908); *On the Trail of Washington* (1909); *Lincoln's Legacy of Inspiration*, essays (1909); *On the Trail of Grant and Lee* (1911); *Washington in Action* (1912); *The Thirteenth Juror*, novel (1913); *Tales out of Court*, short stories (1920); *High School Farces*, plays (1920).

HISPANIC SOCIETY OF AMERICA, THE. An international organization founded in New York City in 1904 to establish a public library and museum designed to be a link between the English-, Spanish-, and Portuguese-speaking peoples, and to advance the study of the Spanish and Portuguese languages, literature, and history, and the study of the countries wherein Spanish and Portuguese are or have been spoken languages. Since 1904, when a collection of paintings, manuscripts, maps, and coins, and a library of about 40,000 volumes were placed in charge of the society, valuable additions have been made to this collection, and a number of temporary exhibitions have been held of the works of noted Hispanic artists. Membership in the society is limited to 100, is honorary, and includes specialists and scholars of all nationalities distinguished in the Hispanic field. The society has published more than 200 catalogues, reprints of old manuscripts, and monographs. The president for 1930 was Archer M. Huntington and secretary, George Bird Grinnell. The museum and headquarters of the society are at 156th Street, West of Broadway, New York City.

HISTORICAL ASSOCIATION, AMERICAN. A society for the promotion of historical studies and writings, formed in 1884 by a group of American scholars and chartered by Congress in 1889. Under provision made by the United States Government, it publishes annual reports and is charged with the office of communicating its proceedings and its information on the state of historical study and writing to the secretary of the Smithsonian Institution, for transmission to Congress. In 1930 the Association had a membership of 3700, who represented not only every State of the Union but also Canada and many European and South American countries. It invites to membership not only those who are engaged in historical work and teaching but all who feel a sufficient interest in historical science to prompt them to join.

The forty-fifth annual meeting was held in Boston, Mass., Dec. 29-31, 1930. The conferences dealt with the following subjects: "The French Revolution"; "Hispanic-American History—Simón Bolívar"; "New England in the Eighteenth Century"; "Organized Religion in American Life"; "Social Studies in the Schools"; "Modern European History"; "Problems of the Young Scholar"; "The Far East"; "English History—A Survey of the Most Important Tasks Still to be Completed"; "Europe in Africa"; "New Viewpoints in Southern History"; "Opportunities for More Effective Research in Colleges"; "Medieval Science"; "The Archaeology of Hellenistic-Roman Cities"; "American Maritime History"; "Feudalism and Serfdom." Meeting with the society for joint sessions were the National Council for Social Studies, American Society of Church History, Agricultural History Society, Business Historical So-

ciety, and Mississippi Valley Historical Association.

The official organ of the association is the *American Historical Review*, a quarterly. The *Annual Report* contains proceedings, important papers read at the annual meetings, texts of significant documents, reports on American archives, reports on history teaching, and papers on agricultural history. The officers for 1930 were: President, Evarts B. Greene, Columbia University, New York City; first vice-president, Ephraim Douglass Adams, Stanford University, Calif. (died Sept. 1, 1930, q.v.); second vice-president, Carl L. Becker, Cornell University, Ithaca, N. Y.; secretary, Dexter Perkins, University of Rochester, Rochester, N. Y.; treasurer, Charles Moore; assistant secretary-treasurer, Patty W. Washington; editor, Lowell Joseph Ragatz, George Washington University, Washington, D. C. Headquarters are at 40 B Street, S.W., Washington, D. C.

HOBART COLLEGE. An institution for the higher education of men in Geneva, N. Y.; founded chiefly under the auspices of the Protestant Episcopal Church in 1822 and permanently chartered by the Regents of the University of the State of New York in 1825. William Smith College, a coordinate institution for the separate instruction of women, administered by the Hobart College corporation, and with instruction given by the Hobart College faculty, was established in 1908. The student enrollment in Hobart College for the autumn of 1930 was 331, while the enrollment in William Smith College was 135. The combined faculty of the two colleges numbered 40. The endowment amounted to \$1,403,000, and the income for the year was approximately \$270,000. There were 89,000 volumes in the library. During 1930 the dormitory Medbery Hall was enlarged and refurnished at a cost exceeding \$35,000. An endowment campaign was also conducted to raise \$1,000,000 for new buildings and \$1,000,000 for instruction. President, Murray Bartlett, D.D., S.T.D., LL.D.

HOBOKEN, N. J. See CELEBRATIONS.

HOCKEY. Ice hockey continued to gain in popularity in the northern part of the United States and in Canada during the 1929-30 season. Not including post-season play-offs, a total of 1,682,915 persons attended the games of the National Hockey League, or 79,389 more than in 1928-29. The Stanley Cup, emblematic of the world's professional hockey championship, was captured by the Montreal Canadiens from the Boston Bruins, the Canadiens winning two straight games by scores of 3 to 0 and 4 to 3, respectively. The Canadiens qualified for the final by defeating the Chicago Black Hawks and the New York Rangers. The Boston Bruins, victors in the National Hockey League series, gained the finals by defeating the Montreal Maroons, winners of the regular international series, in three out of four spectacular contests. The Canadian Amateur hockey title was won by the Montreal A. A. A.

Yale had probably the outstanding sextet among the college teams, winning 16 consecutive games previous to the annual series with Harvard. The Harvard team won 3 to 2 in the first game,

lost the second match by 3 to 1, and the third game resulted in a tie.

HOFFSTEDE DE GROOT, CORNELIUS. A Dutch art critic and historian, died at The Hague Apr. 14, 1930. He was born in 1863. He served for many years as director of the prints collection in the Rijks-Museum in Amsterdam and was also a member of the commission of the leading museums of Haarlem and The Hague. Through his study of the work of Rembrandt and other masters of the seventeenth century, he established an international reputation as an authority on Dutch art. He also discovered the works of the painters Pieter Yanssen and Judith Leyster, the latter a pupil of Hals. In 1893 he wrote a book on Dutch paintings in British private collections, and in 1896 issued an extensive classification of Dutch and German paintings. The *Catalogue Raisonné of the Works of the Most Eminent Dutch Painters of the Seventeenth Century* (8 vols., 1908-27), which he compiled with W. R. Valentiner, is considered the standard work on that subject. His other publications include: *Zeichnungen von Rembrandt in Lichtdruck nachgebildet* (with Friedrich Lippmann, 10 vols., 1888-1910); *Rembrandt, Beschreibendes Verzeichnis seiner Gemälde*, with Wilhelm Bode (English trans., 8 vols., 1897-1905); *Meisterwerke der Porträtmalerei auf der Ausstellung im Haag* (1903); *Die Urkunden über Rembrandt* (1906); *Die Handzeichnungen Rembrandts* (1906); and *Isack Koedijck* (1927).

HOLLIS, IRA NELSON. An American mechanical engineer and educator, died in Cambridge, Mass., Aug. 15, 1930. He was born in Mooresville, Ind., Mar. 7, 1856. On graduating from the U. S. Naval Academy in 1878, he rose to the rank of assistant engineer in the United States Navy, but resigned in 1893 to become professor of engineering at Harvard University. While at Harvard he directed the building of the stadium, which was the first structure of its kind in the United States. In 1913 he was elected president of Worcester Polytechnic Institute, holding this office until his retirement in 1925. He was president of the American Society of Mechanical Engineers in 1917. The A. M. degree was conferred on him by Harvard University (1899); the L.H.D. degree by Union College (1899); and the Sc.D. degree by the University of Pittsburgh (1912). He was the author of *War College Lectures on Naval Ships* (1892) and *History of the Frigate Constitution* (1900).

HOLM, hólmi, FRITS (VILHELM). A Danish explorer and journalist, died in New York City, Mar. 9, 1930. Born in Copenhagen in 1881, he was educated at Copenhagen University and in the Danish Royal Navy. During the Russo-Japanese War (1904-05), he was correspondent in the Far East for Danish newspapers. In 1907-08 he commanded a scientific expedition into the interior of China, bringing with him on his return to the Western World the only existing monolithic replica of the famous Nestorian Monument of 781 A.D. This replica was first lent to the Metropolitan Museum of Art in New York City (1908-16) and then put in the Lateran Palace in Rome. He was a correspondent and a Red Cross commissioner during the World War, receiving many decorations for his work. In 1923 he published a volume entitled *My Nestorian Adventure in China*.

HOLY CROSS, COLLEGE OF THE. A Roman Catholic College for men, under the Society of Jesus, in Worcester, Mass.; founded in 1843. The enrollment for the autumn of 1930 totaled 1039, with a distribution as follows: Arts course, 783; science courses, 77; philosophy course, 164; and graduate school of chemistry, 4. The faculty numbered 79. The library contained 75,000 volumes. President, the Rev. John M. Fox, S.J.

HONDURAS, hōn-dōō'rās. A Central American republic, bounded on the north and east by the Caribbean Sea, on the west by Guatemala, Salvador, and the Pacific Ocean, and on the south by Nicaragua. Capital, Tegucigalpa.

AREA AND POPULATION. The estimated area is 44,275 square miles; population, according to the census of 1926, about 760,560, mostly Indians with a strain of Spanish blood. The chief towns with their populations in 1926, are Tegucigalpa, 26,713 (40,049 on June 29, 1930); San Pedro Sula, 16,881; La Ceiba, 12,136; Choluteca, 10,444; Santa Rosa de Copán, 9795; Comayagua, 9413; Juticalpa, 8591. The chief ports are Amapala on the Pacific and Porto Cortez and Omoa on the Atlantic. The population in 1929 was estimated at 800,000. In the fiscal year 1928-29, there were 29,292 births and 16,222 deaths.

EDUCATION. Elementary education is nominally free and compulsory between the ages of 7 and 15. Government statistics for 1928-29 showed 1250 primary schools, with 41,854 enrolled pupils and 1637 teachers; 14 secondary schools, with 973 enrolled students and 267 teachers; and an enrollment in the university of 167 students.

PRODUCTION. The economic importance of Honduras is due mainly to its large banana production, exports of this fruit comprising approximately 85 per cent of all foreign shipments. The production of sugar is increasing and coffee and coconuts are also grown. The country is well adapted to cattle raising, but stock breeding is neglected. Mineral resources consist of gold, silver, lead, copper, iron, zinc, antimony, and coal; only the first four minerals named are exported in commercial quantities. Bituminous coal resources are estimated at 1,000,000 and lignite resources at 4,000,000 metric tons, all undeveloped. Water-power resources, also undeveloped, are equivalent to about 1,000,000 horse power. Manufacturing is confined largely to sugar refining.

COMMERCE. The total foreign trade for the fiscal year ended July 31, 1929, amounted to \$39,430,097, of which \$14,860,931 represented imports and \$24,569,166 were exports. In 1927-28, the total foreign trade was \$35,716,333, imports were valued at \$12,573,595 and exports at \$23,142,738. The favorable trade balance for 1928-29 was \$9,708,235, as compared with \$10,569,143 for the preceding year. Of the total exports \$20,869,328 represented the value of banana shipments (\$18,670,637 in 1927-28); sugar, \$575,492 (\$1,451,929); coffee, \$525,750 (\$829,054). Textile manufactures, petroleum products, iron and steel manufactures, lumber, and flour were the leading imports.

The United States increased its share of the imports trade in 1928-29 to \$11,563,364 from \$10,-

028,998 in the preceding year. Other chief sources of imports, in the order named, were the United Kingdom (\$837,807), Germany, Central America, Curaçao, and France. The United States was again the principal customer of Honduras, taking goods to the value of \$18,273,189 in 1928-29, as against \$17,646,649 in 1927-28. Values of shipments to other countries were: Germany, \$2,947,246; United Kingdom, \$1,978,784; Central America, \$696,293; the Netherlands, \$283,881; and Canada, \$231,842. For the year ended June 30, 1930, imports from the United States were valued at \$12,126,580 and exports to that country at \$13,531,743.

FINANCE. Revenues and expenditures during the fiscal year 1928-29 totaled 13,728,388 pesos (1 peso equals \$0.50) and 12,863,625 pesos, respectively, according to the Minister of Finance. The surplus of 804,763 pesos, added to that carried over from 1927-28, left a Treasury balance of 1,691,059 pesos. The budget for the fiscal year 1929-30, as adopted by Congress, calculated both revenues and expenditures at 13,101,923 pesos; for 1930-31 the budget balanced at 15,109,628 pesos. The public debt on July 31, 1928, stood at about 28,364,000 pesos (\$14,182,000), of which 11,200,000 pesos were held abroad. Exchange difficulties occurred early in 1930, and the Government, through an arrangement with American bankers, took steps to stabilize the currency at the rate of two pesos to \$1.

COMMUNICATIONS. Railways in 1929 extended about 1065 miles, all except 66 miles being owned by fruit companies. Purchase of the National Railway and the dock at Puerto Cortez was authorized by a decree signed by the President Mar. 18, 1930, and passed by Congress the previous day. At the end of 1929, there were 258 miles of highway and 958 miles additional under construction. For the fiscal year ended July 31, 1929, there were 1035 telephones, with 1550 miles of wire, and 262 telegraph offices, with 5301 miles of wire.

GOVERNMENT. According to the Constitution as amended in 1924, executive power is vested in the President nominated and elected by popular vote, and holding office for four years; legislative power is in the Congress of Deputies consisting of 43 members chosen for four years directly by popular vote. A permanent commission of five members transacts the routine business for Congress while that body is not in session. President in 1930, Dr. Vicente Meira Colindres, who assumed office Feb. 1, 1929, for a four-year term.

HISTORY. An agreement for the settlement by arbitration of the long-standing boundary dispute between Honduras and Guatemala was reached in 1930, following negotiations between representatives of both countries at Washington (see GUATEMALA, under *History*). Negotiations for the appointment of a commission to demarcate the boundary under dispute with Nicaragua were carried on during the year, but without reaching a conclusion acceptable to the delegations of both countries.

Continuance of alleged Communist propaganda, which resulted in the restriction of immigration in 1929, led the Government on June 29, 1930, to declare martial law in the four departments forming the Atlantic coast region. A number of foreigners were arrested and 40 were deported. According to the Government, Communist workers had planned a "strike of seditious character" for July 4. The resignation of Minister of Finance Diaz Chavez in March, 1930, was followed on

April 25 by the presentation of resignations by the Ministers of Education, Foreign Affairs, War, Interior, and Public Works. The President refused to accept the resignations of the latter five. On May 13, however, the Minister of Education was succeeded by Ricardo Alduvin, Minister to Mexico, while Céleo Davila was named Minister of Finance. Congressional elections held in October, 1930, resulted in the selection of an equal number of Conservative and Liberal representatives, an outcome which testified to the fairness of the election. Each party demanded the right to name the president of Congress, under threat of abstention. At the end of the year a compromise was reached under which the two parties were to draw lots for the control of Congress. The withdrawal of either party would have forced President Mejía Colindrez, who was elected by a Liberal coalition, to declare a dictatorship for lack of a quorum in Congress.

A treaty providing for free exchange between Honduras and Nicaragua of natural products and articles manufactured from natural products went into effect Aug. 23, 1930. Tobacco and alcohol, which are Government monopolies, were excluded from the agreement. *Commerce Reports* for May 12, 1930, stated that President Mejía Colindrez had signed a decree imposing a tax of \$1 a month on all lands surveyed and to be surveyed under railway concessions and agricultural and agrarian laws relating to the alternate lots. If effective, the decree would require American interests in Honduras to pay several million dollars annually or abandon most of the alternate lots held in fee simple and under lease.

HONDURAS, BRITISH. See **BRITISH HONDURAS.**

HONG KONG. A possession of Great Britain at the mouth of the Canton River, about 90 miles to the south of Canton, China; comprising an island, with an area of 32 square miles, and the opposite Peninsula of Kowloon, separated from it by a strait about a half-mile wide. Total area, 391 square miles. In addition, considerable land in Kowloon Bay has been reclaimed from the sea. At the end of 1929 the total civil population was estimated at 1,143,510, of which 18,150 were non-Chinese. In 1928, 257,162 Chinese left Hong Kong and 187,847 immigrants entered. Deaths exceeded births by 5400 in Victoria and Kowloon. Victoria, the chief business centre, is on Hong Kong Island and had a population of 577,500 in 1929. Pupils enrolled in the schools in 1928 numbered 56,301. The British University of Hong Kong is attended mostly by Chinese students.

The principal industries are sugar refining, shipbuilding, rope making, the manufacture of tobacco, cement, and knit goods, and tin refining. Hong Kong is a free port, the trade being chiefly with Great Britain, India, Ceylon, Australia, the United States, China, and Japan. In 1928, 52,278 vessels of 37,640,694 tons entered and cleared in the foreign trade. Due to disturbed conditions in China, trans-Pacific freight shipped into Hong Kong showed a 40 per cent decrease in the first half of 1930, as compared with the same period of 1929. Revenue for 1928 totaled £2,496,839 and expenditure, £2,123,024. The colony is under a governor aided by executive and legislative councils. Governor and Commander-in-Chief in 1930, Sir William Peel (appointed 1930).

HOOVER DAM. See **DAMS.**

HOPS. The production of hops in 1930 in most of the hop-growing countries of Europe and in the

United States suffered a marked decline as compared with the yield of the preceding year. Good prices in Europe for several years past had given rise to an increase in acreage and this coupled with good yields led to overproduction and the consequent fall in prices making the culture of the crop less profitable. The production of five countries including the United States reporting to the International Institute of Agriculture, Rome, was placed at 103,517,000 pounds as against 133,936,000 pounds the year before. The area devoted to the crop was 113,000 acres or 20,000 acres less than in 1929. Belgium reported a production of 2,271,000 pounds and Czechoslovakia of 25,097,000 pounds. A later official estimate placed the crop of Germany at 24,366,000 pounds or 5,708,000 pounds less than in 1929. In some European sections owing to low prices part of the crop was not harvested. The International Hop Congress, meeting at Saaz, Czechoslovakia, advised picking only hops in perfect condition in 1930 and urged the curtailing of the present acreage by one-third. In England also growers were advised to harvest only best-quality hops to sustain prices.

The hop production of the United States in 1930 according to estimates published by the Department of Agriculture was 23,447,000 pounds compared with 33,220,000 pounds in 1929, a reduction of over 28 per cent and nearly 20 per cent below the five-year average of 1924-1928. The area was reduced from 24,900 acres in 1929 to 19,500 acres in 1930. The average yield per acre was 1202 pounds in 1930 and 1334 pounds the year before. The farm price about December 1 averaged 14.8 cents per pound in 1930 and 11.4 cents in 1929 and at these prices the total value of the crops was \$3,462,000 and \$3,788,000 respectively. As heretofore the commercial production of hops was confined largely to the Pacific Coast States. Of these Oregon produced 14,350,000 pounds, California 5,445,000 pounds, and Washington 3,652,000 pounds, the average yield per acre being 1025 pounds, 1650 pounds and 1660 pounds respectively. The hop exports of the United States for the fiscal year ended June 30, 1930, were 6,792,000 pounds valued at \$1,050,000, while the preceding year they were 8,836,000 pounds valued at \$1,827,000. The imports for the same periods were 926,000 pounds and 649,000 pounds and valued \$145,000 and \$200,000 respectively.

HORMONES. See **CHEMISTRY** under *Biological Chemistry.*

HORNEBLENDE, CHANGES IN. See **GEOLOGY.**

HORSE RACING. See **RACING.**

HORTICULTURE. Although affected by the general depression in business, horticulture as a whole did not suffer in 1930 in proportion to several other branches of agriculture, a fact which spoke well for the stability of the industry. Disastrous spring frosts in the Central States practically eliminated the peach crop in that area and cut deeply into cherry yields and the long-continued drought took a heavy toll of fruits and vegetables in the Central and Atlantic seaboard States. Yet the horticultural industry is so widely scattered throughout the whole United States that regional failures did not greatly affect the whole, and total productions of practically all fruits and many vegetables were higher in 1930 than in 1929. Overproduction of peaches and grapes in 1930 gave evidence that the need of the industry is not greater quantity but rather better quality with more efficient methods of handling and marketing horticultural products.

PRODUCTION. According to data released on December 17, 1930, by the U. S. Department of Agriculture, all important fruit crops were larger in 1930 than in the preceding year, a fact which should, however, be qualified by the statement that 1929 crops were generally below the average of the preceding five years. A total of 163,543,000 bushels of apples were produced in 1930 as compared with 142,788,000 bushels in 1929; peaches, 53,286,000 bushels in 1930, 45,789,000 bushels in 1929; pears, 25,703,000 bushels in 1930, 22,063,000 bushels in 1929; grapes, 2,368,557 tons in 1930, 2,098,547 tons in 1929; cherries, 108,100 tons in 1930, 84,930 tons in 1929; fresh plums, 143,750 tons in 1930, 116,300 tons in 1929; dried prunes, 254,215 tons in 1930, 160,380 tons in 1929; oranges, 47,691,000 boxes in 1930, 33,839,000 boxes in 1929; grapefruit, 14,153,000 boxes in 1930, 10,718,000 boxes in 1929; lemons, 7,020,000 boxes in 1930, 5,900,000 boxes in 1929; cranberries, 570,500 barrels in 1930, 546,000 barrels in 1929; pecans, 37,250,000 pounds in 1930 and 38,005,000 in 1929; strawberries, 229,336,000 quarts in 1930 and 327,975,000 quarts in 1929. Only two of these crops, namely, cherries and pecans, gained in total value at the farm, thus making it evident that as a rule increased yields were not economic gains to the producers.

As might be expected, vegetable production was much more affected by the drought and was hence much more variable. White potato production in the two years was practically equal, 361,090,000 bushels in 1930 and 359,048,000 bushels in 1929. Sweet potatoes, on the other hand, being largely produced in drought-ridden States, showed a sharp decline from 84,521,000 bushels in 1929 to 71,154,000 bushels in 1930; asparagus production increased from 9,766,000 crates in 1929 to 10,403,000; cabbage declined from 1,116,300 tons in 1929 to 1,035,500 tons in 1930; cantaloupes declined from 16,982,000 crates in 1929 to 15,391,000 crates in 1930. Other crops to lose in 1930 were cauliflower from 6,500,000 crates in 1929 to 5,595,000 crates in 1930; canning corn from 704,400 tons to 661,700 tons; lettuce from 20,180,000 crates to 19,849,000 crates; spinach from 226,400 tons to 138,000 tons. Vegetable crops to gain in 1930 were carrots from 10,957,000 bushels in 1929 to 10,994,000 bushels in 1930; celery from 8,872,000 to 10,043,000 crates; cucumbers from 8,639,000 to 11,740,000 bushels; eggplant from 713,000 to 857,000 bushels; onions from 25,470,000 to 26,124,000 bushels; green peas from 300,000 to 347,000 tons; peppers from 4,160,000 to 4,381,000 bushels; tomatoes from 1,896,000 to 2,132,400 tons; and watermelons from 69,579,000 to 74,751,000 individuals.

Not only do the above figures show the seasonal changes in the crops but depict very clearly the tremendous magnitude of fruit and vegetable production in the United States.

EXPORTS AND IMPORTS. According to the Monthly Summary of Foreign Commerce of the United States, October, 1930, published by the U. S. Department of Commerce and covering the twelve months ended Dec. 31, 1930, there was a notable decline in the value of horticultural products exported from the United States in 1930 as compared with 1929. In exports the total value of fruits, nuts, vegetables, vegetable preparations and nursery stock declined from \$163,010,775 for the twelve months of 1929 to \$130,593,445 for the corresponding period of 1930. In imports the change in total value of these items was from

\$142,498,555 in 1929 to \$118,839,277. Thus the greatest change was in value of exports, a condition undoubtedly due to the world-wide depression in markets as well as the decline in unit value of various United States products offered for sale.

The most notable declines in individual export items were in canned vegetables from \$9,453,758 in 1929 to \$6,721,324 in 1930; oranges \$18,745,561 to \$11,467,500; apples \$4,633,108 to \$3,066,787; and raisins \$8,390,051 to \$6,310,035. Conspicuous changes in import values were canned tomatoes from \$9,005,164 in 1929 to \$2,737,956 in 1930; figs from \$1,833,299 to \$1,141,876; shelled almonds from \$6,437,129 to \$3,967,450; and walnuts from \$5,689,674 to \$4,455,624. Certain import items increased in value to offset the decline in others, notably white potatoes from \$4,304,757 in 1929 to \$5,093,397 in 1930; onions from \$3,555,856 to \$3,618,840; lemons from \$1,064,366 to \$2,080,283. Changes in import values were naturally considerably influenced by the new tariff ratings, which tended to increase unit values. Bananas, entering free of duty, showed but little change from 1929 to 1930, the import values being, respectively, \$36,047,969 and \$34,794,184. Incidentally the report shows that bananas are by far the leading single item in horticultural imports, being in substance over one quarter of the total value and thus concretely testifying to the magnitude of the banana industry.

COÖPERATIVE MARKETING. The Federal Farm Loan Board proved of great assistance to co-operative marketing associations during the year by making important loans to effect needed reorganizations and stabilize the marketing of large crops.

Material loans were made by the Farm Board to the Florida Citrus Exchange to finance the construction of facilities for treatment of citrus fruit, to insure the destruction of possible Mediterranean fruit-fly larvae, and generally to strengthen their business. Loans were also made to fig growers of Texas, raisin growers of California, cherry growers of Michigan and Wisconsin, pecan producers of the South and other groups, all with a view to placing these organizations on a strong, self-sustaining basis.

Strong, well-established organizations, such as the California Walnut Growers and the California Fruit Growers' Exchange, again rendered material service to their members, successfully marketing their respective 1930 crops in the face of generally unfavorable conditions. The general manager of the California Fruit Growers' Exchange, in his annual report for the year ended Oct. 31, 1930, states that this organization handled 46,377 cars of citrus, practically 78 per cent of the entire citrus production of the State. This vast quantity of citrus fruits, oranges, lemons and grapefruit, netted the growers substantial returns of over 104 million dollars. To facilitate marketing, this California exchange spent over \$1,300,000 in advertising in the United States and Canada. Again it was evident that strong, well-managed coöperatives are a great necessity in the handling of the larger fruit crops.

PLANT QUARANTINES. The victory of federal and State entomologists over the Mediterranean fruit fly in Florida was so complete and astounding as to mark 1930 definitely as a banner year in the history of the plant quarantine service. Complete eradication of this potentially

destructive insect at the end of the year was confidently expected as only two minor outbreaks were discovered in 1930. As a result practically all restrictions on the movement of Florida fruits and vegetables were removed in the late autumn, greatly to the relief of the producers in that State.

Efforts to stop the spread of Japanese beetle and gipsy moth were not as successful, both insects continuing their advance into new territory. The so-called "Phony Peach disease," an infectious disease of the roots of peach and nectarine trees widely scattered through the southern States, was subjected to quarantines limited to the movement of possibly infected nursery stock, a measure which, coupled with eradication of diseased mature trees, promised to check this destructive pest quickly. Domestic and foreign quarantines imposed more or less hardship on certain producers but accomplished vast good for the American horticultural industry as a whole.

HORTICULTURAL RESEARCH. No record of the year's accomplishments would be quite complete without mention of research activities which, although lacking in manifestations, really form the basis for the present high standards in horticultural production. The Maryland Agricultural Experiment Station (*Amer. Soc. Hort. Sci. Proc.*, 26, 1929, pp. 191-196), found in a study of various factors affecting the color of apples that sugar in the form of cerelese applied to the soil materially enhanced red coloration, especially when used in connection with spring applications of nitrate of soda. Such a treatment developed to a point of practical usage would greatly add to the marketability of apples of the red varieties. The Ohio Agricultural Experiment Station (*Amer. Soc. Hort. Sci. Proc.*, 26, 1929, pp. 167-173) failed to find that nitrogen fertilizers had any direct influence on the keeping quality of apples, thus controverting the somewhat common thought that nitrogenous materials lessen the storage life of fruits. The New York Agricultural Experiment Station, finding that differences in the yielding capacity of apple trees of a single variety were maintained year after year, reached the conclusion that such differences are due to inherent qualities in the trees or underlying soil and not to pruning or other managerial practices.

The date that apple leaf buds transform into flower buds was found at the New Hampshire Agricultural Experiment Station (*N. H. Sta. Sci. Contrib.*, 26, 1930, pp. 255-260) to vary sharply from year to year. For instance, in the Baldwin apple the change was first noted on Aug. 7, 1928, and in 1929 on July 19. A prolonged drought was the factor concerned in earlier appearance in the second year. The fact that certain apple varieties require cross pollination and others are self-fruitful is now well known. The Missouri Agricultural Experiment Station (*Missouri Sta. Research Bul.*, 138, 1930) presented evidence that the degree of self-fruitfulness is not constant but varies from year to year or tree to tree with differences in nutrition, vigor of tree, etc. Working with Tokay grapes, the California Agricultural Experiment Station (*California Sta. Bul.* 492, 1930, pp. 22) found that thinning out some of the berries resulted in more uniform coloring and ripening of the remaining grapes and hence a higher

quality and more marketable product. The same station (*Botanical Gazette*, 89, 1930, No. 4, pp. 410-413) found that orange trees need a small amount of boron in their nutrition although at one time boron was considered purely a toxic substance in plant growth.

The advisability of using garden peas promptly after harvest was shown in chemical studies conducted by the New York Agricultural Experiment Station (*Plant Physiology*, 5, 1930, No. 3, pp. 399-412). The loss in sucrose was very rapid, followed by a corresponding increase in alcohol insoluble materials.

These few random examples illustrate the substantial grade of work that was being carried on by horticultural research workers.

THE SITUATION IN OTHER COUNTRIES. Large crops of fruit in various parts of the world competed strenuously with those of the United States for the valuable European market. Australia and New Zealand exported 5,423,000 boxes of apples to Europe in 1930, exceeding their hitherto record crop of 1928 by 480,000 boxes. The Canadian apple crop, according to the Fruit Branch of the Canadian Department of Agriculture, declined sharply in 1930, being estimated at 3,166,000 barrels as compared with 3,940,000 barrels in 1929. British Columbia produced 42 per cent more apples, but all other provinces showed losses. Almonds in Mediterranean countries were 88 per cent of 1929 production but filberts showed a distinct gain. The immensity of nut production in this area is shown in estimates of 73,600 tons of shelled and 7750 tons of unshelled almonds and 94,500 tons of filberts on an unshelled basis.

A broad review of the world citrus situation in *Foreign Crops and Markets*, Mar. 24 and 31, 1930, published by the U. S. Department of Agriculture, asserted that there was an increasing production of oranges and grapefruits, especially notable in South Africa and Brazil, potential competitors of the United States for the prized European market.

To offset increased production there was a significant increase in utilization of citrus in north-western Europe, grapefruit especially showing an increased demand in Great Britain. Japan, the third largest citrus producing country in the world, grew over 10,000,000 boxes of oranges in 1930 but this crop was largely used at home. Palestine and Syria with an export crop of 2,700,000 boxes of oranges in 1930, figured somewhat in the citrus deal.

There was a considerable increase in imports into the United States of fresh vegetables from Mexico, Cuba, and Bermuda in 1930 over 1929, green peas from Mexico showing a heavy increase. Bahama shipments of tomatoes were way below average due to the September, 1929, hurricane which destroyed the plantations.

MISCELLANEOUS. The Ninth International Horticultural Congress was held in London, England, Aug. 7-15, 1930, with delegates assembled from all over the world. Asexual propagation of plants received major consideration because of the many problems involved and also on account of the notable advances made in the subject by British horticulturists. Dr. E. C. Auchter, head of horticultural investigations in the U. S. Department of Agriculture, and Dr. W. T. Macoun, occupying a similar position in Canada, were elected permanent representatives on the international committee charged with arrangements for future horticultural congresses.

The passage by the United States Congress of an amendment to the United States Patent Law to include the recording of new plants capable of being asexually propagated, i.e. by cuttings, buds, bulbs, etc., was considered a notable step in stimulating the breeding of improved varieties of economic plants. Under the provisions of this law the originators may be protected for a period of years, thus allowing them opportunity to reap some of the rewards of their endeavors.

NECROLOGY. Dr. Ernest H. Wilson, director of the Arnold Arboretum, Boston, and world-famous plant explorer, was killed in an automobile accident near Worcester, Mass., on Oct. 15, 1930. The Regal lily, discovered by Dr. Wilson in a remote region of China, is a wonderful monument to his memory. He was author of many notable books including *Plant Hunting*, *Romance of Our Trees*, *Aristocrats of the Garden*. G. P. Rixford (q.v.), famous California pomologist, died Oct. 27, 1930, as the result of a train accident. His aid in the discovery of the rôle of the fig wasp in the pollination of Asiatic varieties of the fig had much to do with the successful development of fig growing in California. Albert Dickens, head of the department of horticulture at Kansas Agricultural College since 1902, died Nov. 28, 1930, at the age of 62 years. F. L. Atkins, proprietor of the widely known nursery firm of Bobbink and Atkins, Rutherford, N. J., and president of the National Horticultural Society, died Nov. 10, 1930.

BIBLIOGRAPHY. The popular appeal of horticulture in its manifold phases was evident in the continued large number of books in this field. The list included: F. F. Rockwell, *Roses* (New York, 1930); A. D. Houghton, *The Cactus Book* (New York, 1930); L. S. Dickinson, *The Lawn* (New York, 1930); J. H. Nicolas, *The Rose Manual* (Garden City, N. Y., 1930); E. H. Wilson, *Aristocrats of the Trees* (Boston, 1930); J. C. Wister, *Bulbs for American Gardens* (Boston, 1930); Henry Correvon, *Rock Gardens and Alpine Plants* (New York, 1930); E. A. White, *The Chrysanthemum and Its Culture* (New York, 1930); David Fairchild, *Exploring for Plants* (New York, 1930); J. Coutts, A. Edwards, and A. Osborn, *The Complete Book of Gardening* (London and Melbourne, 1930); V. R. Gardner, *The Cherry and Its Culture* (New York, 1930); J. C. Wister, *Lilac Culture* (New York, 1930); J. E. Knott, *Vegetable Growing* (Phila., 1930); F. A. Waugh, *Everybody's Garden* (New York, 1930).

HOTELS. See ARCHITECTURE.

HOUSEHOLD ECONOMICS. See AGRICULTURAL EXTENSION WORK.

HOWARD, JAMES E. An American engineer-physicist and transportation engineer, died in North Conway, N. H., July 6, 1930. He was born in Palmer, Mass., June 26, 1851, and attended the Highland Military Academy in Worcester, Mass. He served as engineer of tests at the Watertown (Mass.) Arsenal from 1880 to 1910, and was connected with the Bureau of Standards in Washington, D. C., as engineer-physicist from 1910 to 1914. In 1914 he was appointed to the Interstate Commerce Commission's bureau of safety, where his work included notable studies of transverse fissures in rails.

HOWARD UNIVERSITY. A nonsectarian institution for the higher education of men and women in Washington, D. C.; incorporated by Act of Congress Mar. 2, 1867, "for the education

of youth in liberal arts and sciences," open to students without regard to race but principally for the education of Negroes. The registration for the summer school and autumn quarter of 1930 totaled 2530, distributed as follows: College of liberal arts, 538; college of education, 423; college of applied science, 55; school of music, 87; school of religion, 280; school of law, 67; school of medicine, 318; academic evening classes, 290; graduate students, 52; summer session, 429. The faculty numbered 231 members. The total endowment amounted to \$843,546; the endowment income for 1929-30 was \$43,478.

The United States Government appropriated \$510,000 toward salaries and other expenses for 1930-31, \$200,000 toward the completion of a college of education building to cost \$460,000, and \$539,000 for two dormitories for women, making the total Government appropriation for 1930-31, \$1,249,000. There were also reported three notable appropriations from private philanthropy, including \$200,000 from the Conrad Hubert Estate, \$211,900 from the General Education Board, and the availability of an additional sum of \$70,657 from the Julius Rosenwald Fund. These, with other smaller gifts, represented appropriations of approximately \$535,000 from private sources for the year 1929-30. The library contained 51,333 volumes. Administrative officers: Mordecai Wyatt Johnson, S.T.M., D.D., president; Emmett J. Scott, A.M., LL.D., secretary-treasurer.

HOWSE, SIR NEVILLE REGINALD. An Australian surgeon and statesman, died in London, England, Sept. 19, 1930. He was born in Stogursey, Somerset, England, Oct. 26, 1863. After qualifying in medicine at the London Hospital he went to Melbourne, Australia, to practice, and later served in the Boer War with the New South Wales forces. On the outbreak of the World War he went with the Australian Expeditionary Force to German New Guinea and the Pacific Islands, and on his return was appointed assistant director of medical services to the 1st Australian division in Egypt. He later became director of medical services to the Australian Imperial Force, seeing service in the Dardanelles. After the War he was for some time director general of the Australian Army Medical Services, but retired in 1922 with the rank of major general. In recognition of his war services he received the Victoria Cross in 1900 and was created a companion of the Bath in 1915, a knight commander of the Bath in 1917, and a knight commander of St. Michael and St. George in 1919. He was also a fellow of the Royal College of Surgery. In 1922 was elected a member of the House of Representatives of the Commonwealth of Australia, and in 1923 was one of the Australian representatives to the League of Nations' Assembly. He served as Minister for Defense and Health during 1927-28 and as Minister for Home and Territories in 1928, and at the time of his death was Minister of Health and Repatriation.

HUDSON RIVER BRIDGE. See BRIDGES.

HUMANISM. See LITERATURE, ENGLISH AND AMERICAN under *Criticism and Literary History*.

HUNGARY. A kingdom of central Europe, formerly constituting, with Austria, the Dual Monarchy of Austria-Hungary. Capital, Budapest. Regent in 1930, Nicholas Horthy de Nagybánya (elected Mar. 1, 1920).

AREA AND POPULATION. At the census of Dec. 31, 1920, Hungary had an area of 35,875 square miles and a population of 7,980,143. Thirty-six

square miles of additional territory, with 7000 inhabitants, were added after the census. The estimated population on Dec. 31, 1929, was 8,622,000, of which 90 per cent were Hungarians (Magyars), 6.8 per cent Germans, 1.7 per cent Slovaks, and the remainder Croatsians, Rumanians, Ruthenians, and Serbians. In 1928, there were 224,693 births, 146,496 deaths, and 79,634 marriages. The principal cities, with their populations in 1928, are: Budapest, 977,952; Szeged, 125,039; Debrecen, 108,816; Kecskemét, 79,418; Hódmezővásárhely, 62,445; Miskolc, 58,878; Ujpest, 58,703; Kispeszt, 52,728; Győr, 51,512.

EDUCATION. At the census of 1920, 15.2 per cent of the population over six years of age was illiterate. Attendance at day school is compulsory for children from 6 to 12 years of age, after which they must spend three years in continuation school. In 1927-28, there were 6618 elementary schools, with 747,686 pupils, and 160 secondary schools, with 60,426 pupils. Registration at the four universities in 1927-28 was as follows: Budapest, 5429; Szeged, 1268; Pécs, 1132; Debrecen, 1025.

PRODUCTION. A fertile, agricultural country, noted for the variety of products grown, Hungary in 1928 had 60 per cent of its total area under cultivation, 18 per cent permanent pasture, and the remaining area under wood and forest. Production of the chief crops, in quintals (1 quintal equals 220.46 pounds), in 1929, with comparative figures for 1928 in parentheses, was: Wheat, 19,241,009 (27,001,211); rye, 8,162,595 (8,277,641); barley, 6,185,959 (6,677,988); oats, 3,651,610 (3,995,898); maize, 19,623,521 (12,596,996); potatoes, 22,687,682 (14,705,052); sugar beets, 14,686,443 (14,377,906). Wine is an important product. Livestock in the country in 1929 included 1,819,354 cattle, 1,573,180 sheep, 2,582,255 swine, and 892,131 horses.

Hungary has important mineral resources, the bauxite deposits being among the largest known. Coal production in 1929 included 7,044,000 metric tons of brown lignite and 825 tons of black; iron ore, 136,100 metric tons; pig iron, 368,000 metric tons; steel, 513,000 metric tons. The production of metal industries in 1928 was valued at \$17,378,000 pengos (1 pengos exchanged at \$0.1744 in 1928); of textile industries, 377,811,000 pengos; of machine workshops, 236,713,000 pengos; of chemical industries, 202,929 pengos. Milling, distilling, and the manufacture of sugar, hemp, and flax are other important industries. In 1928, there were 3414 factories, employing 233,966 workmen, and with an output valued at 2,877,000,000 pengos.

The crisis in agriculture, due to overproduction and low prices, resulted in widespread agricultural unemployment and suffering in 1930. An official estimate of Aug. 7, 1930, placed the total of unemployed at 450,000.

COMMERCE. Due largely to unfavorable domestic conditions, which discouraged imports and stimulated exports, Hungary's adverse balance of trade declined to 22,800,000 pengos in 1929 from 370,265,000 pengos in 1928. Imports in 1929 totaled 1,065,000,000 pengos (1,188,976,000 in 1928) and exports were valued at 1,042,200,000 pengos (818,711,000 in 1928). Of the increase of 223,500,000 pengos in the value of exports, about 200,000,000 pengos was accounted for by larger shipments of agricultural products. Livestock, wheat, flour, sugar, poultry, and machinery were the leading exports, in the order named, and wood and wooden

products, coal, cotton cloth, paper goods, machinery, wool cloth, and wool the leading imports. The exports went principally to Austria, 322,900,000 pengos; Czechoslovakia, 168,600,000 pengos; and Germany, 119,700,000 pengos. Exports to the United States were \$1,908,065. The chief sources of imports were: Czechoslovakia, 234,400,000 pengos; Germany, 209,800,000 pengos; Austria, 142,200,000 pengos.

FINANCE. Budget estimates for the fiscal year commenced July 1, 1930, placed total revenues at 1,401,100,000 pengos and expenditures at 1,398,100,000 pengos, leaving an estimated surplus of 3,000,000 pengos. Comparative estimates for 1929-30 were: Revenues, 1,432,171,400; expenditures, 1,428,671,400; surplus, 3,500,000. Of the 1930-31 expenditure estimates, 47,400,000 pengos represented investments, making the actual estimated surplus 50,400,000 pengos. Actual ordinary revenue in 1928-29, according to preliminary figures, totaled 964,900,000 pengos and actual ordinary expenditures, 964,600,000 pengos. The total public debt on June 30, 1929, was 1,577,307,648 pengos, of which 100,058,056 pengos represented the internal funded debt, 1,279,192,488 pengos the external funded debt, and 198,057,104 pengos the floating debt. For the reparation settlement at The Hague in 1930 as it affected Hungary, see **REPARATIONS**; also below under *History*.

COMMUNICATIONS. The length of railways in 1928 was 5350 miles, of which 1897 miles were owned and 43/4 miles operated by the state. On May 1, 1930, there were 2311 miles of dirt and gravel roads, and 290 miles of surfaced highway. A total of 2534 flights, with 4229 passengers, were made over the three air lines operating in the country in 1928. The Government-owned telegraph and telephone systems (1928) had 5675 miles and 13,074 miles of line, respectively. During its first full working year in 1929, the free port established at Budapest late in 1928 reported shipments entering the port totaling 173,815 metric tons and loadings of 123,271 metric tons.

GOVERNMENT. Technically, Hungary is a constitutional monarchy with the throne vacant. The Horthy régime, which won control of the government on Aug. 7, 1919, decided that the question of who was to be chosen monarch would be postponed until the nation was liberated from external pressure. The Legislature has two Houses, the Lower House of 245 members, and the Upper House consisting of the six following groups: (1) elected representatives of the former hereditary members; (2) members elected by the county councils and municipalities; (3) heads of the various religious communities; (4) high dignitaries of the state; (5) representatives of scientific institutions and the chambers of commerce; (6) life members appointed by the head of the state. Following the elections of Dec. 20, 1926, the Lower House was constituted as follows: Party of National Unity, 171; Christian Social Union, 35; Socialists, 14; other parties, 25.

The ministry, originally formed on June 17, 1922, was reorganized Sept. 5, 1928, as follows: Prime Minister, Count Stephen Bethlen; Minister of Foreign Affairs, Dr. Louis Walkó; Interior, Dr. Béla de Scitovszky; Public Economy and Commerce, Dr. John Bud; Finance, Dr. Alexander Wekerle; Agriculture, John Mayer; Public Instruction, Dr. Count Kuno Klebelsberg; Justice, Dr. Tibor de Zsitvay (appointed Feb. 5, 1929); National Defense, Julius de Gömbös; Social Welfare, Mgr. Joseph Vass (see his biography).

HISTORY

The year 1930 was marked by important developments in all three of Hungary's outstanding problems, namely, reparations, revision of the Treaty of Trianon, and the succession to the throne. The long-standing reparation question and the allied controversy with Rumania over the compensation of Hungarian optants was finally settled at conferences at The Hague and at Paris early in the year (see REPARATIONS). A new problem arose to harass the Government, however, in the acute agricultural depression, which spread suffering and political unrest throughout Central and Southern Europe.

REPARATIONS SETTLEMENT. The Paris agreement on Eastern Reparations had important political bearings in southeastern Europe. It finally liquidated the Austro-Hungarian monarchy and ended a decade of dispute between the so-called Succession States on one hand and Austria and Hungary on the other. Under the Paris agreement, France, Great Britain, and Italy agreed to divert 13,500,000 gold crowns due them annually in Hungarian reparation payments into two funds for the indemnification of some 300 Hungarian land-owners, whose estates had been seized by Rumania. Hungary regained her financial freedom, becoming at liberty for the first time since the World War to float a foreign loan. Premier Bethlen announced immediately after the Paris settlement that Hungary would thereafter abandon her isolationist course for a policy of co-operation in southeastern Europe. At the same time, Foreign Minister Beneš of Czechoslovakia, asserting that friendly relations had now been made possible, hinted that the Little Entente was willing to hold out the olive branch to Hungary. Negotiations to settle Hungary's differences with Czechoslovakia, establish closer relations with Rumania, and conclude a non-aggression pact with Yugoslavia were reported under way in March.

THE REVISION AGITATION. These moves toward peaceful coöperation were nullified by the campaign for revision of the Treaties of Versailles, Trianon, and St. Germain, which under Italy's leadership emerged as the dominant political issue in Europe in 1930 (see ITALY and FRANCE, under *History*). The gradual alignment of the European powers into two groups supporting and opposing the treaty settlements of 1919 found Hungary among Italy's satellites in the revisionist camp. Yugoslavia, Rumania, and Czechoslovakia aligned themselves with France.

Premier Bethlen, in addressing the Hungarian Parliament May 16, pledged the unrelenting efforts of his Government in securing revision of the Treaty of Trianon, under which some 3,500,000 Hungarian subjects and their properties were incorporated in the Succession States. In an interview with a correspondent of the *New York Times* November 16 he stated for the first time Hungary's precise aims with regard to treaty revision. These were (1) the restoration of all her lost subjects of Hungarian nationality and (2) a plebiscite among her former subjects of other nationalities to determine whether they would return to Hungary or retain their existing connections. The Premier expressed the belief that the Slovaks of Czechoslovakia would be moved by economic reasons to declare for Hungary.

Although Count Bethlen repeatedly declared that the time was inopportune to press for treaty revision, his numerous visits to other European capitals during the year were regarded as evidence

that he was leaving no stone unturned to achieve his objective. His visit to Rome in April aroused much apprehension in the Little Entente states, particularly after the Fascist press hinted that he had secured Mussolini's support in behalf of revision of the more onerous clauses of the Trianon Treaty. Italy had previously shown its good will toward Hungary by supporting her claims at The Hague and Paris reparation conferences. It was definitely announced that the two Premiers had arranged increased transportation facilities for Hungarian wheat destined for Mediterranean markets by an Italo-Hungarian steamship line operating from Fiume.

In June, Count Bethlen paid a formal visit to London at the invitation of the MacDonald Government. He was in Angora in October at the same time Premier Venizelos of Greece visited the Turkish capital, and in November he aroused French fears by an official visit to Berlin. A statement issued by Count Bethlen in Budapest November 26 indicated the likelihood of a rapprochement between Soviet Russia and Hungary under Italian auspices.

RESTORATION MOVEMENT. The coming of age on Nov. 20, 1930, of Archduke Otto, chief pretender to the Hungarian throne, increased the agitation among Hungarian monarchists for the deposition of the Regent and the crowning of Otto as the legitimate heir. The eldest son of Emperor Charles and great-grand-nephew of Emperor Francis Joseph, Otto was attending Louvain University in Belgium. The activities of his adherents was countered by assurances from Foreign Minister Beneš of Czechoslovakia and Premier Maniu of Rumania that their governments would not permit the restoration of the Hapsburg monarchy in Hungary. Socialists, Communists, and other important groups in Hungary united also in actively opposing the plans of the monarchists.

Count Bethlen in 1929 had declared that the rule of Admiral Horthy was best for the nation and would not change "as long as he lives." Although contending that the question of dynastic succession was one for Parliament and not the Succession States to determine, the Bethlen Government in 1930 continued to turn a deaf ear to the Legitimist demands. Nevertheless, recurrent rumors of a monarchist plot kept Hungary in a state of suspense throughout the year, particularly following the successful *coup* made by Prince Carol of Rumania in June. At a huge monarchist demonstration July 1, the veteran Count Albert Apponyi gave assurances that the Legitimists would wait until Otto could be peacefully crowned without outside interference. On August 10, another great gathering of Hungarian monarchists swore fealty to Otto at a ceremony in Budapest in which an Austrian monarchist deputation participated. An order issued August 19 by Minister of War Gömbös for the arrest of former Empress Zita and Otto in connection with a rumored *coup d'état*, directed monarchist hostility toward the Minister, who was credited with aspiring to the Premiership. Archduke Albrecht, another leading aspirant to the Hungarian throne, withdrew his pretensions in favor of Otto early in the year.

SOCIAL UNREST. The crisis in Hungarian agriculture and industry, with its resulting unemployment and suffering, stimulated unrest and disorders, many of which were directly inspired by Communist agitation. A Communist-led demonstration against the Government's failure to

provide unemployment relief, resulted in street fighting in Budapest September 1, in which two persons were killed and 257 wounded. Hundreds of Communists were arrested during the following week to prevent a recurrence of the outbreak. A mass trial of Communists charged with conspiring to overthrow the Government was held in Budapest in June. Alarmed by the possibilities of a continued agricultural depression, Count Bethlen at a party conference on October 20 took steps toward the formation of a world wheat cartel. Hungary was represented also at the conference of Balkan states at Athens in October and the International Agrarian Conference at Bucharest later in the same month, where plans for relieving the farmers of the Balkans and Central Europe were discussed. A customs war between Hungary and Czechoslovakia appeared imminent with the failure on Dec. 11, 1930, of negotiations for an emergency trade agreement to replace the commercial treaty denounced by Czechoslovakia in 1927.

In September, J. Butler Wright, American Minister to Hungary, was succeeded by Nicholas Roosevelt. See YUGOSLAVIA, ITALY, and AUSTRIA, under *History*.

HUNTINGTON, WILLIAM EDWARDS. An American clergyman and educator, former president of Boston University, died in Newton, Mass., Dec. 6, 1930. He was born in Hillsboro, Ill., July 30, 1844. After serving during the Civil War as a first lieutenant with the 49th Wisconsin Infantry (1864-65), he attended the University of Wisconsin (A.B., 1870) and Boston University (B.D., 1873; Ph.D., 1882). Ordained to the ministry of the Methodist Episcopal Church in 1868, he held pastorates in Nahant, Roslindale, Newton, Cambridge, and Boston, Mass., until 1882. He then became dean of the college of liberal arts of Boston University, president in 1904, and dean of the graduate department from 1911 to 1917. After his retirement as president-emeritus, he devoted himself to religious and philanthropic activities. The S.T.D. degree was conferred on him by Syracuse and Wesleyan Universities in 1903 and the LL.D. degree by the University of Wisconsin in 1904, Tufts College in 1905, and Boston University in 1923.

HURRICANES; TYPHOONS. See DOMINICAN REPUBLIC and JAPAN under *History*.

HUTCHINS, HARRY BURNS. An American educator and former president of the University of Michigan, died in Ann Arbor, Mich., Jan. 25, 1930. He was born in Lisbon, N. H., Apr. 8, 1847, and was graduated from the University of Michigan in 1871. After a year of teaching at Owosso, Mich., he became instructor in history and rhetoric at the University of Michigan, being promoted later to the position of assistant professor. In 1876 he was admitted to the bar and practiced at Mt. Clemens, Mich., until 1884, when he became Jay professor of law at the University of Michigan. Three years later, he was called to Cornell University to aid in organizing the law college there and remained on the faculty until 1895 when he returned to Michigan as dean of the law school. He was elected president of the university in 1910, having served as acting head on two previous occasions, the first in 1897 and the second for the eight months preceding his election. As president, he adopted and promoted the policy of closer contacts between campus and alumni, with the result that during his administration former Michigan students raised

\$2,000,000 for the construction of new buildings. He retired as president-emeritus in 1920. The LL.D. degree was conferred on him by the University of Wisconsin in 1897, Wesleyan University in 1916, University of Notre Dame in 1917, University of California in 1918, and University of Michigan in 1920. He revised and annotated the *Michigan Supreme Court Reports* (5 vols., 1882-83) and edited the American edition of *Williams on Real Property*. He was also consulting editor for the *American and English Encyclopedia of Law and Procedure*.

IBSEN, Ib'sen, SIGURD. A Norwegian statesman and journalist, died in Freiburg, Germany, Apr. 14, 1930. He was born in Christiania (Oslo), Norway, Dec. 23, 1859, the son of Henrik Ibsen, Norwegian dramatist, and lived abroad with his parents from 1864 to 1884, receiving his education in Rome and in Munich. During 1885-89 he was in diplomatic service, an attaché in Stockholm, Washington, and Vienna. With his father-in-law, Bjornstjerne Björnson, Norwegian poet, he edited the *Nyt Tidsskrift* in 1892-95 and he was editor of the weekly paper, *Ringeren*, in 1898-99. He was appointed to a post in the Ministry of the Interior in 1899 and became a member of the State Council in Session at Stockholm in 1902. From 1903 to 1905, he was Minister of State at Stockholm in the Hagerup cabinet. He was appointed to The Hague Tribunal in 1906 and reappointed in 1912. He wrote *Unionen* (1891); *Mænd og Magter* (1894); *Menneskelig Kvintessens*, essays (1911; English translation, 1921); *Robert Frank*, drama (1914; German and English translation, 1914); *Tempel der Erinnerung* (1918).

ICE CAP. See GEOLOGY.

ICE CREAM. See DAIRYING.

ICE HOCKEY. See HOCKEY.

ICELAND. An island state united with Denmark by the Act of Union of Nov. 30, 1918. Situated to the northwest of Great Britain (to which it is next in size of European islands), and with its northern coast touching the Arctic Circle, Iceland has an area of 39,700 square miles; population according to the census of 1920, 94,690; estimated at the end of 1928, 104,812. The capital, Reykjavik, had a population of 25,217 in 1928. All other towns had populations of less than 4000. In 1928 there were 711 marriages, 2536 births (14.7 per cent illegitimate), and 1124 deaths. Despite complete religious freedom, only 463 were listed as dissenters from the national (Lutheran) Church in the census of 1920. In 1924-25, there were 182 elementary schools, with 322 teachers and 6540 pupils; also continuation schools and a university in Reykjavik.

Of the total area, about 68 per cent is highland; 12 per cent, glaciers; 10 per cent, lava; and 6 per cent, lowland. Only about one-fourth of 1 per cent of the area of the island is under cultivation, producing chiefly, hay, potatoes, and

turnips. Livestock in 1928 included 627,000 sheep, 30,000 cattle, 52,200 horses, and 28,000 goats. The value of the fisheries in 1927 was estimated at 33,729,000 crowns (1 crown equalled about \$0.22). Exports in 1929 were valued at 69,400,000 crowns (\$15,268,000), as compared with 74,300,000 crowns (\$16,346,000) in 1928. Chief export items in 1929 were: Prepared fish, 34,500,000 crowns; fresh fish, 10,800,000 crowns; and agricultural products, about 8,000,000 crowns. Imports totaled 60,500,000 crowns for the first 11 months of 1929 and 49,600,000 crowns for the same period in 1928. The bulk of the trade is with Denmark, Great Britain, Norway, Sweden, and Germany, in the order named. Revenue for 1930 was estimated at 11,929,600 crowns and expenditure at 11,907,425 crowns. The public debt on Dec. 31, 1928, stood at 13,582,714 crowns, much of it held in Denmark. There are no railroads and but 568 miles of highway, mostly in the southern lowlands. There were 2352 miles of telephone line in 1930. The merchant marine in 1929 consisted of 356 vessels of 33,915 gross tons.

Executive power is vested in the King of Denmark who acts through a responsible ministry; and legislative power in the King and Althing or Parliament, which consists of 42 members, of whom six are elected for eight years by proportional representation for the whole country, and 36 for four years by universal suffrage. The Althing is divided into two Houses, of which the upper has 14 members and the lower, 28. The right to vote is possessed by both men and women over the age of 25. King in 1930, Christian X; President of the Council and Minister of Trade and Communications, Tryggy Thorhallsson; Justice and Ecclesiastical Affairs, Jonas Jonsson; Finance, Einar Arnason.

HISTORY. Iceland in June, 1930, celebrated at Thingvellir the 1000th anniversary of the founding of the Althing, said to be the oldest Parliament in the world. The King and Queen of Denmark and official representatives of the other Scandinavian countries, Great Britain, and the United States, as well as numerous tourists, were present. A feature of the celebration was the signing on June 27 of a treaty of friendship and arbitration by representatives of Iceland, Denmark, Sweden, Norway, and Finland, pledging themselves to submit all disputes among themselves to arbitration.

Construction of a plant for the utilization of hot springs near the capital in heating public buildings was commenced in 1930. Ultimately, it was planned to furnish all heat required in Reykjavik from subterranean sources. See DENMARK; PHILOLOGY, MODERN.

IDAHO. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 445,032. The population on Jan. 1, 1920, was 431,866. The capital is Boise.

AGRICULTURE. The accompanying table gives the acreage, production, and value of the principal crops in 1929 and 1930.

Farms in the State numbered 41,678 in 1930, as against 40,592 in 1925 and 42,106 in 1920.

MINERAL PRODUCTION. Ranking third among the States in 1928 in the production of lead, Idaho increased its output to 297,389,488 pounds for 1929, from 290,645,905 for 1928. An improvement of ½ cent a pound in the average price obtained for lead in 1929, as compared with 1928, made the results of lead mining, as reckoned by value, higher for 1929 by comparison with 1928

| Crop | Year | Acreage | Prod. Bu. | Value |
|-------------|------|-----------|------------|--------------|
| Hay | 1930 | 1,185,000 | 3,003,000* | \$25,157,000 |
| | 1929 | 1,196,000 | 2,872,000* | 30,752,000 |
| Wheat | 1930 | 1,027,000 | 28,228,000 | 14,676,000 |
| | 1929 | 1,088,000 | 25,515,000 | 24,858,000 |
| Potatoes | 1930 | 117,000 | 25,038,000 | 15,028,000 |
| | 1929 | 102,000 | 17,186,000 | 20,568,000 |
| Dry beans | 1930 | 115,000 | 2,415,000 | 4,347,000 |
| | 1929 | 92,000 | 2,116,000 | 5,819,000 |
| Apples | 1930 | | 5,000,000 | 8,750,000 |
| | 1929 | | 5,500,000 | 6,050,000 |
| Oats | 1930 | 143,000 | 6,149,000 | 1,968,000 |
| | 1929 | 151,000 | 6,040,000 | 2,899,000 |
| Barley | 1930 | 165,000 | 6,930,000 | 2,841,000 |
| | 1929 | 147,000 | 5,783,000 | 3,784,000 |
| Corn | 1930 | 59,000 | 2,301,000 | 1,611,000 |
| | 1929 | 54,000 | 1,944,000 | 1,827,000 |

* Tons.

(when they attained \$16,857,462) than was the total by quantity. There was also an increase in the mining of copper, to 5,131,438 pounds for 1929, from 2,072,165 pounds for 1928. The product of 1928 was valued at \$298,392. Silver production was active in 1929, largely from lead-silver ore, and increased to 9,414,303 fine ounces from 8,998,330 for 1928, as was natural in a period of more active lead mining. The value of silver mined in 1928 was \$5,204,023. Zinc, of which the production for 1928 attained the value of \$3,814,126, was much more actively mined in 1929, the quantity of that year being 91,350,807 pounds, as compared with 62,526,048 for 1928. The production of gold, secondary in point of yearly values, on the other hand tended to decline; there were mined 20,247 fine ounces in 1929, as against 20,980 in 1928, when the year's product was valued at \$433,703. The aggregate value of gold, silver, copper, lead, and zinc mined in 1929 was \$31,104,246; for 1928 the corresponding total was \$26,667,706. The only other mineral product of the State listed as exceeding \$1,000,000 in yearly total of value for 1928 was stone, of which were quarried in that year 851,540 short tons, in value, \$1,157,236. The aggregate value of the State's mineral product was \$28,589,221 for 1928; for 1927, \$29,183,929.

The value of the gold, silver, copper, lead, and zinc produced from ore mined in Idaho in 1930, according to estimates by the U. S. Bureau of Mines, was about \$21,645,400 as compared with \$31,104,246 in 1929. On account of the greatly decreased metal prices and the general depression of the metal market during the larger part of the year, decreases were recorded in all metals except gold. The decreases, however, in silver, lead, and zinc were small when compared with those of other western States. According to published reports, mining companies paid dividends amounting to approximately \$4,212,350, compared with \$5,000,000 paid in 1929. The mine output of gold in 1930 was valued at \$436,100 as compared with \$418,545 in 1929. The output of silver decreased slightly from 9,414,403 ounces in 1929 to about 9,260,260 ounces in 1930, and the value decreased from \$5,017,877 to about \$3,565,200 on account of a decided decrease in the average price of silver. In spite of this decrease the State became the second largest producer of silver in the United States, following Utah. In the Cœur d'Alene district, which produced at least 8,850,000 ounces of silver, about 75 per cent of the product was recovered from the ores of the four largest producers: the Sunshine, Bunker Hill & Sullivan, Hecla, and Morning mines, which ranked in the

order given. The output of copper decreased from 5,131,438 pounds in 1929 to about 2,574,600 pounds in 1930, and the value decreased from \$903,133 to about \$319,200 as the average price of the metal decreased 5.2 per cent a pound. The output of lead decreased from 297,389,488 pounds in 1929 to about 266,286,540 pounds in 1930, and the value from \$18,735,538 to about \$13,846,900, as a result of general curtailment of production and a sharp decline in the average price of the metal. The zinc recovered from ore and concentrates decreased from 91,350,807 pounds in 1929 to about 74,000,000 pounds in 1930, and the value from \$6,029,153 to \$3,478,000; the average price of zinc was nearly two cents a pound lower than that of 1929. About 75 per cent of the zinc output was recovered by roasting and leaching at the electrolytic plants at Great Falls and Anaconda, Mont., and most of the remainder was recovered at the new plant of the Sullivan Mining Company at Silver King.

In U. S. Geological Survey *Bulletin* 821-A the Federal Department of the Interior issued in 1930 a survey of the mining history of Idaho represented in graphs covering the period starting with 1860. As shown in these graphs the early boom in placer mining was followed by the development of lode mining, which reached successive stages of high activity in divers areas. The contemporaneous dominant area was shown as the Cœur d'Alene district.

FINANCE. State expenditures in the year ended September 30, 1928, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$4,946,209 (of which \$19,810 was for local education); for interest on debt, \$365,465; for permanent improvements, \$3,301,803; total, \$8,613,477 (of which \$4,122,287 was for highways, \$1,258,459 being for maintenance and \$2,863,828 for construction). Revenues were \$8,276,955. Of these, property and special taxes formed 30.4 per cent; departmental earnings and remuneration to the State for officers' services, 6.4; sales of licenses, 28.1 (including taxes of \$1,699,144 on sales of gasoline). The State's funded debt outstanding on Sept. 30, 1928, was \$5,282,500. Net of sinking-fund assets, it was \$4,500,073. On property bearing an assessed valuation of \$482,065,981 were levied in the year State taxes of \$2,910,361.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 2938.98. No construction of additional line in 1930 was reported.

EDUCATION. The systematic supervision of the rural schools was reported to have been extended to cover every rural community in the State, and to give expectation of better standards of teaching and better adaptation of educational means to rural requirements.

The number of persons of school age in the State was stated in 1930 to be 141,273. There were enrolled in the public schools in that year 124,947 pupils. Of these, 97,775 were in common schools or elementary grades, and 27,172 were in high schools. The expenditures of the year for public-school education totaled \$11,650,814. Salaries of teachers averaged \$1426 for the year.

CHARITIES AND CORRECTIONS. The central State authority in administrative activities of public welfare rested in 1930 in the Department of Public Welfare. This body had as its head a Commissioner (C. K. Macey), who held also, ex-officio,

the post of State Health Officer. The department, in addition to managing three of the State institutions of care or custody, conducted extensive activities for the promotion of public health. Among these were food and drug inspection, public health advice, the work of the State bacteriological laboratory, and of the chemical laboratory, public sanitary engineering, child hygiene, vital statistics and the activities of a board of eugenics. The institutions under the department, with their populations as reported in December, 1930, were: State School and Colony for the Feeble-minded, Nampa, 400; Northern Idaho Sanitarium (for the insane), Orofino, 350; Idaho Soldiers' Home, Boise, 85. The Lava Hot Springs, a public curative resort under State authority, was also managed by the department. The State Penitentiary at Boise, separately managed, was directed by a board consisting of the Governor, Attorney-General, and Secretary of State. By an amendment of the State Constitution it was provided that another State institution, the State Insane Asylum, at Blackfoot, having in 1930 a population of about 350, be placed under the authority of the Department of Public Welfare on Mar. 15, 1931.

LEGISLATION. A brief special session of the State Legislature was held, adjourning on February 28. It enacted an increase in the rate of the tax on gasoline to 5 cents a gallon, from 4 cents. It also authorized the issue of \$1,000,000 of treasury notes, of which the proceeds were to be expended on highway construction and were to be redeemed in semiannual installments of \$200,000 from the receipts of the gasoline tax.

POLITICAL AND OTHER EVENTS. An unsuccessful application was made for the release from prison, on parole, of Harry Orchard, serving a life sentence for the murder of Governor Frank Steunenberg in 1905, during the Cœur d'Alene troubles. At Wallace the Mayor, a former Mayor and the chief of police, with 29 other defendants, were convicted in a Federal court of having used collusion in tolerating liquor traffic. They were charged with having imposed regular fines for liquor infractions, in such a manner as to furnish revenue to the town without checking the illicit traffic. An expedition to the Snake River Valley in Southeastern Idaho, sponsored by the Smithsonian Institution, furnished numerous fossil relics of the Pliocene period, including those of the *Plesippus*, an evolutionary ancestor of the horse.

ELECTIONS. Senator William E. Borah was re-elected on November 4 by 62,230 votes (unofficial total) to 23,444 for Joseph M. Tyler, Democrat, C. B. Rose, Democrat, however, was elected Governor by a moderate majority over John McMurray, Republican, while two Republican Representatives were chosen.

OFFICERS. Governor, H. C. Baldridge; Lieutenant-Governor, Oscar E. Hailey; Secretary of State, Fred E. Lukens; Auditor, E. G. Gallet; State Treasurer, Byron Defenbach; Attorney-General, W. D. Gillis; Superintendent of Public Instruction, Myrtle R. Davis; Inspector of Mines, Stewart Campbell.

JUDICIARY. Supreme Court: Justices, Alfred Budge, Raymond Givens, Bertram S. Varian, T. Bailey Lee, W. F. Naughton.

IDAHO, UNIVERSITY OF. A coeducational State institution of higher learning in Moscow, Idaho; founded in 1889, with a southern branch in Pocatello, established by act of the State Legislature and opened in the autumn of 1927. The

total enrollment at Moscow in the autumn of 1930 was 2067, distributed as follows: Letters and science, 274; agriculture, 164; engineering, 224; agricultural engineering, 6; law, 35; mines, 61; forestry, 103; education, 193; business, 132; junior college, 646; special courses, 36; and non-resident, 193. The total enrollment at Pocatello was 600. The enrollment for the 1930 summer session was 284 at the university and 41 at the southern branch. The faculty in 1930 numbered 163. The physical plant of the university was valued at \$2,850,000 and that of the southern branch at \$765,000, making a total of \$3,615,000. The productive funds of the university amounted to \$2,079,270, and the income for 1929-30 was approximately \$1,250,000. The library contained 90,000 volumes. The outstanding achievement of the year was the establishment of the William Edgar Borah Foundation for the Outlawry of War by Salmon O. Levinson, Chicago attorney and world peace worker. Mr. Levinson established the fund through a gift amounting to \$55,000 to honor the contribution of Idaho's senior senator to the cause of world peace. The pharmacy division of the university's southern branch was put on a degree-granting basis. President, Mervin Gordon Neale, Ph.D., who was inaugurated Sept. 18, 1930.

HERBERG, HERMANN VON. See **JHERING, HERMANN VON.**

ILLINOIS. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 7,630,654. The population on Jan. 1, 1920, was 6,485,280. The capital is Springfield.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|------------|------|-----------|-------------|---------------|
| Corn | 1930 | 9,345,000 | 238,298,000 | \$147,745,000 |
| | 1929 | 8,900,000 | 311,500,000 | 224,280,000 |
| Hay | 1930 | 8,335,000 | 3,782,000* | 49,445,000 |
| | 1929 | 8,594,000 | 5,602,000* | 63,230,000 |
| Oats | 1930 | 4,569,000 | 153,062,000 | 44,388,000 |
| | 1929 | 4,231,000 | 141,738,000 | 56,695,000 |
| Wheat .. | 1930 | 2,296,000 | 41,952,000 | 28,772,000 |
| | 1929 | 2,451,000 | 36,537,000 | 40,493,000 |
| Barley ... | 1930 | 337,000 | 10,110,000 | 4,853,000 |
| | 1929 | 456,000 | 12,084,000 | 6,767,000 |
| Potatoes . | 1930 | 67,000 | 5,226,000 | 6,532,000 |
| | 1929 | 63,000 | 5,040,000 | 7,812,000 |

* Tons.

Farms in the State numbered 214,871 in 1930, as against 225,601 in 1925 and 237,181 in 1920.

MINERAL PRODUCTION. The tendency of coal mining, which provided about 60 per cent of the total yearly mineral production of the State, was upward in 1929. There were mined, in 1929, 60,657,641 net tons of coal, as against 55,948,199 in 1928, the first year after the period of labor difficulties at the mines. The value of coal mined was, for 1929, \$113,453,000; for 1928, \$112,095,000. The year 1929 was likewise marked by much higher coking activity. The by-product ovens of the State produced, in 1929, 4,204,116 short tons of coke, as against 3,240,964 in 1928; in value, \$26,036,197 for 1929 and \$19,967,463 for 1928. In correspondence with this increase the production of pig iron, from ore imported into the State, went up. The blast furnaces shipped 4,316,096 long tons of pig iron in 1929; in 1928, 4,094,514. The value of this product was \$79,672,295 for 1929; \$73,524,773 for 1928. After the coal-and-iron group in order of importance ranked clay products. These, for 1928, the year of the latest

reported official figures, totaled \$32,026,885; for 1927, \$34,452,605. Brick and tile made up \$26,328,670 of the total of 1928, pottery \$5,698,215. The cement industry was stable as to quantity of output, the mills of the State shipping 7,738,208 barrels in 1929 and 7,405,667 in 1928; as to value, \$11,134,538 in 1929 and \$11,602,848 in 1928. The State's production of petroleum continued slowly to fall in quantity, to 6,304,000 barrels for 1929, from 6,462,000 for 1928; but rose somewhat in value, to \$10,300,000 (estimated) for 1929, from \$9,980,000 for 1928. The production of stone, chiefly of the lower grades, was large, attaining \$8,098,390 for 1928; also that of sand and gravel, which exceeded \$10,000,000. Sulphuric acid was produced to the value of \$2,505,843 in 1928; fluorspar and lime each were produced in excess of \$1,000,000. The value of all minerals produced, with deduction for duplications and for pig iron made from imported ores, attained \$188,098,866 for 1928; for 1927, \$180,393,779.

TRANSPORTATION. The total number of miles of railroad line under operation on January 1, 1930, was 12,510.84. There were built, in 1930, 3.46 miles of first, 22.90 of third, and 12.32 of fourth track.

EDUCATION. Financial difficulties in Chicago, which had worked adversely to the advancement of the public-school system in that city, were apparently corrected in 1930 by the making of new provisions for the financing of the schools' activities and by the revision of the assessment of property for purpose of taxation. For the academic year 1928-29, the school population of the State was estimated as numbering 2,010,059 individuals, of ages from 6 to 21 years. There were enrolled in the public schools, 1,380,018 pupils. Of these, 1,099,440 were in the elementary and 286,578 in high-school grades. The year's expenditures (current, alone) for public-school education throughout the State totaled \$115,618,647. The salaries of teachers averaged, for the year, \$1675.

CHARITIES. The central administrative authority for the care and custody of persons rested in 1930 in the State Department of Public Welfare, as created by the enactment of the Civil Administrative Code of 1917. This department had as its head a Director (Rodney H. Brandon). Under him, a superintendent of charities administered the charitable institutions; a superintendent of prisons, the penal institutions; a fiscal supervisor, details of institutional and departmental business and finance. Matters of pardon and parole were handled by a Board of Pardons and Paroles, headed by a supervisor of paroles, a member of the departmental staff. Activities on behalf of dependent children were conducted by a division of child welfare. The department maintained an alienist and a criminologist in advisory capacities. The State institutions of care or custody, with the numbers of persons in their care, on July 1, 1930, were: Elgin State Hospital, Elgin, 3466; Kankakee State Hospital, Kankakee, 3909; Jacksonville State Hospital, Jacksonville, 3176; Anna State Hospital, Anna, 1920; East Moline State Hospital, East Moline, 1774; Peoria State Hospital, Peoria, 2718; Chester State Hospital, Chester, 410; Chicago State Hospital, Chicago, 3469; Alton State Hospital, Alton, 1440; Manteno State Hospital, Manteno, incomplete; Dixon State Hospital, Dixon, 2789; Lincoln State School and Colony, Lincoln, 2610; School for the Deaf, Jacksonville, 416; School for the Blind,

Jacksonville, 242; Institution for the Industrial Blind, Chicago, 90; Soldiers' Home, Quincy, 478; Widows' Home, Wilmington, 98; Orphans' Home, Normal, 643; Eye and Ear Infirmary, Chicago, 124; Research and Education Hospital, Chicago, 167; School for Boys, St. Charles, 812; School for Girls, Geneva, 523; State Penitentiary, Joliet, 4167; Southern Illinois Penitentiary, Menard, 2120; Women's Prison, Joliet, 132; Women's Reformatory, Dwight; Illinois State Reformatory, Pontiac, 2126; State Farm, Vandalia, 400. The number of all institutional wards was 40,219.

LEGISLATION. The fiscal difficulties of the State and of the City of Chicago required the attention of a special session of the Legislature, which was called by Governor Emmerson and convened on May 12. A proposal was adopted to amend the State constitution with regard to Article IX, by removing the limitation that taxation be equal with regard to all property, so as to render it possible to impose on intangibles a tax rate different from that on realty, and by empowering the legislature to levy a tax on incomes. The proposed amendment further stipulated that if an income tax should be imposed the State treasury should not retain from any county more than 15 per cent of the collections, unless the Legislature by a vote of at least two-thirds majority in each house should so direct. This stipulation was designed to protect the City of Chicago, as the locality likely to furnish the principal part of income taxes, from being exploited unduly for the advantage of the rest of the State. The proposed amendment was passed on to the voters at the November election in the form of a referendum.

In return for the concession made by Chicago on the subject of the amendment the Legislature passed a series of some 30 measures designed to provide a way out of the difficulties of the city. These relief measures included the setting of dates at which the overdue taxes should be payable and at which succeeding levies should become due. For the tax list of 1928 the date of July 1, 1930, was set, for that of 1929, Feb. 1, 1931; for that of 1930, Dec. 1, 1931; for 1931, Oct. 1, 1932; for 1932, Aug. 1, 1933; and for 1933, June 1, 1934. Thereafter taxes were to become delinquent after May 1 of each year. A group of 11 acts sought by the Chicago Citizens' Committee bestowed on corporate bodies of Cook County the authority to issue without sanction of a referendum, bonds for specific purposes. Governor Emmerson refused to sign the measures for these powers of issue. He explained that he held that the public should have a right of referendum on all bond proposals; but as the measures in question appeared indispensable to the relief of Chicago, he allowed them to become laws through default of action on his part.

SEE CHILD LABOR.

POLITICAL AND OTHER EVENTS. Like the city of Chicago the State government was financially affected by the deadlock that had occurred in 1929 in the Chicago tax situation and that continued into 1930. It was estimated that the city was in arrears of about \$30,000,000 to the State for the proceeds of taxes that were to have been collected for 1928 and 1929. Conversely, the State owed the city for educational aid that it could not pay. A portion of the State's soldier-bonus bonds was due moreover to mature on August 1. This situation made the adoption of remedial legislation by the legislative session called in May an emergency matter for the State as well as for the city.

Governor Emmerson declined in July a request from Secretary of War Hurley that Illinois advance \$2,000,000 to initiate the development of the Illinois canal, under Federal direction, as a part of the Lakes-to-Gulf Waterway. Work on the project was held in abeyance for a time, as Congress, although it had authorized \$7,500,000 therefor, had failed to make the money immediately available. The coal industry of the State was disturbed to some extent by a break in the State organization of the United Mine Workers of America. The seceding group met at Springfield in March and sought in alliance with a group of Kansas miners to form a separate national organization.

The financial situation of Chicago showed an improvement for the first time in some two years. This turn of affairs was due to the measures taken at the special legislative session and also in part to the completion of the reassessment of taxable property for 1928, for which the disputed tax payments, for the most part, had not been made. Prior to these developments it was reported at the outset of February that in spite of temporary financial shifts arrears of pay to 40,122 public employees had mounted to the total of \$11,275,500. The lesser municipalities of Cook County suffered likewise. Mount Prospect was reported as soliciting contributions from residents for the purpose of keeping schools going. Evanston and Cicero kept the schools going with money raised by the sale of tax warrants.

Facing the opposition of Mayor Thompson the city council passed in January, over his veto, a much reduced city budget; they later passed a tax-levy ordinance as a basis for the sale of anticipation warrants to be based on the taxes of 1930. The Strawn committee, a non-official group of financiers charged with getting Chicago out of its financial predicament, not only helped raise loans but helped promote the move of summoning the Legislature. The reassessment for 1928, taken in accordance with an order of the State Tax Commission nearly two years before, was completed late in March. It cut the total valuation for the city by about \$50,000,000 and that for the rest of the county by another \$50,000,000, approximately, and made it possible to send out tax bills by May 1. In the meanwhile the city's reduced budget had required the dismissal of some 1100 city employees. A portion of Chicago's tax-anticipation warrants coming due, on their face, on May 15, 1930, a move was made on the creditors' behalf to have these declared payable on that date. But an opinion was secured to the effect that these obligations, by their nature, would not fall due until the taxes against which they were issued should become collectible. After the middle of the year the difficulty of providing funds for the operation of the city's government became less. Offerings of short-term bonds of Chicago and of Cook County were successfully made under the authority that the Legislature had granted.

The City Council passed on May 19 an ordinance to authorize a merger of the city's surface and elevated lines and to provide for city-owned subways to run through the business sections and to connect with motorbusses traversing the outlying sections. This ordinance was put to a referendum vote on July 1 and was approved by a majority of some 5 to 1. The Chicago Rapid Transit Company, for its part, won a victory in the decision of the Federal District Court in September rendering permanent an injunction,

temporarily granted in 1928, against State or City interference with its 10-cent fare.

The reform movement with regard to Chicago politics made some progress. Police Commissioner William P. Russell, who had been subjected to much criticism, resigned on June 16. Ten politicians, including five trustees of the Sanitary Board, were indicted on May 29, on a charge of fraud, relating to an alleged plot to plunder the Sanitary Board of several millions of dollars. A popular petition was brought for the ousting of Fred V. Maguire, chairman of the election board of Cook County, and he was accordingly brought to trial, but the defense established that many signers of the petition against him had no knowledge of alleged appointments of gangsters or other unfit persons to be judges and clerks of election, such as had been charged.

The campaign against organized criminality in Chicago continued. Judicial advisory councils of the State and of Cook County framed a plan for the revision of the State's criminal code. Their report, published on August 4, was sent to the Governor for submission to the Legislature of 1931. The plan looked to the reduction of the number of offenses for which long prison sentences might be imposed on first offenders, but proposed the life sentence for second offenders in a list of the less serious crimes. Divers efforts were made to promote the activities against lawbreakers through private committees or extraordinary bodies. A so-called secret committee of six, chosen by influential citizens early in the year, was enlarged in June to the number of sixteen and continued to work in secret. The seven chief daily journals of the city, stirred by the assassination of the Chicago *Tribune's* crime reporter, A. L. Lingle, entered into a compact on June 12 to unite their efforts and resources to drive out gang and police abuses. These journals later urged that the State's Attorney appoint as special assistants two prominent lawyers, who should investigate the acts of gangsters, police, and officials in general.

The assassination of Lingle, the *Tribune* reporter, was at first supposed to have been the work of criminals against whom he had secured information. Investigation by the State's attorney and others brought out indications that he had handled large sums of money, that he had engaged in joint transactions of a speculative character with Police Commissioner Russell, and allegations that he had taken money from men supposedly interested in unlawful enterprises. Another conspicuous crime was the shooting to death of one Jake Zuta, the reputed chief of one of the most notorious Chicago gangs. Zuta was shot at Delafield, Wis., early in August. When the State's Attorney opened his safe-deposit boxes lists of names including many persons of official or private station were reported to have been found, indicating that Zuta had paid these persons contributions for their good will. The lists were not published.

While the courts did not accede to demands made by the Chicago Sanitary District early in the year for permission to exceed the rate of withdrawal of Lake water through the drainage canal that had been set under the authority of the United States Supreme Court, an appeal to Secretary of War Hurley was more successful. Treating the mid-summer drought and the consequent low stage of water for canal navigation as an emergency he granted permission to withdraw

water at a greater rate, the excess to be made up after the emergency had passed.

Construction was undertaken for a main pipe line to transmit natural gas from the Panhandle region of Texas to Chicago. The project was carried on by the Continental Construction Company, the joint subsidiary of several of the leading petroleum and natural gas companies. At an estimated cost of not far from \$100,000,000 was to be created a main pipe line about 1000 miles in length, made of 24-inch pipe and capable of delivering 300,000,000 cubic feet a day. In the southern part of the State natural gas from the Louisiana area was brought to East St. Louis through the system of the Mississippi River Fuel Corporation in May. The work of planning the Chicago Exposition of 1933 was carried on, and in May Charles G. Dawes, absent on leave from his post as Ambassador to Great Britain, went to Chicago and took part in the making of the necessary financial arrangements. See EXPOSITIONS.

Chicago and the surrounding country experienced on March 25 and 26 a blizzard described as hardly less severe than the New York blizzard of 1888. Snow fell for 44 hours, surface transportation was blocked, schools were closed and in some districts there was difficulty in obtaining immediately needed food supplies. The recorded snowfall was 19.1 inches. A fire at the Chicago Municipal Airport on June 25 destroyed 27 airplanes and many structures, causing a loss estimated at \$2,000,000. The Chicago Board of Trade, because of the agitation spread by the Federal Secretary of Agriculture against short sales of wheat made by agents of the Russian Soviet government, made a ruling on September 26 against sales of grain on the Chicago market by any foreign government.

Further litigation again brought about arrears in the payment of the employees of Chicago in October. A drive was arranged late in the year to raise contributions of \$2,000,000 for the relief of the unemployed in the city. In the autumn political campaign Mayor Thompson of Chicago "knifed" Ruth Hanna McCormick, Republican candidate for Senator, issuing an appeal to the Negro voters to oppose her. The deposit of securities of the Chicago traction companies, preliminary to the consolidation of these companies into the Chicago Local Transportation Company, was invited and was largely effected in October.

ELECTIONS. The vote on November 4 elected as United States Senator former Senator James Hamilton Lewis, Democrat, who defeated Ruth Hanna McCormick, Republican, by the phenomenal total (unofficial) of 1,350,808 votes to 656,322. Fifteen Republicans and 12 Democrats were reported to have been elected to the House of Representatives. The State Legislature, none the less, remained prevalently Republican. Three proposals, to promote the repeal of the Eighteenth Amendment, of the Volstead Act and of the State prohibition law, were carried at the polls by majorities of over 300,000 in each case. A proposal to amend the State constitution so as to amplify the taxing powers of the Legislature was defeated. The popular vote approved a series of amendments of the banking law, qualification of women to serve as judges, and an issue of \$14,000,000 in bonds for purposes of conservation.

OFFICERS. Governor, Louis L. Emmerson; Lieutenant-Governor, Fred. E. Sterling; Secretary of State, William J. Stratton; Treasurer, Edward J.

Barrett; Auditor of Public Accounts, Oscar Nelson; Attorney-General, Oscar E. Carlson; Superintendent of Public Instruction, Francis G. Blair.

JUDICIARY. Supreme Court: Chief Justice, Frank K. Dunn; Associate Justices, William M. Farmer, Oscar E. Heard, Clyde E. Stone, Frederic R. De Young, Warren W. Duncan, Warren H. Orr.

ILLINOIS, UNIVERSITY OF. A coeducational State institution of higher learning in Urbana-Champaign, Ill.; founded in 1867. The enrollment in the autumn of 1930 was 12,709, of whom 9460 were men and 3249 were women, distributed among the several colleges as follows: Liberal arts and sciences, 3991; commerce and business administration, 2133; education, 892; engineering, 1823; agriculture, 740; music, 163; journalism, 101; law, 272; library, 134; graduate school, 1096; medicine, 576; dentistry, 149; pharmacy, 682. The 1930 summer-session enrollment was 2553, of whom 1538 were men and 1015 were women. The number of persons on the teaching staff above the rank of assistant was 754, in the grade of assistant or lower there were 413, and the administrative officers totaled 25. The income for the year 1929-30 was \$7,115,863, of which \$4,969,724 was from the State. The productive funds from Federal endowment totaled \$649,012 and from private gifts, \$304,330. During 1930 a gymnasium for the university high school, an agronomy seed house, and a cattle-feeding plant were constructed, and work was in progress on the chemistry annex, the women's gymnasium, and the college of medicine building in Chicago. The library contained 836,496 volumes and 221,800 pamphlets. President, Harry Woodburn Chase, Ph.D., LL.D.

IMMIGRATION. During the fiscal year ending June 30, 1930, there were admitted into the United States 446,214 aliens of whom 241,700 were immigrants and 204,514 were nonimmigrants. In the same period the number of departures totaled 272,425 of whom 50,061 were emigrants and 221,764 were nonemigrants. Thus the net increase for the year was 173,789. For the fiscal year 1928-29, the net increase was 226,829, aliens admitted numbering 479,327 and departed 252,498.

The number of immigrant aliens admitted dropped from 279,678 in the fiscal year ended June 30, 1929, to 241,700 for the fiscal year 1930, a decrease of 37,978, or 13.6 per cent. While immigration from Europe as a whole dropped from 158,598 in 1929 to 147,438 in 1930, a decline of 11,160, or 7 per cent, that from Great Britain and Northern Ireland jumped from 23,576 to 36,489, or 54.8 per cent, with that from Italy also showing an increase from 18,008 to 22,327 and the Irish Free State from 17,672 to 17,971. The largest decrease for European countries was in the case of Germany and Scandinavia (Denmark, Norway, and Sweden), the number of immigrants supplied by the former dropping from 46,751 to 26,569, or 43.2 per cent, and from the latter 17,379 to 6919, or 60.2 per cent. Practically all of the other countries of Europe sent a larger number of immigrants in 1930 than in 1929, the increase

for all being 1951, or 5.5 per cent. Canadian and Mexican immigration also showed a decline from the previous year, the number of immigrants coming from Canada showed only a small decrease from 64,440 to 63,502, or 1.5 per cent, but that from Mexico dropped from 40,154 to 12,703, a decrease of 27,451, or 68.4 per cent. Immigration from Asia, the West Indies and other sources, except South America and Newfoundland, was a little larger during the past year than in the fiscal year 1929.

Of the 446,214 aliens of all classes admitted during the fiscal year 1930, 141,497, or 31.7 per cent, came in under the Immigration Act of 1924 as immigrants charged to the quota; 99,154, or 22.2 per cent, as returning residents; 70,823, or 15.9 per cent, as temporary visitors for business or pleasure; 62,919, or 14.1 per cent, as natives of nonquota countries; 32,105, or 7.2 per cent, as husbands, wives, and unmarried children, of American citizens; and 27,991, or 6.3 per cent, as transits. The remaining 11,725, or 2.6 per cent, were of the miscellaneous classes under the act, including 6389 Government officials, 1902 students, 1340 ministers and professors and their wives and unmarried children, 1510 aliens to carry on trade under existing treaty, 485 wives and unmarried children (born in quota countries) of natives of nonquota countries, 72 women who had been citizens of the United States, 26 Spanish subjects admitted into Porto Rico, and 1 American Indian born in Canada. Government officials, visitors and transits, husbands, wives, and children, of citizens, students, and ministers and professors and their wives and children were the classes showing an increase during the year 1930 over the preceding year. About the same proportion of the annual quota arrived during the year 1930 as during 1929, the percentage being 92.1 and 89.2, respectively. The annual quota was reduced from 164,667 in 1929 under the 1890 population plan to 153,714 in 1930 under the national origin plan, a decrease of 10,953, or 6.7 per cent; the number of quota immigrants admitted was 146,918 in 1929 as compared with 141,497 in 1930, a decrease of 5421, or 3.7 per cent.

A record number of aliens was deported, the total deportations for 1930 reaching an unprecedented number of 16,031, an increase of 3723, or 28.8 per cent, over the previous high-water mark of 12,908 reached in 1929.

The tables on page 362 indicate the numbers of aliens admitted and departed, by continents of origin and by race or people.

STOPPAGE OF IMMIGRATION. In September President Hoover, taking advantage of the extraordinary powers vested in him by the immigration law, issued an order through the State Department upon the American consuls in the foreign countries calling upon these officials to restrict immigration as much as possible. The purpose of the order was to serve as a relief measure to alleviate the unemployment situation in this country and was in line with the policy advocated by the American Federation of Labor. In view of the fact that the immigration law makes the American consuls the sole judges as to whether applicants for visas under the quota restrictions are liable to become public charges, the order in reality was in the nature of a ban upon continued immigration. The President acted as a result of a report submitted to him by Joseph P. Cotton, Acting Secretary of State. On the question of turning back immigrants

ALIENS ADMITTED DURING THE MONTH OF JUNE, 1930, AND DURING THE FISCAL YEAR ENDED JUNE 30, 1930, BY SPECIFIED CLASSES UNDER THE IMMIGRATION ACT OF 1924, AS AMENDED, AND BY PRINCIPAL PLACES OF BIRTH

likely to become public charges, the report said that such action could be taken "even during a considerable period subsequent to the applicant's arrival—although the applicant need not by such refusal lose advantage of his priority application . . . and may get his visa when unemployment conditions again become normal." It is interesting to note that this method was employed in an effort to check the flow of Mexican immigration into this country. The State Department, feeling that many of the Mexican immigrants were in danger of becoming public charges, ordered a tightening of the restrictions. As a result of conferences held with consular

offices at the border cities, Mexican immigration was markedly reduced. Thus, in the first six months of 1930, only 3140 Mexicans were permitted to enter the country (making an annual rate of 6280) as compared with an annual rate of 56,747 for the last five fiscal years, or a reduction of 88.9 per cent.

SOUTH AFRICA. The Union of South Africa joined other nations in March, 1930, when it passed an immigration quota bill. Quotas were placed on alien immigrants coming from all countries except the following: Territories comprising the British Commonwealth of Nations, Austria, Belgium, Denmark, France, Germany,

Holland, Italy, Norway, Portugal, Spain, Sweden, Switzerland, and the United States. The quota restrictions were drastic in view of the fact that not more than 50 persons from each country not included in the above list would be permitted to enter the Union. Exceptions were to be made by an immigrants' selection board set up by the act, in the cases of persons who meet certain qualifications as to character, occupation or relationship to residents in the Union. However, such exempted persons were not to exceed 1000 in any year from one particular country. The following countries, on the basis of 1929 immigration, apparently would be largely affected by the new quota law: Lithuania, Poland, Latvia, Russia, Greece, Palestine. From the nature of the protests which filled the public press, it was evident that immigration from these countries had been largely Jewish in character.

INDIA. A dependency of the British Empire comprising all that part of the Indian peninsula which is directly governed by British officials or indirectly governed through the rulers of native states subject to the British Parliament. The dependency is divided into British India, or the territory subject to British law, and the Indian States, ruled by native princes. Capital, Delhi.

AREA AND POPULATION. The total area, including the Indian states and agencies which are in political relations with the Government, according to the census of 1921, was 1,805,332 square miles, of which 1,094,300 square miles were in the British provinces. The total population in 1921 was 318,942,480, as compared with 315,156,396 in 1911. At the end of 1930 the total population was estimated at about 330,000,000. The population of the British provinces in 1921 was 247,003,293, as compared with 243,933,178 in 1911. The average density was 177 to the square mile; maximum provincial density, 608 to the square mile in the Province of Bengal. Over 90 per cent of the population was classed as rural, only 9½ per cent living in towns of 5000 or more. The average annual excess of births in the British Provinces from 1922 to 1926 was 1,969,739. The rate per 1000 inhabitants in 1927 was 35.27; the death rate, 24.89.

The area and population of the Indian States and agencies subject to the British Government at the time of the 1921 census are shown in the accompanying table.

The accompanying table from the *Statesman's Year Book* for 1930 gives the area and population of all the British-governed divisions of India according to the census of 1921.

RELIGION, ETC. The enumeration of the population in 1921 was: Hindus, 216,734,586; Moslems, 68,735,233; Buddhists, 11,571,268; Animistic, 9,

774,611; Christians, 4,754,064; Sikhs, 3,238,803; Jains, 1,178,596; Parsis, 101,778; Jews, 21,778. There are 2300 different castes, the so-called depressed classes ("untouchable") comprising 30 per cent of the Hindu population. The preponder-

INDIAN STATES AND AGENCIES: AREA AND POPULATION

Bombay, 1,175,914; Madras, 526,911; Hyderabad, 404,187; Rangoon, 341,962; Delhi, 304,420; Lahore, 281,781; and Ahmedabad, 274,007.

EDUCATION. At the census of 1921, 87.4 per cent of the males and 98.1 per cent of the females over six years of age were illiterate. The number of persons who spoke English was 2,500,000. In 1927-28, there were 219,810 "recognized schools," with 11,160,156 pupils; and 34,914 "unrecognized schools," with 615,066 students. Recognized schools conform to standards prescribed by the Department of Public Instruction; the unrecognized do not. Of some 3,500,000 boys in British

India, who annually begin the four years of elementary education considered necessary for literacy, little more than 500,000 are able to complete the course.

PRODUCTION. Agricultural production is the basic source of India's wealth, and supports over three-fourths of the population. Rice is the chief crop and the staple food of the masses. The cotton crop, which normally totals about 6,000,000 bales of 400 pounds each, ranks second in size to that of the United States and is the leading raw material export. India is the largest cane-producing country in the world, although \$50,000,000 worth of sugar is imported annually, and it has a monopoly of the world's jute supply. The annual productivity of the country is estimated at \$10,000,000,000, or about 5 per cent of the world total. The area of British India actually sown in 1927-28 was 223,802,226 acres, of which 43,240,726 acres were under irrigation.

The area and yield of the principal crops in British India and the Indian States in the 1929-30 crop season are shown in the accompanying table.

INDIAN CROPS: AREA AND YIELD, 1929-30
(Including Indian States)

| Crop | Area ^a | | Production ^b | |
|------------------------|--------------------|-----------------|-------------------------|------------------------|
| | 1928-29 | 1929-30 | 1928-29 | 1929-30 |

^f Not including Indian States.

Livestock constitutes another important source of income, hides and skins alone reaching a yearly value of about \$60,000,000. Forests cover more than 100,000,000 acres, including 86,985,199 acres in British India, and yield important quantities of shellac (\$40,000,000 annually), rubber, myrabolans (palm balsam), turpentine, rosin, sandalwood, and wood oils.

India has important iron and other mineral ore deposits. Production of iron ore approximates 2,000,000 tons annually; of coal, 22,000,000 tons; of petroleum, 300,000,000 gallons. Manganese, chromite, wolfram, lead, tin, zinc, mica, magnesite, salt, and saltpetre are other minerals exploited. Gold and silver production averages \$10,000,000 yearly. In 1928, an average of 179,687 persons were employed daily in the coal mining industry.

Industrially, India is one of the seven leading countries of the world. The wealth derived from manufacturing is estimated at nearly \$3,000,000,000 annually, or about two-fifths of the annual agricultural income. Cotton and silk weaving, shawl and carpet weaving, wood-carving and metal-working are the most important indigenous industries after agriculture. In 1927, there were 278 cotton mills (with 342,315 employees), 2116 cotton ginning and pressing factories, 90 jute mills, 1459 rice mills, 122 jute presses, 868 tea

factories, 207 lumber mills, 211 oil mills, 45 sugar factories, 11 petroleum refineries, 77 motor works and coach building plants, and numerous others. Production of yarn in 1928-29 was 648,000,000 pounds, of woven goods, 446,000,000 pounds. Industry was generally depressed in 1930, as a result of political disturbances.

COMMERCE. Although the prosperity of India depends to only a slight degree upon foreign trade, it ranks among the seven leading trading nations of the world. Previous to the outbreak of the civil disobedience movements in 1930, India normally absorbed one-eighth of the total exports of the United Kingdom. In 1928-29, 43 per cent of the total imports were from the United Kingdom, as compared with 64 per cent in 1913.

For the fiscal year ended Mar. 31, 1930, general imports into British India totaled 2,407,600,000 rupees (\$878,800,000) and British Indian exports amounted to 3,018,000,000 rupees (\$1,134,400,000). Comparative figures for 1928-29 were: Imports, 2,533,100,000 rupees (\$924,600,000); exports 3,301,300,000 rupees (\$1,205,000,000). The decrease in the value of exports was due mainly to the sharp decline in the price of raw jute, jute manufactures, and tea. Raw cotton shipments showed considerable increases in quantity and value. Imports of automotive vehicles, cotton twist and yarn, sugar, electrical machinery, mineral oils, and chemicals all increased in quantity and value in the calendar year 1929, as compared with 1928. Import declines were recorded in raw cotton, iron and steel, cotton and wool piece goods, and artificial silk manufactures. The United Kingdom in 1929 furnished 42.4 per cent of all imports, followed by Japan, with 9.2 per cent, and the United States and Germany, in the order named. Indian exports in 1929 went chiefly to the United Kingdom (which took 21.2 per cent of the total, against 21.9 per cent in 1928), the United States, Japan, Germany, and France, in the order named. Imports from the United States (1929) were valued at \$59,903,000 while exports to that country totaled \$139,845,000. The per capita general imports and exports of British Indian products in 1929 were equal to about \$2.82 and \$3.65, respectively.

FINANCE. In the budget for the fiscal year ended March 31, 1930, total revenues and expenditures of the Central Government of India were estimated to balance at £100,547,000 (1,340,633,000 rupees). The rupee exchanged at \$0.362 in 1929. Preliminary returns, as reported by Sir George Schuster, the Finance Minister, in his budget speech before the Legislative Assembly in March, 1930, indicated a deficit of £795,000 (10,600,000 rupees), which more than absorbed the 7,400,000 rupees remaining in the Revenue Reserve Fund. The resulting gap of 3,200,000 rupees was exactly filled by receipts from the German liquidation account. Customs revenue collected during the year totaled 510,000,000 rupees, as compared with 500,170,000 rupees in 1928-29. The increase was due to higher duties put into effect March 1, 1929, rather than to larger imports.

On the basis of existing taxation (March, 1930), the Finance Minister estimated that the budget for 1930-31 would show a deficit of 55,200,000 rupees. The new budget proposals therefore provided for the reduction of military expenditures by 3,000,000 rupees and the imposition of new taxation, which was expected to leave a surplus of 7,000,000 rupees (about £525,000). Of par-

ticular importance to the British cotton industry, was the raising of the import tariff on cotton piece goods from 11 per cent to the general tariff rate of 15 per cent. An additional protective duty of 5 per cent was levied on non-British plain-grey cotton piece goods for three years. The Provincial finances are conducted separately.

The public debt of the Central Government on Mar. 31, 1929, stood at 107,416 crores, or 10,741,600,000 rupees, of which 73,578 crores were productive in railways, telegraphs, and irrigation; 17,086 crores were unproductive; 13,695 crores were incurred on behalf of the Provincial Governments; and 3057 crores represented Treasury holdings of cash, bullion, and securities.

COMMUNICATIONS. India's railway mileage is second only to that of the United States. On Mar. 31, 1929, there were 40,950 miles of line in operation, of which 29,450 miles represented mileage of the Imperial State lines and 5345 miles, Indian State lines. A total of 1282 miles of new railway lines were opened in 1928-29. During the same year all railways carried 620,110,100 passengers and 90,835,000 tons of freight, reporting net earnings of 442,500,000 rupees. The railway staff included 4988 Europeans and 802,878 Indians.

Vessels entering with cargoes in the inter-port trade in 1928-29 had an aggregate tonnage of 18,878,440; vessels clearing, 19,052,056. An air-mail line connects Karachi with London and an inland air service links Karachi with Delhi, Jodhpur, and Hyderabad.

ARMY. The strength of the British Army in India in 1929 was 59,987 men, and of the Indian Army 172,175. The Royal Air Force units in India comprised six squadrons, with 218 officers and 1757 British and 138 Indians of other ranks. Lieut. Gen. Sir Kenneth Wigram was appointed Chief of the General Staff of India, effective Mar. 21, 1931. See **MILITARY PROGRESS.**

GOVERNMENT. Executive and legislative power rests with the Government-General-in-Council. The Council consists of no fixed number of members, but at least three of them must have had 10 years' service in India and one must be a lawyer of at least 10 years' standing. The administration of India in England is under a Secretary of State for India, aided by a council appointed by him, of which at least half the members must have been residents of India for 10 years and must not have left India more than five years previous to their appointment. A high commissioner for India in England acts as agent for the Governor-General-in-Council and conducts business assigned by the Secretary of State. There is also in India the Legislature consisting of the Governor-General and two Chambers, namely, the Council of State and the Legislative Assembly, both constituted under the Montague-Chelmsford Act. See **NEW INTERNATIONAL YEAR BOOK** for 1919 et seq. The Viceroy and Governor-General during 1930 was Baron Irwin of Kirby Underdale (appointed Apr. 4, 1926). The Secretary of State for India was Capt. Wedgwood Benn, appointed in June, 1929, to succeed Viscount Peel. The High Commissioner for India in the United Kingdom was Sir A. C. Chatterjee.

HISTORY

CIVIL DISOBEDIENCE. The tide of Indian nationalism, after mounting steadily during 1929, reached its climax in the spring of 1930. In accordance with a resolution adopted in December,

1929, by the All-India National Congress, the executive committee on February 16 formally authorized Nationalist leaders to engage in a campaign of non-violent disobedience to the civil authorities. On March 6, Mohandas Karamchand Gandhi issued an ultimatum to the Viceroy, Lord Irwin, demanding immediate dominion status for India. Dominion status was not granted, and on March 12 the Mahatma (Great Soul) left his retreat in Sabarmati at the head of 79 volunteers and started a 170-mile march to Dandi, on the Gulf of Cambay, with the announced intention of violating the Government's salt monopoly by dipping up sea water to be heated for the manufacture of salt.

His act of open defiance to the Government took place on April 6, without any effort of the British authorities to arrest him. It served as a signal for similar acts of defiance throughout India. Numerous Hindu government officials resigned, the collection of taxes was forcibly resisted and evaded, railway employees quit their work and in some cases lay across the tracks to obstruct traffic, there were numerous strikes, foreign stores and goods were boycotted, and at Gandhi's order the native liquor shops were picketed by women and toddy palm trees were cut down to prevent the manufacture of liquor.

As in previous civil disobedience campaigns, many of the Mahatma's followers repudiated his doctrine of non-violence. During the week of April 14 there was rioting in Calcutta, Bombay, and Karachi, followed by a raid on the railway and police arsenals at Chittagong, near Calcutta, in which six persons were killed. To aid the Bengal authorities in meeting the situation, the Viceroy promulgated an ordinance giving emergency powers to the executive. As the civil disobedience campaign gained momentum, the emergency powers were extended to apply to the northwest city of Peshawar, where three British soldiers and some 20 natives had been killed during riots and where a Hindu regiment had refused to obey the orders of its British officers to fire on the mob. Virtually all of Gandhi's associates in the campaign were imprisoned and on May 5 the increasing seriousness of the situation forced the Government to imprison the Mahatma, who, in various ways, had courted arrest. He was locked up in Yeroda jail at Poona under an 1827 ordinance forbidding resistance to British authority and under which he could be held without trial for an indefinite period.

Fierce outbursts of rioting in Calcutta, Delhi, and other cities was the Indian Nationalists' response to the arrest of their leader. Trains were stoned, telegraph wires cut, and Government officials attacked. The police and troops fired upon menacing mobs in Calcutta and Delhi, killing over 20. Delhi was placed under martial law, and British military forces were held in readiness for the conflagration which it was feared would sweep India. The outbreak, however, did not materialize on the scale expected. For the most part the Mohammedans refused to join in the Nationalist campaign. The Council of the All-India Moslem Federation adopted a resolution disapproving of the civil disobedience movement as injurious to the best interests of the Moslem community. Similarly, the National Liberal Federation on May 15 issued a statement deprecating civil disobedience as leading to serious disorder and hardship without bringing India nearer to the desired goal of dominion status.

Only in Sholapur, a large manufacturing town 220 miles southeast of Bombay, did the situation become critical. There frenzied Gandhi adherents on May 8 attacked the police, assumed control of the city, burned all liquor shops and three police stations, and looted government buildings and residences. The police fired on the mob, killing 31 and wounding 100, but were forced to take refuge in the railway station pending the arrival of troops and the establishment of martial law on May 13.

Despite these disturbances the Viceroy on May 12 reiterated the Government's determination to proceed with its efforts to provide eventual "dominion status" for India. He announced that the round-table conference proposed by him in 1929 and rejected by the India National Congress would be held in London in October. Censuring Mahatma Gandhi and his lieutenants in the civil disobedience campaign for "rejecting a unique chance to play a constructive part in the evolution of India's future," he warned them that the civil disobedience campaign would postpone real political advancement throughout India.

The immediate aftermath of Gandhi's arrest marked the climax of Nationalist violence. Repeated clashes between the police and thousands of Nationalists intent upon violating the Government's salt monopoly occurred during the remainder of May at Wadala and Dharasana, but with continued arrests of the leaders and the commencement of the rainy season the movement gradually spent its force. In November, some 27,000 Nationalists were serving prison terms. Non-violent resistance and the boycott of British goods continued, however, and sporadic outbursts and assassinations of British officials were reported from various points throughout the remainder of the year. Lieut. Gen. Norman Skinner Simpson, Inspector General of Prisons in Bengal, was assassinated December 8 and on December 23 Sir Geoffrey de Montmorency, Governor of the Punjab, was wounded by a would-be assassin.

A study of the statistics given above under *Area and Population and Religion* explains in part the refusal of large sections of the Indian masses to respond to Gandhi's nationalistic appeal. Their inaction was primarily attributable to the conflicting racial, religious, and caste loyalties of the Indian people as well as to the inertia of a vast and illiterate population still largely imbued with Oriental fatalism. In 1930, as in other critical periods following the conquest of India, the British retained their supremacy because Moslem and Hindu, high-caste and low-caste, princes and proletariat, generally speaking, distrusted each other more than they did the foreign overlord.

WAR ON THE BORDER. In the meantime, a serious situation had been developing on the Northwest Frontier, where the warlike Afridi (Afghan) tribesmen, aroused by reports of the breakdown of British authority, were gathering in force for raids upon Peshawar and the villages of the Peshawar plain. During the disturbances in Peshawar in May, the Hadji of Tarangzai, a turbulent border mullah, marched on the city with some 500 Pathan hillmen, but his following was dispersed by the Royal Air Force. The Afridi raids developed in earnest in June and August on a scale that had not been equaled since the frontier outburst of 1897-98. A force of from 7000 to 14,000 Afridis, advancing on Peshawar, was met and repulsed on the Kajuri Plain June 5 by

a brigade of British and Indian troops. The retreating tribesmen were pursued by airplanes and many of their villages were demolished from the air.

A second Afridi lashkar (military force) of between 5000 and 10,000 men succeeded in reaching a military depot close to the city walls before being driven back by British and Indian troops on August 9 and 10. Repeated raids by smaller groups of Afridis kept the border in a state of extreme tension throughout the summer. One British officer and nine men were killed and 11 wounded in a clash with Waziri tribesmen on August 24, while the Waziri losses were placed at 33 killed, 14 wounded, and 70 prisoners. Punitive raids by Royal Air Force planes upon the mountain villages of the tribesmen forced many to capitulate and give hostages for their future peaceful conduct.

The effort of British negotiators to reach a similar settlement with the main Afridi tribal council was reported on November 20 to have failed. The British military staff then decided to extend the system of military roads protecting Peshawar in order to bar the Afridis from their usual winter quarters in the foothills of the Kajuri Plain. That the invasions from the Afghan highlands were not more serious was due largely to the action of Nadir Shah, the Afghan king, in preventing the Afghan chiefs subject to his rule from joining in the Afridi raids. A number of Communist agents were arrested on charges of stirring up the border tribesmen and inducing villagers under British jurisdiction to refuse the payment of taxes.

The part Communism was playing in the disturbances in India was described by Solomon Lozovsky, general secretary of the Third International, before the Communist party convention held in Moscow in June, 1930. The Communist-inspired revolutionary movement, he said, was aimed not only at the British but also at the Indian bourgeoisie. At first confined to nonpayment of taxes, peasant action was proceeding to confiscation of the land under the leadership of two organized revolutionary groups, the so-called "Red Shirts" and the League of Indian Youth.

THE SIMON REPORTS. The Indian Statutory Commission, headed by Sir John Simon and approved by the House of Commons on Nov. 25, 1927, concluded its investigation of the situation in India in April, 1929, and submitted its findings in two volumes published on June 10 and 24, 1930. The report, as analyzed by the Foreign Policy Association, recommended that India be allowed to progress toward self-government as a federation of autonomous Provinces, but only under the strongest British safeguards. Eight of the nine Provinces of British India would develop self-governing institutions and send representatives to a Federal Assembly at Delhi, in which the Indian States would be represented also. Burma, the ninth Province, would be separated from India, under its own constitution.

Unitary Indian governments responsible to legislatures elected under an extended franchise would be set up for the eight Provinces of British India. The whole field of legislation would be thrown open to the Provincial legislatures, but the British Governors would retain statutory powers to overrule the legislatures when necessary for the preservation of order or the protection of minorities. The British Governors might assume extraordinary powers in case of emergency, but

MAHATMA GANDHI
Indian Native Leader

their extension for more than one year would require the approval of the British Parliament. The existing Legislative Assembly would be replaced by a Federal Assembly, consisting of representatives elected by the Provincial legislatures and the Indian States, and which would enjoy enlarged financial powers.

The Governor General and the Council of State would retain their executive control of the Central Government. The Governor General would continue to initiate tax measures for federal purposes, which would require the approval of the Council of State and the Federal Assembly. Where the safety of British India was considered at stake, he would be authorized to certify a rejected measure. The commission recommended the continuance of British control of the army and of a large British element in the military ranks. It advised that the defense of the Northwest Frontier be placed in Imperial hands, separate from the Government of India, which, however, would supply an annual non-votable sum for the support of forces stationed in India. The commission emphasized that its proposals were designed to give India, and particularly the Provinces of British India, freedom to develop self-governing institutions. The proposed safeguards, it was asserted, were to be applied only if self-government was repudiated.

The Simon Commission had been boycotted by a large section of the Indian public and by the Legislative Assembly but was assisted by a Central Indian Committee, chosen by the Governor General, and by committees representing most of the Provincial councils. The commission's proposals were immediately rejected by the adherents of the All-India National Congress as well as by a large section of moderate Hindu and Moslem opinion. The All-India Moslem Conference, while deciding by a large majority to participate in the round-table conference, registered its emphatic opinion "that the minimum demands of Muslims (Moslems) of India have not been met by the (Simon) Commission." The Conference opposed the system of proportional representation suggested by the commission, and demanded greater provincial autonomy, guaranteed Moslem majorities in Bengal and the Punjab, the separation of Sind from Bombay, extension to the Northwest Frontier Province of the reforms proposed for the other Provinces, full provincial autonomy for Baluchistan, and provision for Moslem representation in the public services.

ROUND-TABLE CONFERENCE. A conference in London of representatives of the various Indian factions and of the British political parties to consider means of meeting India's demands for greater self-government was proposed by Lord Irwin in 1929. The Nationalists refused to participate in the conference on two grounds: (1) they demanded a preliminary explicit pledge from Great Britain that the conference would grant India a responsible government, including complete fiscal autonomy, which was refused; (2) they objected to the choice of delegates by the British Viceroy, demanding that the various Indian groups be permitted to select their own representatives.

Lord Irwin, in an address to the Indian Legislature on July 9, 1930, announced that the British Government would not be bound by the recommendations of the Simon Report at the round-table conference and that it would not promise to meet the Nationalists' demands in advance. The forth-

coming conference was defined by the Viceroy as "not a mere meeting for discussion or debate, but a joint assembly of representatives of both countries on whose agreement precise proposals to Parliament may be founded." He added that "His Majesty's Government still hopes that Indians of all schools of thought, whatever the attitude some have hitherto taken, will be ready to share in this constructive work." This open invitation to opposition Indian leaders to enter the conference fell on deaf ears. Negotiations were then initiated by two moderate leaders in the Indian Legislative Assembly, Sir Tej Bahadur Sapru and Mr. Jayakar, with Mahatma Gandhi and the Nationalist leaders, Motilal and Jawarhalal Nehru, in an effort to end the civil disobedience movement and restore normal conditions. The Nationalist leaders, who were imprisoned at Poona, held out for a pledge of dominion status for India, with the right to secede at any time from the British Empire, and for full economic and military control by a national government. They left the question of their representation at the round-table conference to be decided after these and other "preliminaries" had been agreed to by the Viceroy. The latter dismissed the proposals as impossible and the failure of the negotiations was announced on September 5. On the following day the India Office stated that the round-table conference would take place as scheduled.

The conference opened in London November 12, with a membership of 13 British and 76 Indians of moderate temper, who had been nominated by Lord Irwin. The British delegation was headed by Premier MacDonald and comprised, in addition, four members each from the Labor, Liberal, and Conservative parties. Of the Indians, 16 represented the Indian States and 60 the Provinces of British India. An important obstacle to an autonomous India was eliminated early in the conference, when the Indian princes announced their willingness to enter a federated government. Despite the variety of castes, religions, and races represented, all were unanimous in demanding responsible self-government under federal machinery for both the Indian States and the British Indian Provinces. The united front presented by the Indian delegates and the assurance given by Premier MacDonald on November 21 that his Government stood by Britain's pledge to grant eventual dominion status to India aroused hopes for the success of the conference. On the previous day the Brahmans and other high-caste Hindus signed an agreement that the "untouchables" of the Indian caste system should have political equality in proportion to their numbers in the new Indian Constitution to be demanded of Great Britain.

The ancient antagonism between Hindu and Moslem evidenced itself early in the conference, however, and gradually destroyed the united front of the Indian delegation. The Moslems demanded that the Hindus guarantee separate electorates and a share in the government services for Moslem minorities in Hindu communities. On December 17 a committee of 27 was named to deal with the demands for political rights of all Indian minorities. The conference adjourned for the Christmas holidays, however, without prospect of an agreement between the Hindus and Moslems. It was agreed on December 1 that Burma should be separated from India and Premier MacDonald announced that his Government favored the proposal. When the conference reconvened on Dec. 29, 1930, both the Liberals and Conservatives evidenced a

desire to support the Labor Government in its plans for extending a greater measure of autonomy to India than recommended in the Simon Report.

A feature of the first sessions of the conference was the publication on November 14 of the India Government's official comment on the report of the Simon Commission. The dispatch, signed by Lord Irwin and the members of the Council of State, differed materially from the Simon Report on a number of fundamental points and urged immediate action toward granting India increased autonomy. The Viceroy recommended that Great Britain reserve its authority with regard to the defense of India from external attack, the conduct of Indian foreign relations, maintenance of internal security and financial stability, and the protection of minorities from unreasonable treatment. Virtually all other functions not in conflict with the above aims could properly be vested in a responsible government of India, he asserted. Disapproving of the Simon recommendation for the defense of the Northwest Frontier by the Imperial Government, he advised that the British Government in India be permitted to retain control of defense. The Viceroy's statement was received with favor by the Indian delegation at the round-table conference but was severely attacked as short-sighted and narrow by the *London Times* and other leading British journals.

The appointment of Viscount Willingdon, retiring Governor General of Canada, to succeed Lord Irwin upon the expiration of the latter's term as Viceroy in March, 1931, was announced by the MacDonald Government on Dec. 19, 1930. Lord Willingdon, a Liberal in politics, had previously served for 11 years as Governor of the Presidency of Madras. His appointment was said to have been made at the request of the India Government.

Of interest in connection with the round-table conference was a poll taken by *The Times of India* among non-official Europeans in India which showed 815 favoring the granting of dominion status and 165 opposing. Dominion status was defined as a responsible government at the centre, with safeguards providing final British control of the army, foreign affairs, the external debt, and of the European and other minorities.

OTHER EVENTS. Administrative autonomy of the Church of England in India went into effect Mar. 1, 1930, in accordance with the Indian Church Act of 1927 and the corresponding measure passed by the Church of England Assembly and confirmed by Parliament in the same year. The Anglican communion in India assumed the title of the Church of India, Burma, and Ceylon. At the same time it lost much of the financial aid formerly received from the Government of India. See COTTON, EARTHQUAKES, and GREAT BRITAIN under *History*.

Crisis in India: Its Constitutional Basis," *Foreign Policy Association Information Service* for Nov. 26, 1930 (vol. vi, no. 19). See also PHILOLOGY, MODERN; COMMUNISM.

INDIANA. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 3,238,503. The population on Jan. 1, 1920, was 2,903,390. The capital is Indianapolis.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------|------|-----------|-------------------------|--------------|
| Corn | 1930 | 4,206,000 | 110,197,000 | \$67,220,000 |

^a Tons. ^b Pounds.

Farms in the State numbered 182,092 in 1930, the total having declined from the 195,786 of 1925 and the 205,126 of 1920.

MINERAL PRODUCTION. Improvement in the coal mining industry, which dominates the important iron industry of the State, had not immediately followed the termination of labor troubles at the collieries in 1928; it manifested itself in 1929, when the year's total quantity of coal mined rose to 18,344,358 net tons, from 16,378,580 for 1928. The value of the product rose less notably, to \$29,880,000 for 1929, from \$29,212,000 for 1928. The State's by-product coke ovens shipped, in 1929, 6,455,378 short tons, a fair increase over the 6,094,201 tons of 1928. The value of the shipments was, for 1929, \$41,208,876; for 1928, \$38,237,790. Correspondingly, the production of pig iron rose. The blast furnaces shipped 4,279,825 long tons in 1929, as against 3,842,762 in 1928; in value, \$71,416,732 for 1929 and \$63,622,330 for 1928. The output of the important stone industry of Indiana, for 1928, the last year of reported official figures, was of lower quantity but slightly greater total value. There were quarried, in 1928, 5,102,280 short tons of stone; in 1927, 5,813,000. The total of 1928 fetched \$22,720,411; that of 1927, \$22,634,359. The clay products of the State totaled \$16,540,711 for 1928 and \$17,855,971 for 1927. Petroleum was produced in 1929 to the quantity of 977,000 barrels, valued at \$1,600,000 (estimated), and the value of natural gas output exceeded \$600,000 in 1928. The entire mineral product of the State reached the value of \$98,583,915 for 1928; \$107,578,234 for 1927.

FINANCE. State expenditures in the year ended Sept. 30, 1929, as reported by the United States Department of Commerce, were: for maintenance and operation of governmental departments, \$29,445,094 (of which \$5,203,645 was for local education); for interest on debt, \$99,559; for permanent improvements, \$19,641,088; total, \$49,185,741 (of which \$23,296,538 was for highways, \$8,113,553 being for maintenance and \$15,182,985 for construction). Revenues were \$48,882,164. Of these, property and special taxes formed 27.6 per cent; departmental earnings and remuneration to the State for officers' services,

10.2; sales of licenses, 46.8 (including taxes of \$14,033,711 on sales of gasoline). The State's funded debt outstanding on Sept. 30, 1929, was \$2,411,000. Net of sinking-fund assets, it was \$2,366,730. On property bearing an assessed valuation of \$5,166,896,475 were levied in the year State taxes of \$14,984,000.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 7105.01. There were built, in 1930, 41.81 miles of additional second track.

EDUCATION. There proceeded in 1930 a study conducted by an interim committee of 13 members of the Legislature, charged by the session of 1929, to determine the proper course of the State with regard to the granting of State aid for the public schools. The school population of the State was estimated, for 1930, at 865,352. There were enrolled in the public schools 667,379 pupils. Of these, 504,269 were in elementary and 142,200 in high-school grades. The expenditures of the year for public-school education totaled \$71,988,318. The average salary of teachers, for the year, was \$1103 for elementary grades and \$1521 for high schools.

CHARITIES AND CORRECTIONS. Supervision of all the State's institutions having the care or custody of persons was exercised in 1930, in accordance with the long established organization of this branch of the State government, by the Board of State Charities. This body was composed of six non-salaried, non-partisan appointee members and of the Governor, serving as its president ex-officio. To carry out its orders it had an executive secretary, its own appointee. It gave annual licenses to all hospitals receiving maternity cases and to private institutions, agencies, and individuals engaged in placing or caring for children. Its Children's Department had under its supervision 2300 children in family homes and 2400 in institutions. Its advisory powers extended over charitable and correctional institutions in 92 counties.

The 20 institutions of the State, with their respective populations of Sept. 30, 1930, were: Central State Hospital, Indianapolis, 1666; Logansport State Hospital, Logansport, 1013; Richmond State Hospital, Richmond, 1219; Evansville State Hospital, Evansville, 1050; Madison State Hospital, North Madison, 1491; School for Feeble-Minded Youth, Fort Wayne, 1568; Farm Colony for Feeble-Minded, Butlerville, 374; Village for Epileptics, Newcastles, 767; Soldiers' Home, Lafayette, 353; Soldiers' and Sailors' Children's Home, Knightstown, 638; State Sanatorium, Rockville, 166; Indiana University Hospitals, Indianapolis, 439; State School for the Deaf, Indianapolis, 405; State School for the Blind, Indianapolis, 131; State Prison, Michigan City, 2331; Reformatory, Pendleton, 1981; State Farm for Misdemeanants, Greencastle, 1383; Women's Prison, 72 (penal), 133 (correctional); Indiana Girls' School, Indianapolis, 380; Indiana Boys' School, Plainfield, 530. The entire population of State institutions numbered 18,490.

POLITICAL AND OTHER EVENTS. Work was prosecuted on the \$10,000,000 World War Memorial for which five city blocks had been set apart in the heart of Indianapolis. At Vincennes the United States government, the State and Knox County cooperated in undertaking at the site of Fort Sackville and on the Wabash River the construction of a monument to John Rogers Clark and a bridge, with accessory parkways. Improvement

of the highways opening up the hill country to the south and southwest of Indianapolis was reported as conducing to an extensive development of fruit growing in that section. In politics the year was marked by the relative absence of the discords and evidences of dereliction in office that had characterized the recent past. Plans were made by the Missouri-Kansas Pipe Line Company to construct a line 930 miles in length to transmit natural gas from the Amarillo district of Texas to central Indiana, at an estimated cost of nearly \$40,000,000.

ELECTIONS. The State elected neither a Governor nor a United States Senator on November 4. In the elections to the Federal House of Representatives, 9 Democrats and 4 Republicans were chosen, thus almost exactly reversing the party balance of the delegation, which in the Seventy-first Congress was 10 Republicans and 3 Democrats. The lower house of the State Legislature passed to the control of the Democrats, who obtained about three-fourths of the seats; the Republican majority in the upper house was reduced.

OFFICERS. Governor, Harry G. Leslie; Lieutenant-Governor, Edgar D. Bush; Secretary of State, Otto G. Fifield; Auditor, Archie N. Bobbitt; Treasurer, G. Banta Reynolds; Superintendent of Public Instruction, Roy P. Wischart. As Secretary of State, Frank Mayr, Jr., succeeded on December 1; and as Auditor, on the same date, Floyd E. Williamson.

JUDICIARY. Supreme Court: Judges, Julius C. Travis, David A. Myers, Clarence R. Martin, Willard B. Gemmill, B. M. Willoughby.

INDIANA UNIVERSITY. A coeducational State institution of higher learning in Bloomington, Ind.; founded in 1820. For the first semester of the academic year 1930-31 the registration aggregated 4226 students, of whom 2656 were men and 1670 women. These were distributed as follows: Graduate school, 248; arts and sciences, 2388; law 144; commerce and finance, 181; music, 78, education, 372; medicine, 439; dentistry, 159; nurses' training, 187; social service, 41. The faculty had 310 members. The endowment funds amounted to \$764,528, and the total income for the year, from State and private sources, was \$3,498,000. The library contained 218,750 volumes. In 1927 the legislature appropriated a mill tax that was expected to yield at least \$350,000 a year, for ten years, to be used exclusively for the construction of new buildings and the purchase of land. President, William Lowe Bryan, Ph.D.

INDIANS. According to the annual report of the U. S. Commissioner for Indian Affairs, Charles J. Rhoads, the total estimated and enumerated number of Indians reported by Federal agencies on Apr. 1, 1930, was 340,541. This number consisted of 221,808 Indians who were actually enumerated and 118,733 other Indians who were taken from tribal rolls, earlier and special censuses, and estimates based on records. This aggregate represents an increase over the corresponding figure for the previous year of 0.9 per cent. If a comparison is made between the number actually enumerated in the same areas for 1929 and 1930 the increase is 1.4 per cent. Of the 221,808 Indians enumerated, 112,907 were males, 108,890 females, and for 11 the sex was not reported.

It was significant when the Indians enumerated were considered that 185,377, or 83.6 per cent, resided at the Federal jurisdiction where

enrolled, while only 3984, or 1.8 per cent, resided at another jurisdiction, and 32,447, or 14.6 per cent, resided elsewhere—that is, outside of any Federal jurisdiction.

Of the 32,447 Indians residing elsewhere, 41 were living in the New England States, 208 in the Middle Atlantic, 3633 in the East North Central, 9234 in the West North Central, 437 in the South Atlantic, 93 in the East South Central, 2166 in the West South Central, 5120 in the Mountain States, and 6024 in the Pacific States, and for 5491 Indians the residence was either not reported or unknown. Oklahoma had far more Indians than any other State. If the estimated population of the Five Civilized Tribes and Kaw Reservation were included, the Indian population was 121,884, or 35.8 per cent of the aggregate Indian population of the United States. Arizona ranked next with 47,072, or 13.8 per cent. According to the enumerated population, only two other States had an Indian population of over 20,000—New Mexico and South Dakota. According to a preliminary tabulation of the tribes enumerated on Apr. 1, 1930, the most important numerically were the Navajo, Sioux, and Chippewa, numbering 40,863, 33,168, and 23,647, respectively.

In the estimated Indian population, 118,733, the Five Civilized Tribes and the Kaw Reservation mentioned were of course responsible for the greatest numbers, after which came California, Sacramento Agency, 8761; New York with 4445; Michigan with 1192; Wisconsin with 1404 at three reservations, and the remainder distributed among other States.

In his annual report Dr. Ray Lyman Wilbur, Secretary of the Interior, stated that an encouraging start had been made as regards the Indian's personal welfare. Appropriations of \$18,794,829, or \$4,597,763 more than in 1929-30, were secured for 1930-31. The new Indian Service administration, referred to in the 1929 YEAR BOOK, had to use, during its first fiscal year, the machinery and money available under the old programme.

The revised programme planned by the new administration involved the following leading items: Better food, better clothing, new specialists in vocational education, elementary education, and field supervision; experienced agriculture-extension workmen; organization of the Washington work so as to enable education, agriculture, and industrial work to be major administrative divisions under experienced heads; reduction of the retirement age in the field force from 70 to 65, resulting in opportunity for recruiting new blood; setting up a personnel officer to see that promotions and personnel questions are handled on the most effective basis; these changes have been the starting points.

EDUCATION. Of the approximately 72,000 Indian children in schools in the United States, 38,000 were attending State public schools and the number was increasing from year to year. The Government was paying tuition for them in 861 white communities, 23 more than in 1929. Hundreds of other communities admit Indian children without tuition. Of the other 34,000 who go to Indian schools, 4000 live at home and go to Government day schools. There were 12,000 in reservation boarding schools and nearly 12,000 in boarding schools away from their own reservations; 6000 more attend mission and other private schools. In addition to the 72,000 in schools

there were about 9000 others of school age, all of whom should be given an educational opportunity.

Dr. W. Carson Ryan, Jr., of Swarthmore College, formerly of the U. S. Office of Education, was appointed director of Indian education. Dr. Earl A. Bates, author of the Bates plan, which had been applied with success in New York State, was borrowed for one year from Cornell University. This plan, considered one of the soundest methods of approach to vocational education for the Indian which had been actually tried, emphasized education in trades, agriculture, commercial arts, home making. A key factor was coöperation by the States as Indians are citizens of the States and voters. It must be made increasingly clear that there is a State as well as Federal responsibility to these citizens.

LAW AND ORDER. The Federal Code in 1910 gave Federal courts jurisdiction over eight major crimes committed on Indian reservations. Other crimes were in an uncertain border class where many States decline jurisdiction and the Federal courts have none. Four solutions were considered to settle the confusion of jurisdictional questions between Federal and State governments: (1) Submission of reservations to State criminal laws to be applied in State courts; (2) a special Federal code to be applied in Federal courts; (3) State laws in Federal courts; (4) use of tribal courts on some reservations. A valuable study was being carried on by the Board of Indian Commissioners (an independent body not associated with the Indian Service), with a view to adaptation of these differing methods to suitable classes of reservations.

HEALTH. Continued progress in the improvement and extension of medical care and relief for Indians was reported. The U. S. Public Health Service continued to detail medical officers, field directors, and sanitary engineers to the medical service of the Indian Bureau and to make available the service of the National Institute of Health. Hospitals and other services were improved and the Bureau received the coöperation of various Federal, State, county, and local organizations in attacking special Indian health problems. In addition to a considerable increase in hospital capacity, steps were taken to extend diagnostic and treatment facilities and to add to the personnel. The regular nonreimbursable appropriation for health purposes for 1929-30 was \$2,658,000, an increase of \$1,218,600 over the previous year. In addition, Congress provided a deficiency appropriation of \$400,000 for urgent health demands.

OTHER DEVELOPMENTS. The Bureau continued its efforts to assist the Indians in the development of agricultural pursuits. An agricultural extension service was supplied by a director and eight agents, each with a specified territory including several reservations. A supervisor of livestock was appointed during the year and seven home demonstration agents gave instruction to Indian women.

INDUSTRIAL WORKERS OF THE WORLD. The fact that the Industrial Workers of the World had steadily lost place in the American labor movement has been recorded previously. By the end of 1930 their membership had grown so small that any influence as an insurgent labor movement was practically nil. Probably the chief influence in bringing about this situation had been the development of communism among those labor groups partial to left wing tactics. It has been pointed out that one of the reasons for the steady decline of the I.W.W. was the passage by a number of States of criminal syndicalist laws which made membership in the organization illegal. One of the events which attracted great attention to the I.W.W. in the period immediately after the World War and which served to centre on it public hostility, was the Armistice Day tragedy in Centralia, Washington, in 1919. It will be recalled that this so-called tragedy occurred on Nov. 11, 1919, in Centralia, when a violent clash took place between parading ex-soldiers and members of the I.W.W. As a result of this incident, four parading legionnaires were shot to death; the I.W.W. hall was wrecked; and one member of the I.W.W. was lynched by the mob. Growing out of the shooting there took place, on the charge of conspiracy, the trial of 11 I.W.W. members. The incident ended with the conviction of seven of the defendants for murder and these were given sentences ranging from 25 to 40 years. In October, 1930, a report throwing interesting light on this case was issued, bearing the imprint of the Department of Research and Education of the Federal Council of Churches (q.v.), the Social Action Department of the National Catholic Welfare Conference, and the Social Justice Commission of the Central Conference of American Rabbis. This report makes the important conclusion that while the convicted were legally guilty of a crime, "The crime was not premeditated and was committed under decidedly extenuating circumstances, in the light of which sentences seem very severe." The report pointed out that its investigations disclosed that no conspiracy to kill on the part of the I.W.W. existed in view of the fact that the I.W.W. hall was first raided by legionnaires before any firing began. "Throughout this whole tragedy," says the report, "passion reigned. Business men, raiders and I.W.W. alike were in a state of mind which does not lend itself to reason. The outstanding feature of this whole series of events was the passion of the community, which made sound moral judgment impossible."

INSURANCE. That the depression which followed the collapse of the stock market in the fall of 1929 should seriously affect the insurance business was inevitable. Insurance had become so interwoven with other business activities and also with the personal affairs of individuals that they could not be disarranged without its feeling the effect. In comparison with what some other classes of business had to go through in 1930, insurance may be considered fortunate. As the bulk of the life insurance of the country was written by mutual companies which were not operated for profit, this branch must be considered separately from the others when the results of the year's operations are studied. Generally speaking the companies transacting the other branches of insurance lost money both on underwriting and on investments. Their premium income fell somewhat below that of previous years, but they were unable to effect a corresponding reduction in losses and expenses. In several classes of the business the losses increased. As the bulk of the assets of fire, casualty, and surety companies were invested in bonds and stocks, the decline in market value of these securities during the year reduced the aggregate assets of these companies by millions of dollars. It was anticipated, of course, that much of this would be restored as general business became more active and corporations again were operating at a profit.

Compared with the three previous years, very few companies were organized and little new capital was put into the business. A few independent companies were organized, most of them being small institutions. Several large casualty and surety companies were organized as running mates for established institutions. A number of companies increased their capital to enable them to do a larger business or, in a few cases, in order to distribute more to stockholders while still maintaining moderate dividend rates. On the other hand the number of mergers was larger than usual, and there were several failures of companies which were inadequately financed, badly managed or affiliated with other institutions which got into trouble.

A noteworthy event of the year was the decision of a surety-casualty company which had been organized in 1928 with the largest capital and surplus with which an insurance company ever started in the United States to withdraw from the insurance business, return to its stockholders over eight million dollars of the capital funds they had paid in, and confine its operations to the guaranteeing of certain investments offered by its affiliated institutions. Notwithstanding the advantage of very large resources, its management concluded that the building of a profitable insurance business would require years and that the money of the stockholders would yield larger returns if invested in other enterprises.

Comparatively few State legislatures were in

session in 1930 and the number of new laws affecting the insurance business was not large. The National Convention of Insurance Commissioners, through a special committee, investigated the acquisition cost of fire and casualty insurance. It found the cost higher than the investigators thought it should be, but concluded that this was not due in any great measure to payment of excessive commissions to agents and brokers, but rather to the multiplicity of companies, their appointment of unnecessary and incompetent agents, and the waste resulting from this augmented competition.

LIFE INSURANCE. Very careful estimates of the results of the year's operations were made by the Association of Life Insurance Presidents in November and December, as exact figures are not available until several months of the following year have elapsed. The new life insurance produced and paid for in 1930 amounted approximately to \$18,500,000,000, an amount 3.3 per cent less than the 1929 production, which was the largest in the history of the business. During the first half of the year the production increased over the corresponding period of 1929. This was attributed in part to a drive by agents to get as many people insured as possible before July 1, because at that date nearly all the companies, under orders from the Insurance Commissioners, adopted new policy provisions covering permanent total disability which were less liberal than those formerly in use. This action was taken after careful study of the experience under the old disability clauses disclosed that it was so bad that drastic reform was imperative.

At the close of the year it was estimated that the amount of legal reserve life insurance, ordinary, industrial, and group, in force in the United States was \$108,500,000,000 and that the number of policy holders was 68,000,000, an increase of 1,000,000 during the year. The amount of the invested assets of the companies was placed at \$18,900,000,000. Companies paid during the year \$2,200,000,000, of which \$1,325,000,000 went to living policyholders as dividends, matured endowments, annuities, disability benefits, and cash surrender values, and \$875,000,000 was paid to the beneficiaries of deceased policyholders.

The mortality rate for the year was unusually favorable, possibly the best in the history of the business. This was due largely to the smaller number of deaths from influenza, pneumonia, and tuberculosis. Deaths from apoplexy, automobiles, homicides, and suicides increased, however. It was notable that while suicides among holders of ordinary policies increased from 24 per 100,000 in 1929 to 30 per 100,000 in 1930, the rate among holders of the small, weekly-premium industrial policies increased only from 9 to 10 per 100,000.

One of the great problems facing the life insurance companies in 1930 was that of the lapse of policies, due in part to the heavy borrowing against policies in 1929 and in part to inability of policyholders to pay premiums. The utmost efforts were made both by companies and their agents to prevent these lapses, and the time and energy devoted to this work by agents may have contributed somewhat to the reduced production of new business.

A disconcerting feature of the year was the buying and selling of stock of life insurance companies. The failure of a prominent investment banking house which had been active in acquir-

ing stock of insurance companies disclosed that it had used one life insurance company which it controlled as a holding company for its other insurance interests and that this company had large stock interests in five other life insurance companies, besides one fire and one casualty company. The control of the stock of this company was sold, by court order, to a holding company which owns two other life insurance companies. While there had been no disclosures of abuse of this large group of companies, some of the Insurance Commissioners were impressed with the possibilities of substitution of assets, diversion of deposits to banks controlled by the interests controlling the life insurance companies and other abuses which might endanger the solvency of the life insurance companies if the controlling interests were corrupt or even if they exercised bad judgment.

A gratifying development in life insurance of late was the increased attention to the broader and more thorough education of life insurance salesmen. Since the American College of Life Underwriters had set up standards for the degree of Chartered Life Underwriter, institutions were giving courses of study which would prepare candidates for the degree to take the examinations. In addition, the Life Insurance Sales Research Bureau had extended its work in educating general agents and managers, and the National Association of Life Underwriters was launching a "traveling school," conducted by experienced life insurance educators. The number of companies conducting their own schools for agents increases every year.

FIRE INSURANCE. The fire insurance companies of the country found 1930 an extremely trying year. During 1929 rates on certain classes in many States had been reduced because of favorable experience and also to check the inroads of new stock companies and of mutual companies upon the business on the books of the old companies. Largely as the result of these reductions and of others early in 1930, the aggregate premium income was materially reduced. Added to this cause, were the drop in many commodity prices, reduction in stocks by merchants and the dropping of insurance by many persons who were unable to pay premiums on the full amount they needed. The reduction in premium income was estimated at between 10 and 15 per cent.

As the number of operations performed was almost as large as usual, companies were obliged to retain the usual staffs and overhead could not be reduced. Accordingly, expenses remained almost at their former level. At the same time there was an increase in the losses paid by the companies, as the fire losses of the country were over \$41,000,000 in excess of those in 1929. In the absence of official figures it appeared that the companies in the aggregate paid out more in losses and expenses than they received in premiums. Some of them, however, may have made an "underwriting" profit by reason of the reduction in liability for unearned premiums. Under the depressed general conditions a marked increase in moral hazard was expected. It appeared to some extent but not in such a degree as had been feared.

Stock market conditions had a bad effect on the invested assets of companies, varying with the classes of securities held by them. Those companies which confine their investments to bonds and preferred stocks probably fared better

in this respect than did those having in their portfolios a larger proportion of common stocks. When annual statements are filed it is anticipated that most companies will show reduced assets and surplus, regardless of the care or conservatism with which they have invested their funds.

In the fifteen years following the beginning of the World War the premium income of the fire insurance business had nearly trebled and stockholders' capital and surplus had increased even more rapidly. Efforts to secure premium income on which to earn profits on this vast sum had resulted in overexpansion of agency organizations and increased expense ratios. The available income, in short, was being secured through too many companies and too many agents. Until the adverse conditions of 1930 arrived few companies had been forced to quit or curtail operations and thus relieve the situation. During the year the number of companies was but slightly reduced by mergers, retirements, and failures, but many agencies were merged and many agents sold their business to others and left the insurance field. Companies, forced to watch expenses more closely than in the past, scrutinized the records of individual agencies more carefully to determine whether they were actually a source of profit or, because of the quality of their business and the expense of supervising them, they were a source of loss. No statistics were available, but there was reason to believe that a period of contraction of agency organizations had succeeded the long expansion period. See FIRE PROTECTION.

CASUALTY INSURANCE. The growth of casualty insurance, which was very rapid for nearly 20 years, had been slowing down of late, and in 1930 probably showed a slight recession. With this stationary, or possibly reduced, premium income came very trying competitive conditions, resulting from the fact that many companies organized in recent years were making every effort to get a volume of business, and some of them were disregarding the practices which most of the older companies had found advantageous. During 1930 several large companies, affiliated with powerful fire insurance companies, entered the business and while they adhered to standard practices they were able, through their fire affiliations, to secure many agencies and much business which other companies had previously had. Throughout the year there were signs of distress among casualty companies which were not well financed or had not been wisely managed. A few mergers took place. A few companies reinsured their business and went into voluntary liquidation and a few were forced into involuntary liquidation.

Workmen's compensation insurance constituted one of the largest classes written by casualty companies and on this they had been sustaining an underwriting loss for several years, although the interest on the reserves had produced a large income. As the premiums in this class are based upon payroll, the unemployment during 1930 reduced the premium income materially. Companies, however, regarded this as temporary and they could not afford to cut expenses by disrupting experienced staffs which they had taken years to build up. It was expected, therefore, that annual statements would show an increase in the expense ratio on this class, while the loss ratio already was high. It was necessary to make a new examination of the constantly rising medi-

cal and hospital costs and to advance rates somewhat because of this factor.

Automobile liability insurance was another very large class which did not produce the normal premium income. The number of new automobiles registered in 1930 was more than a million less than in 1929 and the number of prospects for liability insurance was therefore reduced. There were some rate reductions and a larger proportion of the new cars were low-priced ones, on which liability rates are lower than on the more expensive ones. The fact that a dozen States had automobile financial responsibility laws doubtless resulted in some additional car owners taking insurance, but probably not enough to offset other factors. The loss experience had been growing worse, as accidents had become more numerous and the size of claims and of judgments for personal injuries had been growing larger. During the year rates were advanced in a few Southern States and on Jan. 5, 1931, advances became effective in 21 other States.

Burglary underwriters had their most serious trouble in the field of bank burglary insurance. This at one time was a very satisfactory class, losses resulting chiefly from burglaries. In recent years, however, burglaries had given way largely to the more rapid method of holding banks up in the daytime. Notwithstanding additional precautions by the bankers hold-ups had increased greatly. Such faith have the underwriters in the efficacy of tear-gas bombs in foiling robbers that they are offering a liberal discount from the regular robbery rates where these are installed.

Another branch of the business which showed the effects of present conditions was forgery insurance, the amount of losses due to forging and raising checks having increased greatly.

Steam boiler insurance had to meet industrial changes, such as the use of new fuels, extremely large boilers and very high steam pressures. This necessitated a revision of rates, with advances on these more hazardous units and reductions on smaller boilers. Insurance of oil and gas heaters against explosion and of various classes of machinery against breakdown was opening a new field to boiler and machinery insurance companies.

Surety companies had a year which in many ways was discouraging. The premium income was possibly slightly below that of 1929 but losses in several classes of the business were above normal. Throughout the year losses came to light disclosing embezzlement before the stock market collapse. As the embezzlers often had lost everything, salvage from these losses was smaller than in previous years. The closing of hundreds of banks in various parts of the country threw heavy losses upon surety companies, not only under bonds guaranteeing deposits of public funds and, in some instances of private funds, but also under other forms of bonds such as those covering public officials and fiduciaries who found themselves unable to produce funds for which they were accountable because the funds were tied up in closed banks.

Surety companies would recover, as banks were liquidated or reorganized, considerable of what they had been obliged to pay under these bonds, but the waiting periods might be long and the recoveries in some cases small. Surety companies also were called upon to complete an unusual number of construction contracts where con-

tractors whom they had bonded were unable to do so because of bank closings or other causes.

INTELLIGENCE TESTING. See PSYCHOLOGY.

INTERNAL COMBUSTION ENGINES. The combined production of gas and oil engines in the United States during 1930 was approximately 10 per cent under 1929, with the gas engines enjoying the best year of their existence due to large orders for gas line pumping service. A number were also installed in recompression plants in the natural gas fields. A number of Diesels were installed in hotels and office buildings and a few in utility plants and municipal plants. Water works pumping also utilized a few. There is further indication of Diesel engine application to peak load service for isolated central stations.

In the marine field many foreign-built ships were equipped with Diesels but this form of propulsion received scant attention in American-built ships except some tugs, ferry-boats, dredges and fishing boats. The primary reasons for this are the difference in cost between European and American-built Diesels and the fuel bunker oil for burning under steam boilers is much cheaper along the Atlantic Seaboard than Diesel oil. The oil standardization committee of the American Society of Mechanical Engineers in 1930 was looking into the modification of Diesel engines to adapt them to burning this cheaper bunker oil. Among the transatlantic liners equipped with Diesels that went into service in 1930 were the *Britannic* of the White Star Line and the *Lafayette* of the French Line.

Few new designs or radical changes in Diesel engines were brought out during the year, although a number of refinements were introduced. The mechanical fuel-injection type continued to gain in favor over the air-injection type and was also superseding engines with precombustion chambers—a type that was popular a few years previously. Improvements were noted in injection valve designs to permit use of lower grade oils and there was a marked trend toward higher rotative speeds up to 750 revolutions per minute. Other improvements include nickel steel and nickel cast-iron for engine frames, aluminum pistons and alloy steels for valves and shafts. With the extension of natural gas pipe lines over many sections of the country, thus affording attractive gas rates to many localities, there was some conversion of oil engines to use natural gas.

Some progress was being made toward lightweight engines of small size for busses and trucks, but cheap gasoline kept the gasoline engine at the front for such service and retarded development of engines using heavy oils. In Europe this condition did not prevail and more progress was made in this line.

Aside from automobile and tractor engines, which are dealt with elsewhere (see AUTOMOBILES) the gasoline engine found application to a limited extent for standby service in water works and buildings.

INTERNATIONALISM. A committee for the endowment of the Walter Hines Page School of International Relations, published the address of Owen D. Young, delivered at the Johns Hopkins University on Feb. 23, 1925. Mr. Young presented an exposition of the Page memorial project. He argued that all efforts toward world peace are essentially weak because the necessary research has not been done in the fields where the main problems lie. In the course of his address he said:

Some of these problems are economic, some are embedded in racial psychologies, some of them are historical, some are geographical, some are military, and some partake of two or more of these origins. There are experts in all these fields, but it is doubtful if there exists a man whose business is to inter-relate them. And certainly, there is no single place in the world, whether library or university, or government department, where anybody can go and learn all there is to be known of these fundamental facts and inter-relations. The Page School, as I see it, will become such a place. Guided by professors of distinction, research workers will accumulate this information by study of original sources. These men will gather the facts about international trade, racial psychology, commercial and military geography, diplomatic usage and experience, effects of artificial economic barriers upon international amity, effects of new inventions to expedite communications and all the hundreds of things that enter into the contacts of nation with nation. These facts will be digested, systematized, cross-referenced, analyzed, and made accessible and intelligible to everybody who needs to know them. The men who do this research work will become experts in international problems. Some of them will continue their service in pure research as a life career. Others will be teachers of the science. Others will be drafted into the government service. The Page School will, therefore, achieve three things. First, it will develop a science of international relations. Second, it will ascertain the facts so far as they can be found, on any particular problem. And third, it will produce a continually growing body of men trained in that science and available for service in the fields of education, government and business.

The programme at Johns Hopkins is considerably more ambitious than simply establishing a chair of international relations. Mr. Young's idea was that such a school would serve in the first place as a clearing house for all research and inquiry in this field which was being conducted or was likely to be conducted in the United States. He further hoped that such a school would co-operate with similar institutions in Europe so that there would be available a really comprehensive body of fact that might serve as a corrective to the current supply of prejudices and notions.

Fairly considerable sums had been collected from outside New York State towards the initial endowment of \$1,000,000 which the Trustees originally set as their goal. Efforts shortly were to be made to complete the fund, but in the meanwhile the school was opened with such resources as were available and the Hon. J. V. A. MacMurray, former Minister to China was appointed director. The school was not concerning itself with instruction, but only with research designed to illuminate certain problems of international relationships. It was primarily interested in that type of international problems which centres about the question of the causation of national action, such as economic forces and the conscious and unconscious impulses motivating the relationships between peoples and their respective governments.

The only investigations up to the end of 1930 were: One conducted by Frederick Sherwood Dunn on the Theory and Practice of Diplomatic Protection; one by Col. S. C. Vestal dealing with the military conditions under which wars have broken out and analyzing the defects of the historic schemes of world peace; and one by Albert K. Weinberg in the nature of a review and critique of the thinking that has been done on the subject of the motivation of international conduct.

The Norman Wait Harris Foundation for the Study of International Relations held its Seventh Institute June 16 to 27 at which there were present lecturers from Japan, Great Britain, Peru, Canada, and the United States. These lectures, which dealt largely with American foreign policy, are published in book form by the University of Chicago. In addition, there were a series of round tables organized to discuss certain phases of the general problems of American foreign policy. The leaders were mainly from the United States, although there were some from Japan and China.

The seventh session of the Institute of International Relations was held at Glenwood Mission Inn, Riverside, Calif., December 7 to 12, under the auspices of the University of Southern California for the promotion of serious study of the problems involved in international relations. In 1930 there were lectures on the United States of Europe; the London Naval Treaty; Anglo-American Relations; the French Foreign Policy; the German Constitutional Crisis and the Present Parliamentary Situation; the Economics of World Peace and Internationalism; Intellectual Cooperation; the Future Political Status of the Philippines; International Implications of the New Tariff; Post-War Tendencies in International Cooperation. There were also general conferences on Civil Strife in China; Foreign Powers in China; Japan as a Factor in Pacific Relations; Political and Social Developments in Japan; Economic Problems of Japan; India's Political Crisis; Political Experiments in Central America; Problems of Reciprocal Trade; Temporary Revolutions in South American Republics; Our Cultural Relations with Mexico; International Relations Clubs.

The round tables were devoted to a discussion of the Foreign Policies of the United States; International Contacts in the Pacific Area; International Aspects of Industry, Resources, and Labor Problems; Functioning of International Organizations; Fundamentals of Internationalism; Recent Economic Developments in Europe; Reorientation in Peru, Argentina, Chile, and Brazil; Economics of the Orient; Problem of Minorities in Europe; Survey of the Work of the League of Nations.

That the airplane was fast developing as an instrument of international good will and in lessening the distance between nations was decreasing international prejudice was pointed out by Harry F. Guggenheim, American Ambassador to Cuba and patron of aviation, in his book, *The Seven Skies* (New York, 1930). In this volume he says that

In furthering aviation development there is nothing so inspiring as the thought that the airplane with its ability to break down the physical barriers between nations will also break down the petty prejudices that exist between them. These prejudices based on the superficial differences of the nations are periodically irritated until they become what has well been termed "international incidents," the casual causes of grave misunderstandings. To be air-minded is to be, to some extent, internationally minded; and because of the closer link between nations

which the airplane contributes, we shall approach nearer to that happy condition of moral disarmament which a great French statesman has rightly said is a prerequisite to physical disarmament.

Mr. Guggenheim was appointed by President Hoover as a member of the National Advisory Committee for Aeronautics. He believes that in the United States the government should have a definite part in aviation control.

The Federal Government should regulate the operation of airplanes and the movement of visitors at airports. The rapidity with which airports have sprung up all over the country, and in addition, certain legal technicalities of jurisdiction, find us without adequate airport discipline.

In December, 1928, President Coolidge selected Mr. Guggenheim as a delegate of the United States to the International Committee on Civil Aeronautics. He also served as the member from the United States on a committee of civil aviation experts in connection with the Disarmament Conference of the League of Nations. In 1928 he was awarded the American Arbitration Society's medal, given annually "for distinguished service for the promotion of commercial peace."

COMMONWEALTH FUND FELLOWSHIPS. Thirty-three students from British and Colonial universities and the British Colonial Service were appointed in May to the Commonwealth Fund Fellowships by the British Committee of Award. These fellowships are awarded annually for study in the United States, the new appointees being scheduled to enter American universities and scientific schools in the fall of 1930, to travel extensively through the United States in the summer of 1931, and to complete a second year of study before returning home. Three of the 1930 fellows came on leave of absence from Government service in India and Africa. Richard D. Waghorn, captain in the Royal Engineers, was to study railway construction as an aid to his work with the Indian State Railways; Charles Maurice Tattam, of the Geological Survey of Nigeria, was to study methods of prospecting, using the Colorado School of Mines as a base; Chidlow Bigne, of the Forestry Department of the Gold Coast, was to study tropical forestry at Yale.

The Commonwealth Fund, of which Edward S. Harkness was president and founder, established these fellowships in 1925 as a contribution toward the development of understanding and good will between Great Britain and the United States. The total number of fellows appointed to 1930 was 148, representing most of the English, Scottish, and Welsh universities as well as many in the Dominions and Colonies. Fellows choose their own course of study in preparation for further research or professional activity. A student from the University of Sydney was to study immigration legislation in the United States in relation to government policy in Australia. The other subjects chosen ranged from agriculture and astronomy to physics and philosophy.

LIFE AND WORK MOVEMENT. This movement came into being through the conference at Stockholm in 1925. It concentrates on the practical tasks of the churches. In it practically all of Protestantism, the Anglican churches, and the Orthodox bodies of Europe are united to a degree perhaps nowhere else realized in official bodies. While its effectiveness in the first five years of its existence was not such as to challenge widespread attention, it had at least begun the realiza-

tion of the ideals of its founders. The chief reason why it was not better known in America was simple. The aims of the Federal Council of the Churches of Christ in America, so far as church coöperation within the nation is concerned, are so fully parallel to those of the Life and Work movement that there had been no reason to develop organization in America. In 1930 the Federal Council and the Life and Work movement worked out a plan by which the council's commissions on relations with churches abroad was recognized as the American Section of this world movement.

Accomplishments, however, were by no means inconsiderable, although it was probably too soon to judge of the deeper currents that had been set in motion as a result of the Stockholm Conference and the successive annual meetings of the Continuation Committee there appointed. It had begun the application of modern methods of social investigation to the great common problems of the churches of all nations through the establishment of the International Christian Social Institute at Geneva. The best indication of the significance of this organization, still in its infancy, was that it had already attracted the hostile attention and bitter criticism of the Soviet government through *Pravda*, which regarded the Institute as a menace to the growth of Communism. The movement had also been one of the main forces aiding the rapid development of the federal church movement in Germany, and to a lesser extent in Switzerland and France. More important than anything else had been the service rendered to all the church forces through the steady development of acquaintance and fellowship of the church leaders of different countries of Europe and the United States.

A natural outgrowth of the increased interest in the movement and the fruit of the experience thus far gained was a decision taken in September at Chexbres sur Vevey, Switzerland, where the Continuation Committee met for a week. That decision was to form a permanent organization to be known as the Universal Christian Council on Life and Work. Paul H. Steele, of London, who had long served the organization with quiet effectiveness, was made permanent Assistant Secretary for Administration, and transferred his office from London to Geneva where a permanent office was established. Dr. Adolf Keller, Director of Research, was appointed to the position of General Secretary for Education and Extension. The office in Geneva, in which there were placed at work collaborators from Germany, Sweden, Holland, and France, was to be considerably reorganized.

The Chexbres meeting was attended by more than seventy-five representatives of world-wide church groups. The Lord Bishop of Winchester, acting as Chairman of the Executive Committee, played an important rôle. The Lord Bishop of Chichester, whose services as Secretary of the Lambeth Conference alone would entitle him to wide recognition, likewise contributed. So did Bishop Amundson of Haderslev (1930 preacher at the League of Nations), Archbishop Soederblom of Upsala, Dr. William P. Merrill, the Rt. Rev. Warren L. Rogers, and Dr. S. Parkes Cadman of the United States, Prof. Wilfred Monod and Pastor Jezequel of France, Dr. Adolf Deissmann, Dr. Stange, Dr. Siegmund-Schultze and Dr. Hinderer of Germany, Professor Alivatos of Greece, Professor Choisy of Switzerland,

and Dr. G. F. Barbour of Scotland. It was a meeting in which, in spite of many debates revealing differences, practically all important action was finally unanimous.

The Rev. Henry S. Leiper, formerly editorial secretary of the Congregational Commission on Missions, was made executive secretary of the American Section of the Universal Christian Council on Life and Work with headquarters at 287 Fourth Avenue, New York. The chairman of the Section was the Rev. S. Parkes Cadman and the honorary chairman was Bishop Francis J. McConnell. The chairman of the executive committee was the Rev. Kenneth D. Miller.

WORLD ALLIANCE FOR INTERNATIONAL FRIENDSHIP THROUGH THE CHURCHES. Among the topics considered at the Goodwill Congress of the World Alliance for International Friendship through the Churches, held in Washington, D. C., November 10-12, were: Immediate entrance of the United States into the World Court, the exercising of restraint by the American government in the building of the cruisers allowed under the London Naval Treaty, the implementing of the Peace Pact of Paris, and a reconsideration of such issues as Allied debts and reparations.

President Hoover's Armistice address was delivered from the platform of the Goodwill Congress. The President voiced his conviction that "the outlook for peace is happier than for half a century," notwithstanding the fact that "nations in many ways are always potentially in conflict." After reviewing the accomplishments of the World Court, the President urged American participation in its work. By way of answering the oft-repeated suggestion that the Peace Pact of Paris be implemented in some way, the President said, "I do not say that some such further step may not some day come about." For the immediate future, however, Mr. Hoover expressed the opinion that the Pact could be buttressed "by extension from one nation to another of treaties which, in times of friction, assure resort to well-tried processes of competent negotiation, of conciliation, and of arbitration."

Among the other speakers were: Alanson B. Houghton, former American Ambassador to Great Britain and Chairman of the Federal Council's Commission on International Justice and Goodwill, who based his plea for peace upon the need for cultivating in the mind of America an attitude of trust toward the rest of the world; Prof. James T. Shotwell, who pointed to the world tragedy that lies ahead unless a way is found to cut down competitive armaments. Jacob Gould Schurman, former Ambassador to Germany, called for American entrance into the World Court. The Right Honorable Arthur Meighen, former Prime Minister of Canada, reminded his hearers that the world could not effectively be organized for peace without the coöperation of the United States; Judge Florence E. Allen, of the Ohio Supreme Court, voiced the demand for a world of nations governed by law; President Mary E. Woolley, of Mount Holyoke College, declared that world justice and peace would remain an idle dream so long as youth was not instructed in the things that make for good will between nations. The Hon. C. C. Wu, Minister of the Chinese Republic, urged a sympathetic understanding among Westerners of the issues confronting China; Dr. S. Parkes Cadman called on the nations to make good their pledges to reduce their armaments.

WOMEN'S APPEAL. An Appeal to the "World's

Statesmen" was issued by the representatives of organizations with a membership of upwards of 40,000,000 women working in various ways in fifty-six different countries of the world to forward international understanding and coöperation. This appeal was signed for the International Council of Women, by the Duchess of Aberdeen and Temair; for the Women's International League for Peace and Freedom, by Jane Addams; for the World's Young Women's Christian Association, by C. M. Van Asch Van Wyck; for the International Alliance of Women for Suffrage and Equal Citizenship, by M. I. Corbett Ashby; for the World Union of Women for International Concord, by Clara Guthrie D'Arcis; for the International Federation of University Women, by Winifred Cullis.

In this appeal the signers stated they felt impelled to call attention to an increasing and ominous tendency of the press, the general public, and even governmental circles to discuss, or admit in discussion, the possibility of another war; "this," they declared, "in utter disregard of the sacred pact formally renouncing war, which has just been signed by fifty-seven civilized nations. This constitutes a flagrant slur on the national honour of the signatories of the Briand-Kellogg Pact, a direct menace to the youth of the world and to humanity in general. *It cannot and must not be tolerated.*"

The statement declared that we stagger under an unprecedented burden of armaments in the midst of commercial depression and economic warfare, that we have come to a critical moment of upheaval and unrest which demanded the energetic action of every constructive force. The statement maintained—

Work for peace is the most urgent task before the world to-day. We appeal, therefore, to every right-thinking person and, in particular to women, who pay the first cost of human life, to realize their responsibility and power. We ask every single individual to use his active influence to combat the idea of a recourse to violence for the solution of any problem; to work by word and deed for the eradication of the psychological causes of war: fear, ignorance and greed, and to promote by every means the recognition of the oneness of humanity and the interdependence of nations.

We demand of our statesmen, elected by the people—if they value their privilege of service—to increase their efforts and henceforward to make the wholehearted observance of the Briand-Kellogg Pact the supreme charge of national honour and the safeguard of humanity.

PHILIPPINES FRIENDSHIP PROJECT. The third world friendship project, sponsored by the Committee on World Friendship among children in behalf of the children of the Philippines, came to a close October 10 for the Middle West and Eastern States and November 10 for the Pacific Coast; the last army transport sailing from Brooklyn left October 28 and the last sailing from the Pacific Coast November 19. The Friendship Treasure Chests, which figured in this project, were the termination of a programme of study of the country and the people. As a help to such a programme a bibliography of books on the Philippines was issued, arranged in two lists, one for adults and one for children. The educational value of the plan for the children of the United States was a prime factor. It was developed in such a way that children might have the largest possible educational value from it. This did not bar young people or adult groups from sharing in it, but the programmes were worked out in co-operation with the children and the latter made to feel that this was their friendship effort. The

greetings were written by the children themselves.

It was found necessary to make the Friendship Treasure Chests of a material impervious to white ants and so metal was finally chosen because of its decorative possibilities. The chests were $10\frac{1}{2} \times 6\frac{1}{2} \times 5$ inches in size, with handles of brass and a lock and key. They were lithographed in eleven colors, the committee believing that children would happily study the charming old maps; the pictures of Washington and Risal, of Columbus and Magellan; the watchful sea-serpent and whale; and Old Boreas and Father Neptune controlling the winds and waves. Filipino children learn English in their schools, but as there is great need of books a bibliography of 300 books suitable for children from six to fifteen years of age was prepared under the supervision of Miss Clara Whitehill Hunt of Brooklyn, a librarian widely known as an authority on children's books. All books sent were selected from the list prepared by the Committee.

JAPANESE FRIENDSHIP. In March, 1930, great celebrations took place in Tokyo and Yokohama on the completion of the colossal reconstruction programme carried on since the Japanese earthquake of 1923. The cities that had been largely destroyed by earthquakes and terrible conflagrations had been almost completely rebuilt. Five young Japanese women were sent as "Envoys of Gratitude" to express to the American people the appreciation of the people of Japan for the help rendered at the time of their distress, the United States having contributed about \$12,000,000 at that time. It was to bring to America in a dramatic way Japan's expression of gratitude and good will that the *Jiji Shimpō*, one of the great daily newspapers of Tokyo, sponsored this unique delegation. They landed in San Francisco on April 2, and made a triumphal tour of America's principal cities. In Washington, they were received by President Hoover at the White House. A luncheon was given by the American Red Cross and a reception by the Chamber of Commerce. The Federal Council of Churches entertained the Japanese guests at luncheon, at the Women's University Club in New York. See **PEACE AND PEACE MOVEMENTS**.

INTERNATIONAL JUSTICE. See **LEAGUE OF NATIONS**; **WORLD COURT**.

INTERNATIONAL LABOR CONFERENCE. See **MATERNITY PROTECTION**.

INTERNATIONAL LABOR ORGANIZATION. The 14th session of the International Labor Conference was held in Geneva, Switzerland, June 10-28, and there were in attendance delegates from 51 of the 55 countries which are members of the International Labor Organization. On the agenda of the Conference were the following three items: Forced labor, hours of work of salaried employees, and hours of work in coal mines. In regard to the question of forced labor, the Conference adopted a draft convention calling for the suppression of this form of work as soon as possible. The convention called for the final abolition of forced labor within five years. Similarly, a draft convention was adopted calling for the limitation of hours of work of "white-collar" workers to 8-hours a day and 48 hours a week. There were also adopted recommendations calling for inquiries into the hours of work of employees in hotels, restaurants, theatres, and other places of amusement, and hospitals and asylums. These investigations were requested in view of the

fact that such types of activity were not covered by the provisions of the draft convention. A convention proposing the limitation of hours of work of underground workers in coal mines did not succeed in passing, but a decision was reached that the subject be placed on the agenda for the next annual meeting. The Conference, before it broke up, passed a series of resolutions affecting this subject, however. These were: A resolution relating to safe working conditions in mines; another regulating the hours of surface workers; and a resolution pointing out the necessity for the creation of economic agreements among the coal-producing countries. See **UNEMPLOYMENT**.

INTERNATIONAL LANGUAGES. See **PHI-LOGOLOGY**, **CLASSICAL**.

INTERNATIONAL LAW. The First Assembly of the League of Nations failed to adopt the resolution of the Advisory Committee of Jurists meeting at The Hague in 1920, recommending the codification of international law, but on Sept. 22, 1924, as a result of a proposal by the Swedish Delegation, the Fifth Assembly adopted a resolution asking the Council to appoint a Committee of Experts to prepare a list of subjects that might be regulated by international agreement and to report on questions considered "sufficiently ripe for solution." A Committee of Experts for the Progressive Codification of International Law was appointed Dec. 12, 1924, and held annual sessions from 1925 to 1928. After careful study by the Committee, questionnaires were communicated by the Secretariat to the governments of states, whether members of the League or not, for their opinion on the following subjects: 1. Nationality; 2. Territorial waters; 3. Diplomatic privileges and immunities; 4. Responsibility of states in respect of injury caused in their territory to the person or property of foreigners; 5. Procedure of international conferences and procedure for the conclusion and drafting of treaties; 6. Piracy; 7. Exploitations of the products of the sea; 8. Communication of judicial and extra-judicial acts in penal matters; 9. Legal position and functions of consuls; 10. Revision of the classification of diplomatic agents; 11. Competence of the courts in regard to foreign states; 12. Domicile.

The Committee also adopted reports on: 1. Extradition; 2. Criminal competence of states in respect of offenses committed outside their territory; 3. Legal status of Government ships employed in commerce; 4. Most-favored nation clause; 5. Recognition of the legal responsibility of foreign commercial corporations; 6. Nationality of commercial corporations and their diplomatic protection.

On June 13, 1927, the Council considered the reports drawn up by the Committee of Experts at its session and the report thereon of the Polish representative, and decided to transmit them to the Assembly. The Committee recommended seven subjects which might be the subject of an international conference or conferences: 1. Nationality; 2. Territorial waters; 3. Responsibility of states, etc.; 4. Diplomatic privileges and immunities; 5. Piracy; 6. Procedure of international conferences; 7. Exploitation of the products of the sea.

The Council, and after it the First Committee of the Assembly, selected only the first three questions as being ripe for successful international discussion at the time. On Sept. 27, 1927, the Assembly adopted a resolution asking the Council

to appoint a Preparatory Committee of five members to make arrangements for a codification conference on those questions and to draft its rules of procedure. This committee completed its work in three sessions held in February, 1928, January, and May, 1929.

The Assembly resolution of Sept. 24, 1928, decided to refer to subsequent conferences two new questions which the Committee of Experts had deemed ripe for international regulation, i.e., legal position and functions of consuls, and competence of the courts in regard to foreign states. The 1928 Assembly also decided to ask a committee of three jurists to make a "systematic survey" of the subjects which the Assembly proposed to cover in its work of codification. The report of this committee made to the tenth Assembly in 1929 revealed that 250 conventions had been selected for publication in the form of a code.

In its resolution of Sept. 24, 1929, on the first codification conference, the Assembly requested the Council to hasten preparations for the first conference in March, 1930, and to invite the Committee of Experts to continue its labors after the close of the first conference. It noted the systematic "Survey of the Subjects of International Law" drawn up by the committee of jurists with a view to general codification, and stated as its opinion "that it would be necessary first to proceed to codify the various successive conventions which deal with certain particular subjects so as to determine what precisely are the texts in force and the states which are parties thereto."

The first conference for the codification of International Law met at The Hague from March 13 to Apr. 13, 1930. It was composed of delegates of 48 states or members of the League of Nations. Nine states not members of the League were represented, including the United States of America. Of the states not members of the League, only Afghanistan, Costa Rica, Ecuador, and Iraq failed to send representatives.

Three subjects were on the agenda of the conference, quite independent of each other and they were dealt with by separate committees. The first committee drafted four instruments, later adopted as acts of the conference: 1. Convention on certain questions relating to the conflict of nationality laws; 2. Protocol relating to military obligations in certain cases of double nationality; 3. Protocol relating to a case of statelessness; 4. Special protocol concerning statelessness. It also framed eight recommendations which were adopted by the conference and embodied in its final act.

The second committee encountered so many political obstacles in considering the subject of territorial waters that an attempt to reach an agreement was abandoned. Its deliberations were useful, however, in paving the way for further discussion of this difficult subject.

A third committee on responsibility of states for damage caused in their territory to the person or property of foreigners included many of the ranking delegates to the conference, but it failed to reach any agreement, and its report was said to contain few suggestions for guidance in future effort toward codification.

The final act of Apr. 13, 1930, made suggestions for more careful preparatory work for the next conference for the codification of international laws and included definite proposals for examination by the Council and the Assembly.

M. Heemskerck, former Prime Minister of The Netherlands, was chosen by the Council to preside, and with his mastery of both French and English he made an excellent chairman. Eighty-five persons were brought to The Hague from Geneva, to serve as the secretariat. As Professor Hudson shows, this was one of the great gains to the world from the establishment of the League Secretariat, a staff of trained and experienced people at hand to enable international conferences to be conducted efficiently. M. Politis of Greece presided over the first committee, Herr Goppert of Germany over the second, and Professor Basdevant of France over the third.

Women's nationality attracted the most publicity. Various women's organizations were represented at The Hague, and especially those which stood for a thorough-going equality between women and men. Some of these organizations whose positions were most extreme bitterly attacked the convention adopted by the conference. The reasons for this attack did not make much appeal to persons of moderate views, who did not object to some mention of men and women or of husbands and wives. The relevant provisions of the convention were mainly concerned with accomplishing two things: 1. To prevent statelessness of a woman who marries a foreigner by providing that if she does not gain the nationality of her husband, she shall keep her former nationality; 2. To require the consent of a woman before her nationality may be affected by the naturalization of her husband abroad. These seemed to be very sensible provisions, Professor Hudson said, and likely to improve the present situation without in any way prejudicing a continuance of the changes that were fast being made in national legislation.

The convention was adopted by the conference with but one dissenting voice, that of the United States. It subsequently was signed on behalf of a large number of states.

On January 24, Senator Borah moved an amendment to the cruiser bill before the Senate to the effect that Congress favored a recodification of the rules governing the conduct of belligerents and neutrals in war at sea. "My idea of the freedom of the seas," Mr. Borah declared, "is the right of neutrals to carry goods as freely in war as in peace, except when they are carrying munitions or attacking a blockade which must not be a paper blockade." An agreement to this effect proving impossible in 1931, he declared that the Washington armament treaty would be wiped out "and the nations will engage in competitive armament building. We will have to build not only against the strongest but against combinations of the strongest . . ." The result will be a "tremendous burden of taxation for the American People and another cataclysm such as that of 1914."

According to the press reports of this speech Senator Borah did not mention the Anti-War Pact, nor the difference between legal and illegal wars. In the light of the League Covenant and of the Kellogg pact the Foreign Policy Association pointed out:

It is difficult to see how any one can hope to secure an agreement making the rights of "neutrals" more extensive than they were before the World War. The very conception of neutrality presupposes the legality of war. It presupposes that neutral governments cannot pass judgment as to which belligerent is in the right, but in the League Covenant and the Anti-War Pact the nations of the world have promised that they will not embark upon certain kinds of war. If they delib-

erately violate this promise and go to war, the members of the League promise to apply an economic blockade and even military sanctions against them. The United States has assumed no such obligations. Nevertheless how can any self-respecting nation claim the right of unrestricted trade with a State which has flagrantly embarked upon a war in violation of the Kellogg treaty? It is inconceivable that the State Department would make such a demand in a sea law conference or that other States would consider granting it. On the other hand, the British Government, in accepting the Covenant and the Anti-War Pact, have pledged themselves not to use their fleet whether against belligerents or neutrals unless acting by virtue of international authority.

Proposals have been frequently made that the United States should agree not to interfere with League sanctions in the case of a public war, but that in return the other States should agree to the principle of the freedom of the seas in the case of a private war. By private war was meant those wars in which members of the League could legally engage; i.e. in case of disagreement among members of the Council. The ratification of the Anti-War Pact abolishes the basis for this distinction. All wars except those in self or coöperative defense, now become illegal. Henceforth the real difficulty will be in determining whether a state has violated the Anti-War Pact, in determining which party to a dispute is acting in "self-defense," and which party is the aggressor. Under the Covenant the League Council makes recommendations as to the question, and under the Locarno agreement the Council decides. The United States, however, is not a member of the Council, and it is not likely to recognize its jurisdiction unless it has the same right of veto as the members of the Council enjoy. It has been suggested that the United States should agree not to interfere with League sanctions in case of a war in which the Council is unanimous; but that in case of a war in which the Council is divided, the freedom of the seas, as defined to mean unrestricted right of neutrals to trade with the belligerents, should be recognized.

The press during the latter part of the year reported that England and the United States were carrying on conversations concerning the question of sea law, but the State Department categorically denied this report.

During the London Naval Conference the proposal for a Consultative Pact was made in the hope of settling, indirectly at least, this question, but this effort failed and no further attempt for its solution was made. If, however, some foreign government should take advantage of President Hoover's support of the idea of a Consultative Pact, made in his Armistice Day speech, negotiations might be actively undertaken.

BIBLIOGRAPHY. The special *Supplements to the American Journal of International Law*, volume 20 (1926) and volume 22 (1928), contain reprints of documents from the League of Nations Committee of Experts for the Progressive Codification of International Law. The *Journal* for July, 1930, contains articles on the results of the first Conference on Codification of International Law and the *Supplement* for that number contains texts of the important documents of the Conference. The *Handbook of the League of Nations since 1920*, by Denys P. Myers, published by the World Peace Foundation in 1930, contains a chapter on "The Progressive Codification of International Law." In March 1930 the League of Nations Association of the United States in Geneva published a study entitled *The First Conference for the Codification of International*

Law, which summarized the work of codification by the League from 1920 to 1930.

AMERICAN CODIFICATION. At the sixth International Conference of American States (held in Havana in 1928) codification of certain subjects in public international law was adopted. In addition, the conference provided for the appointment of three permanent committees:—One at Rio de Janeiro for the codification of public international law; one at Montevideo for further work dealing with private international law; and another at Havana for the study of comparative legislation and uniformity of legislation. These committees had not met up to the end of 1930.

Action as follows was taken by the respective government on the conventions on public International Law signed at the Sixth International Conference of American States held at Havana in 1928:—

Convention on Status of Aliens was ratified by Brazil, Nicaragua, Panama, United States.

Convention on Asylum was ratified by Brazil, Mexico, Nicaragua, and Panama.

Convention on Rights and Duties of States in the Event of Civil Strife was ratified by Brazil, Mexico, Nicaragua, Panama, and United States.

Convention on Consular Agents was ratified by Brazil, Mexico, Nicaragua, Panama.

Convention on Diplomatic Officers was ratified by Brazil, Mexico, Nicaragua, and Panama.

Convention on Private International Law was ratified by Brazil, Costa Rica, Cuba, and Dominican Republic, Guatemala, Haiti, Honduras, Nicaragua, Panama, and Peru.

Convention on Treaties was ratified by Brazil and Panama.

INTERNATIONAL LAW ASSOCIATION. The International Law Association held its thirty-sixth conference in New York September 1 to 10. It was the third conference that the Association had held in the United States since its foundation in 1873. The prior meetings were held in Buffalo in 1899, and in Portland, Maine, in 1907. Representatives of 25 countries, many of them outstanding figures in the field of international law, attended the sessions in a painstaking, and it is generally believed an effective endeavor to advance the common cause by exchange and interchange of views on the intricate problems that formed the agenda of the conference. As in similar gatherings in the past it was demonstrated that through frank round-table talks on specific questions formulated for consideration, wide differences of background, tradition, self-interest, and language could be diminished if not obviated as Lewis M. Isaacs pointed out in his review of the meeting. Varying human factors were exhibited, special emotional reactions affecting the discussion, deflecting it now in one direction and now in another. These served to emphasize the conclusion that by this conference method, with the gradual building up of "rules and principles winning general acceptance by their inward reasonableness and the eminence of the legal authorities whose names they bear," to quote from the welcoming address of Hon. John W. Davis, the ultimate goal of an established system of international rules of conduct, sanctioned and upheld by all the nations of the world, was possible of attainment.

Coincident in point of time with the earlier days of the conference was the arrival in New York of the foreign guests of the American Bar Association, the English, Scotch, Irish, and

French lawyers and judges, who had attended the annual meeting of the American Bar Association in Chicago, and were proceeding homeward by way of the Atlantic seaboard. There was some overlapping of the personnel of the two groups, but a harmonious and delightful commingling of entertainments and social gatherings, the cumulative effect of which helped to create an atmosphere most favorable to the more serious business of the International Law Association itself.

Held in the commodious and congenial surroundings of the home of the Association of the Bar of the City of New York, the business sessions were productive of varied and useful concrete results. At the opening meeting, Hon. John W. Davis, former Ambassador to Great Britain and a former President of the American Bar Association, was unanimously chosen president of the conference. Lord Tomlin of England, Lord of Appeal in Ordinary, was elected vice-president. To Dr. Davis's address of welcome, Lord Tomlin; Dr. Walter Simons, former Chief of Justice of the German Republic; Commendatore Guiseppe M. Palliccia, Special Attaché of the Royal Italian Embassy; and M. Pierre Arminjou, former Judge of the Mixed Tribunal at Cairo, made fitting responses.

The delegates settled down to a discussion of the Legalization of Documents, presided over by Arthur K. Kuhn, one of the vice-presidents of the American Branch of the Association and chairman of the general conference committee. Complete accord was reached in what promised to be an effective resolution regulating and simplifying the procedure of certification of documents for use and admission in evidence, in countries other than that out of which they issue.

A large amount of time was devoted to the discussion of the effect of war on contracts, Hon. R. E. L. Vaughan Williams of England presiding. The conference agreed upon certain general principles that should govern the situation and also upon a number of suggested rules as to the protection of private property in war time, covering, among other topics, that of persons altering residence during war, neutrals, branch offices and agents, war-time contracts, pre-war debts, pre-war breaches of contract, prescription periods of limitation, negotiable instruments, and severability of obligations.

The question of the effect of war on politics and on insurance and reinsurance of various kinds was reserved for future consideration. As indicating the nature of one fundamental problem the delegates were sharply divided on the proposal that "the general rule should be that the effect of war is to dissolve all contracts, subject to specified exceptions, in preference to stating that the effect of war is not to dissolve contracts except in certain cases in which there should be dissolution." Some delegates contended that on principle the rule should be stated in favor of the preservation of contracts, except in the enumerated cases; while others took the position that practical consideration dictates the statement in the negative. The conference adopted the resolution in the above form.

The conference also approved a resolution to the effect that "for the purpose of facilitating the collection of debts during the period of war, an organization be set up in each of the belligerent countries, permitting the collection of obligations of the debts due from nationals and the conse-

quent discharge of the obligations of the debtors to a like extent."

A session, dealing with war-time conditions of trade, included the sea rights of neutrals. This was presided over by Professor Borchard of the Yale Law School. The conference agreed on a draft convention on the rights and duties of belligerents with regard to neutral property at sea, embodying a number of important principles, which, while not attempting to cover the whole subject, should go far to simplify the work of succeeding conferences. Among the topics involved were visit and search, neutral character, contraband, blockade, submarine cables, and judgment of prizes.

A resolution on commercial arbitration, that promised to have great practical value, was adopted, reading as follows:

Be it resolved, that in order to safeguard the security of transactions in international commerce it is necessary that agreements between governments be entered into to regulate the essentials of arbitration practice and procedure between nationals and their respective countries, and to provide for the reciprocal enforcement of commercial arbitration agreements and awards made pursuant thereto, provided these arbitrations have been conducted under institutions of high standing and which possess necessary facilities.

Action was taken in support of endeavors to improve the international status of trademarks, this session being conducted by Dr. Walter Simons, and there were interesting and important sessions on the subjects of social insurance, air law, and the protection of minorities.

At the final meeting, the following resolution (referring to the Kellogg-Briand Pact) was unanimously adopted:

Resolved, that the International Law Association, at its Thirty-sixth Conference in New York City assembled in September, 1930, record its deep satisfaction that in its advance in civilization the world has reached the time when the Paris Pact could win the acceptance of the nations, and further it desires to convey to M. Briand and Secretary Kellogg its admiration for their noble services for humanity and reason, and trusts that further measures will promptly be taken for adding to the practical efficiency of the pact.

During the period of the conference, the delegates attended many interesting and enjoyable gatherings, some of them, in the earlier days, in conjunction with the foreign guests of the American Bar Association, which of themselves contributed not a little to the usefulness of the proceedings by bringing the delegates into closer social relations and more intimate touch with one another. There was a luncheon and reception by the Chamber of Commerce of the City of New York, an official reception by the Mayor of the City of New York, luncheons by The New York Times, the American Foreign Law Association, and the American Arbitration Association, and a convocation at Columbia University, at which the honorary degree of LL.D. was conferred on Lord Tomlin, Sir Frederick Pollock, Prof. Pierre Arminjou, and Dr. Walter Simons, all delegates to the Association.

It was the general opinion that a feeling of deep satisfaction could be justly indulged in at the results of the conference, not merely in the concrete agreements which were arrived at on specific subjects, but equally in the very evident accord on fundamental and far-reaching problems of international conduct and intercourse.

INTERNATIONAL RELATIONS, INSTITUTE OF. See CALIFORNIA, UNIVERSITY OF; INTERNATIONALISM.

INTERPARLIAMENTARY UNION. The twenty-sixth Inter-Parliamentary Conference which convened at London July 16, 1930, was attended by 450 delegates representing the Parliaments of 32 states: South African Union, United States of America, Australia, Austria, Belgium, Bulgaria, Canada, Czechoslovakia, Denmark, Danzig, Dutch East Indies, Egypt, Estonia, Finland, France, Germany, Great Britain, Greece, Hungary, British India, Ireland, Italy, Japan, Latvia, The Netherlands, New Zealand, Norway, Poland, Rumania, Sweden, Switzerland, Turkey. No delegates were sent from any of the Latin American states, in spite of incessant propaganda to secure their cooperation.

Both Houses of the British Parliament were sitting when the Union met in London. The organizers did not wish to break the tradition according to which the Union holds its meetings within the Parliaments of the states which receive the Conference, and so placed the Royal Gallery at the disposal of the Union. The Duke of Sutherland, president of the British delegation, was elected president of the Conference. After opening addresses by M. Fernand Bouisson, president of the Council, the Duke of Sutherland, and Foreign Minister Arthur Henderson, the conference commenced the discussion of the subjects on the agenda.

The first point on the agenda was the debate on the report of the Secretary General on the general political situation of the world. The lesson that might be drawn from this exchange of views was that two important questions occupied the members of the Union: on one hand, the reduction of armaments, the necessity of which was declared by Lord Cecil to be far more urgent than perfecting the numerous juridical instruments that aim at insuring peace; on the other hand, the economic organization of the world and above all of Europe—an organization, which, in the opinion of many speakers, was suitably formulated in the memorandum of the French Government on European federal union. The question of national minorities occupied a less important place in this debate than during previous conferences. Economic and financial problems were raised by nearly all the speakers. This general debate continued during the two meetings on July 16 and the morning sitting of the following day. Subsequent sessions were devoted to the examination of the draft resolutions submitted to the conference. These texts were all adopted without modification, except in the draft resolution on the problem of national minorities, where a few words were omitted.

Control of international trusts and cartels was the subject of a discussion of the highest interest in its scientific and even technical nature. The draft resolution, presented by Baron Sztérényi (Hungary), of the Committee on Economic and Financial Questions, affirmed that the regulation of trusts and cartels was necessary—control by the State concerned if it were a question of national trusts, control by an international authority if an international trust. The resolution was adopted unanimously with the exception of the abstention of three delegations.

"Security Problems: Implications of the Paris Pact of Aug. 27, 1928" was the topic on July 16. After renewing the homage already rendered to the Briand-Kellogg Pact by the Berlin Conference two years earlier, the draft resolutions established some of the consequences which the

states, in their own interest, should draw from their adhesion to this treaty: the General Act of Sept. 26, 1928, and the Optional Clause of Art. 36 of the Statute of the Permanent Court of International Justice. In cases where certain states could not adhere to these conventions, they should conclude regional or bilateral treaties on the basis of the model treaties recommended by the 1928 Assembly of the League of Nations. As for the other consequences of a violation of the Paris Pact, the resolution left to the *rapporteur*, Morton D. Hull (United States), the task of making known his own opinion and that of a committee formed with his group to study this question. Mr. Hull's conclusions may be summarized as follows: While the attitude of the states members of the League of Nations, in cases of a violation of the Paris Pact, is defined by Art. 16 of the Pact, the situation of non-member states, particularly the United States of America, will not really be very different, for their line of conduct will be parallel to that of member states, with which it may even coincide. M. Bastid (France) presented a report on the settlement of international disputes. His conclusion, in conformity with the draft resolution, aimed at the ratification of the General Act by all the states. The resolution was accepted by a large majority, constituting a solid basis on which the Union will continue its work in the field of security and disarmament.

Monday, July 21, was devoted to a debate on the evolution of the parliamentary system. The draft resolution submitted to the London Conference declared faith in the future of the parliamentary system and enumerated measures for its improvement. MM. Borsarelli (Italy) and Rutgers (Netherlands) disapproved of certain features of the draft resolution but it was accepted without other opposition. The assembly unanimously adopted (July 22) the proposals presented by M. Studer (Switzerland), of the Committee on Ethnic and Colonial Questions, relating to the problem of national minorities. The committee had never secured the unanimous adoption of its resolutions submitted to preceding conferences. The proposal submitted by M. Studer declared, in conformity with the wish of the Copenhagen Conference in 1923, that the extension of the protection of minorities to all states was "in the interest of peace and good understanding between the nations." It then stated the necessity of completing the procedure followed by the League of Nations, by relieving the Council of the League of examining minor cases, which do not raise any question of principle. It proposed that a clearer distinction should be made between the organ for preliminary investigation, whose duty it is to establish the facts, and the body appointed to examine the dispute from the legal standpoint, to deliberate upon it and give an award. For this purpose, conciliatory bodies should be created within the states signatories of Minorities Treaties, for the preliminary examination of questions relating to minorities likely to give rise to a complaint to the League of Nations, with the object of finding the means of meeting such complaints. The League should on its side inform those concerned of the measures taken as a result of the petitions addressed to it. Several speakers made reservations, among others M. de Lukacs (Hungary), who had already submitted to the Ethnic Committee amendments which have been retained, and M. Lindhagen (Sweden) who presented proposals concerning the territorial status

of states and the protection of "extra-European majorities." These last proposals were referred to the Inter-Parliamentary Council.

Premier MacDonald, speaking at the close of the conference, made an appeal in favor of the coöperation of parliaments in the cause of peace and international reconciliation. The Inter-Parliamentary Council reelected as president M. Fernand Bouisson, president of the French Chamber of Deputies; M. Bouisson thus retained the functions of president of the Executive Committee. The conference elected M. Cicio St. Pop, president of the Rumanian Chamber of Deputies, as member of the Executive Committee, in the place of M. Raoul Dandurand (Canada). The Irish Free State Inter-Parliamentary group invited the delegates and their families to visit Ireland at the close of the London Conference.

The Inter-Parliamentary Council met in London, July 15 and 16, 1930. A permanent member of the Rumanian group, M. Cadere, ex-deputy, Secretary General of the Ministry of Justice was admitted and approval of the report of the Secretary General on the attitude of the groups with regard to the new scale of contributions was given. It was stated in this report that 13 groups had accepted the new scale, and that several others had increased their contributions to a considerable degree.

IOWA. POPULATION. According to the Fifteenth Census of the United States, the population of the State on Apr. 1, 1930, was 2,470,939. According to the State census taken in 1925, the population was 2,419,927. The population on Jan. 1, 1920, was 2,404,021. The capital is Des Moines.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|------------|------|------------|-------------|---------------|
| Corn ... | 1930 | 11,100,000 | 860,750,000 | \$209,285,000 |
| | 1929 | 10,893,000 | 429,878,000 | 300,915,000 |
| Oats ... | 1930 | 6,145,000 | 239,655,000 | 67,103,000 |
| | 1929 | 5,997,000 | 215,892,000 | 84,198,000 |
| Hay ... | 1930 | 3,286,000 | 5,284,000* | 59,509,000 |
| | 1929 | 3,566,000 | 6,720,000* | 73,051,000 |
| Wheat .. | 1930 | 405,000 | 8,937,000 | 5,797,000 |
| | 1929 | 416,000 | 8,076,000 | 8,554,000 |
| Potatoes.. | 1930 | 65,000 | 4,550,000 | 5,915,000 |
| | 1929 | 65,000 | 6,695,000 | 9,373,000 |
| Barley .. | 1930 | 527,000 | 16,337,000 | 6,698,000 |
| | 1929 | 592,000 | 17,168,000 | 8,927,000 |

* Tons.

Farms in the State numbered 216,361 in 1930, as against 213,490 in 1925 and 213,439 in 1920.

MINERAL PRODUCTION. Coal took first rank among the State's mineral products of 1929. There were mined, in 1929, 4,241,069 net tons of coal, as against 3,683,635 in 1928. The value of these totals was \$11,948,000 for 1929; for 1928, \$10,525,000. Cement, next in order of importance, was shipped to the quantity of 6,586,111 barrels in 1929 and 6,880,731 in 1928; shipments reached the value of \$9,781,159 for 1929, as against \$10,734,838 for 1928. Second in rank among the States in the production of gypsum, Iowa produced in 1928 (the latest year of available figures) 704,044 short tons, a decline from the 792,159 tons of 1927; the value of these quantities was, for 1928, \$5,355,214; for 1927,

\$6,713,497. The clay products totaled \$5,006,623 for 1928 and \$6,158,104 for 1927. There was a substantial yearly production of sand, gravel, and low-grade stone. The entire mineral production of the State amounted to \$35,498,669 for 1928 and, for 1927, to \$33,426,375.

FINANCE. State expenditures in the year ended June 30, 1929, as reported by the U. S. Department of Commerce were: for maintenance and operation of governmental departments, \$25,087,619 (of which \$807,364 was for local education); for interest on debt, \$878,485; for permanent improvements, \$16,332,063; total, \$42,298,167 (of which \$19,325,041 was for highways, \$5,027,644 being for maintenance and \$14,297,397 for construction). Revenues were \$40,891,561. Of these, property and special taxes formed 26.7 per cent; departmental earnings and remuneration to the State for officers' services, 16.3; sales of licenses, 45.4 (including taxes of \$4,931,900 on sales of gasoline). The State's funded debt outstanding on June 30, 1931 was \$17,471,000. Net of sinking-fund assets, it was \$10,453,995. On property bearing an assessed valuation of \$1,493,323,335 were levied in the year State taxes of \$9,574,066.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 9709.02. No additional construction of railroad line in 1930 was reported.

EDUCATION. A commission on the courses of study in high schools prepared and distributed a set of courses of secondary study among the schools. The State Department of Education made surveys of the teacher personnel and of the State's group of handicapped children.

CHARITIES AND CORRECTIONS. The Board of Control of State Institutions, under authority of a statute of 1898, controlled and governed in 1930 the penal, correctional, and charitable institutions of the State. This body consisted of three appointed members, each serving 6 years, the terms finishing in rotation at intervals of 2 years, the board making the appointments of separate executive officers for the several institutions and determining the number and compensation of their subordinates. It also acted as purchasing agent for the institutions and maintained prison or other institutional industries. These provided the State's license plates and road markers, virtually all the clothing and bedding in the institutions, soap, shoes, brooms, brushes, tin and aluminum ware. On some 14,000 acres connected with the institutions were produced practically all the vegetables and much of the milk and butter that were consumed. Thus some 14,000 institutionalized persons were made collectively to support themselves in great part.

The institutions numbered 15. They were: Men's Reformatory, Anamosa; State Penitentiary, Fort Madison; Women's Reformatory, Rockwell City; Cherokee State Hospital (insane), Cherokee; Clarinda State Hospital (insane), Clarinda; Independence State Hospital (insane), Independence; Mt. Pleasant State Hospital (insane), Mt. Pleasant; Institution for Feeble-minded Children, Glenwood; Hospital for Epileptics and School for Feeble-minded, Woodward; State Juvenile Home, Toledo; Training School for Girls, Mitchellville; Training School for Boys, Eldora; State Sanatorium, (tuberculosis), Oakdale; Iowa Soldiers' Home, Marshalltown; Iowa Soldiers' Orphans' Home, Davenport.

POLITICAL AND OTHER EVENTS. The legal status of the bond issue of \$100,000,000 that the State

was to have put out for the financing of a highway system, in accordance with popular vote, remained unsettled in the courts. Consequently the several counties of the State resumed their road-building work, issuing their own bonds to meet the expenses incurred. The Iowa statute imposing a tax on public carriers on the basis of the number of ton-miles that every such carrier should travel on the highways was held valid in a decision of the U. S. Supreme Court rendered January 10, bearing on test cases brought by the Iowa Motor Vehicle Association.

ELECTIONS. Senator Daniel F. Steck, Democrat, who had originally been elected with the aid of a division in the State's Republican majority, was defeated on November 4 for reelection, by L. J. Dickinson, Republican. Dan W. Turner, Republican, was elected Governor, defeating F. P. Hagemann, Democrat. Ten Republicans and one Democrat were elected to the House of Representatives. The Republican majorities in the Legislature suffered some reduction.

OFFICERS. Governor, John Hammill; Lieutenant-Governor, Arch W. McFarlane; Secretary of State, Ed. M. Smith; Treasurer, R. E. Johnson; Auditor, J. W. Long; Attorney-General, John Fletcher; Superintendent of Public Instruction, Agnes Samuelson; Secretary of Agriculture, Mark G. Thornburg.

JUDICIARY. Supreme Court Justices: Truman S. Stevens, Charles W. Vermillion, Frederick F. Faville, Lawrence DeGraff, William D. Evans, E. G. Albert, E. W. Morling.

IOWA, STATE UNIVERSITY OF. A coeducational, State institution of higher learning in Iowa City; founded in 1847. The enrollment for 1929-30 was 9705, of whom 5214 were men and 4491 women. For the autumn of 1930 the enrollment was 6742, while the summer session registration totaled 4544. There were approximately 600 members on the faculty in the autumn of 1930. The income for 1929-30, including revolving funds, was \$5,447,734. The general library contained 314,502 volumes and the law library, 52,125 volumes. President, Walter A. Jessup, Ph.D., LL.D.

IOWA STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS. A State institution for the higher education of men and women in Ames, Iowa; founded in 1868. The enrollment for the autumn term of 1930 was 4318, distributed as follows: Agriculture, 817; agricultural engineering, 60; engineering, 1498; home economics, 950; industrial science, 340; veterinary medicine, 231; and graduate school, 422. The registration for the first half of the 1930 summer session was 1496 and for the second half, 803. The faculty numbered 497 members. The endowment funds amounted to \$695,000, and the income for the year was \$3,430,000. The library contained approximately 185,000 volumes. President, Raymond Mollyneux Hughes, LL.D.

IRAQ, or MESOPOTAMIA. A territory in southwestern Asia, occupying the basin of the Tigris and Euphrates rivers between Persia and northern Arabia. It comprises the former Turkish vilayets of Bagdad, Basra, and Mosul, which were conquered by British and Indian troops during the World War and later recognized as an independent state under a mandate assigned to Great Britain. Capital, Bagdad, with a population of about 145,000; reigning king in 1930, Feisal.

AREA AND POPULATION. The area is about 143,250 square miles and the population, at the census of 1920, was 2,849,282. Besides 87,488 Jews

and 78,792 Christians, the inhabitants are mainly Mohammedans of the Sunnite and Shiite sects. Basra, the chief sea port, with about 50,000 inhabitants; Kerbela (65,000), and Mosul (60,000), are other leading cities.

There were (1928) 26,706 pupils in 264 government primary and elementary schools; 742 pupils in two secondary schools; and 344 pupils in nine intermediate schools. The University of Al ul Bait was opened in 1926. Arabic, Kurdish, and Turkish are the languages of instruction.

PRODUCTION. Vast areas of Iraq's rich soil can be cultivated only through irrigation. Besides canal systems operated by the Government, tribal groups, and individuals, there were at the end of 1929 about 1800 pumps used to irrigate approximately 900,000 acres. Cheap oil for the operation of the pumps is obtained from three wells near the Persian border. As cheap fuel is an important factor in the economics of farming, Iraq's agricultural future is linked with its oil reserves. The Iraq Petroleum Company, a combination of United States, English, and European oil interests, which held monopoly rights to oil in the country, had three wells in production near the Persian border in 1930. Oil had also been struck in a number of wells near Kirkuk and the Mosul and Kifri districts were being prospected with favorable results. Pipe lines from the oil fields to Basra were under construction.

Wheat, barley, cotton, dates, and wool are the leading farm products. The cotton crop in 1929 was 4600 bales (5202 bales in 1928). Other products are oats, linseed, flax, sheep casings, licorice root, and fruits.

COMMERCE. During the fiscal year ended Mar. 31, 1929, imports totaled 95,006,000 rupees (\$34,500,000), as compared with 105,557,000 rupees in 1927-28. Exports totaled 55,741,000 rupees (\$20,300,000) in 1928-29 and 61,541,000 in 1927-28. The annual large adverse balance is largely offset by such invisible items as cash expenditures by British Forces in Iraq, the cash subsidy given by the British Government to the Iraqi Army, and expenditures by foreign business firms, pilgrims, and tourists. Iraq handles most of the transit trade to and from Persia, the total transit trade in 1927-28 amounting to 58,811,882 rupees.

FINANCE. Revenues for the fiscal year ended Mar. 31, 1929, totaled 59,059,320 rupees and expenditures 59,200,581 rupees, according to preliminary returns. For the preceding year revenues amounted to 59,097,055 rupees and expenditures to 56,993,338 rupees. In 1930, the fall in world prices, with accompanying decreases in Basra customs receipts and in the income of the farming population, adversely affected the budget. The Indian rupee, par value about \$0.3636, is accepted as legal tender in Iraq.

COMMUNICATIONS. Railways of Iraq totaled 752 route miles in 1930, of which 128 miles were standard gauge and 624 miles meter gauge. Though owned by the British government, the railways are administered by the Government of Iraq. The lines connect Bagdad with Baiji in the northwestern part of the country and with Magil, the port of the city of Basra on the Persian Gulf. The gross revenue for the fiscal year 1928-29 totaled 8,379,593 rupees—receipts from 715,501 passengers and 450,660 tons of freight—and the expenditures 8,246,580 rupees, leaving a net revenue of 133,013 rupees. There were nearly 5000 miles of highways (1930). Bagdad and Basra are links in the London to Karachi air line.

GOVERNMENT. The organic law passed by the constituent assembly in June, 1924, provided for a limited monarchy and a responsible government. The legislative body consists of the Senate of 20 nominated "Elder Statesmen" and the Lower House of 88 elected deputies. King Feisal ascended the throne Aug. 23, 1921, as a result of a plebiscite in which 96 per cent of the inhabitants voted in his favor. Premier and Minister of Foreign Affairs in 1930, Gen. Nuri Pasha as Said (appointed Mar. 23, 1930).

HISTORY. Two treaties negotiated during 1930 strengthened perceptibly the none too stable foundations of the Kingdom of Iraq. The first, signed February 24, was a treaty of friendship and conciliation between Iraq and the Kingdom of Hejaz and Nejd, which apparently eliminated the threat to Iraq's independence offered by the powerful Wahabi leader, Ibn Saud (for details of the treaty see ARABIA under *History*). The second, concluded at Bagdad toward the end of June by Sir Francis Humphreys, British High Commissioner, and the Iraqi Cabinet, provided for the virtually complete independence of Iraq.

The latter treaty was to become operative upon Iraq's admission to the League of Nations in 1932 and was to remain in force for 25 years. It provided for an alliance between the two countries in the event of war, the maintenance and protection of essential British communications with India and Australia, and the retention of British forces in Iraq for five years after 1932 pending the organization of native forces to replace them. Three permanent British air bases were to be maintained at Basra and west of the Euphrates. Any foreign military instructors employed were to be British but Iraq was to assume responsibility for the maintenance of order in the country and for defense against aggression.

The treaty was intended to relieve the British treasury of a heavy military burden as well as to meet the demands of Iraqi Nationalists. The Nationalist press, however, denounced those sections permitting the establishment of British air bases west of the Euphrates and making independence contingent upon admission to the League of Nations. It was feared that France and Italy, controlling similar Arab territories, would successfully oppose Iraq's admission and thus indefinitely postpone the termination of British supervision. The King on July 4 dissolved the Chamber of Deputies "to afford the nation an opportunity of expressing an opinion" on the treaty. A general election, held in October, resulted in an overwhelming victory for the Government. The Anglo-Iraqi treaty was ratified at a special session of the new Parliament on November 16. The Chamber of Deputies approved the pact by a vote of 69 to 13 and the Senate by 11 to 5. An agreement between Britain and Iraq covering the Iraqi railways and the port of Basra was signed at London August 20. Another agreement revising the administration of justice was published September 15.

Partly due to Nationalist agitation against Great Britain and partly because of internal dissension centring about Yashin Pasha Hashimi, Minister of Finance, the Cabinet headed by Nazi Bey Suwaidi resigned on March 11. A disagreement with the British High Commissioner was reported over the Cabinet's proposal to terminate the contracts of numerous British officials attached to the Iraqi military and police forces. A new Cabinet was formed March 23, with Gen.

Nuri Pasha as Said as Premier and Minister of Foreign Affairs.

The Kurds of Northern Iraq, who for several years had enjoyed virtual autonomy, petitioned the Government during July for the establishment of an independent Kurdish state. Their unrest was attributed in part to the proposed termination of British administrative control in Iraq. A protest against the omission from the Anglo-Iraqi treaty of a clause safeguarding Kurdish autonomy after 1932 was cabled to the League of Nations. The Cabinet agreed to recognize Kurdish as the official language in the northern provinces and the acting Prime Minister, himself a Kurd, and the High Commissioner, visited the Kurds to reassure them of their future status. Kurds demonstrating against the Government's methods of conducting the electoral campaign in Kurdish district, clashed with the authorities at Sulaimanieh, September 11. Iraqi troops fired on the demonstrators and 13 persons were killed and 35 wounded, including one Iraqi soldier killed and four soldiers and police wounded. Iraqi troops were sent to crush another Kurd outbreak late in October.

The ten-year-old controversy over the exploitation of the large Iraq petroleum deposits appeared near solution in October, 1930, with the announcement of an agreement for the construction of a main pipe line from the oil fields to the British-controlled port of Haifa, with a branch line to Tripoli in the French mandated territory of Syria. In December, an Italian protest was reported to have prevented the early construction of the pipe line, through which Iraq hoped to increase her budget revenues. See KURDISTAN, PERSIA, and TURKEY under *History*.

IRELAND. The smaller of the two main British Isles, with an area of 32,586 square miles; politically divided into Northern and Southern Ireland, the former consisting of the parliamentary counties of Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone, and the parliamentary boroughs of Londonderry and Belfast; and the latter of the remaining 26 counties. Northern Ireland is under a separate Parliament and executive by the Government of Ireland Act of 1920 (see IRELAND, NORTHERN). The southern counties constitute a self-governing dominion, known as the Irish Free State, under the Treaty of Dec. 6, 1921. (See IRISH FREE STATE.) The total population of the island June 13, 1921, was estimated at 4,485,000, as compared with 4,390,218 at the census of 1911. No census for all Ireland was taken in 1921. Statistics for Ireland as a whole are no longer compiled and assembled, but for the two divisions, will be found under their respective titles, IRELAND, NORTHERN, and IRISH FREE STATE.

IRELAND, NORTHERN. A constituent part of the United Kingdom, comprising the parliamentary counties of Antrim, Armagh, Down, Fermanagh, Londonderry, and Tyrone, and the two parliamentary boroughs of Belfast and Londonderry. Capital, Belfast.

AREA, POPULATION, ETC. The area of Northern Ireland, exclusive of water, is 3,351,444 statute acres (also given as 5238 square miles). At the census of 1926, the population was 1,256,561, as compared with 1,250,531 in 1911. The estimated population, as of June 30, 1929, was 1,250,000. In 1928, births totaled 25,963, deaths 18,004, and marriages, 7264. Roman Catholics constituted one-third of the population. The popu-

lation of Belfast was 415,007 in 1926. For the academic year 1928-29 there were 1933 public elementary schools, with 200,919 pupils; 72 secondary schools, with 10,611 pupils; and 135 technical and other schools, with about 24,000 students. Queen's University, Belfast, had 1375 students (1929).

PRODUCTION. Agriculture is the main occupation, although important linen and shipbuilding industries centre in Belfast. In 1929, there were 102,295 farm holdings exceeding one acre and the acreage under crops was 1,013,886, as compared with 1,022,915 acres in 1927. The yield, in tons, of the principal crops (1928) was: Oats, 276,519; potatoes, 1,154,130; turnips, 765,839; flax, 5856; and hay, 794,835. Cattle, pork products, and butter and eggs are shipped to England in considerable quantities. Livestock in 1928 included 738,005 cattle, 624,034 sheep, and 229,128 swine. Linen exports from the United Kingdom in 1927, practically all supplied by Northern Ireland, were valued at £9,800,798. The output capacity of the Belfast shipyards exceeds 250,000 tons annually. Rope, twine, tobacco, soaps are other products. Statistics for commerce are included in those given for the United Kingdom of Great Britain and Northern Ireland.

FINANCE. Approximately 30 per cent of the annual expenditure represents the cost of Imperial defense and of Northern Irish services reserved to the Imperial Parliament. Deducting the cost of these services, the budget for 1929-30, estimated to balance at £8,324,000, showed a surplus of about £17,000, while for 1928-29, revenue totaled £8,145,000 and expenditure £8,067,000. Unfavorable economic conditions and the increasing cost of social services were given as the reason for decreasing budget surpluses. The contribution toward the Imperial Exchequer, provisionally fixed in 1920 at about £6,000,000, shrank to about £875,000 in 1929-30 and to about £150,000 in 1930-31.

COMMUNICATIONS. In addition to 754 miles of railway line, the country is served by various inland waterways, supplemented by 180 miles of canals. There were 12,971 miles of highway in 1929.

GOVERNMENT. The country forms an integral part of the United Kingdom and is represented in the House of Commons by 13 members. The local Parliament elected in May, 1929, included 37 Unionists, 11 Nationalists, 3 Independent Unionists, and 1 Laborite. The Governor in 1930 was the Duke of Abercorn. The ministry was as follows: Prime Minister, Viscount Craigavon; Finance, H. M. Pollock; Home Affairs, Sir R. Dawson Bates; Labor, J. M. Andrews; Education, Viscount Charlemont; Agriculture, Sir E. M. Archdale; Commerce, J. M. Barbour.

IRIGROYEN, HIPÓLITO. See ARGENTINA under *History*.

IRISH FREE STATE. A self-governing Dominion of the British Empire, constituted under the Irish Free State Government Act of Dec. 5, 1922, which embodies the terms of the Treaty of Dec. 6, 1921. Capital, Dublin.

AREA AND POPULATION. Comprising about five-sixths of Ireland, the Irish Free State has an area of 17,024,481 statute acres, or 26,585 square miles. The population in 1929 was estimated at 2,943,000, as compared with 2,949,000 in 1928 and 2,971,922 at the census of 1926. The loss of population is due largely to emigration. In 1928, there were 59,176 births, 41,792 deaths, and 13,-

716 marriages; overseas emigrants numbered 24,691 (27,148 in 1927) and overseas immigrants, 2154 (1904 in 1927). The chief cities, with their populations in 1926, are Dublin, 418,981 (397,957 at census of 1911); Cork, 78,490; Limerick, 39,448; and Waterford, 26,647. At the census of 1926, there were 2,751,269 Roman Catholics and 207,307 Protestants, as compared with 2,812,509 Roman Catholics and 327,179 Protestants at the census of 1911.

EDUCATION. Primary education is free and compulsory for children under 14 years. Study of the Irish language is obligatory, and its use as a medium of instruction is increasing. In 1928-29, there were 5555 elementary schools, with 512,333 pupils and, in 1927-28, 287 secondary schools, with 25,561 pupils. Trinity College, Dublin, had 1309 students in 1928-29 and the three units of the National University at Cork, Galway, and Dublin had 2374 students.

PRODUCTION. The Irish Free State is primarily an agricultural country. Of the total area in 1928, 22 per cent was under cultivation, 49.5 per cent comprised permanent grass land, and 30 per cent, wood, forest, and other land. Production (in tons) of the leading crops in 1929, with figures for 1928 in parentheses, was: Wheat, 31,718 (31,763); oats, 689,385 (637,291); barley, 127,720 (131,697); rye, 3159 (3761); potatoes, 3,006,676 (2,246,336); sugar beets, 141,139 (140,488); flax, 1181 (1177). Cereal production is inadequate for domestic needs and considerable quantities of wheat, wheat flour, and corn are imported annually. Livestock raising and dairying are important. In 1928, there were 4,125,145 cattle, 3,263,556 sheep, 1,182,757 swine, 433,621 horses, and 195,920 asses in the country. A total of 3742 vessels and 12,755 men and boys were engaged in the fisheries in 1928. The fish catch in the same year was valued at \$1,544,000.

The total net output of Irish mines and factories in 1926, according to the census of that year, was £24,190,000 (\$118,000,000), after subtracting the cost of materials, fuel, and power from the gross value of the products. Salaries and wages totaling £13,200,000 (\$64,200,000) were paid to 107,300 workers. Butter, cheese, margarine, milled grain, and liquors were the leading manufactured products, the output of each totaling about £7,000,000. Other manufactured products were cured bacon, tobacco, bread, confectionery, and biscuits. The number of unemployed registered in July, 1930, totaled 23,393, as compared with 21,834 in August, 1929.

COMMERCE. Foreign trade increased in 1929, as compared with 1928. The value of imports, excluding bullion shipments, rose to £61,301,000 from £59,852,000, while the value of exports increased to £46,804,000 from £45,591,000. The unfavorable balance of trade likewise showed a slight gain from £14,261,000 in 1928 to £14,497,000 in 1929. Great Britain purchased 82 per cent of all Free State exports in 1929, and furnished 67 per cent of all imports. Exports went chiefly to Great Britain, £38,420,030; Northern Ireland, £5,045,220; the United States, £993,320. The chief sources of imports were: Great Britain, £41,762,536; Northern Ireland, £6,117,079; United States, £4,772,495; Argentina, £2,440,717; Germany, £1,159,856.

The leading imports in 1929 were: Wheat and wheat flour, £5,625,576; maize, £3,158,840; coal, £3,155,050; tea, £2,345,327; iron and steel and their manufactures (excluding cutlery and ma-

chinery), £2,276,762. The chief exports were: Live cattle, £13,549,485; porter, beer, and ale, £4,790,353; butter, £4,554,855; fresh eggs, £2,902,767; bacon, £2,720,365; horses, £2,517,522.

FINANCE. The budget for the fiscal year commencing Apr. 1, 1930, placed total expenditures at £30,337,000 and revenues at £30,257,000, of which £24,257,000 was anticipated from ordinary taxation sources and £6,000,000 from a new long-term loan. Of the expenditures £21,783,000 were allotted for ordinary supply services and £4,219,000 for central fund services, including the debt service. Receipts and expenditures for 1929-30 were calculated to balance at £29,575,000, according to revised estimates. Actual returns showed an excess of expenditure over revenue of £877,500, although ordinary revenues exceeded expenditures by about £250,000. Total revenues amounted to £24,172,639 and total expenditures to £25,050,061.

The public debt on Mar. 31, 1930, totaled £31,465,000 which was offset by government assets of £11,215,000, leaving a net debt of £20,250,000. The per capita debt was among the lowest in Europe.

COMMUNICATIONS. Railway lines in operation in the Free State at the beginning of 1929 had a mileage of 2674 miles, of which 84 per cent were standard gauge. There were 650 miles of inland canals and waterways, and more than 4388 miles of motor highways. A total of 13,500 vessels, aggregating 9,407,747 gross tons, entered and 13,463 vessels of 9,447,151 tons cleared the ports in 1928. The telegraph and telephone systems are government owned.

GOVERNMENT. The Irish Free State has a written constitution which provides that her status shall be similar to that of the Dominion of Canada. It has a coequal status with the other dominions of the United Kingdom, has complete control of its economic life, with a customs boundary right against all nations, including Great Britain and Northern Ireland. The Governor-General in 1930 was James MacNeill, appointed Dec. 6, 1927. The Executive Council as organized in October, 1927, was as follows: President, William T. Cosgrave; Vice President, Finance, Posts and Telegraphs, Ernest Blythe; Defense, Desmond Fitzgerald; Industry and Commerce and External Affairs, Patrick McGilligan; Education, J. Marcus O'Sullivan; Justice, James FitzGerald-Kenny; Agriculture, Patrick Hogan; Local Government and Public Health, Richard Mulcahy; Lands and Fisheries, Finian Lynch. The distribution of parties in the Dail Eireann, or lower Chamber of Parliament, in 1930 was as follows: Cumann na nGaedhal (President Cosgrave's party), 63; Fianna Fail (de Valera Republicans), 57; Labor, 13; Independents, 11; Farmers, 6; National League, 2; The Speaker 1.

HISTORY. The outstanding internal development of the year was the defeat of President Cosgrave and his colleagues of the Executive Council on March 27 and their reelection six days later after vain attempts of the Fianna Fail and of the Labor party to secure a governing majority. The Cosgrave Cabinet, which had been in power for eight years, was defeated by a majority of two votes on an amendment to the Old Age Pensions Act which would have increased the pension benefits distributed by the Government materially. Mr. Cosgrave's reelection was made certain when the Labor party, which held the balance of power, announced that it would not support Mr. de

Valera, who was then in the United States raising funds for a projected newspaper. Labor spokesmen declared that they accepted the Anglo-Irish Treaty without equivocation and that they would not vote for the Fianna Fail leader so long as he continued to subordinate every other political issue to the removal of the obligations assumed under the Treaty. Fianna Fail in turn declared that it would not support the candidacy of T. O'Connell, leader of the Labor party. In the final division, Mr. Cosgrave was elected by 80 votes to 65.

The Imperial Conference of 1930, which met in London in September, was another bone of political contention. Fianna Fail spokesmen demanded that the Government boycott the conference. They contended that the maintenance of the imperial connection would mean political, industrial, and cultural domination of Ireland by Britain. While rejecting this plea, the Government seized the opportunity presented by the conference to consolidate the Free State's position as an autonomous and coequal Dominion of the British Empire (see GREAT BRITAIN under *History*). In December, John W. Dulaney was appointed High Commissioner in London, succeeding Prof. T. A. Smiddy, who became a member of the new Free State tariff commission.

A revival of the terroristic tactics in vogue during the civil war was threatened with the opening of Parliament in November. A guard at the house of Prof. Michael Hayes, Speaker of the Dail, was shot by two men in civilian attire November 23. The shooting was preceded by other attacks on guards of government officials and was attributed to resentment at the Government's order disbanding the Defense Association, an army reserve organization. The poor harvest of 1930 and low agricultural prices stimulated a demand for a tariff on agricultural imports at the winter session of Parliament. The Opposition leader, de Valera, had long urged the imposition of high tariff duties as a means of promoting domestic industries and preventing emigration. Opposing these tariff proposals, the Cosgrave Government promised \$1,500,000 for unemployment relief, particularly in rural areas.

Thirteen books by leading American and English authors comprised the first list of publications banned under the censorship act of 1929, it was announced May 13, 1930. Nine of the books were on the subject of birth control.

FOREIGN RELATIONS. The election of the Free State to a non-permanent seat on the Council of the League of Nations in September, 1930, was considered a diplomatic triumph in government circles, as it represented the first international recognition of the Free State's status as a sovereign nation and marked an advance in her claim for equality with the other League members. The first consulate established by any British Dominion was opened by the Irish Free State in New York City during the year. The first Papal Nuncio to Ireland in more than 300 years presented his credentials to the Governor General on Jan. 15, 1930. See IRELAND, NORTHERN, and LEAGUE OF NATIONS.

IRISH LANGUAGE AND LITERATURE. See PHILOLOGY, MODERN, under *Celtic*.

IRON AND STEEL. The iron ore mined in the United States in 1930, exclusive of ore that contained 5 per cent or more of manganese in the natural state, was estimated by the U. S. Bureau of Mines at 58,359,000 gross tons, a decrease of

20 per cent as compared with that mined in 1929. The ore shipped from the mines in 1930 was estimated at 55,094,000 gross tons, valued at \$145,888,000, a decrease of 27 per cent in quantity and of 26 per cent in total value as compared with the figures for 1929. The average value of the ore per gross ton at the mines in 1930 was estimated at \$2.65; in 1929 it was \$2.61. The stocks of iron ore at the mines, mainly in Michigan and Minnesota, apparently increased from 7,067,206 gross tons in 1929 to 10,430,000 tons in 1930, or 48 per cent. The Bureau of Mines estimates were based on preliminary figures furnished by producers who in 1929 mined about 99 per cent of the total iron ore. They show the totals for the principal iron-ore producing States, and, by grouping together certain States, the totals for the Lake Superior district and for groups of Southeastern, Northeastern, and Western States.

About 84 per cent of the iron ore shipped in 1930 came from the Lake Superior district, in which approximately 49,378,000 gross tons was mined and 46,411,000 tons was shipped, decreases of 21 and 29 per cent, respectively, as compared with the quantities mined and shipped in 1929. The ore shipped in 1930 was valued at the mines at \$126,026,000, a decrease of 28 per cent. These totals include the ore from mines in southern Wisconsin and ore shipped by rail as well as by water from all mines, but exclude manganiferous ores amounting to approximately 801,500 gross tons in 1930 and 1,058,953 tons in 1929 that contained 5 per cent or more of manganese in the natural state. The former ore is chiefly hematite. The stocks of iron ore in this district apparently increased from 6,108,499 gross tons in 1929 to 9,175,000 tons in 1930, or 50 per cent. The shipments of iron ore by water from the Lake Superior district in 1930 (including manganiferous iron ores), according to the Lake Superior Iron Ore Association, amounted to 46,582,982 gross tons, a decrease of 29 per cent as compared with these shipments in 1929. The average value of the ore at the mines in the Lake Superior district in 1930 was \$2.72 a ton; in 1929 it was \$2.68.

The Southeastern States, in which the Birmingham district is the largest iron-ore producing area, mined approximately 5,937,000 gross tons of iron ore in 1930, a decrease of 13 per cent as compared with 1929. The shipments of iron ore from mines in these States in 1930 amounted to 5,851,000 gross tons, valued at \$11,349,000, decreases of 16 and 17 per cent, respectively, in quantity and value as compared with 1929. The ore is mainly hematite; brown ore and magnetite come next in order. The average value of the ore produced in these States in 1930 per gross ton was \$1.94; in 1929 it was \$1.96. The stocks of iron ore at the mines in this group of States, mainly in the Birmingham district, increased from 827,486 gross tons in 1929 to 914,000 gross tons in 1930.

The Northeastern States, which include the Adirondack district, New York, and the Cornwall district, Pennsylvania, in 1930 mined 2,245,000 gross tons of iron ore, an increase of 2 per cent. The iron ore shipped from mines in these States amounted to 2,033,000 tons, valued at \$7,345,000, decreases of 12 and 2 per cent, respectively, in quantity and value as compared with 1929. The stocks of iron ore in this group of States increased from 119,056 gross tons in 1929 to 328,000 tons in 1930. The average value of the ore in these States in 1930 per gross ton was \$3.61; in 1929

it was \$3.24. The bulk of this ore is magnetite.

The Western States that ordinarily produce iron ore, named in order of their importance, are Wyoming, Utah, New Mexico, Colorado, and Washington. Occasionally Arizona, California, Idaho, Montana, and Nevada contribute small quantities. In 1930 the Western States mined and shipped approximately 799,000 gross tons of iron ore, valued at \$1,168,000, a decrease of 33 per cent in the quantities mined and shipped and

Pig iron production in December was 1,665,690 tons, or 53,732 tons a day. The per diem rate was the lowest since January, 1922, comparing with 106,080 in April, 1930. On Dec. 31, 1930, there were 95 stacks active, or 90 fewer than on April 1 at the inception of the uninterrupted decline in pig iron output, and as compared with 157 on January 1. Production for 1930, totaling 31,399,105 tons, was 25.7 per cent smaller than the record 1929 output.

ESTIMATES OF IRON ORE MINED AND SHIPPED IN THE UNITED STATES IN 1930 AND ACTUAL OUTPUT IN 1929

| District | Ore mined | | Ore shipped | | | |
|----------------------|--------------------|--------------------|--------------------|---------------|--------------------|---------------|
| | 1929 Gross tons | 1930 Gross tons | 1929 Gross tons | 1929 Value | 1930 Gross tons | 1930 Value |
| Lake Superior: | | | | | | |
| Michigan | 15,456,397 | 13,668,000 | 16,838,568 | \$ 47,597,976 | 11,262,000 | \$ 32,248,000 |

| Total | 2,195,601 | 2,245,000 | 2,311,809 | 7,482,672 | 2,033,000 | 7,345,000 |
| Western States | 1,192,122 | 799,000 | 1,191,719 | 1,689,520 | 799,000 | 1,168,000 |
| Grand total | 73,027,720 | 58,359,000 | 75,602,734 | \$197,148,640 | 55,094,000 | \$145,888,000 |

of 31 per cent in value of shipments as compared with 1929. The ore comprises hematite, magnetite, and brown ore.

The imports of iron ore reported for the full year ended Dec. 31, 1930, amounted to 2,775,124 gross tons, valued at \$8,113,039, or \$2.94 a ton. The imports for the year 1929 were 3,139,334 gross tons, valued at \$8,145,354, or \$2.59 a ton. The reported exports of iron ore for the year ended Dec. 31, 1930, amounted to 752,267 gross tons, valued at \$2,734,168, or \$3.63 a ton, as compared with exports for the entire year 1929 of 1,304,417 tons, valued at \$4,774,842, or \$3.66 a ton.

The accompanying table shows the quantity and value of the iron ore mined and shipped in the United States by the principal producing States. The figures for 1929 are final, but those for 1930 are subject to revision.

UNITED STATES PIG IRON PRODUCTION. Production of pig iron in the United States in 1930 aggregated 31,399,105 tons or 25.7 per cent below the 1929 record total of 42,286,000 tons. The monthly pig iron output during the three years compares as follows in tons:

| | 1930 | 1929 | 1928 |
|-----------------|-----------|-----------|-----------|
| January | 2,827,464 | 3,442,770 | 2,866,468 |
| February | 2,538,920 | 3,206,185 | 2,900,126 |
| March | 3,246,171 | 3,714,473 | 3,199,674 |
| April | 3,181,868 | 3,662,625 | 3,180,900 |
| May | 3,232,760 | 3,899,082 | 3,283,856 |
| June | 2,934,900 | 3,715,104 | 3,082,840 |
| July | 2,639,537 | 3,782,511 | 3,072,711 |
| August | 2,523,921 | 3,756,680 | 3,186,570 |
| September | 2,276,770 | 3,466,611 | 3,062,814 |
| October | 2,164,768 | 3,588,118 | 3,873,506 |
| November | 1,867,107 | 3,181,411 | 3,802,523 |
| December | 1,665,690 | 2,836,916 | 3,869,846 |

UNITED STATES STEEL PRODUCTION. Steel ingot production in 1930 according to the American Iron & Steel Institute totaled 39,652,00 tons, against 54,312,000 in 1929 and comparing with 36,811,000 in 1924. In both 1930 and 1929 the number of working days was 311.

Following are monthly calculations of the institute for steel ingot production, all in tons:

| | Monthly output re- porting com- panies, 1930 | Estimated monthly all companies, 1930 | Estimated monthly all companies, 1929 |
|-----------------|--|--|--|
| January | 3,578,574 | 3,796,090 | 4,500,209 |
| February | 3,844,639 | 4,078,327 | 4,328,789 |
| March | 4,053,520 | 4,299,905 | 5,068,265 |
| April | 3,915,844 | 4,153,860 | 4,950,139 |
| May | 3,794,158 | 4,024,778 | 5,286,339 |
| June | 3,243,113 | 3,440,239 | 5,062,955 |
| July | 2,765,315 | 2,938,399 | 4,850,668 |
| August | 2,917,983 | 3,095,293 | 4,939,086 |
| September | 2,703,643 | 2,867,978 | 4,527,877 |
| October | 2,564,543 | 2,720,414 | 4,584,326 |
| November | 2,106,446 | 2,234,482 | 3,521,111 |
| December | 1,892,729 | 2,007,774 | 2,903,012 |

The following table gives a comparison of the total annual production of steel ingots by all steel ingot mills from 1911 to 1929 inclusive:

| 1930 | 39,652,539 | 1920 | 40,881,920 |
|------------|------------|------------|------------|
| 1929 | 54,164,348 | 1919 | 39,694,795 |
| 1928 | 49,865,185 | 1918 | 48,051,022 |
| 1927 | 43,397,743 | 1917 | 49,619,200 |
| 1926 | 46,936,205 | 1916 | 41,401,917 |
| 1925 | 44,140,738 | 1915 | 31,284,212 |
| 1924 | 36,811,157 | 1914 | 22,819,784 |
| 1923 | 43,485,685 | 1913 | 30,280,130 |
| 1922 | 34,508,418 | 1912 | 30,284,682 |
| 1921 | 19,184,084 | 1911 | 23,029,479 |

Steel ingot production in December, 1930, fell to the lowest level since July, 1924, and the out-

put for the year 1930 also was the lowest in 6 years. December output by companies which in 1929 produced 94.27 per cent of the country's total amounted to 1,892,729 tons and the estimated output for all companies was 2,007,774 tons. These figures compare with an output for July, 1924, the previous low, of 1,877,789 tons.

A hopeful feature of the situation at the end of the year was that the unfilled orders of the United States Steel Corporation amounted to \$3,943,596, which was an increase from August of the same year. On Dec. 31, 1929, unfilled orders of this corporation amounted to \$4,417,183, and in 1928 to \$3,976,742.

Production of pig iron in Canada during 1930 at 747,448 long tons was 30.8 per cent under the record for the industry, which was established at 1,080,160 in 1929.

For the year 1930 production of steel at 1,011,743 tons was 26.6 per cent less than the 1,378,024 tons made in the record year in 1929. In 1930 production included 957,430 tons of ingots and 54,313 tons of castings, 95 per cent intended for sale.

The total pig iron output for Great Britain for 1930 was 6,196,800, comparing with 7,589,300 in 1929. The total output of steel in 1930 was 7,298,500 tons, comparing with 9,636,200 in 1929 and was the lowest since 1926. From 1929 the number of furnaces working had decreased from 162 to 76; no less than eleven were damped down and five had suspended operations altogether.

The monthly output of British steel during 1930 averaged 608,200 tons, a similar basis of calculation giving 804,600 for the 1929 average and 638,600 for the average of 1913.

Production of steel in the United Kingdom during a series of calendar years compares as follows:

| Tons | | Tons | |
|------|-----------|------|-----------|
| 1930 | 7,298,300 | 1924 | 8,201,200 |
| 1929 | 9,636,200 | 1923 | 8,481,800 |
| 1928 | 8,519,700 | 1922 | 5,880,600 |
| 1927 | 9,097,900 | 1921 | 3,703,400 |
| 1926 | 3,596,100 | 1920 | 9,067,300 |
| 1925 | 7,385,400 | 1919 | 7,894,000 |

The largest British steel production of wartime, and the largest in the country's history, was the 9,539,439 tons of 1918. The largest prewar production was 7,663,876, in 1913. Until 1906 the annual output never exceeded 6,000,000 tons.

The following table shows the estimated production of pig iron and steel in Russia in 1930 as compared with the three previous years and the prewar year, 1913, in gross tons:

| | Pig iron | Steel |
|------|-----------|-----------|
| 1930 | 4,950,000 | 5,250,000 |
| 1929 | 4,240,000 | 4,760,000 |
| 1928 | 3,220,000 | 4,180,000 |
| 1927 | 2,920,000 | 3,580,000 |
| 1913 | 4,550,000 | 4,750,000 |

WORLD PRODUCTION. After the record figures of world production for both pig iron and steel in 1929, there was a sharp decline, which naturally reflected the world-wide business depression. According to the annual summaries of *The Iron Age* (New York), from which the accompanying tables are reproduced, pig iron production receded to near the 1913 total, but steel remained considerably larger than in the year

before the World War. The accompanying estimates show the pig iron output in 24 countries, and the steel ingot and casting production of 22 nations. While pig iron declined from 97,230,000 in 1929 to 79,100,000 in 1930, there was a shrinkage in the production of steel from 118,430,000 in 1929 to 93,600,000 in 1930. Where American pig iron was 43.8 per cent of the world's total, and steel 47.8 per cent in 1929, it declined to 40 per cent for pig iron and 44 per cent for steel in 1930. The most striking feature of the following tables was the heavy expansion in Russian production, with a new record in pig iron of 495,000 tons and in steel of 5,250,000 tons. Also there was a striking decline for the production in Germany.

TABLE OF WORLD PRODUCTION OF PIG IRON
[In millions of gross tons]

| (From the Iron Age, New York) | | | | |

* Partly estimated. Lorraine's output is included in Germany's in 1913, but in that of France since 1918.
Data revised from those previously published.

The table of world steel exports and imports is also of interest in this connection, the figures

showing marked declines both in exports and imports. France was the only nation to show an increase in imports. Germany, while leading in the amount of exports, nevertheless showed a marked decrease over the previous year.

TABLE OF STEEL EXPORTS AND IMPORTS OF LEADING COUNTRIES
[In millions of gross tons]

| Exports | 1913 | 1922 | 1929 | 1930 * |

IRRIGATION. See RECLAMATION.

IRVINE, JULIA JOSEPHINE (THOMAS). An American educator and former president of Wellesley College, died in Grasse, Bouches-du-Rhone, France, Mar. 14, 1930. She was born in Salem, O., Nov. 9, 1848, and was graduated from Cornell University with the A.B. degree in 1875 and the M.A. degree in 1876. While studying for the latter degree she was married to Charles James Irvine. After Mr. Irvine's death in 1886 she began her teaching career in private schools in New York, and Boston, and in 1890 was appointed professor of Greek at Wellesley. In 1894 she became secretary of the Academic Council of the Faculty and a short time later was appointed acting president. The following year she was elected president. During her administration the schools of art and music were organized into departments and brought into closer connection with other academic work, and the chemical laboratory and chapel were erected. The degree of Litt.D. was conferred on her by Brown University in 1895. After her resignation in 1899, Mrs. Irvine removed to France but returned to Wellesley for the year 1913-14 as acting professor of French.

ISOSTASY. See GEOLOGY.

ITALIAN ART. See ART EXHIBITIONS.

ITALIAN LITERATURE. Recalling the sensation created two seasons previously on the appearance of the monthly journal, *Pègaso*, with material of polemical nature launched as an attack against the spirit or "domination of criticism on literary production (spirit of Croce)," it was of interest to note that the vitality and freshness that characterized the first issues of this magazine had in no wise dissolved or suffered dilution and, judging from the preëminence of the contributors and the quality of the contributions, the magazine continued to be flavored as representative of Italy's intellectuals and men of letters. Its success, thus far, was due, to a degree, to the eclectic personality of its editor and founder, Ugo Ojetti. In addition, two new

journals, among others, made their initial appearance during the year. Guido Stacchini assembled an ambitious weekly, *Giovedì* (Milan), dealing with literature, art, music, the theatre, and the cinema. Its special feature was in the way of exhaustive discussions on international culture. Luigi Russo, who edited for so many years the former *Leonardo*, found occasion to bring out *La Nuova Italia*, a magazine treating of literary criticism pertinent to Italian topics only. The bibliographical magazine of long-standing, *I Libri del Giorno* and the old *Leonardo* were fused into a new and augmented *Leonardo* published by Treves-Bestetti-Tumminelli (Milan-Rome). The bulk of its material was designed to be in the form of book reviews on such major topics as contemporary literature, philosophy, religion, history, philology (classical and modern), archaeology, law, economics, politics, and geography. The weekly, *Giornale dell'Arte*, during the year returned to schedule appearance; the art section, in which it specialized, took precedence over the literary.

Three activities of the literary season held attention. First came the *Pègaso Edizioni*, a "Series" launched under the direction of Ugo Ojetti and Pietro Pancrazi and published by Le Monnier of Florence.

Young Giulio Preda launched a series of books in a *Collection* of poetry past and present, *Raccolta di libri di poesia* (Milan), two volumes of which went into circulation (see below, *Poetry*). Another important publishing enterprise was undertaken by G. A. Borgese, director, and A. Mondadori, publisher, under the title of *Biblioteca Romantica*. This series called for a programme of 50 volumes translated from the masterpieces of the most representative masters of world literature in recent epochs, including among others, Balzac, Stendhal, Goethe, Tolstoy, De Musset, Wilde, Goldsmith, and Hawthorne. The list of translators numbered many of Italy's distinguished authors, Panzini, Bontempelli, Deledda, Borgese, to mention a few. Some six volumes were published, of which Stendhal's *Certosa di Parma* and Goethe's *I dolori del giovane Werther* headed the list. The collection was scheduled for completion by 1933.

The weekly, *L'Italia Letteraria*, during the year carried spirited articles in the field of criticism. Appearing as front page features there were over a score of articles treating some of the present day *letterati* from interesting angles of literary criticism. It also conducted a prize referendum among its readers as to their choice of the hundred best books produced in contemporary Italian literature. Some 1800 readers took part in the competition and the choice of the public tallied favorably with the hundred books selected by a committee of critics and writers. Critics were grateful for the list compiled as to the 100 "most beautiful books" on contemporary Italian literature. (For this list see issue of *L'Italia Letteraria* Nov. 2, 1930.)

FICTION. In the field of the novel it was apparent that the younger writers had scored again. The first novel that came to our attention, Piero Gadda's *Mozzo* ("Deck-hand," published at Milan), gained the Fiera Letteraria Prize. This youthful writer has extraordinary ability to tell a story. He injects vital and human interests with a style which shows no imprints of rhetorical or stylistic effects. *Mozzo* deals with different episodes of a boy's life and the sea

that beckons him, so that he runs away to become a deck-hand. Another sea story was contributed by Lorenzo Viani who gained nation-wide reputation several years previously through his book, *Angio, Man of the Seas. The Return to the Fatherland* (*Ritorno alla patria*; Milan), his 1930 contribution, shared the Viareggio Prize. The author lacks method and architectural structure in his compositions, but his creations possess, on the other hand, moments of intense inspiration and beautifully-worded prose. *The Return to the Fatherland* revolves about the chap Tarmito who, after many years of roaming the seas, comes back to the fatherland in a crucial moment. The call of nationalism is stronger than his previous beliefs in anarchy, and he fights in the World War. Still another sea novel was offered by Umberto Fracchia whose tragic end cut short a literary career in the making. *La Stella del Nord* (*North Star*; Milan) tells about a shipwreck and a family. The book was withdrawn by Fracchia from competition in the Thirty Publishers' Prize, which it would have gained undoubtedly. This prize went to Fabio Tombari for his *La vita* (*A Life*; Milan), which tells about a boy who, after being ordered from his house, sails about the Adriatic and the Mediterranean. The book was received with disfavor by some critics for its poor and capricious handling of an otherwise original theme. Young Pietro Solari wrote *Cuorin-gola* (Lanciano), his *coup d'essai* in the field of novel. It is a book saturated with mixed emotions whose plot centres about a poverty-stricken student trying to wrest a few moments of solace from a fortuitous situation. Though the story contains a thin layer of comic motives there is a powerful undertone of the melancholy and the tragic this life can offer. The book, barring one realistic scene, can be numbered as one of the best of the season.

Space precludes discussions on other contributions by Italy's young authors, and attention must be directed to a few novels by *letterati* of long-standing. The new Academician, Massimo Bon-tempelli, brought out *The Life and Death of Adria and Her Children* (Milan), a book spun about the lady Adria whose beauty, metamorphose-like, is converted into the abstract and icy beauty of a statue. Lucio D'Ambra was certainly involved in a prodigious amount of literary activity. In the season under review he found time to put out a trilogy of novels: *The Job of Being a Husband, The Profession of Being a Wife* (Milan), to be followed by *The Art of Being a Lover. The Profession of Being a Wife, La professione di moglie*, gained the "Zisa" 1930 Prize. Lucio D'Ambra can always be counted upon for some seasoned and pleasurable observations. Compared to his other work, this trilogy was in much lighter vein, and, if it lacks literary value, it offers by contrast pleasant reading. Virgilio Broochi gave as his contribution of the year *Gli Occhi Limpidi* (*Clear Eyes*; Milan). Mr. Broochi treated here an old theme in garb of sincerity and freshness, if in nothing else. Marino Moretti took us to Flanders, to Bruges, in his novel *La casa del santo sangue* (*The House of Sacred Blood*; Milan), couching it in a nordic atmosphere. In *Sudore e sangue* (*Sweat and Blood*; Milan) the distinguished historian, Guglielmo Ferrero, completed the second part of his trilogy of novels in which the author continued his politico-historical exposition of Italy of the latter part of the XIXth century. This novel deals principally with the

Abyssinian War, and specifically the battle of Adua, in which the young millionaire protagonist is taken prisoner, along with other officers. The vivid picture of the battle of Adua should replace some myths regarding this disaster in the minds of many Italians.

Another historical novel was Alessandro Varaldo's *Il Cavaliere errante* (*Knight Errant*; Milan), depicting Italy of the tenth century. Though not without dragging a little, the author imparted a melancholy tone to an epoch when a cavalier's profession was war and wandering. The undertone of historicity depicts Italy, in addition to internal discord, struggling against foreign dominion.

THE SHORT STORY. Though not connected with the short story, there is opportunity to speak of several books of sketches. Anselmo Bucci who devotes himself to painting as a vocation gave us *Il pittore volante* (*Flying Painter*; Milan), which shared the Viareggio Prize. It is a book of aphorisms told in telegraphic fashion. The hundreds of epigrammatic paragraphs on a wide range of topics give rise to some excellent conclusions and furnish abundant fun. *L'Esopo moderno* (*Æsop the Modern*) published at Florence by Pietro Pancrazi was brought out by the Pegaso Series. It brings us Æsop flesh and blood in modern garb. As a matter of fact, Æsop is here a good-natured philosopher speaking in chatty Italian. He does not offer an ostentatious moral at every turn, though he frequently suggests one. Three hundred and seventy-three fables make a happy book, indeed. The Bagutta Prize went to Vincenzo Cardarelli for *Sole a picco* (*Sun at Zenith*; Bologna), a series of sketches drawing upon style for their principal value. That the author shows certain virtuosity in handling the idiom is shown in the different sensations vividly registered as we pass from the sun-scorched pavements of Florence to the sun-baked vineyards of Capri. The book contains also a few poems.

Passing to the short story proper, the season witnessed no decrease in production. Antonio Beltramelli's *Le strade verdi* (*Green Paths*; Milan), was a selection of short stories collected posthumously. In these stories reality was disguised under fantasy, irony tempered by humor, nostalgia suggested under a touch of the poetic. Take next Giuseppe Lipparini's *Racconti di Cutigliano* (*Stories of Cutigliano*; Milan), a batch of stories molded from the art of story telling. Terseness and simplicity is in order for 15 plots that have charm and originality. The stories are characteristically Tuscan, as human as they are interesting, worthy to be mentioned along with Fucini's *Veglie*. The Pegaso Series sponsored Corrado Alvaro's *Gente in Aspromonte* (Florence), stories about mountain folk, shepherds, gypsies, and rustics. Grazia Deledda added to her score or more creations a collection of stories (some taken from newspaper contributions), *La casa del poeta* (*The House of the Poet*, published at Milan). The Deleddian technique of story telling relies on simplicity of plot, as against complication, characters molded from moral activity, as against psychology, style without artifice, as against erudition and sophistication. The Nobel Prize was bestowed on this distinguished Sardinian several seasons ago. In G. B. Angioletti's *Il buon veliero* (Lanciano), the introspective element stands in relief. Angioletti, let us recall, is a critic of high-powered men-

tality. He is chief editor of *L'Italia Letteraria*. There were stories from the futurist and Academican, F. T. Marinetti, in *Novelle colle labbra tinte* (Milan), 24 stories, different and "electrifying." Lastly may be included Paolo Monelli's *Questo mestieraccio* (*This Awful Job!* published at Milan), sketches in and about the Mediterranean showing the vicissitude of a newspaper job, and Luciano Zeccoli's *Paristiana* (Milan), a posthumous collection of sketches of Paris behind the scenes. Zeccoli knew Paris intimately. He died there in 1929.

THEATRE. Luigi Pirandello, indefatigable in matter of energy and productivity, furnished the season with dominant notes in theatrical activity. *Questa sera si recita a soggetto* (*Tonight We Improvise!*; Milan), *Lazarus* (Milan), and *Come tu mi vuoi* (*As You Desire Me*; Milan), were a trio of new plays performed in Italy and elsewhere. The most amusing of the three, *Tonight We Improvise!*, deals with the theatre *per se*, or to what extent does theatrical device and technique lend itself toward creating a work of art. The problem in the last play revolves about the transformation of the actors into their characters, who in turn, are transformed into Tom Jones, Henry Smith, anybody. This can be brought about by a clever director with the unlimited amount of theatrical devices and apparatus at his disposal. The feature in this play has been to have the actors play a good part of the time off stage and among the audience. As in the numerous other plays in the *Maschere nude* series Pirandello dramatized his theories via satire, paradox, poetry, philosophy, and like elements. Aside from the purely intellectual concept of the play it offers many amusing situations. In *Lazarus* (performed also in Germany and England), we have a theme on a man's life based on morality within religion. His whole system of living is to be shattered when, after an automobile accident, he is brought from the dead by a doctor's skillful injection of adrenalin. In a flash he turns bestial, ready to commit violence on people he previously tolerated. His morality and religion were wrong, he had not seen God in the after life! It takes his son to show him a true religion. This play is simpler in construction and is a departure from the usual Pirandellian formula. The plot of *Come tu mi vuoi* Pirandello constructed from the famous "caso Bruneri-Canella," the scandal that absorbed the Italian newspapers and public for so long a time. Only the rôle in this play goes to the woman, Cia. Cia is a dissolute dancer who is recognized (or supposed to be) as the lost wife of Pieri. On the scene is brought another Cia, a woman suffering from dementia. Which is which? But this is where Pirandello expounds: "Truth may have a double face; reality and non-reality have no definite line of demarcation."

From Luigi Antonelli there was *La donna in vetrina* (*Show-window Woman*). Here two beings try to live the moment in which they met: spiritually she was for him the queen he had seen in the show-window of her shop; for her he was the country lad with elementary poetry in his soul. All else was dead, their actual characters did not fit that first moment. Another play offered by Antonelli was *La casa a tre piani* (*Three Story House*), a drama spun on death, fear, poetry. *Chimere* in Luigi Chiarelli's *grotteschi*, performed a good many years back, was available in an edition put out by Treves of Milan. There

was a dramatic poem, Sem Benelli's *Fiorenza* (Milan) in blank verse, extolling Florence and Florentine genius of the thirteenth century. It was performed in Milan in the spring. Open air performances of classical tragedies continued to draw attention. Syracuse, Taormina, and Ostia were the principal centres for these productions. The famous "Thespian Car" with its stock company continued to bring good plays to different parts of Italy. The "Carro" was sponsored by Fascismo (1929) and directed by G. Forzano. See under *Critica—Varia* for other information on the theatre.

POETRY. By way of recording a few noteworthy contributions mention must be made of Aldo Palazzeschi's *Poesie* (Milan), reassembled and re-edited by Giulio Preda. The volume contains the author's poems chronologically arranged from 1904 upwards. Palazzeschi's poetry is personal and original, identified with the "futurists" in typographical structure, and the "crepusculars" in sentiment. From the same publisher came Riccardo Bacchelli's *Amore di poesia*, poems composed during 1914–1929. There are moments of inspiration, and in general, the volume has a certain sense of "dignity" and "literary tone." In the special edition of V. Nardelli's *Europa* (Rome) will be found 33 readable themes under title of Rome, Paris, Vienna, Spain, etc. Diego Valeri's *Poesie vecchie e nuove* (*Poetry Old and New*; Milan) is composed on complex emotions, on varied canvas, and verse structure. The poems are couched in an atmosphere of refinement. The poetess, Sibilla Aleramo, offered *La mia prima poesia* (*My First Poetry*; Milan). Dedicated to Italy under Fascismo there were *Il poema della nuova Italia* (*Poems of New Italy*; Florence), with poems on Mussolini, Cesare Battista, Alfredo Oriani, Marconi, among others.

Of interest is the fact that Salvatore Alonzo translated Charles Baudelaire's *Fleurs du Mal* (Leghorn) for all defiance poetry hurls at translation. Adriano Tilgher studied poetry in dialect in *La poesia dialettale napoletana, 1880–1930* (Rome), in which he speaks of the decadence of this poetry. There are essays on Salvatore di Giacomo, Ferdinando Russo, Galdieri. While speaking of this *genre* let us call attention to Trilussa's screamingly funny poems in Roman dialect, *Libro No. 9* (Milan). Record should be made of the death of Vincenzo Gerace, the Calabrese poet. He gained the Mondadori Prize for poetry several seasons previously and his recent contribution, *La fontana nella foresta* (1927), was typical of his poetry in mixed lyricism and mysticism.

CRITICA—VARIA. Briefly and at random may be considered the critical productivity of the year. A valuable volume was Giuseppe Ravagnani's *I contemporanei* (Turin) composed of a series of essays on the most representative authors of Italy from the latter part of the nineteenth century to our days. The book was accompanied with a foreword by Arturo Farinelli and a bibliographical list on the contemporary field. E. Falqui and E. Vittorini compiled an anthology, *Scrittori nuovi* (*New Writers*; Lanciano), in which 70 of the lesser known writers were included. Alpes of Milan published Enrico Piconi's second part of *La bancarella della novità*. The younger writers were discussed non-caustically; he has hope for their literary future. To honor Vittorio Rossi for his 40 years as an inspiring teacher his friends and students prevailed upon him to collect his scattered lectures and essays into three volumes,

Saggi e discorsi su Dante, Studi sul Petrarca e sul Rinascimento, and *Dal Rinascimento al Risorgimento*, published by Sansoni of Florence. Those who have read Vittorio Rossi's famous *History of Italian Literature* welcomed these essays for their scholarship and their artistic treatment.

Giuseppe Fanciulli wrote on the life and works of Dante in *Dante* (Milan). It is a "lucid and decorous vulgarization for the cultured but non-specialist reader who desires more of an understanding of the poet." Umberto Cosmo also prepared a book on *Vita di Dante* (*Life of Dante*; Bari). In *Petrarca* Luigi Tonelli devoted a whole book to an attempt at reevaluation of various mediæval and humanistic phases of Petrarch. Carlo Steiner (better known for his much-thumbed edition of the *Divine Comedy*) brought out with exhaustive notes and preface Alessandro Manzoni's *I Promessi Sposi* (Turin). A study, *Italy and the Italians of the Nineteenth Century* (Florence), with essays by some of the leading contemporary critics, was edited under the care of Jolanda de Blasi. A collection of essays dealing with the salient points of Italian literature from the Middle Ages to Manzoni were assembled by G. A. Cesareo in his *Studi e ricerche su la letteratura italiana* (Palermo).

On the theatre *I "Pupazzi"* (Milan) was prepared in a de luxe edition with illustrations in color and caricature. Mr. Onorato assembled here a lot of useful material on the Italian theatre and its actors. Franco Liberati gave memoirs on the vicissitudes of the venerable old actors of the first decade or so of this century. There is information on Eleanora Duse, Tommaso Salvini, Erneste Novelli, along with others. Giacomo Antonini prepared a study of the contemporary French theatre, *Il teatro contemporaneo in Francia* (Milan), and Francesco Pico wrote a book on *Molière* (Florence) which, for its careful preparation, was destined to serve as a reference book on the famous French dramatist.

Then mention must be made of a book on the United States, *Gli Stati Uniti di domani* (Milan), by Umberto Orsini Ratto; one on Russia, *L'Intelligenza di Lenin* (Milan), by Curzio Malaparte, praiseworthy for its concise elucidation on Lenin and Soviet Russia; two books on art: Ugo Ojetti's *Bello e brutto* (Milan), teeming with epigrammatic language and æsthetic judgments, and Margherita Sarfatti's *Storia della pittura moderna*, an outline of modern painting excellently prepared with over 150 illustrations.

In conclusion let us mention a few of the principal works published in English on Italian literature. Thomas Caldecot Chubb wrote an entertaining and instructive biography in his *The Life of Giovanni Boccaccio* (New York). Giovanni Papini's *Saint Augustine* (New York) was translated by Mary Prichard Agnetti. In this beautiful study on the great African, Papini presented his views, and for those who might think his conversion insincere, he unleashed some biting remarks in self-justification. Papini's *Laborers of the Vineyard* (New York) also was translated. Gertrude Leigh's book, *New Light on the Youth of Dante* (Boston), marks disapproval of much of the existent criticism on the great poet. There was a book on the Renaissance, *The Civilization of the Renaissance in Italy* (New York), by Jacob Burckhart, and a study of the early Italian theatre, *Italian Actors of the Renaissance* (New York), by Winifred Smith. A broad historical study, *Three Thousand Years of Rome* (New

York), was translated from the German version by Caroline Fredrick. It combines "popular interest with authority."

ITALIAN SOMALILAND, sö-mä'lëland. An Italian colony extending along the east coast of Africa from British Somaliland on the northeast to Kenya on the southwest, and bounded on the north by Ethiopia. Area, approximately 190,000 square miles; population, about 1,200,000, including approximately 1000 Italians. Mogadiscio, with a population of about 28,000, is the capital.

The colony is divided into Southern Somalia, formerly called Benadir, and Northern Somalia. Cattle raising and agriculture are the principal occupations. In Southern Somalia, there are Italian plantations with a cultivated area of about 70,000 acres. In 1928, exports amounted to 42,330,000 lire and imports to 134,158,000 lire (1 lira equaled approximately \$0.052). The chief exports are gum, oil, sesame, hides, butter, cotton and cottonseed oil, resin, kapok, and ivory. Revenues for 1929-30 were estimated at 78,108,715 lire, including a state contribution of 56,108,718 lire, and the total expenditure at 81,599,000 lire, including military expenses of 31,000,000 lire. Governor in 1930, De Guido Corni, appointed in 1928.

ITALY. A constitutional monarchy of southern Europe, comprising, besides Italy proper, the islands of Sardinia, Sicily, Elba, and some 70 other small islands, together with the territory on the eastern shore of the Adriatic acquired as a result of the Treaty of St. Germain, and arrangement with Yugoslavia in 1920. Capital, Rome. Reigning King in 1930, Victor Emmanuel III.

AREA AND POPULATION. The area of Italy before the World War was 110,632 square miles, with a total population on Jan. 1, 1915, of 36,120,118. The area as a result of the survey made at the time of the census of 1921 is 119,710 square miles and the population according to that census, 38,756,433; estimated at the end of 1930 at over 42,000,000, or a density of 350 inhabitants to the square mile. In the nine years from 1922 through 1930, the population increased by 4,000,000, or at the rate of over 450,000 annually. In 1929 births totaled 1,035,868 and deaths were 660,716, leaving a surplus of births of 375,152. The surplus of births in 1930 was estimated on the basis of preliminary returns at over 500,000. Italians living in foreign countries were estimated (1929) at about 9,168,000. In 1928 emigrants numbered 150,566, of whom 75,145 went to other European countries and 68,098 to North and South America. The leading cities, with their populations in 1929 were: Naples, 966,423 (1928); Milan, 961,979; Rome, 914,631; Genoa, 623,196; Turin, 591,316; Florence, 316,806; Catania, 281,500; Venice, 258,381; Trieste, 255,480; Bologna, 245,036; Messina, 203,609 (1928).

EDUCATION. Primary education is free and compulsory to the age of 14. In 1926-27, there were 3,493,715 pupils in 32,954 public elementary schools, 140,841 pupils in 2466 private elementary schools, and 607,891 pupils in 7076 infant schools. For secondary education, there were 1024 Government schools, with 181,066 students in 1926-27, and 611 private schools, with 46,517 students. The 21 state and four free universities reported a total of 36,391 students and 3950 teachers in 1927-28. There are higher institutes for commercial education, agriculture, engineering, and for the various other branches of the professions.

PRODUCTION. Agriculture was the chief support of more than 50 per cent of the population in 1930, although industry was of increasing importance in the national economy. Of a total of 76,633,803 acres in Italy, about 33,276,000 acres were devoted to seed lands, 16,996,250 acres to meadows and permanent pastures, 3,731,750 acres to horticulture, and 13,958,000 acres to forests. At the census of 1921, there were 1,113,106 landed proprietors. An extensive programme for the improvement of agriculture inaugurated by the Government in 1925 resulted in an increase of wheat production from 53,291,000 quintals in 1927 to 70,943,700 quintals in 1929 (1 quintal equals 220.46 pounds). The production, in quintals, of other leading crops in 1929 was: Corn, 24,083,400; potatoes, 20,111,500; rice, 7,335,000; oats, 7,110,620; beans, 4,958,700; barley, 2,585,340; rye, 1,732,870; olives, 17,637,200. Sugar beet production in 1928 was 28,613,000 quintals. Grapes and silk cocoons are other products. The crops in 1930 were generally below normal in quantity, but of good quality. The wheat yield was about 1,000,000 tons less than for 1929.

There were 7,100,000 cattle, 11,000,000 sheep, 2,750,000 swine, 1,000,000 horses, 952,000 asses, and 503,000 mules in Italy in 1928. The Parmigiana-Moglia land reclamation project, covering 217,452 acres in Northern Italy, was completed in July, 1930. In connection with the Government's land-improvement programme, projects costing 1,122,000,000 lire (\$59,000,000) were commenced or authorized for immediate construction during the fiscal year 1929-30. Of the total sum, 885,000,000 lire was spent on projects carried out entirely at Government expense, and 237,000,000 lire as governmental subsidies for work carried out by private individuals.

Industrial conditions, which became more unfavorable during the last half of 1929, continued to reflect the world-wide economic depression in 1930. The chief industries are mining (sulphur, mercury, zinc, and iron being the chief products), centred mainly in Sicily, Tuscany, Sardinia, Lombardy, and Piedmont, quarrying, cotton textiles, silk, sugar, shipbuilding, and dairying. At the industrial census of October, 1927, there were 731,888 industrial establishments in the country, with 5,012,824 employees. Of these, 10,406 factories and 642,654 employees were engaged in the production of cotton textiles.

The production of iron ore, pig iron, and steel ingots and castings increased steadily from 1923 to 1929. In the latter year the output of iron ore was 867,000 metric tons (826,000 in 1928); of pig iron, 672,000 metric tons (508,000); of steel ingots and castings, 2,133,000 metric tons (1,963,000); of sulphur, 354,700 metric tons (327,700). Coal production in 1928 included 133,000 metric tons of black and 703,000 tons of lignite. Cotton yarn production was 2,021,723 quintals in 1928 and 2,127,000 quintals in 1929. Chemical production figures in quintals for 1929, with figures for 1928 in parentheses, were: Sulphate of ammonia, 1,460,000 (1,275,000); calcium cyanamide, 800,000 (554,000); superphosphates of lime, 13,780,000 (11,250,000). The number of motor cars produced declined in 1929 to 54,096 from 55,010 in the previous year.

In the shipbuilding industry, 99 keels of vessels aggregating 45,834 tons were laid in 1929 (88 keels of 63,587 tons in 1928), while 97 vessels of 72,028 tons were launched, as against 68 vessels

of 66,788 tons in 1928. The number of unemployed in October, 1930, numbered 375,000, as compared with 217,000 a year earlier. In the same month a total of 395,849 laborers were employed on public works projects throughout Italy.

COMMERCE. Italian imports in 1929 amounted to 21,300,000,000 lire (1 lira exchanged at \$0.0523 in 1929), as compared with 21,920,000,000 lire in 1928, while exports were valued at 14,889,000,000 lire, as against 14,559,000,000 in 1928. The unfavorable balance of trade was 6,411,000,000 lire in 1929 and 7,361,000,000 lire in 1928.

The decrease of 2.9 per cent in the value of imports was due to a reduction of 42 per cent in foreign wheat imports and considerable declines of purchases of sugar, corn, vegetable oils, and copper. Imports of coal, machinery, iron and steel, and gasoline were larger. The export increase of 2.2 per cent was accounted for by larger shipments of canned tomatoes, almonds, olive oil, silk and rayon fabrics, and machinery. Foodstuffs and live animals represented 21.8 per cent of total imports by value; industrial raw materials, 37.7; partly manufactured articles, 20.7; manufactures, 19.8. Corresponding percentages for exports were 24.1, 10.8, 21.9, and 43.2, respectively. The United States furnished 16.7 per cent of the total imports (18.3 per cent in 1928); Germany, 12.6 (10.1); France, 9.6 (9.4); Great Britain, 9.6 (8.1). Italian exports were distributed as follows: Germany, 11.9 per cent (12.8 per cent in 1928); United States, 11.5 (10.5); Great Britain, 9.8 (9.2); France, 8.8 (9.3). Preliminary foreign trade figures for 1930 placed the import surplus for the year at about 5,100,000,000 lire, or the lowest since 1927.

Of 56,175 tourists entering Italy in the first six months of 1930, 21,926, or 39 per cent, were from the United States and 10,110, or 18 per cent, from Great Britain.

FINANCE. The budget estimates for the fiscal year ended June 30, 1930, placed total revenues at 19,226,199,201 lire and total expenditures at 20,117,460,533 lire. The budget operations closed with a reported surplus of 65,000,000 lire, as against an estimated surplus of about 9,000,000 lire. The revenues were 4 per cent below those of the previous year but 400,000,000 lire above the revenues budgeted. The chief revenue items in the 1929-30 budget were direct taxes, 4,650,000,000 lire; taxes on exchange of wealth, 2,967,620,000 lire; state monopolies, 2,934,000,000 lire; taxes on buildings, 2,070,000,000 lire; customs and maritime duties, etc., 1,446,324,500 lire. Of the expenditure budget, 6,202,985,000 lire went to the Treasury for the service of the debt and other expenses, 2,562,522,024 lire for the Ministry of War, 989,464,562 lire for the Navy, and 1,325,855,134 lire for education.

The budget for 1930-31, as presented to the Council of Ministers by the Minister of Finance, estimated revenues at 19,348,845,000 lire, or 77,923,000 lire more than budgeted revenues for the preceding year, and expenditures at 19,085,858,000 lire, an increase of 773,230,000 lire. The anticipated surplus was 262,988,000 lire.

The public internal debt on June 30, 1930, stood at 87,124,000,000 lire, of which 71,449,000,000 lire represented the consolidated debt, 13,175,000,000 lire the redeemable debt, and 2,500,000,000 lire the floating debt. Under a plan effective May 1, 1930, the Bureau of Amortization was to receive 500,000,000 lire annually for the purchase and retirement of the consolidated

5 per cent internal debt, which amounted to 71,421,000,000 lire (about \$3,750,000,000) on Mar. 31, 1930. The foreign debt on Sept. 30, 1929, amounted to 93,340,000,000 lire. The value of state property was estimated at 63,876,139,000 lire (June 30, 1928).

COMMUNICATIONS. Railways in operation on Jan. 1, 1929, totaled 13,442 miles, of which 10,352 miles were owned by the state (782 miles electrified). The Government had adopted a programme for the electrification of an additional 4000 miles of line. First-class highways, or those under the care of the State Highway Institute, totaled 12,955 miles in 1930. There were 24,840 miles of provincial roads and 55,890 miles of communal and secondary roads. In 1929-30 the Highway Institute built or repaired 994 miles of highway at a total cost of 390,000,000 lire (about \$20,528,300), and expended 60,000,000 lire on supplementary road work. Italian commercial air lines in 1929 extended 9831 miles, the distance flown was 1,835,076 miles, passengers carried numbered 24,935, and the express and mail traffic in ton-miles was 132,000,000. An air line from Trieste to Zara, Yugoslavia, by way of Fiume, was inaugurated by an Italian company early in 1930. The telegraph system and part of the telephone system are Government-owned.

The Italian merchant marine on Jan. 1, 1930, consisted of 1396 steamships of 3,212,302 gross tons (including 152 motor vessels of 439,682 gross tons), and 2692 sailing vessels, of 168,279 gross tons. A total of 246,106 vessels of 72,749,000 tons entered Italian ports in 1928, and 244,759 vessels of 72,474,000 tons cleared.

ARMY AND NAVY. Liability of military service beginning at the age of twenty and lasting for 19 years is compulsory and universal. The strength of the active army in 1928 was 16,570 officers and 234,700 of other ranks, including 60,000 Carabinieri. See **MILITARY PROGRESS.**

The Italian Royal Air Force, constituted in 1925 as a separate force under the Ministry of Aviation, had 2100 airplanes and a personnel of 20,422 of all ranks in 1929. The appropriation for 1929-30 was 700,000,000 lire.

The accompanying table from the *Statesman's Year Book* for 1930 shows the classification of the navy in 1928 and 1929. See **NAVAL PROGRESS.**

| | Completed at end of | |
|---------------------------------------|------------------------|------|
| | 1928 | 1929 |
| Battleships | 5 | 4 |
| Armored cruisers | 3 | 3 |
| Light cruisers | 9 | 9 |
| Flotilla leaders and destroyers | 73 | 80 |
| Torpedo boats | 52 | 40 |
| Submarines | 45 | 43 |

GOVERNMENT. The Italian Constitution vests executive power in the King, acting through a responsible ministry, and legislative power rests conjointly in the King and a parliament of two chambers. The Grand Council of Fascism is the supreme body which "controls all the activities of the régime," under a law promulgated in December, 1928. It "designates" the deputies for the lower chamber and "must give its opinion on all bills dealing with constitutional issues." Its members fall into three categories: (1) Life members, including the head of the Government (Mussolini), the "Quadrumvirate" who led the Fascist march on Rome, ex-ministers who have held office in the Fascist Cabinet for at least five years, and

those who have acted as secretaries-general of the Fascist party since the march on Rome. (2) *Ex-officio* members, including the President of the Senate, the Speaker of the Corporative Chamber, and the Cabinet Ministers. (3) Extraordinary members, i.e., "men who have deserved well of the national cause and the Fascist Revolution, or are experts on the questions under discussion in the Grand Council." There are 35 persons in the first two categories and an unfixed number in the third. All members of the third category and all of the second, except the President of the Senate and the Speaker of the Corporative Chamber, are designated by the head of the Government.

The franchise is granted to men 21 years and over and also to men aged 18 years and over, if married or widowers with sons, who pay a syndicate rate, or taxes to the amount of 100 lire, or who receive a salary or pension from any public institution. Candidates for the Chamber of Deputies, which has a membership of 400, must be at least 25 years of age. Candidates are proposed by the National Syndicate Confederation, by certain juridical persons, and by associations of a national character. From these lists of candidates the Grand Fascist Council selects 400 names to be included in the roll proposed to the electors. If the proposed roll is not approved by the electors, new elections must be held at least one month later, this time by the majority system and in accordance with the principle of proportional representation, formerly in use. The King has power to dissolve the lower house at any time.

The Senate on May 28, 1929, was composed of 451 senators including 11 members of the royal family. Under the Constitution the senators are appointed for life by the King on the proposal of the cabinet. Their number is not limited. Victor Emmanuel III, born Nov. 11, 1869, succeeded his father, Humbert I, July 29, 1900.

The Cabinet in 1930 was composed as follows: Prime Minister, Chief of the Government, and Minister of Interior, Benito Mussolini; Foreign Affairs, Dino Grandi; War, Pietro Gazzera; Navy, Giuseppe Sirianni; Air, Italo Balbo; Public Works, Araldo Di Crollanza; Corporations, Giuseppe Bottai; Education, Balbino Giuliano; Agriculture and Forests, Giacomo Acerbo; Colonies, Emilio de Bono; Finance, Antonio Mosconi; Justice, Alfredo Rocco; Communications, Constanzio Ciano.

HISTORY

Challenging the French military hegemony of Europe, Italy in 1930 assumed active leadership of the nations demanding revision of the peace treaties of Versailles, St. Germain, and Trianon. Strained relations between the states supporting and opposing the peace treaty settlements inevitably resulted. The tension between Italy on the one hand and France and her allies of the Little Entente on the other became sufficiently acute as to arouse fears of a new European war. Despite the discovery of a number of conspiracies against the Government, the Fascist régime retained its firm grip upon the nation and continued its vigorous programme of internal development. Relations with the Vatican were cordial, in general. On July 23, a large area in the southern Apennines was devastated by a severe earthquake, the loss of life being 1475. A second quake at the end of October, centring in Ancona,

killed 15 persons and caused damage estimated at \$15,000,000.

FOREIGN RELATIONS. Friction between France and Italy became acute following France's rejection of Italy's demand for naval parity at the London Naval Conference held during the Spring of 1930 (see *GREAT BRITAIN and FRANCE under History*, and *NAVAL PROGRESS*). The reiteration of Italian demands for revision of the peace treaties, following the failure of negotiations for a naval agreement, was viewed as an effort to force naval and territorial concessions from France under the threat of a military combination of the anti-treaty Powers against her. Treaty revision was first advocated by Premier Mussolini in 1928; in 1930 he assumed active leadership of the anti-treaty agitation through two separate pronouncements. The first, published as an interview July 3 in the *Petit Parisien*, was an unofficial reply to the memorandum of Foreign Minister Briand of France suggesting the formation of a European federation. The Duce declared that the nations which were victorious in the World War were not satisfied with their victory and that a general revision of the peace treaties must precede European federation. The second pronouncement was made before the Fascist directorates on the eve of the eighth anniversary of the Fascist march on Rome, the Premier declaring that the Italian policy of peace treaty revision aimed at avoiding war. The true violators of the League of Nations Covenant, he said, were "those who at Geneva wish to perpetuate two categories of nations—armed ones and defenseless ones."

A significant feature of Mussolini's speech to the Fascist directorates was his frank admission that Italy planned to create an outlet for her rapidly expanding population "on the Danube and in the East." "This," he said, "explains our friendships and our alliances." An important step in connection with this policy was the marriage of King Boris of Bulgaria and Princess Giovanna of Italy on Oct. 25, 1930. Early in the year a ten-year arbitration treaty was concluded with Austria, after which Italy relaxed the severity of her treatment of the German-speaking minority in the Italian Tirol. A visit of the Hungarian Premier, Count Bethlen, to Rome was regarded as evidence of increasing friendliness between the two countries. At the same time the Fascist press reported that an alliance of Italy, Hungary, Austria, and Bulgaria was under discussion.

Italian financial penetration of the Balkans continued. In Bulgaria the Italian Banca Commerciale assumed the task of financing coöperative societies organized for the production of silk and tobacco. Capital was advanced only on condition that Italian machinery be used in the industries aided. Meanwhile the Orient Tobacco Company of Rome had become an important factor in the Balkan tobacco market.

The alarm and excitement aroused in Yugoslavia by these developments was furthered by the Fascist government's severe repression of irredentist activities among the 600,000 Jugoslavs incorporated in the Italian Province of Venezia-Giulia. Refugees who fled from Istria across the Yugoslav border issued from Belgrade on September 9 an appeal to the civilized world to end the reign of terror which they said had been imposed on the Slovenian minority in Italy. They charged that in the previous eight years

20,000 Croat and Slovene subjects of Italy had been imprisoned and tortured and 2172 murdered by Fascist bands. The Fascists, in reply, stated that the Yugoslav elements had resorted to terrorism against the provincial authorities and that they had been abetted in this policy by nationalist organizations in Yugoslavia and indirectly by the Yugoslav government.

Four Italian subjects of Slav origin were executed on September 5 and 14 and others were condemned to serve terms of imprisonment varying from four to 30 years, following their conviction of terrorist activities by a Fascist military tribunal. The executions aroused furious anti-Italian outbursts not only in Yugoslavia but also in Czechoslovakia and Greece. War between Italy and Yugoslavia was considered imminent, but a press censorship in the latter country prevented the situation from getting out of hand. During the crisis military preparations were reported under way in Hungary, Italy's ally. The Italian Ministers in Prague and Athens protested at the anti-Italian tone of the press. The trial of 57 additional Italian subjects of Slav extraction during November on charges of high treason again aroused Slav resentment. The net result of these occurrences was to bind the Little Entente countries—Yugoslavia, Czechoslovakia, and Rumania—still more closely to France.

An amusing development of the year was the increasing cordiality manifested between such inherently antagonistic governments as Fascist Italy and Soviet Russia. A Soviet-Italian commercial agreement, under which the Italian government guaranteed 75 per cent of the credit for Soviet purchases made in Italy, was concluded, and at the sessions of the League of Nations Disarmament Committee in Geneva in November Russia supported Italy in demanding revision of the peace treaties and opposing the French disarmament thesis. Soviet-Italian coöperation, however, was attributed to a mutual fear of France rather than to a disinterested liking for each other. Both Italy and Russia were disappointed by the lukewarm attitude displayed by the German government toward their efforts at treaty revision. The Social Democrats and the moderate parties forming the Government coalition in Germany viewed Italy's policy with deep suspicion. The German Fascists under Hitler, however, promised their enthusiastic coöperation in the event of their accession to power.

INTERNAL PROBLEMS. An outstanding development in the internal political situation was the resignation on September 24 of Augusto Turati, secretary-general of the Fascist party since May, 1926, who was generally considered second only to Mussolini in secular power. Turati had offered to resign the previous year but Mussolini then refused to allow him to do so. He was succeeded by Giovanni Giuriati, president of the Chamber of Deputies and one of the earliest adherents of the Fascist movement. On October 8, the Fascist Grand Council strengthened its organization by adopting a new plan for an organization of Fascist youths between the ages of 18 and 21. The eighth anniversary of the Fascist march on Rome was celebrated in the usual way on October 28, with the inauguration of some 2000 public works project, representing an estimated expenditure of more than \$100,000,000. The Government announced November 7 that immediately preceding the anniversary about 20 persons were arrested in northern Italy on charges of conspiring with

anti-Fascisti in Paris against the Fascist régime. According to anti-Fascist circles in Paris those arrested included a number of prominent university professors and army officers. Among them were Prof. Bartolo Belotti, former Italian Minister of Industry and Commerce, and Prof. Ernesto Belloni, former Governor of Milan. Professors Belotti and Belloni were sentenced to five years' confinement on the penal islands of Lipari and Ponza, the Government announced November 28. On December 22, a special military tribunal sentenced Mario Vinciguerra and Renzo Rendi, leaders of an anti-Fascist organization, to 15 years' imprisonment on a charge of inciting rebellion. Five others, including Mrs. Adolfo de Bosio, American-born widow of the Italian poet, were acquitted. A number of imprisonments for communist activities were reported during the year.

The unfavorable economic situation increased the Government financial difficulties in 1930 (see under *Finance* above) and on November 18 the Cabinet Council decreed a cut of 12 per cent in salaries of all state employees, including Cabinet Ministers. It was believed that this measure would offset a threatened deficit in the 1930-31 budget. In June, the Cabinet Council increased the tax on foreign exchange transactions to 1½ per cent. Of the \$35,000,000 additional revenue anticipated, \$25,000,000 was allocated for a 10 per cent increase in the military budget. In March the Government lifted the embargo on the export of gold and abolished city customs barriers (*octroi*) throughout the country. These measures were designed to place Italy on a firm gold basis and to facilitate the internal movement of merchandise and greater uniformity of prices.

A new tariff schedule, which more than doubled the duty on imported motor cars, aroused concern among American automobile manufacturers as it left the Italian Fiat Company with a virtual monopoly of the Italian market. About the same time the Ford interests purchased the Isotta-Fraschini automobile factory at Milan for the establishment of a branch factory.

FASCISM AND THE VATICAN. Although relations between the Vatican and the Fascist government were on the whole cordial during 1930, evidences of a clash of policies and ideals were not infrequent. A papal encyclical on education, published on January 11, indirectly repudiated Fascist practices in education by asserting that education is preëminently the function of the Church. In an allocution delivered at a consistory for the creation of new Cardinals on June 30, Pope Pius was reported to have accused the Fascist government of aiding Protestants in their efforts to proselytize Italy, an attitude which he termed contrary to the spirit and letter of the Lateran treaties. He was understood to refer to newly-published regulations exempting non-Catholic clergy from military service, providing for religious aid to non-Catholic soldiers, allowing students in non-Catholic schools to postpone their military service, and exempting the children of non-Catholics from religious instruction. State and municipal subsidies for schools in non-Catholic communities and instruction in non-Catholic religions in school premises where non-Catholic students were sufficiently numerous to warrant it were authorized also.

The conciliatory policy of the Government toward the Church was indicated when Secretary General Turati of the Fascist party announced

that membership in the Catholic Action, the leading Italian Catholic organization, would no longer be considered an obstacle to membership in the Fascist party. Rome was bedecked with flags on the first anniversary (February 11) of the signing of the Lateran treaties. The Government joined in the commemoration of the Pope's golden jubilee the following day, and subsequently the Pontiff received Turati and Luigi Federzoni, president of the Italian Senate, in private audiences. See **VATICAN CITY**.

OTHER EVENTS. The 2000th anniversary of the birth of the poet Vergil was widely celebrated throughout Italy and the western world in October. See **CELEBRATIONS**; **VERGIL BIMILLENNIUM**.

See **FRANCE**, **GREAT BRITAIN**, **GERMANY**, **JUGOSLAVIA**, **BULGARIA**, **AUSTRIA**, **HUNGARY**, **CZECHOSLOVAKIA**, **AUSTRIA**, **BELGIUM**, **GREECE**, and **MALTA** under *History*; also **REPARATIONS**, **LEAGUE OF NATIONS**, **EARTHQUAKES**, **NAVAL PROGRESS**, **MILITARY PROGRESS**. Consult C. M. Cresswell, *The Keystone of Fascism* (London, 1929).

ITURBI, JOSÉ. See **MUSIC**, under *Artists*.

IVORY COAST. A French colony, forming a constituent part of the government-general of French West Africa, situated between Liberia and the British Gold Coast. Area, about 121,976 square miles; population, estimated in 1926 at 1,724,545, of whom 1614 were Europeans. Bingerville, the capital, had a European population of 98. The principal commercial products are cacao, mahogany, palm oil and kernels, dried and smoked fish, cotton, and rubber. The production of cacao is rapidly increasing. Some gold has been found. Imports in 1928 amounted to 235,689,000 francs (exchanging at \$0.0392), as compared with 193-305,000 francs in 1927, and exports were valued at 253,052,000 francs, as compared with 235,467,000 francs in the previous year. The budget of the colony for 1929 was fixed at 79,313,500 francs. In 1928, 1165 vessels of 3,676,767 tons entered and 1161 of 3,369,936 tons cleared the ports. There were 304 miles of railway and 3108 miles of motor highways (1929). See **FRENCH WEST AFRICA**.

JAIL OUTBREAKS. See **CRIME**.

JAMAICA. A colony of Great Britain, consisting of the island of Jamaica, which is the largest in the British West Indies, and the following dependencies: Turks and Caicos Islands; Cayman Islands; Morant Cays; and Pedro Cays. Area of Jamaica, 4450 square miles; of the dependencies, 224 square miles. Population of Jamaica, according to the census of 1921, 858,118, including 660,420 blacks; 157,223 of mixed race; 14,476 whites; 18,610 East Indians; and 3696 Chinese; estimated population at the end of 1928, 974,742. The movement of population in 1928 was: Births, 34,616; deaths, 19,062; marriages, 4348. Kingston, the capital, had a population of 62,707 at the census of 1921. In 1928 there were 672 public elementary schools, with 127,785 pupils enrolled. The area under cultivation (1927-28) was 1,157,586 acres, the chief crops being sugar cane, coffee, bananas, coconuts, cacao, and vegetables. Imports in 1929 were valued at \$32,867,412 (\$29,539,546 in 1928) and exports at \$22,276,490 (\$20,051,532 in 1928). The United States supplied 30.9 per cent of the imports and took 34.2 per cent of the exports in 1929. The principal exports were coconuts, logwood, logwood extract, sugar, coffee, rum, and cacao. The only rail transportation on the island is the Jamaica Government Railway, with a length of 210 miles.

Government revenue in 1928-29, £2,212,852; expenditure, £2,317,434; public debt, £5,040,699. Governor in 1930, Sir R. E. Stubbs (appointed in 1925). For efforts to relieve the depression caused by the decline of sugar prices, see GREAT BRITAIN under *History*. Kingston is a stopping point on the air line from Miami, Fla., to Colon, C. Z., opened Dec. 3, 1930.

JAN MAYEN. A volcanic island, 34 miles long and 9 miles wide, in the Arctic Ocean between Spitzbergen and Greenland; annexed by Norway, May 8, 1929. It is used as a weather forecast station and as a base for Norwegian whalers.

JAPAN. A Far Eastern empire, consisting of the five main islands of Honshu (mainland), Hokkaido, Kyusyu, Shikoku, and Taiwan (Formosa), together with some 600 smaller islands and island groups, the peninsula of Korea, or Chosen, and Karafuto (the southern half of the island of Sakhalin). Capital, Tokyo; reigning sovereign in 1930, Emperor Hirohito.

AREA AND POPULATION. The area of the Japanese Empire and the census populations in 1930 and 1925 are shown in the accompanying table.

JAPANESE EMPIRE: AREA AND POPULATION

| | Area, square miles | Population, 1930 census | Population, 1925 census |
|----------------------------|--------------------------|----------------------------|----------------------------|
| Japan proper | 147,327 | 64,447,724 | 59,736,822 |
| Chosen (Korea) | 85,228 | 21,057,969 | 19,522,945 |
| Taiwan (Formosa) | 18,840 | 4,594,161 | 3,993,408 |
| Karafuto | 18,934 | 295,187 | 203,754 |
| Total | 260,879* | 90,395,041 ^b | 83,456,929 |

* Including Pescadores.

^b Preliminary.

The figures show a total population increase of 6,468,550 during the five-year period, 1920-25. In addition, Japan had a 99-year lease of Kwantung (including Port Arthur and Darien in Southern Manchuria) with a population in 1928 of 837,219, and mandate territory in the South Seas with a population of 56,294 in 1925. The population of Japan proper at the census of Oct. 1, 1930, was 64,447,724 as compared with 62,938,200 on Oct. 1, 1929. The density of population in 1930 was 438 per square mile. The density of population per square mile for the entire Empire in 1925 was 320 and for Japan proper, 405. The total increase in population of Japan proper from 1920 to 1930 was 8,486,584, making the average annual increase 848,658. In 1928, births totaled 2,135,852; deaths, 1,236,711; marriages, 499,555; divorces, 49,119. The number of Japanese residing abroad on Oct. 1, 1928, was 717,529, of whom 104,022 men and 65,547 women were in North America. The number of foreigners in Japan on Jan. 1, 1929, was 34,917, of whom 25,963 were Chinese, 2104 English, 2281 American, and 1059 German. The populations of the leading cities at the census of 1929 (figures for the 1925 census in parentheses) were: Osaka, 2,408,800 (2,104,804); Tokyo, 2,294,600 (1,995,567); Nagoya, 904,700 (768,558); Kyoto, 755,200 (679,963); Kobe, 755,200 (644,212); Yokohama, 543,500 (405,888).

EDUCATION. Attendance at the elementary school course is compulsory for all between the ages of 6 and 14 years. In the school year 1925-26, there were 9,188,560 in the elementary schools, 598,258 in the secondary schools, 1,051,437 in preparatory technical schools, 58,596 in special schools, 49,634 in normal schools, 231,693 in tech-

nical schools, and 52,206 in the five imperial universities and the 32 other institutions of university rank.

PRODUCTION. Japanese industry has made rapid strides, but the country was still primarily dependent upon agriculture in 1930. Of the total area of 94,289,000 acres in Japan proper, only about one-sixth was cultivable, there being (in 1928) 7,286,000 acres of rice fields, 6,833,000 acres of upland farms, 4,315,000 acres of moors and pastures, and 21,053,000 acres of taxable forests. The fertile area is divided into small farms averaging about 2½ acres each and is intensively tilled but with largely primitive methods. About 54 per cent of the cultivated land is owned by large landowners and leased to tenants, who ordinarily secure only a bare subsistence. Rice is the largest agricultural crop of the empire and the principal diet of the people. The rice crop for 1930 was officially estimated at 334,361,000 bushels. As the domestic production is insufficient for local needs, an increasing amount of rice is imported annually. The area and production of the chief crops in Japan proper in 1928 and 1929 are shown in the accompanying table.

CROP AREAS AND PRODUCTION: JAPAN PROPER

| Crop | Area ^a | | Production ^b | |
|-------------------|-------------------|-------|-------------------------|----------------------|
| | 1928 | 1929 | 1928 | 1929 |
| Wheat | 1,201 | 1,214 | 30,812 | 30,496 |
| Barley | 2,242 | 2,202 | 81,479 | 80,360 |
| Oats | 285 | 289 | 11,518 | 10,413 |
| Rice | 7,822 | 7,847 | 534,249 | 529,132 |
| Tea | 106 | 105 | 86,172 ^c | 86,845 ^c |
| Tobacco | 92 | 88 | 147,159 ^c | 138,065 ^c |
| Cocoons | ... | ... | 775,965 ^c | 844,043 ^c |

^a Thousands of acres.^b Thousands of units—bushels except as indicated.^c Unit, pound.

The forested area (Jan. 1, 1928) aggregated 47,219,191 acres, of which 18,319,385 acres belonged to the state, and 2,922,963 acres to the Imperial household. The ordinary income from the state forests in 1927-28 was 35,227,919 yen (1 yen equaled about \$0.464 in 1928). The value of raw marine products in 1929 was placed at 227,292,000 yen; of manufactured marine products at 183,204,000 yen.

Japan's mineral deposits are varied, but limited in quantity. Copper is the only metal available in quantities more than sufficient for local needs. The chief minerals, with their production in 1928 and 1929, are shown in the accompanying table.

MINERAL AND METAL PRODUCTION (JAPAN PROPER)

| Product | 1928 | 1929 |
|---------------------------------|-------------------|---------|
| Coal | 1,000 met. tons | 33,860 |
| Iron pyrites | met. tons. | 593,972 |
| Crude petroleum | 1,000 hectolitres | 2,922 |
| Sulphur | met. tons. | 70,063 |
| Gold | 1,000 grammes | 10,390 |
| Silver | 1,000 grammes | 160,024 |
| Copper | met. tons. | 68,233 |
| Pig iron ^a | met. tons. | 110,108 |
| Steel ingots | 1,000 met. tons | 1,704 |

^a Exclusive of pig iron used for materials for steel manufacturing.

MANUFACTURING. Japanese industry was seriously curtailed during 1930 by the world-wide depression and other factors discussed under *History* below. The industrial inactivity was accompanied by increasing unemployment and labor unrest. A few large family groups control the

bulk of Japanese industry and commerce. In 1929, nine families controlled and operated 144 companies with an aggregate paid-up capital of about \$1,180,000,000. The textile industry is of primary importance, there being 18,041 cotton spinning factories at the beginning of 1928 employing 187,103 men and 811,344 women. Other leading industries are metals and metal products, machinery and vehicles, foodstuffs, clay products, paper, chemicals, lumber, and wood products. At the beginning of 1928, there were 53,680 factories, including 9954 not worked by motors, and a total of 1,898,872 employees. Electric power generated in Japan in 1927 totaled 3,470,000 kilowatts, of which 2,110,000 kilowatts represented hydro-electric power and 1,360,000 kilowatts steam power. In the same year the aggregate amount of electric power used was 9,757,000,000 kilowatt-hours.

Manufacturing output in 1928 was as follows: Cotton yarn, 870,925,000 pounds; spun silk, 12,821,000 pounds; wheat flour, 767,513 metric tons; crude camphor (Japan proper), 1,436,000 pounds; camphor oil (Japan proper), 2,416,000 pounds; cigarettes, 31,741,000,000; cut tobacco, 52,525,000 pounds; sake, 245,834,000 gallons; printing paper, 782,753,000 pounds; cotton fabrics, \$364,149,000; silk fabrics, \$224,013,000; wool fabrics, \$102,290,000; porcelain earthenware, \$35,609,000; vegetable oil, \$19,071,000; lacquered wares, \$16,690,000. In 1929, Japan stood next to Great Britain as a builder of motor-ship tonnage. A total of 69 new vessels, with a gross tonnage of about 180,000, were launched during the year.

COMMERCE. General imports and exports of Japan proper both showed an increase in 1929 over 1928. Exports from Formosa were lower and imports higher, while imports and exports of Korea both showed increases. For Japan proper imports in 1929 totaled 2,216,240,000 yen (\$1,021,687,000) and exports, 2,148,619,000 yen (\$990,518,000). Comparative figures for 1928 were: Imports, 2,196,315,000 yen (\$1,019,310,000); exports, 1,971,995,000 yen (\$915,184,000). The adverse balance of trade was \$31,174,000 in 1929 and \$104,126,000 in 1928. Preliminary returns for 1930 showed a drastic decline in both imports and exports, as compared with 1929.

In 1930, according to preliminary reports, Japan's exports totaled 1,470,000,000 yen and imports were valued at 1,546,000,000 yen, leaving an unfavorable merchandise balance of 76,000,000 yen, as compared with 67,621,000 yen in 1929. The favorable balance of invisible trade largely offset the excess of visible imports over exports.

The United States in 1929 was Japan's leading market while Japan ranked fifth among the principal markets for American merchandise, imports from the United States having increased 137 per cent in the 13 years ended in 1929. In the latter year, the United States took 42.5 per cent of all Japanese exports and furnished 29.5 per cent of all imports. China took 16.1 per cent and supplied 9.5 per cent; British India, 9.2 and 13; Great Britain, 3 and 7; Germany, 0.6 and 7.1. The value of leading exports in 1929, with comparative figures for 1928 in parentheses, was as follows: Raw silk, \$360,060,000 (\$340,045,000); cotton tissues, \$190,258,000 (\$163,464,000); silk tissues, \$69,129,000 (\$62,217,000); clothing and accessories, \$47,613,000 (\$38,906,000); sugar, refined, \$13,818,000 (\$17,828,000); drugs and chemicals, \$16,039,000 (\$17,779,000); pottery,

\$17,040,000 (\$16,078,000); paper and paper manufactures, \$15,352,000 (\$14,883,000); food in tins and bottles, \$21,277,000 (\$10,689,000). Corresponding figures for leading imports were: Raw cotton, \$263,987,000 (\$255,075,000); iron and steel, \$73,632,000 (\$69,329,000); wool, raw and tops, \$46,937,000 (\$51,912,000); cedar wood, \$37,146,000 (\$47,376,000); machinery and parts, \$55,825,000 (\$42,793,000); mineral oils, \$42,839,000 (\$41,739,000); oil cake, \$29,875,000 (\$34,048,000); wheat, \$32,683,000 (\$31,400,000); sugar, \$14,365,000 (\$30,147,000).

FINANCE. The budget for 1930-31, as approved by the Diet in May, 1930, balanced at 1,608,600,000 yen. Ordinary revenues were placed at 1,514,500,000 yen and extraordinary at 94,000,000 yen, while ordinary expenditures were estimated at 1,224,000,000 yen and extraordinary at 384,600,000 yen. An appropriation of 240,000 yen was made to guarantee banks against losses on export bills drawn on South and Central America, Russia, the Near East, and the countries of the South Seas and Africa.

The 1930-31 budget showed a reduction of 75,600,000 yen from the actual working budget of 1929-30. In contrast with preceding budgets, it was expected to balance without resort to Government loans. The budgets for 1928-29 and 1929-30 are shown in the accompanying table. The fiscal year ends March 31.

GOVERNMENT RECEIPTS AND EXPENDITURES [Thousands of yen]

| Item | 1928-29, actual ^a | 1929-30, budget estimates |
|--|---------------------------------|---------------------------------|
| ORDINARY RECEIPTS | | |
| Income tax | 206,742 | 202,664 |
| Land and business tax | 125,887 | 117,406 |
| Customs | 150,944 | 150,298 |
| Liquors, sugar, and textiles | 859,233 | 357,303 |
| All other taxes | 73,104 | 69,911 |
| Stamp receipts | 86,579 | 86,247 |
| Posts, telegraphs, and telephones (gross) | 233,413 | 249,599 |
| Monopolies (net) | 177,202 | 171,481 |
| Other public enterprises | 63,579 | 69,641 |
| All other | 28,330 | 32,102 |
| Total | 1,505,018 | 1,506,652 |
| Extraordinary receipts | 500,678 | 266,915 |

| Agriculture and forestry | 26,717 | 31,453 |
| Communications (gross) | 287,072 | 297,503 |
| All other | 155,970 | 164,442 |
| Total | 1,184,242 | 1,282,325 |
| Extraordinary expenditures | 630,613 | 541,242 |

^a Subject to revision.

Actual ordinary revenue in 1929-30 totaled 1,481,143,304 yen, a decrease of 23,563,453 yen from the estimates, while extraordinary revenue amounted to 345,301,447 yen, an increase of 168,947,270 yen over the estimates. Total revenues of 1,826,444,751 yen were thus 145,383,817 yen above the budget. Total expenditures were 1,736,317,000 yen, or 55,256,121 yen more than anticipated in the budget. Ordinary expenditures amounted to 1,212,726,860, a decrease of 10,962,110 from estimates, and extraordinary expenditures to 523,590,195 yen, an increase of 66,218,331 yen.

The public debt on Oct. 31, 1930, totaled 6,092,000,000 yen, as against 5,846,000,000 yen (\$2-

914,000,000) on Mar. 31, 1929. Domestic loans totaled 4,506,000,000 yen and foreign loans, 1,586,000,000 yen. The per capita debt on Mar. 31, 1929, was about \$46. In per capita savings Japan ranked fourth among the nations, with total savings deposits at the end of June, 1929, of 5,292,000,000 yen.

COMMUNICATIONS. Of a total of 12,198 miles of railway line in operation in 1929, 8509 miles were operated by the state railways and 3689 miles by private companies. Electrification of sections of the state railway system was under way in 1930, a stretch on the important Tokaido line having been electrically operated since 1925. In 1929 the railways carried 1,213,578,000 passengers and 103,204,000 tons of freight. Gross receipts were 611,549,000 yen, as compared with 581,141,000 yen in 1928. An air service linking the principal cities of the empire was established in 1929. In the same year, 18,320 vessels of 55,197,000 net registered tons entered Japanese ports and 18,313 of 55,387,000 tons cleared.

The merchant marine of Japan proper in March, 1929, consisted of 3323 steamers of 3,725,759 tons and 14,930 sailing vessels of 884,523 tons. The telegraph and telephone systems are government owned.

ARMY AND NAVY. Military service is universal and compulsory. Liability commences at 17, but actual service begins at 20 years and lasts for 20 more. The peace strength of the active army in 1929 was 15,540 officers and 198,800 of other ranks. The military budget for 1929-30 amounted to 225,256,000 yen. See **MILITARY PROGRESS.**

The accompanying table from the *Statesman's Year Book* for 1930 shows the classification of the Japanese Fleet for the three years ending with 1929.

JAPANESE FLEET

| | Completed at end of | | |
|---|---------------------|------|------|
| | 1927 | 1928 | 1929 |
| Battleships and battle cruisers | 10 | 10 | 10 |
| Armored cruisers | 7 | 7 | 7 |
| Aircraft carriers | 2 | 3 | 8 |
| Cruisers | 25 | 27 | 29 |
| First-class gunboats | 4 | 3 | 2 |
| Destroyers | 97 | 106 | 112* |
| Submarines | 65 | 71 | 65* |

* Including 62 first-class and 50 second-class.

† Including 21 first-class, 44 second-class.

See **NAVAL PROGRESS.**

GOVERNMENT. Executive power is vested in the Emperor who acts with the advice and aid of a ministry appointed by, and responsible to, himself; legislative power is in the Emperor and the Imperial Diet of two chambers, namely, the Upper House or House of Peers, composed of membership based on rank, wealth, and other qualifications, and numbering 407 members; and the Lower House or House of Representatives, elected for four years, unless sooner dissolved, and numbering 466 members after the election of Feb. 21, 1930. Emperor Hirohito, born Apr. 29, 1901, succeeded his father Yoshihito, Dec. 25, 1926. The cabinet as constituted at the beginning of 1930 was as follows: Premier, Osachi Hamaguchi; Home Affairs, Kenzo Adachi; Foreign Affairs, Baron Kijuro Shidehara; Finance, Junnosuke Inoue; War, General Kazunari Ugaki; Marine, Admiral Jakeshi Takarabe; Justice, Viscount Chiaki Watanabe; Education, Ryuzo Tanaka; Agriculture and Forestry, Chuji Machida; Commerce and Industry, Magoichi Tawara; Com-

munications, Matajiro Koizumi; Railways, Tasuku Egi; Overseas Affairs, Genji Matsudaira.

HISTORY

FOREIGN RELATIONS. Japan's foreign relations in 1930 were marked by increasing cordiality toward the Nationalist (Nanking) Government of China, the settlement of naval rivalry with the United States and Great Britain for a five-year period through ratification of the London Naval Treaty, and the revival of the agitation for elimination of discriminatory features from the American Immigration Act of 1924. The Hamaguchi Government evidenced its friendliness toward Gen. Chiang Kai-shek's régime in China by granting a request for a Japanese military mission to aid in training Nationalist troops (see **CHINA** under *History*). On October 21, the Japanese Government brought to an end a long controversy with Nanking by withdrawing the appointment of Torikichi Obata as Minister to China. Mr. Obata, the former Japanese Ambassador to Turkey, had been declared *persona non grata* by the Nanking Government for his part in forcing the notorious Twenty-one Demands upon China in 1915.

Plans of the Nanking Government for railway construction in Manchuria which would parallel the Japanese-owned South Manchuria Railway aroused serious concern in Tokyo, where it was feared that the Chinese intended to strangle the extremely profitable South Manchuria system. The Chinese project was considered a violation of the Sino-Japanese Treaty of 1905. Relations with Soviet Russia became somewhat strained as a result of a dispute over Japanese fishing rights off the coast of Kamchatka and the closing by Soviet authorities of the Bank of Korea branch in Vladivostok.

RELATIONS WITH AMERICA. That Japanese resentment still smoldered at the exclusion clause of the United States Immigration Act of 1924 was made plain by Foreign Minister Shidehara, in speaking before the Diet in January, and by Masanao Hanihara, former Japanese Ambassador to Washington, who on May 23 made his first statement on the subject since his recall from Washington six years before. Addressing a farewell banquet in honor of the retiring American Ambassador, William R. Castle Jr., Mr. Hanihara declared that the "Japanese Government and people deeply resented this (the American exclusion act) and the resentment is felt now as it was then, nor will it ever die out so long as the wound inflicted remains unhealed."

On the same day Representative Albert Johnson, chairman of the House Immigration and Naturalization Committee and author of the 1924 Immigration Law, announced in Washington that he would introduce an amendment to give Japan its proportionate quota, but that the admissions would be restricted to those eligible for naturalization under other provisions of the 1924 act. This, in effect, meant that only persons of white or Negro blood born in Japan and therefore designated as Japanese citizens might be admitted for quota purposes. Press opinion in Japan indicated that no amendment which failed to place persons of Japanese blood on the same quota basis as other races would be acceptable.

W. Cameron Forbes, former Governor General of the Philippines, was appointed Ambassador to Japan by President Hoover on June 12, 1930. Questioned with regard to the immigration issue

upon his arrival in Tokyo, Ambassador Forbes stated that the question was one for Congress to settle. He was charged with dodging the issue by leading Japanese papers.

THE KOREAN AGITATION. Events during 1930 indicated a definite trend toward Communism in the Korean nationalist movement. Widespread disturbances among Korean students in both Korea and Japan were reliably reported to have been inspired by Communist "cells" planted in the various schools. Viscount Saito, the newly appointed Governor-General of Korea, pressed for the extension of greater autonomy to Korea on several visits made to Japan early in the year. On March 11, the Cabinet approved the underlying principles of the Governor-General's autonomy plan. Vice Governor Ohira of the Japanese leased railway in South Manchuria reported in May that the extension of the Kirin-Kainei Railway toward Korea was being obstructed by anti-Japanese feeling. Later Japanese police fired on a threatening mob of Korean peasants at Tansen, Korea, killing four and wounding 26. Raids by bands of alleged Korean Communists against Japanese centres in South Manchuria were reported during May and June.

DOMESTIC POLITICS. The Hamaguchi Government's expected appeal to the country came January 21, when Parliament was dissolved by imperial rescript. The government had found its hands tied by the lack of a majority in the Diet which convened Dec. 23, 1930. Furthermore, the Minseito, or Liberal party, leaders considered the time unusually propitious for new elections, due to the revelations of widespread corruption in the previous administration of the Seiyukai under Baron Tanaka (see 1929 YEAR BOOK).

The general election for members of the lower house of the Diet held on February 20 resulted in a sweeping victory for the Minseito party. It won a total of 273 seats, the Seiyukai 174, proletarian parties 5, and other groups 14. Premier Hamaguchi's Ministry, which controlled only 178 seats in the previous Diet, was now assured of a clear majority of 80 seats over all other parties combined. The proletarian groups suffered a sharp defeat, due to competition among four different proletarian parties, numerical weakness of the Japanese trade-union movement, and dearth of funds (liberally supplied by the privileged interests to the Minseito and Seiyukai parties).

Although Japanese elections are largely fought over personalities, the Minseito landslide seemed to express the voters' approval of the government's policies of financial retrenchment, budget balance without recourse to loans, restoration of the gold standard, and conciliation toward China. The tendency toward a two-party system evidenced in the general election of 1928 was confirmed by a further decrease in the number of independents elected to the new Diet. Approximately 10,000,000 of the 12,942,597 voters in Japan went to the polls.

THE TREATY DEBATE. When Emperor Hirohito affixed his signature to the London Naval Treaty on Oct. 2, 1930, in formal ratification, one of the most bitterly contested and significant struggles in modern Japanese political history came to an end. The debate involved two primary issues—the terms of the treaty and the authority of the Cabinet to accept them. Admiral Takarabe, Minister of the Navy, expressed the prevailing opinion with regard to the first issue upon his return from London May 19. He said that while Japan

was not entirely satisfied with the London Treaty, the terms secured were the best obtainable. None of the other signatories was completely satisfied, he pointed out.

The Hamaguchi Ministry, which strove vigorously for ratification of the treaty, encountered its principal opposition in the "big navy" group of army and naval officers. Their opposition involved the long-standing constitutional controversy as to whether control of the nation's military and naval policies rested with the Cabinet or with the Supreme War Council. The Ministry, which upheld the principle of civilian control, had neglected to obtain the formal approval of the Naval General Staff before signing the treaty.

The government crushed opposition within its ranks by accepting on June 9 and 10 the resignations of Admiral Kanji Kato, Chief of the Navy General Staff; Vice Admiral Yamanashi, Vice Minister of the Navy; and Vice Admiral Suyetsuvu, Assistant Chief of the Naval Staff. Their respective posts were filled immediately by Admiral Soshin Taniguchi, Vice Admiral Kobayashi, and Vice Admiral Nagano. That a powerful section of the navy supported the Ministry in its fight for ratification of the treaty was evidenced by the prompt acceptance of appointments to the vacated posts by ranking officers. At the same time Admiral Takarabe ignored demands for his resignation as Minister of the Navy, issued by various military and reactionary organizations. The defeat of the militarists was considered a striking evidence of Japan's progress toward a liberal and more democratic political system. The press, with few exceptions, staunchly supported the government and the strong treaty sentiment of the public was shown by the reception accorded Reijiro Wakatsuki, chief delegate to the London Conference, upon his arrival in Tokyo June 18.

The Supreme Military Council on July 23 formally reported to the Emperor that they considered the London treaty defective in so far as the national defense was concerned. The Cabinet was temporarily endangered but the Minister of the Navy postponed his expected resignation until after ratification of the treaty. He then was succeeded by Admiral Abo, an adviser of the Japanese delegation to London, who had opposed acceptance of the treaty. The treaty was submitted to the Privy Council on July 24 and was finally approved after a bitter fight upon the constitutionality of the Cabinet's procedure. The dilatory tactics of the Privy Council in its consideration of the treaty led to the appointment of a special committee on October 9 to reform the Council's organization and procedure.

A tragic result of the naval controversy was the attempted assassination of Premier Hamaguchi on November 14 by a member of the reactionary Aikokusha (Love of Country Association). The Premier was shot through the abdomen but recovered from his serious wound.

THE NAVAL BUDGET. The dispute between the military and civilian elements over the disposition of some 508,000,000 yen (about \$254,000,000) calculated as the saving effected by the London treaty was finally settled by a compromise agreement on November 10. A new naval programme submitted to the Diet provided for the expenditure of 373,000,000 yen (about \$186,000,000) over the six-year term of the naval treaty. The programme authorized a 70 per cent increase in the naval aviation force and the expenditure of 50,-

000,000 yen for the modernization of capital ships. On the basis of the expenditure necessary had there been no limitation agreement, it was estimated that the new naval programme would permit a tax reduction of 135,000,000 yen (about \$67,500,000).

ECONOMIC POLICIES. The government continued its economic policy of reducing the general level of Japanese prices in an effort to stimulate the export trade. Rationalization of industry, encouragement of the tourist trade, restriction of imports, and the return of various enterprises intimately associated with the government to private operation, were part of the Ministry's programme. Foreign loans were discouraged and deflation in all lines of business was undertaken. Retrenchment in both government and private undertakings was urged to facilitate the readjustments necessitated by the removal of the gold embargo on January 11. The downward pressure on commodity prices and unfavorable conditions in overseas markets combined to intensify the business and industrial depression. In March, the unemployed numbered 351,589, an increase of 100,000 in six months. Thirty-six cotton mills, employing 40,000 persons, cut wages and salaries approximately 25 per cent early in April and other industries followed suit. A suicide rate averaging 500 per month for Japan proper was attributed primarily to unemployment (see UNEMPLOYMENT).

Japan's first legislative enactment limiting hours of labor went into effect Sept. 1, 1930. The law in question provided for a 10-hour mining day. On Nov. 12, 1930, the government announced its intention of raising an internal loan of between \$15,000,000 and \$25,000,000 for the relief of unemployment through public works construction.

OTHER EVENTS. An unsuccessful but significant step in the direction of woman suffrage was the passage by the lower chamber of the Diet of a bill extending the suffrage to women in village, town, and city elections. As was anticipated, the bill failed to emerge from committee in the House of Peers. A typhoon, which lashed Southern Japan and Korea on July 18, and a severe earthquake, which rocked the Izu peninsula of Central Japan on November 26, took a large toll of human lives and property. The typhoon was reported to have cost more than 125 lives and \$50,000,000 in property damage, while incomplete reports from the earthquake zone placed the deaths at 285, the injured at 143, and the number of houses razed or damaged at 5000. Completion of the reconstruction of Tokyo at a cost of \$369,500,000 following the disastrous earthquake of Sept. 1, 1923, was celebrated March 24, 25, and 26.

JEWETT, HENRY. An American actor, died in West Newton, Mass., June 24, 1930. He was born in Australia in 1862 and made his first appearance on the stage in Wellington, New Zealand, in 1880. Returning to Australia in 1882, he was for the next eight years leading man in several stock companies. In 1892 he went to the United States, appearing in San Francisco in *My Uncle's Will*. The following year he was leading man for Julia Marlowe, playing in her repertoire. During 1894-97 he was a member of Richard Mansfield's company and later supported Fanny Davenport and Viola Allen, appeared in *Arms and the Man*; *Diplomacy*; *Benedict Arnold*; *Julius Caesar*; *Othello*; *Joan of Arc*; and *The Christian*. In 1908 he organized the Henry Jewett Shakespearean Players in Boston, and also opened the Copley Theatre which he managed for eight years. He then became director of the Repertory Theatre of Boston, with which his own interests had been merged, holding this position until his death.

JEWS. According to Dr. H. S. Linfield, writing in the *American Jewish Year Book* for 1930-31, there were approximately 15,050,000 Jews, of whom 7,114,000 were residing in Central Europe. Over 4,380,000 Jews were living in North America; 300,000 were residents of Palestine and the surrounding countries of the Near East (Arabia, Iraq, and Syria); while 400,000 were living in the Arab-speaking countries of North Africa. Of the total estimated number of 15,043,788 Jews in the world, 9,290,017 were inhabitants of Europe, 542,009 lived in Africa, 568,585 in Asia, 24,783 in Australasia and 4,617,794 in America. The following constituted the proportions by continents: Europe, 62 per cent; America, 30.7 per cent; Asia, 3.78 per cent; Africa, 3.61 per cent; Australasia, 0.1 per cent. In the accompanying table, Dr. Linfield has compiled his figures for the more important countries of the world.

During the year ending June 30, 1929, a total of 12,479 Jews entered the United States and 189 departed in the same period. During the same fiscal period, 153 Jews were deported. The following were the countries from which the 12,479 Jewish immigrants came during the fiscal year 1928-29: Poland, 5906; other central European countries, 2656; from American countries, 2059; from Northern and Western Europe, 1001; Palestine, 550; from Balkan countries, 106. During the year ended Mar. 31, 1929, 3848 Jews entered Canada; during 1928, 4055 Jews entered Brazil; and during the same calendar year 6812 Jews entered Argentina. During the calendar year 1929, 5249 Jews entered and 1746 Jews departed from Palestine. During the same year, 1317 non-Jews entered that country and 1809 departed. From the date of the British occupation of Palestine (Dec. 9, 1917) to the end of 1929, a total of 104,000 Jews had entered that country as against an emigration from the country of about 30,000.

PALESTINIAN RIOTS. In March, Great Britain published the results of an inquiry made by Sir Walter Shaw bearing on the reasons for the killing of 133 Jews and 116 Arabs in the 1929 summer's riots in Palestine. The Shaw commission's report characterized the outbreak "as an attack by Arabs on Jews, for which no excuse in the form

* Based on latest official census.

of earlier murders by Jews had been established." The commission found that the fundamental cause for the outbreak was the Arab feeling of animosity and hostility toward the Jews as rising out of disappointment in their political and national aspirations and fear for their economic future. According to the commission, the Arabs were disturbed lest continued Jewish immigration and land purchase by Jews would deprive them of their economic well-being and would in time force them under Jewish political domination. The Shaw commission called upon the British government to define with "unequivocal clearness" its interpretation of its duties to Jews and Arabs under the Palestine mandate. Elsewhere in this article there is discussed the Passfield White Paper which in October sought to state again the British position with regard to the mandate. The Shaw report was accepted as a vindication of the Arab position by Arab spokesmen and was received with mixed feelings by Zionists. Dr. Chaim Weizmann characterized the report as "unsympathetic" and "a severe disappointment." Colonel Josiah Wedgwood, a member of Parliament and a friend of the Zionist cause, predicted that the Shaw report would create exasperation and annoyance with England among Jewish communities all over the world.

DISCRIMINATION. It was generally being recog-

nized that anti-Jewish prejudice was on the increase in the United States in the year 1930. Commentators were pointing out that Jews were finding it increasingly difficult to obtain employment, particularly in large corporations, and that Jewish white collar workers were finding themselves in the unfortunate rôle of an industrial reserve; that is to say, that it was being charged that Jews were not being employed for clerical and professional positions when other applicants, particularly non-Jewish ones, were available. In addition, charges were being broadcast that social and academic prejudice was on the increase. For instance, Dr. Frank Gavin, a professor in the General Theological Seminary, declared that it was three times as hard for Jewish boys to enter certain medical colleges as for other boys. He pointed out that in 1929 some 600 Jewish boys who were denied admission to American medical schools made application at Edinburgh, Scotland, and of these only 30 were allowed to matriculate. Of Americans studying medicine in Europe, a disproportionate number was made up of Jewish boys who were unable to obtain admission to American colleges. According to Dr. Gavin, discrimination of this kind made for the development of all those things against which religion was doing battle: embitterment of life, construction of personality,

frustration of vocation, cramping, and paralysis of capacity, incentive, and creative powers. Attention should be called to the activities of the National Conference of Jews and Christians which by round-table discussions and propaganda was seeking to dispel the growing race prejudice. This National Conference, for the twelve months ending August, 1930, succeeded in holding 200 meetings, 80 of which were at colleges and schools. In these conferences it was estimated that 2000 persons participated. In October, 1930, the Conference set up a research committee for the purpose of stimulating study into the causes and character of race discrimination among graduate students and in college seminars.

It is interesting to record the point of view of a non-conformist with regard to race discrimination. Michael Gold, editor of the *New Masses* and the author of *Jews without Money*, declared that race discrimination was part of the larger question of economic discrimination. According to Gold the grouping was fundamentally an economic one—discrimination by employer against employer, by the rich against the poor, indulged in equally by Jews and Christians. Said Gold: "There is no solidarity among the Jews. Half the Jewish firms in town discriminate against their own people. It is the rich Jews against the poor Jews, never the rich Jews helping the poor." Gold attributed the growing discrimination to the social climbers among the Jews who, because they have attained some measure of well being, insist upon claiming that social recognition which is part and parcel of the American scene. Gold believed that fully 2000 Jews through change of name and renunciation of their Jewish heritage were "passing" and were being lost among the larger Gentile majority. Gold believed that intermarriage and assimilation were on the increase.

IN OTHER COUNTRIES. The *Quebec* school question, which had been a topic of lively discussion in the Canadian Jewish community for a number of years, was settled in an amicable fashion. In *Australia*, beginning March, 1930, a complete ban on European immigration, excepting only wives and children of residents, was ordered. In *Germany* the anti-Semitism of previous years continued in full force. Discrimination against Jews was encouraged by Alfred Hugenberg, leader of the Nationalist Party, and Adolph Hitler, leader of the National Socialists. In the campaign preceding the municipal elections in Berlin the platform of the National Socialists included pledges to exclude Jews from employment in newspapers, theatres, motion pictures and other artistic enterprises and the withholding of housing facilities from Jews. Acts of personal violence were not infrequent.

The history of the Jews in *Austria* was largely the same. The *American Jewish Year Book* reported that the "catastrophic economic conditions which exist in Austria no doubt have much to do with the fact that anti-Jewish propaganda is the outstanding characteristic of the life of the Jews in that country. Political strife between extreme reactionaries on one hand and extreme radicals on the other is another factor which leads to attacks on Jews—each of the two conflicting groups accusing the Jews of being partisans of the other, whereas as a matter of fact the bulk of the Jewish population maintains sides with neither of the extreme parties." The sympathies of the Jews were said to be mainly with the moderate liberals.

The record was largely the same in the case of *Hungary*. While the government frowned upon manifestation of Jew-baiting in the universities, no real efforts were being made to interfere with the silent but effective boycott which had depopulated many villages and small towns of their Jewish residents. The hopes of Jews in *Rumania* that the ascendancy of the National Peasant Party headed by Dr. Maniu would bring better times for them were destined to prove baseless during the year. The *American Jewish Year Book* reported the continuance of outbreaks in the universities and of economic discrimination aimed against Jews in villages and small towns. Jewish leaders in Rumania complained against the government on a variety of grounds. They charged that it had failed to keep its promise to establish a Jewish teachers' seminary and to reopen Jewish schools that were established by previous cabinets; that the Ministry of Education had reduced the number of hours devoted to Hebrew or Yiddish in Jewish schools; that the Jews were being discriminated against in civil service employment; that Jewish officials were being dismissed in Bukovina and Transylvania; that the government was delaying the settlement of the political status of thousands of Jews who were not yet citizens of Rumania.

In *Poland* there apparently was a diminishing of anti-Jewish propaganda and discrimination. However, the economic life of the Jewish people was as serious as ever and it was necessary for the American Jewish Joint Distribution Committee to continue its work of succor in order to permit Polish Jews to survive economically. Much of the economic distress was due to the fact that the Polish government was extending its activities into fields formerly operated by private entrepreneurs. This was especially true of such industries as tobacco, alcohol, lumber and salt mining. The Polish government, too, was refusing to give Jews employment in public utilities. According to a correspondent in a New York Jewish daily paper of the total of 20,000 persons employed by the City of Warsaw only 50 were Jews. A number of anti-Jewish demonstrations took place at some of the prominent Polish universities, particularly Cracow and Warsaw Universities. The question of providing Jewish medical students with cadavers was a topic of lively discussion in the Jewish communities of the country.

Along with the adherents of other religions, the Jews of *Russia* were being made to suffer as a result of the intensive campaign of atheism which was going on hand in hand in this country with the five-year plan of industrialization. As in former years the anti-religious campaign took a variety of forms among which were the confiscation of synagogues, the conversion of cemeteries into public grounds; the punishment of teachers of religion; attempts to interfere with the celebration of holidays; discouragement of ritual practices, and the degradation of ministers of religion and other functionaries. Statistics published in December, 1929, showed that a total of 646 synagogues had been seized since the revolution. The most notorious case of persecution of religious functionaries was the arrest in February, 1930, of 14 leaders of the Minsk Jewish community including several rabbis. Eleven of the 14 persons were soon released not, however, before the whole Jewish community of the western world, hearing tales of the threatened execution of the arrested persons, was aroused and issued appeals

and memorialized the Soviet government to exercise moderation. After their release the rabbis signed a statement in which they denied that there was any religious persecution in Russia and in which they also expressed indignation at Jewish leaders abroad and at the Pope for their attacks upon the Soviet government's attitude toward religion.

The work of settling Jews on the land made considerable progress during the year. In February, Dr. Joseph Rosen, Director of the Agro-Joint, announced that in 1930 a total of 15,000,000 rubles was to be devoted by the Government to this work in addition to 4,000,000 rubles which was to be contributed by foreign organizations. The programme on which this money was to be spent, included the placing of over 30,000 persons in industry or under training to work in factories. Apparently the Bira Bidjan project in the Far East which was the favored scheme of the Ozet in Russia and of the Icor in America, appeared to have all but failed. In January the Far Eastern Council of the Communist Party openly charged that the Bira Bidjan colonization scheme had thus far been a failure owing to a mismanagement of the Ozet's representatives; and the society admitted that only 2500 hectares were being tilled and that only 400 families were actually permanently settled on the land.

In June the governments of *White Russia* and the *Ukraine* took a real step to ameliorate the condition of the declassed Jewish artisans. An order was issued declaring that all these artisans were eligible for employment in factories and were to be granted the same right of factory workers provided they worked in coöperatives of not less than 30 members and produced goods suitable for export. These artisans were to be relieved of special taxes and exempted from arrests and the confiscation of their goods. According to the Jewish Telegraphic Agency this decree meant that thousands of Jews that had heretofore been without political or economic rights were henceforth to be on a level with factory workers and members of labor unions. In other words they were to have the right to vote and the rights to the same ration and housing facilities as these other classes.

ZIONISM. The cause of Zionism was rendered a serious blow when the British Labor government, on October 20, issued the Sir John Hope Simpson report together with a White Paper setting forth the Government's future policy in the administration of its mandate of Palestine. The White Paper was the work of Lord Passfield (Sidney Webb), Secretary for the Colonies, and, in effect, denied that the mandate committed the British government to recognizing the claims of political Zionism. The White Paper attacked the too rapid transfer of land from Arab into Jewish hands, placed a ban on Jewish immigration until economic conditions warranted a more liberal policy, and proposed the creation of a legislative council to act as the administrative and law-making body for the country. The White Paper devoted particular attention to the condition of the Arabs on the land and declared:

The condition of the Arab peasant leaves much to be desired and a policy of land development is needed if the improvement of his condition of life is to be effected. The sole agencies which have pursued a consistent policy have been the Jewish colonization societies, private and public. The Jewish settlers had every advantage that capital, science and organization could give them. To these and the energy of the settlers themselves their

remarkable progress is due. On the other hand, the Arab population while lacking the advantages enjoyed by the Jewish settlers has been by an excess of births over deaths increasing rapidly, while the land available for their sustenance has decreased by about 250,000 acres. This area has passed into Jewish hands. . . . It can now be definitely stated that at the present time and with the present methods of Arab cultivation there remains no margin of land available for agricultural development by new immigrants, with the exception of such undeveloped land as the various Jewish organizations hold in reserve.

The new British policy, in other words, indicated the belief of the Labor government that too much haste had characterized the building of the Jewish homeland. While it was generally charged by Zionists and the defenders of the Jewish settlement of Palestine that the British White Paper was a repudiation of the Balfour Declaration of 1917 in view of the fact that the Balfour pledge was committed to the "establishment in Palestine of a national home for the Jewish people," the British government was able to point out that in 1922 it had clearly indicated that its definition of a national home could not prejudice the rights of the Arabs. In 1922 the British government had declared *inter alia*: (1) That it did not aim to make Palestine as "Jewish as England is English." (2) That it was not its intention "that Palestine as a whole should be converted into a Jewish national home, but that such a home should be established in Palestine." (3) That immigration should be subject to the country's economic ability to absorb new settlers.

The White Paper proposed that the legislative council consist of 22 members, of whom 10 were to be official persons and 12 unofficial, the latter to be elected by the Palestinian population. On the point of Arab-Jew hostility the White Paper had this to say:

It is only the closest coöperation between the government and the leaders of the Arab and Jewish communities that can prevent Palestine from drifting into a situation that would imperil on the one hand the devoted work of those who have sought to build up a Jewish national home, and on the other the interests of a majority of the population who at present possess few resources of their own with which to sustain the struggle for existence.

The Simpson report devoted itself to an examination of the economic programmes that Jewish groups had adopted for the development of the country. Sir John Hope Simpson declared that the terms of the mandate compelled Great Britain to see that the position of the Arabs was not being prejudiced by Jewish immigration, but that also it was Britain's duty to encourage the close settlement of the Jews on the land. To further these ends an intensive programme of agricultural works was necessary. The Simpson report praised the progress of small industries in the country but warned against the inauguration of large industrial planning. The Simpson report also attacked the boycott against the employment of Arab workmen by the Jews.

In conclusion Sir John Hope Simpson indicated his belief that the only way the terms of the mandate could be successfully carried out was by the intensive development of rural Palestine. He said:

It is my personal belief, founded on the inquiries which I have made and on my inspections that with thorough development of the country there will be room not only for all the present agricultural population on a higher standard of life than it at present enjoys but for not less than 20,000 families of settlers from the outside.

Lord Passfield's action was immediately assailed by outstanding Jewish groups the world

over. As a mark of protest Dr. Chaim Weizmann, President of the Jewish Agency for Palestine and of the Zionist World Organization, immediately resigned both offices. Dr. Weizmann indicated, however, that he would continue at the head of the Zionist World Organization until the meeting of the next convention in February, 1931. The American Jewish Congress, meeting in Washington at the time the British White Paper was issued, adopted a resolution declaring that the new Palestine policy was a repudiation of the Balfour declaration and of the terms of the British mandate of Palestine. Said Dr. Weizmann, in explaining the reasons for his resignation:

The promise of the Balfour Declaration and of the mandate was to the Jewish people in its diaspora and rested the claims of the people upon the historic connection of Palestine. It acknowledged their right to reconstruct a national home in Palestine. The pledge was given to the whole Jewish people who were to take their place in Palestine "by right and not on sufferance," to use the words of the White Paper of 1922. All this by implication disappears from the government's new statement of policy.

Following the action of Dr. Weizmann, Felix M. Warburg, chairman of the administrative committee of the Jewish Agency for Palestine, and Lord Melchett (q.v.), chairman of the council and of the political committee of the same body, also quitted their posts. Mr. Warburg characterized the White Paper "as a cruel betrayal of trusteeship" in Palestine, while Lord Melchett called that document "an unparalleled act of treachery."

Jewish hostility to the Passfield White Paper found unexpected support in the unequivocal statements of British political leaders. Thus, three outstanding representatives of the British Conservative party came to the defense of the Zionists. Stanley Baldwin, Sir Austen Chamberlain, and Leopold S. Amery attacked the MacDonald government for what they designated an abandonment of the terms of the mandate. The signatories of this statement paid high tribute to the work of Dr. Weizmann who, they declared, had for twelve years been identified with a policy of cooperation with the British government. Gen. Jan Christiaan Smuts too sided with the Zionists. He telegraphed to the MacDonald government reminding them that the Balfour Declaration of 1917 was an international pronouncement approved beforehand by the Allied and Associated powers, and declared that the repudiation of this pledge could not become operative without the consent of all those nations who had agreed to it. David Lloyd-George, leader of the British Liberal party, took his place beside Ex-Premier Baldwin and other Conservatives in their attacks on the Labor government. He, too, declared that the Balfour Declaration had been issued only after consultation with the Allied and Associated powers and he spoke concerning the reasons for its issuance as follows:

At a most critical moment in the war we were anxious to secure the good will of the Jewish community throughout the world and on the side of the Allies. The Balfour Declaration about Palestine was a gesture not merely on our part but on the part of the Allies to secure that valuable support. It was prepared after much consideration, not merely of its policy but of its actual wording by the representatives of all the Allied and Associated countries, including America and our Dominion premiers.

Jewish protests advocated the adoption of the following programme: an appeal to the League

of Nations to compel Great Britain to observe the terms of the mandate; Jewish noncooperation in the creation of the legislative council; and renewed pressure on the MacDonald government by private agencies and, if possible, public authority. Along these lines American Jews indicated that they would place their complaints against the British government before President Hoover. On the other hand, Palestinian Arabs expressed themselves as being favorably disposed toward the proposed legislative council.

In the middle of November, attacks against the Labor government were resumed. Lloyd George on November 17 characterized the issuance of the Passfield White Paper "as a truly amazing performance." Lloyd George charged that nobody interested or concerned had really been consulted in its formulation. Neither the League of Nations nor its Mandates Commission nor Mr. Stanley Baldwin, leader of the Opposition, was consulted. Lloyd George insisted that the Passfield Paper was a direct repudiation of the Balfour pledge, which gave the promise that if Palestine were conquered a national home for Jewish people would be established. The Labor government was justified by the Under Secretary for Colonies and by Prime Minister MacDonald himself. Dr. Drummond Shiels declared that the Labor government in its White Paper had only intended to elaborate and follow the interpretation issued by Winston Churchill in 1922. He declared that it intended to stand by the mandate and continued to hold a balance between conflicting interests. The White Paper in fact was—

Merely a fusion of the document of 1922, the Shaw report, and the John Hope Simpson report, and was put forward only as a basis for discussion with both sides. Meanwhile I will remove other misunderstandings. The Government will guarantee and for the first few years pay the interest in sinking fund charges of a loan of £12,500,000 for the development of works in Palestine and to provide land for 10,000 families. Landless Arabs will have their claim, and the land will then be open to both sides.

Mr. MacDonald, in defending the policy of his administration, gave assurance that Palestine would continue to remain a national home for Jews; that the mandate would be scrupulously carried out; that no change in policy was being contemplated; and that any doubts to the contrary were due to a misunderstanding. Premier MacDonald stressed the point that a Jewish national home could best be promoted by economic cooperation with the Arabs. In discussing reactions to the Passfield Paper he made the following statement:

The Jewish people and the Zionists may be disappointed. They were disappointed in 1922 but if they were disappointed it was because conditions rendered necessary a pull-up in the rapidity of development. If those admirable men like Dr. Chaim Weizmann who have given their whole lives and hearts are disappointed the circumstances are such that a pull-up is necessary. Will they take our word for it that the pull-up is in no sense an abandonment in the mandate or a change in the policy that has been pursued in order to carry out the mandate?

It was apparent that British sentiment was prepared in large degree to back up the stand of the MacDonald government. Thus, the *London Times*, which was in no sense an administration organ, commented on the November debates in the following fashion:

The extreme claims of political Zionists are inadmissible. They involve the establishment with the aid of the British administration, ultimately backed by British

troops, of Jewish ascendancy over the Arabs in Palestine, in obvious violation of the Mandate.

But the moderate Zionists, who loudly regret the setback to the policy of intensive colonization, will do well to remember, first, as Sir Herbert Samuel wisely said, that an Arab gain is not a Jewish loss, and secondly, that a Jewish national home requires a solid foundation of good-will to be secure.

The policy of the MacDonald government clearly aims at securing that good-will. It is a pity it was stated with so little precision in the first instance.

See PALESTINE and GERMANY under *History*.

JHERING, yä'ring, HERMANN VON. A German naturalist in Brazil, died in Budingen, province of Oberhessen, Germany, Feb. 24, 1930. The son of the German jurist, Rudolf von Jhering, he was born in Kiel, Oct. 9, 1850, and was educated at Giessen, Leipzig, Berlin, and Göttingen. He was *privatdozent* at Erlangen and Leipzig until 1880, in which year he went to Brazil to become naturalist of the Museu Nacional in Rio de Janeiro. From 1893 to 1916, he was director of the Museu Paulista in São Paulo and, after his return from South America, he was honorary professor of the University of Giessen. His special interest was zoögeography, the problems in relation to which he solved by experimental work with land and freshwater mollusca and with the social insects, the wasp in particular. He was noted for his contributions to South American biology and palæontology, though he wrote also on the Antarctic faunas and the German Selachii. He also grouped the Neomenia, Chetodermia, etc., under the new name *Amphineura* (1876), but erroneously assigned them to a division of worms. From 1895 to 1911, he edited the *Revista do Museu Paulista*. His published works include *Anatomie des Nervensystems und Phylogenie der Mollusken* (1877); *Anthropology of the State of São Paulo* (2d ed., 1906); *Les mollusques fossiles du Tertiaire et du Crétacé de l'Argentine* (in *Anales del Museo de Buenos Aires*, 1907); *Archhelenis und Archinotis* (1907); and *Die Geschichte des Atlantischen Ozeans* (1926). In this, his last general work, he summarized his former conclusions and suggested fundamental changes in both Atlantic and Pacific geography up to the middle of the Kainozoic era.

JOHNS HOPKINS UNIVERSITY, THE. A nonsectarian institution of higher education for men (women are admitted to certain courses) in Baltimore, Md.; founded in 1876. The enrollment for the autumn of 1930 was 5975, distributed as follows: School of higher studies of the faculty of Philosophy, 484; school of higher studies in education, 118; school of medicine, 278; school of hygiene and public health, 167; school of engineering, 363; school of business economics, 90; college of arts and sciences, 371; college for teachers, 1330; night courses for technical workers, 677; and evening courses in business economics, 956. The registration for the 1930 summer session was 1141. The faculty numbered 665. The productive funds amounted to \$26,826,975, and the income from all sources for 1929-30 was \$2,639,211.

Important gifts to the university during 1929-30 included: \$40,000 from the Rockefeller Foundation for research and graduate work in chemistry; \$100,000 from Mrs. Anne Archbold to endow the John D. Archbold fellowship in medicine; \$55,000 from the Chemical Foundation for the John J. Abel Fund for research on the common cold; \$500,000 from the General Education Board as an additional grant for the completion of the Osler and Halsted clinics; \$100,000 from Edward S. Harkness for the endowment fund for physiolog-

ical optics and \$30,000 from the same donor for the Harkness fellowship in ophthalmology; and \$200,000 from an anonymous donor and \$100,000 from Edwin G. Baetjer for the establishment of the Institute of Law. The university also received from the Rockefeller Foundation a pledge of \$500,000 towards the endowment of the departments of the biological sciences on the condition that it designate an equal amount and an appropriation of \$100,000 as a fluid research fund in the humanities to extend over five years.

The Walter Hines Page School of International Relations was inaugurated in February, 1930, John Van Antwerp MacMurray, former Minister to China, acting as director. Other members of the faculty of this school included John Holladay Latané, for some years professor of history in the university; Frederick S. Dunn; Col. S. C. Vestal; and Gilbert Chinard. See INTERNATIONALISM. In the school of medicine Dr. Alan M. Chesney succeeded Dr. Lewis H. Weed as dean on the latter's appointment as director of the school. The visiting professors were: Charles W. Metz of the Carnegie Institution of Washington (zoölogy); Henry Suzzalo, president of the Carnegie Foundation for the Advancement of Teaching (education); Isaac L. Kandel of Columbia University (education); E. Bompiani of the University of Rome (mathematics); Wilhelm Blaschke of the University of Hamburg (mathematics); and Carl W. Kockel of the University of Leipzig (geology). The main library contained 376,775 volumes. President, Joseph Sweetman Ames, Ph.D. See INTERNATIONALISM.

JOHORE. See NON-FEDERATED MALAY STATES.

JONES, MARY HARRIS ("MOTHER"). An American labor leader, died in Silver Springs, Md., Nov. 30, 1930. She was born in Cork, Ireland, in 1830, and migrated to Toronto, Canada, with her father in 1837. After teaching in Memphis, Tenn., she was married to an iron molder, but in 1867 lost her husband and four children in a yellow fever epidemic. On going to Chicago she became an active leader in the betterment of conditions among the laboring classes. She played a prominent part in the anthracite coal strike of 1900, and later became one of the principal organizers of the United Mine Workers of America. She was also an ardent crusader against child labor in the South.

JOSIAH MACY JUNIOR FOUNDATION. See UNIVERSITIES AND COLLEGES.

JUDITH, EMPRESS OF ETHIOPIA. See ZAUDITU (JUDITH).

JUGOSLAVIA. The official name attached by royal decree on Oct. 3, 1929, to the Balkan state formerly known as the kingdom of the Serbs, Croats, and Slovenes. Established Dec. 29, 1918, Yugoslavia comprised the formerly independent kingdoms of Serbia and Montenegro; Bosnia and Herzegovina; Croatia and Slavonia, former autonomous provinces of Austria-Hungary; portions of the Banat, Backa and Baranja, integral parts of Hungary proper; Dalmatia, a former province of the Austrian Empire; and Slovenia, composed of portions of former Austrian provinces. Capital, Belgrade; reigning King in 1930, Alexander I.

AREA AND POPULATION. According to the census of Jan. 31, 1921, the area of Yugoslavia was 96,134 square miles and the population 12,017,323, representing a density of 125 to the square mile. The estimated population on Feb. 1, 1930, was 13,600,000. It was distributed according to

the new administrative structure adopted in October, 1929, roughly as follows:

JUGOSLAV PROVINCES: AREA AND POPULATION

| Province | Capital | Area in square miles | Population |
|----------------|-----------------|----------------------------|------------|
| Drava | Ljubljana | 6,151 | 1,040,000 |
| Sava | Zagreb | 14,242 | 2,320,000 |
| Vrbas | Banjaluka | 7,935 | 850,000 |
| Littoral | Split | 7,495 | 800,000 |
| Drina | Sarajevo | 11,299 | 1,400,000 |
| Zeta | Cetinje | 12,476 | 740,000 |
| Danube | Novi Sad | 10,870 | 2,100,000 |
| Morava | Nish | 9,928 | 1,200,000 |
| Vardar | Skoplje | 15,272 | 1,405,000 |

Belgrade formed a special administrative unit.

Serbian and Croatian are the principal languages spoken, the minor linguistic groups comprising Slovenes, Germans, Rumanians, Hungarians, and Albanians. The principal cities, with their census populations, were: Belgrade, 225,000 (1929); Zagreb, 150,000 (1928); Soubotitz, 104,000 (1928); Skoplje, 72,000 (1927); Sarajevo, 64,500 (1925); Ljubljana, 57,000 (1928); Novi Sad, 51,000 (1929).

PRODUCTION. Agriculture engages about 85 per cent of the population; lumbering and cattle raising are the other chief occupations. Rich resources in minerals, timber, and water power remain to be exploited. Cereals constitute the principal crops. In 1928 there were approximately 15,796,000 acres of arable land, or 26 per cent of the total area; 1,396,000 acres of orchards, shrubs, and bushes; 10,777,000 acres of permanent pasture; and 18,745,000 acres of forests.

The harvest for 1929 showed great improvement over the two previous poor crop years, although profits were affected by lower world prices for agricultural products. Production of the leading crops, in metric tons, for 1929, with comparative figures for 1928 in parentheses, was: Corn, 2,870,000 (1,819,000); wheat, 2,585,000 (2,811,200); oats, 350,770 (366,300); barley, 314,590 (394,200); rye, 210,070 (191,200). The total area devoted to cereals in 1929 was 5,726,495 hectares, as compared with 5,307,390 hectares in 1928 (hectare equals 2.47 acres). The prune crop was estimated at 300,000 metric tons (460,260 in 1928); opium, 35,000 kilograms (200,000 kilograms in 1928).

Industrial progress was generally more satisfactory than in 1928, although the low purchasing power of the population resulting from low agricultural prices restricted the progress of industries manufacturing for home consumption. Lumber exports increased in value, and textile, cement, and paper factories continued to expand their output, due largely to tariff protection. Conditions in the leather, flour milling, metal, and electro-technical industries were less satisfactory. Other industries are sugar refining, pottery, iron working, carpet weaving, and brewing.

Production of practically all minerals increased in 1929, the output in metric tons, with comparative figures for 1928, being distributed as follows: Coal, 5,964,500 (5,051,800); iron ore, 450,800 (439,480); copper ore, 356,560 (327,800); bauxite, 93,000 (49,260); pyrites, 61,660 (64,270). There are large coal deposits of low caloric value. The estimated hydraulic power resources total 3,500,000 horse power, of which 212,000 horse power were developed in 1930.

COMMERCE. An increase of 23 per cent in the value of exports in 1929 and a decrease of 3 per

cent in imports resulted in a favorable balance of trade for the first time in three years. Exports were valued at 7,921,700,000 dinars (\$134,900,000), as against 6,444,700,000 dinars (\$113,400,000) in 1928, while imports totaled 7,594,800,000 dinars (\$133,700,000), as against 7,835,300,000 (\$137,900,000) in 1928, leaving a favorable balance of 326,900,000 dinars, as compared with an adverse balance of 1,390,600,000 dinars in 1928.

The increased exports were due to the larger harvest, increased mineral output, and a strong foreign demand for construction wood. While imports declined in value, the volume was larger than in the previous year. Construction wood was the leading article of export in 1929, with wheat, eggs, crude copper, hogs, cattle, and corn ranking in order. The chief imports were cotton, iron and iron articles, wool, machinery, food products, skins and hides, and coal.

Exports went chiefly to Italy (24.9 per cent of the total), Austria, 15.6 per cent; Rumania, 12.9 per cent; Germany, 8.5 per cent; Greece, 7.4 per cent; Hungary, 6.8 per cent, and Czechoslovakia, 5.4 per cent. Principal sources of imports were Czechoslovakia, 17.5 per cent; Austria, 17.4 per cent; Germany, 15.6 per cent; Italy, 10.8 per cent; Hungary, 6.5; Great Britain, 5.6; and the United States, 4.74. Imports from the United States decreased from \$6,784,000 in 1928 to \$6,341,000, while exports to that country increased from \$1,048,000 in 1928 to \$2,213,000 in 1929.

FINANCE. The budget for the fiscal year ended Mar. 31, 1930, anticipated receipts of 12,158,721,100 dinars and expenditures of 12,158,672,000 dinars. The respective figures for 1928-29 were 11,555,794,000 dinars and 11,952,794,000 dinars. Government revenues continued to show a slight surplus over expenditures during 1929 and dinar exchange remained steady despite the continued postponement of legal stabilization. The budget for 1930-31 again showed an increase, balancing at 13,348,000,000 dinars (about \$235,000,000). The public debt on July 1, 1929, stood at 32,085,282,000 dinars (\$564,701,000), as compared with 31,119,196,000 dinars (\$547,698,000) a year earlier. The dinar equaled \$0.193 at par.

COMMUNICATIONS. Yugoslavia in 1929 had 6280 miles of railway line, of which 5562 miles were operated by the government. Of the total length, 4225 miles were standard gauge and 2051 miles of narrow gauge. During 1930 Yugoslavia obtained from Germany and Hungary, on reparation accounts, 110 standard-gauge and four narrow-gauge locomotives; 1100 standard-gauge gondola cars and 600 standard-gauge box cars, and 1730 freight cars of various types for narrow-gauge lines. State and provincial highways in 1930 had an aggregate length of 24,855 miles (6214 miles being state roads), of which about 50 per cent were passable for motor traffic. The highway programme for 1930 called for the construction or improvement of 482 miles of highway at a cost of about \$13,000,000. Air lines extend from Belgrade to Zagreb and to Skoplje.

Waterways and canals extend 1242 miles. Entrances and clearances at the ports in 1929 totaled 183,916 vessels of 29,907,000 registered tons, as against 170,009 ships of 28,800,000 tons in 1928. In 1928, the merchant fleet consisted of 153 steamers of 242,000 gross tons, 14 motor ships of 366 net tons, 709 sailing vessels of 7313 tons, and 5449 fishing vessels of 10,219 tons.

GOVERNMENT. Under the Constitution adopted

June 28, 1921, executive power was vested in the King and a Cabinet responsible to a single legislative chamber, called Narodna Skupshtina (National Assembly). By an executive decree issued Jan. 6, 1929, the King abolished the Constitution, dissolved the Skupshtina, and assumed all executive powers, which he exercised through a cabinet appointed the following day. On Feb. 17, 1929, another royal decree established a supreme legislative council of 17 nominated members (11 Serbs, 4 Croats, and 2 Slovenes). The Cabinet appointed Jan. 7, 1929, was composed as follows: Premier and Minister of the Interior, General Pera Zivkovitch; Deputy Premier, N. Onzunovitch; Foreign Affairs, Dr. Voyislav Marinkovitch; Transport and Communications, Lazar Radivojevitch; Defense, General Stevan Hajitch; Finance, Stanko Shverljuga; Commerce and Industry, Juraj Demetrovitch; Education, Boza Maximovitch; Justice and Public Worship, Dr. Milan Srshkitch; Social Affairs and Health, Dr. Matya Drinkovitch; Mines and Forests, Father Anton Koroshetz; Posts, Telegraphs, and Public Works, M. Trifunovitch; Agriculture and Agrarian Reform, Professor Otto Frangesh.

HISTORY

NATIONAL UNIFICATION. Efforts of the military dictatorship to crush separatist tendencies and weld Serbs, Croats, and Slovenes into a unified nation continued to arouse serious opposition in 1930. Anti-Serb feeling in Croatia was deeply stirred by the trial of the Croat Peasant party leader, Dr. Vlatko Machek. Serb discontent with the dictatorship was revealed in connection with the frustration of a plot by members of the former Serb-Croat Peasant Democratic party to bomb a train bearing a loyal deputation to Belgrade on April 22.

During the Machek trial, the dictatorship took steps to conciliate the Croats by the appointment on May 19 of two additional Croat representatives to the Cabinet. Dr. Stanko Schipenik was named Minister of Agriculture and Nikola Preka Minister of Social Welfare. Two Croats whom they succeeded on the Cabinet were retained as Ministers without Portfolio. Seven Croats held Cabinet posts in June, 1930. The government, however, flatly refused to relax the drastic measures by which it sought to infuse a new spirit of nationality. Gen. Pera Zivkovitch, in a communiqué issued July 4, said that the old system of parliamentary government could not and would not be restored. The division of the country into nine banats or provinces was declared "final."

Hopes that the banats would be granted large powers of local autonomy were dashed by a decree issued later in the same month providing for the establishments of provincial councils. Members of the councils were to be appointed and dismissed by the central government. Duties of the councils were confined to economic and social matters and they were ordinarily to meet but once a year. Their apparent function was to serve as consultative assemblies only. The political parties dissolved in January, 1929, were formally prohibited for the future. State officials and teachers were ordered to strive to put into effect the new plan for a national state. The sokols, or athletic organizations, were taken under the wing of the government and reorganized along lines similar to the Balilla of Fascist Italy and the Young Pioneers (Communist auxiliaries) of Soviet Russia.

More effective than these methods in securing acceptance of the King's policy of national unification was the threat of war with Italy. The relations of the two countries reached an acute stage following the execution by Fascist riflemen in September of four Italian citizens of Slovenian blood, charged with terrorism in connection with the irredentist movement among the Slovenian minority in Italy (for further details see ITALY under *History*).

A national defense law, promulgated by the King July 18, was clearly intended to prepare the nation for the threatened struggle with Italy. The decree established a council of national defense, composed of the chief of the General Staff and the members of the Cabinet, to work out plans for the prompt mobilization of all financial, industrial, and labor resources. The threat of war apparently aided the dictatorship to win over a considerable section of Croatian opinion. On Dec. 8, 1930, a huge demonstration of Croat loyalty to the King was held in Zagreb under the leadership of Karl Kovachevich, a former member of the Croat Peasant party. On the other hand, widespread passive resistance to the dictatorship was reported among the Serbian peasants and observers agreed that the future of the dictatorship would be largely determined by the measure of success achieved in coping with the economic crisis. In line with its programme of national development, the Cabinet placed a special tax on all bachelors and exempted from all taxes fathers with more than nine children.

The development of a religious dispute between the Roman Catholics of Croatia and the Orthodox Serbs offered a further obstacle to King Alexander's hope of creating a united nation. An anti-Catholic movement among the Serbs had its origin in the conviction that the Pope, following the peaceful settlement of the Roman Question, was attempting to Catholicize the Orthodox nations of the Balkans. On the other hand Roman Catholic organs in Austria charged the dictatorship with attempting to establish a Pan-Serbian-Fascist system, which would be strongly anti-Catholic. Croat Catholics were accused in the Serbian press of carrying on an anti-Serb campaign at the behest of Rome. On February 2 a large delegation of Croatian Catholics, headed by the Archbishop of Zagreb, visited Belgrade to protest against the charges in the Serbian newspapers, which were vigorously denied.

THE MACHEK TRIAL. The trial of Dr. Vlatko Machek, Croat Peasant party leader and head of the opposition in Croatia to the dictatorship, opened at Belgrade April 24. Dr. Machek, with 23 others, was tried on charges of sedition and of belonging to a terrorist political organization. The Croat leader was one of more than 2000 persons arrested in connection with an alleged Croatian conspiracy to frustrate the celebration of the King's birthday on the previous December 17. The trial, which attracted widespread attention in Europe, was marked by sensational charges of police brutality. It ended June 14 with the acquittal of nine of the 24 defendants, including Dr. Machek and Colonel Begitch. Fifteen defendants were found guilty and sentenced to terms ranging from a few months' imprisonment to 15 years at hard labor. The court found that all the criminal activities mentioned in the charges had taken place, but that not all the defendants had been guilty of participating in them.

THE AGRICULTURAL CRISIS. Yugoslavia in 1930

coöperated actively with neighboring states in an effort to alleviate the agricultural crisis in the Balkans and central Europe resulting from low farm prices and American competition. An attempt by Yugoslavia, Rumania, and Hungary to form an agricultural selling pool at a conference in Bucharest in July failed (see *RUMANIA under History*). Early in August, however, Rumania and Yugoslavia reached an agreement at Sinai, Rumania, preliminary to the reduction of tariffs and the mutual exchange of excess products. Later Czechoslovakia was included in the agreement. An attempt to extend this virtual customs union to the other states of eastern Europe was made at a conference which assembled at Warsaw, Poland, on August 28 (see *POLAND under History*). A Yugoslav delegation attended the conference for Balkan unity held in Athens during October (see *GREECE under History*). Additional agrarian conferences were held at Bucharest in October, with a larger number of states in attendance, and at Warsaw in November. While little progress was made, these negotiations were regarded as paving the way to a system of regional unions, which in turn would furnish a basis for the proposed European federation.

THE MACEDONIAN QUESTION. The question of the treatment of the Macedonian minority in that portion of Yugoslavia detached from Bulgaria at the close of the World War again came to the fore in January when three Macedonians escaped from Yugoslavia and laid formal charges of Yugoslav oppression before the League of Nations. They demanded that a special League commission be established to insure that the Macedonians obtained the rights guaranteed them by the Minority Treaty signed at St. Germain, Sept. 10, 1919.

A convention was signed on February 17 by Bulgaria and Yugoslavia to regulate the administration of border populations in both countries. It provided that a permanent Mixed Commission of Control should be empowered to assess responsibility for future border incidents and to advise border authorities as to their policies with respect to the maintenance of peace. The agreement failed to exert the favorable effect anticipated, however. Hardly had it been signed when a series of bomb outrages in Yugoslavia, bearing strong evidence of the work of Macedonian revolutionaries, led to strained relations, and a demand from the Yugoslav Minister in Sofia that the guilty be punished.

Anxious to avert another Balkan outbreak such as that which touched off the World War, the British and French governments, joined later by Italy, made diplomatic representations to the Sofia government. Bulgaria then undertook in apparent earnest the task of breaking up the Macedonian revolutionary organizations (see *BULGARIA under History*). KANSAS. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 1,880,999. According to the State census taken in 1925, the population was

1,812,986. The population on Jan. 1, 1920, was 1,769,257. The capital is Topeka.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930.

| Crop | Year | Acreage | Prod. Bu. | Value |
|---------------|------|------------|-------------|---------------|
| Wheat ... | 1930 | 11,775,000 | 158,862,000 | \$ 88,945,000 |
| | 1929 | 11,516,000 | 138,060,000 | 138,053,000 |
| Corn ... | 1930 | 6,847,000 | 76,164,000 | 44,937,000 |
| | 1929 | 6,103,000 | 106,802,000 | 79,033,000 |
| Hay | 1930 | 2,234,000 | 8,437,000* | 31,007,000 |
| | 1929 | 2,282,000 | 3,971,000* | 41,026,000 |
| Oats | 1930 | 1,385,000 | 42,104,000 | 14,736,000 |
| | 1929 | 1,197,000 | 28,249,000 | 12,995,000 |
| Grain sorghum | 1930 | 1,100,000 | 14,300,000 | 9,295,000 |
| | 1929 | 1,091,000 | 19,638,000 | 13,747,000 |
| Potatoes . | 1930 | 45,000 | 4,955,000 | 4,460,000 |
| | 1929 | 47,000 | 4,375,000 | 6,125,000 |
| Barley .. | 1930 | 545,000 | 12,480,000 | 4,618,000 |
| | 1929 | 608,000 | 12,464,000 | 6,232,000 |

* Tons.

Farms in the State numbered 166,055 in 1930, their total being almost the same as in 1925 (165,879) and in 1920 (165,286). Irrigated lands totaled 69,841 acres in 1929, as against 47,312 in 1919.

MINERAL PRODUCTION. A period of diminished mineral production in Kansas culminated with 1928. By the results of that year the State ranked eleventh in the aggregate value of mineral production. This aggregate was, for 1928, \$113,279,524; for 1927 it had been \$120,368,526, a total in turn well below that of 1926. In 1929 the production of a number of the State's leading minerals rose. The petroleum wells yielded 42,875,000 barrels in 1929, as against 38,596,000 in 1928; the value of this product was \$63,500,000 (estimated) for 1929; for 1928, \$52,500,000. Zinc was mined to the quantity of 109,850 short tons in 1929; in 1928, of 107,251 short tons. The value of the zinc total rose to \$14,500,200 for 1929, from \$13,084,022 for 1928. Lead, the other important component in the State's lead-zinc ores, was also increasingly produced. There were mined 26,596 short tons of lead in 1929, as against 25,276 in 1928; in value, \$3,351,096 for 1929 and \$2,932,016 for 1928. Cement production was slightly higher, shipments from the cement mills totaling 6,855,861 barrels in 1929; in 1928 they had totaled 6,787,568. Their value was, for 1929, \$10,041,282; for 1928, \$10,091,330. Coal production, 2,975,971 net tons for 1929, was slightly above the 2,809,724 net tons of 1928. The value of coal mined was, for 1929, \$6,697,000; for 1928, \$6,861,000. As to the production of natural gas the figures for 1929 were not yet available. For 1928 the total produced was 45,044,000 M cubic feet of natural gas, as against 42,640,000 M for 1927; in value, \$14,144,000 for 1928 and \$12,833,000 for 1927. Gasoline extracted from natural gas totaled 33,800,000 gallons in 1929 and 36,765,000 in 1928; in value, \$2,060,000 in 1929 and \$2,444,000 in 1928. Clay products attained for 1928 the value of \$3,593,130, for 1927, of \$3,805,509. The output of salt, 840,370 short tons for 1929, was moderately above the 821,950 of 1928; in value it was, for 1929, \$3,761,894; for 1928, \$3,573,982. The production of gypsum, to the value of \$935,595 in 1928, was near the normal level. The total value of the State's mineral products was, for 1928, \$113,279,524 as compared with a total of \$120,368,526 in 1927.

TRANSPORTATION. The total number of miles of

railroad line under operation on Jan. 1, 1930, was 9342.06. No construction of additional line or trackage in 1930 was reported.

EDUCATION. The report of the State School Code Commission and that of the Tax Code Commission, both issued in 1929, were subjected to wide publicity, with a view to promoting some of the recommendations embodied, notably that for a plan of equalization for school expenditure.

CHARITIES AND CORRECTIONS. The State Board of Administration, as organized in 1905, was in 1930 the central administrative authority over the State institutions for the care or custody of persons. It was composed of the Governor and three other members, assisted by a business manager. In addition to general administrative duties it made frequent visitations of the institutions and discharged the function of recommending paroles for prisoners, while its business organization purchased institutional supplies. The State institutions under its authority, with their respective numbers of inmates as counted in November, 1930, were: Topeka State Hospital (insane), 1719; Osawatimie State Hospital (insane), 1466; Larned State Hospital (insane), 715; State Hospital for Epileptics, Parsons, 680; State Training School, Winfield, 984; State Sanatorium for Tuberculosis, Norton, 223; State Orphans' Home, Atchison, 195; Kansas State Penitentiary, Lansing, 1727; Kansas State Industrial Reformatory, Hutchinson, 953; Women's Industrial Farm, Lansing, 154; Boys' Industrial School, Topeka, 203; Girls' Industrial School, Beloit, 177. The State also maintained the following special schools: School for the Blind, Kansas City, 109; School for the Deaf, Olathe, 238; Western University, Kansas City, 160; Kansas Vocational School, Topeka, 164.

LEGISLATION. A special session of the Legislature was held, adjourning March 12. It dealt with matters chiefly of taxation, and particularly with the situation brought about by the intangible tax law, which was regarded as having enabled banking and other financial institutions to place themselves on a more favorable tax basis than town and farm property owners. The intangible tax law was repealed. An act was passed placing National, State, and savings banks, and loan, trust, finance and investment companies on the same basis for tax purposes. All were to be taxed, at the general property tax rate, on valuations determined by capital stock, surplus and undivided profits. Legislation was enacted to enable the State to take advantage of the exemptions allowed by the Federal estate tax.

POLITICAL AND OTHER EVENTS. The emergency cited by Governor Reed as his reason for calling the special legislative session arose from a decision of the State Supreme Court. The court rendered a majority opinion that the tax on intangibles, which had been attacked by stockholders in a State bank as discriminatory, was constitutional, but that State banks, like National banks, must be taxed at the rate of but 50 cents on the \$100. A dissenting opinion of one of the judges raised the point that if State banks could sue successfully for the restitution of excessive tax payments other institutions and corporations might do likewise, thus imperiling the financial condition of the State government.

A sharp discord developed in the labor organization of the Kansas coal-mining industry, which under the leadership of Alexander Howat clashed with the parent organization, the United Mine

Workers of America. The latter on March 26 revoked the charter of District 14 of Kansas.

The severe decline in the price of wheat that took place about the time of the gathering of the year's crop was a subject of general agitation in the State. Chairman Legge of the Farm Board made a speaking campaign through Kansas in July on behalf of his proposal that wheat growers generally throughout the country should reduce the acreage to be planted for 1931. He was opposed by Governor Reed, who made his criticism of the Farm Board's policy the chief feature of his primary campaign for renomination. In spite of agricultural antagonism to the Farm Board's proposals Governor Reed lost the Republican nomination to Frank Hauke, an ex-soldier.

ELECTIONS. For the full term as United States Senator, Arthur Capper, Republican, was re-elected on November 4 by an ample majority. For the partly expired term to which Henry J. Allen had been appointed *ad interim* on the elevation of former Senator Curtis to the Vice Presidency, Allen, a Republican, was defeated by the Democratic candidate, George McGill. The election for Governor was exceedingly close. Harry Woodring, Democrat, was reported to have defeated Frank Hauke, Republican, by the narrow margin of a few hundred votes. A delegation of seven Republicans and one Democrat was elected to the House of Representatives. With diminished majorities, Republicans retained control of both branches of the Legislature. The voters rejected a proposed constitutional amendment to allow a graduated income tax and a proposal to double the pay of legislators.

OFFICERS. Governor, Clyde M. Reed; Lieutenant-Governor, J. W. Graybill; Secretary of State, E. A. Cornell; Auditor, Will J. French; Treasurer, Tom B. Boyd; Attorney-General, William A. Smith; Superintendent of Public Instruction, George A. Allen, Jr.

JUDICIARY. Supreme Court: Chief Justice, William A. Johnston; Associate Justices, Rousseau A. Burch, John Marshall, John S. Dawson, W. W. Harvey, Richard J. Hopkins, William Easton Hutchinson.

KANSAS, UNIVERSITY OF. A State institution of higher education in Lawrence, Kan.; founded in 1864. The 1930 autumn enrollment was 4449, of whom 148 were registered in more than one school, leaving a total enrollment of 4301. Of this number, 1554 were women and 2747 men, distributed as follows: Graduate school, 276; college of liberal arts and sciences, 2423; engineering and architecture, 648; fine arts, 314; law, 145; pharmacy, 48; medicine, 355; education, 84; business, 156. The 1930 summer session had an enrollment of 1869, of whom 1031 were women and 838 men. The full-time faculty members numbered 250. The endowment fund amounted to \$236,000, and the income for the year, including the balance carried over from 1929, was \$2,631,179. There were 232,000 volumes in the library. Chancellor, Ernest Hiram Lindley, LL.D.

KANSAS WESLEYAN UNIVERSITY. A coeducational institution under the auspices of the Methodist Episcopal Church in Salina, Kan.; founded in 1885. The enrollment for the autumn of 1930 was 494, distributed as follows: College of liberal arts, 265; college of music, 54; business college, 175. The 1930 summer session had an enrollment of 125. The faculty numbered 30. The endowment amounted to \$100,000, while the income from the General Fund was \$129,946. A

gift of \$10,000 was made by Walter P. Chrysler. There were 15,000 volumes in the library. President. L. B. Bowers, D.D.

KARAFUTO. The name applied to the Japanese half of the island of Sakhalin (see **SAKHALIN**), which comprises that portion south of the 50th parallel of N. latitude. Area, approximately 13,934 square miles; population in 1929, 240,502. The chief industry is the herring fisheries, although the colony is suitable for agriculture and pasturage. Coal, gold, and oil are mined and six pulp factories were in operation in 1929. The herring catch averages more than 825,000,000 pounds annually, the greater part of which is manufactured into fertilizer. The total value of fishery products in 1928 was 20,557,432 yen. Oil production in 1928 totaled 539,481 tons. For the year ending Mar. 31, 1930, the approved budget balanced at 33,036,935 yen (1 yen equaled about \$0.46).

KELLOGG PACT. See **LEAGUE OF NATIONS**.

KENTUCKY. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 2,614,589. The population on Jan. 1, 1920, was 2,416,630. The capital is Frankfort.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|------------------|------|-----------|--------------------------|--------------|
| Corn | 1930 | 2,909,000 | 31,417,000 | \$28,904,000 |
| | 1929 | 2,938,000 | 80,207,000 | 72,988,000 |
| Tobacco .. | 1930 | 507,500 | 331,699,000 ^a | 47,433,000 |
| | 1929 | 492,800 | 389,277,000 ^a | 68,123,000 |
| Hay | 1930 | 1,179,000 | 882,000 ^b | 17,224,000 |
| | 1929 | 1,272,000 | 1,802,000 ^b | 28,116,000 |
| Potatoes .. | 1930 | 45,000 | 2,831,000 | 3,539,000 |
| | 1929 | 50,000 | 4,395,000 | 5,933,000 |
| Sweet potatoes . | 1930 | 14,000 | 952,000 | 1,142,000 |
| | 1929 | 15,000 | 1,365,000 | 1,638,000 |
| Wheat ... | 1930 | 238,000 | 3,284,000 | 2,988,000 |
| | 1929 | 240,000 | 2,832,000 | 3,568,000 |
| Oats | 1930 | 218,000 | 3,488,000 | 1,849,000 |
| | 1929 | 290,000 | 6,235,000 | 3,679,000 |

^a Pounds. ^b Tons.

Farms in the State numbered 247,011 in 1930, as against 258,524 in 1925 and 270,026 in 1920.

MINERAL PRODUCTION. The renewal of activity in the coal-mining areas of the neighboring States of Illinois and West Virginia that occurred in 1929, following the close of labor troubles, was on the whole unfavorable to the coal mines of Kentucky. These mined but 60,462,600 net tons of coal in 1929, as against 61,860,379 in 1928 and 69,123,998 in 1927. The total value of coal mined was, for 1929, \$93,283,000; for 1928, \$96,722,000. As usual comparatively little of the product was coked in the State, and there was no sign of increase in the State's output of pig iron, of which blast furnaces shipped 194,150 long tons in 1929, as against 225,545 in 1928. Petroleum production was higher: 7,776,000 barrels in 1929, as against 7,359,000 in 1928; in value, \$13,300,000 (estimated) for 1929 and \$11,850,000 for 1928. Clay products attained for 1928 the total of

\$7,123,523; for 1927, of \$7,257,664. The production of natural gas increased to 15,383,000 M cubic feet, from 10,206,000 M for 1927; in value, to \$5,349,000 for 1928, from \$3,277,000 for 1927. Outside of these main products and of the normal output of stone, sand and gravel, Kentucky produced important quantities of native asphalt and of fluor spar. Asphalt production was 318,548 short tons in 1928 and 344,220 in 1927; in value, \$2,757,547 in 1928 and \$3,156,700 in 1927. Of fluor spar were produced, in 1928, 69,747 short tons, valued at \$1,426,766. The total value of the State's mineral products was, for 1928, \$131,969,907; for 1927, \$152,614,177.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 4033.23. There were built, in 1930, 16.46 miles of first, 55 of second, and 1.28 of third track.

EDUCATION. The cause of State aid to public school education was advanced by the enactment in 1930 of an equalization law. This measure appropriated \$1,250,000 to be employed to make up deficiencies in teachers' salaries in school districts lacking the resources to pay the legal minimum rate of \$75 a month. There were enrolled in the public schools, in the year ended June 30, 1929, 581,511 pupils. Of these, 526,472 were in common schools or elementary grades, and 55,039 were in high schools. The year's expenditures for public-school education were: current, \$19,138,429; total, including capital outlay and debt service, \$27,357,550. Teachers' salaries for the year averaged \$767 in elementary and \$1406 in high schools.

CHARITIES AND CORRECTIONS. The control of eight State institutions for the care or custody of persons rested in 1930, as in previous years, with the State Board of Charities and Corrections. This body was a non-partisan board of eight members holding their places by appointment of the governor. It was required by law that two of the number be women. It had as executive officer a Commissioner of Institutions. The institutionalized persons under the authority of the board in 1930 numbered about 10,000, of whom about 60 per cent were inmates of mental hospitals and the remaining 40 per cent were in reformatory or penal institutions. The following were the institutions, with their populations as reported for Oct. 31, 1930; Eastern State Hospital (mental), Lexington, 1628; Central State Hospital (mental), Lakeland, 2202; Western State Hospital (mental), Hopkinsville, 1707; Feeble-Minded Institute, Frankfort, 621; State House of Reform for Boys, Greendale, 519; State House of Reform for Girls, Greendale, 156; State Reformatory, Frankfort, 2396; State Penitentiary, Eddyville, 1167;

LEGISLATION. The Legislature met in regular biennial session. It enacted a much discussed statute to the effect that the ballots cast in elections should no longer be counted on the night of the election, immediately after the closing of the polls, according to the custom prevailing throughout the country, but should be locked in boxes and taken from the polling places to the respective county seats. There they were to be opened and the count was to be made and tabulated on the day after the election. The declared purpose of the act was to check fraudulent counting of ballots. The legislature followed the example of Georgia in imposing a sales tax on the business of shops. It enacted a law subjecting retail merchants to an impost of one-twentieth of

1 per cent on gross sales of \$400,000 or less; of twice that rate up to \$500,000; and gradually up to the rate of 1 per cent on sales in excess of \$1,000,000 a year. Refusal of a retailer to file a return or permit his books to be examined was made a misdemeanor punishable by a fine of \$1000 and imprisonment up to six months. The statute forbids the maintaining of a suit at law to restrain or delay collection. The measure was regarded in some quarters as a blow against the chain store. The Clark Toll Bridge Act empowered the Highway Commission to sell \$4,000,000 of bridge bonds without bidding.

POLITICAL AND OTHER EVENTS. The State Court of Appeals invalidated in May the statute providing that transfers of property made within three years of the donor's death should be presumed to have been made in anticipation of death. It held that transfers made veritably in such anticipation should be held subject to inheritance tax, but that the State might not arbitrarily fix a period to establish a presumption. The Court of Appeals sustained in June the Clark Toll Bridge Act of 1930 and also an agreement between Kentucky and Indiana for the construction of a Henderson-Evansville Bridge, which had been attacked in a friendly suit to determine validity.

The law of 1931 for a central ballot count deferred until the morrow of election was first applied on August 1, the occasion of the Congressional primaries. The contest over the disposal of Cumberland Falls continued. T. C. duPont made an offer at the beginning of the year to buy the site of the Falls at his own expense as a gift to the State. The Legislature voted acceptance of this proposal; Governor Sampson then vetoed the acceptance. The lower chamber overrode his veto but the Senate sustained it. The State Attorney-General sought thereafter to negotiate with the Cumberland River Power Company, the holders of the site, for an agreement to yield it to the State. At the same time an effort was made to get the Federal Power Commission to refuse a permit for power development at the Falls, which Kentucky citizens wanted preserved for scenic reasons, but the Power Commission was advised by the Federal Attorney-General that it had no authority to take scenic matters into consideration. The power company refused late in July an offer from the State of \$230,000 for its property and rights at the Falls, and the State then set under way condemnation proceedings with the intention of thus dispossessing the company and converting the site into a State park.

Economically the State suffered severely for a time from the summer's drought, which however was in part relieved by rains in August. Lack of feed for the cattle threatened and in some cases brought the necessity for farmers to sell their dairy herds. Through the Red Cross were distributed among destitute farmers such aids as 100,000 bushels of rye seed and likewise kale and turnip seed with which to raise late greens for fodder. Prolonged labor troubles occurred over the efforts to reestablish a uniform unionized wage scale in the coal fields of Western Kentucky. At Providence in Webster County one of the collieries was bombed from an airplane, which was traced to Murphysborough, Illinois, and found to have been flown by a local aviator, who asserted that he had piloted the bombers under compulsion.

The National Bank of Kentucky, at Louisville, suspended on November 16, with liabilities of approximately \$54,700,000, including about \$41,-

000,000 in deposits. These included the \$3,250,000 proceeds of the State's sale of bridge bonds, which deposit, however, was reported to be protected by a surety bond. A number of smaller banks suspended in the same critical moment, which coincided with numerous bank suspensions in Tennessee and Arkansas.

ELECTIONS. Senator John M. Robison, Republican, failed of reelection, being defeated on November 4 by Judge M. M. Logan. The vote was unofficially reported as 329,623 to 302,625. Nine Democrats and two Republicans were elected to the Federal House of Representatives. Senator Robison, an appointee, was defeated also for the unexpired term, to which Ben Williamson, Democrat, was elected. In Lexington the voters approved the adoption of municipal government by city manager.

OFFICERS. Governor, Flem D. Sampson; Lieutenant-Governor, James Breathitt, Jr.; Secretary of State, Ella Lewis; Attorney-General, J. W. Cammack; Auditor, Clell Coleman; State Treasurer, Emma Guy Cromwell; Commissioner of Agriculture, Labor, and Statistics, Newton Bright; Superintendent of Public Instruction, W. C. Bell.

JUDICIARY. Court of appeals: Chief Justice, Gus Thomas; Associate Judges, William Rogers, Clay, W. F. Grigsby, R. P. Deitzman, M. M. Logan, William H. Reese, S. S. Willis.

KENTUCKY, UNIVERSITY OF. A coeducational, State institution of higher learning in Lexington, Ky.; founded in 1866. The enrollment in the autumn of 1930 was 3204, distributed as follows: Graduate school, 238; arts and science, 1284; agriculture, 274; engineering, 603; law, 105; education, 360; commerce, 340. There were 1758 students registered in the 1930 summer session. The faculty numbered 239. The productive funds amounted to \$184,075, and the income for the year was \$1,716,528. During 1930 construction of the education and dairy products buildings was completed. The library contained 116,531 volumes. President, Frank LeRond McVey, Ph.D., LL.D.

KENYA COLONY AND PROTECTORATE (formerly the EAST AFRICA PROTECTORATE). A British crown colony and protectorate in East Africa bordering on the Indian Ocean between Italian Somaliland and Tanganyika and extending inland to Uganda and Ethiopia. Area, 224,960 square miles; population in 1928, estimated at 2,891,691, including 12,529 Europeans, 30,583 Asiatics (about 25,000 Indians), and 10,557 Arabs. Capital, Nairobi, with 32,864 inhabitants (3612 Europeans). Mombasa, the largest town, had a population of 39,824 (869 Europeans).

Besides 2500 mission and native schools, there were 51 Government schools open in 1928. Agricultural products include rice, cotton, simsim, coconuts, groundnuts, and sugar cane in the lowlands and coffee, maize, wheat, and sisal in the highlands. The dairy and wool industries are expanding. The forested area of 4500 square miles contains valuable timber. Minerals so far discovered include gold, graphite, manganese, sodium carbonate, and diatomite. Kenya and Uganda form one administrative unit for Customs purposes. Preliminary figures of the Commissioner of Customs for 1929 showed imports into the two territories of £8,608,000 (£8,696,000 in 1928) and exports of £7,021,000 (£6,662,000 in 1928). Kenya's share in 1929 was: Imports, £6,290,000; exports, £2,746,000. The customs rev-

enne for Kenya and Uganda in 1929 was £1,390,000. In 1928 total Kenya revenues were £3,020,694; expenditures, £2,834,647. The public debt on Jan. 1, 1929, stood at £13,500,000. The state-owned Kenya and Uganda Railway in 1929 operated 1291 miles of line, a steamer service on Lakes Victoria and Kioga, and a motor-transport service. An additional 180 miles of railway line were under construction.

The colony is governed under the constitution of December, 1925, which provides for an executive and legislative council. Governor and Commander-in-Chief in 1930, Lieut.-Colonel Sir Edward W. M. Grigg, succeeded in October by Sir Joseph Aloysius Byrne, Governor of Sierra Leone.

HISTORY. After six years of delay and discussion, the British government on June 19, 1930, announced its policy with regard to the administration and development of Kenya, Uganda, and Tanganyika. In general, its programme followed the recommendations of the Hilton-Young report (see 1929 YEAR BOOK under *Kenya*). A High Commissioner for the three dependencies was to be appointed with wide dual powers—first, as chief adviser on native and other policies to the British government; and, secondly, as High Commissioner to administer and legislate with regard to ports, railways, customs, etc., in all three territories. In Kenya, the British government decided to leave the constitution of the Legislative Council substantially unchanged and to retain the official majority. It thus rejected the demand of the White Settler party of Kenya for an unofficial majority in the Kenya Legislature. The government further proposed to secure the natives in possession of their lands, to safeguard conversion of native lands to public uses, and to insure for the natives greater freedom in choosing their livelihood and place of work.

The Labor government's policy agreed in important respects with that urged by the Government of India on behalf of the Indian settlers in the three territories, and to which European settlers in Kenya and Tanganyika bitterly objected. Criticism was also voiced by German members of the Mandates Commission of the League of Nations, who feared that union of Tanganyika Mandate, formerly German territory, with Kenya and Uganda, would make it difficult to transfer the mandate back to Germany or to some other European power.

Evidences of native unrest in Kenya were reported during the year. In April, 1930, the Native Lands Trust Bill was passed by the Kenya Legislature. It granted the natives a charter which guaranteed their lands in perpetuity, vested control of the lands in a central board under the High Commissioner, and provided for eventual African representation in the Legislature. See **TANGANYIKA** and **UGANDA**.

KENYON COLLEGE. A college of arts and sciences for men in Gambier, Ohio; established in 1824 by the Protestant Episcopal Church and associated with it. The enrollment for the autumn term of 1930 was 218. The faculty numbered 22 members. The endowment funds amounted to \$1,671,000, and the income for the year was \$209,000. The value of buildings and equipment was \$1,755,000. The library contained 78,000 volumes. President in 1930, William F. Peirce, L.H.D., D.D., LL.D.

KIRBY-LUNN, LOUISE. A British contralto, died in London Feb. 17, 1930. Born in Manchester in 1873, she studied at the Royal College of Music, making her début in 1896 in Stanford's Irish opera, *Shamus O'Brien*, at the Opera Comique in London. She then toured with the Carl Rosa Company for three years, where she became especially distinguished in Wagnerian rôles. Becoming associated with the Covent Garden Opera Company in 1902, she achieved her greatest triumph two years later as Amneris in Verdi's *Aida*. In 1904 she also appeared as Kundry in the first English performance of *Parsifal* in Boston. Between 1906 and 1908, and again in 1912, she appeared with the Metropolitan Opera Company in New York City. In 1909, on her return to England, she created the rôle of Delilah in French at Covent Garden. She also appeared in opera in Germany and Hungary and toured America, Australia, and New Zealand in concert.

KIRGHIZIA, or KIRGHIZ AUTONOMOUS SOCIALIST SOVIET REPUBLIC. See **SOVIET CENTRAL ASIA.**

KIWANIS INTERNATIONAL. An organization of clubs made up of not more than two of the leaders in each business and profession, united for the rendering of civil and social service to the community. Each club enjoys autonomy but at the same time functions in direct connection with district and international administrations. There are 29 geographical districts, each with a governor, in the United States and Canada. The first club was organized in Detroit, Mich., in January, 1915. By 1917 the organization had spread into Canada. The name "Kiwaniis" was coined to express the constructive, unselfish work of Kiwanians. The motto of the organization, "We Build," is also an expression of this spirit. Its aims are to crystallize community sentiment for municipal improvements, to cultivate public opinion for purer politics, and to promote community coöperation in all good things. At the close of the year 1930 the international organization consisted of 1871 clubs, with an approximate membership of 100,000. Some 35,000 civic and welfare projects were carried out by these organizations during the year. Raymond M. Crossman, of Omaha, Neb., was the international president for 1930-31; Fred. C. W. Parker of Chicago, secretary; and Walter W. Weiser of Daytona Beach, Fla., treasurer. Headquarters are in the Federal Reserve Bank Building, 164 West Jackson Boulevard, Chicago.

KLEBELSBERGITE. See **MINERALOGY.**

KNIGHTS OF COLUMBUS. A fraternal society of Roman Catholic men, organized under a special charter granted by the General Assembly of the State of Connecticut in 1882. The order is composed of a supreme council, a board of directors, and State and subordinate councils. On June 30, 1930, there were 61 State councils and two territorial jurisdictions. The subordinate councils, numbering 2555, had a membership of 618,611, of whom 254,794 were insurance members and 363,817 associate members. These two classes were developed through deviation from one of the chief purposes of the organiza-

tion, to urge Roman Catholic men to insure provision after death for those dependent upon them, expansion in membership permitting others to join the associate class with certain restrictions as to their rights.

The four principles of the order, charity, unity, fraternity, and patriotism, emphasize to members the necessity of rendering service in time of illness, death, or distress; the gathering together of men for better citizenship; the value of mutual assistance; and loyalty to duly authorized civil government. Since the World War the society has offered to ex-service men evening courses in academic, commercial, and trade or technical subjects free of charge and has conducted correspondence courses for ex-service men and other members of the order.

The order's programme of boy-guidance work was organized in 1922 at the request of the bishops of America. It includes a two-year training course in boy-guidance work at Notre Dame University, established through the endowment of a chair by the order. Scholarships are furnished outstanding Catholic men graduates of colleges, who are particularly adapted to the work. The Circles of Columbian Squires, the junior order for boys between 14 and 18, in 1930 numbered 72 with a membership of 3200. The objectives of the junior order are: to develop a programme of activities most suitable for boys of the middle adolescent group; to train Catholic boys for future leadership; and to develop them through the five-fold programme into high-type-Catholic gentlemen.

The 1930 supreme convention was held in Boston, August 19-21, with an attendance of approximately 1500 members. By vote of the convention each council of the order was requested to appoint a committee to work for the general alleviation of the unemployment situation in the United States. Appropriations also were made by the board of directors, following the action of the convention, for relief work in the drought-stricken sections of the middle western States, and in Santo Domingo after the hurricane.

The officers reelected at the convention were: Martin H. Carmody, supreme knight; John F. Martin, deputy supreme knight; William J. McGinley, secretary; D. J. Callahan, treasurer; Edward F. Fahey, M.D., physician; Luke E. Hart, advocate; the Rev. John J. McGivney, chaplain; and David F. Supple, warden. The order publishes *Columbia*, a monthly magazine with a circulation of more than 625,000. The headquarters of the supreme council are in New Haven, Conn.

KOMURA, KIN-ICHI, SECOND MARQUIS. A Japanese statesman, died in Tokyo Dec. 29, 1930. Born in 1882, he was graduated from the Imperial Tokyo University in 1907, and then became attaché at the Japanese embassies in Peking (1907) and in London (1908-10). After serving as sectional chief of the political bureau, he was appointed in 1923 deputy-director of the information bureau of the Japanese Foreign Office. At the time of his death he was Vice Minister of Overseas Affairs.

KONGO BELGIAN, KONGO FREE STATE. See CONGO, BELGIAN.

KOREA or CHOSEN. A peninsula of eastern Asia annexed by the Japanese Empire under the treaty concluded between Japan and Korea on Aug. 22, 1910, and incorporated as an integral part of the Japanese Empire by an Imperial Rescript issued in 1919. Capital, Seoul (Keijo-fu).

AREA AND POPULATION. With an area of 84,949

square miles, Korea had a population of 21,057,969 in 1930. There were (1928) 18,667,334 Koreans, 469,043 Japanese, and 53,322 foreigners (including 743 Americans). The population of the chief cities at the end of 1926 was: Seoul, 315,006; Pusan, 113,092; Pyong-Yang, 119,729; Tai-Ku, 82,549; Chemulpo, 53,865.

EDUCATION. Less than 20 per cent of the population are literate. In 1927, common schools for the education of Koreans numbered 1395, with 401,992 pupils; private common schools, 81, with 19,460 pupils; higher common schools, 39 (18 private), with 13,143 pupils. For the education mainly of Japanese there were 459 elementary schools, with 56,671 pupils and 11 middle schools, with 5230 pupils. The University of Seoul had 597 students in 1927, of whom 422 were Koreans and 175 Japanese.

PRODUCTION. Korea is almost exclusively an agricultural country. At the end of 1929 there were 2,815,277 farming households, comprising a population of 15,210,204, or 78.6 per cent of the total population. Land under cultivation at the end of 1929 totaled 10,115,900 acres, or about 20 per cent of the total area; 36.5 per cent of the cultivated land was devoted to paddy fields. Japanese own nearly one-half of the tilled land, their holdings averaging 52.92 acres per household, as against 4.16 acres for Korean households. Rice, barley, wheat, beans, tobacco, cotton, hemp, ginseng, and various cereals are the leading crops. The rice crop for 1930 was estimated at 98,217,000 bushels (70,154,000 in 1929). Livestock raising, fruit growing, and silk culture are important subsidiary farm industries.

Gold, iron, graphite, and anthracite are the principal minerals mined, although considerable quantities of silver, zinc, copper, lead, tungsten ore, and kaolin are produced also. Mineral production has shown a steady expansion, the total value in 1928 being 26,360,834 yen, as against 24,169,229 yen in 1927. The value of sea products in 1928 was 44,886,136 yen (1 yen equaled \$0.4640 in 1928).

Industrial production in 1928 was valued at 392,533,876 yen, or 22,890,000 yen more than in 1927. At the beginning of 1929 there were 5342 power-equipped factories employing five or more workers per day and with an annual production value of 5,000,000 yen or more. Textile fabrics, paper, pottery, metal ware, manufactured tobacco, brewed drinks, and leather are the chief industrial products. The Government exercises a monopoly of ginseng, salt, and tobacco.

COMMERCE. The overseas trade in 1929, totaling 768,757,607 yen, was 11,211,960 yen less than in 1928. Exports to foreign countries amounted to 35,773,033 yen and imports to 107,767,710 yen, while exports to Japan proper totaled 309,891,023 yen and imports, 315,325,841 yen. As compared with 1928, the 1929 trade with foreign countries showed a gain of 3,623,846 yen in exports and a decline of 10,383,312 yen in imports, while the trade with Japan proper indicated a decline of 23,938,314 yen in exports and an increase of 19,485,920 yen in imports.

FINANCE. The finances of Korea are included in the Japanese budget as a special account. The budget for the fiscal year ended Mar. 31, 1930, as approved by the Diet, balanced at 246,852,843 yen (1 yen equaled \$0.4601 in 1929) for both ordinary and extraordinary items, or 24,105,864 yen more than the working budget for 1928-29. The working budget for 1929-30, subsequently

adopted by the new Hamaguchi Government, totaled 236,431,539 yen, or 10,421,304 yen less than the budget approved by the Diet. Actual returns for 1929-30 showed combined ordinary and extraordinary revenues of 240,579,267 yen (ordinary revenues, 184,069,530 yen) and total expenditures of 224,740,305 yen (ordinary expenditures, 160,905,956 yen). The working budget for 1930-31 was estimated to balance at 239,729,783 yen, with ordinary revenues of 202,057,540 yen and ordinary expenditures of 186,672,827 yen. The public debt outstanding on Mar. 31, 1930, totaled 377,136,235 yen.

COMMUNICATIONS. Railway lines open to traffic in Korea on Mar. 31, 1930, totaled 2150 miles, of which 1710 miles were owned and operated by the Government, and 440 miles by private interests. A 12-year programme for the construction of 860 miles of additional lines by the Government was under way in 1930.

At the beginning of 1929, there were 10,767 miles of first-, second-, and third-class highways completed as part of a projected highway system of 14,929 miles. Expenditure on roads during 1928 totaled \$1,100,000, of which \$700,000 was supplied by the Central Government and \$400,000 by local governments. Shipping entering the open ports in 1928 had an aggregate tonnage of 8,028,546; those clearing, a tonnage of 7,724,590. The extension and improvement of the port of Chemulpo was commenced by the Japanese Government-General in June, 1930.

GOVERNMENT. Korea is governed as an integral part of Japan through a governor-general entrusted with large administrative powers. In 1929, Viscount Minoru Saito, former Governor-General of Korea, was reappointed to that post as the successor to Gen. Hanzo Yamanashi. See JAPAN.

KOWEIT, or **KUWAIT**. See ARABIA.

KRAKATAO, ERUPTION OF. See DUTCH EAST INDIES.

KRAMERSITE. See MINERALOGY.

KU-KLUX KLAN, KNIGHTS OF THE. An American benevolent, eleemosynary, and fraternal institution, incorporated under the laws of the State of Georgia in 1915. Its membership decreased 8.1 per cent during 1930, but it continued its activity in all matters of civil government affecting its ideals or principles. "The membership is made up of white, male, Gentile persons, native-born American citizens, 18 years of age. They must be of sound mind, good character, commendable reputation, and respectable vocation; must believe in the tenets of Christian religion; and must owe no allegiance to any foreign government, nation, institution, sect, ruler, prince, potentate, people, or person, and whose allegiance, loyalty, and devotion to the Government of the United States of America in all things is unquestionable." The officers were: President, Hiram W. Evans; secretary, H. C. Spratt; treasurer, Sam H. Venable. Headquarters are in Atlanta, Ga.

KULAKS. See RUSSIA under *History*.

KURDISTAN, *kūr'de-stān*. A term applied to an indefinite region in eastern Asia Minor comprising portions of Turkey, Persia, Soviet Armenia, and Iraq and inhabited by semi-nomadic Kurds, a people related to the Persians in race and language. Their nationalistic aspirations resulted in a serious revolt among the tribes of eastern Turkey in 1930, which received assistance from the Kurds of Persia and Iraq (see TURKEY,

and IRAQ under *History*). Great Kurdish demonstrations for the establishment of an autonomous Kurdish state were reported from Northern Iraq in July, 1930.

KURIA MURIA ISLANDS. See ADEN.

KUWAIT. See ARABIA.

KWANG-CHOW-WAN, *kwāng'chō'wān*. A small territory on the coast of the Chinese Province of Kwangtung, leased to France in 1898, and two small islands commanding the bay leased to her the following year. Area, about 190 square miles; population estimated in 1926 at 205,000 (270 Europeans). Imports in 1928, 7,295,857 piastres; exports, 7,570,480 (1 piastre exchanged at \$0.4854 in January, 1929). The local budget for 1928 balanced at 680,000 piastres. The administration is under the Governor-General of French Indo-China. See FRENCH INDO-CHINA.

KWANTUNG, *kwān'tung'*, or **KWANTAO**. A territory at the southern part of the Liaoting Peninsula, leased to Japan by China, as a successor to Russia after the Russo-Japanese War. Area, about 538 square miles; population, Dec. 31, 1928, 837,219, of whom 733,711 were Chinese. At the end of 1927, there were 69 schools for Japanese, with 31,209 pupils, and 132 schools for Chinese, with 24,929 pupils. The agricultural products include rice, tobacco, hemp, and various grains and vegetables. The fishing industry is of importance. Salt is the chief manufactured product. Trade is mainly with Japan and China. Imports in 1928 were valued at 168,524,899 *haikwan* taels and exports at 199,363,559 *haikwan* taels (the exchange value of the *haikwan* tael in 1928 averaged \$0.71). The seat of the administration and the chief port is Dairen, formerly Dalny. The budget for 1929-30 was estimated to balance at 23,050,000 yen. The South Manchurian Railway connects Port Arthur and Dairen with Mukden, Harbin, and the Chinese Eastern Railway; its total length in 1926 was 691 miles. The territory is under the administration of a Japanese governor-general.

LABOR. The reader is referred to the following articles for discussions of the various aspects of the history of labor during the year: CHILD LABOR; COÖPERATION; LABOR ARBITRATION AND CONCILIATION; LABOR LEGISLATION; MINIMUM WAGE; OLD-AGE PENSIONS; STRIKES AND LOCK-OUTS; UNEMPLOYMENT; WOMEN IN INDUSTRY; WORKMEN'S COMPENSATION; and to the articles dealing with the respective countries. See also TRADE UNIONS and SOCIALISM for special aspects of the labor subject. The article which immediately follows discusses the history of the American Federation of Labor for the year 1930.

LABOR, AMERICAN FEDERATION OF. The American Federation of Labor held its fiftieth annual convention at Boston from October 6 to October 17. The executive council reported that there was a total membership for 1930 of 2,961,096 as compared with 1929's membership of 2,933,545 and 1928's membership of 2,896,043. During the year 1929-30 the executive council declared that the following new charters had been issued: Central labor unions, 11; local trade unions, 42; federal labor unions, 8. There was a total of 500 delegates in attendance during the sessions of the convention. Among the outstanding events were the address of President Hoover, the detailed discussion given the Federation's unemployment programme, and the speeches of Senators Wagner of New York, and Walsh of Massachusetts.

Appreciating the seriousness of the unem-

ployment emergency, the legislative council of the convention placed before the assembly delegates a programme for unemployment which consisted of the following nine points: (1) The creation of a national system of Federal and State employment exchanges for the registry of the unemployed. (2) The collection of comprehensive statistics on employment and unemployment. (3) Reduction in the hours of labor and the introduction of the 5-day week. (4) Formation of a national economic council for the purpose of stabilizing industry. (5) Collection of data on methods of regularizing production. (6) Speeding up of public works. (7) Introduction of vocational training courses. (8) The recommendation to President Hoover that he arrange for a special study of technological unemployment. (9) Recommendation that the legislative council be empowered to study all proposed plans of unemployment relief.

Early in the meetings of the conference it was apparent that the floor would see considerable discussion devoted to the American Federation of Labor's programme for the handling of unemployment. On October 7 two resolutions favoring unemployment insurance were submitted and on the next day four resolutions with the same end in view were placed before the delegates. The most radical proposal dealing with unemployment was a resolution presented by the Newport, R. I., Central Labor Union, which advocated compulsory unemployment insurance through governmental legislation. This particular resolution proposed the establishment of a plan by which a fund would be created from taxation on "the increased value of stocks and bonds above par or original selling value; increased dividends or earnings in business and increased bank deposits and reserves." However, the proposal for the American Federation of Labor support of unemployment insurance received a severe setback when it was announced that the New York State Federation of Labor, which at its own convention had gone on record as favoring such a plan, would not present such a resolution to the American Federation of Labor convention. It is interesting to note, too, that President William Green, of the American Federation of Labor, though he had endorsed the candidacy of Governor Roosevelt of New York, went on record as opposing the Governor's compulsory unemployment insurance measure.

Important resolutions advocating unemployment insurance under State and Federal supervision were offered by the United Textile Workers of America and the American Federation of Teachers. The sessions of the resolutions committee of the convention witnessed an animated discussion of the whole problem. Repeatedly, charges were made that unemployment insurance constituted a dole and that its lack of success in Great Britain was ample justification for the opposition being voiced by the American Federation of Labor leaders. On the other hand, the fraternal delegates of the British Trades Union Congress who were present presented a spirited defense. Allen A. H. Finlay, one of the British delegates, objected to the use of the word dole and insisted that unemployment insurance in Great Britain was on a contributory basis. His union of 1,000 members, he said, had itself contributed \$35,000,000 in unemployment insurance to its members in the last nine years. Arthur Shaw, General Secretary of the British National Union

of Textile Workers, also defended the British scheme.

Senator Wagner, of New York, on October 10 severely criticized the inaction of business and governmental leaders in handling the acute unemployment situation. He resented the use of the word dole as applied to governmental programmes and said: "Is not the dole in use to-day in every industrial community of the country? What else can we call the disbursements for unemployment relief by every charitable organization and even by many municipalities?" Senator Wagner devoted considerable attention, too, to the use of injunction in labor disputes, and charged that in many of the States of the Union the Constitution had been suspended and that local law was being superseded by injunction edicts handed down by Federal and State courts. He also attacked the yellow-dog contract.

On October 15 President Green defended the unemployment programme submitted by the executive council of the American Federation of Labor. Mr. Green called on entrepreneurs in industry to set their own house in order and warned them that serious trouble might impend if rigorous action was not taken. The executive council triumphed when the convention, after a prolonged debate, adopted its unemployment programme and agreed to submit to it for further study all resolutions favoring compulsory unemployment insurance. This implied that the executive council would be expected to bring in a detailed report on the subject before the 1931 convention. Said Mr. Green in defense of the stand taken by himself and the other members of the executive council:

The American Federation of Labor has a programme which you have just heard. We will point the way. Our recommendations are the most practicable yet made by a responsible body. I believe if we placed the moral force of the Federation behind that programme we can force the adoption of a remedy, but we cannot have these periods of unemployment and maintain peace and tranquility in this country. If we are to maintain the present social order that squares with advancing civilization, the managers of industry must help; if they are to live and be protected they must help us find a cure for unemployment. It is a reflection on our civilization that we have 3,000,000 in this country seeking and willing to work and yet have no work to do. It is indefensible, morally wrong, socially disgraceful and the American Federation of Labor must press on until a solution is found.

The resolutions committee, to which had been submitted all the proposals for unemployment insurance, attacked these programmes without qualification. Matthew Woll was chairman of this committee. The committee report characterized compulsory unemployment insurance as a dole. The report said that such a policy would deprive the worker of his liberty by placing him under the supervision of Federal and State bureaucracies. A system of unemployment insurance would interfere with the free movement of labor from one part of the country to another in search of work. Another argument advanced against the scheme was that workers would be prevented in joining in movements to increase wages lest they sacrifice their eligibility to insurance coverage.

Other arguments voiced from the floor against unemployment insurance were based upon the alleged failure of the British system. In England, it was pointed out, the worker had become a ward of the state because it compelled him to accept work offered him under the penalty of loss of insurance. There was heated opposition advanced against these remarks by delegates

from the floor. Max Zaritsky, of the Cloth Hat and Cap Makers' Union, objected to characterizing unemployment insurance as a dole and then pointed out logically enough that the acceptance of doles in the form of charity was no more self-respecting. Mr. Zaritsky proposed that the problem of unemployment be attacked at the source and the source lay in the fact that "the purpose of industry is to operate for profit and not for service." None the less, the resolutions committee's report, proposing the submission of these schemes to the executive council, was adopted with few dissenting votes.

As a result of the urging of the United Textile workers of America, the American Federation of Labor pledged its support to the continuance of an intensive campaign for the organization of labor in the South. The United Textile Workers called particular attention to the strike of 4000 textile workers in Danville, Virginia. A formal resolution pledging such financial and moral assistance was adopted by the convention. A number of speakers pointed out that the success of the Federation's organization programme in the South depended in large degree upon the outcome of the Danville strike. This particular strike, speakers from the South declared, involved the yellow-dog contract, government by injunction, and company unionism. In addition to giving its own support the Federation promised to send out an appeal for financial aid to the strikers from all affiliated unions.

The executive council gave its support to the United Mine Workers of America in their struggle against the insurgent miners of Illinois. The action of the executive council indicated that the American Federation of Labor was opposed to the dual unionism that had sprung up in this union, and it was apparent that the Federation was opposed to the secession movement which the insurgents were fostering. The insurgent movement had been formed in Illinois under the leadership of John H. Walker for the purpose of wresting control away from John H. Lewis, president of the United Mine Workers of America. The decision of the executive council indicated that the American Federation of Labor would stand by the organization in control of the miners.

Other resolutions adopted by the convention were the following: a resolution asking for the almost complete exclusion of immigration during periods of depression; a resolution asking for the legalization of beer with a 2.75 per cent alcoholic content. (In other words the convention was opposed to the repeal of the Volstead Act and the Eighteenth Amendment.) A resolution calling on Congress to place immigration from Mexico on a quota basis; a resolution calling for the exclusion of Filipinos and Amerinds coming from south of the Rio Grande; a resolution calling for the strict enforcement of Chinese exclusion laws and the extension of the provisions of the alien contract labor law to include musicians, singers, and other artists; a resolution characterizing the yellow-dog contract as a "legalistic fraud" which should have no standing in court; a resolution pledging the support of the American Federation of Labor to the pending Walsh-Blaine-Norris anti-injunction bill before Congress; a resolution opposing intervention in Cuba; a resolution favoring the complete independence of the Philippines; a resolution calling upon the governor of California to pardon Thomas J. Mooney

and Warren K. Billings; a resolution favoring the manufacture of war munitions and the construction of naval vessels in government arsenals and navy yards "so that the elimination of private profit will place this department of national defense beyond the baleful influence of those who seek to create sentiment for the production of war munitions so that they may make greater profits."

The convention adjourned on October 17, after having unanimously reelected William Green president. The other officers reelected were: Frank Morrison, secretary; Martin Ryan, treasurer; Frank Duffy, first vice-president; T. A. Rickert, second vice-president; Matthew Woll, third vice-president; James Wilson, fourth vice-president; John Coefield, fifth vice-president; Arthur O. Wharton, sixth vice-president; Joseph N. Weber, seventh vice-president; G. M. Bugniazet, eighth vice-president. Vancouver, B. C., was chosen as the convention city for 1931.

See UNEMPLOYMENT.

LABOR ARBITRATION AND CONCILIATION. During the fiscal year 1929-1930 the United States Conciliation Service of the U. S. Department of Labor handled a total of 557 cases of which it adjusted 386, was unable to adjust 60 and reported that 60 were still pending at the end of the year. In these disputes there was involved a total of 268,960 workers. Some of the more important cases handled by the Conciliation Service follow:

Boyce Thompson Institute, Yonkers, N. Y. In April, 1930, a dispute arose between the Westchester County Building Trades Council and the sub-contractor responsible for erecting the annex to the Boyce Thompson Institute, a \$400,000 project at Yonkers, N. Y. The building trades council charged that the contractor was a non-union concern and it refused to let the crafts work on building material furnished by the company. Through the intercession of a representative of the Conciliation Service the dispute was adjusted and the men returned to their employments.

Minnesota and Ontario Paper Company, International Falls, Minn. Here in May, 1930, a strike impended involving 2500 employees. The reason for the threatened strike was an attempt on the part of the management to maintain one of its mills on an open-shop basis. As a result of intercession of a representative of the Conciliation Service, the strike was averted.

H. C. Aberle Company Hosiery Mills, Philadelphia. In this plant a strike involving 1400 employees broke out on Jan. 7, 1930, in protest against reduction of wages alleged to vary from 8 per cent to 33 per cent. A representative from the Service made efforts to bring the two groups together but without success. The situation got out of control, much trouble followed and the intercession of the police was necessary. As a result of the insistent demand of the Philadelphia public both sides were compelled to resort to arbitration and there was created a board made up of Philadelphians. This board was in session for upwards of a month and laid down decrees reducing the wage cuts. The plant was shut down for four weeks after the decision, the management claiming that it was impossible for it to continue under the wage rates granted by the arbitrators. However, the plant opened under the terms of the agreement.

Moving Picture Operators, Buffalo, N. Y. In the spring of 1930 a strike of moving picture operators was called by the union in the City of

Buffalo against a dozen independent theatres. The reason for the strike was the employment of non-union men by these independent owners. Weeks of trouble followed in which the theatres were picketed and a considerable loss of business resulted. As a result of the intercession of a representative of the Conciliation Service agreements were entered into and the strike was accordingly called off.

Truck Drivers, Philadelphia. In May, 1930, there occurred in this city a strike of truck drivers which involved 700 men and threatened to include an additional 3000. Truck drivers were demanding an increase in wages, shorter hours and improved working conditions. The commissioner from the Conciliation Service was able to arrange joint conferences of representatives of the Truck Owners' Association and of the union with the result that a compromise was reached and the drivers were granted a rate increase of from \$30 to \$32.50 a week. A week's work was designated as 60 hours, time and one-half for overtime and double time for Sundays and for holidays.

LABOR CONFERENCE, INTERNATIONAL. The fourteenth session of the official International Labor Conference was held at Geneva, June 10-28, with 156 delegates representing 51 countries in attendance. The conference adopted two draft conventions, one aiming at the ultimate suppression of the use of forced labor, and the other providing that the hours of work of persons employed in commercial establishments and offices should not exceed 48 in the week and eight in the day. Among the recommendations adopted by the conference were three requesting the member countries to investigate the hours of work of employees in hotels and restaurants, in theatres, and in establishments for the care of the sick, the infirm, the destitute, or the mentally unfit.

LABOR LEGISLATION. In 1930 there were convened in regular session the legislatures of nine States, two insular possessions and two territories, and the Congress of the United States. In addition, in several States, the Legislatures met in special session.

Notable among new laws were the provision for old-age assistance in New York and Massachusetts, the regulation of private fee-charging employment agencies in Kentucky, the provision for collection of additional employment statistics by the United States Bureau of Labor Statistics, the regulation of home work in New Jersey, and the liberalization of the Virginia workmen's compensation law.

Idaho. (Special session.) No labor laws enacted.

Kentucky. Granting of private employment agency licenses made conditional upon good moral character and many abuses forbidden; policemen's and firemen's pension law amended.

Louisiana. Maximum hours of labor for women in certain establishments are reduced to nine a day and fifty-four a week.

Massachusetts. Investigation of stock purchasing by employees in cooperative shoe shops directed; one day of rest in eight authorized for members of police department; bootblackening on Sunday left to local option; unlicensed seamen's intelligence offices penalized; investigation of unemployment, particularly among workers over forty-five years of age, directed; investigation of textile industry and unemployment continued; granting of adequate assistance to deserving citizens seventy years of age or over provided for; study of State retirement system directed; policemen's and teachers' retirement laws amended; State retirement law amended; mothers' aid law amended; civil service law amended; maximum salaries of industrial accident board members raised;

boiler inspection law amended; division on necessities of life created; workmen's compensation law amended in minor respects to improve procedure.

Mississippi. Practice of barbering is regulated; group insurance for State employees is authorized; firemen's relief fund is extended to include policemen.

Nebraska. (Special session.) No labor laws enacted.

New Hampshire. (Special session.) No labor laws enacted.

New Jersey. Mechanics' lien law amended; leaves of absence for disabled municipal and county employees authorized; law regulating home work enacted; safety code for the construction industry established; commission to investigate old age dependency created; discrimination against persons forty years of age or over applying for State or county employment forbidden.

New York. Certain buildings not to be deemed factory buildings; mechanics' lien law amended; injunctions may be granted only upon such notice as the court may direct, certain salaries increased; hours of work on certain grade crossings regulated; motion picture operators granted one day of rest in seven; women's hour law amended; preference on public works to be given to State citizens; study of public employment offices authorized; demolition of buildings brought under labor law; safety devices must be provided for window cleaners; statewide system of old age relief established to grant assistance to citizens seventy years of age and over; public employees' retirement law amended; study of problems of social welfare authorized; salaries of certain labor department officials changed; occupational disease list extended and minor improvements made.

Porto Rico. Interference with employees' right to vote penalized; dismissal wage required upon discharge without fifteen days' notice; certain women in canning industry exempted from law prohibiting night work for women; work after 10 p.m. Saturday forbidden; employment service in New York City provided for; emancipated minors may engage in business; fruit packing factories exempted from law requiring dispensaries; teachers' retirement law amended; insular employees' retirement law amended; department of agriculture and labor made much more specialized.

Rhode Island. Sale of certain articles on Sunday may be authorized; appropriation for public employment offices no longer specified; firemen's pension law amended; salaries of boiler inspectors raised; grading of factory inspectors changed; law requiring certain revenue statements amended.

South Carolina. No labor laws enacted.

Utah. (Special session.) Additional sum appropriated to State building commission.

Virginia. Mechanics' lien law amended; corporations authorized to grant pensions to certain former employees; study of pensions and disability allowances for public employees directed; workmen's compensation law liberalized by increase in benefits payable and reduction of waiting period to seven days.

United States. Collection and publication of complete statistics on employment provided for; federal vocational rehabilitation act continued until June 30, 1933; federal employees' retirement act amended.

LABOR LEGISLATION, AMERICAN ASSOCIATION FOR. Founded in 1906, this membership organization of socially-minded economists, lawyers, journalists, labor leaders, and employers has worked along scientific lines, fearlessly attacking needless industrial evils from the general welfare viewpoint. It continues its work as the American arm of the International Association for Social Progress formed by the fusion of the three international organizations for labor legislation, unemployment, and social insurance. See SOCIAL PROGRESS, INTERNATIONAL ASSOCIATION FOR. Progress of the Association was recorded in its substantial quarterly, the *American Labor Legislation Review*, the December, 1930, issue of which contained a convenient annual summary and index of all new labor laws enacted in the United States.

The severity of business depression during the year brought renewed interest in the Association's unemployment programme. As in 1915 and 1921 a country-wide unemployment survey was made and standard recommendations concerning emergency relief measures, public employment agencies, long-range planning of public works, stabilization, and unemployment insurance were

stressed. After consultation with representative authorities throughout the country an unemployment insurance bill was drafted which the Association called "An American Plan for Unemployment Reserve Funds" and which was carefully framed to meet the special conditions of American industrial life. A campaign for the enactment of this bill was begun.

The Association continued its activities in the fields of workmen's compensation, old-age pensions, mine safety, regulation of private employment agencies and labor law administration. Legislative progress during the year included a more liberal compensation law for Virginia, old-age assistance laws for New York and Massachusetts, and an act regulating private fee-charging employment agencies for Kentucky. An intensive study of the administration of labor law in Rhode Island was made and a report published.

The Association held its third National Conference on Unemployment in connection with its twenty-fourth annual meeting at Cleveland, December 29-31. Subjects discussed included Federal-State cooperation in legislation, official unemployment committees, industrial changes and unemployment, the statistical measurement of unemployment, and unemployment insurance. The president in 1930 was Joseph P. Chamberlain; the secretary, John B. Andrews, with headquarters at 131 East 23rd Street, New York City. See *Labor Legislation*.

LABOR OFFICE, INTERNATIONAL. See INTERNATIONAL LABOR OFFICE.

LABOR UNIONS. See TRADE UNIONS.

LABRADOR. A large peninsula of British North America, lying between the Atlantic Ocean and Hudson Bay and forming the easternmost part of the North American Continent. The Atlantic watershed of the peninsula, a large part of which was claimed by Quebec, was awarded to Newfoundland by the Privy Council in 1927. The remainder comprises part of Quebec. The population of the section attached to Newfoundland was 4086 in 1928. Fishing and lumbering are the chief industries.

LABUAN. A small island off the northwest coast of Borneo, ceded to Great Britain in 1846. Area, 30 square miles; population, in 1928, 5904 (23 Europeans). Capital, Victoria, with a population of about 1500. Revenue in 1928, 187,172 Singapore dollars; expenditure, 222,264 dollars (1 dollar equaled about \$0.56). The island is administered under the supervision of the Governor-General of the Straits Settlements. See STRAITS SETTLEMENTS.

LACROSSE. The Flannery Cup, emblematic of international lacrosse supremacy which had been held by Syracuse since 1923, was won by a combined Oxford-Cambridge team during an invasion of the United States in the spring of 1930. The British team engaged in 15 games, winning 12, tying one, and losing two. A team of picked players from 13 American colleges was defeated by the Oshawa General Motors team of Canada in a two-game series for the international championship held in Toronto in July. St. John's College of Annapolis was recognized by the Inter-collegiate Lacrosse Association as foremost among American college teams. Although the Annapolis team was defeated by Johns Hopkins, three to two, it had a record of ten victories.

LADD-FRANKLIN, CHRISTINE. An American scientist and educator, died in New York

City, Mar. 5, 1930. She was born in Windsor, Conn., Dec. 1, 1847. After her graduation from Vassar College in 1869, she was engaged in teaching in the scientific departments of several schools. In 1878 she entered Johns Hopkins University, the only woman student, and four years later was married to Dr. Fabian Franklin, an associate professor in the mathematics department. Later, 1891-92, she studied at the universities of Göttingen and Berlin. She was an associate editor of *Baldwin's Dictionary of Philosophy and Psychology*, 1901-02, and lecturer in logic and psychology at Johns Hopkins University, 1904-09, and at Columbia University, 1910-30. Vassar conferred the LL.D. degree on her in 1887, and in 1926 she received the Ph.D. degree from Johns Hopkins. She contributed the doctrine of antilogism to logic, and in physics made a notable contribution with her theory of color-vision, first offered in 1892 and published in the *Zeitschrift für Psychologie*. In 1928 her collected papers on this theory were published under the title, *Colour and Colour Theories*. She also contributed to the *American Journal of Mathematics* and the *American Journal of Psychology*, and wrote the appendix to the English translation of Helmholtz's *Physiological Optics* (1924).

LAFAYETTE COLLEGE. An institution for the higher education of men in Easton, Pa.; founded in 1826. The registration in the autumn of 1930 was 1004, the enrollment being restricted. The faculty numbered 95. The productive funds amounted to \$3,467,985 on July 1, 1930, and the income for the previous year was \$577,140. The number of volumes in the library was 78,000. The Markle Hall of Mining Engineering and the Kirby Hall of Civil Rights were completed during the year. President, William Matthew Lewis, A.M., LL.D.

LAFLEUR, EUGENE. A Canadian lawyer, died in Ottawa, Ont., Apr. 29, 1930. He was born in Longueuil, Quebec, in 1856, and was educated at McGill University. For three years he read law in a private office and in 1881 became a partner of Lailleur and Sharp. He also practiced law alone and with other partners and, at the time of his death, was a member of Lafleur and MacDougall, Macfarlane and Barclay. He was created a Queen's Counsel in 1900 and appointed to the Montreal bar in 1904, becoming the same year Batonnier-General of the Province of Quebec. From 1880 to 1908, he was professor of international law at McGill University. In 1911 he was president of the International Boundary Commission, appointed to settle boundary disputes between the United States and Mexican governments. Appointed in 1929, with Justice Willis Van Devanter of the Supreme Court of the United States, he was to have acted as a board of arbitration to hear the *I'm Alone* Case, brought about by the sinking of the Canadian schooner, *I'm Alone*, by a United States Coast Guard vessel when the Canadian captain refused to allow his vessel to be searched for smuggled liquor.

LAJEUNESSE, lā'zhé'nēs', MARIE LOUISE EMMA CECILE. See ALBANI, EMMA.

LAKE TSANA, or TANA. See ETHIOPIA under *History*.

LAMBERT, GEORGE WASHINGTON. An Australian painter, died in London, May 29, 1930. He was born in St. Petersburg (now Leningrad), in March, 1873, and spent his boyhood in England and Australia. In 1891 he entered the Sydney School of Art where he studied under Julian Rossi

Ashton, the "father" of Australian painting. He also was engaged at this time with book illustration and pen-and-ink sketches for the *Sydney Bulletin*. In 1900 he won the traveling scholarship of the New South Wales Society of Artists, which enabled him to study for two years in Paris. The first picture which he exhibited was a self-portrait which was accepted by the *Société Nationale des Beaux-Arts* in 1901. His first appearance in London was in 1903 at an exhibition of the International Society of Painters, Sculptors, and Gravers. In 1904 his portrait of Thea Procter, an Australian artist, was accepted by the Royal Academy. Then followed such notable subject paintings as "Family Group" (1905); "Lotty and a Lady" (1906); "The Mother" (1907); "The Bathers" (1908); and "Holiday in Essex" (1910), with which he achieved a great success at the Academy. In all of these his wife and children were used as models. In 1911 his allegory, "The Mask," though rejected by the Academy was accepted by the Venice International Exhibition and was purchased for a gallery in Petrograd. By 1912 his reputation as a portrait painter had been definitely established, and he became recognized as one of the leading British portrait painters. In 1917 he was appointed by the Commonwealth War Records Department official artist to the Australian Imperial Forces in Egypt and Palestine. Typical of this commission are: "Charge of the Light Horse at the Nek"; "The Light Horse Sergeant"; and "Jericho during the War." More than 250 pictures and sketches which he produced as official artist are on exhibition in the War Museum in Melbourne. He was a foundation member of the Modern Society of Portrait Painters, and in 1922 was elected an Associate of the Royal Academy, the second Australian artist to receive this honor. His work was marked by a gift for composition and showed deliberation and restraint and meticulous attention to detail.

LAMBETH CONFERENCE. See CHURCH OF ENGLAND.

LAMBS. See LIVESTOCK.

LAND CLASSIFICATION. See SOILS.

LAND GRANT COLLEGES. See UNIVERSITIES AND COLLEGES.

LANDS, PUBLIC. The Commissioner of the General Land Office of the United States in his annual report for the fiscal year ending June 30, 1930, stated that the area embraced in original entries was 5,434,550 acres as against 4,612,722 acres the previous year and 3,243,446 in 1926. The area embraced in unperfected entries at the close of the year was 22,533,574 acres as against 21,347,505 at the close of 1929.

An important activity of the year was field examinations and subsequent adjudicative work to clear the records of speculative mining locations in the area to be flooded by the Boulder Dam. Also field examination and office adjudication of oil shale mineral locations in Colorado, Utah, and Wyoming were made and data compiled for the Department of Justice involving immense areas in connection with a large number of suits brought by Indian tribes in the Court of Claims. A plea was also made for increased funds for forest-fire prevention and for a special appropriation to combat coal fires on the public domain.

The total receipts of the General Land Office were \$6,801,409.95, and the total expenditures were \$2,222,785. Receipts under the mineral leasing act amounted to \$4,739,095.67. Over 20,000

filings were made in the district land offices, and 497 at Washington involving land in States where the district land offices have been discontinued. Of the 5,434,550 acres embraced in allowed entries, over 4,000,000 were allowed under the stockraising homestead law. Over 9500 patents were issued, involving 1,892,475 acres, including 1,433,905 acres patented under the homestead laws. Consideration was given to 195 applications for rights of way for railroads and 617 for rights of way for canals, ditches, telegraph, telephone, and power transmission lines.

Eighty-four oil and gas leases were issued, where required by statute or justified by particular equities, 133 applications for oil and gas prospecting permits were reinstated, 150 permits which had been canceled were reinstated, and 199 new permits were granted, after consideration of equities which had been alleged by the applicants and permittees. During the year 4474 oil permittees were called upon to show cause why their permits should not be canceled, 8358 permits were canceled for failure to conform to requirements of the mineral leasing act, and 4390 permit cases were examined on which further action was necessary. Sixty-eight coal prospecting permits were issued, 29 coal leases and 15 coal licenses, 41 potash permits, 3 potash leases, and 3 sodium permits.

Among the objects for which miscellaneous leases were issued pursuant to law were airports, fur farms and grazing in Alaska, mineral springs, etc. Title was conveyed to the States covering 274,230 acres involved in indemnity selections, and 113,146 acres of quantity selections. There were patented in satisfaction of grants to the railroads 73,311 acres, and 66,552 acres of selections were rejected. Ten railroad grants were finally adjusted. Ninety-nine sales of timber on the revested Oregon and California railroad grant lands were held, involving 285,019,380 feet of timber for which \$499,840.52 was received, and \$263,657.50 was received for timber on the Coos Bay wagon road grant.

The surveying service accomplished the survey of over 3,000,000 acres. Field examination was made of 16,860 cases, 11,634 being reported favorably and 5226 adversely, as a result of which over 129,000 acres were restored to the public domain by administrative action and over 4000 by decree of court. Twenty-nine indictments were secured and of the cases tried 22 convictions were obtained. The total amount of cash collected as the result of the work of the field examiners was \$81,306.63, principally in settlement of timber trespass, and \$1111.87 additional was recovered through suits, all this being in addition to the entries and selections which were not allowed to proceed to patent because of the facts disclosed by the adverse reports. The report covered the disposition of rights asserted or privileges claimed under practically every one of the numerous general and special public land laws.

LARKIN, PETER CHARLES. High Commissioner for Canada in London, died in London, Feb.

3, 1930. He was born in Montreal, Can., May 13, 1856, and entered business. He organized the Salada Tea Company with offices in Canada, England, and the United States. In 1911 he was appointed Canada's representative on the royal commission to investigate the resources of the British Empire. Becoming in 1922 the Canadian High Commissioner in London, he organized and coordinated the Canadian agencies in London, secured the removal of the embargo on the landing of Canadian cattle in England, and supervised the building of Canada House in Trafalgar Square. He was a Liberal in politics and a member of the Privy Council of Canada.

LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF. A religious body commonly known as the Mormon Church, existing chiefly in the United States. It was organized Apr. 6, 1830, at Fayette, N. Y., by Joseph Smith to whom is credited by his followers the discovery, through divine revelation, of a set of metal plates, buried in a hill, from which by a special power received from God he translated the text of the Book of Mormon, the special sacred book of the church. The Mormon articles of faith include belief in God, Jesus Christ, and the Holy Ghost as individual beings, the punishment of men for their own sins, the atonement, divine authority, baptism, laying on of hands, prophecy, salvation for the dead, the Bible "as far as it is translated correctly," the common virtues, and obedience to constituted authorities. The membership of the church is largely in the Mountain States, owing to the early migrations of Mormons and their final settlement in Utah.

The administrative divisions of the church are known as the general, stake, ward, branch, and mission. A stake is a geographical division and comprises wards and branches, and is directed by a presidency of three. A ward is frequently a part of a city, and is directed by a bishop and two counselors. The branch, similar to the ward, is directed by an elder. In 1930 the church consisted of 104 stakes, 930 wards, and 75 independent branches. The estimated membership was 663,454. There were 12 missions in America with a membership of approximately 98,777; the missions in Europe had a membership of 29,000 and those in the Pacific Islands of 15,000. A mission is directed by a mission president. In 1930, 148 missionaries were at work in various countries, 899 being outside the United States.

The general authorities who have jurisdiction over the entire church are the First Presidency, the Quorum of the Twelve Apostles, the Presiding Patriarch, the First Council of Seventy, and the Presiding Bishopric. In 1930 these authorities were: First Presidency: Heber J. Grant, president; Anthony W. Ivins, first counselor; Charles W. Nibley, second counselor. Quorum of the Twelve Apostles: Rudger Clawson, president, and Reed Smoot, George Albert Smith, George F. Richards, Orson F. Whitney, David O. McKay, Joseph Fielding Smith, James E. Talmage, Stephen L. Richards, Richard R. Lyman, Melvin J. Ballard, and John A. Widtsoe, apostles. Presiding Patriarch: Hyrum G. Smith. Seven Presidents of the First Council of Seventy: Brigham H. Roberts, J. Golden Kimball, Rulon S. Wells, Joseph W. McMurrin, Charles H. Hart, Levi

Edgar Young, Rey L. Pratt. Presiding Bishopric: Sylvester Q. Cannon, presiding bishop; David A. Smith, first counselor; and John Wells, second counselor.

The church maintains seven temples which are devoted to sacred ordinances for the living and the dead, such as baptisms, endowments, and marriages. It also maintains Brigham Young University (q.v.) at Provo, Utah, five junior colleges, three collegiate institutes, two high schools, and 78 seminaries, small schools adjoining high schools and providing special religious instruction. The Sunday schools in 1930 had an enrollment of 252,544 pupils and 26,314 officers and teachers. Junior seminaries had an enrollment of 12,035. The auxiliary bodies included a women's relief society, numbering about 62,902 members, who care for the sick and poor. The Melchizedek Priesthood, a senior order, had 75,322 members, and the Aaronic Priesthood, a junior order, 77,116 members. The two mutual improvement associations, composed of young people, had an enrollment of 108,557. The primary association for those under 14 had 109,483 members.

The church holds two general conferences each year, one during the first week in April and the other the first week in October, at which the work of the general authorities is reviewed. The centennial celebration commemorating the organization of the Church of Jesus Christ of Latter-day Saints and the first century of its religious activity was held on Apr. 6, 1930, in every city, town, or village where a branch or local congregation of the church had been established. In Salt Lake City, the seat of the first presidency and headquarters of the church, a great centennial conference was in session four days, and during the month there was presented each evening in the Mormon Tabernacle a pageant called *The Message of the Ages*, depicting the history of religion.

LATTER-DAY SAINTS. REORGANIZED CHURCH OF JESUS CHRIST OF. After the death of Joseph Smith in 1844, several factions developed among the Latter-Day Saints. In 1852, in Wisconsin, some of these scattered congregations effected a partial reorganization, which in 1860 was completed under the name of the "Reorganized Church of Jesus Christ of Latter-Day Saints," and which claims to be the true continuation of that established by Joseph Smith in 1830. This claim has been successfully sustained in the Federal Court. In 1860 the Reorganized Church chose as its leader Joseph Smith, the son of the founder, who became presiding officer, a position which he held until his death in 1914, when his son, Frederick M. Smith, succeeded him. The Reorganized Church holds the same faith and religious practice which were established in the original church, but rejects as false and inconsistent with the doctrine, beliefs, and practices of the church prior to 1844 the doctrine of polygamy. The membership as reported in 1930 was 108,356, including members throughout the United States and in Canada, Great Britain, Australia, Germany, Isle of Pines, Holland, Switzerland, Norway, Sweden, Palestine, South Sea Islands, Hawaii, and New Zealand. The organization in 1930 comprised 745 churches, 6932 ministers, 730 Sunday schools, and 45,000 pupils; and maintained Graceland College in Lamoni, Iowa, the Institute of Arts and Sciences, home for the aged, and the Independence Sanitarium in Independence, Mo. Its official periodical, the *Saints' Herald*, is issued weekly. The world-

headquarters of the church are in Independence, Mo., where in 1930 an auditorium costing \$1,000,000 was in process of erection.

On Apr. 6, 1930, the Reorganized Church celebrated its centennial anniversary. More than 25,000 persons attended the two-weeks' celebration which was characterized by an historical pageant depicting the organization and development of the church in the last century and an oratorio entitled *The Course of Time* by John T. Gresty of Sydney, Australia. During 1930 the Reorganized Church devoted its activities to developing the doctrine of stewardship, stressing the social and economic aspects of religion, and in the vicinity of its headquarters made investments totaling many thousands of dollars for the purpose of carrying out practical demonstrations in the field of agricultural and industrial stewardships under group control.

LATVIA. A Baltic republic formed from territories of the former Russian Empire on Nov. 18, 1918; bounded by Estonia on the north, Russia on the east, and Lithuania and Poland on the south. Capital, Riga.

AREA AND POPULATION. The total area, excluding inland lakes, is approximately 24,400 square miles. The population at the beginning of 1930 was 1,899,000 as compared with 1,844,805 at the census of 1925. In 1928, the birth rate per 1000 of population was 20.65 and the death rate 14.41. Of the total population in 1925, 75.61 per cent were Letts, 12.32 per cent Russians, 4.48 per cent Jews, 3.39 per cent German, and 2.52 per cent Poles. Riga, the chief city, had 339,324 inhabitants in 1929. Other leading towns, with their census populations in 1925, are: Libau (Liepāja), 60,762; Dvinsk (Daugavpils), 40,640; Mitau (Jelgava), 28,321.

EDUCATION. Each national minority has the right to its own schools, with its own language of instruction. In 1928-29, there were 1931 elementary schools, with 157,810 pupils, and 137 secondary schools, with 23,042 pupils. The State supported 77 of the secondary schools and all but 111 of the primary schools. The Latvian University at Riga had 7974 students.

PRODUCTION. Agriculture is the primary industry, although manufacturing has shown a rapid growth. About 55 per cent of the total area, or 8,118,000 acres, were under cultivation in 1929 and 29.2 per cent consisted of forests. Harvests in 1929 were larger than for the poor crop year of 1928, with the exception of wheat. The yields, in quintals in 1929, with comparative figures for 1928 in parentheses, were: Wheat, 644,000 (680,100); rye, 2,381,000 (2,148,700); barley, 2,136,000 (713,100); oats, 3,430,000 (1,456,900). The potato crop in 1929 amounted to 1,125,670 metric tons. Due to the poor harvest of 1928, livestock in 1929 showed a decrease to the following totals: Cattle, 975,000; sheep, 900,000; swine, 388,000; horses, 360,000.

The number of industrial enterprises increased from 2887 in 1928 to 2948 in 1929, and the number of workmen employed from 67,098 to 71,736, respectively. Woodworking is the predominant industry, others being metal working, printing, and the manufacture of food, drink, tobacco, chemicals, textiles, and paper. The number of unemployed in June, 1930, was 779, as compared with 1236 in June, 1929. Mineral resources of the country are small.

COMMERCE. Both imports and exports showed a substantial increase in 1929 over 1928, and the

unfavorable balance of trade rose to \$9,005,000 lats (1 lat equals \$0.193 at par) from 46,116,000 lats in 1928. Excluding bullion shipments, imports in 1929 were valued at 361,808,000 lats (307,425,000 in 1928) and exports at 271,803,000 lats (261,309,000 in 1928). Imports in 1929 were divided by the value of principal classes as follows: Manufactured goods, 152,206,000 lats; foodstuffs, 117,845,000; raw and semi-manufactured materials, 89,823,000; livestock, 1,934,000. Exports consisted of: Raw and semi-manufactured materials, 117,372,000 lats; manufactured goods, 89,924,000; foodstuffs, 64,262,000; livestock, 245,000.

Trade is chiefly with Germany, Great Britain, Soviet Russia, Poland, the United States, Belgium, and the Netherlands.

FINANCE. The budget for the fiscal year ended Mar. 31, 1930, including ordinary and extraordinary receipts and expenditures, was estimated to balance at 186,500,000 lats. Actual returns, however, showed a surplus of 11,764,000 lats, according to the Ministry of Finance. The surplus was provisionally marked for distribution to the road building, social welfare, and agricultural promotion funds. The budget for the fiscal year 1930-31, as passed by Parliament Apr. 16, 1930, balanced at 178,649,000 lats (\$34,479,000). In the new budget, provision was made for meeting practically all ordinary and extraordinary expenditures from tax revenues, thus eliminating the supplementary budgets necessary in previous years. Taxes normally provide 56.5 per cent of the total revenues, and income from State monopolies and forests, 26.3 per cent. The public debt on Jan. 1, 1930, stood at 110,700,000 lats, of which 50,500,000 was owed to the British government, and 28,400,000 to the Government of the United States. The remainder consisted of a 31,100,000-lat 6 per cent foreign loan and internal loans aggregating 700,000 lats.

COMMUNICATIONS. Of the 1773 miles of railway in operation in 1929, built in five different gauges, all but 109 miles were state owned and operated. For the fiscal year 1928-29, the Latvian railroad administration reported operating expenses of 36,241,000 lats (about \$6,994,513), operating revenues of 45,002,000 lats (about \$8,685,386), and a net operating profit of 8,715,000 lats (about \$1,690,873). Latvian highways extended 15,540 miles, of which only 459 miles were macadamized and 110 miles paved. Construction during 1929 included 84 miles of first-class highways. The allotment for road maintenance and construction for the fiscal year 1929-30 amounted to \$2,900,000. The merchant marine in 1930 consisted of 146 vessels (both sailing and powered) of 105,336 net tons.

GOVERNMENT. Under the constitution adopted by the constituent assembly, Feb. 15, 1922, executive power is vested in a president, elected by Parliament for three years; and legislative power in the Saeima, or Parliament, comprising 100 members elected for three years, by universal direct suffrage (men and women), on the basis of proportional representation. President at the beginning of 1930, Gustav Zemgals (elected Apr. 8, 1927); Prime Minister, Hugo Cleminš (appointed Nov. 30, 1928).

HISTORY. Except for the election of a new president and increased activities of Communists, Latvia passed a comparatively uneventful year in 1930. Albert Kviesis, a member of the Farmers' Union and formerly Vice President of the Cham-

ber, was elected President April 9 to succeed Gustav Zemgals. A secret Communist meeting in the vicinity of the capital was reported to have been broken up April 13, with the arrest of 39 participants. A Communist demonstration in Parliament three days later resulted in the ejection of three deputies. Action to end Communist activities was urged by Premier Celminš in an address on May 16. He pointed out that although the Communist party was illegal, it was represented in Parliament. Minister of Agriculture Albering resigned March 4, following attacks upon him in Parliament. He was succeeded by V. Gulbis. In a review of Latvia's foreign relations on Jan. 1, 1930, Foreign Minister Balodis said that the country was on peaceful terms with all its neighbors, including Soviet Russia.

LAW, INTERNATIONAL. See INTERNATIONAL LAW.

LAW ENFORCEMENT. See CRIME; PROHIBITION.

LAWN TENNIS. See TENNIS.

LAWRENCE COLLEGE. A coeducational institution comprising a college of liberal arts and a conservatory of music in Appleton, Wis.; founded in 1846. For the autumn term of 1930, 853 students were enrolled in the college and 209 in the conservatory. There were 65 members on the faculty of the college and 25 on the faculty of the conservatory. The endowment, exclusive of buildings and equipment, amounted to \$1,869,920; the income from endowment for 1930 was \$98,139. There were 53,000 volumes in the library exclusive of government documents. President, Henry Merritt Wriston, Ph.D., LL.D.

LEAD. The U. S. Bureau of Mines reported that the domestic lead industry was less severely affected by the world-wide industrial depression of 1930 than either the copper or the zinc industry. The output of lead from domestic sources was 15 per cent lower than in 1929, while copper and zinc showed decreases of 25 and 20 per cent, respectively. Estimated withdrawals of lead from the total supply available for consumption were only 16 per cent less than in 1929, whereas withdrawals of both copper and zinc for domestic consumption were approximately 28 per cent less. The output of primary lead from domestic sources was the smallest recorded since 1924 and that from domestic and foreign sources the smallest since 1923. Indicated domestic withdrawals were lower than in any year since 1923; exports of refined lead and imports of lead in ore, base bullion, etc., were lower than in any year since 1922.

The output of primary domestic desilverized lead in 1930 was about 324,000 tons, of soft lead about 200,000 tons, and of desilverized soft lead about 45,000 tons, making a total output from domestic ores of about 569,000 tons of refined lead. Corresponding figures in 1929 were 381,481 tons of desilverized lead, 235,345 tons of soft lead, and 55,666 tons of desilverized soft lead, making a total of 672,498 tons. The output of lead smelted and refined from foreign ore and bullion was about 72,000 tons, as compared with 192,135 tons in 1929. The total primary lead smelted or refined in the United States in 1930 was thus about 641,000 tons, as compared with a total of 774,633 tons in 1929, a decrease of about 17 per cent. The output of primary antimonial lead in 1930 was about 11,000 tons, as compared with 25,669 tons in 1929.

According to the Annual Summary in the *Engineering and Mining Journal*, the World Pro-

duction of Pig Lead in the years 1928-30 was as follows:

WORLD PRODUCTION OF PIG LEAD
[In short tons]

| | 1928 | 1929 | 1930 |
|--|-----------|-----------|-----------|
| United States | 649,800 | 688,000 | 605,000 |
| Canada | 170,800 | 159,200 | 160,000 |
| Mexico | 260,700 | 274,300 | 267,000 |
| North America | 1,080,800 | 1,121,500 | 1,032,000 |
| Australia | 174,900 | 194,700 | 183,000 |
| Spain and Tunis | 156,000 | 167,000 | 106,000 |
| Germany | 95,900 | 107,900 | 126,000 |
| Burma | 87,800 | 89,900 | 89,000 |
| Others | 244,600 | 254,100 | 294,000 |
| Total | 1,840,000 | 1,935,100 | 1,830,000 |
| Average New York lead price, cents per pound | 6.305 | 6.833 | 5.517 |

The average price for lead at New York (outside market) was unchanged at 6.25 cents a pound during January and all but the last two days of February. The average monthly price dropped steadily to 5.23 cents in July, rose to 5.49 cents in September, and dropped again to a low for the year of 5.10 cents in November and December. The price held at 5.10 cents from October 10 to the end of the year. There was considerably less fluctuation in the price of lead in 1930 than in the prices of silver, copper, and zinc.

LEAGUE OF NATIONS. The fifty-eighth session of the Council of the League of Nations opened on January 13 with a declaration from Foreign Minister Arthur Henderson of Great Britain that Parliament would be asked to ratify the optional clause for compulsory jurisdiction of the World Court. Mandates were chiefly discussed; and Mr. Henderson asked the president of the Council to appoint a commission for the study of the crucial Wailing Wall controversy in Palestine. Plans discussed for Iraq's entry into statehood met with Italian opposition, presumably from Italy's fear of losing her oil rights there. Mr. Henderson denied that the League covenant was being made second to the Kellogg Pact, and asked only that the covenant be amended that the two might harmonize. A strong bid was made from Geneva for speedy American ratification of her signature to the World Court protocols, in view of the Court elections next September; but reports from Washington gave little hope therefor.

On January 16, the tenth anniversary of the first session of the League (January 16, 1920), the Council rose. Recalling the general political situation when the League was created, M. Zaleski said that the hope and faith placed in the organization had not been in vain, and that the work done during the first ten years of its existence had not disappointed the nations. He then described the essential features of this work, emphasizing the part played by the League in international politics.

Perhaps the most fundamental activity of the session was the decision taken with reference to harmonizing the League Covenant and the Kellogg Pact. The committee appointed to report on amendments to the Covenant necessary for this was composed of Adachi (Japan), Von Bülow (Germany), Lord Cecil (British Empire), Cobian (Spain), Cornejo (Peru), Cot (France), Scialoja (Italy), Sokal (Poland), Titulesco (Rumania), Unden (Sweden), and Woo Kaiseng (China).

In the discussion on this issue Arthur Henderson brought out an interesting point. He strongly

intimated that the reservations, sometimes known as the "British Monroe Doctrine," made by the previous British Government to the Kellogg Pact, are of much less significance than has heretofore been accorded them. Stressing the importance of the League Covenant, Mr. Henderson explained that no League member can go to war, with or without the Kellogg Pact, without first invoking the various arbitral steps set forth in the Covenant. The fact that the "gap" in Article 15, Paragraph 7, of the Covenant does permit war in certain circumstances is not to be taken as meaning that the various obligatory measures to settle all disputes peacefully are not binding. Therefore Sir Austen Chamberlain's reservations to the Kellogg Pact merely mean that Great Britain reserves, not complete freedom of action in certain areas, but only freedom of action in those areas in the event that the League machinery of peace has completely broken down.

The speech of M. Briand on the subject of reconciling Pact and Covenant was symptomatic of French thought on the necessity of sanctions:

In the future it will be necessary not merely to condemn war, to nail it to the pillory, but also to insure that it can never be born, and in consequence to envisage what obstacles other than words can be opposed to that terrible scourge.

A second committee was appointed by the Council to study reasons for the delay in ratification of conventions concluded under the auspices of the League. The difficulty here is one which is vital to the success or failure of the work of international coöperation in progress at Geneva.

On the subject of ratification it should be noted that Lithuania, during the Council session, acceded to the Optional Clause of the World Court Statute, making the twentieth accepting state, and also signed the World Court Protocols providing for the accession of the United States.

The Council decided to convene, on February 17, the International Conference contemplated by the tenth Assembly for the conclusion of a customs truce. Virtually all the European countries agreed to participate in this conference, designed to stabilize tariffs during a period in which negotiations looking toward their reduction can be carried on. In view of the "United States of Europe" discussion, it was interesting to see that opinion in favor of the proposed customs truce was largely confined to Europe. The overseas British Dominions broke with the lead of the mother country by refusing to participate in this conference.

A proposal of independence for Iraq (q.v) in 1932 met with certain objections from the Italian and German representatives, who held that it might not be an advance, from the international viewpoint, to have the impartial supervision of the League of Nations exchanged for a nominal independence that might in practice mean subordination to the interests of a single foreign power. Following this discussion the Council requested the Mandates Commission to make suggestions which would enable it to decide as to the general conditions necessary of fulfillment before a Mandate should be terminated in favor of independent status.

The closing hours of the session were largely devoted to a consideration of minority questions concerning Lithuania and Upper Silesia. To report on these, Viscount Adachi, long the Japanese representative to the Council, made a special trip from The Hague, where he had been the chief

spokesman for his country during the Reparations Conference in the Dutch capital.

Other meetings which took place in January included sessions of the Economic and Financial Committees and of the Permanent Central Opium Board and a consultation of agricultural experts. The Advisory Committee on Traffic in Opium and the Committee on the Organization of the Secretariat, the International Labor Office, and the Registry of the Permanent Court were in session at the end of the month.

Constitutional and economic questions, the relations between the Covenant and the Paris Pact and the European economic problem were the principal items on the League's programme for February. The Conference for Concerted Economic Action met on February 17 to consider the possibility of a "tariff holiday," i.e. an agreement not to increase tariffs during a certain period—and to draw up a programme of subsequent negotiations for the improvement of economic relations by the reduction of trade barriers. This Conference was attended by 30 states, mostly European, several of the delegates being the Ministers in charge of the commercial policies of their countries. Edwin C. Wilson, First Secretary of the American Embassy in Paris, was instructed by the United States Government to be present as observer at this conference.

Article XII of the League Covenant was unanimously amended on February 28 by the committee of 11 jurists assembled at Geneva to try to harmonize the Covenant with the Kellogg treaty. In this renunciation of war, the amendment goes beyond the Kellogg treaty in three points: (1) It emphasizes "in no case" shall League members resort to war; (2) it specifies "peaceful means," viz. arbitration, judicial ruling, or examination by the League Council; (3) it excludes all reservations as to defensive wars, or regions of vital interest. Viscount Cecil stated on March 7 that no changes were contemplated in the sanction provisions of Article XVI, and that modification of Article XVII, dealing with the position of states outside the League in case of a dispute, was also not called for.

Two general conferences—the first League Conference for the Codification of International Law (see INTERNATIONAL LAW), and the Conference for Concerted Economic Action—were the principal items on the League's agenda for March, which was almost wholly devoted to legal and technical questions. Other important plenary sessions were those of the Health and Transit Committees, as well as meetings of the Committee on the Relations between the Covenant and the Paris Pact.

The Conference for Concerted Economic Action came to an end on March 24. It adopted a Commercial Convention providing for some measure of tariff stabilization and a programme of negotiations to be conducted during the period of stabilization with a view to the improvement of economic relations.

Persia filed a protest on March 16 concerning the Bahrein Islands, in the Persian Gulf, allotted by "technical error" to Great Britain. See PERSIA.

At a meeting of the Conference for Concerted Economic Action, sitting in Geneva, a protocol dealing with economic peace was recommended on March 15 for consideration. In the meantime, Austria's refusal to sanction Article I of the tariff-truce agreement, providing against re-

nunciation of the truce before Apr. 1, 1931, threatened the collapse of the conference. Out of a roll-call it developed that only 17 delegations voted in favor of the article. Internal politics were blamed by the French Minister of Commerce, Pierre Flandin, for the obstruction. In Czechoslovakia, one of the abstaining states, powerful Socialist agitation against revision of the tariff found that country wholly unprepared for the Geneva customs-truce negotiations. Immense profits were derived by the Socialists of Czechoslovakia from the large coöperative food concerns which they manage.

An important event in the social and humanitarian sphere was the meeting of the Advisory Commission for the Protection and Welfare of Children and Young People with its Committees on Traffic in Women and Children and Child Welfare. This Commission met in April and examined numerous reports and pursued its inquiries regarding the traffic in obscene literature, the recognition and enforcement of maintenance orders, illegitimate children, juvenile courts, the cinematograph in its relation to children, and draft conventions for the repatriation and assistance of foreign minors.

The Committee on Arbitration and Security (a sub-committee of the Preparatory Disarmament Commission) began its sessions on April 28 at Geneva. Three questions were on the agenda: (1) The transformation of the model treaty, framed by the Committee in 1928, into a general convention. This treaty would give the League Council power to enforce certain recommendations for preventing the outbreak of hostilities in case of disputes. (2) The revision of the draft convention for financial assistance to a state a victim of violation of the League Covenant or the Kellogg pact. (3) The completion of projects for insuring prompt means of communications, e.g. by airplanes, with the concerned areas in case of emergency. Another recommendation was made by Señor Cornejo, Peruvian member of the Council, that the committee study the amendment to Article XVIII of the Covenant that he proposed at a recent meeting of jurists for the harmonization of the pact and the Covenant. The amendment would forbid the League to register any peace treaty imposed by force as a result of the war undertaken in violation of the pact and would thus render such a settlement illegal, since the Covenant already declares non-registered treaties invalid.

While unspectacular, the fifty-ninth session of the Council, which met in Geneva from May 12 to May 15 inclusive, was important from the point of view of business transacted. The somewhat prosaic character of the meetings was itself, as Felix Morley of the League of Nations Association pointed out, indicative of the degree of development which the Council has reached.

Several problems that have worried the League in the past were removed from the agenda as "finished business." Foremost among these was the elimination of the protracted Bolivia-Paraguay dispute, that started in December, 1928. On May 15 the President of the Council informed that body of the receipt of communications from both these Latin-American governments announcing the final settlement of their difficulties and the resumption of diplomatic relations (see BOLIVIA). Less dramatic, but none the less important, was the final winding up of the work of the Greek Refugees commission.

Two other items that now disappeared from the League's calendar were the Hungarian Optants dispute, which had been eliminated by the Eastern Reparations Settlement, and the winding up of the Commission of Control for Hungary, whose finances, thanks largely to League assistance, were now in sound condition. See REPARATIONS; HUNGARY under *History*.

Two resignations were accepted by the Council: that of Charles Evans Hughes, formerly a Justice of the World Court, and that of Dr. Ludwig Kastl, a former member of the League's Mandates Commission. As successor to Dr. Kastl the Council appointed another German, ministerial-direktor Dr. J. Ruppel, an official in the Administration of the Cameroons from 1908 to 1913 and who in this period drafted the constitutional laws of that German colony. The Government of Iraq, a mandated area that probably was to be the first of its kind to achieve independence, requested that it be allowed to accede to the League Convention for the Suppression of Counterfeiting Currency. The Council decided that this accession was permissible, thereby practically endorsing the Iraq claim to eligibility to League membership as a prerequisite of eventual independence.

Another point of political importance was the application of the Free City of Danzig for membership in the International Labor Organization. If that application were accepted it would definitely settle in the affirmative the question of whether a state can be a member of the International Labor Organization without enjoying League membership. To many this issue seemed already settled since both Germany and Austria were members of the I. L. O. before joining the League, and since Brazil had continued to be a member of the I. L. O. since resigning from the League. The case of Danzig, however, would define the issue a little more clearly. The question was put up to the World Court (q.v.), which was to give an advisory opinion on the subject.

The Secretary General was instructed to ask those members of the Court that had not yet ratified the Protocol for the revision of the statute to state whether they had any objection to the coming into force of the amendments, that were due to take effect on September 1. Governments were asked to give their objections, if any, before August 20.

Innovations of considerable importance with reference to the handling of the opium problem were made by the Council. It decided to add to the Advisory Committee on Opium Austria, Belgium, Egypt, Mexico, Poland, Spain, and Uruguay, as representatives of non-manufacturing states. Furthermore, the Council decided to convene a conference on limitation of drug manufacture on or about December 1, to be preceded by a preliminary conference of representatives of manufacturing countries only, at the end of July.

On May 22nd the Fiscal Committee met to continue its study of questions referred to it by the Conference on Double Taxation. Three important events marked the work of the League of Nations in June, the end of the International Conference for the Unification of Laws on Bills of Exchange and meetings of the Mandates Commission and the Economic Committee. The Conference for the Unification of Laws on Bills of Exchange sat from May 13 to June 7, adopting three separate conventions for the elimination of differences in laws of the Continental type of bills of exchange. These

conventions were immediately signed by 33 countries and were to come into force as soon as seven states, members of the League or not, including three permanent members of the Council, had ratified or acceded to them.

The Mandates Commission met from June 3 to June 21 and held an extraordinary session devoted to the examination of the Palestine incidents of August and September, 1929. This extraordinary session was followed by an ordinary session in the course of which the Commission examined the reports of the Mandatory Powers on Syria and Lebanon, Togoland under French Mandate, Tanganyika, Nauru, New Guinea, and Southwest Africa.

The principal event in July was the annual session of the Committee on Intellectual Co-operation which was of particular importance in view of the decisions adopted with regard to the general reorganization of the work and methods of intellectual coöperation. To carry out the necessary reforms, the Committee appointed a permanent executive body, to meet four times a year.

The first conference of the League Committee on Air Transport Coöperation was opened at Geneva on July 8. Statements from Col. Charles A. Lindbergh, Dr. Hugo Eckener, and Gen. Italo Balbo, Italian Air Minister, were read to the air experts of 13 countries by the chairman, Louis de Broekère, of Belgium. Colonel Lindbergh urged the international standardization of commercial aviation methods. A programme of study was adopted for the development of international civilian aviation.

Albania was the latest government to appoint a permanent delegate to the League. The Costa Rican Congress favored the reentry of that nation into the League of Nations, leaving to their President to decide the conditions, if any, of reentry. Costa Rica left the League in 1924 over the question of its financial contribution to the League and over the frontier question with Panama, which was later settled. The League Council in 1928, on the motion of Colombia, invited the country to return.

Economic and social questions constituted a major part of the League's August agenda. Double taxation and the taxation of foreign motor cars were studied by Sub-Committees at The Hague. The Committee of Inquiry into Traffic in Women in the East held a preliminary session at Geneva, and the Permanent Central Opium Board considered statistics of drug manufacture and traffic for 1929, as well as estimates for 1930.

The League's scientific study of double taxation was made possible by a gift of \$90,000 from the Rockefeller Foundation, bringing the total sum of money given or pledged to League activities from private American sources to nearly \$5,000,000.

Two documents affecting the development of Palestine under British mandate made their appearance in August. The first of these was the long-awaited report of the Permanent Mandates Commission criticizing British administration in Palestine. The second contained the comments of the British government on the Mandate Commission's report. Both documents were laid before the League Council during its September session (See PALESTINE).

The eleventh Assembly of the League was in session from September 10 to October 4. It was attended by delegates from 52 member states,

Argentina and Honduras alone not sending representatives. As usual, the General Debate opened the discussions. It showed a marked feeling of uneasiness. The optimism and ardor which characterized the debates of the previous year, particularly the remarkable speech made by Mr. MacDonald, was replaced by a certain skepticism and critical spirit. Several speakers reviewed the situation very frankly. At least two of the undertakings of the League had more or less failed during the year: the Paris Conference on the treatment of aliens ended in no positive result, and the first Conference on the Codification of International Law at The Hague was far from realizing the results hoped for. The "customs truce," which the 1929 Assembly initiated had not yet been fully put into execution, as certain states had refused to ratify the agreements prepared. The Preparatory Commission of the Disarmament Conference had not been called, and in spite of the results of the London Naval Conference, it was only too true that in the field of disarmament there was still serious opposition to be overcome.

To these facts was to be added the effect of the economic depression that was being manifested by ever-increasing unemployment, by the agricultural crisis both in Europe and in overseas lands, and finally by the disturbing impression caused by the German elections. A certain anxiety had been caused by the Briand Memorandum on European Federal Union. It will be remembered that this memorandum had suggested the formation of a special European organization, composed of a conference, a council, and a permanent secretariat. Many wondered if this would not mean competition with, or at any rate duplication of the League of Nations, that would be harmful and costly. This feeling was revealed in most of the replies from the European Governments, to such an extent that it might be said that these replies as a whole constituted a plebiscite in favor of the League of Nations. It was, however, a fact that at the opening of the session there was still some uncertainty as to the intentions of the French Government. Fortunately this uncertainty was soon dispelled. At a meeting of representatives of European States held before the opening of the Assembly, M. Briand accepted the British proposal to bring the European question before the Assembly itself, which he did on the first day of the General Debate.

Thus problems of a European nature became the object of a detailed exchange of views during the General Debate, so that it seemed superfluous to refer them to a committee for further consideration. The debate completed the elements set forth on one side by the Briand Memorandum and on the other by the replies of the Governments to this memorandum. Certain conclusions may be drawn from this discussion:

1. A sincere and unanimous homage was paid to M. Briand.

2. It was recognized that there was a series of problems concerning Europe alone which required urgent and detailed consideration.

3. This work was to be pursued within the framework of the League of Nations, to allow all European and non-European nations, members and non-members of the League, to submit their contributions. With this object in view the Assembly instituted a Study Committee, to which all the European states members of the League were invited to nominate representatives; other

states to send observers. The committee was to meet on Jan. 19, 1931, after the meeting of the League Council, and submit a report to the twelfth session of the Assembly.

4. The great majority of the governments and speakers recognized that this committee should in the first place devote its attention to economic problems, without, however, neglecting the political problems to which the memorandum wished to give priority.

The session was opened by the Acting President of the Council, M. Zumeta (Venezuela), with a speech in which, after setting forth the main features of the League's work during the past year, he reminded the Assembly that two questions still had a predominant claim on its attention, the organization of peace and the economic problem.

M. Titulesco (Rumania) was elected President of the eleventh Assembly by 46 votes out of 51 cast.

The Assembly adopted its agenda, and divided its work among the seven following committees, to which each of the states represented was entitled to send one delegate: 1. *Legal and Constitutional Questions*.—Chairman, M. Scialoja (Italy); 2. *Technical Organizations*.—M. Colijn (Netherlands); 3. *Reduction of Armaments*.—M. Politis (Greece); 4. *Budget and Financial Questions*.—Count Carton de Wiart (Belgium); 5. *Social and General Questions*.—Countess Apponyi (Hungary); 6. *Political Questions*.—Sir Robert Borden (Canada); 7. The chairmen of the six Assembly Committees are *ipso facto* Vice-Presidents of the Assembly. The Assembly elected six other Vice-Presidents who, with the Chairmen of the Committees and the Chairman of the Agenda Committee, constituted its *General Committee*. The six Vice-Presidents elected by the Assembly were Mr. Henderson (British Empire), M. Matsudaira (Japan), M. Briand (France), M. Costa du Rels (Bolivia), M. Curtius (Germany), M. Quinones de León (Spain).

The Assembly held 24 plenary meetings; the general debate on the work of the League during the year lasted from September 11 to 16, bringing some 40 speakers to the platform.

The principal results of the work of the Assembly and the Council may be summarized as follows: Increase of the number of World Court Judges from 11 to 15; formulation of proposals concerning the amendment of the Covenant in order to bring it into harmony with the Paris Pact, which will be communicated to Governments for examination; arrangements to secure the greatest possible number and the early deposit of ratifications of League Conventions; conclusion of a Convention for Financial Assistance, signed by 28 states, including 22 European states, and two permanent Members of the Council—France and Great Britain; creation of a special committee for the further study of the draft Convention for Strengthening Means of Preventing War; two resolutions designed to facilitate League communications in times of emergency; a resolution expressing the conviction that the Preparatory Commission would be able to finish its preliminary draft by November, so as to enable the Council to summon the Disarmament Conference as soon as possible.

Other results included: Enunciation of the necessity of concerted action by Governments with a view of remedying the general economic depression; an appeal to all states to accede to

the Commercial Convention of March, 1930, and proposals regarding the prompt execution of the programme of future negotiations drawn up by the Conference for Concerted Economic Action; the dispatch to Bulgaria of experts to study the question of agricultural cooperatives; the scheduled convocation early in 1931 of the first conference of representatives of central police offices in order to promote international cooperation in the prevention and suppression of counterfeiting currency; convocation of a European Conference on Road Traffic for March, 1931; preparation of a European Conference on Rural Hygiene; creation of an International School for Advanced Health Studies in Paris; reorganization and definition of the work of the International Committee on Intellectual Cooperation.

In addition there was: The invitation of the Polish and Lithuanian Governments to enter into direct negotiations with a view to restoring order and tranquillity in the region of the "Administrative Boundary"; arrangements for studying the conclusions of the Transit Committee with regard to the obstacles to freedom of transit caused by the present state of affairs between Poland and Lithuania; agreement between the German and Lithuanian Governments concerning Memel; appointment of an arbitrator to settle a dispute between Greece and Bulgaria; convocation of a General Conference for the Limitation of Drug Manufacture for May, 1931; establishment of the programme and methods of work of the Committee of Inquiry on Traffic in Women in the East; creation of an international refugee office; invitation to the British Government to take such measures as it may consider indicated to give effect to the conclusions of the Mandates Commission, on the Palestine incidents.

Then there was a unanimous report following a protracted debate in the Sixth Committee and settlement by the Council of specific minority cases in Upper Silesia; suppression of the Saar Defense Force and Railway Commission; decisions regarding the obligation of the staff, the duration of contracts, regulations instituting a pensions scheme, and creation of a committee to study questions concerning the principal officers.

During the eleventh Assembly, Albania, Luxemburg and Persia accepted the compulsory jurisdiction of the Court, no ratification being necessary. More than 30 states, i.e. half the Members of the League, including the majority of European states, had now accepted the compulsory jurisdiction of the Court. Eight European states had become parties to the General Act for the Pacific Settlement of International Disputes. Spain and Luxemburg acceded during the eleventh Assembly. France's accession had been voted by Parliament, and was before the Senate. The accession of the British Empire was to be discussed by the Imperial Conference. Guatemala, the Irish Free State, and Norway succeeded Cuba, Canada, and Finland as nonpermanent Members of the Council.

Owing primarily to the opposition of Cuba, the Assembly was unable to complete the amendment of the World Court Statute. The effect in this country of the failure to amend the Statute was being watched with anxiety by American friends of the Court.

The complicated technical question of amending the Covenant of the League of Nations to bring it into conformity with the Kellogg Pact was much discussed but no agreement was reached.

This difficult problem was, therefore, referred for consideration to the next Assembly.

The Assembly decided to call a meeting of the Preparatory Disarmament Commission in November, but it could not agree on a date for calling the General Disarmament Conference. Again, as in previous years, the German spokesmen expressed their dissatisfaction at the lack of progress, and criticized the Allies, particularly France and the countries associated with France, for their failure to carry out their pledge in the Armistice agreement and implicit in the Treaty of Versailles that Germany's disarmament would be followed by general disarmament. The League's prestige and usefulness would be seriously impaired if it did not bring about a reduction of the oppressive burdens of land armaments. The whispered apprehension, as reported by the Foreign Policy Association, so often heard in the cloak-rooms of the Assembly undoubtedly expressed the view of disinterested observers, that, unless the Allies reduced their armaments, Germany would sooner or later arm itself beyond the treaty limitations. Should that happen, Europe would be confronted with a crisis of the first magnitude, one that might wreck the League. That danger was from without. But it was evident in the Assembly that the League was threatened also from within. The Secretariat in fact was suffering from a degree of disillusionment natural at the end of its first decade.

The Committee of Inquiry into the Traffic in Women and Children in the Far East began its task of arranging for the investigation which was to be financed by a gift of \$125,000 from the Social Hygiene Bureau of the Rockefeller Foundation of New York. It was announced that the United States was willing that the Philippines be included in the inquiry.

The sixtieth and sixty-first sessions of the Council, held at Geneva during the month of September, were for the most part concerned with routine activities. It was an interesting illustration of the organic development of the League that the Council meetings, held while the Assembly was in session, seemed secondary in importance to the proceedings of the larger body.

In the opinion of many observers the most interesting of the sixtieth session's activities was its acceptance of the report of the Mandates Commission on its extraordinary session concerning Palestine. This report was received by the British representative, Arthur Henderson, with complete good will and a formal recognition that it was the duty of the commission to criticize, when facts justify, the policy of the mandatory power.

The League Conference on Buoyage and Lighting of Coasts sat at Lisbon from October 6 to October 23, and was attended by 32 states. It drew up recommendations concerning lighthouses and agreements on maritime signals and attended lightships.

The Liberian Government officially informed the League of Nations on October 23 that all the domestic slaves of the native tribes had been declared free. The Government also announced that it had abolished the system by which a tribesman pledged a member of his family as security for a loan, and had ended forced recruiting for foreign labor contracts. Liberia explained that its action was taken because of the report of the International Inquiry Commission, composed of Dr. Charles S. Johnson, of Fisk Univer-

sity, for the United States, Cuthbert Christy, of Great Britain, appointed by the League Council, and Sir Arthur Barclay, named by the President of Liberia.

Debates in the November session of the Preparatory Disarmament Commission only served to bring out increasing divergencies. In the eighteen months since the commission last met, General Kasprzycki, of Poland, said that the tendency toward peace and the feeling of security had grown weaker. The debate as to the choice of limiting navies by expenditure, to which the United States continued to declare itself for its own case unalterably opposed, or by direct enumeration, seemed to imply opening up the revision of the Treaty of Versailles. The action taken by Great Britain, France, Italy, and Japan urging reduction of the size of battleships below the maximum limit of 35,000 tons and 16-inch guns threatened the unity arrived at by the London Conference between the first-mentioned two Powers and the United States, whose chief delegate, Ambassador Gibson, said that nothing definite could be said by him on this subject. A vote, however, was taken on the proposal of the Soviet delegate, Maxim Litvinov, that the commission recommend reduction instead of mere limitation. Carrying a French amendment "to reduce as far as possible," the proposal passed by a vote of 11 to 1, with 12 abstaining. See MILITARY PROGRESS; NAVAL PROGRESS.

The tenth anniversary of the League of Nations was celebrated on January 10. It recalled ten years of diversified and stimulating activity. Elihu Root said: "For these years the League in the political field and the Court in the judicial field have been rendering the best service in the cause of peace known to the history of civilization, incomparably the best." In a statement, President Nicholas Murray Butler of Columbia University emphasized the point that consultation is capable of keeping open the highroad of established peace.

Americans displayed keen interest in the League. During the tenth session of the Assembly James T. Forstall, of Chicago, gave 25,000 francs toward a revolving fund to facilitate the circulation of League literature; the Rockefeller Foundation contributed to the publication of banking laws and to the Health Section and gave \$2,000,000 to the building and endowing of the new League Library, the cornerstone of which has been laid; some 40 American citizens have served on various committees of the League; the United States government has coöperated with the League in a variety of ways.

Each year the International Federation of League of Nations Societies becomes more firmly established, and more competent in its programme of unifying world opinion behind the aims and ideals of the League of Nations. The price paid for increasing efficiency would seem to be an increasing conservatism in the pressing of concrete programmes. This conservatism was particularly pronounced at the fourteenth Plenary Congress of the Federation, held in Geneva, June 5 to 9, 1930. The resolutions adopted were much more in the direction of supporting policy already agreed upon by the League, than in urging the League to rapid advance along lines which are not yet demonstrated as practicable.

After a special discussion in committee, the proposal to move the headquarters of the Federation from Brussels to Geneva, supported by the

American, British, and German delegations, was again defeated. A branch office was opened in Geneva at 8 Rue de la Cloche, in June, 1930. Close relationship between the Federation and the League was emphasized by the appearance before the Plenary Congress of both the Secretary General, Sir Eric Drummond, and the Director of the International Labor Office, M. Albert Thomas.

Certain controversial resolutions were passed by the congress including a motion of protest against alleged persecutions in the Ukraine on the part of the Soviet government; a resolution demanding "all necessary measures" to restore Armenian property confiscated by Turkey; and a resolution on the situation in Palestine. A somewhat controversial Monroe Doctrine resolution was placed on the agenda by the Argentine society, but no Argentinian delegation attended to support it, and consideration of the resolution was postponed for another year.

Esther Lawrence, 17-year-old senior in the Bennett High School, Buffalo, N. Y., won the first prize of a trip to Europe in the Fourth National Competitive Examination on the League of Nations from among the 1277 papers submitted. In the Second National Contest for students at teacher-training institutions, Edward Heyman, of the Michigan State Normal College at Ypsilanti, won the European trip for his thesis on "The Growth of International Cooperation through the League of Nations."

The 1929 award of the Woodrow Wilson Foundation was made to the League of Nations June 19, 1930, for its ten years' work in the cause of peace. The award consists of a bronze plaque designed by the Yugoslav sculptor, Ivan Mestrovic, and a sum of \$25,000. At its January meeting, the Council decided that the gift should be used for the erection in the new League buildings of a monument to President Wilson.

A proof of the interest of the United States in the League of Nations was to be found in the appointment of Prentiss B. Gilbert as American Consul at Geneva with diplomatic rank. The selection of an experienced diplomat and his investiture with diplomatic rank were generally conceded to indicate that Mr. Gilbert would be in fact, if not in name, the official American observer at Geneva, and seemed to promise more direct contact between the State Department and the League. Before going to Geneva, Mr. Gilbert visited the leading capitals of Europe and spent a brief period as First Secretary of the United States Embassy in Paris. See INTERNATIONAL LAW.

LEATHER. During 1930 there was in the United States and throughout the world generally, decreased production of leather and leather manufactures. This is seen in the accompanying figures compiled by the U. S. Department of Commerce for the leading classes of product in the United States. As discussed under LIVESTOCK (q.v.), the number of animals slaughtered in the United States during the year showed a decrease from 1929, while the imports of hides and skins in 1930 were considerably less than in the previous year when the imports represented the largest volume since 1923.

The enactment of the Hawley-Smoot Tariff, which went into effect June 18, 1930, placed a duty of 10 per cent ad valorem on hides and skins of cattle, and 12½ per cent on sole, belting, and other leathers, with the exception of upper or patent leathers, which had a duty of 15 per cent,

and glove, strap, and other similar or finished leathers which had duties ranging to 30 per cent.

U. S. LEATHER PRODUCTION BY PRINCIPAL CLASSES, 1929-1930

| | 1929 | 1930 |
|--|------------|------------|
| Sole leather (cattle)sides. | 15,518,124 | 14,516,339 |
| Belting leatherbutts. | 1,431,779 | 2,067,875 |
| Side, upper, and patent (cattle)sides. | 15,738,312 | 18,563,515 |
| Harness leatherdo.. | 505,525 | 641,895 |
| Bag, case, and strapdo.. | 750,958 | 846,630 |
| Upholsterypieces. | 711,978 | 1,205,626 |
| Calf and kidskins. | 14,172,449 | 15,367,726 |
| Goat and kiddo.. | 55,443,901 | 55,684,501 |
| Sheep and lambdo.. | 80,390,739 | 38,980,687 |

According to a preliminary tabulation of the U. S. Census of Manufactures, the total output of leather in 1929 by tanners and finishers in the United States, exclusive of that produced on contract from hides and skins owned by others, was valued at \$458,995,685 (at f.o.b. factory prices), an increase of nine-tenths of 1 per cent as compared with \$454,904,813 reported for 1927, the last preceding census year. The chief items in the total for 1929 were: Sole and belting leather, \$136,524,951; harness leather, \$6,117,336; bag, case, and strap leather, \$7,307,793; upholstery leather, \$15,401,442; upper leather (other than patent), \$183,471,019; patent leather (other than upholstery), \$24,111,991; glove and garment leather, \$23,024,659; fancy and bookbinders' leather, \$15,395,595; finished splits (other than upholstery), \$19,246,240.

The imports of raw hides and skins, except furs, into the United States in 1930 aggregated 399,864,441 pounds valued at \$92,268,412, as against 515,658,541 pounds valued at \$137,281,386 in 1929. The value of cattle hides in 1930 was \$24,269,325 as compared with \$42,598,865 in the previous year. As in previous years, Argentina was the leading source of supply, providing hides valued at \$12,304,708 in 1930, as compared with \$23,197,540 in 1929. In 1930 kip and calf skins to the value of \$8,911,650 were imported, as against \$16,400,157 in 1929. Sheep and lamb skins to the value of \$14,368,774 were imported in 1930, as against \$21,904,919; goat and kid skins in 1930 to the value of \$38,098,645, as against \$47,500,323 in 1929.

The imports of leather into the United States in 1930 were valued at \$23,727,904, as against \$44,559,116 in 1929, while manufactures of leather imported were valued at \$31,169,901 in 1930, as against \$41,563,220 in 1929. Of the 1930 imports, the value of leather gloves, \$15,195,261, constituted 48.7 per cent and that of leather footwear, \$11,263,384, 38.1 per cent. See BOOTS AND SHOES. In 1929 footwear imports were valued at \$18,773,000, and leather gloves at \$16,551,000. Of the 14,498,278 pairs of leather gloves, valued at \$15,195,261 imported in 1930, Germany supplied 33.5 per cent (4,849,691 pairs) and France 33.3 per cent (4,821,942 pairs). In 1929 these countries furnished 5,568,741 and 5,571,351 pairs, respectively. The other important countries of origin were Italy, 15.8 per cent (2,295,497 pairs); Belgium, 7.8 per cent (1,127,009 pairs); United Kingdom, 0.8 per cent (125,121 pairs); and other countries, 8.8 per cent. The United Kingdom supplied almost identical quantities in 1929 (125,796 pairs) and in 1930 (125,121 pairs). Trade with the other countries declined.

The United States during 1930 exported to foreign countries and the noncontiguous territo-

ries of Alaska, Hawaii, and Porto Rico, leather manufactured goods valued at \$16,874,000, compared with \$22,353,000 for 1929, and imported similar commodities to the value of \$31,169,900. Exports to foreign countries alone were valued at \$12,630,197 compared with \$17,734,224 in 1929. The decreased exports reflect the unfavorable conditions existing throughout 1930 in the foreign markets.

Prevailing economic conditions seriously affected the leather belting export trade, which declined from 1,294,165 pounds in 1929 to 885,573 pounds valued at \$1,416,466 in 1930. British India, the leading market, was supplied with 192,142 pounds, or 21.7 per cent of the total exports. China and Mexico were supplied, respectively, with 171,232 and 80,990 pounds. Trade with the Philippine Islands increased from 24,803 to 35,063 pounds. Other important markets were Canada and the United Kingdom, which were supplied, respectively, with 57,932 and 49,673 pounds. The noncontiguous territories of Hawaii and Porto Rico were shipped, respectively, 14,128 and 22,524 pounds of new leather belting, or a total of 36,652 pounds valued at \$65,364. Foreign countries were supplied with 16,917 dozen pairs of leather gloves valued at \$156,458; harness and saddlery, \$164,076; traveling bags, etc., \$88,615; leather pocketbooks, \$287,714; and miscellaneous goods, \$2,125,999. In 1930 trade in these commodities also declined.

LEBANON. See SYRIA.

LE COQ, ALBERT AUGUST VON. A German archaeologist and ethnologist, died Apr. 25, 1930, in Berlin, where he was born Sept. 8, 1860. In 1904 and 1905, and again in 1913-14, he conducted expeditions to Asia to explore an area at the foot of the eastern Tian-Shan Mountains, being accompanied on one of the earlier journeys by Dr. Albert Grünwedel, the archaeologist. From the excavations of ruins buried in sand, he brought back to Berlin Buddhistic wall-paintings and other relics and, more important still, a number of documents written on Chinese paper, vellum, and wood. Written in a variety of alphabets, the documents revealed links between Hellenism, Persia, India, and China and led to the discovery of a new Aryan language, Tocharian, with two distinct dialects. From 1914 to 1925, he was assistant director and, later, director of the Berlin Museum für Völkerkunde. In addition to contributions to the publications of the Prussian Academy of Sciences (1908-09, 1911-12, 1919-22) and to other compilations and journals, he

LEEWARD ISLANDS. A group of islands belonging to Great Britain in the West Indies; the most northerly group of the British Lesser Antilles, lying to the north of the Windward group and southeast of Porto Rico, comprising Antigua, Dominica, Montserrat, St. Christopher or St. Kitts (with Nevis and Anguilla), and the British Virgin Islands. Total area, 715 square miles; population at the census of 1921, 122,242, as compared with 127,193 in 1911. The estimated population in 1928 was 123,000. The two largest islands with their area and estimated population in 1928 were: Dominica, 305 square miles and 41,671 inhabitants; Antigua, 108 square miles, but with Barbuda and Redonda, 170 square miles, with a population of 30,442. The chief towns are Roseau (Dominica), 7374 inhabitants; St. John (Antigua), 6997 inhabitants; and Basse-Terre (St. Kitts), 7736 inhabitants. The British Virgin Islands comprise all those in the group which do not belong to the United States; area, 58 square miles; population (1921), 5082. The staple products in most of the islands are sugar, cotton, and molasses. Cacao and onions also are grown. The culture of tobacco is successfully carried on in Dominica. On that island and on Montserrat, lime juice and citrate of lime are important products. In the calendar year 1928, exports totaled \$4,220,000 and imports, \$4,040,000. In 1928 the receipts for Antigua, Montserrat, St. Christopher, and Dominica totaled £278,000, the expenditures £277,000, and the public debt, £201,000. The islands are divided into five presidencies under a governor, who is commander-in-chief, a Federal executive council, and a Federal legislative council. Governor in 1930, Lieut.-Colonel T. R. St. Johnston.

LEGISLATION. See LABOR LEGISLATION; paragraphs on *Legislation* under the several States; and the article UNITED STATES.

LEGION, AMERICAN. See AMERICAN LEGION.

LEHIGH UNIVERSITY. A nonsectarian institution for the higher education of men in Bethlehem, Pa.; founded in 1866 and composed of the colleges of engineering, business administra-

tion, and arts and science. The enrollment for the autumn of 1930 was 1532, the largest autumn enrollment in the history of the university. The enrollment for the summer session of 1930 was 467. The faculty numbered 179, including 22 persons on the administration staff. The endowment amounted to \$5,285,029, while the total income for the year was \$1,448,458. There were 190,000 volumes in the library. The new addition to the library was dedicated on Apr. 25, 1930, and the James Ward Packard laboratory of electrical and mechanical engineering on October 15-17. On the latter occasion conferences on the relation between the industries and the technical schools and on the future of American industry were held. President, Charles Russ Richards, Eng.D., LL.D.

LELAND STANFORD UNIVERSITY. See STANFORD UNIVERSITY.

LENA GOLDFIELDS CASE. See RUSSIA under *History*.

LEONARD, THE RT. REV. WILLIAM ANDREW. Protestant Episcopal Bishop of the Diocese of Ohio, died in Gambier, Ohio, Sept. 21, 1930. He was born in Southport, Conn., July 15, 1848, and attended St. Stephen's College and the Berkeley Divinity School, being graduated from the latter in 1871. On ordination as deacon in 1871 he became assistant at the Church of the Holy Trinity in Brooklyn, N. Y. Two years later he was ordained priest, serving as rector of the Church of the Redeemer, Brooklyn, until 1880 and as rector of St. John's Church, Washington, until 1880. He was consecrated Bishop of Ohio on Oct. 12, 1889, and for more than 40 years was a dominant force in the Protestant Episcopal Church in the Middle West. For a number of years he was also administrator of the American churches in Europe. In 1925 he was presiding bishop during the trial of the Rt. Rev. William Montgomery Brown of Arkansas for heresy. At the time of his death he was senior bishop of the Protestant Episcopal Church. The D.D. degree was conferred on him by St. Stephen's College in 1870 and by Washington and Lee University in 1885, and the LL.D. degree by Kenyon College in 1919. His works include: *Via Sacra, or Footprints of Christ* (1875); *History of the Christian Church* (1878); *A Faithful Life* (1888); and the Bedell lectures on the *Witness of the American Church to Christianity* (1894).

LEOPOLD, MAXIMILIAN JOSEPH MARIA ARNULF, PRINCE OF BAVARIA. A German soldier, died Sept. 28, 1930, in Munich where he was born Feb. 9, 1846. Entering the Bavarian army in 1861, he took part in the Prussian campaign against Austria in 1866 and the Franco-Prussian War of 1870-71. On receiving his commission as first lieutenant in 1871, he was promoted through the ranks to inspector-general in 1891, general in 1896, and field marshal in 1905. He participated in the World War on the eastern front, being appointed in 1915 head of the 9th Army and playing an important part the following year in the German victories in Poland and Russia. The capture of Warsaw, in particular, was one of the greatest strategic movements of the early part of the War.

LESSINGITE. See MINERALOGY.

LEWIS, ARTHUR. An American actor, died in New York City, June 13, 1930. He was born in Hampstead, England, Aug. 19, 1846, and made his first appearance on the stage in Paris in 1872,

appearing two years later in London. From 1876 to 1878 he was a member of the Dublin Theatre Stock Company and toured the English provinces during 1879-81. He came to the United States in 1882 and was a member of Mary Anderson's company from 1883 to 1889, appearing with her in *Pygmalion and Galathea*; *Comedy and Tragedy*; *Romeo and Juliet*; *The Hunchback*; and *A Winter's Tale*. His outstanding successes on Broadway, from 1902 to 1929, were in *Monsieur Beaucaire*; *The Hypocrites*; *The House Divided*; *The Garden of Allah*; *The Legend of Leonora*; *The Witness for the Defense*; *Three Wise Fools*; *Decameron Nights*; *The Servant in the House*; *The School for Scandal*; *The Captive*; *Interference*; and *A Hundred Years Old*. He also was manager in London for Mme. Réjane, Mme. Sarah Bernhardt, Coquelin, and Antoine.

LEWISTONITE. See MINERALOGY.

LEXICOGRAPHY. See PHILOLOGY, MODERN.

LIBERIA. A Negro republic on the west coast of Africa, extending from the British colony of Sierra Leone on the west to the French Ivory Coast on the east, with about 350 miles of coast line. Area, about 43,000 square miles; population, estimated at 2,000,000 to 2,500,000, most of whom live in the interior. They belong to about 40 tribes and speak as many languages. The civilized inhabitants, reported at about 60,000, live along the coast and speak English. Capital, Monrovia, with 10,000 inhabitants (including Krutown). There are 62 mission schools, with 5360 pupils, and 64 Government schools, with 3552 pupils.

Agriculture, mining, and industry are comparatively undeveloped. Cacao and cotton are produced in small quantities, but the staple product is native coffee. Other products are piassaba fibre, palm oil, palm kernels, chillies, and beniseed. In 1930 over 30,000 acres of the 1,000,000-acre Firestone rubber concession, granted in 1926, had been planted to rubber trees. The undeveloped mineral resources include: Gold, copper, tin, zinc, monazite, lead, corundum, lignite, and iron. The last named is worked by natives. Some diamonds have been found.

While imports mounted steadily from 1924 to 1928, exports declined after 1925. In 1928 imports totaled \$4,029,506 and exports, \$1,465,568. Rubber, palm oil and kernels, piassaba fibre, coffee, and ivory are the leading exports. The budget for 1927-28 provided for revenues of \$1,267,437 and expenditures of \$1,712,709. By the terms of a \$5,000,000 loan obtained in the United States in 1927, Government finances are supervised by an agent appointed by the President of the United States. There are less than 250 miles of motor highways. These, with cart roads, and the navigable portion of the St. Paul River (25 miles) offer the only transportation facilities. In 1928, 1162 ships entered and cleared.

The constitution, modeled after that of the United States, vests executive power in a president, assisted by a cabinet of six, and legislative power in a congress of two houses. Suffrage is restricted to Negroes owning land. English is the official language. President in 1930, Charles D. B. King (1928-32).

HISTORY. Charges that slavery and forced labor were practiced in Liberia were investigated in 1930 by a commission appointed by the League of Nations, at the request of the Liberian government. A dispute between Liberia and the British government over the Sierra Leone boundary was ended in January, 1930, by an exchange of

notes. The British agreed to withdraw from the territory under dispute, and to redemarcate the boundary. See LEAGUE OF NATIONS.

LIBIA. The name of an Italian colony on the north coast of Africa. In 1919 for administrative and military purposes, it was divided into Cyrenaica and Tripolitania. The temporary southern frontier was pushed to or south of the 29th parallel in 1928 and the pacification of the desert tribes was considered virtually complete in 1930. The Government sponsored a vigorous policy of economic development and colonization. See CYRENAICA and TRIPOLITANIA.

LIBRARY ASSOCIATION, AMERICAN. The official organization of librarians in the United States and Canada, founded for the purpose of promoting library service and librarianship. In 1876 its membership was 103; in 1930 it was more than 12,000. The activities of the association are carried on by its officers; by its more than 60 voluntary committees engaged in studying the problems of book buying, book selection, cataloguing, library work with the blind, and the foreign born; by its boards; by hundreds of volunteer workers; and by the members of the headquarters staff, which numbered more than 60 in 1930, including the executive assistants to the A.L.A. committee on library extension, the board on the library and adult education, and the board of education for librarianship.

The association publishes books and pamphlets on library work, buying-lists for libraries, and so forth. Important publications of the year included *Reference Work*, by James I. Wyer; *Introduction to Cataloging and the Classification of Books*, by Margaret Mann; *The Library in the School*, by Lucile F. Fargo; *Book Selection and Order Work for Libraries*, by F. K. W. Drury; *American Library Laws*, compiled by Milton J. Ferguson; and *Library Service for Children*, by Effie L. Power. Reading with a Purpose courses, published by the association during 1930, were: *English History*, by George H. Locke; *Invention and Society*, by Waldemar Kaempffert; *Scandinavian Literature*, by Hanna A. Larsen; *Shakespeare*, by Felix E. Schelling; *International Relations*, by Isaiah Bowman; *Short Story Writing*, by Blanche Colton Williams; and *Representative Twentieth Century Americans*, by M. A. DeWolfe Howe. Each course is written by an authority and consists of a short essay followed by a recommended list of five or six books. Of the 55 courses published since 1925, nearly 700,000 copies had been sold by the end of 1930.

The association also issues four periodicals: *The Bulletin of the American Library Association*, a monthly publication which includes the conference proceedings and the handbook; *The Booklist*, issued monthly as a guide to the selection and purchase of current books; the *Subscription Books Bulletin*, a quarterly presenting critical estimates of subscription books and sets sold currently by canvassing agents; and the *Adult Education Quarterly*, issued by the A.L.A. board on the library and adult education.

The fifty-second annual conference ranking third in point of attendance in the history of the association, was held during the week of June 23, 1930, in Los Angeles, Calif., and was attended by more than 2000 librarians. On this occasion the John Newbery Medal, given annually for the most distinguished children's book of the year by the section for library work with children, was awarded to Rachel Field for her book, *Hitty*,

Her First Hundred Years. The usual meetings of college, school, county, reference, children's, agricultural, and hospital librarians were held. In addition to more than 30 regular round tables of the association two new groups, the junior college library and the young people's reading round tables, met for discussion. Meeting with the association were the American Association of Law Libraries, the League of Library Commissions, and the National Association of State Libraries. Mrs. Elizabeth Sprague Coolidge was elected an honorary member of the American Library Association in recognition of her devotion to the cause of music as founder of the Berkshire Festival of Chamber Music, later transferred to Washington, and several Quartets and Trios. Preceding the Los Angeles conference, the first Arizona meeting of the association was held at the Grand Canyon on June 21.

The officers elected for 1930-31 were: Adam Strohm, librarian, Public Library, Detroit, Mich., president; Louis R. Wilson, librarian, University of North Carolina Library, Chapel Hill, first vice-president; Charlotte Templeton, librarian, Public Library, Greenville, S. C., second vice-president; Matthew S. Dudgeon, librarian, Public Library, Milwaukee, Wis., treasurer; Andrew Keogh, librarian, Yale University, New Haven, Conn., and Margaret Mann, Department of Library Science, University of Michigan, Ann Arbor, members of the executive board; and Harry A. Wheeler, vice-chairman, First National Bank, Chicago, Ill., trustee of endowment funds. The headquarters of the association are at 520 North Michigan Avenue, Chicago, Ill.

LIBRARY ASSOCIATION, THE. An organization of libraries in Great Britain founded in 1877 and incorporated by Royal charter 1898. Its membership includes librarians throughout the United Kingdom. It publishes the *Library Association Record* (monthly), *The Subject Index to Periodicals* (annual), *The Year's Work in Librarianship* (annual), and other works appropriate to the conduct of libraries of various types. It maintains a professional register consisting of Fellows (F. L. A.) and Associates (A. L. A.). The officers at the end of 1930 were as follows: President, J. Stanley Jast, F. L. A., Chief Librarian, Manchester; Chairman of Council, Lt. Colonel J. M. Mitchell, O. B. E., M. C., M. A., Secretary of Carnegie United Kingdom Trust, Dunfermline; Honorary Secretary, E. A. Savage, F. L. A., Chief Librarian, Edinburgh; Honorary Treasurer, H. Tapley-Soper, F. S. A., F. R. Hist. S., F. L. A., City Librarian, Exeter, and Secretary, Guy W. Keeling. The Association maintains headquarters at 26-27 Bedford Square, W. C. 1, London.

LIBRARY PROGRESS. Southern library development was an important factor in library progress in the United States during the year. Of the fifteen new county libraries established between October, 1929, and October, 1930, nine were in Southern States and four received grants from the Julius Rosenwald Fund. Library activity in the South was further stimulated by the appointment of a Southern regional field agent, Miss Tommie Dora Barker, by the American Library Association, and by the initiation or strengthening of State library field work in Alabama, Tennessee, South Carolina, and Arkansas through Rosenwald grants. In North Carolina, a supervisor of school libraries was appointed. Two Southern conferences of importance were a State

conference on libraries at Lexington, Ky., in October, called at the suggestion of the president of the University of Kentucky to assist in the preparation of a library development programme for the State; and a summer institute for Negro librarians, financed by the Julius Rosenwald Fund and held at Spelman College, Atlanta, Ga., with Charlotte Templeton, president of the Southeastern Library Association, as director. The close of the Louisiana demonstration brought to a successful conclusion a five-year experiment in arousing widespread interest among the people of a State in the development of free book service. The State legislature appropriated funds to carry on the work of the State Library Commission for another year.

LEGISLATION. Legislation for State aid for county libraries was introduced in the legislatures of Louisiana, New York, and Virginia. Although it failed in each State, keen interest in the measure indicated that New Jersey's example in providing State aid would probably be followed in the succeeding year. In Mississippi, the county library law was revised to make more generous provisions for this service. In New Brunswick, a Provincial Library Commission was established and funds were secured for organization purposes.

CIRCULATION. Circulation figures of public libraries in 38 leading cities of the United States showed a circulation of more than 121,000,000 books during the year, an increase of more than 4,000,000 over the preceding year. The Chicago Public Library circulated the largest number of books, 14,534,393; New York, exclusive of Brooklyn and Queens, was second with 11,103,019; and Los Angeles third with 9,682,305. Those with the largest per capita circulation were: Portland (Ore.), 9.7; Cleveland, 9.57; and Los Angeles, 7.86.

ADULT EDUCATION. New experiments in the adult education field were those in radio and alumni education. Four experiments with reading lists in connection with nation-wide broadcasting were carried on: (1) by the World Peace Foundation and the Foreign Policy Association; (2) the Walter Damrosch music appreciation broadcasts; (3) the American Library Association in connection with the League of Women Voters' programmes; and (4) the American School of the Air. The response of the radio public was such that all four services were to be continued during 1931. Projects were being carried on in five colleges through grants from the Carnegie Corporation as experiments in alumni education. Lawrence College at Appleton, Wis., was promoting reading among the alumni by monthly lists and the loan of books; Lafayette College at Easton, Pa., prints the *Lafayette Book Shelf* and sponsored two "alumni colleges"; the University of Michigan at Ann Arbor was promoting discussion groups among the Detroit alumni and carried through a summer alumni university; Vassar College at Poughkeepsie, N. Y., arranged for week-end conferences for alumni and their families; and Ohio State University at Columbus organized discussion groups of alumni with special emphasis on parent education. Discussion groups were proving popular, also, in public libraries of large cities, and the *Reading with a Purpose Courses*, published by the American Library Association, were being used extensively by libraries throughout the United States. See article on **LIBRARY ASSOCIATION, AMERICAN.**

LIBRARY SCHOOLS. Library school development was marked by rapid increase in the number of courses offered both in the academic year and summer sessions and by the larger enrollment. Eighteen library schools were accredited and five other schools provisionally accredited by the Board of Education for Librarianship of the American Library Association. Early in 1930, a survey of library training agencies in thirteen Southern States was conducted by Sarah C. N. Bogle, secretary of the A.L.A. Board of Education for Librarianship, and Tommie Dora Barker, regional field agent for the South for the American Library Association, under a special grant from the Carnegie Corporation. Miss Bogle was also in charge of a survey of agencies for training school librarians in California, made at the request of the California superintendent of instruction.

Certification standards for school librarians were revised at the annual meeting of the Association of Colleges and Secondary Schools of the Southern States, in Kentucky, and the time limit for their final enforcement extended to the autumn of 1933. In New York, the Board of Regents approved a certification plan effective January, 1931, by which every librarian of professional grade in the State is required to hold a certificate based on the Standards of Service.

A Rural Library Extension Institute, the first ever held for experienced workers, was conducted during the summer of 1930 at the University of Wisconsin in connection with the Ninth Rural Leadership Summer School. Rural sociology and adult education, as well as extension problems, were discussed.

BIBLIOGRAPHY. In the field of bibliography, the Vollbehr collection of incunabula was purchased by the Library of Congress for \$1,500,000. This collection consists of 3000 books and includes a copy of the Gutenberg Bible, only two other perfect copies of which are known to exist. A new bibliographical society, the Inter-American Bibliographical Association, was established by the Pan American Union for the purpose of organizing and coördinating inter-American activities in the field of bibliography.

INTERNATIONAL CONFERENCES. Among meetings of importance were the International Library Committee conference in Stockholm in August; the Second Pan-Pacific Women's Conference in Honolulu, and the Conference of the World Association for Adult Education at Sorvik, during the same month; and the Library Association conference at Cambridge, England, in September. These were attended by American library representatives. The International Library Committee accepted an invitation from the American Library Association to hold a meeting in Chicago in 1933, during the Century of Progress exposition.

FUNDS AND ENDOWMENTS. Funds appropriated for library work, in addition to those from the Carnegie Corporation and the Julius Rosenwald Fund mentioned elsewhere in this article, included: a \$10,000,000 trust fund for the maintenance of the Folger Shakespeare Memorial in Washington, D. C., the bequest of Henry Clay Folger; \$2,000,000 for a new library building at the University of Cincinnati left by the late Charles P. Taft; \$1,000,000 for the maintenance and operation of Dartmouth College Library, from George F. Baker, donor of the building; a gift of \$1,000,000 from the Charles Deering estate

for a new library building at Northwestern University; a grant of \$140,000 to the Library of Congress from the Daniel Guggenheim Fund for the Promotion of Aeronautics; the bulk of the \$600,000 estate of the late Horace S. Oakley to the Newberry Library, Chicago, for the establishment and maintenance of a musical library; and a grant of \$100,000 from the Carnegie Corporation to provide library service for the people in a large, sparsely-settled section of British Columbia. In addition to the fellowship grants offered by the Carnegie Corporation, and the Caroline M. Hewins Scholarship, a new award, the E. P. Dutton Fellowship for study in the field of library work with children, was given by John Macrae, Jr.

NEW BUILDINGS. The completion of the Sterling Memorial Library at Yale University, New Haven, Conn., at a cost of \$8,000,000 was one of the important events of the year. Other library buildings which were completed or were under construction include: the Richmond, Va., Public Library at a cost of \$500,000; the University of West Virginia Library, Morgantown, the first unit of which was to cost \$300,000; the Lake Forest, Ill., Public Library to be erected through a \$250,000 gift from Mrs. Kersey Coates Reed and Mrs. Charles Schweppe; six new branch buildings at Queens, N. Y., constructed at a cost of \$1,430,000; the University of Cincinnati Library, Ohio, completed at a cost of \$900,000; the University of Tulsa Library, Okla., built with the \$525,000 gift of Mr. and Mrs. R. M. McFarlin; the University of Tennessee Library at Knoxville, a \$300,000 structure; a \$250,000 library building at the Texas Agricultural and Mechanical College; the Edward Kierstein Memorial Branch in Boston, completed at a cost of \$150,000; two new branch library buildings at St. Paul, Minn., erected at a cost of \$94,000; and a \$60,000 public library and art gallery on the Palos Verdes Estates, Calif. Among library buildings dedicated were: the University of Oklahoma, Norman; the new half of the Toronto Public Library, Ontario; the \$325,000 library of Loyola University, Chicago, the gift of Edward A. Cudahy; the Thomas Scott Buckham Memorial Library at Faribault, Minn., erected at a cost of \$250,000; the Youngstown Public Library, O., a new \$164,000 building; and the Randolph-Macon Woman's College Library at Lynchburg, Va., a \$150,000 building.

LIBYA. See **LIBIA**.

LIECHTENSTEIN. One of the smallest independent European states, lying between the Austrian province of Vorarlberg and the Swiss cantons of St. Gallen and Graubünden. Area, 65 square miles; population (1912), 10,716, largely rural. Capital, Vaduz (population, 1405). Reigning Prince, Francis I. Revenue for 1930 was estimated at 1,179,350 francs; expenditure, 1,049,597 francs (1 franc equaled about \$0.192). The Diet of 15 members is elected by universal suffrage. Since January, 1924, Liechtenstein has been included in the Swiss Customs Union and the posts are administered by Switzerland.

LIGHT. See **PHYSICS**.

LIGHTHOUSES. At the close of the fiscal year ending June 30, 1930, the Commissioner of Lighthouses, George R. Putnam, reported that the U. S. Lighthouse Service had 19,556 marine aids to navigation in service, an increase of 555

over the preceding year. The radio-beacon system was also increased materially, 14 new stations having been established, and 17 being under construction. Airways facilities were extended and lighting installations were completed on about 3300 additional miles of airways. An important new light station was under construction at Detroit, Mich., at the mouth of the St. Marys River leading from Lake Huron to Lake Superior. This new station, located in 24 feet of water a mile off shore, will replace an older station on the shore. The effectiveness of a lighthouse at this point will be greatly increased by having the station close to the channel to which all vessels must adhere. At the close of the fiscal year much of the preliminary work had been completed and it was expected that the station would be placed in commission during 1931. Numerous important improvements were made at the Lighthouse Depots located in different parts of the country. The larger construction projects were those at Edgemoor, Del., Staten Island, N. Y., Portsmouth, Va., Goat Island, Calif., and Honolulu, Hawaii. New depot projects are under consideration at Portland, Maine, and in Narragansett Bay. The purchase of additional land to extend the depot at Chelsea, Mass., has been authorized.

At the close of the fiscal year the U. S. Lighthouse Service had approximately 13,500 miles of lighted airways in operation, with 319 intermediate landing fields, 1477 airways beacons, 303 airways weather reporting stations, 35 airways radio stations, 9 radio range beacons, 3 point-to-point airways radio stations, and 5650 miles of telephone-typewriter circuits, including 120 telephone-typewriter stations.

A further test was conducted during the year of a system previously developed for the remote control of fog signals by radio. The device has been permanently installed at Poe Reef Light Station, Straits of Mackinac, where it controls the fog signal at Fourteen Foot Shoal, a nearby station, and has been in constant use now for some months. This apparatus makes it practicable to place an efficient minor fog signal out at the point of danger and control it from shore.

During the year there were completed six lightships equipped with the most up-to-date machinery. In no other year had such a large number of lightships been completed, the new ships being radical departures from the types employed in the past.

Another interesting development was that radio-beacon and sound-in-air signals were synchronized at five additional stations, an arrangement which made it possible for navigators to determine their distance from the sending stations at any time when the signal could be heard. Much favorable comment followed the installation of such signals on the Great Lakes, the great density of traffic there making them exceptionally valuable.

Various improvements were made in the marine aids to navigation, the changes affecting nearly all sections of the 40,000 miles of coastline under the jurisdiction of the Lighthouse Service. Twelve fixed lights were changed to flashing or occulting, the illuminant of six lights was changed to incandescent oil vapor, the illuminant of 36 lights was changed to acetylene, and the illuminant of 23 lights was changed to electric incandescent. A number of diaphones, nautophones, oscillators, to serve as fog signals, were established at various stations. In Alaska 41 new aids to navigation were

established, bringing the total number of aids in these waters up to 854.

For Columbus Memorial Lighthouse, see PAN AMERICANISM.

617,000 tons valued at \$4,468,000 in 1930. This represents a decrease of 21 per cent in quantity and 24 per cent in value from 1929. Pennsylvania also ranked second among the States in produc-

LIGNITE. See COAL.

LIME. The sales of lime by producers in the United States in 1930 amounted to 3,384,000 short tons valued at \$24,950,000 according to estimates furnished by the U. S. Bureau of Mines. This was a decrease of 21 per cent in quantity and 25 per cent in value as compared with sales of 4,269,768 tons valued at \$33,478,848 in 1929. The estimated sales of hydrated lime, which are included in these figures, amounted to 1,306,000 tons in 1930 valued at \$10,102,000, a decrease of 16 per cent in quantity and 21 per cent in value from the production of 1,550,771 tons valued at \$12,771,525 in 1929. The average unit value of all lime showed a decrease from \$7.84 a ton in 1929 to \$7.37 in 1930. Sales of lime in 1930 for construction were estimated at 1,200,000 tons compared with 1,640,827 tons in 1929, a decrease of 27 per cent. Sales of lime for chemical uses were estimated at 1,900,000 tons compared with 2,200,612 tons in 1929, a decrease of 17 per cent. Included in the estimated sales of chemical lime in 1930 were sales of refractory lime (sintered dolomite) amounting to 356,000 tons, a decrease of 27 per cent from the output reported for 1929. The sales of lime for agricultural use were estimated at 284,000 tons, a decrease of 17 per cent from the 338,329 tons reported in 1929.

The principal States producing lime in 1930 showed decreases from the 1929 production ranging from 4 per cent to 46 per cent in quantity and 9 to 44 per cent in value. As in 1929 the leading State in production of lime was Ohio with an estimated output in 1930 of 742,000 short tons valued at \$5,614,000, a decrease of 23 per cent in quantity and 29 per cent in value from 1929. Pennsylvania ranked next to Ohio in the annual production of lime with an estimated output of

tion of building lime but its output was less than one-third that of Ohio. The Keystone State produces more agricultural lime than any other State, but the greater part of its output—nearly 60 per cent—is chemical lime. It ranked second in production of hydrated lime, sold chiefly for agriculture. The sales of hydrated lime in Pennsylvania in 1930 were estimated at 225,000 short tons and represented a decrease of 13 per cent in comparison with the preceding year. The most notable decrease (46 per cent) in the volume of production occurred in Wisconsin. The lime from this State was shipped largely to Illinois and sold for construction purposes. Other States producing chiefly building lime and showing considerable decreases in output in comparison with 1929 were Connecticut, Maine, Massachusetts, and Texas.

LINSEED. See FLAX.

LIONS CLUBS, INTERNATIONAL ASSOCIATION OF. An organization of business and professional men's clubs united in one association for the purpose of promoting good government and good citizenship, encouraging efficiency, and promoting high ethical standards in business and in the professions. In 1917 the Business Circle of Chicago issued a call to approximately 150 business organizations, inviting them to send representatives to a meeting in Chicago on June 7. More than 20 delegates, representing 50 clubs, attended this meeting and voted to form an association; the name "Lions" was adopted. Additional Lions Clubs have been organized in accordance with the method of choosing one man from each business or profession in the community.

On Dec. 1, 1930, the number of clubs in the

United States and Canada was 2350, with a membership of approximately 80,000. At the 1930 convention, held July 15-18 in Denver, Colo., Earle W. Hodges of New York City was elected international president. The vice presidents chosen were: Julien C. Hyer of Fort Worth, Texas; Robert L. McKeever of Washington, D. C.; and Charles H. Hatton of Wichita, Kans. Melvin Jones of Chicago has been secretary-treasurer since the association was organized. The official organ is *The Lion*, Charles Lee Bryson, managing editor. Headquarters are in the McCormick Building, 332 South Michigan Avenue, Chicago.

LIQUOR LAWS. See PROHIBITION.

LITERATURE, ENGLISH AND AMERICAN. To publishers 1930 will be memorable for the slackening of business. Yet there seemed no slackening of enterprise, for the lists of new books were not appreciably shorter. Inventories were often reduced, however, by the sale of remainders, so that book-buyers could obtain many bargains during the year. And a few publishers startled the business in the late spring by announcing that they would publish new books for the popular taste, including fiction, at one dollar. In England one publisher set his price for the same class of book at three shillings. But at the end of the year all these American publishers but one announced that the plan was a failure. The audience for a new book seemed as willing to pay two dollars or more as one dollar; sales were not much increased by the reduction. The dollar-book audience apparently preferred its books with established reputation of some sort; it is not so much interested in newness. This audience has for years been catered to quite successfully by the publishers who made their own reprints after buying the plates of established successes from the original publishers. Attempts by the latter to compete in the reprint field seemed to be unsuccessful, at the end of the year.

FICTION. 1930 was an unusual year, in that it brought forth no novel which could really be called a smashing success, both critically and financially. Perhaps as pleasant a work as the year showed was A. P. Herbert's *The Water Gipsies*, kindly humor about servants. Also charming was Rose Macaulay's *Staying with Relations*, about the surprises of a novelist in an exotic background. J. B. Priestley's *Angel Pavement* dealt with London life; and Louis Bromfield's *Twenty-four Hours* with New York life, the former more persuasively. Thornton Wilder's eagerly awaited *The Woman of Andros* was more philosophy than story, almost a collection of proverbs. *Cakes and Ale*, by W. Somerset Maugham, was a piece of literary malice, not, however, easy to pin to actual persons. Evelyn Waugh's *Vile Bodies* was funny, fantastic, and satirical. Rudyard Kipling published *Thy Servant a Dog*; and H. G. Wells's *The Autocracy of Mr. Parham* was fun about politics. Arnold Bennett wrote *Imperial Palace*, details about a luxury hotel. Stella Benson, in *The Faraway Bride*, and Grace Zaring Stone, in *The Bitter Tea of General Yen*, put their characters in the Orient. H. M. Tomlinson's *All Our Yesterdays* was a philosophic war book. Other noteworthy war narratives were Liam O'Flaherty's *Return of the Brute*; the anonymous *War Nurse*; and *Step-daughters of War*, about Waacs, by Helen Zenna Smith.

Dorothy Canfield, in *The Deepening Stream*, described a woman's progress from youth to age. Margaret Kennedy gave more about the Sangers

in *The Fool of the Family*. In *A Note in Music*, Rosamund Lehman laid bare some starved lives. Anne Douglas Sedgwick's *Philippa* dealt with a girl and her parents. Anne Green's *The Selbys* was a delightful comedy. D. H. Lawrence's *The Virgin and the Gipsy* was his last novel and on his usual themes. Joseph Hergesheimer's *The Party Dress* was heavily sophisticated. Manuel Komroff's *Coronet* was a novelized history of aristocracy. Martha Ostenso, in *The Waters under the Earth*, dealt with a tyrannical parent.

There were several good historical novels: Hugh Walpole's *Rogue Herries*, the 18th century; Elizabeth Madox Roberts's *The Great Meadow*, Kentucky history; Daphne Muir's *Pied Piper*, about the Children's Crusade; M. L. Mahic's *The Saint, the Devil, and the King*, about Louis XI; and *None So Pretty*, by Margaret Irwin, the 17th century. V. Sackville-West's *The Edwardians* was historical-satirical. First novels highly praised were: Claire Spencer's *Gallows' Orchard*; Alexander Laing's *End of Roaming*; J. Keith Winter's *Other Man's Saucer*; Jonathan Daniels' *Clash of Angels*, a fantasy. Other fantasies were: T. F. Powys' *Kindness in a Corner*; Edith Olivier's *The Triumphant Footman*; William Gerhardt's *Pending Heaven*.

Detective stories sell when nothing else will. To mention only two: S. S. Van Dine's *The Scarab Murder Case*, and *The Door*, by Mary Roberts Rinehart. To select more from the many is impossible.

Other noteworthy novels were: Edna Ferber's *Cimarron*; Rex Stout's *Seed on the Wind*; Charles G. Norris's *Seed*; Mary Heaton Vorse's *Strike*; Booth Tarkington's *Mirthful Haven*; Sheila Kaye-Smith's *Shepherds in Sackcloth*; Warwick Deeping's *Exile*; H. W. Freeman's *Down in the Valley*; William Faulkner's *As I Lay Dying*; W. R. Burnett's *Iron Man*; Caradoc Evans' *Nothing to Pay*; Ludwig Lewisohn's *Stephen Escott*; Stephen Hudson's *A True Story*; Upton Sinclair's *Mountain City*; Helen Hull's *The Asking Price*.

Dorothy Parker's *Laments for the Living* was a collection of short, bitter stories. In *On Forsyte 'Change*, John Galsworthy made random notes about his perennial family. Roark Bradford's *Ol' King David and the Philistine Boys* was Negro dialect stories. Other volumes of short stories were: Walter de la Mare's *On the Edge*; Osbert Sitwell's *Dumb Animals*; John Erskine's *Cinderella's Daughter*; Richard Aldington's *Roads to Glory*, war material; Leonard Merrick's *The Little Dog Laughed*; Laura Benét's *Goods and Chattels*; Stark Young's *The Street of the Islands*; Julian Green's *Christine and Other Stories*, translated by Courtney Bruerton.

A few of the important translated novels were: Sigrid Undset's *The Son Avenger*, completing her *The Master of Hestviken*; Knut Hamsun's *Vagabonds*, by Eugene Gay-Tiffet; Maxim Gorki's *By-stander*; Marcel Proust's *The Sweet Cheat Gone*; Thomas Mann's *Mario and the Magician*, by H. T. Lowe-Porter; Michael Ossorgin's *Quiet Street*; Jaroslav Hasek's humorous war book, *Schweik*; Jean-Richard Block's —and Company, by C. K. Scott-Moncrief; Leonhard Frank's *Carl and Anna*; Irene Nemirovsky's *David Golder*; and Ivan Goncharov's *Oblomov*, by Natalie A. Dudington.

POETRY. John Masefield's first book since his laureateship was perhaps the most eagerly awaited poetry of the year. It was *The Wanderer*

of *Liverpool*, about a beautiful and unlucky sailing vessel. *The Collected Poems of Robert Frost* reminded of his preëminence among American poets. T. S. Eliot published a thin religious volume, *Ash Wednesday*. W. B. Yeats continued his musings from his tower in *The Winding Stair*. Richard Eberhart's *A Bravery of Earth*, about the poet's growth through adolescence to maturity, and Alan Porter's *A Signature of Pain and Other Poems*, were highly praised first volumes. Humbert Wolfe wrote satirical verse in *The Uncelestial City*. Hart Crane's *The Bridge* was representative of the cult of difficulty, almost unintelligibility, among some American poets. Edwin Arlington Robinson's *The Glory of the Nightingales* added little to his reputation. John Freeman's *Last Poems* were highly spoken of in England. *The Last Voyage*, by Alfred Noyes, was the third part of his epic, *The Torchbearers*.

Other important poetry included: Conrad Aiken's *John Deth and Other Poems*; *The Collected Poems of Edith Sitwell*; *The Gates of the Compass*, by Robert Hillier; *New Legends*, by Hervey Allen; *Poems (1914-1930)*, by Edmund Blunden; *Adamastor*, by Roy Campbell; *White April*, by Lizette Woodworth Reese; *Poems 1929*, by Robert Graves; *Fifty Poems*, by Lord Dunsany; *Macrocosmos*, by James Laver; *Hemlock Wall*, by Frances M. Frost; *The Wind in the Cedars*, by Glenn Ward Dresbach; *Year in, You're Out*, by Samuel Hoffenstein; *Lost Buffalo*, by Leonard Bacon; *Wild Apples*, by Oliver Gogarty; *Love and the Luxembourg*, by Richard Aldington. Chaucer's *Canterbury Tales* were translated into modern English verse by Frank Ernest Hill. Among the anthologies were: *Twentieth Century Poetry*, by John Drinkwater, Henry Seidel Canby, and William Rose Benét; *Twentieth Century Poetry*, by Harold Monro; *Lyric America*, by Alfred Kreymborg; and the amusing *The Stuffed Owl*, of bad verse, by D. B. Wyndham Lewis and Charles Lee, who selected only from the traditionally great.

DRAMA. No year which includes the publication of a play by Bernard Shaw is undistinguished. During 1930 his *The Apple Cart*, about international politics in the future, appeared, and Marc Connelly published *The Green Pastures*, his great play about the Negro's God. But the rest of the list of important plays is short, if not without interest. George Moore wrote a striking play about Jesus and Paul, *The Passing of the Essenes*. Two plays concerned literary figures: Susan Glaspell's *Alison's House*, based on the life of Emily Dickinson, and Rudolf Besier's *The Barretts of Wimpole Street*, about the family of Mrs. Browning. John Cournos published a translation of a hitherto unknown play of Chekhov's, *That Worthless Fellow Platonov*, which was left unfinished. Other plays were: Sir Arthur Pinero's *Two Plays*, including *Dr. Harmer's Holidays* and *Child Man*; S. N. Behrman's *Meteor*; R. C. Sheriff's *Badger's Green*; A. A. Milne's *Michael and Mary*; Noel Coward's *Private Lives*; Maxwell Anderson's *Elizabeth the Queen*; Philip Barry's *Hotel Universe*; George Shiels's *Two Irish Plays*; and V. Kirchon and A. Ouspensky's *Red Rust*, adapted by Virginia and Frank Vernon. A very fine collection was the third series of Thomas H. Dickinson's *Chief Contemporary Dramatists*. See also **THEATRE**.

ESSAYS. Under this classification the late Earl of Birkenhead (q.v.) distinguished himself with three books during the year: *The World in 2030*,

A. D., Turning Points in History, and *Last Essays*. Walter de la Mare published *Desert Islands*, all his own, and edited *The Eighteen-Eighties*. Would-be humor included *The Treasurer's Report and Other Aspects of Community Singing*, by Robert Benchley; *Through the Alimentary Canal with Gun and Camera*, by George S. Chappell; and *Whither, Whither, or After Sea, What?* edited by Slater Brown. Three more volumes, vii, viii, and ix, of *The Boswell Papers from Malahide Castle*, edited by Frederick A. Pottle, appeared. Miscellaneous books of essays were: Sir James G. Frazer's *Myths of the Origin of Fire*; Arnold Bennett's *Journal of Things New and Old*; William Bolitho's *Camera Obscura*; D. H. Lawrence's *Assorted Articles*; Arthur Ponsonby's *Casual Observations*; Sisley Huddleston's *Europe in Zig Zags*; Henry Williamson's *The Village Book*; Stephen Graham's *The Death of Yesterday*; G. K. Chesterton's *The Resurrection of Rome*; G. Lowes Dickinson's *After Two Thousand Years*; *I'll Take My Stand*, by Twelve Southerners, in favor of the Old South; and *An Anthology of American Negro Literature*, edited by V. F. Calverton.

CRITICISM AND LITERARY HISTORY. The year was notable for a literary controversy, centering around a movement calling itself "Humanism," whose pronouncement was issued in *Humanism and America*, edited by Norman Foerster, who also published *Towards Standards*, as a sort of footnote. The counterblast came in *A Critique of Humanism*, edited by C. Hartley Grattan. Critics and authors in profusion contributed to both volumes. In general, the humanists seemed to oppose naturalism and romanticism in literature, especially as exemplified in the critical and creative work done in America in the last decade. Their leaders were Paul Elmer More and Irving Babbitt, and the ably edited monthly, *The Bookman*, was enlisted in their cause. The anti-humanists were probably less well organized, but appeared quite able to take care of their end of the controversy.

Other important works of general criticism were: *A Plea for Liberty of Interpreting*, by Lancelles Abercrombie; *The Proving of Psychoe*, by Hugh L'Anson Fausset; *Indecency and the Seven Arts*, by H. M. Kallen; *Tradition and Experiment in Present Day Literature*, by various authors; *Literature and Occult Tradition*, by Denis Saurat.

Concerned with Shakespeare were: G. Wilson Knight's *The Wheel of Fire*, about his tragedies; Sir E. K. Chambers's *William Shakespeare*; Cumberland Clark's *Shakespeare and Science*; and Percy Allen's *The Case for Edward de Vere, 17th Earl of Oxford*, as "*Shakespeare*." This advanced the latest candidate of the anti-Shakespeareans.

About poets and poetry were: Herbert Reed's *Wordsworth*; Humbert Wolfe's *Tennyson*; C. H. O. Scaife's *The Poetry of Alfred Tennyson*; J. Middleton Murry's *Studies in Keats*; Carl Grabo's *A Newton among Poets*, about Shelley; George Williamson's *The Donne Tradition*; Charles Williams's *Poetry at Present*; G. F. Broadby's *About English Poetry*. About fiction and novelists: volumes iii and iv of *A History of the English Novel*, by Ernest A. Baker; *The Art and Practice of Historical Fiction*, by Alfred Tressider Shepard; *Five Masters*, by Joseph Wood Krutch; *Malory*, by Eugene Vinaver; *Some of Us*, by James Branch Cabell. Having to do with the drama: Max Beerholm's *Around Theatres*; Barrett H. Clark's *An Hour of American Drama*; Al-

lardyce Nicoll's *A History of Early 19th Century Drama*; John Mason Brown's *Upstage*; Walter Prichard Eaton's *The Drama in English*; Hamilton Fyfe's *Sir Arthur Pinero's Plays and Players*. J. B. Priestley wrote *English Humor*, and Louis Cazamian *The Development of English Humor*. Others were: Donald A. Stauffer's *English Biography before 1700*; Frank Luther Mott's *A History of American Magazines, 1741-1850*; and *Voices of October: Art and Literature in Soviet Russia*, by Joseph Freeman, Joshua Kunitz, and Louis Lozowick.

BIOGRAPHY AND AUTOBIOGRAPHY. A number of persons received the attentions of more than one biographer during 1930, which attests the popularity of the field. For instance, among American political figures, Jefferson Davis won three books: Allan Tate's *Jefferson Davis: His Rise and Fall*; Elizabeth Brown Cutting's *Jefferson Davis*; Robert W. Winston's *High Stakes and Hair Trigger: the Life of Jefferson Davis*. Three books concerned Taft and Roosevelt: *Taft and Roosevelt: the Intimate Letters of Archie Butt*; *William Howard Taft*, by Herbert S. Duffus; *Roosevelt: the Story of a Friendship*, by Owen Wister. Other American political personages dealt with were: *The Unknown Washington*, by John Corbin; *Rutherford B. Hayes*, by H. J. Eckenrode; *An Epoch and a Man: Martin Van Buren and His Times*, by Denis Tilden Lynch; *Lincoln*, by Emil Ludwig, translated by Eden and Cedar Paul; *The Adams Family*, by James Truslow Adams; *Daniel Webster*, by Claude Moore Fuess; *Thomas B. Reed*, by William A. Robinson; *Nelson W. Aldrich*, by Nathaniel Wright Stephenson; *Henry White*, by Allan Nevins; *Johnson of the Mohawks*, by Arthur Pound; and *Undiplomatic Memories: the Far East 1896-1904*, by William Franklin Sands.

Emily Dickinson, among American literary figures, was celebrated in two books: Genevieve Tuggard's *The Life and Mind of Emily Dickinson*, and Josephine Pollitt's *Emily Dickinson: the Human Background of Her Poetry*. About other literary Americans: *The Letters of Henry Adams*, edited by Worthington C. Ford; *Emerson, the Enraptured Yankee*, by Regis Michaud; *My Thirty Years' War*, by Margaret Anderson; *The Changing Years*, by Norman Hapgood.

Among other Americans, Mary Baker Eddy was the subject of two books: *According to the Flesh*, by Fleta Campbell Springer, and *Mary Baker Eddy*, by Lyman P. Powell, and Anne Hutchinson of three: *An American Jezebel*, by Helen Augur; *Unafraid*, by Winnifred King Rugg; and *Anne Hutchinson*, by Edith Curtis. These were also important American biographies: *Whistler*, by James Laver; *Whistler the Friend*, by Elizabeth Robins Pennell; *Charles W. Eliot*, by Henry James; *Dwight L. Moody*, by W. R. Moody; *Jeb Stuart*, by John W. Thomason, Jr.; *Morgan the Magnificent*, by John K. Winkler; *Audacious Audubon*, by Edward A. Muschamp; *Lone Cowboy*, by Will James; *American*, about a great Indian, by Frank B. Linderman.

Many important books were about English literary persons: Carl van Doren's *Swift*; Edith Sitwell's *Alexander Pope*; Edmund Blunden's *Leigh Hunt and His Circle*; John Drinkwater's *Pepys*; André Maurois's *Byron*, translated by Hamish Miles; Shelley's *Lost Letters to Harriet*, edited by Leslie Hotson; James R. Ullman's *Mad Shelley*; Dorothy Stuart's *Christina Rossetti*; J. Howard Whitehouse's *The Solitary Warrior*,

about Ruskin; Osbert Burdett's *The Two Carlyles*; Waldo H. Dunn's *Froude and Carlyle*; David Cecil's *The Stricken Deer*, about Cowper; Willard Connely's *Bracony Wycherley*; J. Lewis May's *Cardinal Newman* and *George Eliot*; Jean M. Carre's *The Frail Warrior*, about Robert Louis Stevenson; E. M. W. Tillyard's *Milton*; Stephen Gwynn's *The Life of Sir Walter Scott*; F. Dorothy Senior's *The Life and Times of Colley Cibber*; G. F. Lahey's *Gerard Manley Hopkins*; E. H. W. Meyerstein's *A Life of Thomas Chatterton*; Geoffrey West's *H. G. Wells*; Doris Arthur Jones's *Taking the Curtain Call*, about Henry Arthur Jones; and autobiographies by Liam O'Flaherty, *Two Years*, and by Robert Graves, *But It Still Goes On*.

Outstanding among works concerned with British political figures was Winston S. Churchill's *A Roving Commission*, autobiography. Others were: the unfinished autobiography of Lord Balfour, *Retrospect*; third series volume i of *Letters of Queen Victoria*, edited by George Earle Buckle; *Wolsky*, by Hilaire Belloc; *The Portrait of a Diplomatist, Sir Arthur Nicolson, Bart.*, by Harold Nicolson; *Laud*, by Robert P. Tristram Coffin; *Lord Melbourne*, by Bertram Newman; *A Life of John Wilkes*, by O. A. Sherrard; *The Making of William Penn*, by Mabel R. Brailsford; and *Mary Gladstone, Her Diaries and Letters*, edited by Lucy Masterman. A fascinating autobiography was *The Lives of a Bengal Lancer*, by Francis Yeats-Brown. Hamilton Fyfe's *Northcliffe*, and Gordon Craig's *Henry Irving* should also be mentioned.

Interesting narratives of war experience were: Siegfried Sassoon's *Memoirs of an Infantry Officer*; Gen. F. P. Crozier's *A Brass Hat in No Man's Land*; Gen. J. E. B. Seely's *Adventure*. E. F. Benson's *As We Were: A Victorian Peep-show*, was entertaining, as was Gamaliel Bradford's *Daughters of Eve*. Volumes iv and v of *The Dictionary of American Biography*, edited by Allen Johnson and Dumas Malone, were published during the year.

About people who did not speak English: Georges Clémenceau's autobiography, *Grandeur and Misery of Victory*; *Clémenceau*, by Jean Martet, translated by M. Waldman; *The Tiger*, by George Adam; *Pauline Bonaparte*, by W. N. C. Carlton; *My Life*, by Leon Trotsky; *Joseph Fouché*, by Stefan Zweig; *Simon Bolívar*, by Hildegard Angell; *Memoirs of General Wrangel*, translated by Sophie Goulston; *Makers of Modern Europe*, by Carlo Sforza; *Private Letters, Pagan and Christian*, edited by Dorothy Brooke; *Baudelaire*, by Lewis Piaget Shanks; *Balzac, the Man and the Lover*, by Francis Gribble; *Eroica*, about Beethoven, by Samuel Chotzinoff; *R. v. R.*, about Rembrandt, by Hendrick Willem van Loon; *Molière*, by John Palmer; *Larson, Duke of Mongolia*, by F. A. Larson; *José Antonio Páez*, by R. B. Cunninghame-Graham; *Mahatma Gandhi: His Own Story*, edited by C. F. Andrews; *The Life of Miranda*, by William Spence Robertson.

THE FINE ARTS. Books about painting again provided the bulk of the important work in this field, as: Royal Cortissoz's *The Painter's Craft*; Samuel Kootz's *Modern American Painters*; S. C. Kaines Smith's *An Outline History of Painting in Europe*; Edward Allen Jewell's *Americans*; Murdock Pemberton's *Picture Book*; Chandler Rathfon Post's *Early Spanish Painting*; Arthur Symons's *From Toulouse-Lautrec to Rodin*; Frank Rutter's *El Greco*; Henry McBride's *Matisse*;

Roger Fry's *Henri Matisse*; Sir Joseph Duveen's *Thirty Years of British Art*; Curt H. Weigelt's *Sieneese Painting of the Trecento*. Sculpture was considered in Stanley Casson's *Twentieth Century Sculptors*; Gisela M. A. Richter's *The Sculpture and Sculptors of the Greeks*; *Modelling and Sculpture*, by F. J. Glass; and *Modern Architectural Sculpture*, edited by W. Aumonier.

With *The Fair-Haired Victory*, Sacheverell Sitwell completed his trilogy of the Gothic Revival; and Elie Faure's *The Spirit of the Forms*, translated by Walter Pach, brought his history of art to date. Three interesting books on æsthetics were: D. W. Prall's *Æsthetic Judgment*; Helen Huss Parkhurst's *Beauty*; and Philip McMahon's *The Meaning of Art*. Osvald Siren published *A History of Early Chinese Art*, and William Cohn, *Chinese Art*. There were in addition: Sheldon Cheney's *The New World Architecture*; and Edward Gordon Craig's *Woodcuts and Some Words*.

In this place may be mentioned the vogue for stories told in pictures, usually woodcuts. Such books were: *Madman's Drum*, by Lynd Ward; *He Done Her Wrong*, by Milt Gross; *Allay-Oop*, by William Gropper; and *The Life of Christ in Woodcuts*, by James Reid.

RELIGION. John Crowe Ransom, usually a poet, ventured into theology with *God without Thunder*, a plea for the God of the Old Testament. William Adams Brown tried to answer philosophic doubters with *Pathways to Certainty*. In *Treatise on the Gods*, by H. L. Mencken, and *The Pathetic Fallacy*, by Llewellyn Powys, Christianity was vigorously attacked. Selden Peabody Delaney wrote of his conversion in *Why Rome?* and William Barry advocated the Roman position in *The Coming Age and the Catholic Faith*. *Pioneers of Christian Thought*, by Frederick D. Kerschner, was a collection of biographical essays. Dean W. R. Inge published *Christian Ethics and Modern Problems*, and contributed to *What is the Real Hell?* by various authors.

Other religious books were: Woodbridge Riley's *The Meaning of Mysticism*; Charles Gore's *The Philosophy of the Good Life*; C. E. M. Joad's *The Present and Future of Religion*; Frank Morison's *Who Moved the Stone?*; Nathaniel Schmidt's *The Coming Religion*; Benjamin Wisner Bacon's *Jesus, the Son of God*; Edgar S. Brightman's *The Problem of God*; James Moffatt's *Love in the New Testament*; J. W. C. Wand's *A History of the Modern Church*; Herbert M. Foston's *Man and the Image of God*; Leonard Hodgson's *Essays in Christian Philosophy*; Thomas Cuming Hall's *The Religious Background of American Culture*; C. Luther Fry's *The United States Looks at Its Churches*.

SOCIOLOGY. Protest against present social tendencies, especially in America, was exhibited in *The American Public Mind*, by Peter Odegard; *This Land of Liberty*, by Ernest Sutherland Bates; *Portrait of the Artist as American*, by Matthew Josephson; *King Mob*, by "Frank K. Notch"; *Goodbye to Western Culture*, by Norman Douglas; and censorship as a means of social control was particularly attacked in *Mrs. Grundy*, by Leo Markun, and *Censored: The Private Life of the Movies*, by Morris Ernst and Paré Lorentz. But *Toward Civilization*, edited by Charles A. Beard, and *What's Right with America*, by Sisley Huddleston, were quite optimistic. The impact of machinery was discussed in Silas Bent's *Machine-Made Man*, and in H. Dubreuil's *Robots or Men?*, translated by Frances and Mason Merrill.

Two significant general works were *The Meaning of Culture*, by John Cowper Powys, and *Culture and Progress*, by Wilson D. Wallis. Love, marriage, and women received attention in Floyd Dell's *Love in the Machine Age*; John Macy's *About Women*; Phyllis Blanchard and Carlyn Manasses's *New Girls for Old*; *Marriage*, by 24 authors; and F. Muller-Lyer's *The Evolution of Modern Marriage*, translated by Isabella C. Wigglesworth. Some local sociological studies were Charles W. Wood's *The Passing of Normalcy*, about Marion, Ohio; Robert Redfield's *Tepoztlán, a Mexican Village*; and Margaret Mead's *Growing Up in New Guinea*. Charles S. Johnson published *The Negro in American Civilization*, and James Weldon Johnson, *Black Manhattan*. Other important works were: Jerome Frank's *Law and the Modern Mind*; Bertrand Russell's *The Conquest of Happiness*; and Graham Taylor's *Pioneering on Social Frontiers*.

EDUCATION. A highly-charged controversial work in this field was *Universities: European and American*, by Abraham Flexner, which made contrasts distinctly unfavorable to even the best established American institutions. C. C. Little advocated reforms in *The Awakening College*. Other works on the subject were: *The Marks of an Educated Man*, by Albert Edward Wiggam; *Life in College*, by Christian Gauss; *The American Road to Culture*, by George S. Counts; *The New Generation*, by V. F. Calverton and Samuel D. Schmalhausen; *The Modern Parent*, by Garry Cleveland Myers; *The New Education in Europe*, by Frederick William Roman; *The Great Investment: Secondary Education in a Democracy*, by Thomas H. Briggs; and *The Development of Harvard University*, by Samuel Eliot Morison.

POLITICS AND INTERNATIONAL RELATIONS. The year was remarkable for the number of books about India. A few were: *India and the Simon Report*, by Charles F. Andrews; *Voiceless India*, by Gertrude Emerson; *Reconstructing India*, by Edward Thompson; *The Case for India*, by Will Durant. There were several important general books, such as: Harold J. Laski's *Liberty in the Modern State*; Everett Dean Martin's *Liberty*; Herbert Adams Gibbons's *Nationalism and Internationalism*; Harry Elmer Barnes's *World Politics in Modern Civilization*; Oscar Newfang's *The United States of the World*. American relations with Great Britain were realistically treated in *America and England*, by Nicholas Roosevelt, and *America Conquers Britain*, by Ludwell Denny.

Important books about American politics were: *The American Leviathan*, by Charles A. and William Beard; *The Giant of the Western World*, by Francis P. Muller and Helen Hill; and *Chicago Surrenders*, by Edward Dean Sullivan.

Dealing with war: Ramsay Muir's *The Political Consequences of the Great War*; Maurice R. Davie's *The Evolution of War*; George Sylvester Viereck's *Spreading Germs of Hate*, about propaganda. Others were: *China*, by Nathaniel Peffer; *Tortured China*, by Hallett Abend; *The Soviets in World Affairs*, by Louis Fischer; *Soviet Russia*, by William Henry Chamberlin; *The Little Entente*, by Robert Machray; *Spain*, by Salvador de Madariaga; *Uniting Europe*, by William E. Rappard; *England*, by Wilhelm Dibelius, translated by Mary Agnes Hamilton; *Turkey Faces West*, by Halid Edib; *Look to the East*, by Frederick Palmer; and *France, A Nation of Patriots*, by Prof. Carleton J. H. Hayes of Columbia.

ECONOMICS. One of the most important books of the year was Paul M. Warburg's *The Federal Reserve System*, a large and careful work. The depression probably accounted for such studies as Irving Fisher's *The Stock Market Crash and After*; *The Menace of Overproduction*, edited by Scoville Hamlin; *The World's Economic Dilemma*, by Ernest Minor Patterson; *Some Folks Won't Work*, by Clinch Calkins; *King Cotton is Sick*, by Claudius T. Murchison, J. M. Keynes's *A Treatise on Money* added to his already great reputation. Other noteworthy works were: Norman Angell's *The Story of Money*; Hartley Withers's *Money*; Francis Whitmore's *The Money Machine*; G. D. H. Cole's *Gold, Credit, and Employment*; Evans Clark's *Financing the Consumer*; Harry F. Ward's *Our Economic Morality*; A. W. Lake's *Trends in the Foreign Trade of the United States*; A. L. Bowley's *Some Economic Consequences of the Great War*; Grover G. Huebner's *Foreign Trade*; *A Philosophy of Production*, edited by J. G. Frederick; and *Europe the World's Banker, 1870-1914*, by Herbert Feis.

HISTORY. Publications in American history were particularly distinguished during 1930, including such works as Samuel Eliot Morison and Henry Steele Commager's *Growth of the American Republic*; Vernon L. Parrington's *The Beginnings of Critical Realism in American*; the completion of the illustrated history *The Pageant of America*, edited by Ralph H. Gabriel, with his own *The Lure of the Frontier*; O. S. Coad and Edwin Mims's *The American Stage*, and John A. Krout's *Annals of American Sport*; Mark Sullivan's *Pre-War America*, volume iii of *Our Times*; Preston W. Slosson's *The Great Crusade and After*, about the post-war period; Robert E. Riegel's *America Moves West*; George Fort Milton's *The Age of Hate*; Andrew Johnson and the Radicals; and Howard K. Beale's *The Critical Year*, which was 1866.

The outstanding work in English history was perhaps George Macaulay Trevelyan's first volume of *The Age of Queen Anne, Blenheim*. There were also published in this field: *The Seventeenth Century*, by G. N. Clark; *England in the Age of the American Revolution*, by L. B. Namier; *The American Revolution and the British Empire*, by R. Coupland; *Those Earnest Victorians*, by Esmé Wingfield-Stratford; *The Age of the Chartists, 1832-1854*, by J. L. and Barbara Hammond; and *The Voyages of the Cabots*, by James A. Williamson. Volume vi of *The Cambridge History of the British Empire, Canada and Newfoundland*, edited by J. H. Rose, A. P. Newton, and E. A. Benians; *A Short History of Scotland*, by George Malcolm Thomson; and *Australia*, by W. K. Hancock, were also important.

Two histories of "culture" were: volume i of Preserved Smith's *A History of Modern Culture*; and Egon Friedell's *A Cultural History of the Modern Age*. Concerning ancient history: volume viii of *The Cambridge Ancient History, Rome and the Mediterranean, 218-133 B. C.*, edited by S. F. Cook, F. E. Adcock, and M. P. Charlesworth; John Garstang's *The Hittite Empire*; V. G. Childs's *The Bronze Age*; G. Elliott Smith's *Human History*. Of medieval history: volume vi of *The Cambridge Medieval History, The Victory of the Papacy*, edited by J. R. Tanner, C. W. Previté-Orton, and Z. N. Brooke; Harold Lamb's *The Crusades: Iron Men and Saints*; Alexander Clarence Flick's *The Decline*

of the Medieval Church. About the World War: volume vi of *British Documents on the Origin of the War*, edited by G. P. Gooch and Harold Temperley; and *The Coming of the War*, by Bernadotte E. Schmitt. Other noteworthy histories were: Charles Guignebert's *A Short History of the French People*; J. Swire's *Albania*; and René Fülöp-Miller's *The Power and Secret of the Jesuits*, translated by F. S. Flint and D. F. Tait.

SCIENCE. There was much interesting activity manifested in popular science. Sir James Jeans again captured sales and acclaim with his astronomical work, *The Mysterious Universe*. Geoffrey Dennis published an impressive summary of the prophecies of science and religion, *The End of the World*. Harlow Shapley's *Flights from Chaos*, and Harlan True Stetson's *Man and the Stars* were also astronomical. The palm for quantity of important books probably goes to the biologists, however, with such works as: H. S. Jennings's *The Biological Basis of Human Nature*, about genetics; J. H. Woodger's *Biological Principles*; R. A. Fisher's *The Genetical Theory of Natural Selection*; Joseph Needham's *The Sceptical Biologist*; Frederick Tilney's *The Master of Destiny*, about the brain; Sir Richard Paget's *Human Speech*; Frank M. Chapman's *My Tropical Air Castle*; John Langdon-Davies's *Man and His Universe*; John Hodgdon Bradley, Jr.'s *Parade of the Living*; T. R. Parsons's *The Materials of Life*; Robert Briffault's *Rational Evolution*; Herbert F. Standing's *Spirit in Evolution: From Amœba to Saint*; Austin H. Clark's *The New Evolution*; Julian M. Drachman's *Studies in the Literature of Natural Science*; and Maurice Maeterlinck's *The Life of the Ant*.

Jonathan Norton Leonard, in *Crusaders of Chemistry*, and Bernard Jaffe, in *Crucibles*, wrote biographies of chemists. In *Stalkers of Pestilence*, Wade W. Oliver did likewise for physicians. E. N. da C. Andrade's *The Mechanism of Nature* and G. P. Thomson's *The Atom* were concerned with physics. *Sons of the Earth*, by Kirtley F. Mather, was about geology; *Number: the Language of Science*, by Tobias Dantzig, was about mathematics. A well done history of science was Benjamin Ginzburg's *The Adventure of Science*.

TRAVEL AND THE OUT-OF-DOORS. Polar exploration was a quite popular subject during 1930. Admiral Richard E. Byrd's *Little America* sold extremely well; *Andrée's Story*, told in the diaries of his expedition and translated by Edward Adams-Ray, was impressive; and Griffith Taylor wrote *Antarctic Adventures and Research*. Rockwell Kent's *N. by E.* was about a voyage to Greenland and adventures there. A. J. Villiers wrote of a voyage in a sailing vessel *By Way of Cape Horn*; Evelyn Waugh made much of a tour to the Mediterranean in *Labels*; William Morris Barnes showed himself the old sea-dog in *When Ships Were Ships and Not Tin Pots*. Walter B. Hayward's *The Last Continent of Adventure* was again about the Antarctic; Gifford Pinchot took his way *To the South Seas*; William J. W. Roome went *Tramping through Africa*. Hickman Powell thought the island of Bali *The Last Paradise*; W. Somerset Maugham wrote of Burma in *The Gentleman in the Parlour*. Henri de Monfried's *Pearls, Arms, and Hashish*, as told to Ida Treat, is exciting stuff about an extraordinary smuggler. *Bring 'Em Back Alive*, by Frank Buck and Edward An-

thony, concerns wild game hunting for circuses and zoölogical collections. Frank H. Shaw's *Full Fathom Five* is about shipwrecks.

Louis Untermeyer published *Blue Rhine-Black Forest*; Constance Bridges, *Thin Air: a Himalayan Interlude*; Fred Puleston, *African Drums*; Gretchen Cron, *The Roaring Veldt*; K. G. Grubb, *Amazon and Andes*; Sidney de la Rue, *The Land of the Pepper Bird*; H. V. Morton, *In Search of Scotland*; Murio Praz, *Unromantic Spain*.

Aviation was written about in John Goldstrom's *A Narrative History of Aviation*, and Sir Alan Cobham's *Twenty Thousand Miles in a Flying Boat*. W. S. Cobham wrote of trees he had met in *Giants of the Forest*. Capt. Jack Randell told of his rise and fall of fortunes in *I'm Alone*, the name of his rum-running ship. G. M. Dyott's *Man Hunting in the Jungle* told of a search for a lost explorer up the remoter reaches of the Amazon.

Sport was the subject of: *The America's Cup*, by Nigel Lindsay; *The America's Cup Races*, by Herbert L. Stone; and *Lawn Tennis: Its Principles and Practice*, by A. Wallis Myers. See PHILOLOGY, MODERN.

LITHUANIA, lith'ü-ä'ní-ä. A Baltic republic established Feb. 16, 1918, from territories of the former Russian Empire; bounded by Latvia on the north, Poland on the east, and Poland and East Prussia on the south and southwest. Capital, Kovno, although Vilna, which was transferred to Poland by the Council of Ambassadors in 1923, was still claimed by the Lithuanians in 1930 as their capital.

AREA AND POPULATION. Poland retains possession of approximately 10,000 square miles of territory claimed by Lithuania. The actual area under Lithuanian sovereignty in 1930 was 21,490 square miles, and the population on Jan. 1, 1930, was 2,340,038, as compared with 2,316,615 on Jan. 1, 1929. The birth rate per 1000 of population in 1929 was 27.2 and the death rate, 17. The chief cities are Kovno (Kaunas), 96,535; Memel (Klaipeda), 36,633; and Shavli (Siauliai), 22,560.

EDUCATION. At the census of 1923, 35.9 per cent of all males and 38.8 per cent of all females over five years were illiterate. In 1929, there were 2657 primary schools, with 160,678 pupils; 123 secondary schools, with 22,752 pupils; 13 teachers' training colleges, with 1700 students; and 15 vocational institutions, with 1811 students. The University of Kovno had 4032 students.

PRODUCTION. Lithuania is predominantly rural in its economy, with agriculture and lumbering as the chief support of the population. Of the total area in 1928, 47.4 per cent was under cultivation, 25.3 per cent was permanent grass land, 15.9 per cent wood and forest, and 11.4 per cent other land. Production of the cereal crops in 1929, with figures for 1928 in parentheses, was (in quintals of 220.46 pounds): Wheat, 2,400,000 (1,722,000); rye, 5,575,000 (4,754,500); barley, 2,602,000 (1,504,500); oats, 4,366,000 (2,667,400). Other farm products in 1929, in metric tons, were potatoes, 1,220,000; peas, 101,585; flax fibre, 34,600 (33,980 in 1928). Cattle and dairy farming are extensively practiced. Livestock in 1929 consisted of 1,160,100 cattle, 1,125,300 sheep, 973,300 swine, and 588,300 horses, all except cattle being fewer in number than in the previous year. Mineral resources are insignificant.

About 67,000 tons of peat were produced in 1928.

COMMERCE. Lithuanian foreign trade in 1929 continued its rapid expansion and due largely to the German market for foodstuffs opened by the Lithuanian-German trade agreement ended the year with a favorable balance of 23,400,000 lits (1 lit or litas equals \$0.10 at par). Exports amounted to 329,800,000 lits (256,900,000 in 1928) and imports to 306,400,000 lits (291,100,000). The chief exports in 1929 were: Wood products, 47,000,000 lits; wood pulp, 38,400,000 lits; butter, 31,400,000 lits; swine, 28,600,000 lits; meat, 17,100,000 lits; cattle, 14,500,000 lits. Leading imports: Cotton tissues, 23,500,000 lits; fertilizers, 15,500,000 lits; sugar, 14,300,000 lits; woolen tissues, 14,200,000 lits; and coal, 12,600,000 lits.

Germany took 59 per cent of Lithuanian exports in 1929, the United Kingdom, 17 per cent; Latvia, 9 per cent, and the Netherlands, 3 per cent. Of the imports, 49 per cent came from Germany, 9 per cent from the United Kingdom, 6 per cent from Czechoslovakia, and 5 per cent from the United States.

FINANCE. Budget estimates for 1930 anticipated that total revenues and expenditures would balance at 320,000,000 lits. Ordinary revenue was estimated at 275,000,000 lits, of which 35,000,000 lits was anticipated from direct and 71,000,000 lits from indirect taxation. Actual returns for 1929 showed revenues of 320,000,000 lits and expenditures of 280,000,000, leaving a surplus of about 40,000,000 lits. The accumulated surplus was reported as 68,889,710 lits. The total public debt on June 1, 1929, stood at 86,261,575 lits, including \$6,271,674 owing to the United States government, \$1,848,150 to Lithuanians in the United States, and £90,000 to the British government.

COMMUNICATIONS. At the beginning of 1929, there were 1043 miles of state-owned railway lines, including 737 miles of broad gauge. Highways totaled 25,461 miles and navigable waterways, 1606 miles, including 301 miles navigable for steamboats.

GOVERNMENT. According to the constitution as amended May 26, 1928, executive power is vested in the President of the Republic, elected for seven years, who acts through a responsible ministry; and legislative power is in a diet elected for five years by universal, equal, direct, and secret suffrage. President in 1930, Antanas Smetona; Prime Minister and Minister of Finance, Juozas Tubelis.

HISTORY. A continuance of friction with Poland over the disputed Vilna territory, and the settlement of the Memel question by agreement with Germany, were outstanding features of Lithuanian history during 1930. The internal disturbances characteristic of the country during preceding years continued also, the government of Premier Tubelis exhibiting the same repressive tendencies as had the deposed dictator, Augustinas Valdemaras.

The dispute with Germany involved German protests at the administration of Memel and claims for approximately 64,000,000 German marks as compensation for losses sustained in connection with the transfer of the Memel territory to Lithuania in 1923. It was announced January 9 that Lithuania had rejected the demands for compensation on the ground that the serious economic losses suffered by the country during the World War absolved it of any obliga-

tion with regard to German losses. An agreement reached between the Foreign Ministers of Lithuania and Germany at Geneva in September provided for the termination of the censorship within the Memel territory, the replacement by Memel citizens of two Lithuanian members of the Memel directorate, and the holding of elections by the electoral committee. Criticism of the agreement in the Lithuanian Parliament led Foreign Minister Zaunius to present his resignation on October 8. The German government immediately filed a protest at Geneva against Lithuania's failure to carry out the compact. Later it was reported that President Smetona had refused to accept the Foreign Minister's resignation and that the agreement would be carried out.

In a statement on March 17, Foreign Minister Zaunius reiterated Lithuania's determination not to compromise with Poland with regard to Vilna. Expressing dissatisfaction with the Vasconcelos report upon the organization of transit traffic on the Vilna, Memel, Königsberg, and Libau railway lines, he revealed that Lithuania's failure to send representatives to the meeting of the League of Nations' Commission on Communications, before which the report was presented, was due to opposition to Poland. The Lithuanian government on May 22 demanded an inquiry by the Council of the League into the dispersal of a meeting of Lithuanians in the disputed territory by Polish troops, in which one Lithuanian was mortally wounded. The Polish government contended that the Council had no jurisdiction as the question was "not an international affair."

Professor Valdemaras, the former dictator and Premier, was indicted on a charge of high treason May 24 after he had charged the government with violations of the Constitution. The Nationalist Union, in which he was a leading figure along with President Smetona and Premier Tubelis, at the same time read him out of the party. On July 25, Valdemaras was banished to the governmental farm at Kroettingen, where he was reported to have attempted unsuccessfully to escape a few days later. The government also took steps to break up a militarist organization of his adherents, known as the "Iron Wolves," which was considered a menace to public order. Election promises of Premier Tubelis to restore constitutional government remained unfulfilled late in 1930. The Liberal European press reported that prisons and concentration camps were still filled with Socialists, Communists, and other opponents of the government. The imposition of the death sentence upon two Communists by the Kovno Military Court resulted in disorders on January 14, and numerous arrests.

LITTLE AMERICA. See POLAR RESEARCH.

LITTLE ENTENTE. An ostensibly defensive alliance, entered into first in 1920 by Czechoslovakia, Yugoslavia, and Rumania, aimed at the maintenance of the *status quo* in central Europe as established by the Treaties of Versailles, St. Germain, and Trianon. Originally all three countries were aligned with France. Occasionally their policies were supported by Poland. Following the development of Franco-Italian tension in 1930, however, there were indications that Rumania was being drawn toward Italy. At the eleventh annual conference of Little Entente Foreign Ministers, held at Strbske Pleso, Czechoslovakia, June 25-27, 1930, Foreign Minister Mironescu of Rumania stressed his country's

friendship for Italy. Besides the Franco-Italian rivalry, questions discussed included plans to prevent the threatened return to the Hungarian throne of Archduke Otto, the application of The Hague and Paris reparation agreements, the development of closer economic coöperation, and land reform. A commercial treaty, providing for a special customs arrangement, was signed between Czechoslovakia and Rumania June 27. The Little Entente accepted in principle the Briand memorandum for a European union, but agreed that each member state should answer it separately. The Little Entente treaties were renewed in 1929. See separate articles on Little Entente states and AUSTRIA, under *History*.

LITTLE THEATRE TOURNAMENT. See THEATRE.

LIVER TREATMENT. See MEDICINE, PROGRESS IN, under *Pernicious Anæmia*.

LIVESTOCK. Several situations in 1930 resulted adversely for the livestock industry. The chief difficulty was a weakened demand for livestock products with an accompanying reduction in prices, to which the general industrial depression contributed. The situation was complicated by the most serious and widespread drought that had occurred since 1901. Not only was the corn crop materially reduced and pastures seriously depleted, but fall seeding was handicapped. The shortage of water was acute in many areas.

The prices of meat animals declined so that in August they were estimated as but 119 per cent of the prewar level. If business activity had remained at the 1929 level the Secretary of Agriculture estimated that livestock producers should have received more than \$500,000,000 more for their products than were actually received during 1930. This estimate was based on the numbers of the different classes of livestock marketed.

The numbers of cattle, calves, hogs, and mutton slaughtered under Federal Inspection in the United States during the first nine months of 1929 and 1930 indicates the changes in the relative slaughtering of meat animals. It is apparent that mutton slaughtered was considerably increased in 1930 and the slaughter of hogs decreased while cattle and calves did not change greatly from 1929.

Data on the amount of feed available for livestock during the winter of 1930-31 indicated that the supplies of feed grains per animal unit were 83 per cent of the five-year average and of hay 89 per cent of the five-year average. The increase of about 3 per cent in the number of cattle on farms at the close of the year was considered to be more than offset by a smaller number of hogs, horses, and mules. Lack of fall pastures necessitated early fall feeding in sections where the shortage of feed was most acute.

Sheep producers were in greater distress than any other branch of the meat industry. In five years the number of sheep had increased 11,000,000 head and there was a lamb crop of 2,000,000 head in 1930. Efforts to stimulate consumption of mutton were somewhat successful in that lamb consumption was increased by more than one pound per capita, but the price was lower than had occurred in many years. Retail prices for leg of lamb averaged about 30 cents. Some adjustment appeared necessary in the sheep industry in order that satisfactory prices might be expected. See WOOL.

Cattle numbers at the beginning of the year were reduced almost to the low point reached in

MEAT SLAUGHTERED AND STORED UNDER FEDERAL INSPECTION IN THE UNITED STATES IN 1930, WITH COMPARISONS

| 1929—lbs. | 103,883,000 ^d | | 703,084,000 ^e | 5,317,000 |
| 3-year average—lbs. | 93,248,000 ^f | | 678,874,000 ^g | 5,116,000 |

* Average for 1927, 1928, and 1929.

^b 55,879,000 lbs. fresh, and 20,182,000 lbs. cured beef.

^c 124,788,000 lbs. fresh, 398,529,000 lbs. cured pork, and 51,064,000 lbs. lard.

^d 77,230,000 lbs. fresh, and 26,653,000 lbs. cured beef.

^e 145,078,000 lbs. fresh, 475,908,000 lbs. cured pork, and 82,098,000 lbs. lard.

^f 69,750,000 lbs. fresh, and 23,498,000 lbs. cured beef.

^g 134,181,000 lbs. fresh, and 470,636,000 lbs. cured pork, and 74,057,000 lbs. lard.

1929 and consequently from the supply standpoint the cattle industry was in a strong position, although prices continued low. It is also of interest that beef production fell off about 12 per cent in 1930 in Argentina. The census for 1930 showed that there were 31,974,000 cattle in Argentina and the average carcass weights were light on account of the scarcity of pasture during the early months of 1930.

The situation of pork producers is dependent to a considerable extent upon foreign markets for the disposal of surplus pork products, especially lard. Hog slaughter was reduced about 10 per cent in 1930 but conditions in foreign markets were relatively unfavorable. Reports from the important foreign pork-producing countries indicated a continued increase in hog numbers, with 22 per cent more hogs due to farrow in the fall of 1930 than in 1929. Hog numbers in Germany, Denmark, Irish Free State, United Kingdom, and the Netherlands were estimated on farms at about 34,000,000 head. The estimated number in the United States was 52,323,000. The storage supplies of pork in the United States in 1930 were much below those of 1929.

It is of interest to compare the principal exports of pork and lard from the United States as influenced by the growing foreign competition. Lard, the export product of most importance, dropped to 642,486,396 pounds during 1930 as compared with 829,328,487 pounds in 1929. There was a reduction of 103,085,838 pounds in the export of lard to Germany, but only a very small reduction in the amount sent to the United Kingdom. There were also decreases in the exports of other pork products in 1930 as compared with 1929, as follows: Cured hams and shoulders, 120,098,575 pounds in 1930 and 125,796,826 pounds in 1929; bacon, 89,173,074 pounds in 1930 and 138,423,370 pounds in 1929; and Cumberland and Wiltshire sides, 7,639,211 pounds in 1930 and 10,879,488 pounds in 1929. Exports of fresh pork increased from 13,539,070 pounds in 1929 to 17,573,008 pounds in 1930.

The marketing of poultry and eggs suffered from the general price decline and to some extent from over production. With the low prices storage of eggs increased so that by August supplies of eggs in storage were the largest on record. A heavy consumption of poultry resulted from the low prices. Toward the close of the year poultry was banned by the Jewish trade as a kosher food in Chicago and in other large cities on account of "racketeering" among the shoctim. The

consequences of this action to the industry were uncertain.

The Tariff Act of 1930 included substantial increases in the duty on cattle, sheep, swine meats, and meat products, and eggs and egg products, which tended to prevent importation of these products unless the domestic market was in a much better financial position than it was at the close of 1930.

The Federal Farm Board assisted in the organization and functioning of the National Livestock Marketing Association which was incorporated on May 10, 1930, by existing coöperative associations. The operations of the National Livestock Marketing Association are national in scope and include not only the marketing of finished cattle but also the marketing and purchase of feeder stock and the purchase of feeds as well as the extension of credit for livestock operations. See AGRICULTURE.

TRENDS IN RESEARCH. Research continued principally along the lines of feeding, management, breeding, and nutrition. Investigations in feeding and nutrition were most numerous on account of the difficulties arising in attempts to study management problems and the tremendous expense and long duration of thoroughgoing breeding investigations. In the nutrition field primary interest continued in the study of the vitamin content of feeds and the study of the value of minerals. Of much practical interest to poultry feeders was the finding at the Cornell Agricultural Experiment Station that the potency of vitamin D, the antirachitic vitamin, decreased with age when cod liver oil, a potent source of this vitamin, was mixed with mash.

The value of different minerals in the animal body was not fully understood. In studies at the Illinois Agricultural Experiment Station, the equivalent of one grain of elemental iodine fed daily to young pigs did not modify the rate of growth or nitrogen or phosphorous utilization. On the other hand, iodine feeding in conjunction with desiccated thyroid at the West Virginia Agricultural Experiment Station tended to increase the metabolic rate and calves fed iodized milk at the Ohio Agricultural Experiment Station grew more rapidly and were in a better physical condition than those receiving milk not so treated. Iron and copper products were tested in attempts to prevent anemia in pigs with somewhat variable results. At the Illinois Agricultural Experiment Station the administration of ferric citrate increased the count of red corpuscles

in the blood of pigs, but iron and copper salts had no effect on the hemoglobin content of the blood of chicks. See **FOOD AND NUTRITION**.

The Texas Agricultural Experiment Station demonstrated the dependence of range cattle on weather and pasture conditions as regards their increase in body weight. Cattle on the range increased rapidly in weight during the spring, but slowed down from late summer to early winter and lost weight from mid-January to early March. Body measurements which were affected by the degree of fatness followed the same general trend but measurements of the long bones and head increased at about the normal rate regardless of weather and pasture conditions. There were indications that growth was retarded in parts of the body during periods of scanty feed but without permanent stunting. A study of growth in beef cattle on restricted rations at the Missouri Agricultural Experiment Station indicated that the length of the growth period of normal beef steers was about six years but that it could be prolonged to about nine years by undernourishment. Severe undernutrition during the first three years reduced the mature size but did not result in abnormalities in form.

Studies of the influence of a low plane of nutrition and early breeding on swine at the Missouri Agricultural Experiment Station indicated that neither of these conditions inhibited skeletal growth but a low plane of nutrition increased the age at which sexual maturity was reached and reduced the birth weight of the pigs. Investigations of the U. S. Department of Agriculture showed that by careful selection and feeding it was possible to produce suitable Wiltshire sides for the English bacon market from American breeds.

In studies of the time of breeding ewe lambs at the North Dakota and British Columbia Agricultural Experiment Stations it was found that ewes bred to lamb at about one year of age raised satisfactory lamb crops. While the early bred lambs were not quite as heavy, nor did not produce quite as much wool as their unbred mates, the production of the lambs more than compensated for the difference and the early bred lambs were not permanently handicapped. The U. S. Department of Agriculture in cooperation with Purdue University showed that pasture was exceptionally valuable as a feed for lambs and that lambs could be well finished on good pasture without the use of expensive grains.

A growing interest was exhibited in the study of the factors concerned with the physiology of reproduction in domestic animals. The indication of the rôle in reproduction of the anterior lobe of the pituitary body, a small ductless gland, stimulated research along this line. Investigations at the California and Missouri Agricultural Experiment Stations indicated a close relationship between the secretions of the pituitary and the cyclic behavior of the ovary in female animals.

The Inter-American Conference on Agriculture, Forestry and Animal Industry held in Washington, D. C., from September 8 to 20 did much to promote good will among investigators in North and South America. Several days of the programme were devoted to the presentation of papers by outstanding investigators and administrators of livestock research and allied subjects in the different countries of the New World.

The Fourth World Poultry Congress held July

22 to 30 at the Crystal Palace, London, England, was attended by representatives from 61 different countries.

The Council for Scientific and Industrial Research of Australia received a gift of £20,000 from T. D. McMaster, an extensive sheep breeder, for the investigation of problems on animal health, giving special attention to problems affecting the sheep industry.

CHANGE IN PERSONNEL. Important changes in personnel included the appointment of Dr. S. A. Asdell as Assistant Professor of Animal Husbandry at Cornell University. Dr. Asdell had conducted extensive studies relating to the physiology of reproduction of animals in England, Australia, and the United States. Dr. C. B. Cain was appointed head of the Animal Husbandry Department at the Mississippi Agricultural Experiment Station to succeed Prof. A. D. Buchanan who accepted a position with the Texas A. and M. College. Dr. Bruce L. Warwick, Assistant Professor of Veterinary Science at the University of Wisconsin, was appointed on March 1 as Animal Husbandman in charge of breeding investigations at the Texas Agricultural Experiment Station to succeed Dr. J. L. Lush who accepted a position as Professor of Animal Husbandry at the Iowa State College of Agriculture. In the reorganization of some of the departments at the Massachusetts Agricultural College, Prof. V. A. Rice was appointed head of the Animal Husbandry Department.

BIBLIOGRAPHY. Among the recent publications on livestock are the following: C. S. Plumb, *Registry Books on Farm Animals* (Columbus, Ohio, 1930); F. T. LOCKE, WILLIAM JOHN. A British novelist and dramatist, died at his home in Paris, May 14, 1930. He was born in Barbados, B. W. I., Mar. 20, 1863, and was educated at the Queen's Royal College in Trinidad and at St. John's College, Cambridge University. An architect by profession, he became secretary of the Royal Institute of British Architects in 1897, remaining there

until 1907. In 1895 he published his first novel, *At the Gate of Samaria*, but not until 1905, with *The Morals of Marcus Ordeyne*, did he win wide recognition from the public and critics. The following year he published *The Beloved Vagabond*, generally considered his best novel and a characteristic one in theme and treatment. Mr. Locke frequently chose to present a Bohemian character, whimsical and irresponsible and lovable. His work is characterized by an irony that evidently owed much to Anatole France but was tempered by a tolerant good humor and a whimsical and romantic viewpoint. In 1906 *The Morals of Marcus Ordeyne* was dramatized and presented both in England and in the United States and, two years later, *The Beloved Vagabond* was also successfully presented. He wrote other plays, including *The Palace of Puck* (1907); *Butterflies* (1908); *The Man from the Sea* (1910); *An Adventure of Aristide Pujol* (1912); and *Jaffery* (1915). In 1928 he went to Hollywood, Calif., where some of his stories were being produced for the moving pictures. A prolific writer, Mr. Locke's novels, in addition to the early one named above, include *Derelicts* (1897); *Idols* (1898); *Where Love Is* (1903); *Septimus* (1909); *Simon the Jester* (1910); *The Glory of Clementina Wing* (1911); *The Joyous Adventures of Aristide Pujol* (1912); *Stella Maris* (1913); *The Fortunate Youth* (1914); *Far Away Stories* (1916); *The Wonderful Year* (1916); *The Rough Road* (1918); *The House of Baltazar* (1920); *The Mountebank* (1921); *The Tale of Triona* (1922); *The Golden Adventure of Mr. Paradyne* (1924); *The Kingdom of Theophilus* (1927); *Joshua's Vision* (1928); *Perella* (1928); *Ancestor Jorico* (1929); *The Town of Tombarel* (1930); *The Shorn Lamb* (published posthumously in 1930).

LOGAN, JAMES ADDISON, JR. An American soldier and banker, died Oct. 27, 1930, in Philadelphia, Pa., where he was born Nov. 11, 1879. He attended Haverford College and served in the Spanish-American War and the Philippine Insurrection. He was commissioned a captain in the U. S. Army in 1901, and was graduated from the Army War College (1912). During the early part of the World War he was chief of the American Military Mission with the French Army, and on the entry of the United States was commissioned colonel and made assistant chief of staff at the general headquarters of the American Expeditionary Forces. After the Armistice he was appointed principal assistant to Herbert Hoover in relief operations in Europe, and was also adviser to the American Relief Commission in connection with Russian relief during 1921-23. In addition to serving as American representative in the financial and communications sections of the Supreme Economic Council, he was in charge of coordinating operations of technical advisers to various new states of central and eastern Europe and was assistant American unofficial delegate to the Reparations Commission (1919-23) and American unofficial delegate to the same (1923-25). He also attended the London Conference of Prime Ministers in 1924 and the Finance Ministers' Conference in Paris in 1925 as unofficial American delegate. On his return to the United States in 1925 he became associated with Dillon, Read & Co., New York banking concern.

LONDON NAVAL CONFERENCE. See **GREAT BRITAIN** and **UNITED STATES** under *History*; **NAVAL PROGRESS**.

LORD, HERBERT GARDINER. An American educator, died in New York City, Mar. 12, 1930. He was born in Boston, Mass., Mar. 29, 1849, and was graduated from Amherst College in 1871 and from the Union Theological Seminary in 1877. Ordained in the Presbyterian ministry in 1878, he served as pastor of the Church of the Redeemer in Buffalo, N. Y., from 1877 to 1895. He became professor of philosophy in the school of pedagogy at the University of Buffalo in 1895, and he was principal of the Franklin School in Buffalo from 1899 to 1900. After 1900 he was professor of philosophy at Columbia University, retiring in 1921. Professor Lord was author of *Psychology of Courage* and coauthor of *Essays Philosophical and Psychological in Honor of William James* and *Studies in the History of Ideas*.

LORD, HERBERT MAYHEW. Brigadier general, U. S. army, retired, and former director of the budget for the United States government, died in Washington, D. C., June 2, 1930. He was born in Rockland, Me., Dec. 6, 1859, and was graduated from Colby College in 1884. Until 1898 he was engaged in newspaper work, serving also as clerk of the ways and means committee of the House of Representatives in Washington. He was appointed major of additional paymasters in the Spanish-American War (1898) and paymaster, with the rank of captain, in the U. S. army in 1901. He was promoted through the grades to the rank of brigadier general in 1919. In 1918 he was appointed assistant to Major General Goethals, with the title of director of finance, and in 1920 he became chief of finance, U. S. army. For his services as director of finance he was awarded the Distinguished Service Medal. During the World War, he was a Liberty Loan officer. On retirement from the U. S. army in 1922, General Lord was appointed to succeed Gen. Charles G. Dawes as director of the bureau of the budget of the United States government. He resigned the office in May, 1929.

LORING, WILLIAM CALEB. An American jurist, died in Pride's Crossing, Mass., Sept. 8, 1930. He was born in Beverly, Mass., Aug. 24, 1851, and was graduated from Harvard with the LL.B. degree in 1874. The year after his admission to the bar in 1874 he was appointed assistant attorney general of Massachusetts, but resigned that post in 1878 to become a member of the law firm of Ropes, Gray and Loring. From 1882 to 1886 he was general solicitor and general counsel to the New York & New England Railroad Co. (later part of the New York, New Haven, and Hartford system). He was appointed an associate justice of the Supreme Judicial Court of Massachusetts in 1899 and served on the bench until 1919. In 1922 he became a lecturer on the practice of law at Harvard. He was president of the Boston Bar Association during 1920-21 and chairman of the Judicial Council of Massachusetts during 1924-26. The A.M. degree was conferred on him by Harvard University in 1876 and the LL.D. degree in 1901. He was also president of the trustees of the American School of Classical Studies in Athens, Greece, from 1911 to 1923, and in 1922 was made a knight commander of the Royal Order of George I by the Greek government.

LOS ANGELES WATER SUPPLY. See **AQUEDUCTS**; **CALIFORNIA** under *Political Events*.

LOUISIANA. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 2,101,593. The population on Jan. 1, 1920, was 1,798,509. The capital is Baton Rouge.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops, in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|-------------------|------|-----------|-------------|---------------|
| Cotton | 1930 | 2,093,000 | 710,000 * | \$ 67,280,000 |
| | 1929 | 2,050,000 | 809,000 * | 11,345,000 |
| Corn | 1930 | 1,109,000 | 12,199,000 | 19,828,000 |
| | 1929 | 1,180,000 | 21,476,000 | 18,257,000 |
| Rice | 1930 | 491,000 | 17,676,000 | 18,465,000 |
| | 1929 | 472,000 | 18,833,000 | 3,584,000 |
| Potatoes ... | 1930 | 37,000 | 2,655,000 | 2,867,000 |
| | 1929 | 31,000 | 1,977,000 | 5,609,000 |
| Sweet potatoes .. | 1930 | 76,000 | 6,232,000 | 6,324,000 |
| | 1929 | 80,000 | 7,440,000 | 4,784,000 |
| Hay | 1930 | 832,000 | 358,000 * | 4,689,000 |
| | 1929 | 307,000 | 352,000 * | |
| Sugar cane . | 1930 | 171,000 | 2,907,000 * | |
| | 1929 | 155,445 | 2,917,925 * | |

* Bales. * Tons.

Farms in the State, numbering 161,514 in 1930, were 21.9 per cent more numerous than in 1925, when they numbered 132,450; they were 19.2 per cent in excess of the 135,463 farms of 1920. Irrigated lands totaled 452,251 acres in 1929, as against 454,882 in 1919.

MINERAL PRODUCTION. Petroleum, for years the leading mineral product of the State, showed on the whole a tendency to decline of production, while natural gas, owing in part to the development of great pipe lines to convey the product to distant areas, tended to rise in respect of production and to assume the lead. The petroleum wells yielded 20,229,000 barrels in 1929, as against 21,847,000 in 1928; the yield, for 1929, had a value of \$25,200,000 (estimated); for 1928, of \$25,850,000. For natural gas the statistics were available only through 1928. The production of the State rose to 227,281,000 M cubic feet for 1928, from 186,961,000 M for 1927; the value of natural gas produced, to \$20,279,000 for 1928, from \$12,158,000 for 1927. An apparent rise in the production of natural gas in 1929 was suggested by the increasing quantity of gasoline extracted therefrom: 63,400,000 gallons in 1929, as against 55,022,000 in 1928; in value, \$3,902,000 in 1929 and \$3,434,000 in 1928. Salt production declined to 525,840 short tons for 1929, from 630,780 for 1928. In value it was \$2,277,366 for 1929 and \$2,405,351 for 1928. The total value of the State's yearly mineral product was \$56,810,403 for 1928; for 1927, \$51,266,921.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 4762.71. There were built, in 1930, 18.89 miles of first track.

EDUCATION. The work of teaching the illiterate adults of the State in special classes continued in 1930; at the end of the year State Superintendent of Education Harris, in the *Journal* of the National Education Association, reported that about 100,000 adults had been instructed so that they might read and write. By the terms of one of the amendments of the State Constitution adopted by popular vote at the November election the Legislature was required to appropriate for each year a sum for State aid to education equal at least to \$12 for each census pupil and to set aside one-sixth thereof as an equalization fund for the benefit of schools in the poor sub-

divisions. The school population of the State, for the academic year 1929-1930, was reported as composed of 394,456 whites and 255,740 colored. There were enrolled in the public schools 277,707 white and 156,850 colored pupils. Of these, 226,298 white and 150,416 colored pupils were in the elementary schools; in the high schools were 51,409 white and 6434 colored. The net expenditure of the year for public school education totaled \$23,380,257. Salaries of white teachers averaged \$1102 for the year; of colored teachers, \$451.

LEGISLATION. The Legislature held two sessions, these being the regular biennial session, which convened in May and adjourned on July 10 after fruitless debates due to disagreement on the policies that Governor Long sought to impose; the second, a special session called by Governor Long after his having obtained in the primary election for United States Senator a vote carrying endorsement of his course. This special session, convened on September 16 and adjourned on September 22, ratified virtually in whole the Long programme of expenditure, bond issue and taxation. The main objective of this programme was to provide the State with an extensive system of hard-surface highways and bridges, so as to put it abreast of the foremost of the Southeastern States in these respects. A highway and bridge bond issue of \$75,000,000 was authorized by constitutional amendment. Of its proceeds, \$80,000,000 were to go to highway construction and \$15,000,000 to building bridges. New Orleans, which had opposed heavy highway expenditure, was reconciled by the designation of \$7,000,000 of the bridge money as reserved for the construction of a bridge across the Mississippi River at that city. The bond interest was to be met and the bonds were to be retired from the proceeds of the existing State tax of four cents a gallon on gasoline. A measure was passed providing for the construction of a new State Capitol at Baton Rouge and a bond issue of \$5,000,000 for this purpose was authorized. An additional cent was, by a constitutional amendment subject to popular ratification, affixed to the per-gallon rate of the gasoline tax; its proceeds were to go in part to supply the equalization fund, the source of State aid to the public schools; in part to the development of the port of Lake Charles; and the remainder to the improvement of the port of New Orleans, and to the service of the outstanding bonds of the New Orleans port commission. Provisions were made for an increase of the State property tax with the purpose of raising the pensions of Confederate veterans to \$60 a month, from \$30. The New Orleans Levee Board was authorized to develop an airport on the shores of Lake Pontchartrain and to issue bonds to the total of \$1,000,000 for the work. The rate of State aid to public schools was fixed at \$12 for each educable child, the designation including all between the ages of 6 and 18 years. A sales tax on retail shops was created.

POLITICAL AND OTHER EVENTS. The chief political event of the year was Governor Long's campaign for the nomination of the Democratic party to the office of United States Senator. The campaign, owing to the intensity of the opposition to Long's policies of expanded State outlay and higher taxation, amounted to a popular test of his strength as Governor. In the primary election on September 9 Long received a solid majority over his opponent, Senator Joseph E. Ransdell. The outcome was generally accepted as

carrying an implied mandate for Long to summon the Legislature in special session and for it to adopt the Long programme of highway construction and bond issue.

Suit over the validity of the State act authorizing the government of Louisiana to dispense free textbooks not only among the public schools but among sectarian institutions was carried to the U. S. Supreme Court, which on April 28 upheld the act. On March 2 a warehouse fire at New Orleans destroyed cotton to the estimated value of some \$3,000,000. The settling of the claims of property owners whose lands were needed for the construction of the Bonnet Carré Spillway, a part of the Federal flood-protection project, was delayed and became a subject of public dispute, local interests asserting that the Federal authorities had resorted to a dilatory policy in order to force settlements at low prices. The Southern States Line, a shipping company to operate between New Orleans and the Mediterranean ports, was formed and an allowance of \$7750 a voyage was granted it by the Shipping Board.

ELECTIONS. Governor Huey P. Long, running unopposed as the Democratic candidate for United States Senator, was elected on November 4. A delegation of eight Democratic Representatives was elected, six being the existing incumbents. The eight constitutional amendments submitted by the Legislature were approved at the polls, without organized opposition. They provided for the issue of \$68,000,000 of State bonds for paved roads; for raising the rate of gasoline tax by one cent, to five cents a gallon, the proceeds to go to the public schools and to the dock boards of New Orleans and Lake Charles; for \$5,000,000 of bonds to build a new State Capitol; to authorize subdivisions to exempt new industries from taxes for five years; to allow the New Orleans Levee Board to build an airport on the lake shore; to authorize New Orleans to issue \$4,500,000 of bonds for rebuilding public markets and for refunding outstanding debts; to render it obligatory for future Legislatures to provide yearly school funds at the rate of \$12 to the educable child and, further to create an equalization fund at the rate of \$2 for every such child; to increase the pensions of Confederate veterans and veterans' widows to \$60 a month, from \$30. For bridging the Mississippi at New Orleans \$7,000,000 of State bonds were approved by vote of the State.

OFFICERS. Governor, Huey P. Long; Lieutenant-Governor, Paul N. Cyr; Secretary of State, Alice Lee Grosjean; Treasurer, H. B. Conner; Auditor, L. B. Bayard, Jr.; Attorney-General, Percy Saint; Superintendent of Education, T. H. Harris.

JUDICIARY. Supreme Court: Charles A. O'Neill, Chief Justice; Associate Justices, Ben C. Dawkins, Winston Overton, John St. Paul, Wynne G. Rogers, John R. Land, H. F. Brunot, Fred. M. Odom.

LOWELL, PERCIVAL. American astronomer. See **ASTRONOMY**.

LUÇON, lü'sôn', LOUIS HENRI JOSEPH, CARDINAL. A prelate of the Roman Catholic Church, died in Rheims, France, May 28, 1930. He was born in Maulévrier, Oct. 28, 1842. On ordination to the priesthood in 1865 he became chaplain of St. Louis-des-Français in Rome. He later served as archpriest of Notre Dame in Cholet, France, and in 1888 was consecrated Bishop of Belley. In 1906 he was elevated to the archbishopric of Rheims, and a year later was created a cardinal-

priest. At the time of his death he was dean of the French cardinals. During the World War Cardinal Luçon gained the admiration of the allied nations by the courage he exhibited in the bombardment of the Rheims Cathedral. He remained in the city from August, 1914, to April, 1918, holding daily masses and ministering to the soldiers. Through his letters to the Pope he vindicated the French army of the charge that the cathedral had been used as a military observation post, which had been the reason given by the Germans for their demolition of the famous edifice. He also helped pave the way for the resumption of friendly relations between France and Germany after the War by stimulating a spirit of forgiveness. In 1921 he officiated at a service commemorating American assistance in restoring the devastated regions of France, and in 1927 re-consecrated the partly-restored cathedral. He was decorated with the rosette of an officer of the Legion of Honor in recognition of his bravery and noble attitude during the War. He was the author of *La nécessité sociale de la religion* (1917).

LUMBER PRODUCTION. See **FORESTRY**.

LUNN, LOUISE KIRBY. See **KIRBY-LUNN, LOUISE**.

LUTHERAN CHURCH. A church made up of groups of religious bodies, acknowledging "the Holy Scriptures . . . as the only source and infallible norm of all church doctrine and practice" and declaring the unaltered Augsburg Confession and Luther's Small Catechism to be "a pure exposition of the Word of God." Its membership is chiefly in central and northern Europe and in the United States and Canada. The following organizations in the United States bear the Lutheran name: United Lutheran Church in America; American Lutheran Church; American Lutheran Conference; Evangelical Lutheran Church (Eielsen Synod); Church of the Lutheran Brethren of America; Danish Evangelical Lutheran Church of America; Icelandic Lutheran Synod of North America; Finnish Evangelical Synod in America (Suomi Synod); Finnish Evangelical Lutheran National Church; Finnish Apostolic Lutheran Church; and the Evangelical Lutheran Synodical Conference of North America.

The American Lutheran Church was formed by the merger of three independent general bodies, the Evangelical Lutheran Joint Synod of Ohio and Other States, the Evangelical Lutheran Synod of Iowa and Other States, and the Lutheran Synod of Buffalo, which was consummated Aug. 10-11, 1930, in Toledo, Ohio. There also was organized October 29-31 in Minneapolis, Minn., the American Lutheran Conference, a delegate co-operative federation composed of the following: The American Lutheran Church; Norwegian Lutheran Church of America; United Danish Evangelical Lutheran Church in America; Evangelical Lutheran Augustana Synod of North America; and Lutheran Free Church. The Evangelical Lutheran Synodical Conference of North America is composed of the Evangelical Lutheran Synod of Missouri, Ohio, and Other States; Evangelical Lutheran Synod of Wisconsin and Other States; Slovak Evangelical Lutheran Synod of America; and Norwegian Synod of the American Evangelical Lutheran Church.

The outstanding event of 1930 was the celebration of the 400th anniversary of the Augsburg Confession, the basis of doctrinal unity of Lutheran churches throughout the world. This cele-

bration culminated in Europe on June 25 with a great Pan-Protestant meeting in Augsburg, Germany, attended by about 50,000 persons, and in the United States on October 29-31 at the convention of the American Lutheran Conference in Minneapolis. There also was celebrated the 1100th anniversary of the coming of St. Ansgar to Sweden and the 900th anniversary of the introduction of Christianity into Norway. Having relieved the American National Lutheran Council of the distribution and administration of world relief in January, 1930, the World Convention of Lutheran Churches carried out its programme of relief work among "weak, suffering, and endangered churches in Europe," especially in Russia. In addition to maintaining the Lutheran Theological Seminary in Leningrad, the convention succored the sick and destitute and sponsored two immigration missionary agencies to aid those who managed to escape to Canada.

Statistics showing the general growth of the church in the United States and Canada during 1930 were as follows: Pastors, 11,852; congregations, 16,727; baptized members, 4,278,416; confirmed members, 2,858,071; and communing members, 2,369,242. Church schools numbered 16,222, with 136,466 officers and teachers and 1,448,582 pupils. Church property was valued at \$372,107,077, while congregational expenses amounted to \$40,401,715, congregational benevolences to \$12,854,316, and total expenditures to \$59,256,031. It was estimated that throughout the world there were 75,000 Lutheran congregations, with 50,000 pastors and a baptized membership of 82,180,000.

In 1930 the Lutheran organizations in the United States maintained 34 theological seminaries, 37 colleges, and 97 academies, with a total enrollment of 36,884 students, 2222 instructors, endowment amounting to \$16,140,914, and property valued at \$39,908,104. Lutheran inner-mission institutions, such as deaconesses' homes, hospitals, old-people's homes, orphanages, immigrants' and seamen's homes, numbered 373, with an endowment of \$4,466,180 and a property value of \$42,568,002; during the year they sheltered or ministered to 5337 children and 430,756 men and women. The work of the churches in fields outside of the United States and Canada was carried on principally in India, Africa, Japan, China, New Guinea, Argentina, and British Guiana. Baptized converts in 3867 congregations numbered 314,511; confirmed members, 203,449; and communing members, 189,102. The total value of the property of these congregations was \$5,886,787. A feature of foreign-mission work during the year was the development of an indigenous church in Japan, which was recognized by the United Lutheran Church at its convention in Milwaukee, Wis., Oct. 9-16, 1930.

Important cooperative groups of the Lutheran bodies include the American Federation of Lutheran Brotherhoods, the National Lutheran Educational Conference, the Lutheran Student Association of America, the Lutheran Theological Seminary Conference, the Lutheran Foreign Missions Conference of America, the Lutheran Home Missions Council of America, the National Lutheran Inner-Mission Conference of America, the American Lutheran Statistical Association, the National Lutheran Editors' Association, and the National Lutheran Publishing House Managers' Association. The church maintains 25 publishing houses with a total property value of \$5,663,798.

Official periodicals are the *Lutheran* (United Lutheran Church), *Lutheran Standard* (American Lutheran Church), *Lutheran Companion* (Augustana Synod), *Lutheran Herald* (Norwegian Lutheran Church), *Lutheran Witness* (Missouri Synod), *Northwestern Lutheran* (Wisconsin Synod), *Ansgar Lutheran* (United Danish Church), and *Lutheran Men* (American Federation of Lutheran Brotherhoods). Headquarters of the National Lutheran Council, in which the United Lutheran Church in America and the American Lutheran Conference cooperate, are at 39 East 35th Street, New York City, the executive director being the Rev. Ralph H. Long.

LUXEMBURG, lûks'em-bûrg. A small state of western Europe, bounded by Germany, France, and Belgium and linked economically to Belgium by a customs union effective May 1, 1922. Area, 999 square miles; population at the census of Dec. 1, 1927, 285,524; estimated Jan. 1, 1929, at 289,694. Capital, Luxemburg, with a population in 1927 of 52,440; ruler in 1930, Grand Duchess Charlotte.

Agriculture engages only 32 per cent of the population, the 394,000 acres under cultivation being devoted principally to oats and potatoes. Mining and metallurgical industries predominate. Pig iron production for 1929 was 2,906,093 tons, against 2,770,061 tons in 1928, steel production was 2,702,257 tons, against 2,567,079 in the previous year, and iron-ore production, 7,547,019 tons, against 7,026,832 tons. There were 47 blast furnaces and 7 steel works in operation in 1928. Brick, printing, leather, and glass industries are relatively important. Separate figures on foreign trade are not available. In the ordinary and extraordinary budgets for 1930 revenues were estimated at 411,307,817 francs and expenditures at 396,213,951 francs. The public debt on Jan. 1, 1930, amounted to 442,042,000 francs (415,475,185 francs on Jan. 1, 1929). In 1928 there were 342 miles of railway line and 1297 miles of State roads.

Executive power is vested in the Cabinet appointed by the sovereign and legislative power in the Chamber of Deputies elected by universal suffrage for six years. The Council of State of 15 members acts as a Senate. Premier in 1930, Joseph Bech (Catholic-Conservative), who was assisted by three director-generals. See BELGIUM.

LYNCH, JAMES MATHEW. An American labor leader and public official, died in Syracuse, N. Y., July 16, 1930. He was born in Manlius, N. Y., Jan. 11, 1867. After learning the printing trade in 1881 he soon became active in labor union politics, and for seven terms was president of the Syracuse Trade Assembly. In 1899 he became first vice president and the following year president of the International Typographical Union. He held this office during 1900-14 and again during 1924-26, attaining international prominence. It was at his order that the nation-wide strike of printers for an eight-hour day in the United States was called in 1906 and was ended successfully two years later. During his administration he also succeeded in obtaining a pension of eight dollars weekly for aged and indigent printers and an appropriation to care for chronic cases at the Union Printers' Home and Tuberculosis Sanitarium in Colorado Springs. He was appointed labor commissioner of New York State in 1913 and also served as a member of the Workmen's Compensation Commission. On the merging of these departments the following

year he became a member of the State Industrial Commission, holding this post until 1921. In 1929 he was appointed a member of the New York Old Age Security Commission. He was also president of the American Life Society, a mutual insurance corporation, and a member of the American Association for Labor Legislation.

LYNCHINGS. As a result of the great increase in lynchings in the U. S. during the year 1930, as compared with the year 1929, and because of adverse criticisms directed against the South from many quarters, Southern publicists and other leaders decided that a thorough-going inquiry was necessary. There was organized therefore by the Commission on Interracial Cooperation a committee whose function it was to be to examine into the situation and to propose measures of relief to the State governors, eight of whom had publicly pledged themselves to combat the evil. George F. Milton was named chairman of the committee, and its other members included the following persons: Julian Harris, a southern editor; Prof. Howard W. Odum, of North Carolina University; Alex W. Spence, of Dallas; W. P. King, of the Methodist Episcopal Church, South; and W. J. McGlothlin, President of Furman University. The following prominent Negroes were also appointed members of the committee: Robert R. Moton, President of Tuskegee; John Hope, President of Atlanta University; Charles S. Johnson, of Fisk University; and B. F. Huber, President of Georgia State College.

In December Mr. Milton, in reporting on the activities of his Commission, declared that in the final outcome "a definite relation will probably be found between inadequate education and readiness to give the law into the hands of the mob." The Commission was making a detailed case study of all lynchings in 1930, of which there had been twenty-one. In only one case was the lynching that of a white man. In Mr. Milton's opinion, although the South had been the scene of the greatest number of these acts of mob violence, lynchings were not strictly geographic or racial affairs. Said Mr. Milton: "It is rather the underlying beast in the man which comes out to the fullest in the excitement of the mob." And in another place in his report he declared: "Where many men are living year after year, on the fringe of hunger and outbreak, they accumulate a formidable mass of internal emotional tension demanding satisfaction. Furthermore in the majority of studies thus far completed the communities in which the lynchings occurred had less than a six-months school term."

At the end of the year the National Association for the Advancement of Colored People reported that the year 1930 had witnessed 25 lynchings as against 12 during 1929. Seven lynchings had taken place in Georgia during 1930; there had been four each in Alabama and Texas; three in Mississippi; two each in Indiana and South Carolina; and one each in Florida, North Carolina and Oklahoma. The offenses charged against the victims ranged from the most trivial ones to the customary one of "outrages against Southern womanhood." Among the crimes for which Negroes were lynched were the following: failure to stop an automobile when ordered, being active in politics, testifying against a white man in court, quarreling with a white man, murder, assault, attempted assault, robbery. The statement of

the National Association for the Advancement of Colored People noted that increasingly the white womanhood of the South was repudiating the mob violence of its men folk, at any rate, when employed as a "protection of womanhood." Said Walter White:

During the year representative white women of twelve Southern States, including church, educational, voters, Y. W. O. A., and club groups, have issued two statements declaring they desired no such "protection," characterizing lynching as "the complete breakdown of government and the triumph of anarchy" and stating that "it brutalizes the community where it occurs, including the women and children, who frequently witness its orgies, and particularly the youth who are usually conspicuous participants."

MACAO, makä'ö. An island at the mouth of the Canton River, in China, which with the two adjacent islands of Taipa and Coloane, constitute a province of Portugal. Area, 4 square miles; population, according to the census of 1927, 157,175 (including 3840 Portuguese, and 152,738 Chinese). The trade is chiefly in transit and is mainly in the hands of the Chinese. In 1929-30, revenues were estimated at 4,781,492 patacas and expenditures at 4,658,272 patacas (1 pataca equals approximately \$0.48). In 1928 imports were valued at 24,058,470 patacas and exports at 9,381,533 patacas. The city of Macao is divided into two parts, inhabited respectively by Chinese and non-Chinese, each under its own administration.

MACDONALD, J. RAMSAY. See GREAT BRITAIN under *History*.

MACDONELL, ARTHUR ANTHONY. A British Orientalist and educator, died in Oxford, England, Dec. 28, 1930. Born May 11, 1854, he was educated at Göttingen and at Corpus Christi College, Oxford, where he was Taylorian German scholar (1876), Davis Chinese scholar (1877), Boden Sanskrit scholar (1878), and Taylorian teacher of German (1880-1900). He also acted as deputy professor of Sanskrit from 1888 to 1890, and then accepted the Boden professorship of Sanskrit. In 1914 he was awarded the Campbell Memorial Gold Medal for Oriental Research by the Royal Asiatic Society of Bombay. His works include: *A Sanskrit Grammar* (1886); *A New Sanskrit Grammar* (1901, 3d ed. 1927); *A Sanskrit-English Dictionary* (1892, 2d ed. 1924); *A History of Sanskrit Literature* (1900); *A Vedic Grammar* (1910); *A Vedic Grammar for Students* (1916); *A Vedic Reader* (1917); *Hymns from the Rigveda* (1922); *Lectures on Comparative Religion* (1925); and *India's Past* (1927).

MACEDONIA. A stretch of territory in the Balkan peninsula, included in European Turkey until the outbreak of the Balkan Wars (1912-13) and since the World War divided between Greece and Yugoslavia to the exclusion of Bulgaria. See BULGARIA and JUGOSLAVIA under *History*.

MCGILL UNIVERSITY. A coeducational institution of higher learning in Montreal, Quebec, Canada; founded in 1821. The enrollment for the autumn session of 1930 was distributed as follows: Faculties of arts and science, 1022; medicine, 469; applied science, 303; dentistry, 34; law, 93; music, 180; and graduate studies, 220 and schools or departments of agriculture, 136; architecture, 44; commerce, 247; household science, 70; graduate nursing, 34; public health, 3; physical education, 42; social service, 27; pharmacy, 7; library administration, 13; and

teachers' training school, 131. The registration in the French summer school of 1930 was 172. The number of members on the teaching staff was 538. New appointees during 1929-30 included: A. S. Eve, dean of graduate studies; F. M. G. Johnson, dean of science; C. F. H. Allen, chemistry; N. B. MacLean, mathematics; Kiang Kang-hu, Chinese studies; A. J. D. Porteous, philosophy; C. L. Huskins, genetics; J. H. Menie, chemistry; O. N. Brown, mining engineering; F. F. Osborne, geology; V. C. Wynne Edwards, zoölogy; J. Norman Bird, agronomy; R. Millinchamp, agricultural engineering; K. I. Melville, pharmacology; and E. G. D. Murray, biochemistry. The endowment of the university amounted to \$17,602,876, the income for the year was \$2,141,728. The library contained 350,000 volumes. During 1930 Divinity Hall and an addition to the Royal Victoria College were under construction. Principal, Sir Arthur William Currie, G.C.M.G., K.C.B., LL.D.

MACHEK, DR. VLATKO. Croat autonomist leader. For his trial for sedition see JUGOSLAVIA under *History*.

MACKAY, JOHN YULE. A British anatomist and educator, died in Broughty Ferry, Scotland, Mar. 30, 1930. He was born in Inverkeithing, Fifeshire, Jan. 13, 1860, and was educated at Glasgow University, receiving his M.B. and C.M. degrees in 1882 and M.D. degree in 1885. After serving as senior demonstrator in anatomy and lecturer in embryology at the University of Glasgow, he was appointed in 1894 professor of anatomy in University College, Dundee, a constituent part of the University of St. Andrews. In 1897 he became principal of the college and retained the principalship until his death, although he resigned his chair in 1927. He was for many years representative of the University of St. Andrews on the General Medical Council. His research work was devoted mainly to the vascular system and the morphology of the arterial system among vertebrates. In connection with the latter, he constructed a scheme of the classification of the branches of the aorta, the correctness of which was confirmed by subsequent embryological observation. He was the author of "The Morphology of the Arterial Arches in Birds," published in 1888 in the *Transactions of the Royal Society of London*, and co-author of *Human Anatomy: General and Descriptive and A Directory of Dissections*. He was also one of the founders in 1889 of *Memoirs and Memoranda in Anatomy*.

MACKENZIE. See NORTHWEST TERRITORIES.

MACKENZIE, SIR THOMAS. A New Zealand statesman and explorer, died in Wellington, N. Z., Feb. 14, 1930. He was born in Edinburgh, Scotland, Mar. 10, 1854, and, while a child, was taken to live in Otago, N. Z., where he was educated in the public schools. He entered politics and, from 1887 to 1896, served as a member in the New Zealand Parliament from Clutha; he later represented Waihemo, Waikouaiti, Taieri, and Egmont. In 1909 he was a Cabinet member, with the portfolios of Minister of Industries and Commerce and of Minister in Charge of Tourist and Health Resorts, Scenery Preservation, and State Forestry Departments. For a brief time in 1912, he was Prime Minister of New Zealand and, on being defeated by a vote of lack of confidence, was appointed High Commissioner in London, serving there until 1920. In 1921 he was made a member of the Legislative Council for

Otago. He explored the little-known areas of New Zealand, his trips being of interest and value because of the discoveries made, including three passes, several lakes, and pastoral country. He wrote *Explorations in Fiordland, New Zealand*. In 1916 he was made Knight Commander of St. Michael and St. George.

MCKRAE, MILTON A. An American newspaper publisher, died in La Jolla, Calif., Oct. 11, 1930. He was born in Detroit, Mich., June 13, 1858, and began his newspaper career as a reporter on the *Detroit News*, later becoming advertising manager of the *Cincinnati Post*. In 1890 he became associated with E. W. Scripps, with whom he founded the Scripps-McRae League of newspapers in 25 different cities. Following his retirement, the league was consolidated in 1922 with the Howard Newspaper Syndicate, being known as the Scripps-Howard Newspapers. He was the author of *Forty Years in Newspaperdom*.

MADAGASCAR. An island belonging to France, separated from the southeast coast of Africa by the Mozambique Channel. The area is 241,094 square miles and the population at the census of 1926 was 3,621,342 (including the Mayotte and Comoro Islands), of whom 3,591,943 were Malagasy, 18,040 French, and 11,359 foreigners. In 1925, deaths among the native population exceeded births by 606. Capital, Tananarive, with 88,487 inhabitants in 1928.

Other leading towns, with their populations in 1926, were: Antsirabe, 19,130; Majunga, 16,570; Tamatave, the chief port of the east coast, 15,022. The native Malagasy are divided into numerous tribes, of which the Hova or Merina are most numerous and their language is understood over a large part of the island. Education is compulsory for children from 8 to 14 years, and they are obliged to learn French.

PRODUCTION. Cattle breeding and agriculture are the chief occupations, the principal crops being rice, sugar, coffee, manioc, cotton, cacao, vanilla, tobacco, beans, cloves, rubber, and mulberry trees. The forests contain valuable woods and gums. Graphite production is important, and gold, mica, corundum, phosphates, iron, coal, copper, and precious stones are produced also. The relatively unimportant local industries include rice milling, sugar grinding, meat packing, and the manufacture of straw hats, mats, etc.

COMMERCE. The balance of foreign trade became increasingly unfavorable from 1925 to 1928. In the latter year imports totaled 688,561,341 francs (1 franc equaled \$0.0392 in 1928) and exports 483,596,535 francs. France supplies the bulk of the imports and also purchases most of the exports. The chief imports in 1928 were cotton goods, wines, machinery, metals, cement, fuel oil, and flour, while leading exports were graphite, manioc, tanning bark, rice, hides, rafia fibre, and mica.

FINANCE. The ordinary budget estimates for 1929 balanced at 242,338,000 French francs (about \$9,500,000 converted at par). Railway estimates totaled 38,153,000 francs; native medical assistance estimates, 19,596,000 francs; and public works estimates, 68,650,000 francs. The public debt on Jan. 1, 1929, totaled 131,142,000 francs.

COMMUNICATIONS. The railways, which are government owned, reported 430 miles of line in 1928 and in the same year carried 1,184,286 passengers and 270,000 metric tons of freight,

the gross receipts totaling 34,698,000 francs (\$1,300,000). There were 1800 miles of highways (1928). In 1928, 6119 vessels of 3,190,430 tons entered and 6189 vessels of 3,212,818 tons cleared the ports of the island.

GOVERNMENT. The colony is under a governor-general aided by a consultative council of administration. Governor-General in 1930, Marcel Olivier (appointed in 1924). Dependent upon Madagascar are the small islands of Nossi Bé, Diego Suarez, Ste. Marie, and the Comoro group.

MAHÉ. See FRENCH INDIA.

MAINE. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 797,423. The population on Jan. 1, 1920, was 768,014. The capital is Augusta.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|--------------|------|-----------|------------|--------------|
| Potatoes ... | 1930 | 188,000 | 45,120,000 | \$29,328,000 |
| | 1929 | 179,000 | 50,120,000 | 60,144,000 |
| Hay | 1930 | 1,149,000 | 1,272,000* | 13,841,000 |
| | 1929 | 1,234,000 | 1,596,000* | 17,525,000 |
| Oats | 1930 | 122,000 | 5,002,000 | 2,601,000 |
| | 1929 | 122,000 | 4,880,000 | 8,416,000 |

* Tons.

Farms in the State numbered 38,996 in 1930, and showed a decline from the 50,033 of 1925 and the 48,227 of 1920. The farms in 1930 comprised 4,639,719 acres, of which 1,411,080 were crop land, 1,637,553 pasture, 1,350,626 woodland, and 240,460 other land. Farm lands were valued at \$95,828,615; farm buildings, \$98,567,979; implements and machinery, at \$28,395,103. Farm horses in 1930 numbered 60,817, as against 94,350 in 1920; cattle in 1930, 230,369; hogs, 33,733; chickens, 1,457,625.

MINERAL PRODUCTION. Stone, the leading mineral product, contributing nearly one-half of the yearly mineral total, was actively quarried in 1928, 413,960 short tons being produced, as against 355,800 in 1927. This included much stone of the higher grades, as was evidenced by the high ratio of the total value of the product to its quantity. The total value of the stone output was \$2,579,523 for 1928 and \$2,447,644 for 1927. The output of lime, which attained the quantity of 123,023 short tons for 1928, fell, for 1929, to 92,000 (estimated) short tons; the value of lime quarried declined from \$1,056,443 for 1928, to \$806,000 (estimated) for 1929. Classified apart from the stone production, that of slate was substantial, rising to \$653,627 for 1929, as represented by the quarries' sales, from \$551,242 for 1928. Cement and clay products each totaled for 1928 in excess of \$500,000, and there was a material production of feldspar. The total value of the mineral products of the State, for 1928, was \$5,922,729; for 1927, \$5,475,695.

FINANCE. State expenditures in the year ended June 30, 1929, as reported by the U. S. Department of Commerce, were: for maintenance and operation of government departments, \$12,082,509 (of which \$2,223,456 was for local education); for conducting public service enterprises, \$100,288; for interest on debt, \$927,975; for permanent improvements, \$7,392,171; total, \$20,508,943 (of which \$9,618,865 was for highways, \$2,801,453 being for maintenance and \$6,817,412 for construction). Revenues were \$18,014,201. Of these, property and special taxes formed 38.2

per cent; departmental earnings and remuneration to the State for officers' services, 8.3; sales of licenses, 46.9 (including taxes \$3,006,645 on sales of gasoline). The State's funded debt outstanding on June 30, 1929, was \$21,506,070. Net of sinking-fund assets, it was \$21,495,323. On property bearing an assessed valuation of \$743,688,259 were levied in the year State taxes of \$5,746,704.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 2197.47. No additional construction of line or trackage in 1930 was reported.

EDUCATION. Committees were put to work in the course of the year to revise both the course of study for elementary schools and that for the State normal schools. A school of education was established at the University of Maine, and it was agreed that the university should grant to the State's normal-school graduates two years of credit toward an A.B. degree in education. The number of individuals of school age in the State in the year ended June 30, 1930, was reported as 247,796. There were enrolled in the public schools 162,725 pupils. Of these, 135,083 were in common schools or elementary grades, and 27,642 were in high schools. The year's expenditures for public-school education totaled \$11,700,408. Salaries of teachers averaged, for the year, \$889 among the elementary and \$1542 among the secondary group.

CHARITIES AND CORRECTIONS. The State's activities in the care of persons, concentrated to a great extent in the Department of Public Welfare, centred in this organization to an increasing degree by reason of an act of 1929. This act required the Department to administer an appropriation for patients unable to pay for treatment in general or private hospitals. This duty increased the activity of the Department in 1930. The Department had at its head a body of five commissioners, serving under appointment and holding monthly meetings; and, as its chief executive, an appointive secretary. The Department acted as a State board of children's guardians, having an average of 2252 children in its charge in this capacity in 1930. It also dispensed assistance under a mothers' aid law. The State institutions included three hospitals for the insane, situated at Augusta, Bangor, and Pownall; sanatoria at Greenwood Mountain, Fairfield, and Presque Isle; Reformatory for Men, South Windham; Reformatory for Women, Skowhegan; State School for Boys, South Portland; State School for Girls, Hallowell; Maine School for the Deaf, Portland; Military and Naval Orphan Asylum, Bath; State Prison, Thomaston.

LEGISLATION. A special session of the Legislature convened on August 5 and adjourned on August 6. Its chief enactment was a measure to revise and consolidate the State's public laws. This measure embodied recommendations of a special recess committee that had been appointed by the previous session to study the subject. The session also altered the charter of Dexter P. Cooper, Inc., the company formed to derive electricity from the tides of the Bay of Fundy. The original provision that the company might erect a power plant partly in Canada and might deliver electric current in Canada was altered so as to require both the plant and the sale of power to be entirely in Maine.

ELECTIONS. The biennial State elections were held on September 8. Representative Wallace H.

White, Jr., of Lewiston, Republican, who had won in the Republican primaries over former Governor Ralph O. Brewster, was elected United States Senator by 87,023 votes (unofficial total) to 56,003 votes for Frank H. Haskell, Democrat. Governor W. Tudor Gardiner, Republican, was re-elected, obtaining 82,216 votes (unofficial total) to 65,479 for Edward C. Moran, Jr., the Democratic candidate.

OFFICERS: Governor, William Tudor Gardiner; Secretary of State, Edgar C. Smith; Treasurer, William S. Owen; Auditor, E. D. Hayford; Attorney-General, Clement F. Robinson; Commissioner of Education, Bertram E. Packard.

JUDICIARY. Supreme Judicial Court: Chief Justice, Luere B. Deasy; Associate Justices, Guy H. Sturgis, Charles P. Barnes, Charles J. Dunn, Norman L. Bassett, William R. Pattangall, Frank G. Farrington. Superior Court: Justices, William H. Fisher, George H. Worster, Arthur Chapman, Harry Manser, George L. Emery, James H. Hudson, Sidney St. F. Thaxter.

MAINE, UNIVERSITY OF. A coeducational State institution of higher learning in Orono; founded in 1865. The enrollment for the autumn of 1930 was 1614 and for the summer session of 1930, 351. There were 167 members on the faculty. The productive funds of the university amounted to \$891,635, and the income for the year was \$1,482,468. The library contained 97,000 volumes. A school of journalism, established by the board of trustees in April, 1930, was opened for the fall semester. President, Harold Sherburne Boardman, C.E., D.Eng., LL.D.

MALDIVES ARCHIPELAGO. See CEYLON.

MALTA. An island in the Mediterranean Sea, which, with the adjacent islands of Gozo and Comino, was annexed by Great Britain in 1814. Situated 58 miles south of Italy and 180 miles from the African coast, it is an important link in British Imperial communications and the base of the British fleet in the Mediterranean. Area of Malta, 95 square miles; total area with Gozo and Comino, 122 square miles. The civil population increased from 224,680 at the census of 1921 to 230,618 on Jan. 1, 1929. There is a garrison of about 10,000 troops. Valletta is the chief town and port (population, 48,240).

In 1928-29 there were 166 public schools, with 25,105 pupils, besides secondary and private schools, and a university with 119 students. Agriculture is the main occupation; the total farm production in 1928-29 was valued at £860,205. Cereals, potatoes, vegetables, grapes, and cotton are the leading crops. The fishing industry occupied about 3500 persons in 1928-29. Lace, cotton, and filigree are manufactured. In 1928, imports, including specie and bullion, totaled £3,999,109 and exports were £556,908. Expenditures of the British fleet and by tourists tend to balance the island's annual account. Revenue for the fiscal year 1928-29 totaled £875,147 and expenditure, £821,252.

Under the Constitution of 1921 local affairs are controlled by a legislature, consisting of the senate of 17 members, 10 of whom are appointed, and a legislative assembly of 32 elected members. There is a responsible ministry for local affairs.

A governor, appointed by the King, controls the naval, military, and air forces, Imperial interests, external relations and trade, coinage, immigration, and may veto local legislation. He is assisted by an appointed Executive Council and a Nominated Council, consisting of the Lieutenant-Governor, a legal adviser, and three officers of the military forces. Governor and Commander-in-Chief in 1930, General Sir John Du Cane (appointed 1927); Premier and Minister for Police and Justice, Lord Strickland of Sizergh. English and Italian are the official languages.

HISTORY. A dispute of thirty years' standing between Church and State in Malta reached a climax in 1930, resulting in the indefinite suspension of the Constitution on June 24, and the virtual severance of diplomatic relations between the Vatican and the British Government. Although primarily religious, the dispute was complicated by the Italian affiliations of the Roman Catholic hierarchy in Malta and the tendency of the Fascist press in Italy to treat Malta as an irredentist sphere. The pro-British faction in Malta charged that the Vatican, whether consciously or unconsciously, was encouraging a movement among the Italian element for union with Italy. The Vatican emphatically denied that such was its intent. The strength of the separatist movement was discounted by Lord Passfield, the British Colonial Secretary, in the House of Lords June 25. He said the Nationalist or pro-Italian party in Malta represented primarily a cultural movement in defense of the Italian language and traditions. It was pointed out, however, that one of the Nationalist leaders openly advocated union with Italy.

ORIGIN OF THE DISPUTE. The difficulties leading to the suspension of the Constitution had their immediate origin in March, 1929, when Father Carta, Italian head of the Minorite Order of Malta, sought to discipline Father Micallef, a Franciscan monk and British subject, by sending him to Sicily. Father Micallef appealed to Lord Strickland, the Prime Minister of Malta, who declared that the monk was being punished on a political charge primarily because of his pro-British sentiments and ordered that no passport be issued. Lord Strickland, himself a Catholic, was leader of the pro-British Constitutional party, which was victorious in the election of 1927.

When the Vatican upheld Father Carta and excommunicated Father Micallef, an acrimonious correspondence ensued between Lord Strickland and Cardinal Gasparri, the Papal Secretary of State. In May, 1929, at the suggestion of the British Government, the Vatican sent a British prelate, Mgr. Paschal Robinson, to Malta to investigate the situation and to open negotiations for a concordat. Among the terms proposed by Lord Strickland for incorporation in the concordat were: That the clergy should eschew political questions; that violations of the law by the clergy should be dealt with by civil authorities; that no foreign ecclesiastics should head religious orders in Malta; that responsible posts in the hierarchy be reserved for British subjects (including Maltese); and that the Church should recognize use of the Maltese language and encourage the preaching of sermons in English instead of in Italian. The unfavorable nature of Monsignor Robinson's report was forecast when, shortly after the apostolic delegate's return to Rome, Lord Strickland was declared *persona non grata* at the

Vatican, which declined to continue negotiations for a concordat while the Malta Premier was in power. The report was presented to the Holy See on June 16, 1929, and made public in a Vatican White Book issued June 21, 1930. In it Monsignor Robinson attributed the difficulties in Malta to Lord Strickland's "quarrelsome" nature and "overmastering love of power." He expressed the hope that the British Minister of Colonies would compel Lord Strickland to modify his policy or "eliminate him pacifically from the political field in Malta." He summed up the situation as follows:

It is not an exaggeration to say that Malta at present is subjected to a reign of terror and inquisitorial despotism in which the Opposition (Nationalist party) is disarmed, its newspapers muzzled, the law courts threatened, justice suspended, the Constitution in danger, the country in foment and the Church and religion openly flouted.

On June 4, 1930, the British Government issued a Blue Book on Malta, containing notes exchanged with the Vatican. It revealed that the Government considered the Vatican's refusal to negotiate with Lord Strickland "incompatible with friendly relations" and "nothing less than a claim to interfere in the domestic politics of a British colony." The British notes also expressed resentment at the issuance to the Maltese clergy of instructions which were considered a direct incitement to discredit and resist the Government.

On May 2, 1930, on the eve of the triennial elections, according to a summary by the Foreign Policy Association (May 30), the Bishops of Malta and Gozo issued a pastoral letter stating that no Catholic could vote for Lord Strickland, a candidate to succeed himself, or candidates supporting him in his fight against the rights and discipline of the Church without committing grave sin. Priests were forbidden to administer the sacraments to those who disobeyed. As the Maltese are devoutly Catholic and unaccustomed to question the edicts of the clergy, the election of a Nationalist ministry of Italian sympathies seemed assured. Upon the advice of the Privy Council of Malta, Sir John Du Cane, the Governor, ordered the elections postponed "until the danger of disorder is past." The hierarchy then placed a ban on the two leading organs of the Constitutional party, later removing it when the publishers agreed to discontinue criticisms of the Church's position in the dispute. To a protest of Nationalist leaders on May 7 against postponement of the elections, the Ministry replied May 13 that if the claim implied in the acts of the Church were accepted, "the people's right would *ipso facto* be transferred to the Bishops, who would alone have the power to select the members of the Maltese Parliament and Ministers."

The British Foreign Secretary informed the Vatican that the pastoral letter seemed "in the highest degree reprehensible to His Majesty's Government," but the Vatican, on May 12, upheld the Maltese Bishops in a communiqué published in *Osservatore Romano*. The Vatican's hostility was confined to Lord Strickland personally and to his persistent policy of "northernizing" some of the ancient religious customs of Malta. The effect of his policy, the communiqué stated, was to undermine the authority of the clergy and the faith of the people.

Factional bitterness aroused in Malta by these events increased when on May 23 Lord Strickland narrowly escaped assassination by John Miller, a member of the Nationalist party. Police

immediately raided the Nationalist club where Miller lodged. On June 8 an anti-clerical crowd threatened to storm St. John's Cathedral in Valletta, while Archbishop Caruana was celebrating Whitsunday high mass. The demonstrators were dispersed by police. A ban on public meetings was imposed by the Government on June 15 and on June 24 Premier MacDonald announced in the House of Commons that under the circumstances prevailing in Malta his Government "had no alternative but to sanction a temporary suspension of the Constitution." The decision was widely approved in Great Britain.

On the following day the Malta Court of Appeals ruled that Governor Du Cane had acted *ultra vires* in declaring the political crisis a "reserved" matter under the letters patent establishing the Constitution. The British Government met this challenge by promulgating on June 26 an Order in Council authorizing a temporary Government during the "state of emergency" and granting the Governor full power to make laws by ordinances. The existing Ministry was retained in office. The suspension of the Constitution, while approved by the Constitutionals, was denounced by the Nationalists. They ascribed it to "Protestant intolerance, bigoted prejudice against the Vatican, and Bolshevik influence in the Labor Government."

The deadlock between the Vatican and Great Britain continued to the end of the year. Great Britain made any resumption of negotiations conditional upon the issuance of orders by the Holy See to the Bishops of Malta and Gozo which would insure the electorate "complete freedom to exercise their political judgment." The Vatican refused to move until Great Britain repudiated Lord Strickland's policies or the latter publicly repented. The British Minister to the Vatican was transferred to Chile at the end of May, 1930, and the post was still vacant at the end of the year. Foreign Secretary Henderson informed the House of Commons June 23 that the Government "did not propose to be in any hurry" to appoint a new minister to the Vatican. See GREAT BRITAIN and VATICAN CITY under *History*. Consult "Malta: Church and State," *Foreign Affairs*, October, 1930.

MALTEN, mäl'ten, (MÜLLER), THERESE. A German dramatic soprano, died in Dresden Jan. 2, 1930. She was born in Insterburg, East Prussia, June 21, 1885, and studied with Gustav Engel in Berlin, making her début in Dresden in 1873 as Pamina in *The Magic Flute*. From that time on until her retirement in 1903 she remained a member of the Royal Saxon Opera House Company, with frequent leaves of absence for appearances in the principal European cities. In 1880 she was appointed chamber singer to the King of Saxony, and in 1882 Wagner conferred upon her the honor of selecting her as the original Kundry in *Parsifal*. Her repertory included all the great operas, but she was preëminent as an interpreter of Wagner's heroines.

MAN, EARLY HISTORY OF. See ANTHROPOLOGY.

MANAGER PLAN. See MUNICIPAL GOVERNMENT.

MANCHURIA, man-chōō'rě-ā. A vast region comprising one of the Chinese Outer Territories, extending from the Amur River south to China proper and from the Hingan Mountains on the west to Korea and the Ussuri River. Area, about 363,610 square miles; population, estimated

July 31, 1927, at 24,520,661. Approximately 1,500,000 new settlers entered Manchuria from China in 1929 and in 1930 the migration was believed even greater due to famine in western and northern China. The territory is divided into three provinces—Sheng-King or Fengtien, Kirin, and Heilungchiang. Capital, Mukden, with about 250,000 inhabitants.

With its vast areas of rich soil attracting millions of settlers from China, Manchuria in 1930 was the most rapidly developing frontier region of the world. The economic conflicts arising from the convergence there of population pressures from Soviet Russia, Japan, and China were recognized as one of the principal dangers to world peace. Primarily an agricultural land, its chief crops are soya beans, millet, wheat, and rice. The area under cultivation in 1928 was 81,718,945 acres, of which 19,193,765 acres were devoted to soy beans and 7,241,087 acres to wheat. Sugar beet and silk cultivation, and livestock raising were of increasing importance. Forests cover about 28,756,000 acres. Industries are confined to the larger cities and consist mainly of flour mills, bean-oil mills, soap works, sugar refineries, saw mills, distilleries, glass factories, and tanneries. There are rich mineral deposits of coal, iron, gold, silver, lead and cement. The Fushun deposits, 22 miles east of Mukden, contain in an area of 15 square miles about 1,200,000,000 tons of bituminous coal covered by approximately 5,000,000,000 tons of oil shale. In connection with open-pit mining of the coal there, the South Manchurian Railway Company placed in operation early in 1930 a plant for the treatment of the oil shale.

Index figures for the foreign trade of Manchuria show an increase from 100 to 728 during the period from 1907 to 1928, while the corresponding increase in the trade of China proper was from 100 to 279. For the fiscal year 1927-28 the total foreign trade amounted to 662,000,000 haikwan taels, an increase of 15,000,000 taels over the previous year (1 haikwan tael equaled \$0.71 in 1928). In 1930 there were 3865 miles of railway line in operation in Manchuria, including 111 miles of narrow gauge line. Some additional 833 miles were under construction. Of the lines in operation, the most important were the Chinese Eastern, 1364 miles, under joint Sino-Soviet control; the South Manchurian Railway, 695 miles; and the Peiping-Liaoning (Peking-Mukden), 392 miles within Manchuria. For the fiscal year ended Mar. 15, 1930, the South Manchurian Railway Company reported total railway receipts of 122,000,000 yen and total profits on railway operations of 39,800,000 yen. (1 yen equals \$0.498 at par.)

Business and commerce continued disturbed during 1930, as a result of the civil war in China proper. Manchuria remained under the domination of Gen. Chang Hseuh-liang, son of the former war lord, Gen. Chang Tso-lin. See CHINA, RUSSIA, and JAPAN under *History*.

MANDATES. See LEAGUE OF NATIONS; IRAQ; PALESTINE; SYRIA.

MANGANESE. There was an increase of about 11 per cent in shipments of manganese ore containing 35 per cent or more of metallic manganese from mines in the United States in 1930. The total was approximately 67,000 gross tons, valued at \$1,454,000, as compared with 60,379 gross tons, valued at \$1,612,357 in 1929, according to the U. S. Bureau of Mines. The shipments of metallurgical ore in 1930 amounted to about 55,800

gross tons, valued at \$1,040,000, as compared with 47,597 gross tons, valued at \$1,036,199 in 1929. Chemical ore shipments decreased from 12,782 gross tons, valued at \$576,158, in 1929, to about 11,200 gross tons, valued at \$414,000 in 1930. The increase in 1930 was mainly due to the increased shipments of concentrates from the plants of the Georgia Manganese & Iron Co., at White, Ga., and the Hy-Grade Manganese Production & Sales Corp., at Star Tannery, Va., and to the shipments to consumers of crude rhodochrosite from the Emma mine, at Butte, Mont. The plant of the Domestic Manganese & Development Co., at Butte, Mont., which sintered rhodochrosite from the Emma mine of the Anaconda Copper Mining Co., was closed June 30, 1930, and consequently the production and shipments of sinter were substantially smaller than in 1929. Shipments of high-grade metallurgical ore from Arkansas were 3300 tons in 1930; from Georgia 19,800 tons; from Montana 24,100 tons; and from Virginia 3500 tons. These four States therefore contributed 50,700 tons of metallurgical ore, or 91 per cent of the total.

In 1930 the United States imported 582,365 gross tons of ore containing 281,459 gross tons of metallic manganese, as compared with 664,269 gross tons of ore containing 323,415 tons of metallic manganese during 1929. The imports from Soviet Russia amounted to 231,564 gross tons of ore and (for 11 months) 102,440 tons of metallic manganese, compared with 329,336 gross tons containing 169,121 tons of metallic manganese in 1929. A sharp increase in importations from British West Africa (Gold Coast) occurred. There were also from Russia, Brazil, and India noteworthy imports.

The U. S. Tariff Act of 1930 continued the duty of 22.4 cents per unit on manganese ore and extended it to cover ores containing down to 10 per cent of metallic manganese. The imports of the Russian ore affected most seriously American manganese plants and prices fell during the year, with the Soviet Ore Trust increasing its production and sales and offering its output on the world market at a reduced price, amounting in some cases to little more than 50 cents a unit, delivered free of duty, freight and other charges at ferromanganese furnaces in the United States. It was alleged at the end of the year that Russian manganese was being dumped at a price that rendered it impossible for American producers to compete, and there was invoked an embargo on the Russian supply, as it was charged it was mined by forced or convict labor.

The production of steel in 1930, estimated at 41,320,000 tons in comparison with 58,433,473 tons in 1929, accounted for the decreased demand for ferromanganese and in turn for manganese ore. The production of ferromanganese in 1930 was estimated at approximately 280,000 tons, compared with 339,205 tons in 1929. The rate of consumption of manganese ore in the manufacture of ferromanganese, as reported for 1929 by ferromanganese producers, was 1.894 tons of ore per ton of product. At this rate the production of ferromanganese in 1930 would have required about 530,000 tons of ore. About 50,000 tons of manganese alloys, equivalent to 90,000 tons of ore (figured on the same percentage of recovery as in domestic manufacture), was imported for consumption in 1930. This figure added to the requirements of domestic ferromanganese producers (530,000 tons) would indicate that the total metallurgical requirements of the United

States in 1930 were probably in the neighborhood of 620,000 tons of manganese ore.

Shipments of domestic ore containing from 10 to 35 per cent of manganese (ferruginous manganese ore) in 1930 were 84,000 gross tons, valued at approximately \$592,000, as compared with 78,191 tons, valued at \$451,843 in 1929. The domestic shipments of ore containing from 5 to 10 per cent of manganese (manganiferous iron ore) in 1930 were 592,000 tons, valued at \$807,000, as compared with 1,110,067 tons, valued at \$2,822,623 in 1929.

MANITOBA, mǎn't-tǎ'ba. The easternmost of the Prairie Provinces of Canada, situated west of Ontario and Hudson Bay and east of Saskatchewan. Capital, Winnipeg.

The area is 251,832 square miles and the estimated population June 1, 1930, was 671,500 (639,056 at census of 1926). The leading cities, with the populations in 1926, are: Winnipeg, 191,998 (Greater Winnipeg, 280,000); Brandon, 16,443; St. Boniface, 14,187. In 1928, births totaled 14,504; deaths, 5396; marriages, 5170. The provincial schools in 1928-29 enrolled 150,883 pupils. The University of Manitoba at Winnipeg had 2747 full-course students in 1927-28.

Agriculture, mining, and manufacturing are the chief industries. The area devoted to field crops in 1929 was 6,687,163 acres and the yield was valued at \$88,335,000 (\$113,492,000 from 6,744,407 acres in 1928). The total agricultural production in 1928 was about \$148,867,000. Production of the chief crops (1929) was: Spring wheat, 31,565,000 bushels; oats, 30,740,000 bushels; barley, 36,518,000 bushels; rye, 1,309,000 bushels; potatoes, 1,161,000 cwt.; hay and clover, 570,000 tons. Mineral production in 1929 rose to \$4,925,403 from \$4,186,853 in 1928, gypsum, gold, and copper being the chief minerals extracted. The 1928 fish catch was valued at \$2,240,314. In the same year there were 871 factories, employing 25,166 workers and paying \$32,569,223 in salaries and wages. The gross value of manufactured products was \$159,435,094. Hydraulic horse power developed in 1929 was 311,925, while the total available horse power at ordinary minimum flow was estimated at 3,309,000.

Preliminary figures for 1929 showed ordinary receipts of \$12,150,490 and ordinary expenditures of \$12,344,493. The funded debt on Apr. 30, 1929, was \$81,964,344, while estimated assets were \$129,663,640. Railway mileage on Jan. 1, 1929, totaled 4293. Government is administered by a lieutenant-governor and a legislative assembly elected for five years. The Province is represented in the Dominion Parliament by six members in the Senate and 17 in the House of Commons. Lieutenant-Governor in 1930, J. D. McGregor; Premier, President of the Council, and Provincial Treasurer, John Bracken. In the Dominion general election of July 28, 1930, Manitoba returned 11 Conservatives, 3 Liberal-Progressives, 2 Laborites, and 1 Liberal to the House of Commons at Ottawa. See CANADA.

MARIETTA COLLEGE. A nonsectarian, co-educational institution in Marietta, Ohio; founded in 1835. The total registration for the autumn term of 1930 was 346, of whom 216 were men

and 129 women. The faculty numbered 35. The productive funds amounted to \$1,348,912, and the income for the year to \$152,378. The alumni contributed \$8588 to the current expenses of the college through the Marietta Fund. The buildings erected during the year included the Administration Building; the Field House, for men; and Dorothy Webster Hall, a dormitory for women. The library contained 97,313 volumes. President, Edward Smith Parsons, L.H.D., LL.D.

MARQUETTE UNIVERSITY. An institution of higher learning for men and women, under Roman Catholic direction, in Milwaukee, Wis.; organized as a college in 1881 and chartered as a university in 1907. It comprises the following colleges and schools, for which registrations of regular students in the autumn of 1930 were as follows: Graduate school, 250; liberal arts, 824; business administration, 288; dentistry, 182; engineering, 513; journalism, 133; law, 226; medicine, 320; speech, 17 (with 900 students enrolled in speech courses from other schools and colleges of the university). In addition, there were 219 students in evening courses in business administration, 23 in dental hygiene, 499 in teachers' courses, and 494 in high school, making a grand total of 3994 enrolled in the university. The registration for the 1930 summer session was 853. The faculty in the autumn numbered 367 members, excluding 26 high school instructors. Endowment funds amounted to \$2,822,099, excluding Jesuit service endowment estimated at \$1,350,000. The income for the year was \$1,193,393 and was received from the following sources: Endowment income, \$251,031, which includes \$81,187, representing the value of the services rendered gratis by 28 Jesuit priests in 1929-30; tuition, \$659,124; private benefactions for permanent improvements, lands, buildings, and so forth, \$9928; private benefactions for increase of endowment, \$73,233; miscellaneous receipts, \$200,075. The library contained 53,800 volumes. President, the Rev. William M. Magee, S.J., A.M., LL.D.

MARRIAGE. See ANTHROPOLOGY.

MARRIAGE AND DIVORCE. The Department of Commerce in October reported that, on the basis of an estimated population for Continental United States of 121,455,000, the number of marriages per thousand population was 10.1 in 1929 as against 9.9 in 1928. There was, too, an increase in the divorce rate, the rate per thousand population in 1929 being 1.66 as against 1.64 in 1928. According to the Census Bureau, New York had the lowest divorce rate in 1929 of any State in the country. Here the ratio of divorces to marriages was 1 divorce to every 23.6 marriages. In the District of Columbia the ratio was 1 divorce to every 41 marriages. New York marriages in 1929 totaled 121,535, the greatest number in the history of the State, and an increase of 7187 or 6.3 per cent over the year 1928. For

every 1000 persons in New York State in 1929 there were 9.8 marriages. The number of divorces was 5143 in 1929 as compared with 5293 in 1928 or a decrease of 2.8 per cent. In New Jersey there were 3001 divorces in 1929 as against 3170 in 1928, showing a decrease of 5.3 per cent. Marriages increased from 29,120 in 1928 to 30,257 in 1929, or an increase of 3.9 per cent. In Connecticut there were 1220 divorces in 1929 and 1276 divorces in 1928, or a decrease of 4.4 per cent. In the same State 12,303 marriages took place in 1929 as against 11,650 in 1928, or an increase of 5.6 per cent. In the whole country there took place 1,232,559 marriages in 1929 as compared with 1,182,497 in 1928, or an increase of 4.2 per cent. In 1929 in the country a total of 201,475 divorces took place as compared with 195,939 divorces in 1928. This was an increase of 2.8 per cent. There was one divorce for every 6.1 marriages in the country. In Nevada there was one divorce for every 2.3 marriages; in Oregon there was one divorce for every 2.6 marriages; in

Michigan the ratio was one divorce to every 3.1 marriages; in Wyoming the ratio was 2.8; in California and Texas, 3.4; in Montana, 4.1; in Ohio and Oklahoma, 4.3; in Florida, 4.8; in Maine, 4.9; in Iowa, 5.0; in Kansas, 5.1; in Illinois, 5.3; in Indiana, 5.4; in Colorado, 5.5; in Nebraska, 5.9; in New Jersey and Connecticut, 10.1; in Georgia, 13.9. There were no divorces in South Carolina because of the absence of a divorce law in this State. There were 4400 marriages annulled in 1929 as compared with 4563 in 1928. California reported 1476 annulments, more than one-half of the total for the entire country, New York's total was 1029. Tabular summaries are shown above and on page 458.

MARTINIQUE, mār'tēnek'. One of the Lesser Antilles group of the West Indies, forming a colony of France. Area, 385 square miles; population, in 1927, 234,695, of whom 10,000 were whites, and the remainder Negroes, mulattoes, East Indians, and Chinese. Capital and chief port, Fort-de-France, with a population of 43,338.

* A minus sign denotes decrease.

Sugar, rum, cacao, coffee, tobacco, pineapples, and bananas are the chief products. Imports in 1927 were valued at 212,594,604 francs and exports at 229,373,089 francs. Sugar and rum constituted nearly 90 per cent of the value of all exports. The budget for 1927 balanced at 66,103,756 francs. The colony is administered by a governor, a general council, and an elected municipal council; it sends one Senator and two Deputies to the French Parliament. Governor in 1930, L. Gerbinis.

MARYLAND. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 1,631,526. The population on Jan. 1, 1920, was 1,449,661. The capital is Annapolis.

AGRICULTURE. The accompanying table gives the acreage, production, and value of the principal crops in 1929 and 1930.

Farms in the State numbered 43,313 in 1930, as against 49,001 in 1925 and 47,908 in 1920.

MINERAL PRODUCTION. Coal, for years the State's leading mineral product, was less actively

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------------|------|---------|-------------------------|--------------|
| Corn | 1930 | 530,000 | 7,791,000 | \$ 7,246,000 |
| | 1929 | 520,000 | 18,890,000 | 16,702,000 |
| Wheat | 1930 | 509,000 | 11,707,000 | 9,014,000 |
| | 1929 | 536,000 | 9,380,000 | 11,068,000 |

^a Tons. ^b Pounds.

mined in 1928 and showed a slight further diminution for 1929. The State's production was, for 1929, 2,649,114 net tons and for 1928, 2,686,979; in value, \$4,640,000 for 1929 and \$4,954,000 for 1928. Clay products totaled \$4,586,625 for 1928 and \$2,503,935 for 1927; the rise in the total was wholly ascribable to the fact that the earlier total did not include pottery, which was included for 1928 and by itself totaled \$2,424,905. Much of

the coal of the State's output was coked, the yearly quantities being 1,393,052 short tons for 1929 and 1,186,398 for 1928, of which official reports did not state the value. Pig iron, for which likewise no separate figures of value were available, was produced to the quantities of 1,111,219 long tons for 1929 and 971,832 long tons for 1928. The total value of the yearly mineral product of the State, coke and pig iron not included, was \$18,417,781 for 1928; for 1927, \$20,469,294.

FINANCE. State expenditures in the year ended Sept. 30, 1928, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$18,404,870 (of which \$3,234,423 was for local education); for interest on debt, \$1,387,810; for permanent improvements, \$9,518,671; total, \$29,567,076 (of which \$10,555,721 was for highways, \$3,998,952 being for maintenance and \$6,556,769 for construction). Revenues were \$27,552,766. Of these, property and special taxes formed 28.6 per cent; departmental earnings and remuneration to the State for officers' services, 14.7; sales of licenses, 44.0 (including taxes of \$4,558,444 on sales of gasoline).

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 1438.82. No additional construction of line or trackage in 1930 was reported.

EDUCATION. Movement in the development of public-school education followed the lines, during the year, of higher requirements for high-school teachers' certificates, of a stronger supervisory programme, and of the commencement of work in vocational rehabilitation. A survey with a view to starting special classes for handicapped children in the counties was conducted, as reported in the *Journal* of the National Education Association. The number of persons of school age (5 to 18 years) in the State was stated in 1930 as 369,027. There were enrolled in the public schools 277,459 pupils. Of these, 235,163 were in common schools or elementary grades, and 42,296 were in high schools. Expenditures of the year for public-school education were: current, \$18,544,774; capital outlay, \$3,958,510. Yearly salaries of teachers averaged, in elementary grades, \$1474 for whites and \$1113 for colored teachers; in high schools, \$1817 for whites and \$1741 for the colored.

LEGISLATION. A brief special session of the Legislature was held on July 29 for the sole purpose of changing the dates of registration for voters, which had been found to coincide, for 1930, with Jewish holy days, namely, September 23 and 24 and October 7 and 8. The registration days were accordingly altered to enable Jewish citizens to vote without violating their customs. See CHILD LABOR.

POLITICAL AND OTHER EVENTS. The dispute over the boundary between Maryland and Virginia along the bed of the lower Potomac and adjacent waters was settled by an agreement reached in accordance with the findings of two investigators, who had been appointed in 1928, one by the Governor of each State. The line, subject to ratification of the agreement by Congress, was set in accordance with an award of 1877, following the principle that it should run from headland to headland, in each case touching the low-water mark on the Virginia shore. The dispute had remained unsettled since 1661, despite recurrent efforts to conclude it. The submerged lands involved had acquired in the years preceding 1930 a considerable value as oyster beds.

ELECTIONS. Governor Albert C. Ritchie, Democrat, was elected on November 4 for a fourth term, receiving a total (official) of 283,639 votes, to 216,864 for Broening (Republican). The Republicans lost their two places in the State's delegation of six United States Representatives. Democratic majorities were again elected to the State Legislature. A measure instructing the General Assembly to call a constitutional convention was affirmed by the popular ballot, chiefly by the Baltimore vote.

OFFICERS. Governor, Albert C. Ritchie; Secretary of State, David C. Winebrenner, 3d; Treasurer, J. M. Dennis; Auditor, Edmund R. Stewart; Comptroller, William S. Gordy, Jr.; Attorney-General, William Preston Lane, Jr.; Superintendent of Schools, Albert S. Cook.

JUDICIARY. Court of Appeals: Chief Judge, Carroll T. Bond; Associate Judges, John R. Pattison, T. Scott Offutt, William H. Askins, Francis N. Parke, Hammond Urner, W. M. Digges, D. Lindley Sloan.

MARYLAND, UNIVERSITY OF. A coeducational, State institution of higher learning at College Park and Baltimore, Md.; founded in 1807. The enrollment for the autumn term of 1930 was 2916, distributed as follows: Agriculture, 163; arts and sciences, 620; education, 148; engineering, 316; home economics, 82; graduate school, 152; dentistry, 410; law, 150; medicine, 413; nursing, 112; and pharmacy, 351. The enrollment for the 1930 summer session at College Park was 745. The faculty in the autumn numbered 468. The total income from appropriations and other receipts amounted to \$3,101,519. The library contained 66,002 volumes. During 1930 a new library building costing approximately \$225,000 was under construction. President, Raymond A. Pearson, D.Agr., LL.D.

MARYLAND TERCENTENARY. See under CELEBRATIONS.

MASHONALAND. See RHODESIA.

MASSACHUSETTS. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 4,249,614. The population by the State census of 1925 was 4,144,205. The population on Jan. 1, 1920, was 3,852,356. The capital is Boston.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------------|------|---------|--------------|--------------|
| Hay | 1930 | 403,000 | 561,000 * | \$10,508,000 |
| | 1929 | 478,000 | 705,000 * | 13,442,000 |
| Cranberries .. | 1930 | 14,000 | 380,000 † | 8,800,000 |
| | 1929 | 14,000 | 400,000 † | 5,300,000 |
| Tobacco | 1930 | 8,100 | 11,397,000 * | 3,499,000 |
| | 1929 | 8,000 | 11,600,000 * | 4,942,000 |
| Corn | 1930 | 89,000 | 1,794,000 | 1,794,000 |
| | 1929 | 40,000 | 1,560,000 | 2,106,000 |
| Potatoes | 1930 | 12,000 | 2,400,000 | 2,640,000 |
| | 1929 | 12,000 | 1,596,000 | 2,873,000 |

* Tons. † Barrels. ° Pounds.

Farms in the State numbered 25,600 in 1930, their number having fallen greatly below that for 1925, which was 33,454. For 1920, it was 32,001.

MINERAL PRODUCTION. Stone of divers grades continued to supply somewhat less than half of the entire value of the yearly mineral production. In 1928 stone production was active, there being quarried 2,879,990 short tons, as against 2,629,890 in 1927; in value, \$7,723,247 for 1928 and

\$7,291,969 for 1927. The clay products attained, for 1928, the value of \$2,829,610; for 1927, of \$2,398,474. Lime was produced on a somewhat diminishing scale: 171,944 short tons in 1928 and 132,000 short tons (estimated) in 1929; in value, \$2,026,019 for 1928 and, for 1929, \$1,486,000 (estimated). There was a considerable industry in coking and in production of pig iron in some of the industrial centres. The total value of the mineral products of the State, excluding coke and pig iron, both produced from imported materials, was \$16,234,037 for 1928; for 1927, \$16,295,373.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 2015.94. No additional construction of line or trackage in 1930 was reported.

EDUCATION. In conformity with the regulation issued by the State Board of Education in 1929, requiring a course of three years in a State Normal school as qualification for the elementary teacher's diploma, the minimum course in all the normal schools of the State was lengthened in 1930 to three years, from two. The statutory requirement that every town or city having so many as five crippled children there residing should furnish them with special instruction came into operation. The school population as stated for the year ending June 30, 1930, comprised 845,900 persons between the ages of 5 and 16 years; there were also by estimate 5096 illiterate minors above 16 years of age. In the public schools were enrolled 747,056 pupils. Of these, 518,933 were in elementary grades; 95,146 were in junior high schools; and 132,977 were in high schools. The expenditures of the year for public-school education totaled \$70,792,177. The year's salaries of all public-school teachers, principals and supervisors averaged \$1889.

CHARITIES AND CORRECTIONS. Central authority over State institutions and activities for the care or custody of individuals was divided among four State bodies. The Department of Public Welfare, headed by a commissioner, Richard K. Conant, and an advisory board, administered State aid to mothers, children and persons without legal settlement; supervised housing, private charitable bodies, maternity hospitals, homes for the aged, and homes for infants; had custody of minor wards of the State (to the number of 6432 on Dec. 1, 1930); and had authority over five State institutions. These were: State Infirmary, Tewkesbury, population on Dec. 1, 1930, 3031; Massachusetts Hospital School, Canton, 314; Lyman School for Boys, Westborough, 488; Industrial School for Girls, Lancaster, 305; Industrial School for Boys, Shirley, 315. Under the Department of Mental Diseases were insane hospitals at Worcester, Taunton, Northampton, Danvers, Westborough, Medfield, Palmer, and Boston; also, State schools at Waltham, Wrentham, Grafton, and Belchertown. The Department of Public Health had authority over sanatoria at Rutland, North Reading, Lakesville, and Westfield, and the Norfolk State Hospital. The Commissioner of Correction had charge of the State Prison, Charlestown; Reformatory, Concord Junction; Reformatory for Women, Framingham; State Farm, Bridgewater.

Fall River encountered difficulty in its municipal finances in 1930. These were attributed to depression in the local cotton textile industry, on account of which the municipality could not collect anticipated tax receipts from some mills. It

was reported to have resorted to seizure of certain mill properties to satisfy tax bills. Nevertheless at the end of November it was in default on a temporary revenue loan of \$1,600,000.

LEGISLATION. The General Court convened in regular annual session on January 1 and was prorogued on May 29. There was also held a special session of one day on October 20 to observe the 300th anniversary of the establishment of the Legislature. The most significant act of the regular session was a so-called Old Age Pension statute. It actually provided only an approach to a pension for the aged, as it created no fixed schedule of payments. In other respects it bore a resemblance to the New York Old Age Pension act of 1930. The State Department of Public Welfare was charged with the duty of rendering "adequate" assistance to deserving citizens of 70 years or over who had resided in the State for 25 years. Local welfare boards were to determine what assistance might be required, in each case considering the resources of the applicants and the ability of children or others to support them. Beneficiaries were to be kept so far as possible in their own places of residence. See OLD AGE PENSIONS.

The erection of a war memorial for western Massachusetts on Mount Greylock was authorized, the monument to take the form of a giant beacon. The Legislature failed to pass a measure for a proposed war memorial in the eastern part of the State and left the proposal of a memorial on an island in the Charles River to consideration by a commission to report to a future session. A measure was enacted to regulate and expedite the abolition of grade crossings of railroads and highways. The much criticized law against obscene books, which had been invoked against some standard literary works, was modified. It had prohibited the sale of books containing obscene words or phrases; it was made to prohibit the sale of books "which are obscene," thus removing the necessity to rule against a book on account of an isolated passage or passages. Provisions were made for a subway extension in Boston, under Governor Square. The Civil Service Commission was deprived of authority to pass on appointees to be heads of departments of the city government of Boston. A board of tax appeals was created, but much tax legislation failed of passage; among other measures, a proposed constitutional amendment to give the State the power to classify tangible personal property for taxation at a flat rate throughout its territory, which fell by reviewing a vote numerically favorable but less than the required majority of all the two houses' elected members. A proposed amendment to permit a graduated income tax was placed on file for revival in the session of 1931.

POLITICAL AND OTHER EVENTS. In the suit of Connecticut against Massachusetts before the U. S. Supreme Court, to prevent the latter State from drawing water from the Ware and Swift rivers for municipal uses, the Court's master, Charles W. Bunn, reported in June, finding for Massachusetts in all the disputed matters of fact save one, relating to contingent damages to a water-power producer in Connecticut. In Boston and other centres of early settlement were held in August and later in the year celebrations to mark the tercentenary of colonization. Work was started in Boston on July 21 on a \$3,000,000 subway extension under Governor Square, designed

to continue through Commonwealth Avenue and Beacon Street. Owing to disclosures incident to an investigation of the pensioning of a former head of the liquor squad of the Boston police department, Governor Allen demanded and received on May 5 the resignation of Police Commissioner Herbert A. Wilson. At Harvard University were opened in the autumn session Lowell and Dunster houses, the first two of seven units to be erected under the Harkness donation of \$15,000,000.

ELECTIONS. Marcus A. Coolidge of Fitchburg, Democrat, was elected on November 4 to the U. S. Senate, the State thus sending to the Senate of the Seventy-second Congress two Democratic Senators, an occurrence without precedent in its history. Coolidge's vote, as unofficially totaled, was 651,088, to 538,651 for former Senator William M. Butler, Republican. For Governor, Joseph B. Ely of Westfield, Democrat, defeated Governor Frank G. Allen, Republican, running for reelection, by 606,175 votes (unofficial) to 589,779. The composition of the State's delegation in the House of Representatives remained unaltered, 12 Republicans and 4 Democrats. The Republicans elected William S. Youngman Lieutenant-Governor and likewise filled the offices of Secretary of State and Attorney-General; Democrats were elected State Treasurer and Auditor. Republican majorities in the Legislature were somewhat cut down. A measure submitted to popular vote by the initiative and carried by some 270,000 majority repealed the State act for the enforcement of Prohibition, the repeal to become effective in 30 days.

OFFICERS. Governor, Frank G. Allen; Lieutenant-Governor, William S. Youngman; Secretary of the Commonwealth, Frederic W. Cook; Treasurer, John W. Haigis; Auditor, A. B. Cook; Attorney-General, Joseph E. Warner; Commissioner of Education, Payson Smith; Commissioner of Public Welfare, Richard K. Conant.

JUDICIARY. Supreme Judicial Court: Chief Justice, Arthur Prentice Rugg; Associate Justices, John Crawford Crosby, Edward Peter Pierce, James Bernard Carroll, William C. Wait, George A. Sanderson, Fred Tarbell Field.

MASSACHUSETTS AGRICULTURAL COLLEGE. A State institution for agricultural and scientific training in Amherst, Mass.; founded in 1867. The enrollment in 1930 was 1182, distributed as follows: Graduate school, 62; four-year B.S. course, 645; two-year course in practical agriculture (Stockbridge School), 242; short courses, 79; and summer school, 154. There were 195 members on the faculty, including 111 engaged in resident teaching, 60 in research at the experiment station, and 24 in extension service in agriculture and home economics. The income, amounting to \$1,339,565 in 1930, was received from the following sources: State appropriation, \$1,027,000; Federal appropriation, \$173,305; and endowment and trust funds, \$139,260. The library contained approximately 90,000 volumes. A building for the physical education department was under construction in 1930, funds being raised by contributions from alumni and by State appropriation. President, Roscoe W. Thatcher, D.Agr., LL.D.

MASSACHUSETTS BAY TERCENTENARY. See CELEBRATIONS.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY. A nonsectarian institution for scientific and technical education in Cambridge, Mass.; founded in 1861. The enrollment for the

autumn of 1930 was 3209, including 539 graduate students. For the summer session, the registration was 1656. There were 240 members on the faculty and 323 others on the active staff of the institute. The productive funds amounted to \$33,150,000; and the income for the year was \$3,515,200 received from various sources, as follows: Funds, \$1,702,800; student fees, \$1,267,800; miscellaneous, \$544,600. The book value of land and buildings in Boston and Cambridge was \$14,083,000. The library contained 262,566 volumes. Three new dormitory units housing 210 students were completed in 1930. President, Karl Taylor Compton, D.Sc., D.Eng., Ph.D., LL.D.

MATABELELAND. See RHODESIA.

MATERNAL HEALTH. See CHILD WELFARE.

MATERNITY PROTECTION. In 1919 the International Labor Conference, held at Washington, adopted a draft convention calling upon the member nations to write on their statute books laws creating maternity benefits for the protection of women before and after childbirth. Under the convention a woman employed in industry was not to be permitted to work during six weeks after her confinement, and there was also to be allowed an absence of six weeks before confinement on production of a medical certificate indicating that such rest was necessary. In the national laws adopted as a result of this draft convention, the rest periods allowed ranged from four to twelve weeks in all. The draft convention required that the position of the expectant mother be retained open for her during the periods of rest. The convention allowed, too, the extension of the rest period during which the employer was denied the right of dismissing the expectant mother.

In the 10 years that had elapsed since the adoption of the convention, ratification had been made in a large number of countries, the more prominent of which were Argentina, Australia, Austria, British Columbia (Canada), China, Czechoslovakia, Denmark, Estonia, Finland, France, Germany, Great Britain, Hungary, Japan, Italy, New Zealand, Norway, South Africa, Spain, Sweden, Switzerland. In France the law applies to industry and commerce, allows a rest period of 12 weeks before confinement, permits an extension, precludes dismissal and furnishes compulsory crèches. In Germany the law applies only to industry, allows a rest period of six weeks before and after confinement, permits an extension, precludes dismissal. In Great Britain the law is applicable to industry only, allows no rest period antecedent to confinement, but provides for four weeks following confinement. A number of countries make provision for cash and medical benefits and this is largely due to the fact that benefits arise out of the compulsory sickness insurance laws on statute books. In most of these countries the benefits are derived from the public or social insurance funds. Thus, in Australia there are cash benefits to all expectant mothers; in France there are cash and medical benefits paid out by the insurance fund; in Germany the same situation holds; the same is true of Great Britain, the Irish Free State, Italy, Japan, Luxemburg, Poland, Spain, Sweden, Yugoslavia.

AUSTRALIA. It is interesting to examine the cost of maternity protection in the large industrial nations. In Australia, in the fiscal year ending June 30, 1930, a total of 132,304 claims for maternity allowances were paid and the money

payment totaled \$3,219,287. The maternity allowance system has been in vogue in this commonwealth since 1912. In the 17 years covered by the period 1912-29, there had been presented 2,230,000 claims for maternity allowances, of which 2,220,728 have been paid. The total allowances thus granted reached the figure, in this interval, of \$54,035,854.

MATHER, STEPHEN TYNG. An American manufacturer and public official, died in Brookline, Mass., Jan. 22, 1930. He was born in San Francisco, Calif., July 4, 1867, and was graduated from the University of California in 1887. After acting as reporter on the *New York Sun* for six years, he became, in 1894, Chicago manager of the Pacific Coast Borax Company. He was among the first business men to realize the psychology of advertising and inaugurated several trade slogans, including the famous "Twenty-Mule Team." He severed his connection with the Pacific Coast Borax Company in 1903 and later formed the Sterling Borax Company, of which he was president. In 1915 his interest was aroused in the national parks, and he accepted the invitation of Franklin K. Lane, then Secretary of the Interior, to improve the system. After serving as an assistant in the Department of the Interior for two years, he became, in 1917, first director of the National Park Service, with authority to develop it. He more than satisfied expectations and under his direction the National Park Service made extraordinary progress. At the time of his resignation in 1929 seven new parks had been created: Hawaii, Lassen Volcanic, Mount McKinley, Acadia (formerly Lafayette), Grand Canyon, Zion, and Bryce Canyon. The accessibility of the national parks also was improved, and a more general knowledge of and interest in them was stimulated. In recognition of his efforts he received in 1926 the gold medal of the National Institute of Social Sciences and in 1928 the Pugsley gold medal of the American Scenic and Historic Preservation Society. The LL.D. degree also was conferred on him by George Washington University in 1921 and the University of California in 1924.

MAURITANIA. A colony in French West Africa, with an area of 347,000 square miles and a native population of 296,516 (300 Europeans). The budget for 1929 was 12,843,500 francs. See FRENCH WEST AFRICA.

MAURITIUS, mā-rīsh'ī-ūs. An island in the Indian Ocean, 500 miles east of Madagascar, forming with adjacent small islands a crown colony of Great Britain. Area, about 720 square miles; estimated population at end of 1928, 404,802, most of whom were Indians. Port Louis, the capital and largest city, had 54,464 inhabitants in 1928. Curepipe, population 17,770, is the residential centre for Europeans. At the end of 1928 there were 57 Government schools, with 13,371 pupils, and 93 aided schools, with 18,680 pupils.

Sugar is the main crop, one-quarter of the island being devoted to its cultivation. Production in 1929-30 was estimated at 240,000 metric tons. Low prices in 1930 aroused a demand for Government aid to the industry. (See *GREAT BRITAIN* under *History*.) Coconuts, cacao, tobacco, coffee, aloe fibre, tea, and vanilla also are grown. In 1928, exports totaled £3,158,094 and imports, £3,295,853. For 1927-28, revenue was estimated at 15,308,918 rupees and expenditure at 16,725,513 rupees (1 rupee equaled about \$0.36). There were 144 miles of railway. Vessels

entered in 1928 numbered 236 of 650,369 tons; cleared, 235 of 647,446 tons. The colony is under a governor, aided by an executive council and a council of government, the latter having a minority of elected members. Governor in 1930, W. E. Francis Jackson, appointed March, 1930.

MAWSON, SIR DOUGLAS. See POLAR RESEARCH.

MAY, SIR WILLIAM HENRY. A British naval officer, died in Coldstream, England, Oct. 7, 1930. Born July 31, 1849, he entered the navy at 14 and passed through the grades of lieutenant (1871), commander (1881), captain (1887), rear admiral (1901), vice admiral (1905), and admiral (1908), to admiral of the fleet in 1913. He was a member of the Arctic expedition of 1875-76; became director of naval ordnance and a Lord of the Admiralty in 1901; commanded the Atlantic fleet from 1905 to 1907; was second Sea Lord in 1907-09; commanded the home fleet for two years; and then was commander-in-chief at Plymouth from 1911 to 1913. Created a Knight Commander of the Royal Victorian Order in 1904, a Knight Commander of the Bath in 1906, a Knight of the Grand Cross of the Bath in 1911, he was retired from the naval service in 1919.

MAYOTTE (mā-yōt') AND COM'ORO ISLANDS. An archipelago midway between Africa and the northern end of Madagascar, belonging to France and administered by the Governor-General of Madagascar. Capital, Dzaoudzi (111 inhabitants). Total area, about 790 square miles; population in 1928, 126,208 (about 800 Europeans). The area of Mayotte is 140 square miles, and the population (1925) about 12,674. Vanilla is one of the chief products; others are sugar, copra, aloes, and perfumes.

MEAT. See LIVESTOCK; FOOD AND NUTRITION.

MECHANICAL ENGINEERS, THE AMERICAN SOCIETY OF. An organization founded in April, 1880, to promote the art and science of mechanical engineering and the allied arts and sciences. It includes 16 professional divisions, organized on the basis of a common interest in a branch of engineering within the scope of the society: Aeronautics, applied mechanics, fuels, hydraulic, iron and steel, machine-shop practice, management, materials handling, national defense, oil and gas power, petroleum, power, printing industries, railroad, textile, wood industries. In 1930, 72 local sections had been established in industrial centres throughout the United States, and 106 student branches had been formed in engineering colleges and technical schools. At the beginning of its fiscal year on Oct. 1, 1930, the total membership of the society was 20,011.

The celebration of the fiftieth anniversary of the founding of the society was held Apr. 5-6, 1930, in New York City at the headquarters of the society, at the offices of the *American Machinist*, and in Hoboken, N. J., at the Stevens Institute of Technology, its birthplace, and April 7-9 in Washington in the national council chamber of the United States Chamber of Commerce. Among the prominent speakers were: Dr. Robert A. Millikan, of the California Institute of Technology, who spoke on the bond between pure physics and engineering; Charles M. Schwab, a past president of the society, who acted as toastmaster at the welcoming dinner in New York City; Edward J. Mehren, vice-president of the McGraw-Hill Publishing Company, who offered the felicitations of the engineering press; and Robert I. Rees, president of the Society for the

Promotion of Engineering Education, who spoke on behalf of the educational institutions of the United States. A highly-praised feature of the celebration was the pageant *Control*, written by Prof. George Pierce Baker, of Yale University, to illustrate the development of mechanical engineering, which was presented by undergraduates of the Stevens Institute of Technology on April 5.

At the celebration in Washington five medals were presented to leading engineers, two of which—the Hoover Gold Medal and the Daniel Guggenheim Medal—were awarded for the first time. The recipients were: Hoover Gold Medal, Herbert Hoover for his civic and humanitarian achievements; Daniel Guggenheim Medal, Orville Wright for design and construction, with his brother, of the first successful engine-propelled airplane; Gantt Gold Medal, Fred J. Miller for application on a large scale, in the Remington typewriter factories, of sound principles of scientific management; A.S.M.E. Medal, William LeRoy Emmet for his contributions in the development of the steam turbine, electric propulsion of ships, and other power-generating apparatus; and Melville Medal, Joseph Wickham Roe for his paper, "Principles of Jig and Fixture Practice," read at the society's annual meeting in 1928. The medal struck in honor of the society's fiftieth anniversary was presented to the following, selected by the engineering profession of their countries: Ludwig Erhard (Austria); Fédération des Associations Belges d'Ingénieurs (Belgium); Brig.-Gen. Charles H. Mitchell (Canada); Julio Garzon Nieto (Colombia); Stan Spacek (Czechoslovakia); Georges Claude (France); Conrad Matschoss (Germany); Loughnan St. L. Pendred (Great Britain); Luigi Luigi (Italy); Masawo Kamo (Japan); Norberto Dominguez (Mexico); Daniel Dresden (The Netherlands); Vilhelm Nordström (Sweden); Aurel Stodola (Switzerland); Donato Gaminara (Uruguay); and Carl E. Grunsky (United States).

In association with representatives of many other organizations, a large number of members of the society have contributed to the advancement of the profession through the work of the technical committees on power test codes, boiler code, standardization, safety, and research, all of which cover the field of mechanical engineering in its broadest aspects. During 1930, 16 standards, codes, and research publications were completed and issued in pamphlet form. Other publications of the society were: *Mechanical Engineering*, the monthly journal; *Transactions*, containing the year's papers of specialized interest and issued annually in 36 sections, including the *Record and Index*, containing annual reports, necrology, and an index to all publications of the society for the year; the *Engineering Index*, a comprehensive index to the engineering literature of the world; *Mechanical Catalog*, formerly the Condensed Catalogues of Mechanical Equipment; and the *A. S. M. E. News*, the semi-monthly newspaper.

At the fifty-first annual meeting, held in New York City Dec. 1-5, 1930, the officers and council members elected for 1930-31 were: President, Roy V. Wright; vice-presidents, Paul Doty, Ernest L. Jahncke, Conrad N. Lauer, Ralph E. Flanders, William A. Hanley, Harvey N. Davis, and Thomas R. Weymouth; managers, Charles M. Allen, Robert M. Gates, Ely C. Hutchinson, James D. Cunningham, Clarence F. Hirshfeld,

Harold V. Coes, W. L. Batt, H. L. Doolittle, and H. L. Whittemore; treasurer, Erik Oberg; secretary, Calvin W. Rice. Headquarters are in the Engineering Societies Building, 29 West 39th Street, New York City.

MEDICAL ASSOCIATION, AMERICAN. A union of the constituent, or State and Territorial, medical associations, founded in 1847 "to promote the science and art of medicine and the betterment of public health." Members in good standing, who have qualified as fellows, constitute the scientific assembly of the association, which meets annually to present and discuss subjects pertaining to the science and art of medicine. This assembly is divided into the following sections: Practice of medicine; surgery, general and abdominal; preventive and industrial medicine and public health; radiology; nervous and mental diseases; pathology and physiology; obstetrics, gynecology, and abdominal surgery; orthopedic surgery; urology; diseases of children; ophthalmology; laryngology, otology, and rhinology; pharmacology and therapeutics; dermatology and syphilology; and gastro-enterology and proctology. The legislative powers of the association are vested in a house of delegates, which is empowered to transact all business not provided for in the by-laws and elects the general officers and the board of nine trustees.

The 1930 annual session was held in Detroit, Mich., June 23-27, with an attendance of more than 5000. At this meeting leading authorities and investigators in the field of medical science discussed before the scientific assembly the latest discoveries and methods of interest to the various sections. The important topics discussed, and acted on, through the house of delegates included: Socialization of medicine, with all physicians becoming employees of the State; psychiatric service in criminal courts and prisons; and establishment of a bureau of economics to study the problem of the costs of medical care. The 1931 convention was scheduled to meet in Philadelphia, Pa., June 8-12. The membership in 1930 totaled 98,766. The officers for 1930-31 were: President, William Gerry Morgan, Washington; president-elect, E. Starr Judd, Rochester, Minn.; vice-president, Louis J. Hirschman, Detroit; secretary and general manager, Olin West, Chicago; treasurer, Austin A. Hayden, Chicago; and editor, Morris Fishbein, Chicago. The official publication is the *Journal of the American Medical Association*. Headquarters are at 535 North Dearborn Street, Chicago, Ill.

MEDICINE, PROGRESS IN. The YEAR BOOK this year presents a summary of the more significant developments in Medicine grouped together, and discussed in the following paragraphs.

ADDISON'S DISEASE. Perhaps the most important advance in medicine in 1930, both scientifically and from the point of view of its clinical significance, was the isolation of a hormone from the cortex of the suprarenal glands by two groups of American investigators, Swingle and Pfiffner of Princeton University, and Hartman, Brownell, and Hartman of the University of Buffalo. These observations were made quite independently and at about the same time. Addison, a famous physician at Guy's Hospital in London, described in 1849 a disease characterized by anemia and extreme weakness, and usually fatal in a short time. It was always associated with marked pathological changes in the suprarenal glands, and was usually but not always the result of

payment totaled \$3,219,287. The maternity allowance system has been in vogue in this commonwealth since 1912. In the 17 years covered by the period 1912-29, there had been presented 2,230,000 claims for maternity allowances, of which 2,220,728 have been paid. The total allowances thus granted reached the figure, in this interval, of \$54,035,854.

MATHER, STEPHEN TYNG. An American manufacturer and public official, died in Brookline, Mass., Jan. 22, 1930. He was born in San Francisco, Calif., July 4, 1867, and was graduated from the University of California in 1887. After acting as reporter on the *New York Sun* for six years, he became, in 1894, Chicago manager of the Pacific Coast Borax Company. He was among the first business men to realize the psychology of advertising and inaugurated several trade slogans, including the famous "Twenty-Mule Team." He severed his connection with the Pacific Coast Borax Company in 1903 and later formed the Sterling Borax Company, of which he was president. In 1915 his interest was aroused in the national parks, and he accepted the invitation of Franklin K. Lane, then Secretary of the Interior, to improve the system. After serving as an assistant in the Department of the Interior for two years, he became, in 1917, first director of the National Park Service, with authority to develop it. He more than satisfied expectations and under his direction the National Park Service made extraordinary progress. At the time of his resignation in 1929 seven new parks had been created: Hawaii, Lassen Volcanic, Mount McKinley, Acadia (formerly Lafayette), Grand Canyon, Zion, and Bryce Canyon. The accessibility of the national parks also was improved, and a more general knowledge of and interest in them was stimulated. In recognition of his efforts he received in 1926 the gold medal of the National Institute of Social Sciences and in 1928 the Pugsley gold medal of the American Scenic and Historic Preservation Society. The LL.D. degree also was conferred on him by George Washington University in 1921 and the University of California in 1924.

MAURITANIA. A colony in French West Africa, with an area of 347,000 square miles and a native population of 296,516 (300 Europeans). The budget for 1929 was 12,843,500 francs. See FRENCH WEST AFRICA.

MAURITIUS, mā-rīsh'ī-ūs. An island in the Indian Ocean, 500 miles east of Madagascar, forming with adjacent small islands a crown colony of Great Britain. Area, about 720 square miles; estimated population at end of 1928, 404,802, most of whom were Indians. Port Louis, the capital and largest city, had 54,464 inhabitants in 1928. Curepipe, population 17,770, is the residential centre for Europeans. At the end of 1928 there were 57 Government schools, with 13,371 pupils, and 93 aided schools, with 18,680 pupils.

Sugar is the main crop, one-quarter of the island being devoted to its cultivation. Production in 1929-30 was estimated at 240,000 metric tons. Low prices in 1930 aroused a demand for Government aid to the industry. (See GREAT BRITAIN under *History*.) Coconuts, cacao, tobacco, coffee, aloe fibre, tea, and vanilla also are grown. In 1928, exports totaled £3,158,094 and imports, £3,295,853. For 1927-28, revenue was estimated at 15,308,918 rupees and expenditure at 16,725,513 rupees (1 rupee equaled about \$0.36). There were 144 miles of railway. Vessels

entered in 1928 numbered 236 of 650,369 tons; cleared, 235 of 647,446 tons. The colony is under a governor, aided by an executive council and a council of government, the latter having a minority of elected members. Governor in 1930, W. E. Francis Jackson, appointed March, 1930.

MAWSON, SIR DOUGLAS. See POLAR RESEARCH.

MAY, SIR WILLIAM HENRY. A British naval officer, died in Coldstream, England, Oct. 7, 1930. Born July 31, 1849, he entered the navy at 14 and passed through the grades of lieutenant (1871), commander (1881), captain (1887), rear admiral (1901), vice admiral (1905), and admiral (1908), to admiral of the fleet in 1913. He was a member of the Arctic expedition of 1875-76; became director of naval ordnance and a Lord of the Admiralty in 1901; commanded the Atlantic fleet from 1905 to 1907; was second Sea Lord in 1907-09; commanded the home fleet for two years; and then was commander-in-chief at Plymouth from 1911 to 1913. Created a Knight Commander of the Royal Victorian Order in 1904, a Knight Commander of the Bath in 1906, a Knight of the Grand Cross of the Bath in 1911, he was retired from the naval service in 1919.

MAYOTTE (mā-yōt') AND COM'ORO ISLANDS. An archipelago midway between Africa and the northern end of Madagascar, belonging to France and administered by the Governor-General of Madagascar. Capital, Dzaoudzi (111 inhabitants). Total area, about 790 square miles; population in 1928, 126,208 (about 800 Europeans). The area of Mayotte is 140 square miles, and the population (1925) about 12,674. Vanilla is one of the chief products; others are sugar, copra, aloes, and perfumes.

MEAT. See LIVESTOCK; FOOD AND NUTRITION.

MECHANICAL ENGINEERS, THE AMERICAN SOCIETY OF. An organization founded in April, 1880, to promote the art and science of mechanical engineering and the allied arts and sciences. It includes 16 professional divisions, organized on the basis of a common interest in a branch of engineering within the scope of the society: Aeronautics, applied mechanics, fuels, hydraulic, iron and steel, machine-shop practice, management, materials handling, national defense, oil and gas power, petroleum, power, printing industries, railroad, textile, wood industries. In 1930, 72 local sections had been established in industrial centres throughout the United States, and 106 student branches had been formed in engineering colleges and technical schools. At the beginning of its fiscal year on Oct. 1, 1930, the total membership of the society was 20,011.

The celebration of the fiftieth anniversary of the founding of the society was held Apr. 5-6, 1930, in New York City at the headquarters of the society, at the offices of the *American Machinist*, and in Hoboken, N. J., at the Stevens Institute of Technology, its birthplace, and April 7-9 in Washington in the national council chamber of the United States Chamber of Commerce. Among the prominent speakers were: Dr. Robert A. Millikan, of the California Institute of Technology, who spoke on the bond between pure physics and engineering; Charles M. Schwab, a past president of the society, who acted as toastmaster at the welcoming dinner in New York City; Edward J. Mehren, vice-president of the McGraw-Hill Publishing Company, who offered the felicitations of the engineering press; and Robert I. Rees, president of the Society for the

Promotion of Engineering Education, who spoke on behalf of the educational institutions of the United States. A highly-praised feature of the celebration was the pageant *Control*, written by Prof. George Pierce Baker, of Yale University, to illustrate the development of mechanical engineering, which was presented by undergraduates of the Stevens Institute of Technology on April 5.

At the celebration in Washington five medals were presented to leading engineers, two of which—the Hoover Gold Medal and the Daniel Guggenheim Medal—were awarded for the first time. The recipients were: Hoover Gold Medal, Herbert Hoover for his civic and humanitarian achievements; Daniel Guggenheim Medal, Orville Wright for design and construction, with his brother, of the first successful engine-propelled airplane; Gantt Gold Medal, Fred J. Miller for application on a large scale, in the Remington typewriter factories, of sound principles of scientific management; A.S.M.E. Medal, William LeRoy Emmet for his contributions in the development of the steam turbine, electric propulsion of ships, and other power-generating apparatus; and Melville Medal, Joseph Wickham Roe for his paper, "Principles of Jig and Fixture Practice," read at the society's annual meeting in 1928. The medal struck in honor of the society's fiftieth anniversary was presented to the following, selected by the engineering profession of their countries: Ludwig Erhard (Austria); Fédération des Associations Belges d'Ingénieurs (Belgium); Brig.-Gen. Charles H. Mitchell (Canada); Julio Garzon Nieto (Colombia); Stan Spacek (Czechoslovakia); Georges Claude (France); Conrad Matschoss (Germany); Loughnan St. L. Pendred (Great Britain); Luigi Luiggi (Italy); Masawo Kamo (Japan); Norberto Dominguez (Mexico); Daniel Dresden (The Netherlands); Vilhelm Nordström (Sweden); Aurel Stodola (Switzerland); Donato Gaminara (Uruguay); and Carl E. Grunsky (United States).

In association with representatives of many other organizations, a large number of members of the society have contributed to the advancement of the profession through the work of the technical committees on power test codes, boiler code, standardization, safety, and research, all of which cover the field of mechanical engineering in its broadest aspects. During 1930, 16 standards, codes, and research publications were completed and issued in pamphlet form. Other publications of the society were: *Mechanical Engineering*, the monthly journal; *Transactions*, containing the year's papers of specialized interest and issued annually in 36 sections, including the *Record and Index*, containing annual reports, necrology, and an index to all publications of the society for the year; the *Engineering Index*, a comprehensive index to the engineering literature of the world; *Mechanical Catalog*, formerly the Condensed Catalogues of Mechanical Equipment; and the *A. S. M. E. News*, the semi-monthly newspaper.

At the fifty-first annual meeting, held in New York City Dec. 1-5, 1930, the officers and council members elected for 1930-31 were: President, Roy V. Wright; vice-presidents, Paul Doty, Ernest L. Jahneke, Conrad N. Lauer, Ralph E. Flanders, William A. Hanley, Harvey N. Davis, and Thomas R. Weymouth; managers, Charles M. Allen, Robert M. Gates, Ely C. Hutchinson, James D. Cunningham, Clarence F. Hirshfeld,

Harold V. Coes, W. L. Batt, H. L. Doolittle, and H. L. Whittemore; treasurer, Erik Oberg; secretary, Calvin W. Rice. Headquarters are in the Engineering Societies Building, 29 West 39th Street, New York City.

MEDICAL ASSOCIATION, AMERICAN. A union of the constituent, or State and Territorial, medical associations, founded in 1847 "to promote the science and art of medicine and the betterment of public health." Members in good standing, who have qualified as fellows, constitute the scientific assembly of the association, which meets annually to present and discuss subjects pertaining to the science and art of medicine. This assembly is divided into the following sections: Practice of medicine; surgery, general and abdominal; preventive and industrial medicine and public health; radiology; nervous and mental diseases; pathology and physiology; obstetrics, gynecology, and abdominal surgery; orthopedic surgery; urology; diseases of children; ophthalmology; laryngology, otology, and rhinology; pharmacology and therapeutics; dermatology and syphilology; and gastro-enterology and proctology. The legislative powers of the association are vested in a house of delegates, which is empowered to transact all business not provided for in the by-laws and elects the general officers and the board of nine trustees.

The 1930 annual session was held in Detroit, Mich., June 23-27, with an attendance of more than 5000. At this meeting leading authorities and investigators in the field of medical science discussed before the scientific assembly the latest discoveries and methods of interest to the various sections. The important topics discussed, and acted on, through the house of delegates included: Socialization of medicine, with all physicians becoming employees of the State; psychiatric service in criminal courts and prisons; and establishment of a bureau of economics to study the problem of the costs of medical care. The 1931 convention was scheduled to meet in Philadelphia, Pa., June 8-12. The membership in 1930 totaled 98,766. The officers for 1930-31 were: President, William Gerry Morgan, Washington; president-elect, E. Starr Judd, Rochester, Minn.; vice-president, Louis J. Hirschman, Detroit; secretary and general manager, Olin West, Chicago; treasurer, Austin A. Hayden, Chicago; and editor, Morris Fishbein, Chicago. The official publication is the *Journal of the American Medical Association*. Headquarters are at 535 North Dearborn Street, Chicago, Ill.

MEDICINE, PROGRESS IN. The YEAR BOOK this year presents a summary of the more significant developments in Medicine grouped together, and discussed in the following paragraphs.

ADDISON'S DISEASE. Perhaps the most important advance in medicine in 1930, both scientifically and from the point of view of its clinical significance, was the isolation of a hormone from the cortex of the suprarenal glands by two groups of American investigators, Swingle and Pfiffner of Princeton University, and Hartman, Brownell, and Hartman of the University of Buffalo. These observations were made quite independently and at about the same time. Addison, a famous physician at Guy's Hospital in London, described in 1849 a disease characterized by anemia and extreme weakness, and usually fatal in a short time. It was always associated with marked pathological changes in the suprarenal glands, and was usually but not always the result of

tuberculosis. Since his time the disease has been carefully studied and a great deal of exact information concerning its nature obtained. Animal experimentation showed that removal of the suprarenals (in most species) invariably caused death. Later it was found that the glands were composed of two parts, a central portion or medulla, and a peripheral portion or cortex, and further that it was the removal of the cortex and not of the medulla which was responsible for the death of the animal. In 1895 Schafer and Oliver were able to extract from the medulla of the gland a substance (later identified by Abel as adrenalin) which stimulated smooth muscle including that of the walls of arteries, thus producing a rise of blood pressure. It was also a specific stimulant of the sympathetic nervous system.

It was hoped that this extract of the medulla might be of value in the treatment of Addison's Disease and it was used extensively for many years, but without very significant results. It has become gradually clearer and clearer that the characteristic features of the disease are due to destruction of the cortex of the gland, and indeed it has been shown pathologically that the disease is always associated with marked changes in the cortex, whereas in some instances the medulla is not involved. Many workers had tried to prepare a potent extract of the cortex but none had been consistently successful until this year.

Swingle and Pfiffner (*Science*, vol. 71, 321, and 489) in April reported that they had prepared an aqueous extract of the lipoidal residue of the suprarenal gland capable of maintaining life indefinitely in suprarenalectomized cats. Removal of the suprarenal glands in cats ordinarily causes death in 8-10 days. The animals never live longer than 14 days. After removal of the glands they exhibit a train of symptoms quite similar to those seen in Addison's disease in man. There is loss of appetite, marked loss of weight, extreme muscular weakness, convulsions, coma, and death. By the daily injection of doses of their extract subcutaneously, Swingle and Pfiffner were not only able to prevent the extreme symptoms mentioned above, but were able to keep their animals sleek, fat, and apparently perfectly normal. Withdrawal of the extract was followed in about five days by typical symptoms of cortical insufficiency, and in ten days the animals would die. If the animal while in a comatose state and obviously moribund were given large doses of the extract intravenously, it could be revived and in a few days brought back to a normal condition. Four or five days would be required for the severe symptoms to disappear. If later the extract were again withdrawn, symptoms would reappear and the animal would die.

These results were so clear cut and striking that the use of the extract was taken over into clinical medicine. In November, 1930, Rowntree and Greene of the Mayo Clinic reported the successful use of the extract in one case of Addison's Disease. Their patient, a middle-aged man, was rescued from one of the acute crises of the disease, when his life had been despaired of, and restored to apparently good health. The first extract, which they obtained by airplane from Princeton, contained some adrenalin and could not be given intravenously. Since then Swingle and Pfiffner had been able to prepare an almost adrenalin-free solution which can be given in larger doses and intravenously. (Consult article in *Science*, Nov. 7, 1930).

Rowntree and Greene reported their further experience with the extract. (*Jr. Amer. Med. Ass.* Jan. 24, 1931.) They had treated five cases, and felt that the results were exceedingly promising. Treatment so far had necessarily been somewhat sporadic because the extract had not been regularly available, nor obtainable in large quantities. Steps towards its standardization and manufacture in commercial quantities for distribution to the medical profession were being taken.

Hartman, Brownell, and Hartman of the University of Buffalo Medical School during the year produced a similar potent extract of the suprarenal glands with which they were able to maintain life in animals whose suprarenals had been removed. They proposed the name "Cortin" for the hormone responsible for the specific action of the cortex of the suprarenal gland. They described a clinical case in which they were able to save a patient with Addison's Disease who was prostrate and comatose with an extremely low blood pressure (50 systolic).

It seemed quite likely that patients with Addison's Disease would require repeated injections of the extract in order to maintain good health ("substitution therapy"), and that it would be used much as insulin is in diabetes mellitus and liver in pernicious anemia.

COMMON COLD. During the year rather convincing evidence was presented by two groups of investigators that a filterable virus (a living organism so small that it cannot be seen by the microscope and passes through the finest filter) is the cause of the common cold. This ubiquitous and ordinarily minor malady is important because of the total of human discomfort it causes, because it is probably responsible for more loss of time from work than any other disease, and finally because it is a common precursor of such serious conditions as pneumonia, rheumatic fever, and acute nephritis. Any exact information concerning its aetiology is therefore earnestly welcomed.

The impression that the common cold is not caused by any of the numerous organisms so readily cultured from the nasopharynx steadily gained support since the first work of Kruse who in 1914 was able in a few cases to transfer colds from one person to another by inoculation with filtered naso pharyngeal washings. Dochez, Shibley, and Mills of the Presbyterian Hospital in New York reported in April, 1929, that they were able to transfer the common cold from man to one of the higher apes by the instillation in the pharynx of the animal of a filterable agent obtained from the naso pharyngeal washing of a man in the first 24 hours of a cold. The ape was chosen for this study because it is the only animal that has spontaneous colds; also bacteriological studies have shown that the organisms which may be cultured from its naso pharynx are quite similar to those found in man. The only loop-hole in this work was that while practically all of the bacteria had been removed by filtration through a Berkfeld filter (a very fine filter which catches all the ordinary bacteria), a small bacillus could be grown from the filtrate. It was similar to one previously described by Olitsky and Gates, two other investigators who had studied the common cold; and of course the possibility remained that this bacteria might be the aetiological agent. At this same time Dochez reported that colds had been transmitted from patients to human volun-

teers by a similar procedure. (*Proc. Soc. Exp. Biology and Medicine*, April, 1929.) But Dochez was unable to transfer any disease with the nasal washings of men in summer although the filtrates still contained the Gram negative coccus. This led him to believe that it was therefore not the responsible agent.

Long and Doull of the Johns Hopkins University studied the transmission of the common cold in a selected group of young women in the months of June and July when endemic colds are at their minimum in Baltimore. By employing a finer filter than had been previously used they were able to obtain a filtrate from the nasopharyngeal washings of patients with colds which was entirely bacteria free, and from which the bacteria of Olitsky and Gates was positively excluded. This filtrate when placed in the nose and throat of a healthy girl volunteer produced typical symptoms of the common cold. The incubation period was usually two to three days. (*Proc. Soc. Exp. Biology and Medicine*, October, 1930.)

Dochez in a later paper (*J. Exp. Medicine*, November, 1930) reported that he had transferred the common cold from man to apes, and from human subject to human subject by the use of filtered nasal washings in 44 per cent of the cases. He had been able to make from two to four serial transfers.

PERNICIOUS ANÆMIA. Of particular interest was the announcement of the *Popular Science Monthly's* Prize award for 1930 to Dr. George H. Whipple of the University of Rochester School of Medicine and Dentistry and Dr. George R. Minot of the Harvard Medical School for their work which led to the present effective treatment for pernicious anemia. The award of \$10,000 was to be divided between these two investigators. Dr. Whipple had studied since 1925 the problem of a simple hemorrhage in dogs and had clearly shown that the regeneration of blood could be greatly aided by diet. He found that liver was the most effective agent in severe simple anæmia in contrast to the old idea that iron was all important. On the basis of his work Dr. Minot, with the aid of Dr. W. P. Murphy, tried the effect of feeding liver to patients with pernicious anemia and made the extremely important observation that liver produced an increase in the number of red blood cells, and a corresponding improvement in the general condition of the patient. As a result of his work this disease, formerly almost uniformly fatal, was placed among those for which there is an adequate and specific treatment.

Following the introduction of liver therapy in pernicious anemia in August, 1926, it was discovered that extracts of liver, and indeed of other organs such as the hog's stomach, were effective in combating the disease. It was not, however, until August, 1930, that West and Howe of the Medical Clinic of the Presbyterian Hospital, Columbia University, New York City, were successful in isolating the active principle from the liver which is responsible for its effect on the blood-forming organs. (*Jr. Biological Chemistry*, vol. 88, 427.) They were able to extract an acidic crystalline substance which was clinically potent and produced improvement in patients with pernicious anemia quite comparable to that obtained by the feeding of liver. Working with Dr. Dakin they were able to identify this active crystalline principle as a combination of two common amino-acids, hydroxyglutamic acid and hydroxyproline. (*Proc. of Society for Exp. Biology and*

Medicine, October, 1930.) This work was unusually significant because it identifies chemically an extremely valuable therapeutic agent. It represented one of the real triumphs of modern biological chemistry, and emphasized again medicine's ever-increasing debt to the chemical and biological sciences.

MULTIPLE SCLEROSIS. Miss Kathleen Chevasut of the Westminster Hospital, London, reported the discovery of a filterable virus which may be the cause of this serious neurological condition first described by the great French physician, Charcot, in 1866. The disease is characterized by paralytic and other nervous symptoms, is associated with mental degeneration and usually ends fatally. The specific toxic agent, which was named *Spherula insularis*, was cultured from the cerebrospinal fluid of 176 out of 189 patients with the disease, and was not found in any of 269 cases of other diseases of the nervous system which she studied. It was injected into seven monkeys, two of which developed neurological symptoms. Microscopic study of their spinal cords showed degenerative changes quite similar to those found in patients with multiple sclerosis.

Sir James Purves-Stewart used an autogenous vaccine prepared from this organism in 128 cases of multiple sclerosis. Of these 70 were observed long enough to yield suggestive results. Of 10 early cases 9 were improved and 1 showed no change. Of 27 moderately advanced cases 22 showed improvement and 9 no change. Of 33 advanced cases only 9 showed any improvement while 24 were not benefited. An interesting observation was that in a few cases the patient's blood serum after vaccine treatment inhibited the growth of the virus *in vitro*. Purves-Stewart, while optimistic about the results of this new treatment, counseled conservatism in the interpretation of the results so far obtained, because the disease is known frequently to undergo spontaneous remissions. And he pointed out that we may not hope to restore the nervous tissue which already had been destroyed, but only that the malady may be stopped in the stage that it had reached when treatment was begun. (*Lancet*, Mar. 15, 1930.)

CHRONIC INFECTIOUS ARTHRITIS (RHEUMATOID ARTHRITIS). Cecil, Nicholls, and Stainsby of the Cornell Medical School reported the results of their extensive researches on the etiology of rheumatoid, or so-called chronic infectious arthritis. (*Am. Jr. Med. Sci.*, January, 1931.) Their conviction was that:

Rheumatoid arthritis is a streptococcal infection, in which streptococci are discharged from some primary focus and, circulating from time to time in the blood stream, localize in certain joints and establish a secondary infection in them. In the investigations herein reported these streptococci have actually been demonstrated in the joints of a high percentage of cases, and a disease almost identical with the human form has been produced in rabbits. If these results are corroborated by others there would seem to be little doubt left as to the streptococcal nature of the infection.

In their work they found:

1. Almost constant presence of streptococci in foci of infection.
2. Streptococci recoverable from the blood in 62.3 per cent of rheumatic patients; none from healthy controls.
3. Streptococci recoverable from affected joints of 67.8 per cent of rheumatic patients.
4. High agglutination of "typical strain" streptococci with serum of 94 per cent of rheumatic patients.
5. Disappearance of agglutination with recovery.
6. Biologic identity of organisms recovered from blood and joints, in most cases in which comparisons were made.

7. Reproduction of the disease by inoculation of rabbits with the "typical strains" of streptococci.
8. Recovery of organism from blood and joint of rabbits.
9. Striking similarity in histological changes found in joints of rabbits and man.

They believe that such factors as heredity, exposure to cold wet weather, nervous disturbances, disturbed carbohydrate metabolism, and inadequate circulation, all previously mentioned as possible causes of the disease, are merely predisposing factors. They finally point out that there is "now available an agglutination reaction for rheumatoid arthritis which is quite as specific and reliable for differentiating this condition as is the Widal test for typhoid fever."

Dawson and Boots of the Presbyterian Hospital, New York, added the interesting information that the subcutaneous nodules found in chronic infectious arthritis, which are "uniform and highly characteristic," show a striking histological resemblance to those found in acute rheumatic fever, another disease for which evidence incriminating one of the streptococci was gradually increasing.

RHEUMATIC FEVER. Dr. Alvin F. Coburn of the Presbyterian Hospital in New York described his extensive studies of rheumatic fever. (*The Factor of Infection in the Rheumatic State*, Baltimore, 1930.) He followed a large group of patients on the wards of the hospital, while convalescing in the country, and while at work under different environmental conditions. He was impressed by the protean character of the disease, and felt its clinical manifestations to be the response of the body to chemical substances arising from infections of the upper respiratory tract. He made cultural studies of the naso pharyngeal flora of rheumatic patients under varying environmental conditions and in varying conditions of health. He found that the onset of the disease often followed an upper respiratory infection with the hemolytic streptococcus, and that recurrences of activity were most frequently associated with recurrence of the upper respiratory infection. At this time, the hemolytic streptococcus would again be found in the throat.

A group of rheumatic patients were transported to Porto Rico where respiratory infections are quite rare. They all showed a subsidence of the active rheumatic process while there, only to have it flare up again on their return to New York. He noticed that exacerbations of the disease often followed in the wake of epidemic colds and sore throats. He concluded that, since the disease could not be reproduced in animals by inoculation with streptococci and since no positive immunological relationship could be established between the hemolytic streptococcus and the rheumatic state, this organism could not be definitely said to be the cause of the disease. Nevertheless, he believed, that the hemolytic streptococcus was "an important factor of infection in the rheumatic state."

Swift and his co-workers at the Rockefeller Institute began a study of the effects of intravenous vaccination of patients who had rheumatic fever with hemolytic streptococci. Their studies, while incomplete up to the end of 1930, suggested that this might become an effective method of therapy in certain cases. States resembling true rheumatic relapses were obtained. Diminution of the rheumatic symptoms with an increasing tolerance for the streptococcus at least suggested that hypersensitivity to the organism bears a

causal relationship to the symptoms of the disease. (*Am. Jr. Med. Sci.*, January, 1931.)

PNEUMONIA. Of unusual interest was the announcement by Avery and Dubos of the Hospital of the Rockefeller Institute of their discovery of an enzyme capable of hydrolyzing the capsule of the type-3 pneumococcus, and apparently effective in the treatment of this type of pneumonia in mice (*Science*, Aug. 8, 1930). They discovered that a bacillus isolated from the organic matter of soil taken from the cranberry bogs of New Jersey was capable of splitting or hydrolyzing the specific capsular sugar of the type-3 pneumococcus. Later they were able to extract from their cultures a soluble, non-living principle (of the nature of an enzyme) which was capable of the same specific action. This enzyme, when added to cultures of pneumococcus, did not inhibit growth or cause lysis, but did seem to destroy the capsule of the organism. Later it was found that when the enzyme was injected into mice it was able to exert a distinct and specific action in type-3 pneumonia, and that it had both a prophylactic and curative effect. It was not effective in pneumonia caused by other types of pneumococcus, and there had been no report of its clinical use up to the end of the year.

PARESIS. The treatment of paresis, a disease of the central nervous system caused by syphilis, was revolutionized by Wagner von Jauregg of Vienna in 1918. He inoculated patients suffering from the disease with malarial organisms and reported remarkably favorable results from this treatment. He was later awarded the Nobel Prize in Medicine for this work. Although his treatment has been widely used with good results, the mechanism of its beneficial action was not entirely clear. Recent work seemed to indicate that the febrile reaction associated with malaria is the responsible factor. Other workers have used different means of producing fever and have reported comparable results. The organisms of Rat Bite Fever and Relapsing Fever, two rather readily controlled diseases, have been used, and more recently attempts have been made to treat the disease by hot baths, since the treatment by malaria or other protozoan parasites is not entirely devoid of danger (the patient sometimes succumbs to the new infectious process). Neymann and Osborne of the Northwestern University Medical School reported (*Jr. Am. Med. Assn.*, June 27, 1930) that they had treated a series of patients with paresis by the use of diathermy—an electrical method of elevating the body temperature. They were able to obtain remissions of the disease in 66 per cent of their patients and to improve markedly 8 per cent more. Their work is of importance because it shows the significance of the elevation of body temperature in the treatment of paresis, and because it offers a relatively safe and practical way of combating the disease without recourse to the use of an infective agent.

AGRANULOCYTIC ANGINA. Dr. Paul Reznikoff of the Cornell Medical School reported favorable results from a new method of treatment for agranulocytic angina. This disease, first described by Schwartz in 1904 and again called to the attention of the medical profession by Schultz in 1922, seemed recently to have become much more common and was widely reported. It is characterized by fever, intense prostration, sore throat, areas of subcutaneous hemorrhage over the body, and by a marked leukopenia (decrease in the number of white blood corpuscles). It runs an

acute course and the mortality has been very high. The etiology is unknown and there is some question as to its specificity, because agranulocytosis (lack of production of white blood corpuscles) occurs in certain other infections and in certain poisoning. It had been previously treated with uncertain success by blood transfusion and X-ray.

Reznikoff observed experimentally in rabbits that the intravenous injection of adenine sulphate and guanadine hydrochloride, two so-called nucleic acids common in all animal cells, produced a marked increase in the number of white blood corpuscles (particularly of the polymorphonuclear type). This seemed to offer a logical basis for the use of adenine and guanadine in this disease of man in which the white blood cells are so tremendously reduced. He used these nucleic acids in a small series of cases and was able to report three recoveries. The work in 1930 was still too new to be evaluated properly, but it seemed that he had introduced a rational procedure which gave hope of lowering the mortality in this serious disease.

DENTAL CARIES. In the *American Journal of the Diseases of Childhood* (September, 1930), Bunting, Hadley, Jay, and Hard described their interesting studies of the relation of diet to the development of caries of the teeth in children. They pointed out that the disease is one of antiquity, evidence of it having been found in the skulls of Egyptian mummies; that it is widely prevalent, especially in the civilized countries; that it is worse during the years from 7 to 20; and finally that carious teeth may act as foci of infection.

They studied five groups of children placed on different diets. Each group contained from 74 to 159 children. Four of the groups lived in State institutions and could be closely followed. The first two groups were placed on a satisfactory diet (including milk, green vegetables, and fruit) and were required to use an antiseptic mouth wash daily. Of these two groups, at the end of a year 80 per cent were free of caries and only 5 per cent had active caries. The third group used a mouth antiseptic but their diet was not controlled. Of these 50 per cent had active caries and only 25 per cent were free. The fourth group had an adequate diet and no mouth wash. Seventy-five per cent of them were free of caries and only 6 per cent had an active process. The last group had no control of diet and did not use a mouth wash; 18 per cent were free from caries and 49 per cent had an active process. This indicated that an adequate diet, particularly one rich in Vitamin D, is a powerful preventive agent against caries. It seemed to show that the local use of antiseptics is of little value.

INFANTILE PARALYSIS (POLIOMYELITIS). Shaughnessy, Harmon, and Gordon reported in the *Proceedings of the Society for Experimental Biology and Medicine* for May, 1930, some interesting and significant work which demonstrated the unexpectedly high potency of the blood serum of normal adults to neutralize the virus of infantile paralysis *in vitro*. They added to a filtrate obtained from the infected spinal cord of a monkey various dilutions of the serum of patients who were convalescing from poliomyelitis, and also various dilutions of normal human serum. They found, surprisingly, that the serum of family contacts and of apparently normal adults and older children possessed a greater ability to neu-

tralize the virus of the disease than did the serum of convalescents. They also found that the serum of children under two years gave little evidence of any antibody while that of children over two neutralized the virus in dilutions of one to ten. In the past the disease had been treated by the use of convalescent serum, but this work suggested that the serum of healthy adults might be more effective.

ARTIFICIAL RESPIRATION. Dr. Philip Drinker of the Harvard Medical School reported the results obtained from the use of the "Respirator," a machine for the maintenance of artificial respiration which he first described in May, 1929 (*Jr. Am. Med. Assn.*, Oct. 25, 1930). This apparatus consists of a sheet-metal tank which contains a bed and mattress. The patient lies in the tank while his head protrudes through a rubber cuff which has an air-tight seal. By an electrically driven set of blowers and valves the pressure is changed from slightly negative (which causes the chest to expand and the patient therefore to inspire) to normal atmospheric pressure (which causes the patient to expire). The pressure may be varied as desired and a tracing of it is recorded. The patient eats, drinks, sleeps, and may even use the bed pan while in the machine. He is turned twice daily as a rule. The Respirator is used whenever a patient is unable for any reason to satisfactorily maintain his own respiration. It has been employed in cases of acute respiratory failure of infantile paralysis, in cases of carbon monoxide poisoning, alcoholic coma, drug poisoning, drowning, post-operative respiratory failure, and asphyxia of the new born. Twenty machines were in use (chiefly in Boston, New York, and Philadelphia) and at the time of this report 80 cases had been treated. There was no question but that in some cases its use had been a life-saving measure.

TYPHUS. This disease, which has occurred in several great epidemics with high mortality, as well as sporadically from time to time, has previously been shown to be transmitted by the bite of the body louse. The actual infective agent had not been positively identified, although Wohlbach, Todd, and Palfrey in 1922 were led to believe from their extensive studies that a small bacterium, one of the so-called Rickettsia bodies, bore an important etiological relationship to the disease. This view was strengthened by researches of Zinsser and Castenada who adduced strong evidence in favor of identifying the virus of Mexican Typhus fever with a Rickettsia which they had found in lesions of the testis of guinea pigs, which had been previously inoculated with typhus-infected blood. They found that the organisms were much more abundant in poorly nourished animals who had the disease than in well nourished ones. They were able to prepare a vaccine which protected animals against the disease, either by preventing it entirely or by making its course much milder. They also succeeded in culturing the Rickettsia, something which previously had been accomplished only with great difficulty. Their work promised to afford a means of immunizing man against this once dreaded disease.

TUBERCULOSIS. Interest in and discussion of the results obtained from Calmette's vaccination of young children with an attenuated tubercle bacillus of bovine origin (so called B. C. G. vaccine) was greatly increased by an unfortunate episode which occurred in Lübeck, Germany, in the spring. There, more than a hundred children died follow-

ing the vaccination. The exact cause of this deplorable event was not determined, but Professor Calmette was convinced that the vaccine had been contaminated with human tubercle bacilli. Professor Neufeld of Berlin, a leading German authority, felt similarly (*Deut. Med. Woch.*, Sept. 19, 1930). Professor Calmette, who was the director of the Pasteur Institute in Paris, in a letter to the *Journal of the American Medical Association* (Jan. 3, 1931), strongly repeated his faith in this method of treatment and urged its more extensive use in the United States. It was widely employed in France and in certain other parts of the world, and more than a million children have been vaccinated since 1924. Professor Calmette concluded his letter by stating that the evidence seemed overwhelming to him that—

B. C. G. is innocuous, never interferes with normal development, that mortality from tuberculosis in vaccinated children is reduced almost to zero, and that vaccinated children are more resistant to most infantile infections than non-vaccinated ones; that is why the general infantile mortality is everywhere manifestly reduced by vaccination, often by as much as 50 per cent or even more.

It is only fair to state that some prominent students of tuberculosis differed sharply from this view. Petroff, of the Trudeau Foundation in the United States, after a long study of the problem believed that bacterial types are not fixed, that changes in the character and virulence of organisms may occur, and that we have no right to believe that B. C. G. may not in some instances become pathogenic for man. He has isolated from the B. C. G. an organism pathogenic for guinea pigs. (Calmette insisted this is an accidental contamination with human tubercle bacilli.) Petroff intimated that Calmette's statistical studies are not valid, and seemed to believe that the Lübeck disaster was due to Calmette's vaccine assuming a pathogenic form. The whole question was still *sub judice*.

MELCHETT, ALFRED MORITZ MOND, FIRST BARON. A British politician and industrialist, died in London, Dec. 27, 1930. Born in Farnworth, near Widnes, Lancashire, Oct. 23, 1868, he attended Cheltenham College and Cambridge and Edinburgh universities. He became a barrister of the Inner Temple (1894), and was a judge on the North Wales and Cheshire circuit. He was a member of Parliament for Chester from 1906 to 1910, for Swansea from 1910 to 1923, and for Carmarthen from 1924 to 1928. In 1926 he transferred his allegiance from the Liberal to the Conservative party. He served in the Cabinet as First Commissioner of Works (1916-21), and as Minister of Health (1921-22). He was chairman or director of many powerful companies in varied industrial fields, including Imperial Chemical Industries, Ltd. He was also a member of the Royal Institution, founder president of the Institute of Fuel, president of the British Science Guild (1927-28), president of the World Power Conference (1928), president of the Empire Economic Union, and joint chairman of the Conference on Industrial Reorganization and Industrial Relations, which was organized in 1928 for the purpose of bringing together in amiable relations the capital and labor of Great Britain. One

of the foremost leaders among the Jews of Great Britain, he was active in the Zionist cause. He was created a baronet in 1910, and in 1928 Baron Melchett of Landford. Besides articles on politics and economics, he wrote: *Questions of Today and Tomorrow* (1912); *Why Socialism Must Fail!* (1923); *The Remedy for Unemployment* (1925); *Industry and Politics* (1927); *Imperial Economic Union* (1930).

MENARD, mă'năr, ÉMILE RENÉ. A French painter, died Jan. 13, 1930, in Paris, where he was born Apr. 15, 1862. He studied with his father, René Joseph Ménard, director of the School of Decorative Arts in Paris, and first exhibited at the Paris Salon in 1883. In 1897 he began to exhibit at the International Exhibitions of the Carnegie Institute in Pittsburgh and was represented in practically every exhibition until the time of his death. In 1922 his painting, "Women Bathing in the Greve," was awarded second prize. He was best known for his landscape paintings, which were imaginative and poetical in feeling, and was often called a Hellenist because of his classical point of view. Among his important works are: "À la tombée de la nuit," in the Antwerp Museum; "Portrait de ma mère," in the Brussels Museum; "Crépuscule," in the Helsingfors Museum; "Portrait de Louis Ménard," in the Luxembourg Museum, Paris; "Temps d'orage," in the Munich Museum; "Le fleuve," in the Stockholm Museum; "Paysage corse," in the National Gallery, Budapest; "Terre antique," in the Museum of Venice; and "The Judgment of Paris" and "The Rape of Europa," in the Carnegie Institute, Pittsburgh. Several of his murals are found in the School of Higher Studies, the Sorbonne, Paris. He was an officer of the Legion of Honor, and in 1926 was elected a member of the French Institute.

MERCER, HENRY CHAPMAN. An American anthropologist and archaeologist, died Mar. 9, 1930, in Doylestown, Pa., where he was born June 24, 1856. He was graduated from Harvard University in 1879. In 1893 he went as an honorary member of the U. S. Archaeology Commission to Madrid. From 1893 to 1897, he was editor for anthropology in the *American Naturalist* and, during 1894-97, he was also curator of American and prehistoric archaeology at the University of Pennsylvania. In American caves he discovered remains of extinct animals, in particular in the bone cave of Port Kennedy, Pa., where he made valuable discoveries of fossil carnivora. He compared the remains of ancient man in drift gravels and flint workings of America and Europe and, after exploring the caverns of Yucatan, he fixed the geological date for the peninsular ruins. Research in the Pennsylvania Dutch pottery manufactures resulted in his perfecting a new method of manufacturing tiles for mural decoration (1899) and a new process for making mosaics (1902). He also patented a process for printing large designs in color on fabrics and paper in 1904. In 1916 he built and endowed a museum at Doylestown, in which is housed his collection of utensils and implements used in the colonial period of United States history. At his death, he gave his home Fontheil, containing exhibitions of ceramic art, to the city of Doylestown to be used as a museum. Dr. Mercer wrote *Lenape Stone* (1885); *Hill Caves of Yuca-*

tan (1896); *Researches upon the Antiquity of Man in the Delaware Valley and the Eastern United States* (1897); *Tools of the Nation Makers* (1897); *Bible in Iron* (1915); *Ancient Carpenters' Tools* (1925).

MERRITT, ANNA LEA. A British painter, died in London, Apr. 7, 1930. She was born in Philadelphia, Pa., Sept. 13, 1844, and was a pupil of Henry Merritt, the English artist and critic, to whom she was married in 1877. She won medals at the Centennial Exposition, Philadelphia, 1876; the Columbian Exposition, Chicago, 1893; the Atlanta Exposition, 1895; and the Pan-American Exposition, Buffalo, 1901. She was a constant exhibitor at the Royal Academy in London from 1871 to 1906 and was represented in the Chantrey Collection of the National Gallery of British Art, London, by "Love Locked Out" and in the Pennsylvania Academy of Fine Arts, Philadelphia, by "Piping Shepherd." Among her other important works are: "Eve Repentant," "Merry Maids," and "I Will Give You Rest"; portraits of James Russell Lowell in Memorial Hall, Harvard University, and of Mrs. Arnold Toynbee in Lady Margaret Hall, Oxford; and eight mural paintings of St. Martin's Church, Chilworth, Surrey, England. She was also the author of *Memoirs of Henry Merritt* (1879); *A Hamlet in Old Hampshire* (1902); and *An Artist's Garden* (1908).

MERRY DEL VAL, RAPHAEL, CARDINAL. A prelate of the Roman Catholic Church and former Papal Secretary of State, died in Rome, Feb. 26, 1930. He was born Oct. 10, 1865, in London where his father was Secretary of the Spanish Embassy, and was educated at the Jesuit College of St. Michel in Brussels and at Ushaw University in Durham, England. On completing his course at the latter institution, he was chosen private tutor to King Alfonso XIII of Spain. He then entered the Gregorian University in Rome, where he prepared for the priesthood, and was admitted to the Academia dei Nobili Ecclesiastici in 1886. In 1887, while still a student, he was sent to London in the suite of Mgr. Rufo Scilla, who presented the Pope's felicitations on the occasion of Queen Victoria's golden jubilee. The following year he went to Berlin with Mgr. Galimberti to represent the Vatican at the funeral of William I, and also attended the jubilee in Vienna in honor of the fortieth anniversary of Francis Joseph's reign.

After his ordination to the priesthood in 1888, Cardinal Merry del Val was retained for service in the Vatican by Leo XIII, who made him Papal Chamberlain in 1892. In 1896 the Pope entrusted to him the office of Secretary of the Commission for the Study of the Validity of the Anglican Ordinations, and in the following year named him Domestic Prelate. In 1897 he was sent as Apostolic Delegate to Canada to bring about a settlement of the controversy over the closing of religious and other private schools in Manitoba, and on the basis of his report the Pope wrote his famous letter to the Roman Catholics of Canada on the principles underlying Catholic education. In 1899 Cardinal Merry del Val became president of the Accademia Pontifica, and the following year was consecrated titular bishop of Nicæa. In 1901 he represented the Vatican at the coronation of Edward VII, and in 1902 was honored with an appointment to the archbishopric of Nicosia.

On the death of Leo XIII, Cardinal Merry del Val was chosen secretary of the conclave of the Sacred College which in 1903 elected Pius X. In the same year he was created a cardinal by the new Pope and was appointed Papal Secretary of State. He attained distinction in the conduct of this important office, but was criticized later for adopting an aggressive policy which helped to intensify the strained relations between the Curia and the French Government. He relinquished the post of Secretary of State upon the accession of Benedict XV in 1914, and was appointed Archbishop of the Vatican Basilica and Secretary of the Congregation of the Holy Office. Under Pius XI, Cardinal Merry del Val was instrumental in bringing about the reconciliation between the Vatican and the Italian Government. He was a staunch supporter of the principle of ultramontaniam and was the author of *The Truth of the Papal Claims* (1909).

MESOPOTAMIA. See IRAQ.

MESSMER, THE MOST REV. SEBASTIAN GEHARD. An American Roman Catholic archbishop, died Aug. 3, 1930, in Goldach, Switzerland, where he was born Aug. 29, 1847. He was educated at St. George College in St. Gall, Switzerland (1861-66), and at the University of Innsbruck in Austria (1866-71). Ordained a priest in 1871, he was thenceforth until 1889 professor of theology at Seton Hall College, South Orange, N. J., and during 1890-92 was professor of canon law at the Catholic University in Washington, D. C. He was consecrated Bishop of Green Bay (Wis.) in 1892, and the following year was appointed Archbishop of Milwaukee. The D.D. degree was conferred on him by Pope Leo XIII in 1885 and the D.C.L. degree by the Appollinare University in Rome in 1890. His works include: *Praxis Synodalis* (1883); *Canonical Procedure* (1886); *Spirago's Method* (1901); and *Outlines of Bible Knowledge* (1910). He also edited Devivier's *Christian Apologetics* (1903) and Bishop England's *Works* (7 vols., 1908).

METABOLISM. See FOOD AND NUTRITION.

METALLURGY. Extremely low metal prices during the year stimulated metallurgists to make every refinement possible to cut costs, involving, in some instances, higher metal losses in slags and tailings, the unit value of the contained metal being comparatively small. Also, most plants were operating at from one-half to three-quarters capacity, giving metallurgists plenty of time to study the details of their work instead of bending every effort towards increasing output, as they had been forced to do a year or two previously. The tendency continued towards centralized operations, most of the newer plants being of large capacity; many of the smaller older plants were forced to close down. Added refinements were made in most metallurgical processes, but little that was totally new and not heretofore mentioned attracted attention during the year.

ORE DRESSING. Several new types of crushers and grinding mills recently were put on the market or were under development. The success of the cone crusher had stimulated other manufacturers to design new machines or to improve existing models of gyratory crushers. One produced a 15-inch reduction crusher with curved heads and concaves, to give a small discharge opening and a large feed opening. Heavy outside springs allow the head to be forced downward to release any obstruction that may catch between the crusher surfaces. Hammermill crushers were further im-

proved. Rolls continued to be displaced, as in the Tri-State zinc-lead district, where one of the large new mills expected to effect marked economies by the use of a suspended gyratory for secondary crushing.

Larger ball mills were becoming increasingly popular and considerable success was attained with special types of liners designed to secure a more violent action of the grinding media in the mill. The advantage of multiple-stage grinding was increasingly recognized. Bowl-type classifiers were popular in the final stage, and high circulating loads were maintained. The bowl type of classifier affords a more closely sized product than the standard type, which product is more adaptable to selective flotation processes.

In flotation equipment, the old Callow type pneumatic cells and the standard mechanically agitated machines had been pretty well displaced in modern plants. For selective flotation, sub-aerated mechanically agitated machines were widely used. These were also useful for floating coarse ore; native copper in Michigan was being successfully floated as coarse as 10-mesh. Pneumatic machines in which air is released into the pulp through pipes or slits at small pressure continued to extend their popularity, especially for large-scale work on lean ores. During the year these were made as much as 100 feet long, having a capacity of 3000 to 4000 tons a day, and using 3000 cubic feet of air per minute at 1½-lb. pressure. Another type of machine was built with a 16-inch header and 3-inch drop pipes, using 1-lb. air.

In the revolving rotor type machine, canvas was being supplanted by sheet rubber with exceedingly fine perforations, 225 to the square inch, of a special outline, cut into the rubber. Owing to the elasticity of the rubber, and its smooth surface, there is no tendency to blind in alkaline circuits, and its wearing quality is excellent.

Most flotation machines were made of steel instead of wood, and the mechanically agitated machines had individual motors with rope drives. No one type of machine could be said to be better than another: one may be low in power requirements and high in cost of reagents required; another may be simple to operate and of long life but inferior in metallurgical recovery.

Progress was constantly being made in greater knowledge concerning the best reagent to use on an ore of known type, though individual tests were still required as practically all ores show some varying characteristics. Among the most popular reagents are sodium, potassium, amyl, and butyl xanthates, the last two being recent developments; and several modifications of the phospho-cresylic acid reagent originated by F. T. Whitworth and developed by Utah Copper. Among other chemicals widely used in flotation were the pine oils, coal-tar creosotes, sulphuric acid, lime (practically all circuits are alkaline), sodium carbonate, sodium silicate, sodium sulphide (for sulphidizing), copper sulphate (for activation), zinc sulphate, and cyanide.

Data for the United States, covering the year 1928, for 208 plants, indicated 59,000,000 tons of ore treated by flotation, producing 3,696,000 tons of concentrates. Of this ore, 47,000,000 tons were copper ore. The total consumption of reagents during the year was 264,000,000 pounds, of which 208,000,000 pounds was lime.

Drum filters, with the filter cloth on the inside

of the drum, were increasingly popular, especially for coarse, fast-settling concentrate. A new type of filter with leaves attached to a traveling belt has just been introduced.

The most important new plant that went into operation during the year was the 8000-ton concentrator of the International Nickel Company of Canada, at Copper Cliff, Ont. This crushes 5-inch ore to 1 inch in cone crushers, to ¾ inch in rolls in closed circuit with vibrating screens, and grinds to minus 65-mesh in rod mills which may be used as ball mills if desired. Bowl classifiers are in closed circuit with the mills. Selective flotation of nickel and copper is practiced with pneumatic rotor machines. Dewatering of concentrates takes place in three stages: drag classifiers, tray thickeners, and internal-settling drum filters. Another important Canadian concentrator, for zinc-copper ore, rather an unusual combination, was completed by the Hudson Bay Mining & Smelting Company in 1930. This has a capacity of 3000 tons a day. In the United States, among important new plants to be completed during the year were the Bird Dog mill of the Commerce Mining & Royalty Company, near Picher, Okla.; the Sylvan Lake, N. Y., mill of St. Joseph Lead; and the Universal Exploration Company's concentrator at Jefferson City, Tenn. All of these mills treat a zinc ore, and their capacities per day are 2400, 500, and 800 tons, respectively.

HYDROMETALLURGY. Inspiration Copper at Miami, Ariz., was segregating a mixed sulphide and oxide copper ore, after crushing, into sand and slime, giving each a separate treatment. The slime is given counter-current continuous decantation with acid solution in four 150-foot traction thickeners of acid-resisting construction. The availability of acid-resistant alloys for equipment of this kind makes the process possible. A similar process was to be used at the Andes plant in Chile.

In electrolytic zinc plants, progress was reported in improving power consumption, reducing losses in the residues, and in making a higher-grade product. Commercial grades of electrolytic zinc were consistently above 99.99 per cent pure, traces of lead and cadmium only being present. Cadmium is a commercial by-product of the process. The bad effect of germanium, even in amounts as little as one part in 20,000,000 in cell solutions, recently was brought out, and purification methods to eliminate it devised. Better frames and guides for cathodes were designed also.

In cyanidation of gold ores, a novel practice was developed at the McIntyre property in Ontario during the year, wherein the ore is first concentrated by flotation, the concentrate re-ground and cyanided. Three plants in Australia had similar plants under construction or proposed. Sulphides or tellurides being important gold-bearing constituents of the ore, the concentrates would be roasted before cyanidation. Several amalgamation or cyanidation plants were changed over to straight flotation, with recovery of the gold from the concentrate by pyrometallurgical methods. Tabling was used instead of flotation, preceded by hand-sorting, to obtain a high-grade product for cyanidation at the Alaska Juneau. Here the gold content of the ore was only about \$1.12 a ton as mined, but the company had begun paying dividends, making it the lowest-grade profitable gold mine in the world. The highest-grade was probably the Ashanti mine in

the Gold Coast Colony, where the gold ore ran in the neighborhood of \$25 per ton.

New construction in the Kirkland Lake district of Ontario included 2000-ton mills for the Lake Shore and Teck-Hughes companies. Some tellurium was present. Teck-Hughes practice included grinding to 99 per cent through 200-mesh; 36- to 40-hour cyanide treatment; high dilution and alkalinity, with a number of changes of solution; aëration by low-pressure air at several points; and the use of sodium peroxide for oxidizing tellurium. The Dome mine at Porcupine erected a new straight cyanide mill to replace one burned a year or so previously.

Cyanide regeneration by the use of sulphur dioxide received more extended application. Research was under way to recover the cyanide from sulpho-cyanides and other complex cyanides, as well as from simple alkaline and alkaline-zinc cyanides.

PYROMETALLURGY. Flash roasting was the subject of discussion and experiment, the idea being to oxidize the sulphur almost instantaneously from finely ground particles of concentrate while they are suspended in air, rather than to plow them through a hearth furnace in a bedded condition, with the top surface of the beds exposed to oxidizing gases for several hours. Experimental work was carried on by the Tennessee Copper Company, and at the Consolidated smelter at Trail, B. C. The process so far was veiled in secrecy but essentially consisted of blowing concentrates into a preheated combustion chamber, using burner equipment similar to that used in coal-dust firing. So far, the multiple-hearth furnace had been modified by tearing out several hearths, making a large combustion chamber. One company was making a special ball mill to break up the concentrates before flash roasting. Flash roasting seemed likely to spread, with new furnaces specially designed for this work.

The practice of building roasting furnaces directly above reverberatory smelting furnaces was extended by the International Nickel Company, whose smelter was completed in the summer of 1930. Quick gravity flow of red-hot calcine to the smelting furnace was thus secured but at the expense of a higher construction cost. Roasting was being entirely eliminated at some copper plants which have a dearth of sulphur in the charge, there being no necessity of drying damp concentrates before feeding into the furnace. At others, where drying is desired, concentrates were fed on to one or more of the lower hearths of the roasting furnaces as well as on the top.

One new idea in reverberatory charging recently was introduced, the calcine being admitted through a telescopic pipe feeder discharging a few inches above the bath in the furnace. This allows better distribution of the charge, lower dust losses, and a longer life for the furnace.

An unusual problem in copper smelting was presented at the new Roan Antelope plant in Africa, under construction. The concentrates will contain from 50 to 60 per cent copper, and the matte made therefrom, 70 to 80 per cent, so that special treatment will probably be necessary for the rich slag, and there may well be difficulties in maintaining the heat in the converters.

Further progress was made in developing the use of the continuous vertical retort for volatilizing zinc, Grasselli having put in a plant at Meadowbrook, W. Va., during the year. Extreme purity of the zinc product, comparable with that

of electrolytic zinc, was secured. Lead impurities, in the reduced condition, may be filtered out as the volatilized zinc passes through the cool charge, and are not subsequently volatilized as would be the case if the lead were in the oxidized condition. The patent for the process states that zinc containing only 0.02 to 0.05 per cent lead can be made from ores containing 1.5 to 3.5 per cent lead. Such ores, under the standard methods of retorting, would give at least 1 per cent of lead in the product.

High-silica retorts, made of fireclay, clean firebrick culls, and silica flour, were a success at one plant. This gives a stiffer retort, and one that can better support heavy charges such as are now being used. The trend in zinc smelting during the last few years has been toward longer retorts and a higher charge density.

In the metallurgy of iron, progress was made in sintering ore by increasing the length and width of the sintering machine, and carrying a deeper bed. One plant used grates 72 inches wide and 127 feet long, with a charge 18 inches thick. Substitution of sintered ores have improved blast-furnace practice in some instances. Coke containing lower ash, made from washed coal, has improved furnace efficiencies. Increasing the size of blast-furnace tops has reduced the production of flue dust. Increasing cleaning of blast-furnace gas was notable, as was increased use of the gas for heating coke ovens and in open-hearth furnaces. Blast furnaces now produce regularly 1000 tons of iron a day.

Increased efficiency in the use of fuel in open-hearth furnaces had been brought about by semi-automatic combustion control, many furnaces being so equipped, with further improvements in this direction expected. Natural gas was being used to an increasing extent for smelting of both iron and non-ferrous metals. The relative advantages of a luminous and a non-luminous flame were still not fully understood.

Copper refineries were completed or were under construction at Copper Cliff, Ont., and at Montreal, reflecting increased Canadian production of that metal. The multiple system was employed at both, though reports of excellent progress in the series system recently had been made, and it could not yet be said to have been displaced in modern technology. New copper refineries in France and England were projected. Native copper from Michigan continued to be refined by fire methods, as it contains so little gold and silver.

Beryllium production had some publicity, but only about 3 to 5 pounds a day was produced in the United States, and about the same amount in Germany. Suitable large supplies of ore were difficult to find. A million-dollar plant for the reduction of titanium ores was under way in Virginia, most of the product being used for pigments. Pure ductile zirconium and hafnium metal had become available. Uranium was available for the first time in the form of ductile wire, rods, and sheets. Thorium was obtainable for three or four years but had become available as made by the electrolytic process. Tantalum was being used in increasing quantities, and columbium in ductile pliable form, as wire, sheet, and rod, was offered. Indium was isolated as a pure metal in 1930. Thallium-lead alloys were being developed and could be electroplated on iron, steel, and brass, affording a corrosion-resistant surface on those metals at a reasonable cost. A market for pure

strontium, now commercially available, was being sought. Research work in the production and use of these and other rare metals was particularly active during the year.

METAPHYSICS. See PHILOSOPHY.

METEORITES. See EXPLORATION under *Asia*. For chemistry of meteorites see CHEMISTRY under *Mineralogical Chemistry*.

METEOROLOGY. The large and rapid fluctuations in temperature that often occur from one day to another in the spring and early summer, and give rise to abnormally warm and abnormally cold periods, have always attracted considerable attention. In particular, it has long been an interesting question as to whether they have a tendency to recur on or about the same dates each year at a given place; irregular fluctuations still persist in the series of average daily temperatures as obtained from records 30 or 40 years in length, and it is still uncertain whether they would all become smoothed out as the length of the record increased indefinitely, or whether some of them are inherent and would always remain. From a recent study of the temperature records kept at the Kew Observatory since 1871, C. E. P. Brooks concludes it is very improbable that there is an abiding tendency for any periods of the year to be abnormally warm or abnormally cold, although such tendencies may spring up suddenly and persist for 10, 20, or 30 years before they vanish.

CLIMATE CHANGES. That marked changes of climate have occurred over large areas of the globe during geological times is well established, though these changes probably were not so profound as was at one time thought; that rather pronounced climatic changes have also taken place during comparatively recent, though largely prehistoric, times is likewise fairly certain. Whether or not further changes have taken place during historic times has long been a subject of controversy; instrumental records extend back less than three centuries, and were not of a very precise character previous to 1800, while non-instrumental data are often ambiguous and easy to discredit. During the 150 years from the middle of the eighteenth century to the end of the nineteenth, the climate of western Europe appears to have remained fairly stable. The remarkable series of warm winters in the twentieth century suggests that there may have been some kind of climatic change about 1900, but such a change is not shown by the weather elements other than temperature, and does not appear in any other season than winter.

It is only by going back to the beginning of the instrumental period before 1750 that definite indications of an appreciably different climate are found; and a study of the climate of the first half of the eighteenth century has recently been made by C. E. P. Brooks. Meteorological instruments, though not of high quality, were then sufficiently well distributed to give some indication of the climatic characteristics. The rainfall records are especially valuable; and they indicate a deficiency of rain over England and western Europe that appears to have been genuine; tree growths indicate that during the same period the rainfall of the western part of the United States was also deficient. This, and other, evidence as to the meteorological conditions over the globe during the first part of the eighteenth century seems to show that during

that period there was a weakening of the planetary circulation in the northern hemisphere, and of the associated minor circulations over the North Atlantic and North Pacific oceans.

CLIMATOLOGY. From a study of all the rainfall data that have now become available, C. E. P. Brooks has estimated that the average annual rainfall over the whole globe is 975 millimeters; the total volume of the water which falls each year is 4971×10^{11} cubic meters. The average annual rainfall over land is 659 millimeters, over the oceans 1107 millimeters. The maximum annual rainfall on land is just south of the equator, and there is a secondary maximum in the southern hemisphere between latitudes 50° and 60° ; in the northern hemisphere, the rainfall on land increases continuously from pole to equator, with no secondary maximum. There are three regions of maximum rainfall over the oceans, the chief of which is in the storm belt at latitude 50° N.; the equatorial maximum is almost as pronounced, while a less well developed maximum lies between latitudes 40° S. and 45° S.

South America receives nearly twice the average annual rainfall of any other continent; Australia receives the least. Africa as a whole has a rather high rainfall, since the heavy rains of the equatorial belt compensate for the subtropical deserts. The rainiest country in Europe is Switzerland, with Scotland second and Ireland third; Norway comes well toward the foot, and Russia is the driest of all. The average annual rainfall of the oceanic islands is 2086 millimeters, or 82.13 inches. The country with the greatest annual rainfall on the globe is Samoa, with a well authenticated average of 4300 millimeters, or 169.3 inches.

WEATHER. The West Indian hurricane of Sept. 1-5, 1930, resulted in \$50,000,000 damage and the loss of 4000 lives, in the Dominican Republic (q.v.).

The outstanding feature of the weather of 1930 in the United States was the unprecedented heat and drought east of the Rocky Mountains. A shortage of rain began in December, 1929; the deficiency was then in no way different from what occurs practically every year in some part of the United States, but the drought thus initiated continued for nearly a year, and spread to every State east of the Rockies except Florida. By March, 1930, the rainfall had become less than normal in 36 States; partial relief in May was followed by renewed dryness during June. July was the driest month of the drought, with the rainfall deficient in 36 States, and the least on record in nine States. In addition, July was extremely warm in most sections; every State had maximum temperatures of 100° F. or higher, and previous high temperature records were broken in nine States and equaled in three others; on the other hand, temperatures of freezing or below were reported from 11 States. In August, 35 States had deficient precipitation, four having the lowest of record; the abnormal heat continued through the first half of the month, though temperatures of freezing or below also occurred in 19 States. In September, much of the interior of the country experienced relief from the drought, but the rainfall was still deficient in 24 States; in several States, material relief had not yet been experienced at the close of the year. A somewhat detailed account of the drought will be found in the *Monthly Weather Review* for September, 1930.

METHODIST CONNECTION (OR CHURCH) OF AMERICA, WESLEYAN. A branch of the Methodist Episcopal Church, organized May 31, 1843, in Utica, N. Y.; the outgrowth of controversy over what was termed "liberty of testimony and freedom of discussion," and also a protest against the exercise of ecclesiastical authority. The purpose of the new organization was a church that should be anti-slavery and non-episcopal. In doctrine, the church is in accord with the Methodist bodies generally. In 1930 the branch comprised 25 annual conferences. Its general conference meets quadrennially, a convocation being scheduled for June, 1931. In 1930 there were 602 churches, 782 ministers and 21,661 members; the Sunday schools numbered 584, with 6110 teachers and officers, 33,927 pupils, and 7081 persons enrolled in the home department and on the cradle roll. The foreign missionary department conducts missionary work in Africa, India, and Japan, and the department of home missions and church extension among the American Indians, Mexicans, and in the mountain region of the South. Among the colleges maintained by the church are Central College, Central, S. C.; Houghton College, Houghton N. Y.; Marion College, Marion, Ind.; and Miltonvale College, Miltonvale, Kans. *The Wesleyan Methodist*, published weekly in Syracuse, N. Y., is the official organ of the church. A large printing plant is maintained in Syracuse, and all the literature of the church is printed there. Headquarters for the denomination are maintained at 330 East Onondaga Street, Syracuse, N. Y.

METHODIST EPISCOPAL CHURCH. Methodism in its widest signification and intention was a "revival of Christian earnestness, simplicity, and power." John Wesley (1703-91) had no intention of establishing a new church; his effort was to revive pure and undefiled religion. He taught the doctrines of the Church of England and "faithfully urged the people to attend its ordinances, to be present at its public assemblies, and to be interested in its prosperity." Had the authorities of the Church of England accepted some of Wesley's plans, in place of driving him away from them, the future of Methodism might have been quite different. Richard Boardman and Joseph Pilmoor, two of Wesley's workers, came to America in 1709 and were followed in 1771 by Francis Asbury who was destined to be the great leader of the infant church. At the first conference held in Philadelphia in 1773, there were present 10 preachers who reported 1170 members. The Methodist Episcopal Church was organized at a "Christmas conference" held in Baltimore in 1784.

The governing body of the church is the general conference, composed of an equal number of ministerial and lay delegates who meet once in four years and make all the rules and regulations. The last quadrennial session of the general

conference convened in Kansas City, Mo., in May, 1928. An annual conference, presided over by the bishop of each area, meets once a year at which all pastoral changes are considered and reports of the local churches are gathered and compiled. There is also a local quarterly conference that administers all matters pertaining to the work of the local church.

In 1930 there were in the United States and territories 98 annual conferences and missions; 12,046 ordained ministers; 11,155 lay preachers; 4,044,851 church members; 24,195 Sunday schools; 371,649 Sunday-school officers and teachers; 4,100,311 Sunday-school pupils; and 509,873 Epworth League members. Conferences in white areas numbered 77 and consisted of 13,531 charges with 3,643,392 members; conferences in colored areas numbered 19 and consisted of 1995 charges with 302,222 members. Conferences outside the United States included 5 in Africa, 12 in Eastern Asia, 22 in Europe and North Africa, 6 in Latin America, 3 in Southeastern Asia, and 12 in Southern Asia, with a total membership of 640,899, 2070 ordained ministers, 3709 local preachers, 8388 Sunday schools, and 394,319 Sunday-school pupils.

The administration of the missionary, educational, and philanthropic work of the Methodist Episcopal Church is committed to six general benevolence boards: Foreign missions; home missions and church extension; education; hospitals, homes, and deaconess work; pensions and relief; and temperance, prohibition, and public morals. These boards cooperate in the world service movement, their budgets being fixed and their work correlated in the interest of cooperation, economy, and efficiency by the world service commission. On May 31, 1930, this commission reported total net receipts of \$7,494,185.

The board of foreign missions administers the missions of the church in Mexico, South America, Europe, Africa, southern and eastern Asia, the Philippines, and the islands of many seas. It received during 1930 a total of \$2,234,987. The constituency roll of the church in foreign mission fields numbered 893,881 persons, including 675,116 members of the church and 218,765 baptized children under instruction for membership. The board of home missions and church extension looks after weak churches in new and growing communities in the United States, where church buildings are needed and ministers have to be supported, and cares for the religious work among many foreign groups. During 1930 a total of \$1,383,250 was expended on home mission work, while appropriations for church maintenance and extension amounted to \$1,758,250. There are also two women's missionary societies, the foreign and the home, which reported receipts in 1930 amounting to \$3,868,429.

The educational system of the church, administered by the board of education, included, in 1930, 46 colleges and universities, 24 secondary or preparatory schools, 8 schools of theology, and 19 institutions for colored students. The total enrollment was 63,350. The board of hospitals, homes, and deaconess work administered, in 1930, 77 hospitals, 44 homes for the aged, 43 homes for children, 45 deaconesses' homes, and 26 homes for young business men and women. The board of pensions and relief reported in 1929 a gross income of \$3,369,446 and estimated capital resources of \$22,449,647; \$3,194,114 was paid during the year as annuity to a total of 8498 claim-

ants. The board of temperance, prohibition, and public morals is responsible to the general conference, its purpose being "to make more effective the efforts of the church to create a Christian public sentiment which will relate the experiences of the Gospel of Christ to the economic, political, industrial, and social relations of life" and "to crystallize opposition to all public violations of the moral law and to all attempts to undermine and destroy civil and religious liberties."

The official publications of the church are the *Christian Advocate* (New York); the *Epworth Herald* (Chicago); *Zion's Herald* (Boston); and *Der Christliche Apologete* (Cincinnati). Sectional editions of the *Christian Advocate* include the following: Western (Cincinnati); northwestern (Chicago); central (Kansas City, Mo.); Pacific (Portland, Ore.); California (San Francisco); southern (Cincinnati); and southwestern (New Orleans). The *Pittsburgh Christian Advocate* (Pittsburgh, Pa.) and the *Michigan Christian Advocate* (Detroit) are also official in character. The secretary of the general conference was the Rev. John M. Arters, 700 Hammond Street, Bangor, Me.

METHODIST EPISCOPAL CHURCH, COLORED. This denomination was organized in Jackson, Tenn., in 1870 and was composed of the colored membership of the Methodist Episcopal Church, South. In 1930 it reported 4410 churches with 481,610 members; 3624 traveling preachers and 2104 local preachers; 3190 Sunday schools with an enrollment of 296,350 pupils; and 1809 Epworth Leagues with a membership of 47,201. The amount raised during the year for educational purposes was \$271,520 and about the same for missionary purposes. More than \$1,000,000 was also contributed for home maintenance. The church has 10 bishops and 12 connexional officers. The *Christian Index* is the official organ, while the *Eastern Index* and *Western Index* serve their respective sections. A quadrennial general conference was held in Louisville, Ky., in May, 1930. Headquarters are maintained in Jackson, Tenn.

METHODIST EPISCOPAL CHURCH, SOUTH. A separate branch of the Methodist Episcopal Church formed in 1845 over the question of slavery. Statistics for 1930 showed that there were 54 conferences and missions, of which 41 were in the United States and 13 in foreign countries; 8357 traveling preachers and 4614 local preachers; 2,661,429 members; 17,123 churches which had a valuation of more than \$185,000,000; 6614 parsonages, with a valuation of \$29,355,000; 15,689 Sunday schools, 1,951,218 Sunday-school pupils; 9303 Epworth Leagues, and 253,129 Epworth League members. The contributions for all purposes for 1930 amounted to \$35,775,667. The denomination sponsored 248 educational institutions, including 32 universities and colleges, 21 academies, and 46 mission schools. The important periodicals of the denomination are the *Missionary Voice* and the *Christian Advocate*. The executive body is the College of Bishops which in 1930 had 16 members who hold office for life, subject to superannuation at the general conference nearest the seventy-second birthday. A general conference was held in Dallas, Texas, in May, 1930, at which 472 delegates were entitled to seats. Three new bishops were elected, and provision was made for the retire-

ment of bishops as stated above. The conference authorized the establishment of autonomous churches in Brazil, Korea, and Mexico. A general board of Christian education was established to do the work heretofore done by the board of education, Sunday-school board, and Epworth League board. Headquarters of the church are in Nashville, Tenn.

METHODISTS. **WESLEYAN METHODIST CHURCH.** The principal branch of the Methodist denomination in Great Britain and Ireland, founded at the University of Oxford in 1739 by John and Charles Wesley and holding its first conference in London in 1744. This is the mother church of the denomination and is composed of five divisions: Great Britain; Ireland; Foreign Missions; French Conference; and South African Conference. The church maintains a publishing house at 25-35 City Road, London, E. C., 1. See **METHODIST CONNECTION (OR CHURCH) OF AMERICA, WESLEYAN.**

PRIMITIVE METHODIST CHURCH. Commonly known as the "Camp Meeting Methodists," organized in Staffordshire in 1810. Next to the Wesleyan, this is the most numerous and most democratic of the denominations which have arisen out of the Methodist movement. The church was organized in the United States in 1844 by Hugh Bourne, one of the founders of the movement in England. A publishing house is maintained at Holborn Hall, Clerkenwell Road, London, E. C., 1.

UNITED METHODIST CHURCH. Formed in England in 1907 by the union of three denominations of Methodists which had hitherto been separate from and independent of each other: The Methodist New Connection; the Bible Christians; and the United Methodist Free Church. The church maintains a publishing house at 12 Farrington Avenue, London, E. C., 4.

WESLEYAN REFORM UNION. One of the smaller divisions of the Methodist movement, which separated in 1850 from the Wesleys and organized as a separate body in 1859. Its adherents are to be found mostly in the Midland counties of England.

INDEPENDENT METHODIST CHURCHES. Founded in 1796 in England and united with other societies in 1806. The title was changed twice, but in 1898 the old name was resumed.

AUSTRALASIAN METHODIST CHURCH. Methodism in Australia dates from 1812; the first conference was held in 1855. Publishing houses are maintained in Sidney, Melbourne, Adelaide, Brisbane, and Perth.

Other branches of the denomination include the New Zealand Methodist Church and the Japan Methodist Church. Also see **CANADA, THE UNITED CHURCH OF.**

In Great Britain, a scheme for the reunion of the Wesleyan, the Primitive, and the United Methodist churches, after having been approved by all three conferences and having received Parliamentary sanction, was to be voted on finally at the conferences of 1931.

MEXICO. A federal republic lying between the United States and Central America. Capital, Mexico City.

AREA AND POPULATION. The area of the republic, which is divided into 28 states, one Federal district, and three territories, is about 767,198 square miles. The population at the census taken May 15, 1930, was 16,404,030, representing a gain of 2,069,231, or 14.4 per cent since the census of 1921. Females in the population in 1930 outnumbered the males by 273,000. In December, 1928, the Indian population was estimated at 4,179,472, of whom 1,791,000 still conserved their native tongue. Americans residing in Mexico in 1929 totaled 14,607.

The population of Mexico City in 1930 was 968,443 (752,194 in 1921) and that of the Federal District including Mexico City, 1,217,802 (906,063 in 1921). Other leading cities are Guadalajara (143,376 in 1921), Monterrey (88,458), Puebla (95,535), San Luis Potosi (57,353), and Leon (53,639). The population is predominantly Roman Catholic but the Church, under the Constitution of 1917, is separated from the State and strictly regulated.

EDUCATION. According to the census of 1921, 62.29 per cent of the population was illiterate. Primary education is nominally free, compulsory, and secular. An active campaign to reduce illiteracy was carried on in 1930, when 63,800,000 pesos (about \$31,900,000) were spent on education, 40,000,000 pesos being contributed by the Federal Government and the remainder by the States. The total enrollment in State and Federal schools in 1928 was 1,311,000 and in private schools, about 18,000. Students in the three universities, National University of Mexico, University of the Southeast, and the University of Guadalajara, totaled 9379 on July 31, 1928. The attendance at the National University of Mexico in 1929 was 7527.

PRODUCTION. Mexico's agricultural resources have been only partially exploited. In 1930 there were about 30,027,000 acres under cultivation, of which 5,700,000 acres were irrigated. Cultivation was by primitive methods, for the most part. The Don Martin Dam in the State of Nuevo Leon, the largest unit in the development programme inaugurated by the Federal Irrigation Commission in 1926, was completed in March, 1930. It was designed to reclaim 750,000 acres of arid land. Other extensive irrigation projects were under construction. The appropriation for agricultural development in 1930 was 23,000,000 pesos (about \$11,500,000). The policy of agrarian reform adhered to by the Obregon, Calles, Portes Gil, and Ortiz Rubio governments resulted in the distribution of 15,228,904 acres of public and confiscated lands to over 582,000 persons up to Jan. 1, 1930 (see below under *History*).

Production of the chief crops in 1929, with figures for 1928 in parentheses, was: Wheat, 11,333,000 bushels (11,031,000); corn, 60,778,000 bushels (85,542,000); rice, 3,338,000 bushels (4,074,000); beans, 3,789,000 bushels (6,472,000); tomatoes, 95,000 metric tons (89,000); coffee, 84,503,000 pounds (92,562,000); cotton, 112,541,000 pounds (132,884,000); sugar, 394,000,000 pounds (394,000,000); chick-peas, 2,540,000 bushels (2,363,000). Other crops, with the production for 1928, are: Barley, 3,970,000 bushels; tobacco, 25,794,000 pounds; cacao, 3,089,000 pounds; henequen, 139,000 metric tons; bananas, and chicle.

While copper, lead, and zinc production increased in 1929, as compared with 1928, the output of silver and gold was smaller than in the previous year. The output in kilograms, with the percentage of increase or decrease as compared with 1928, was as follows: Copper, 85,553,669 (32.13 per cent increase); lead, 248,400,859 (5.04 per cent increase); zinc, 174,049,687 (7.61 per cent increase); silver, 3,327,038 (7.61 per cent decrease); gold, 20,276 (2.15 per cent decrease).

Petroleum production was 44,689,000 barrels (50,151,000 barrels in 1928). The coal output averages slightly more than 1,000,000 tons annually. Other minerals, with their 1928 output in metric tons, are: Antimony, 3578; arsenic (white), 8669; graphite, 4972; mercury, 87 (83 in 1929). The drastic decline in silver prices in 1930 reduced the value of the Mexican output by more than \$18,000,000. The average price per troy ounce of silver was about 53 cents in 1929 and 34½ cents in 1930. Mexico's water-power resources are estimated at 6,000,000 horse power, of which 300,000 were developed in 1926.

Manufacturing centres in Mexico City and Monterrey and is mainly for local consumption. Textiles, shoes, iron and steel, soap, cement, and tobacco are the chief products. Protection was extended to a number of industries by the tariff imposed toward the end of 1929.

COMMERCE. Imports in 1929 totaled \$191,421,490 (\$178,881,000 in 1928) and exports \$295,317,000 (\$296,222,000 in 1928). Imports increased by \$12,540,311, or 7 per cent, while exports declined by \$905,396, or less than 1 per cent. The United States supplied 69.1 per cent of all imports (67.5 per cent in 1928) and took 60.7 per cent of all exports (68.2 in 1928). The United Kingdom, Germany, and France were the other chief customers and sources of imports. Exports, in order of value, were silver, copper, lead, zinc, petroleum, henequen, coffee, and raw cotton. For the fiscal year ended June 30, 1930, exports to the United States were valued at \$101,648,806 (\$122,808,840 in 1928-29) and imports from the United States totaled \$138,182,647 (\$118,984,885 in 1928-29).

FINANCE. The budget for 1930, as approved by the budget committee of Congress, estimated revenues at 293,806,950 pesos (about \$146,903,400) and expenditures at 293,773,787 pesos (about \$146,886,800), the anticipated surplus being 33,162 pesos. As approved by the Cabinet for submission to Congress, the 1931 budget placed revenues at 309,500,000 pesos and expenditures at 298,500,000 pesos. The expenditure items included 12,500,000 pesos allotted for highways. Increased revenues were expected from increased import duties and higher taxes on gasoline, tobacco, and alcohol. By confirming the President's power to promulgate changes in the rates of import and export duties, the Mexican Congress provided for the easy adjustment of the tariff schedule to meet revenue needs.

The 1931 budget set aside 34,000,000 pesos for the service of the foreign debt (20,000,000 pesos in 1930), while the appropriation for the Department of War and Marine was fixed at 70,000,000 pesos (79,000,000 pesos in 1930).

The fiscal year 1929 ended with a surplus of approximately 24,000,000 pesos (\$12,000,000), according to a report of the Minister of Finance submitted to Congress Sept. 1, 1930. In the budget for 1929, revenues and expenditures were

calculated to balance at about 288,000,000 pesos (1 peso equals \$0.4985 at par). The Government's cash balance on Dec. 31, 1929, was 17,895,235 pesos, as compared with 4,395,644 pesos on the same date in 1928.

Under an agreement signed in New York City July 25, 1930, by the Minister of Finance and Mexico's international creditors, the principal of the direct foreign debt was fixed at \$267,000,000, a reduction of \$7,000,000, and the principal of the debt of the National Railways of Mexico was reduced to \$225,000,000 from \$239,000,000. Substantial reductions in accrued interest were granted also. Previous to the signing of the agreement, the total unpaid on the direct foreign debt was placed at 946,958,808 pesos (about \$473,479,000), of which the principal was 550,470,000 pesos (about \$275,274,000) and the accrued interest, 396,409,476 pesos (about \$198,204,000). On the National Railways debt of about \$239,000,000, the accrued interest amounted to about \$171,988,000.

The agreement provided for the payment of the foreign debt in annuities beginning with \$12,500,000 for the year 1931 and increasing to \$15,000,000 in 1936 and thereafter until 1975. Out of the early annuities the bankers' committee was to reserve some \$11,750,000 for the retirement of overdue obligations with respect to the direct debt, and the balance was to be used to pay interest and amortization on bonds of two series (A and B) to be issued to retire the principal of the outstanding secured and unsecured debt, respectively. Both issues were to constitute a charge on the entire customs revenue of the Government (A bonds having priority) and were to bear interest beginning at 3 per cent and gradually rising to 5 per cent in 1935 for Series A and in 1936 for Series B.

Provision was made for the future reorganization of the railways under new management and the consolidation of the outstanding railway debt by means of a new general mortgage, part of which would be guaranteed by the Government for the purpose of refunding existing bonds bearing a similar guaranty. A prior lien mortgage was to be placed on the railways to finance capital requirements of the company under proper safeguards. Interest on the new railways obligations was to rise gradually from 2½ per cent to 5 per cent, and provision was to be made for the creation of a fund for retirement of the accrued interest on the same terms as for the foreign debt.

It was estimated that the revised foreign debt plus the specific internal debt amounted to about \$350,000,000. In addition, foreign claims for losses suffered during revolutionary disturbances totaled about \$150,000,000 and the agrarian debt, incurred by the expropriation of large estates for distribution to the peons, was estimated at \$750,000,000. A credit of \$15,000,000 was secured from the National City Bank of New York late in the year to stabilize the currency.

COMMUNICATIONS. Of the 12,359 miles of railway line in 1929, about 7460 miles comprised lines of the National Railways of Mexico, a company in which the Government held 52 per cent of the stock (1930). A general reorganization of the National Railways was undertaken in 1930, following the agreement for the resumption of interest payments on the railways debt (see above under *Finance*). Javier Sanchez Mejorada, Minister of Communications, was appointed executive president of the system, the programme for rail-

way expansion was curtailed, and strict retrenchment in expenditures was inaugurated. Improved railway service between Mexico and the United States was inaugurated in 1930, the running time from Mexico City to St. Louis, Mo., being reduced to 61 hours and to New York, to 85 hours.

Highway mileage in use during 1930 was reported at 62,137 miles, of which 994 miles were automobile highways, and the expenditure on road work during the year was about \$5,252,000. Work on a comprehensive highway programme was going forward in 1930. It included a 868-mile road from Matamoros, near the United States border on the Gulf of Mexico, to Mazatlan on the Pacific, which was expected to be completed in three years at a cost of 10,000,000 pesos. Air lines connected Mexico City with the United States and a new line linking Vera Cruz with the countries of Central and South America was inaugurated June 1, 1930.

GOVERNMENT. Under the constitution of 1917, executive power is vested in the President, elected by direct popular vote for four years and ineligible for reelection; legislative power in the Congress consisting of the House of Deputies elected for two years by universal suffrage, and the Senate, comprising two members from each State, elected in the same manner. A permanent committee of 14 Senators and 15 Deputies, appointed by the respective Houses, sits while Congress is in recess. President in 1930, Pascual Ortiz Rubio, who assumed office Feb. 5, 1930.

HISTORY

FOREIGN RELATIONS. Mexican foreign affairs in 1930 were marked by the continuation of amicable relations with the United States, the severance of diplomatic relations with Soviet Russia, a temporary estrangement with Guatemala (see GUATEMALA under *History*), and the resumption of diplomatic relations with Portugal on October 29.

The fruitful three-year term of Dwight W. Morrow, the American Ambassador to Mexico, was terminated September 17 when he left to further his successful candidacy for United States Senator from New Jersey. His outstanding accomplishment was the settlement of the long-standing controversy over Mexico's nationalization of petroleum deposits. He was credited also with playing an important rôle, as a friendly mediator, in the settlement of the struggle between the Church and the State in Mexico. J. Reuben Clark, appointed October 3 to succeed Ambassador Morrow, was a former Under Secretary of State and served also as adviser to Mr. Morrow at Mexico City. President Hoover on August 21 approved recommendations of the Mexican-United States Boundary Commission for the straightening of the course of the Rio Grande from El Paso to Fort Quitman, Texas. Negotiations were opened subsequently for the conclusion of a treaty embodying the recommendations. The commission's plans called for shortening the 154-mile course of the river to about 88 miles at a cost of \$6,000,000, 88 per cent of which would be borne by the United States as the country most benefited by the project. The Mexican Consulate at Laredo, Texas, closed Dec. 17, 1929, was reopened Jan. 17, 1930.

In May, the introduction into the United States Congress of several bills to limit Mexican immigration to the United States aroused widespread protest in Mexico. There were threats of

tariff retaliation, if the bills were enacted, and minor demonstrations by Mexico City students (see *Immigration*). Apprehension at what was described as the increasing passive conquest of Mexico by American interests, ranging from financial control to the denationalization of the Mexican mind by American schools and educational missionary institutions such as the Y. M. C. A., was widely expressed at a meeting of the University Council in Mexico City June 5. An appeal to Catholics to cooperate in stamping out Protestantism in Mexico "not only for religious motives but also for patriotic motives" was made by Archbishop Pascual Díaz of Mexico in his Christmas message for 1930, read in all Catholic Churches.

Another viewpoint was revealed in the recommendation of Gen. Juan Andreu Almazán, Minister of Communications and one of the most powerful military figures in Mexico, that Mexico align itself with the United States in any future war. General Almazán reported to President Ortiz Rubio July 30, after an extended trip in the United States, that such an alliance "is the only way of lessening danger to our own nation and subsequently obtaining advantages ourselves." Two American citizens kidnapped by bandits during the year were released upon payments of small sums of ransom. Federal troops were reported to have wiped out one band of kidnappers.

In January, Mexico suddenly severed diplomatic relations with Soviet Russia as a protest against Communist demonstrations before Mexican embassies in the United States and other countries, which Foreign Minister Genaro Estrada declared were organized with the approval of the Soviet Government. This action was preceded by raids on Communist headquarters in Mexico City, in which numerous arrests were made, including 12 foreign Communists, who were deported. The prisoners were charged with dynamite outrages and with planning to assassinate prominent men, including former President Calles. After hearings extending over a four-year period, the German-Mexican Claims Commission completed its work in 1930. Claims against Mexico aggregated 6,169,080 pesos, while those approved totaled only 508,912 pesos. A move in the direction of membership in the League of Nations was taken by Mexico in the spring of 1930 when Antonio Castro Leal, counselor to the Mexican Embassy in Paris, was appointed official observer at Geneva.

INTERNAL DEVELOPMENTS. Despite a serious depression in agriculture, mining, and business, sporadic banditry, and a quarrel over the governorship of the State of Chihuahua, internal conditions were comparatively peaceful during 1930. The Chihuahua dispute was ended when the Federal Government declared unconstitutional the coup by which Manuel Jesus Estrada was proclaimed Governor on June 25 and confirmed the incumbent, Gov. Francisco Almada, as rightful holder of the post. In a special election held in Chihuahua July 20, the National Revolutionary (Government) candidate defeated his Socialist opponent.

In his inaugural address on Feb. 5, 1930, President Ortiz Rubio pledged his administration to continue the revolutionary programme inaugurated by Obregon and Calles. He stressed his Government's intention to reduce the infant mortality rate, which was nearly 50 per cent of all births, to improve the character and efficiency of

the civil service, and to further education among the masses. The President was shot through the jaw in an attempt to assassinate him a few hours after his inaugural address and was incapacitated for 11 days. The Cabinet announced by President Ortiz Rubio was as follows: Interior, Former President Emilio Portes Gil; Foreign Affairs, Genaro Estrada; War, Joaquin Amaro; Treasury, Luis Montes de Oca; Agriculture, Manuel Perez Trevino; Industry, Commerce, and Labor, Luis León; Education, Aarón Sáenz; Communications and Public Works, Juan Andreu Almazán. Friction over the Government's economic policies led to a Cabinet crisis in October. Luis León, the Secretary of Industry, Commerce, and Labor, resigned October 8 and on the same day former President Portes Gil resigned as head of the National Revolutionary party, the dominant political group organized by former President Calles. Luis León was succeeded by Aarón Sáenz, the Secretary for Education, and Portes Gil by General Lázaro Cárdenas, former Governor of the state of Michoacán. The vacant portfolio of Education was filled December 10 by Dr. José Manuel Puig Casauranc.

The National Revolutionary party insured its control of Congress by a sweeping victory in the elections of July 6. The general voting public showed little interest in the elections, although election day riots resulted in two deaths and the wounding of 14 persons. The National Agrarians, a newly organized opposition party, had been weakened by internal dissensions. The National Revolutionary party enjoyed the official sponsorship of the Government under a decree issued by President Portes Gil on January 26. It provided that the wages of all Government employees for seven days a year should be diverted by the National Treasury into the hands of the party for use in political campaigns, social and charitable work, and the insurance against illness and death of members of the party.

A new Cabinet crisis was threatened in December in connection with attacks upon the debt accord signed in New York by Finance Minister Montes de Oca (see above under *Finance*). President Ortiz Rubio caused a sensation in Government circles by issuing a vigorous statement in defense of the Finance Minister and his debt settlement policy.

THE ECONOMIC CRISIS. The controversy over the debt settlement was the direct outgrowth of the economic crisis which faced Mexico during the year. The drastic decline in prices of bar silver, of which Mexico is the world's largest producer, the consequent unfavorable repercussions on Mexico's silver exchange, the poor harvest of 1929, and low agricultural prices combined to render the world-wide depression especially severe in that country. Various Government schemes for the revival of business activity were rendered ineffective by the necessity for financial retrenchment. On November 22 the Government resorted to tariff increases on a number of imported articles as a means of stimulating Mexican industry. At the same time the duties on imports of mining machinery and cattle were removed. A proposal submitted to the Chamber of Deputies November 29 urged a 10-year moratorium on the foreign indebtedness and the diversion of interest payments to internal development. On December 2, Congress voted to give the President extraordinary financial powers in the employment of public funds to alleviate the crisis.

The number of unemployed men in the country early in 1930 was estimated at about 300,000.

AGRARIAN POLICY. Minister of Labor Luis León announced February 18 that the Government's policy of distributing communal lands would be continued until every agricultural worker had his own plot of ground. He referred, however, to the necessity of facing the agrarian indebtedness. Agrarian bonds issued for expropriated land totaled only \$4,200,000 up to the beginning of 1930, although some 15,000,000 acres had been distributed to about 3000 native villages. Of this land 1,775,000 acres had been expropriated from foreigners, including 465,000 acres owned by American citizens.

Ortiz Rubio's agrarian policy was further developed in two decrees issued April 27 and May 8, respectively. The first authorized the issuance of \$25,000,000 of bonds on the public agrarian debt, bearing 5 per cent interest and redeemable in 20 years. The second provided for the leasing and eventual sale to citizens of land from the public domain, provided they had a capital of \$2500, took the lands on five-year contracts, and agreed not to cultivate plants producing alcoholic drinks. The greater restrictions placed on the wholesale distribution of land indicated a growing realization of the insufficiency of the effort to resuscitate the communal system of land holding. In June, former President Calles, after consultation with leaders of the National Revolutionary party, publicly confessed that the agrarian policy had been to a large degree a failure and demanded its early revision. It was admitted that agricultural production had shown no noticeable increase and that agricultural products were being imported increasingly, while the henequen industry of Yucatan had been virtually ruined. A third decree signed by President Ortiz Rubio on August 12 provided for the apportionment in communal grants to small holders of the government-owned haciendas, or large plantations and ranches. The President announced that all lands expropriated for distribution under his administration would be paid for in cash. For the agrarian debt, see above under *Finance*.

NEW MINING LAW. A new mining law, promulgated by the President August 2, went into effect Oct. 1, 1930. It made the extraction and commercial preparation of mineral substances a public utility, with a *a priori* right to the use of the soil. Exploitation of mineral wealth can be undertaken only under a concession issued by authority of the President. Foreigners may obtain concessions only upon the pledge to observe the provisions of Article 27 of the Constitution.

CHURCH AND STATE. In his message to Congress on September 1, President Ortiz Rubio stated that the conflict between Church and State was not likely to recur so long as the Church obeyed the laws. That the Government intended to enforce the religious laws was indicated by the levying of a \$100 fine on Monsignor Pascual Diaz, Archbishop of Mexico, for having confirmed child prisoners in Belen prison in August in violation of the statute forbidding religious ceremonies outside of churches. The Catholic Cathedral of Mexico was formally reopened August 15, after having been closed since July, 1926. Roman Catholic critics of the settlement reached between the Church and the State in 1929 were warned on September 22 by the Apostolic Delegate to Mexico, Archbishop Leopoldo Ruiz y Flores, that he could not "permit discussion (of the settlement)

by people holding such views, for now is not the time to discuss but to obey, and I cannot recognize any right to demand of me an account of my official actions." It was reported in September that the Government had started legal proceedings to nationalize all property of the Methodist Episcopal Church in Mexico. In anticipation of this action, the Methodist congregations of Mexico were organized as a national church by the parent organization in the United States. For archaeological studies, see *ANTHROPOLOGY*.

MEYER, EDUARD. A German historian and educator, died in Berlin, Aug. 31, 1930. He was born in Hamburg Jan. 25, 1855, and attended the Universities of Bonn and Leipzig, receiving the Ph.D. degree from the latter institution in 1875. He was appointed professor of ancient history at the University of Leipzig in 1884, at Breslau in 1885, at Halle in 1889, and at Berlin in 1902. In 1909 he was German exchange professor at Harvard University, and during 1919-20 served as rector of the University of Berlin. Honorary degrees were conferred on him by Oxford, St. Andrews, Freiburg, and Chicago Universities. He was also a member of academies of art and science in Berlin, Amsterdam, Copenhagen, and Munich, and in 1910 received the University of Berlin's Gold Medal for Knowledge. His works include: *Geschichte von Troas* (1877); *Geschichte des Altertums* (5 vols., 1884-1902); *Geschichte des alten Aegyptens* (1887); *Forschungen zur alten Geschichte* (2 vols., 1892-1899); *Untersuchungen zur Geschichte der Gracchen* (1894); *Wirtschaftliche Entwicklung des Altertums* (1895); *Die Israeliten und ihre Nachbarstämme* (1906); *Aegypten zur Zeit der Pyramiden* (1908); *Ursprung und Geschichte der Mormonen* (1912); *Reich und Kultur der Chetiter* (1914); *Caesars Monarchie und das Principat des Pompejus* (1919); *Preussen und Athen* (1919); *Ursprung und Anfänge des Christentums* (2 vols., 1920-22); and *Hellenismus in Asien* (1925). Professor Meyer was also the author of several books in which he attempted to justify Germany's attitude during the World War.

MIAMI UNIVERSITY. A coeducational institution in Oxford, Ohio; founded in 1809. The enrollment for the autumn of 1930 was 2215, distributed as follows: College of liberal arts, 727, school of education (four-year course), 722 (two-year course), 217; business administration, 408; fine arts, 84. The enrollment in two summer sessions was 1075. The faculty numbered 167, of whom 17 were new appointees. The income from the State of Ohio for maintenance and from gifts, fees, and income on investments for 1930-31 was \$1,331,042. There were 118,000 bound volumes in the library. During 1930 a new chemistry building and a physical education building and gymnasium, costing in all approximately \$600,000, were under construction, the funds being appropriated by the Ohio Legislature. The Oxford College Loan Fund (for women) was increased during the year from \$8000 to \$14,000. The historic Rogers mansion, facing the campus, was presented to the university as a guest house by John R. Simpson, a prominent New York alumnus. President, Alfred H. Upham, Ph.D.

MICHIGAN. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 4,842,325. The population on Jan. 1, 1920, was 3,668,412, according to the Fourteenth Census. The capital is Lansing.

AGRICULTURE. The following table gives the

acreage, production, and value of the principal farm crops during the years 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|---------------|------|-----------|------------|--------------|
| Hay | 1930 | 2,876,000 | 3,800,000* | \$58,802,000 |
| | 1929 | 8,029,000 | 5,085,000* | 54,207,000 |
| Corn | 1930 | 1,384,000 | 28,372,000 | 21,846,000 |
| | 1929 | 1,844,000 | 32,928,000 | 29,808,000 |
| Oats | 1930 | 1,482,000 | 56,316,000 | 19,147,000 |
| | 1929 | 1,372,000 | 40,886,000 | 19,625,000 |
| Wheat | 1930 | 824,000 | 19,336,000 | 14,118,000 |
| | 1929 | 904,000 | 16,810,000 | 18,994,000 |
| Dry beans .. | 1930 | 819,000 | 4,832,000 | 12,563,000 |
| | 1929 | 694,000 | 5,691,000 | 21,057,000 |
| Potatoes ... | 1930 | 263,000 | 15,254,000 | 12,966,000 |
| | 1929 | 263,000 | 19,725,000 | 24,656,000 |
| Sugar beets . | 1930 | 85,000 | 559,000* | |
| | 1929 | 52,000 | 300,000* | 2,881,000 |
| Barley | 1930 | 245,000 | 7,350,000 | 4,042,000 |
| | 1929 | 243,000 | 5,589,000 | 3,856,000 |
| Rye | 1930 | 171,000 | 2,565,000 | 1,411,000 |
| | 1929 | 166,000 | 2,241,000 | 1,972,000 |

* Tons.

Farms in the State numbered 169,915 in 1930, the total having fallen considerably from 192,327 for 1925 and 196,447 for 1920.

MINERAL PRODUCTION. Second only to Minnesota in the mining of iron ore, Michigan was increasingly active in this industry, producing 16,838,568 long tons in 1929, in contrast to 14,241,102 in 1928. The value of the year's product rose to \$47,597,976 for 1929, from \$37,039,644 for 1928. The ore was, as usual, chiefly shipped outside the State. The local iron industry, however, more than held its own. Though producing little coal (804,869 net tons in 1929, as against 617,632 in 1928, or, in value, \$2,904,000 for 1929 and \$2,631,000 in 1928), the State was a fairly large producer of coke, its byproduct ovens furnishing 2,679,971 short tons in 1929, and 2,399,656 in 1928. These quantities were valued at \$14,867,651 for 1929 and \$13,461,466 for 1928. Coke, in turn, went into the blast furnaces, which produced, in 1929, 841,089 long tons of pig iron, as against 797,766 in 1928; in value, \$14,099,467 for 1929 and \$15,157,535 for 1928. The product of the copper mines was large in 1929, attaining 186,402,218 pounds, as against 178,442,704 in 1928; the value of copper mined was \$32,806,790 for 1929, and \$25,695,749 for 1928. The cement mills shipped 13,325,727 barrels of cement in 1929; in 1928, 14,044,230. The value of the shipments was, for 1929, \$18,916,711; for 1928, \$19,268,707. Foremost State in the salt industry, Michigan produced, in 1929, 2,650,220 short tons of salt, an increase over the 2,405,240 short tons of 1928. By value the product was \$8,343,670 for 1929 and \$8,249,437 for 1928. The value of clay products was \$6,310,586 for 1928 (for 1927, \$6,772,283). Gypsum yielded, in 1928, 677,108 short tons, in value, \$3,159,369 (in 1927, 668,617 short tons, in value \$4,216,524). A heavy and increasing production of stone, chiefly of low grades, attained 12,472,600 short tons, valued at \$7,588,840, for 1928. The value of all the native mineral products of the State totaled, for 1928, \$123,535,869; for 1927, \$124,029,572.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 8155.35. There were built, in 1930, 5.62 miles of first, and 3.90 of second track.

EDUCATION. The movement toward the equalization of educational facilities in the several localities of the State made further advance in 1930; the State educational survey commission conducted a study of elementary and secondary schools throughout Michigan. It was expected by

State Superintendent of Public Instruction Pearce, writing in the *Journal* of the National Education Association, to use its findings as the basis of a recommendation to the legislative session of 1931 that it establish a programme of minimum education and adjust the resulting cost to the means of poor localities by State aid. Plans for revising the system of teachers' retirement were under consideration of a commission appointed by the Legislature. They had to do particularly with the correction of the unsatisfactory condition of the teachers' retirement fund. For the year ended June 30, 1929, the school-age population of the State was reckoned to be 1,337,018 persons from 5 to 19 years old. The number of those enrolled as pupils in the public schools was 942,615 net of duplications. Of the enrolled, 818,560 were in the elementary and 157,481 in the high-school grades. The net expenditure for education in the public schools, for the year, was \$91,827,140. The monthly salaries of teachers averaged, for men, \$220; for women, \$160.

CHARITIES AND CORRECTIONS. The State Welfare Department, as functioning in 1930, comprised five commissions, those respectively of welfare, prisons, hospitals, corrections, and the State institutions for the education of special classes. These commissions, consisting of from five to seven appointive members each, performed the central duties of administration or control in their respective fields. The department itself had as its administrative head a director. Under the State Hospital Commission were the following State mental hospitals, as named with their populations of October, 1930; Kalamazoo State Hospital, 2591; Pontiac State Hospital, 1728; Traverse City State Hospital, 2092; Newberry State Hospital, 1149; Ionia State Hospital, 691; also the Farm Colony for Epileptics, Wahjamega, 803. Under the State Prison Commission were the State Prison, Jackson, 5201; Michigan Reformatory, Ionia, 1846; Branch Prison, Marquette, 931. The Corrections Commission had charge of the Girls' Training School, Adrian, 300; and the Boys' Vocational School, Lansing, 698. The State Institute Commission controlled the Michigan School for the Deaf, Flint, 407; Michigan School for the Blind, Lansing, 149; Employment Institution for the Blind, Saginaw, 64; and State Public School, Coldwater, 383. Another State institution, the Michigan Home and Training School, had a population of 3029.

POLITICAL AND OTHER EVENTS. There was initiated by petition, prompted by a movement in Detroit, a proposed constitutional amendment for the reappointment of representation in the State. The petition was filed in June and carried about 172,000 names. It called for the submission of the proposal to popular vote at the election in November, should it be found to carry at least 135,000 legal signatures. The boring of the \$25,000,000 international tunnel under the Detroit River was carried through on June 1, the two bores of the 35-foot tunnel being successfully joined.

The State administration in the effort to establish a State broadcasting station for news to police brought about a clash with the Federal Radio Commission. When the Commission failed to issue a license for the station Governor Green announced in March that the State would go ahead and build its station without a license. Abandoning its plans to seek legal means to

prevent him, the Commission issued the license on May 8. The case was regarded as bearing on the issue of States' rights in respect to police operations. Of the life sentences that had been imposed on traffickers in liquor and its possessors under the State's "life-for-a-pint" law, Governor Green on January 15 commuted five, to terms of from seven and one-half to fifteen years. An analysis of the results of the first year of the Michigan tax on malt, published by the Secretary of State, was reported as indicating that enough malt had been sold in the year to provide 97½ pints of beer for every inhabitant of the State.

In Detroit there was much unemployment by reason of the reduced activity of the automobile factories and particularly because of shutdowns of two weeks or more in July, affecting about 160,000 workers. Mayor Murphy summoned an unemployment conference, which organized efforts among merchants and others to provide work. Warning was issued at the outset of October that persons without means of support coming to Detroit would be turned back by specially posted police or, if they succeeded in entering, would be expelled. As early as March there appeared considerable unrest, and Detroit was one of the American cities in which were held Communist demonstrations. A gathering of 75,000 persons, by estimate, was dispersed on March 6 by mounted police, with some casualties but no fatalities. A proposal to amend the city charter with regard to provisions affecting the debt limit was put to a popular vote in a special election on September 9 and defeated.

The Common Council granted permission on February 6 for the private construction of an elevated high-speed highway for automobiles, 28 miles in length, along the Detroit River, subject to ratification by popular vote. The project was connected with plans of the Grand Trunk Railroad for a \$100,000,000 development of rapid transit and commuter traffic.

Dissatisfaction with the Mayor's attitude toward the prevalence of lawlessness in Detroit and with his strife with Police Commissioner Harold H. Emmons led to the presentation of a petition on June 19 for Mayor Charles Bowles's recall. The petition, carrying 111,270 names, necessitated a popular vote on the proposed recall. Mayor Bowles sought to delay or stop the taking of the popular vote by resort to the courts, but failed. The vote was cast on July 22 and gave a majority of 30,956 for recall, out of a total vote of 210,770. On the following day a radio announcer, Gerald E. Buckley, who had been active in the campaign against the Mayor, was shot to death by unidentified criminals, his assassination being the eleventh recorded in the city in 19 days. F. Murphy was elected Mayor in September.

The tunnel for vehicular traffic under the Detroit River between Windsor, Ont., and Detroit was finished, and was opened on November 23.

ELECTIONS. The vote of the State remained pre-eminently Republican on November 4. For Governor, Wilber M. Brucker, Republican, defeated William A. Comstock, Democrat, by 426,139 votes, as unofficially totaled, to 316,295. For U. S. Senator, James Couzens was reelected, over his Democratic opponent, Thomas E. Weadock, by 520,247 votes (unofficial) to 139,814. Republicans obtained all 13 seats in the House of Representatives and majorities in the State Legislature. A measure to impose a cigarette tax in order to

allow of lessening the tax on real estate was defeated in a referendum vote. Constitutional amending proposals to let the State participate in river and harbor improvements, to increase homestead exemption and to give populous counties more Legislative representation were also defeated. An amendment to render township officers elective was approved.

OFFICERS. Governor, Fred W. Green; Lieutenant-Governor, Luren D. Dickinson; Secretary of State, John S. Haggerty; Treasurer, Frank D. McKay; Auditor, Oramel B. Fuller; Attorney-General, Wilber M. Brucker; Superintendent of Public Instruction, Webster H. Pearce.

JUDICIARY. Supreme Court: Chief Justice, Howard Wiest; Associate Justices, Louis H. Fead, Nelson Sharpe, William W. Potter, John S. McDonald, George M. Clark, Henry M. Butzel, Walter H. North.

MICHIGAN, LAKE. See SEWERAGE AND SEWAGE TREATMENT.

MICHIGAN, UNIVERSITY OF. A State institution for the higher education of men and women in Ann Arbor; founded in 1817. In 1929-30 the enrollment was 15,154, of whom approximately 36 per cent were women; 66 per cent were inhabitants of the State of Michigan, and the remaining 34 per cent, with the exception of 368 foreign students, were from all parts of the United States. Of the net total enrollment in the regular session for 1929-30 and the 1929 summer session, 5304 were in the college of literature, science, and arts; 1560 in the college of engineering; 384 in the college of architecture; 797 in the medical school; 122 in the school of business administration; 233 in the university hospital school of nurses; 652 in the law school; 104 in the college of pharmacy; 328 in the school of dentistry; 864 in the school of education; 44 in the school of forestry and conservation; and 2321 in the graduate school. The registration in the 1930 summer session was 3095. The teaching staff was composed of 861 members, including 57 members of the summer session staff not at the university during the regular year.

For current expenses, the State appropriated \$4,925,000, while approximately \$4,000,000 was derived from other sources. During 1930 an elementary model school and the John P. Cook Building, a dormitory for law students, were completed, and the William W. Cook Legal Research Library was under construction. The most important gift of the year was that of William W. Cook (q.v.), an alumnus of New York City who bequeathed to the university for the development of its law school practically his entire estate, amounting to approximately \$12,000,000. In addition, he left certain trust funds for the completion of the Legal Research Library and for the erection of a law school building. These buildings were to complete the Law Quadrangle, the other parts of which (the Lawyers' Club, refectory, and extensive dormitories) had been erected by Mr. Cook during his lifetime. The university libraries contained 775,516 volumes. President, Alexander Grant Ruthven, Ph.D.

MICROBIOLOGY. See SOILS.

MIDDLEBURY COLLEGE. A coeducational, nonsectarian college in Middlebury, Vt.; founded in 1800. For the autumn term of 1930, 625 students were registered as undergraduates and 15 as graduates; of these 352 were men and 273 women. The enrollment in the special summer

schools of French, Spanish, and English, conducted by the college, amounted to 558. There were 61 members on the faculty, including administrative officers and those on leave of absence. The productive funds of the college in 1929-30 amounted to \$4,244,818, and the income for the year was \$339,019. Gifts to the college amounted to \$51,209. The library contained 60,000 volumes. President, Paul D. Moody, D.D.

MILBURN, JOHN GEORGE. An American lawyer, died in London, England, Aug. 11, 1930. He was born near Sunderland, Durham, England, Dec. 13, 1851, and came to the United States when 18 years old. After studying law in the offices of Wakeman and Watson in Batavia, N. Y., he was admitted to the bar in 1874 and practiced privately in Buffalo for several years. In 1879 he became a member of the firm of Sprague, Milburn and Sprague in Buffalo, and in 1883 of Rogers, Locke and Milburn. He was president of the Pan-American Exposition held in Buffalo in 1901, and it was to his home that President McKinley was removed after the fatal assault on his life and died. In 1904 he removed to New York City, becoming a member of the firm of Carter, Ledyard and Milburn with whom he was associated at the time of his death. He was counsel for many important organizations and institutions, including the New York Stock Exchange, and was a member of the Board of Commissioners of Statutory Consolidation, which consolidated all the general statutes of New York State from 1777. He was also president of the New York State Bar Association during 1902-04 and of the Association of the Bar of the City of New York during 1919-21. The LL.D. degree was conferred on him by Princeton and Alired Universities.

MILITARY PROGRESS. World forces during the year were at work along paths that lead nowhere, or to war, which is the same thing. Surveying the countries of the globe in 1930 there were heard rumors of war; war antagonisms still continued unabated, and preparations for war were going on apace. Nations, like individuals, cannot refrain from encounters if things go wrong or an advantage is to be gained.

The Preparatory Disarmament Commission of the League of Nations, after five years of effort finally drafted a framework of a treaty for limitation of the world's land, sea, and air armaments. Probably by 1932 there would be convoked the first conference of its kind in the history of mankind. Most of the Geneva delegates in their final speeches stressed the need for the peoples of the world to act and give their answer. They must bring pressure to bear on their governments and never forget the grave dangers if the disarmament movement fails. Not all hopes were realized. Russia dwelt upon the Commission's refusal to limit trained reserves, or the amount of army weapons, to abolish tanks, and ban air bombing or the manufacture of poison gas. See **DISARMAMENT**.

The Commission had previously met six times without accomplishing anything, and since its inauguration the military budgets of the five greatest powers had increased 27 per cent. There were in Europe in 1930 many more men under arms than there were in 1914. In fact there were not a few of the opinion that, barring accident or miracle, another European war was near at hand.

Walter Duranty's wireless despatches from Russia to *The New York Times* Nov. 8, 1930,

stated that the most interesting feature of the Russian military parade at the Soviet Anniversary Celebration in Red Square, apart from the equipment and discipline of troops, which improved steadily from year to year, was the evidence of the progressive mechanization of the Red Army, and the possession of an admirable outfit of searchlights, radios, airplane detectors, and anti-aircraft guns, all drawn by tractors, and a large number of light tanks, armored cars, automobile and motorcycle machine guns and light artillery. "There were hundreds of motor lorries full of troops, but no heavy artillery, mechanized or not . . . small combat biplanes and a gigantic four-motored monoplane bomber flew back and forth, and in excellent formation one group of five planes performed regular battle stunts at a daringly low altitude." One who had seen a good deal of armies during the World War, and since, said Soviet Russia ranked with the United States as a first-class military power, not perhaps for offensive purposes or trench fighting but for self-defense in conditions of open warfare on the vast Russian plains.

The German propaganda at home and abroad to force a disarmament pact or an alteration of post-war conditions curtailing German armaments was considerably heightened by the statement of Minister of Defense Groener to the effect that the nation was surrounded by neighbors who were

far better equipped for war than they were in 1914.

Peace is endangered while disarmament is limited to one country, which is defenceless and exposed to every hostile attack . . . the German army of 100,000 in the west (French border) faces the French and Belgian armies of 740,000 active troops. Of these 157,000 are officers and non-commissioned officers. In addition, on the east are 450,000 Poles and Czechoslovaks. Moreover, our neighbors can place 8,000,000 trained reserves in the field. . . . How can Germany threaten French security when Germany is able to place only 288 pieces of field artillery against France's 2700 pieces of light and heavy artillery? . . . What good are Germany's cardboard tanks against France's 2000 real tanks? . . . France's outlay for fortifications exceeded Germany's entire military budget. . . . (*Herald Tribune*, Nov. 29, 1930.)

Furthermore a word seems opportune on the most difficult problem confronting Great Britain in the solution of her Indian question, the control of the army. The security of India within her borders, and her protection from invasion from without, has been insured by an army consisting roughly of 60,000 British and 150,000 Indian troops, the latter commanded by British officers. What is not generally realized is the extent to which the troops composing the Indian Army are drawn from a limited number of the more martial Indian fighting races. The 54,000,000 people of Bengal and Assam did not contribute a single soldier to the regular army. On the other hand the virile races of the Punjab supplied 86,000 out of the total, while the next largest contribution—19,000,—was made by Nepal, an independent state and not part of British India at all. The fighting Moslem of the Punjab had less than no respect for the high-caste Hindu of Madras, where the 40,000,000 population contributed but 4000 combatants to the Indian Army.

The Simon Commission in its report of 1930 emphasized what could not be controverted that "the presence of British troops and the leadership of British officers secure that the fighting regiments of India . . . shall not be a menace to the millions who are conducting their civil occupations without any thought of the consequences

which might ensue if British troops were withdrawn and the Indian army consisted of nothing but representatives of the Indian fighting races." The Marquess of Zetland in the article in *Foreign Affairs* (October, 1930) went on to say:

The experiment which has already begun of training up Indians to hold commissioned rank in the Indian army must continue; but years must elapse before a body of Indian officers capable of commanding even a portion of the Indian army can come into existence . . . the army as at present constituted cannot possibly be placed under the control of an Indian legislature . . . and the Simon Commission suggests that henceforth the defence of India should be accepted not as a purely Indian interest but as an imperial obligation and that the army, both British and Indian, should be controlled by the Viceroy—not as head of the Government of India, but as the agent of the Imperial Government, acting of course in consultation with the Commander-in-Chief, who shall cease to be a member of the Indian Government. Such in brief is the experiment which is in progress in India and such are the lines along which it should proceed.

GENERAL. There was really no such thing in 1930 as "Air Control," if by the term is meant the substitution of air power for land defense forces. Control which air forces could exercise without land troops and armored vehicles is ineffective anywhere. It is impossible to control a disorderly population solely from the air. The ultimate safety of any region must depend on the presence there of an adequate ground force.

The approximate percentages of increase and decrease in air expenditures for 1930 as compared with 1925 was as follows: Great Britain—2 per cent; United States—plus 140 per cent; France—plus 114 per cent; Italy—plus 31 per cent.

SERVICE AIRCRAFT OF THE POWERS

| | <i>First line</i> | <i>Reserve</i> | <i>Total</i> |

| Great Britain | 772 | 520 | 1,292 |
| Japan | 572 | unknown | 572 |

The Under Secretary of State for Air gave these figures for the first line: France, 1300; Italy, 1100; United States, 900; Great Britain, 772.

GREAT BRITAIN. The importance of the closest coöperation among the Army, Navy, and Air Force not only in war but also in training in time of peace was deemed necessary (*The Army Quarterly*, vol. xx, No. 2, July, 1930). The first few years after the Armistice there was a marked tendency to attach undue importance to the exaggerated claims made by the Air Power. The passage of time, however, has brought with it closer acquaintance with aircraft, their capabilities, and their limitations, and great increase in efficiency in anti-aircraft gun shooting since the war has had a steady effect upon military opinion. At the end of the World War some thousands of rounds had to be fired to bring down one airplane. In 1930 that could be accomplished in about one hundred rounds. And this from guns of semi-mobile nature.

The defense of the ports could not be entrusted to the Air Force or any one service. It was to be successfully accomplished with the help and close coöperation of all three services. The commander of the land force is the most suitable person to command the defenses of a port. There was no indication yet that the time was approaching when guns could be dispensed with in defense of ports. Therefore they should be manned by the army.

The necessity of speeding up communication by signals and sound detectors to give as early warning as possible of air craft was evident. Also the importance of arranging for rapid dissemination of intelligence and for the control of the civil population in ports in time of war was stressed.

The 1930 estimates for Army and Air Force showed a slight reduction for the former and a slight increase for the latter. The total expenditure indicated a determination to reduce defense forces to a minimum. For 1930 the effective charges were £32,119,870; non-effective charges £8,383,300. War terminal charges were £40,500,000, a reduction of £605,000.

The strength of the Army, inclusive of troops in India, was approximately 10,000 below establishment and almost entirely in the infantry of the line.

The net total of the Air Force estimates (£17,850,000) showed an increase of £890,000. The existing units of Home Defense Force were consolidated, with one non-regular squadron alone added. The air strength was 70 regular squadrons (including equivalent of 12 squadrons in Fleet Air Force and 12 non-regular squadrons). There were in service in the first line 772 planes, and in reserve 520, a total of 1292.

The War Office withdrew support of the Cadet Corps of Great Britain, notwithstanding the testimony of men of various types that the training given in the corps to many thousands of its future citizens was primarily moral in character. The policy of the government was that it was not desirable for boys between the ages of 12 and 16 to receive military training.

The steps taken to bring the Army up to date, partly as the result of the lessons learned in the various theatres of the World War and partly by the application of modern mechanical and scientific development, show that the reorganization of the Staff was required to place and maintain a force in the field. The effect of mechanization was most noticeable in the composition of the staff of the Army. The Master General of the Ordnance became represented in the field. The Director of Ordnance Services, under the M.G.O., was concerned with the repair and maintenance of all vehicles other than the R.A.S.C. vehicles and with the supply of ammunition and stores of a technical nature.

There were also two new directorates, under the Director of Artillery and Director of Mechanization respectively, both of whom were technical officers only and not represented below G.H.Q. The Director of Works was represented in the branch of the D.Q.M.G. in the field and had under him a Director of Works and a Director of Stores. At Corps Headquarters the artillery became represented by two officers, one responsible for the corps artillery, survey, and counter-battery work, the other dealing with medium and heavy artillery.

As for the cavalry one regiment was allotted to each division for local patrol and reconnaissance work. A division was the largest self-contained unit of cavalry, consisting of two brigades and ancillary services, together with a cavalry armored car regiment. The cavalry regiment consisted of two sabre squadrons and one machine-gun squadron. The Hotchkiss gun having been discarded the regiment had only a few Lewis guns for anti-aircraft work. All cavalry first-line transport became mechanized. The field squadron and cavalry field ambulance were also unchanged

and to the mobile veterinary section was added a motor horse ambulance. For all this a cavalry divisional ordnance workshop was added.

ARTILLERY. Medium and army field brigades were in process of mechanization on the basis of six-gun batteries, the proportion of howitzers to guns being unchanged. Divisional artillery was to remain horse-drawn. Brigade and divisional ammunition columns were abolished and replaced by ammunition companies and divisional maintenance companies. The ammunition portion of the divisional maintenance companies were planned to consist of four sections, three of which carry ammunition and serve the three artillery brigades, while the fourth carries small arms and light artillery ammunition.

The tendency was to work more and more through specialists, and it was accepted that, if the problem was to transport certain goods from one place to another, it was the nature of the operation rather than the nature of the cargo that should decide which branch of the Service should carry out the removal.

ENGINEERS. In the Royal Engineers field organization the field squadrons were left unchanged and the field companies remained horsed. There were three field companies to a division but a new unit, a field park company, was added to each division. This unit was to be equipped with certain plant and labor-saving gear and would be concerned with camp construction, divisional workshops, and the like.

INFANTRY. With infantry the division was to be the largest self-contained unit, consisting of three brigades with other arms added when needed. Infantry brigade headquarters was partly mechanized and the infantry battalion was to consist of a headquarters wing, three rifle companies, one machine-gun company with guns carried in horse-drawn limbered wagons. Increased fire power was being supplied the infantryman by the new machine-gun organization with battalions, and mobility developed by lorry movement, both strategic and tactical. The infantryman must be able to fight immediately on arrival at his destination and with this in view all modern research and development were being directed.

CANADA. The term "Militia" means all the military forces in Canada. The militia is active and reserve, the active, consisting of such corps as are from time to time named by the Governor in Council, the reserve, unorganized, being provided by all the remaining male inhabitants of Canada between 18 and 60 years, physically fit and not legally exempt. Active militia comprises the Permanent Force, whose personnel are enrolled for continuous service and whose main duty is instruction. Under the National Defense Act of 1922 the fighting forces were consolidated under a Department of National Defense; and the country divided into eleven military districts commanded by a major-general or brigadier-general with adequate staff.

The distribution of troops of the active militia in each district depends on the density of population, effect of topography and the civil occupations of the inhabitants. The Prairie Provinces of Manitoba, Saskatchewan, and Alberta, for instance, are comparatively strong in Mounted Militia units and weak in infantry. In the peace organizations the active militia units follow British establishments as far as local conditions permit and on mobilization British war establishments come into force. Of the 120 infantry

regiments of the Canadian Non-Permanent Militia 64 were either allied or arranging alliances with British regiments, thus increasing effectiveness in imperial relationships.

ACTIVE MILITIA OF CANADA

AUSTRALIA. The new conditions of service provided for enlistment between 18 and 40 years for a full period of three years and subsequent reënlistment for one year, the age for retirement of non-commissioned officers and men being 48 years. Annual period of training was to consist of 16 days, 8 days home training in whole days, half days, and night parades, and 8 days continuous training in camp supplemented by courses, schools, and classes. The pay was four shillings per day for privates. Senior Cadet Corps were being continued under the Voluntary System; in one case as regimental detachments with the Citizen Forces (in this Cadets must be 16 years of age and must leave on reaching 18 years); in the other case of pupils over 14 years in the care of detachments at educational establishments. The annual training for Cadets consists of a minimum of 60 hours duration made up of a whole day, one-half day, night parades, but no camp.

The distribution of troops was as follows:

1st Cavalry Division, consisting of 2nd and 4th Cavalry Brigades in New South Wales and 1st Cavalry Brigade, Queensland;
2nd Cavalry Division, consisting of 3rd and 5th Brigades in Victoria;
1st Infantry Division, consisting of the 1st and 8th Infantry Brigade in New South Wales and 7th Infantry Brigade in Queensland;
2nd Infantry Division, consisting of 5th, 9th, and 14th Brigade in New South Wales;
3rd Infantry Division, of the 4th, 10th, and 15th Brigade in Victoria;
4th Infantry Brigade, consisting of 2nd and 6th Brigade also in Victoria;
Field Troops, 4th Military District, of the 6th Cavalry Brigade and 3rd Infantry Brigade in South Australia;
5th Infantry Division, Queensland; 11th Infantry Brigade in Brisbane;
12th Mixed Brigade in Tasmania and Western Australia.

There were six district bases.

FRANCE. It was apparent that French military thought was not passing lightly the remarks of General Von Seeckt in August—"The retention of a certain minimum armament is generally recognized," therefore, "as necessary and the amount to be retained will depend less on the relative size of the populations concerned than on their sense of insecurity and their natural desire for national self-preservation." . . . and "A country naturally seeks to satisfy its desires for security by making full use of its resources, and, in estimating the amount of protection it needs, it cannot be expected to listen to views dictated from outside." His ideas were not by any means to underrate the importance of numbers, but he insisted that the object of modern strategy should be to strike a decisive blow by the use of a mobile and highly trained force without setting in motion mass armies.

French military experts were considerably exercised as to the best method of meeting the kind of attack that might be directed against their country by the type of professional soldier contemplated by the German general.

The French army was in process of reorganization, and the question to be decided was whether a highly trained professional army or a national army raised by the ordinary methods of conscription would best serve the interests of France. According to the *Times* correspondent the French army in 1930 consisted of 108,000 long-service professional soldiers, and an annual class (numbering approximately 240,000 men) called up in half-yearly contingents for one year's intensive military training. In addition to these troops France had also a large number of trained reserves and her Colonial forces. In the event of war her entire male population was liable for service either civil or military. The security of her frontiers was based upon a chain of fortifications on which endless thought and money were being spent. On the whole, it seemed likely that the French would rest content with the professional nucleus that already existed in their army, and would not abandon the form of national service to which they were accustomed. (*Army Quarterly*, October, 1930.) See FRANCE under *Army and History*.

MEXICO. Army estimates for 1931 showed the greatest reduction of any government department, the figures being the lowest on record due undoubtedly to the elimination of eight cavalry regiments. The army of the line included 382 generals, 31 of them holding the highest rank, that of divisional general. There were 119 generals of brigade, 232 brigadiers, and about 500 colonels. The effectives were reduced to 61,394 officers and men, including more than 2000 reserves.

ITALY. Two important changes in the military organization of Italy were made. One made compulsory service for all men between the ages of 18 and 20 and, frequent courses in pre-military training which were to be established by the Fascist militia in every municipality in Italy. Another, while confirming that the normal period of compulsory military service was eighteen months, reduced that service to twelve, six, and three months for special categories of young men with particular reference to whether they had gone through the whole course of pre-military training. The object of the two changes was mainly military, with the idea of furnishing the army with recruits who already had acquired the rudiments of military training; their effect would be financial. The pre-military training was to be imparted on holidays, those taking the courses were to receive no pay, or be housed, or fed. All young men, on reaching the age of 18 must attend courses on holidays, which of course means Sundays, under pain of a fine of from \$2 to \$25. Those living more than six miles from the seat of a municipality would be exempt. Three privileged classes were to be formed corresponding to the three, six, or twelve months' course. The choice of Sunday training of Italian youths was obviously made so as not to interfere with the young men's week-day activities.

UNITED STATES. The retiring Chief of Staff, Gen. Charles P. Summerall, in his last report to the Secretary of War, declared the strength of the army is "entirely inadequate" to serve as "an agency for facilitating a general mobilization." The past decade "has seen no reduction in the mobilization forces of foreign nations in trained troops," while "the number of men under arms throughout the world is greater than at any previous epoch in the peaceful history of mankind."

Since 1921, he stated, the strength of the army had been reduced from 280,000 to 118,750 and added—"When from this strength there are deducted the forces required for overseas garrisons, service schools, instructors for civilian components, and the overhead required for the administration of the Army of the United States, there remain available only 53,954 men for the formation of a mobile force capable of taking the field on the outbreak of war and coast artillery sufficient to furnish only 10 per cent of the strength required for harbor defenses in time of war."

Describing the national defense act of June 4, 1920, as a "distinct advance over all previous legislative measures for the national defense," General Summerall declared, "The funds provided have been insufficient for even an approximate realization of the military system contemplated by that act." The American effort in the World War he described as "the most remarkable example of the improvisation of an army in the course of a war recorded in the military history of the world" and added that the achievement should not lead to complacency. He declared the army was inadequate for national defense in view of world conditions.

COAST ARTILLERY. During the year the corps was reorganized within the continental limits of the United States and training concentrated on anti-aircraft, fixed railway and tractor-drawn work. Experimental long range firing was held with 16-inch guns and a system of fire control by aerial observation was developed. Consistent improvement in anti-aircraft and machine-gun practice was reported by the Chief of the Corps. An increase in appropriations in the estimate needed for modernization of the nation's harbor defenses of \$20,000,000 was asked. Approximately \$30,000,000 had been expended toward the programme which originally was based on an eight-year construction period for the United States, a three-year period for the insular departments and a two-year period for Panama. By 1928 this had become a more than ten-year programme for the United States, and a five-year programme for the overseas departments. On the basis of the 1931 appropriations the overseas programme had become more than a ten-year programme and that

for the continental United States would have to be extended greatly.

CAVALRY. The cavalry strength of the regular army was 7974 men, a great reduction in this arm, and much of its strength was being mechanized through the addition of armored cars. Ten years previously this strength was 20,000 men. A provisional platoon was equipped with 11 armored cars and 2 trucks as an experiment. There were 5 light cars, completely armored, each mounting a .30-calibre tank machine gun, with 6 medium cars. These latter were in pairs to diversify the experimentation. One pair had a .50-calibre water-cooled gun as its main armament; one pair carried a Lewis gun and the remaining pair a Browning machine gun. All the cars carried either two Lewis guns or two machine rifles, to be mounted on brackets outside of the cars for use as anti-aircraft weapons when halted. All guns except the .50-calibre could be used as anti-aircraft fire. Two trucks were constructed on the same frame and with the same mechanical features as the medium car to determine if such vehicles could satisfactorily replace the escort wagon used by cavalry regiments.

NATIONAL GUARD. The strength of the National Guard on June 30, 1930, was 12,732 commissioned officers, 198 warrant officers and 169,785 enlisted men. Federal appropriations during the year were \$32,474,798. There were established throughout the nation 16 headquarters and 45 units. During the year the allocation of flying equipment was revised and placed on a basis of five standard observation planes, one basic plane and two primary training planes for each of the 19 squadrons. The demand for aviation units far exceeded the number allotted.

There were 11,969 enlisted men in the Reserve, of whom 5420 were assigned to organizations and 6549 unassigned.

While rearmament of anti-aircraft batteries progressed during the year an acute shortage still existed in 3-inch guns, modern fire-control equipment, sound locators, and searchlights.

A serious note was sounded by Assistant Secretary of War Davison in his annual report for 1930 in so far as the Reserve Corps is concerned. There were 79,385 reserve officers on the lists, whereas there were 102,779 in 1928. In the fiscal year 1929-1930, 22,843 reserve officers separated themselves from active participation as against only 8008 in 1928.

AIR CORPS. According to the Assistant Secretary of War the Air Corps was also reaching a serious condition due largely to inequalities in promotion. Of the 53 airplane squadrons but five were commanded by majors, the normal commanders. As to equipment, under the five-year plan, there should have been 1520 serviceable planes in June. Actually there were 1139, including those undergoing repairs and 133 which were more than five years old.

Congress in 1926 authorized the addition of 6240 men to the Air Corps, but since that time had not appropriated pay and maintenance for more than the previous authorized strength of 118,000 men. The Air Corps was to have been increased by annual increments over five years. In 1927 there were added to it 1248; in 1928, some 530; in 1929, 1960; and in 1930, 1248; with 1248 to be added in 1931. The consequence was that with these increases the other branches have had to suffer. To provide for these additions the Ordnance, Engineers, Field Artillery, and Cavalry were depleted,

and some reductions in strength ordered. About 13 organizations were seriously affected, with this reduction, in efficiency and morale.

Contracts for the purchase of \$5,936,419 for new airplanes, engines, and accessories would result in the Air Corps receiving 402 new airplanes with spare parts, 128 new engines and spare parts. Army airplanes were divided into eight classes, according to type or model:

| | |
|--|----|
| Pursuit (fighting) planes | P |
| Observation | O |
| Attack (ground strafing) | A |
| Transport, Cargo, Ambulance, Workshop | O |
| Bombardment | B |
| Primary Training | PT |
| Basic Training | BT |
| Photographic | P |
| Airplanes of experimental and service tests status are prefixed by X or Y. | |

The actual officer strength by grade in the Air Corps on June 30, 1930, was: Maj. Gen. 1; Brig. Gen. 2; Col. 5; Lt. Col. 15; Maj. 93; Capt. 156; 1st Lt. 494; 2d Lt. 500; total 1266. During the year 27 Air Corps officers resigned.

The Air Corps Tactical School graduated 14 Air Corps officers, three Marine Corps officers, one foreign officer, and 11 officers from other branches of the army. Reserve training, limited as it was by restrictions in the Army Appropriations Act to combat pilots, was interfered with. Of the 3675 rated officers in the Air Corps Reserve 1559 had either become physically disqualified or had gone on record as not desiring further flying duty.

The Assistant Secretary of War, Colonel Payne, declared the necessary supplies with which to mobilize the army, while private industry was being made ready to meet wartime needs, were being rapidly depleted and faster than replacements could be obtained under existing programmes. There was a sad lack of these supplies, for the Army had been existing on what was left of wartime supplies. Ammunition was deteriorating faster than it could be replaced. Specific procurement plans had been drawn up for 1705 of the 3876 commodities essential for war operations.

The dispute between the Army and Navy Departments over control of the coast air defenses was reaching settlement and it was hoped to avoid the serious duplication between the Army and the Navy in carrying out the joint board agreement with reference to land-based aircraft for coast defense. The Army claims the right to direct these operations.

The strength of the United States Army on June 30, 1930, was 137,645 officers and men, according to the report of the Adjutant General of the Army. This was divided into 12,255 commissioned officers and 124,301 enlisted men. In addition there were 807 army nurses, 32 contract surgeons, and 922 cadets at the U. S. Military Academy. The maximum commissioned strength, authorized by law, during the year was 12,322 but inasmuch as current appropriations were sufficient only for an average of 12,000 that number was not exceeded for the greater part of the year. Appropriations for the fiscal year 1931 provided for an enlisted strength of about 118,750, exclusive of Philippine Scouts. Of the total strength reported 97,171 were serving in the United States proper, 15,155 in Hawaii, 9302 in the Canal Zone, 11,232 in the Philippine Islands, including 6542 Scouts, 315 in Alaska, 1008 in China, 37 in France, 1 in Japan, 280 in Nicaragua, and 1506 were en

route from one country to another, on leave of absence or serving as military attachés in various foreign countries.

The loss during the year was 175 officers retired, 102 resigned, 16 discharged, 5 dismissed, 1 dropped, and 79 died. The percentage of desertion was 4.78 as against 5.20 for the preceding year, due no doubt to better housing facilities and the intelligence tests conducted in selecting recruits.

INFANTRY. According to the Chief of Infantry that branch of the service was progressing with mechanization and the infantryman had, in addition to rifle and bayonet to support him, tanks, tractors, armor-piercing machine guns and anti-aircraft weapons. For experimental purposes a cannon company was added to the Twenty-ninth Infantry at Fort Benning, Ga. The tests that had been made with the special object of increasing the fire power of the infantry without sacrificing freedom of movement resulted in the reorganization of the infantry division.

The Twenty-ninth Infantry, the war strength regiment at the Infantry School, was organized according to the new table approved by the War Department. The following changes were to be noted in this connection. Increasing the number of machine guns in the battalion from 12 to 16. Increasing the automatic rifles in the squad from 1 to 2, with corresponding reduction in the number of magazine rifles. Adding a machine-gun company of 16 guns to the regiment. Increasing the number of 75-mm mortars and 37-mm guns from 3 each to 8 each. The reorganization contemplated 1 tank company of 24 tanks, a division headquarters company, a military police company, and two infantry brigades of two infantry regiments each. The regiment comprised a headquarters and headquarters company; a service company; a cannon company of eight 37-mm guns and eight 75-mm mortars; a calibre .30 machine gun company of 16 guns and three combat battalions. The battalion includes a headquarters and headquarters company, three rifle companies each armed with 144 rifles and 36 automatic rifles, and one machine-gun company of 16 guns.

The newly approved infantry brigade war strength with 128 machine guns showed a decided increase in these powerful weapons over the World War brigade which had 96 and the 1930 strength with 72 machine guns. Likewise, the number of automatic rifles in the new brigade—848—was about double that of the World War organization of 384 and the 1930 brigade of 324. This increase indicated greatly increased fire power. The increase in infantry cannon, which was designed to provide a counter for the modern tendency to fight with armored vehicles, was likewise marked. The eight 37-mm guns and the eight 75-mm mortars of increased range and accuracy as compared to the World War regiment of three 37-mm and six mortars and 1930 regimental organization of three each was to be noted.

The tendency toward increased use of motor transportation evident in modern armies was reflected in this organization by the new motorized field trains of the infantry regiment, such trains being animal drawn. The combat trains remained animal-drawn.

The evolution of the armament of infantry in calibre .30 weapons was shown by the following: In May, 1917, the infantry regiment had six machine guns and 1820 rifles, a proportion of 1 of the former to 303.3 of the latter. There were no automatic weapons in this organization. During

the World War there were 48 machine guns (including proportion of infantry brigade guns), 192 automatic rifles, and 3200 rifles, a proportion of one automatic calibre .30 weapon to 13.3 magazine rifles. The proportion of machine guns to rifles was 1 to 66.6. The proportion of automatic rifles to rifles was 1 to 16.6. In the 1930 regiment there were 36 machine guns, 162 automatic rifles, and 1852 rifles, a proportion of 1 automatic weapon to 9.4 rifles. The proportion of machine guns to rifles was 1 to 51.4. The proportion of automatic rifles to rifles was 1 to 11.5. In the new organization there were to be 64 machine guns, 324 automatic rifles, and 1751 rifles, a proportion of 1 automatic weapon to 4.5 rifles. The proportion of machine guns to rifles was to be 1 to 27.3 and of automatic rifles to rifles 1 to 5.4.

The 75-mm infantry mortar M1 was the latest development in an infantry mortar weapon. It was smooth bore and fired a vaned projectile weighing approximately 10½ pounds to a maximum range of about 2000 yards. The carriage permitted a traverse of 13 degrees without moving the trail and a maximum elevation of 80 degrees. The weapon in firing position weighed 362 pounds and its total weight, including accessories, was 422 pounds. It broke down for transportation purposes into five one-man loads, the heaviest of which was 94 pounds for transportation. Initial ignition is obtained with a shotgun shell and different zone charges made by added increments of powder inserted between the vanes.

Mechanization includes even the band. A mechanical substitute for an army band was to be tested for use at stations which have no bands. The apparatus as supplied by the Radio Corporation was a neat unit, ruggedly built into a ¾-ton truck. It is capable of playing while in motion to the same degree as is a dismounted band. This apparatus can be used as a complete substitute for the instrumental music of the band and to a limited degree for field music. However it cannot be utilized in conjunction with a band, therefore there will be no reduction in the strength of bands.

FIELD ARTILLERY. The Field Artillery was undergoing reorganization during the year. The object was to increase the efficiency of this branch and to place its units where they would be of most use and assistance in training the National Guard and Organized Reserves. Four stations became the home of a new battalion of 155 howitzers, this regiment of 155's being now a part of the Field Artillery Brigade of the Infantry Division. Three ammunition trains and 14 batteries were so depleted in furnishing their quota to build up the Air Service that they have had to be rendered inactive.

An all-around, all-purpose field gun successfully combined in one piece of field calibre the functions of ground and air defense. Modern fire control equipment and recent metallurgical development permitting greater strength with no disproportionate increase in weight made this possible. It is a 75-mm gun (muzzle velocity, 2175 feet seconds) giving a maximum range of 15,000 yards with a 15-pound projectile. The new carriage was equipped with wheels mounting balloon tires and having roller bearings at the hubs. Either single or dual tires would be mounted. The increased ground contact area would make it possible for the vehicle to pass through sand and

soft mud. In the first position of the gun it could be fired through an angle of traverse of 90 degrees, and at an elevation from 0 to plus 80 degrees. In the second position the gun could be fired through 360 degrees of traverse and at angles of elevation from 0 to plus 80 degrees.

Twenty-four four-wheel-drive cargo trucks were purchased for the replacement of the war-time equipment of one artillery regiment. Sufficient Caterpillar "20" tractors were purchased to equip two motorized divisional field artillery units in the continental United States.

ANTI-AIRCRAFT REGIMENT. The new regiment was of a composite type, consisting of a band, combined headquarters battery and combat train, a searchlight battery, a 3-inch gun battery and a machine-gun battery, totaling 16 officers and 330 enlisted men. The equipment was to include the latest type 60-inch searchlights, 3-inch mobile anti-aircraft machine guns, as well as the modern fire-control instruments. The searchlights are carried on motor trucks, and the 3-inch guns are on wheeled mounts fitted with pneumatic tires. As motor vehicles are to be provided for transporting all other equipment and the personnel, the regiment was to be a highly mobile unit.

A high-speed tank of the Christie type for technical and tactical test was developed and purchased. Its general characteristics were: weight, not over 15 tons; engine, Liberty as used in Mark VIII tank; type, convertible wheel and track; required speed, 40 miles per hour on wheels and 30 miles per hour on tracks; crew, two men; armament, one 37-mm and one .30 calibre machine gun in combination mount in an all-around fire turret. The tank for test purposes was to be equipped with soft steel plate of the same thickness as the proper armor plate.

RESERVE CORPS. The aggregate strength of the Officers' Reserve Corps was 113,523, a net increase of 766, with 321 units of the Officers' Training Corps with an enrollment of 114,464 located in 228 civil institutions. Twenty-two per cent of the enrollment of officers taking the special courses in the army service schools was of personnel of the Officers' Reserve Corps.

SIGNAL CORPS. After a number of years of study and experiment the Signal Corps completed the design, development and preliminary test of a new type of wire for portable field use that would take the place of both the heavy and light types as issued, and provide a better all-around wire for field telephone and telegraph communication. The new type of wire (called field wire, type W-110) possesses high tensile strength and insulation, light weight and flexibility, and when lying flat on the ground will successfully withstand considerable abrasion caused by passing vehicles, trampling by horses and men, or other abuse. Because of its lighter weight and decreased volume per mile, relatively larger amounts of the new-type wire can be transported and put on reels than was possible with the old type of heavy wire.

MILITARY TERRITORY OF THE NIGER. A territory under the Governor-General of French West Africa. Capital, Zinder. See FRENCH WEST AFRICA.

MILK. See DAIRYING; FOOD AND NUTRITION.

MILLISITE. See MINERALOGY.

MILLS COLLEGE. A college for women in Oakland, Calif., founded in 1885. The enrollment in the autumn of 1930 was 511, while that for the summer session was 124. The summer session

included courses only in music, art, drama, and physical education. The faculty numbered 83 members. The total productive funds amounted to \$1,568,180, while the income for the year ending June 30, 1930, was \$711,383. Gifts amounted to \$52,502, and buildings, equipment, and grounds were valued at \$2,368,529. The library contained 55,000 volumes. President, Aurelia Henry Reinhardt, Ph.D., LL.D., Litt.D.

MINE ACCIDENTS. See WORKMEN'S COMPENSATION.

MINERALOGICAL CHEMISTRY. See CHEMISTRY.

MINERALOGY. Two important contributions to the science of mineralogy stand out in contrast and as marking the progress of the science for the year 1930. As the result of work carried on for several years in the laboratories of the U. S. Geological Survey, the U. S. National Museum, and Columbia University, Dr. Clarence S. Ross of Washington, and Prof. Paul F. Kerr of Columbia have defined the identity and character of the Kaolin Groups of hydrous silicates, and have eliminated from this much burdened section of the mineral classification many clay minerals whose identity in the past was established upon chemical analysis alone. These are now shown to be intimate mixtures of three kaolin minerals, kaolinite, macrite, and a newly announced member of the group, for which these authors propose the name *dickite*, in honor of Dr. Allen B. Dick who as early as 1888 drew attention to its occurrence.

In a series of studies extending over the last seven years Prof. Esper S. Larsen of Harvard University and Dr. Earl V. Shannon of the U. S. National Museum have dealt with an intricate series of phosphate minerals occurring in nodules near Fairfield, Utah. In the course of this investigation (*Amer. Mineralogist*, Vol. XV, page 303) the authors have separated and identified eight new mineral species from these concretionary druses and crusts. This study was rendered both intricate and difficult by reason of the intimately intergrown character of the concretions, close determinations of the specific gravity and the optical constants constituting in most instances the ultimate criteria. The mineral species from this occurrence, that has since 1896 been known as *wardite*, has been shown to be identical with the *sousmanite* from Montebas, Creuse, France, a species announced in 1910. Priority is claimed for the species name *wardite*. The new hydrous phosphates of lime, soda potash, and alumina announced in this paper are (1) *deltaite* named from a characteristic Greek letter (Δ) cross section: (2) *dennisonite*, named in honor of J. M. Dennison, who first described *wardite*; (3) *der-nite*, named from *Dehrn*, Nassau, Germany, where the species also occurs; (4) *lewistonite*, named from Lewiston, Utah; (5) *englishite*, named in honor of George L. English; (6) *millisite*, named in honor of F. T. Millis, who sent the original specimens to the U. S. National Museum; (7) *lehiite*, named from Lehi, near Fairfield, Utah; (8) *gordonite*, named in honor of S. L. Gordon.

A number of new mineral species were announced during the year, in addition to the above. The most commercially important of these is the lime soda hydrated borate from the Kramer district, Kern County, California. *Probertite* is the name that has been given to this new borate in honor of Prof. Frank H. Probert, Dean of the

Mining College of the University of California. A more recent description proposes the name *kramersite* for this species. The first-mentioned name, however, seemed to have priority. The mineral occurs in embedded rosettes and in colorless, radiating, monoclinic crystals. *Fersmanite* was named in honor of Prof. A. E. Fersman of Moscow. This new mineral, which is a titano-silicate of lime and soda, occurs in crystals resembling those of titanite on the Kola Peninsula of Russia. *Lessingite*, which was also a new Russian mineral, is a silicate of calcium and the rare earths occurring in greenish to reddish yellow rolled pebbles in an affluent of the Borzovka River, near Kychtyn, Urals. It was named in honor of Prof. F. Loewinson Lessing, a Russian petrologist.

The Rumanian mining locality Felsöbánya, which has long been noted for its rare and unique minerals, yielded a new basic hydrous sulphate of antimony. This mineral occurs as powdery yellow crystals on stibnite, and was named

klebelsbergite, in honor of Dr. Kuno Klebelsberg. *Fülöppite*, a new lead sulph-antimonide of the pligionite semseyite group, was found at Nagbánya, Szatmar, Rumania, where it occurs in bright, metallic, steel-blue monoclinic crystals. It was named in honor of Bela Fülöpp, a Hungarian mineral collector.

Two new mineral species were brought to light by the recent development of mining in Africa. Of these *bismutotantalite*, a new tantalate of bismuth related to stibotantalite in which bismuth takes the place of antimony, occurs at Gamba Hill, in the Kampala section of Uganda in pitch-black orthorhombic crystals.

A new basic silicate of tin, found near Arandis, South West Africa, was named *arandisite* from the locality. It occurs in apple-green resinous and fibrous masses. The volcanoes of Italy, which have been very productive of new and rare mineral species in the past, furnished a new lime magnesium fluoride. This mineral was found in gray

MINERAL PRODUCTS OF THE UNITED STATES, 1928 AND 1929 *

| Product | Quantity | Value | Quantity | Value |
|---|------------------|--------------------------|------------------|--------------------------|
| METALLIC | 1928 | | 1929 | |
| Aluminum pounds | 210,000,000 | \$ 47,899,000 | 225,000,000 | \$ 51,864,000 |
| Antimonial lead ^b short tons (2,000 pounds) | 33,058 | 3,978,318 | 25,669 | 3,267,095 |
| Antimony ^c do | 3,432 | 707,000 | 3,052 | 545,700 |
| Bauxite long tons (2,240 pounds) | 375,426 | 2,273,898 | 365,777 | 2,265,638 |
| Cadmium pounds | 1,875,896 | 1,144,297 | 2,481,427 | 2,009,956 |
| Chromite long tons | 660 | 14,807 | 180 | 3,226 |
| Copper, ^d sales value pounds | 1,825,900,393 | 262,930,000 | 2,002,863,135 | 352,504,000 |

| Grand total approximate value of mineral products | | \$5,384,900,000 | | \$5,830,000,000 |

^a In this general statement certain of the figures represent shipments rather than quantity mined, and some of the figures for 1929 are estimates. The reader is referred to articles on the various mineral products for information in greater detail than it seems practicable to give here.

^b From both domestic and foreign ores.

^c Figures represent antimony content of antimonial lead. Value excluded from metallic total as the value of the antimony is included in the antimonial lead value. Value for antimony other than that in antimonial lead is included in metallic total; Bureau of Mines not at liberty to publish figures.

^d Product from domestic ores only.

^e Value, \$20.671834625323 an ounce.

^f Value not included in total value.

^g Including ore used for fluxing.

^h Figures not available.

ⁱ Figures showing values not available.

^j Figures for 1929 not yet available.

^k Value included in total value of metallic products; Bureau of Mines not at liberty to publish figures.

^l Figures obtained through cooperation with Bureau of the Census. Figures for 1929 not yet available; estimate of value included in total value of nonmetallic products.

^m Includes brown coal and lignite, and anthracite mined elsewhere than in Pennsylvania.

ⁿ Figures represent tripoli only. Value of diatomite is included in total value of nonmetallic products; Bureau of Mines not at liberty to publish figures.

^o No canvass. Estimate of value included in total value of nonmetallic products.

^p Canvass discontinued after 1915. Value of iron ore sold for paint included under last item ("Unspecified").

^q Sublimed blue lead, sublimed white lead, leaded zinc oxide, and zinc oxide.

^r Equivalent as K₂O.

^s Figures for 1929 include pyrites concentrates from Tennessee and partly desulphurized tailings from zinc operations in Wisconsin; similar output in earlier years was not included in the statistics.

^t Figures represent talc only. Value of soapstone is included in total value of nonmetallic products; Bureau of Mines not at liberty to publish figures.

^u Includes for 1929 the value of bismuth, cadmium compounds (\$498,734), cherts (\$577,000), columbite (\$17,261), flint lining for tube mills and pebbles for grinding (\$66,178), gem feldspar (\$2,200), iron ore sold for magnets, iron ore sold for paint (\$90,852), lithium minerals, new ingot magnesium (\$1,146,175), natural magnesium salts (\$1,081,817), calcareous marl (\$130,866), greensand marl (\$255,680), micaceous minerals (\$91,021), molybdenum (\$2,259,000), selenium (\$568,265), silica sand and sandstone (finely ground) (\$1,333,263), sodium salts (carbonate, bicarbonate, sulphate, and trona) from natural sources (\$1,957,831), tellurium (\$2,710), and an estimate of the value of miscellaneous mineral products, statistics for which are not collected annually by the Bureau of Mines.

mamillary masses and white radiating fibres in an old fumerole channel on Monte Rossi, Etna, Sicily. It was named *zamboninite*, in honor of Prof. F. Zambonini of Naples. *Scawtite*, a new silicate and carbonate of calcium, occurs in clusters of flattened, colorless plates at Scawt Hill, in County Antrim, Ireland.

MINERAL DEPOSITS. See GEOLOGY.

MINERAL PRODUCTION OF THE UNITED STATES. In 1930, as discussed in the articles on the separate minerals, there was a marked decline in production, measured both by quantities and values. As a result of the general industrial depression in many fields, activity was curtailed, though gold mining, as is quite usual at times of poor business, experienced increased activity. Mineral fuels declined in amount and for the first time the production of petroleum and natural gas both were smaller than in the previous year. Coal suffered a considerable decrease, as did iron ore, while copper production declined to a marked degree. Such an outlined statement, prior to the appearance of the annual summary for 1930 issued by the U. S. Bureau of Mines, must be considered in relation to the extraordinary output for 1929.

The U. S. Bureau of Mines stated the value of all mineral products in 1929 at \$5,830,000,000, or 8 per cent greater than the value in 1928. The upward trend was, however, neither general nor uniform and did not bring the total to preceding high levels—\$6,213,600,000 in 1926, a year of marked prosperity, and \$5,986,500,000 in 1923 and \$6,981,340,000 in 1920, two years of high price levels. Comparisons for the major groups of mineral industries show that the total value of metals produced in 1929 was exceeded only twice—in 1923 and 1920—in the past decade; that the total value of all nonmetallic products, except fuels, was less in 1929 than in any year of the decade except the first three; and that the total value of all mineral fuels in 1929 surpassed that for each year of the decade except 1926, 1923, and 1920.

The mineral fuels as a group show an increase of about 11 per cent in total value of products, attributable chiefly to a large gain in the value of petroleum produced and commensurate gains in the value of natural gas and natural gasoline, whereas the value of the bituminous coal output increased only moderately and the value of anthracite showed no material change. However, the moderate increases in 1929 in the quantity and value of bituminous coal mined and in the quantity of anthracite mined are noteworthy, as they followed two years of declining output. Petroleum production passed the 1,000,000,000-barrel mark in 1929, an increase of more than 12 per cent over 1928. The sales of natural gas and natural gasoline continued strong in growth throughout 1929.

The total value of metallic products of the mines of the United States was about 15 per cent greater in 1929 than in 1928. Except for gold and silver, all the important metals contributed to this increase, of which nearly one-half was accounted for by a great increase in the value of copper. Whereas the smelter output of copper in the United States increased 10 per cent, the total value increased 34 per cent; the average price for the year was higher by 3.2 cents per pound, or 22 per cent, than that for 1928. Production and consumption of copper continued at a high rate throughout 1929, but production so far out-

distanced consumption as to cause an accumulation of stocks of refined copper at the end of the year of more than two and one-half times the stocks at the beginning. In lesser degree the lead, zinc, and aluminum industries also benefited by increased output and higher price levels in 1929 as compared with 1928. The production of steel reached a new high level, exceeding 1928 production by about 9 per cent, and concomitantly shipments of pig iron reached a new peak total of 8 per cent in quantity above 1928. Although not keeping pace with the outputs of steel and pig iron, the shipments of iron ore were 19 per cent greater in 1929 than in 1928. Values of both pig iron and iron ore also averaged higher in 1929 than in 1928. The production of high-grade manganese ore in 1929 showed the first increase since 1925 by reason of sustained operation of a process of beneficiating carbonate ores. The production of mercury was nearly one-third greater in quantity and value in 1929 than in 1928 and was the largest annual output since 1918. Gold production declined by about 1 per cent. The quantity of silver produced increased moderately, but the average and total value decreased.

The total value of nonmetallic products (not including fuels) decreased about 5 per cent in 1929 as the result not only of decline in quantity of production of a number of important items but also by reason of generally lower price levels for nonmetallic products. The decline in the total is due to the preponderance of the structural materials, in the use of which there was recession in 1929, whereas most of the chemical, metallurgical, and other mineral materials showed increases. See table on pages 488 and 489.

MINES AND MINING, MINERAL TREATMENT. See INTERNATIONAL LABOR OFFICE; METALLURGY.

MINIMUM WAGE. American public attention was again focused on the subject of minimum wage regulations for women when Harvard University decided to release 21 women employed as cleaners in the Widener Library because it refused to pay the minimum wage recommended by the State Minimum Wage Commission. In November and December, 1929, despite the fact that the University authorities were meeting with considerable public censure, the discharges were made and male employees were appointed in the places of the women. The Minimum Wage Board recommended a minimum of \$.37 an hour for cleaning women employed for less than 42 hours per week. The Harvard authorities insisted that they were not willing to pay more than \$.32 for this type of labor. Early in 1930 the University was compelled to take official notice of the criticisms leveled against it and a statement was issued defending the University's policies. The points made by this statement were that men were more efficient than women and that the University had always had in mind the replacement of the part-time women cleaners by a full-time male porter staff. The move too was justified on the ground of economy, the treasurer of the University declaring that the replacement of 21 part-time women by 7 full-time men was to result in an annual saving of \$2000. Despite this defense it was the general opinion of commentators that Harvard University had not particularly distinguished itself as a result of the controversy with the Minimum Wage Board and was setting a poor example to industrialists of the State. After all, the Minimum Wage Commission

of Massachusetts had no mandatory powers and its effectiveness depended entirely upon the willingness of concerned parties to accept its budgets and minimum wage regulations as fair. Harvard University, by its action, threatened seriously the principle of voluntary minimum wage regulation which had heretofore proved so successful in the State.

MINING AND METALLURGICAL ENGINEERS, AMERICAN INSTITUTE OF. An organization founded in 1871 and incorporated under the laws of New York State in 1905 "to promote the arts and sciences connected with the economic production of the useful minerals and metals and the welfare of those employed in these industries." It is made up of 27 local sections and has 43 affiliated societies in colleges throughout the United States. There are six classes of membership: Members, men who have been practicing engineers for at least six years; junior members, the younger engineers; associates, men interested in or connected with mining, geology, metallurgy, or chemistry, but not practicing engineers; student associates, students in engineering schools; Rocky Mountain members, for life by merger; and honorary members, engineers of international distinction or persons who have rendered to the Institute some distinctive service, elected by unanimous vote of the board of directors. On Nov. 15, 1930, there were 9132 members, distributed as follows: Honorary, 15; members, 6644; junior members, 174; associates, 1011; student associates, 367; Rocky Mountain members, 133; and junior associates (class abolished in 1930), 788. The income for 1930 was \$194,283.

In addition to the monthly meetings of the local sections and regional meetings held in various important mining or metallurgical centres, an annual meeting, or four-day convention beginning on the third Tuesday in February, is held in New York City. The medals and prizes awarded by the society during 1930 for notable work in the field of mining and metallurgy were: The James Douglas Medal, to John Van Nostrand Dorr; William Lawrence Saunders Gold Medal, to Daniel C. Jackling; Robert W. Hunt Medal, to James Aston; and J. E. Johnson, Jr., Award, to William S. Unger. The Institute publishes *Transactions*, an annual in several volumes containing the best papers of the year on mining and metallurgical subjects; *Mining and Metallurgy*, a monthly bulletin; the *Year Book*, which constitutes a "Who's Who" in the profession; *Technical Publications*, a series of individual technical pamphlets; and special volumes from time to time. In connection with three other societies, it maintains the engineering societies library and an employment bureau. The officers elected at the 1930 convention were: President, William H. Bassett; vice-presidents, Henry Krumb and Scott Turner; directors, R. C. Allen, Cadwallader Evans, Jr., John M. Lovejoy, John A. Mathews, and Milnor Roberts; secretary, H. Foster Bain; and treasurer, Karl Eilers. Headquarters are in the Engineering Societies Building, 29 West 39th Street, New York City. See GEOLOGY.

MINNESOTA. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 2,563,953. The population on Jan. 1, 1920, was 2,387,125. The capital is St. Paul.

AGRICULTURE. The table in the second column gives the acreage, production, and value of the principal crops during 1929, and 1930.

| Crop | Year | Acreage | Prod. Bu. | Value |
|-------------|------|-----------|-------------|--------------|
| Corn | 1930 | 4,880,000 | 135,780,000 | \$71,963,000 |
| | 1929 | 4,253,000 | 148,855,000 | 96,758,000 |
| Hay | 1930 | 4,098,000 | 5,611,000* | 50,800,000 |
| | 1929 | 4,326,000 | 6,467,000* | 62,118,000 |
| Oats | 1930 | 4,358,000 | 171,351,000 | 42,888,000 |
| | 1929 | 4,212,000 | 153,798,000 | 53,863,000 |
| Wheat | 1930 | 1,301,000 | 21,525,000 | 12,367,000 |
| | 1929 | 1,872,000 | 19,723,000 | 20,804,000 |
| Barley ... | 1930 | 1,980,000 | 55,836,000 | 19,543,000 |
| | 1929 | 2,200,000 | 59,400,000 | 28,512,000 |
| Potatoes .. | 1930 | 805,000 | 21,350,000 | 13,878,000 |
| | 1929 | 822,000 | 27,370,000 | 27,370,000 |
| Flaxseed .. | 1930 | 732,000 | 7,820,000 | 10,614,000 |
| | 1929 | 523,000 | 4,707,000 | 13,509,000 |
| Rye | 1930 | 416,000 | 7,197,000 | 2,231,000 |
| | 1929 | 396,000 | 6,930,000 | 5,683,000 |

* Tons.

Farms in the State numbered 185,476 in 1930, as against 188,231 in 1925 and 178,478 in 1920.

MINERAL PRODUCTION. The State supplied about five-eighths of the iron ore produced in the United States in 1929. The mines of the State yielded 46,470,243 long tons of iron ore, as against 38,129,018 in 1928; in value, \$121,776,312 for 1929 and \$94,258,899 for 1928. The great bulk of this ore was as usual exported from the State, although the small production of pig iron rose slightly, to 376,551 long tons for 1929, from 341,203 for 1928. Clay products totaled \$1,492,792 for 1928 (for 1927, \$1,675,662). Quarries furnished a moderate quantity of stone of fairly high average grade, in 1928, 474,450 short tons, in value \$3,699,498. The remainder of the mineral product was made up largely of manganiferous ore, to the quantity of 1,028,501 long tons for 1928, in value about \$2,000,000, and of sand and gravel. The value of all native mineral products of the State was, for 1928, \$108,274,963; for 1927, \$102,972,753.

FINANCE. State expenditures in the year ended June 30, 1929, as reported by the U. S. Department of Commerce, were: for maintaining and operating governmental departments, \$36,723,878 (of which \$9,948,136 was for local education); for interest on debt, \$3,970,275; for improvements, \$10,514,423; total, \$51,217,576 (of which \$13,878,680 was for highways, \$4,173,929 being for maintenance and \$9,704,751 for construction). Revenues were \$63,041,416. Of these, property and special taxes supplied 24.9 per cent; departmental earnings and compensation to the State for officials' services, 8.7; sales of licenses, 47.8 (in which was included State revenue from the gasoline sales tax, totaling \$3,678,105). State revenue from the gasoline tax diminished for 1929, because in that year a higher proportion of the receipts from this source was ceded to the counties. The funded debt of the State, outstanding on June 30, 1929, was \$56,219,059, of which total the debt incurred to defray the granting of rural credits formed a part, while the so-called county-reimbursement road bonds were excluded. These road bonds, though the State was obligated to pay both their principal and their interest, were the direct issues not of the State but of the counties. On the above basis the State debt net of sinking fund assets was \$6,086,614. On taxable property assessed at \$2,358,810,615 were levied in the fiscal year State taxes of \$10,580,229.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 8816.16. No additional construction of line or trackage in 1930 was reported.

EDUCATION. There were enrolled in the public schools of the State, in the year 1929-1930, 551,-

741 pupils. Of these, 436,281 were in common schools or elementary grades, and 98,613 were in high schools. The expenditures for public-school education in the fiscal year 1930 totaled \$53,636,116. For men teachers, the year's salaries averaged \$188.80 a month in the graded districts and \$105.59 in the ungraded rural districts; for women teachers, \$131.20 in the graded districts and \$93.49 in the ungraded rural districts.

CHARITIES AND CORRECTIONS. The chief central authority, the State Board of Control, as operating in 1930, had general control over 18 State institutions, supervised 14 county tuberculosis sanatoria, acted as a board of parole, purchased institutional supplies, conducted prison industries, collected charges for maintenance of the insane, inspected jails, lockups, poor-houses and infirmaries, appointed county welfare boards, and performed a variety of other duties. The entire number of inmates of the State institutions on June 30, 1930, was 14,290. Of these, 7800 were listed as insane, 2306 as feeble-minded or epileptic, and 2258 as criminal. The State eleemosynary and custodial institutions were: State asylums at Anoka, Hastings, and Willmar; State Training School; Fergus Falls State Hospital; Rochester State Hospital; St. Peter State Hospital; three schools for the feeble-minded, the blind and the deaf; Colony for Epileptics; State Public School; Home School for Girls; State Reformatory; State Reformatory for Women; State Prison; Sanatorium for Consumptives; Hospital for Crippled Children.

POLITICAL AND OTHER EVENTS. The solution of the water-power situation along the State's Canadian border was essayed through Federal authority, by the passage in Congress of the Shipstead-Nolan Act, a measure for the preservation of the watercourses in the area of the border lakes. This measure was widely approved in Minnesota, although it allocated to the Federal government a function supposed to have been within the province of the State authority. The act had the support of a resolution of the Minnesota Legislature of 1929 memorializing Congress in favor of its passage. Under the terms of the act non-agricultural lands in the area of the border lakes were to be withdrawn from settlement, private works on waterways fronting on Federal lands were to be prohibited and general schemes of power development were to be postponed until after the negotiation of an agreement with Canada on the subject. The act checked the project of E. W. Backus for the creation of seven reservoirs designed to cover a considerable part of the region, which was desired for a forest preserve.

The State of Minnesota appeared before the Interstate Commerce Commission in June to oppose, on behalf of railroad employees, the approval that the Commission had granted the proposed consolidation of the Great Northern and Northern Pacific railroad systems. The steady exploitation of the iron ore mines of the State led in 1930 to the active exploration of its lands by private prospectors for iron ore, provided with permits issued on the basis of bids of from 12 to 12½ cents a ton of royalty to be paid for ore discovered and extracted. With regard to the State demand for the deepening of the upper Mississippi River, Secretary of War Hurley announced on September 1 that, while the Government favored creation of a 9-foot channel, it would not be bound to attain this result within the life of the five-year programme for waterways.

Minneapolis and St. Paul carried on negotiations for the division of the costs of the projected metropolitan drainage system which the previous legislature had authorized them to build jointly, at an outlay of about \$26,000,000. At a special election held in St. Paul on June 16 the voters again, as in 1929, failed to adopt a proposal to establish municipal government under a city manager. The vote cast—28,553 in favor to 20,888 opposed—fell short of the required majority. Mayor Bundle of St. Paul declared in July that the 15 civilian members of the City Planning Committee were no longer entitled to office, their terms having expired with the previous year, and made new appointees. The First National Bank of St. Paul let contracts in June for the construction of a new bank building of 30 stories, at Fourth and Minnesota Streets, to cost about \$3,000,000.

ELECTIONS. Senator Thomas D. Schall, Republican, was reelected by a narrow majority, over his Democratic opponent, Einar Hoidale, the vote on November 4, as unofficially reported, being 287,081 to 278,854. Floyd B. Olson, Farmer-Labor candidate, was elected Governor, defeating Chase, the Republican contender. To the House of Representatives were elected 10 Republicans and one Farmer-Laborite, Paul Kvale. The voters rejected three constitutional amendments, which respectively would have allowed the Legislature large discretion in fixing the liability of stockholders in corporations; would have replaced the existing court commissionerships with associate judgeships and would have allowed the State to alter the prices for the sale of State lands and to exchange such lands for Federal lands.

OFFICERS. Governor, Theodore Christianson; Lieutenant-Governor, Charles E. Adams; Secretary of State, Mike Holm; State Treasurer, Julius A. Schmahl; Auditor, Ray P. Chase; Attorney-General, Henry N. Benson; Commissioner of Education, James M. McConnell.

JUDICIARY. Supreme Court: Chief Justice, Samuel B. Wilson; Associate Justices, Homer B. Dibell, Andrew Holt, Clifford L. Hilton, Royal A. Stone. In accordance with an amendment to the State Constitution, adopted November 4 and increasing the membership of the court by two members, I. M. Olsen and Charles Loring were later appointed to the court.

MINNESOTA, UNIVERSITY OF. A coeducational, State institution for higher learning in Minneapolis, Minn.; founded in 1851. The 1930 autumn registration was 12,157, while the summer session enrollment for the same year was 6015. The university staff on a full-time basis, including professors, associate professors, assistant professors, and instructors, numbered 706. The income for the year ending June 30, 1930, amounted to \$11,390,665, distributed as follows: State appropriations for maintenance, buildings, and special purposes, \$4,744,840; Federal aid, \$348,857; permanent university fund, \$228,782; income from student fees, \$1,167,980; income from service enterprises, revolving funds, and intercollegiate athletics, \$2,858,819; income from trust funds, \$1,188,863; 1929 building fund certificates of indebtedness, \$300,000; sales and miscellaneous income, \$552,524. The permanent university fund was increased by \$596,538; a bequest of \$229,830 was also received from William Henry Eustis to increase the endowment of the Minnesota Hospital and Home for Crippled Children. Additions were made during 1929-30 to the

Cyrus Northrup Memorial Auditorium at a cost of \$420,846 and to the Elliot Memorial Hospital at a cost of \$114,663. The library contained 654,447 volumes. Chancellor, Lotus Delta Coffman, Ph.D., LL.D.

MINORITIES. See LEAGUE OF NATIONS.

MISSISSIPPI. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 2,009,821. The population Jan. 1, 1920, was 1,790,618. Capital, Jackson.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|------------------|------|-----------|------------------------|-------------|
| Cotton | 1930 | 4,249,000 | 1,500,000 ^a | \$..... |
| | 1929 | 4,071,000 | 1,915,000 ^a | 164,690,000 |
| Corn | 1930 | 1,730,000 | 19,895,000 | 19,497,000 |
| | 1929 | 1,765,000 | 35,300,000 | 32,829,000 |
| Hay | 1930 | 435,000 | 383,000 ^b | 5,240,000 |
| | 1929 | 479,000 | 592,000 ^b | 9,044,000 |
| Sweet potatoes . | 1930 | 53,000 | 5,035,000 | 3,776,000 |
| | 1929 | 59,000 | 7,670,000 | 6,136,000 |
| Potatoes .. | 1930 | 14,000 | 970,000 | 1,358,000 |
| | 1929 | 14,000 | 1,214,000 | 1,882,000 |

^a Bales. ^b Tons.

The number of farms in the State was 312,453 in 1930, having risen notably, from 257,228 for 1925 and 272,101 for 1920.

MINERAL PRODUCTION. The mineral production of the State remained in 1928 a minor feature of its industry. The output of clay products was slightly less, as to value, being \$1,129,799 for 1928, as against \$1,146,472 for 1927. The digging of sand and gravel furnished almost all the rest of the yearly total of mineral production, which was, for 1928, \$2,634,347; for 1927, \$2,553,633.

FINANCE. State expenditures in the year ended Sept. 30, 1928, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$14,758,248 (of which \$4,819,148 was for local education); for interest on debt, \$812,731; for permanent improvements, \$5,541,465; total, \$21,112,444 (of which \$6,174,317 was for highways, \$2,214,650 being for maintenance and \$3,959,667 for construction). Revenues were \$17,448,831. Of these, property and special taxes formed 34.9 per cent; departmental earnings and remuneration to the State for officers' services, 10.9; sales of licenses, 29.9 (including taxes of \$2,468,680 on sales of gasoline). The State's funded debt outstanding on Sept. 30, 1928, was \$20,280,549. Net of sinking-fund assets, it was \$19,846,587. On property bearing an assessed valuation of \$775,716,077 were levied in the year State taxes of \$6,205,720.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 4284.13. There were built, in 1930, 1.17 miles of additional second track.

EDUCATION. A new school code, adopted by the Legislature in the spring, embodied provisions affecting the school system in divers respects. The number of persons of school age in the State was reported in 1930 to be 873,065, the white numbering 379,678 and the colored 493,987. There were enrolled in the public schools of the State, according to the same report, 584,705 pupils, of whom 301,850 were white and 292,855 colored. In common schools or elementary grades were enrolled 542,317, of whom 254,989 were white and 287,328 colored; in high schools, 52,288, made up of 46,861 white and 5427 colored. Expenditures of one year for public-school educa-

tion totaled \$15,843,417, of which \$14,259,875 was for whites and \$1,583,542 for the colored. Yearly salaries of teachers averaged \$625 for all; for whites, \$800; and for the colored, \$226.

LEGISLATION. The Legislature convened in January and adjourned on May 31, after the longest session in its history. Strife with Governor Bilbo and difficulty in reaching a long-sought agreement for financing an \$88,000,000 programme of road construction protracted the session. Though the lower house passed a measure to this effect at the last moment, the adjournment of the Senate, which had taken place in the meantime, was regarded as nullifying its action. A sales tax was enacted, providing that ordinary retail stores pay the State one-fourth of one per cent of the year's gross sales, and that merchants operating more than five separate stores pay one-half per cent. A privilege tax was also enacted, to apply to natural-gas pipe lines running through any part of the State. An issue of \$5,000,000 of notes to correct the condition of the State treasury was authorized, the payment of the notes to be provided from new taxation. Provision was made for the popular election of a new Highway Commission of three members.

POLITICAL AND OTHER EVENTS. The difficulties between the Legislature and Governor Bilbo that largely nullified the efforts of the legislative session centred in charges of corruption brought against the Governor's friends and appointees by his factional opponents. There were contempt proceedings and efforts to bring about impeachments, but little in the way of actual reform was accomplished. The constitutionality of the chain store tax on gross sales and that of the tax on pipe lines were attacked in the courts of the State.

According to information elicited in the course of the legislative investigation of the matter, an antitrust suit started in 1929 in the State courts by a firm of Jackson lawyers against the Warren Brothers Company of Boston, manufacturers of paving materials, was abandoned upon the payment of \$80,000 and papers in the possession of the plaintiffs' counsel were surrendered to the defendants. One of the lawyers who had been occupied with the prosecution, Carl Marshall, declined to tell what had become of the chief part of the \$80,000, asserting the obligation to preserve the confidence of a client. He was arrested for contempt of the Legislature, but was freed by the Governor's pardon and absented himself from the State. The ultimate destination of the money remained undisclosed. In June Governor Bilbo dismissed, without publicly assigning charged against them, a number of teachers in the State-supported schools and colleges, including the chancellor of the university. The action was the subject of protests from the American Medical Association and the American Chemical Society.

Application was made to the city of Jackson by the Mississippi River Light and Power Company for a franchise to serve the city with natural gas, but was opposed by the Mayor on the ground of too high a proposed rate. The new Highway Commission provided by the Legislature of 1930 was duly elected, but the failure of the ambitious construction programme in the legislative session left it with but \$4,700,000 a year, approximately, to expend, and without Federal aid, for which complying legislation had not been enacted.

ELECTIONS. Pat Harrison, Democratic Senator,

and a delegation of eight Democratic Representatives were reelected to the Federal Congress, without opposition, on November 4.

OFFICERS. Governor, Theodore G. Bilbo; Lieutenant-Governor, Bidwell Adam; Secretary of State, Walker Wood; Attorney-General, George T. Mitchell; Treasurer, H. C. Yawn; Auditor, C. C. White; Superintendent of Education, W. F. Bond.

JUDICIARY. Supreme Court: Chief Justice, Sydney Smith; Associate Justices, W. D. Anderson, James G. McGowan, George H. Ethridge, W. H. Cook, V. A. Griffith.

See **CHEMISTRY, INDUSTRIAL.**

MISSISSIPPI, UNIVERSITY OF. A coeducational, State institution of higher learning in University, Miss.; chartered in 1884 and opened in 1848. The university consists of a college of liberal arts and schools of law, engineering, medicine, pharmacy, education, and commerce and business administration. The total enrollment for the autumn of 1930 was 1254; the registration for the 1930 summer session was 312. The faculty numbered 73, exclusive of fellows and student assistants. There were approximately 40,000 volumes in the library. The income for the year was \$609,481. A special appropriation of \$1,600,000 was made by the 1928 Legislature for the construction of new buildings and other permanent improvements. The buildings completed by the end of 1930 were those for the law and graduate schools, a gymnasium, a field house, and seven dormitories. Chancellor, J. N. Powers, M.A., M.Pd., LL.D.

MISSISSIPPI FLOODS. See **FLOODS.**

MISSOURI. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 3,629,367. The population on Jan. 1, 1920, was 3,404,055. The capital is Jefferson City.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|------------------|------|-----------|------------------------|---------------|
| Corn | 1930 | 5,922,000 | 72,841,000 | \$ 54,631,000 |
| | 1929 | 5,384,000 | 126,524,000 | 108,811,000 |
| Hay | 1930 | 3,736,000 | 3,419,000 ^a | 40,570,000 |
| | 1929 | 4,056,000 | 5,368,000 ^a | 55,324,000 |
| Wheat | 1930 | 1,420,000 | 19,880,000 | 14,699,000 |
| | 1929 | 1,730,000 | 17,300,000 | 19,546,000 |
| Oats | 1930 | 1,781,000 | 48,978,000 | 19,101,000 |
| | 1929 | 1,535,000 | 33,770,000 | 15,872,000 |
| Cotton | 1930 | 369,000 | 160,000 ^b | |
| | 1929 | 343,000 | 220,000 ^b | 17,952,000 |
| Potatoes .. | 1930 | 82,000 | 8,692,000 | 8,257,000 |
| | 1929 | 81,000 | 5,508,000 | 8,262,000 |
| Sweet potatoes . | 1930 | 11,000 | 1,045,000 | 1,150,000 |
| | 1929 | 12,000 | 1,320,000 | 1,584,000 |

^a Tons. ^b Bales.

The number of farms in the State was 256,131 in 1930; it had declined slightly from 260,473 for 1925 and 263,004 for 1920.

MINERAL PRODUCTION. Ranking as the foremost among the States in the mining of lead in 1928, Missouri slightly increased its lead production in 1929, for which year the mine production of recoverable lead in the State was 198,469 short tons, as against 195,393 for 1928; in value the product was \$25,007,094 for 1929 and \$22,665,588 for 1928. Cement production was 7,984,337 barrels, for 1929 and 7,943,367 for 1928, as indicated by mill shipments; in value it was \$11,557,905 for 1929 and \$12,367,018 for 1928. Coal production, as to quantity, increased to 4,030,

311 net tons for 1929, from 3,732,421 for 1928; as to value, it was \$9,778,000 for 1929 and \$9,637,000 for 1928. The clay products, exclusive of pottery, totaled \$14,891,273 for 1928 and were \$16,392,171 for 1927, with pottery included. The output of stone, 3,445,690 short tons for 1928 and 3,064,600 for 1927, was valued at \$6,137,631 for 1928 and \$5,170,859 for 1927. There was a substantial production of zinc, 11,017 short tons in 1929 and 12,974 in 1928; by value, \$1,454,244 in 1929 and \$1,582,828 in 1928. Leading in the domestic production of barite, Missouri produced 118,550 short tons of the crude mineral in 1929, as against 114,274 in 1928; by value, \$901,891 in 1929 and \$810,203 in 1928. The aggregate value of the native mineral products of the State was, for 1928, \$74,981,382; for 1927, \$75,890,415.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 7939.91. There were built, in 1930, 18.26 miles of second track.

EDUCATION. The publication of the report of the State's survey commission, made in 1930, presented a definite view of the position of the public schools of the State. The report was welcomed as affording the basis for better planning of the school's activities on a state-wide scale. The number of persons of school age in the State was estimated for the fiscal year 1928-29 at 925,672. There were enrolled in the public schools 668,735 pupils. Of these, 203,064 were in common or ungraded schools; 340,547 in elementary grades; and 125,124 in high-school grades. The year's expenditures for public-school education totaled \$51,311,573. Salaries of teachers, for the year, averaged as follows: rural—men, \$658 and women, \$610; high school districts—men, \$1437 and women, \$919.

CHARITIES AND CORRECTIONS. As functioning in 1930, the State Board of Charities and Corrections exercised the duty of inspection over county jails and hospitals. It also inspected and licensed those maternity hospitals and boarding homes for children throughout the State which were not maintained with public funds. Connected with it was a children's bureau which received and cared for dependent and neglected children committed to it by the courts. It placed such children temporarily in a Receiving Home at Carrollton, awaiting their placement in private families. There were at the end of 1930, about 150 children in this institution and between four and five hundred placed in homes. Among the other State institutions of care or custody were four State hospitals, the Missouri Colony for the Feeble-minded and Epileptic, Missouri State Sanatorium, Confederate Home, State Soldiers' Home, State Penitentiary, Reformatory, Industrial Home for Girls, and Industrial Home for Negro Girls.

POLITICAL AND OTHER EVENTS. At Kansas City was set under way in June an organized movement of leading citizens to expedite the development of the community in accordance with a ten-year programme. Kansas City was the scene of a peculiar conflict between a public-service corporation and the Federal District Attorney on the subject of prohibition enforcement. It was asserted that the Kansas City Gas Company had furnished gas to a supposed still, and officials of the company when questioned refused to supply such information about the premises as their meter readers might have acquired. About 1100 convicts in the State penitentiary mutinied on

March 25 and 27 but were subdued by a National Guard force, which was called out for the emergency.

ELECTIONS. There were elected, on November 4, twelve Democratic and four Republican Representatives, this result affording the Democrats a net gain of six seats. The lower house of the State Legislature went under Democratic control, while the State Senate remained Republican. No election for Governor or United States Senator was held. Seven proposals for constitutional amendments were presented on the ballot; all, with the possible exception of one, on which the vote was close, were reported to have been defeated.

OFFICERS. Governor, Henry S. Caulfield; Lieutenant-Governor, Edward H. Winter; Secretary of State, Charles U. Becker; Auditor, L. D. Thompson; Treasurer, S. L. Cantley; Attorney-General, Stratton Shartel; Superintendent of Public Schools, Charles A. Lee.

JUDICIARY. Supreme Court: Chief Justice, William T. Ragland; Associate Justices, Berryman Henwood, Frank E. Atwood, Earnest S. Gantt, William F. Frank, John Turner White, George R. Ellison.

MISSOURI, UNIVERSITY OF. A State institution of higher education in Columbia and Rolla, Mo.; founded in 1830. The enrollment for all divisions for the first semester of 1930-31 was 4592, of whom 3276 were men and 1316 women. This enrollment was distributed as follows: Agriculture, 364; arts and sciences, 1709; business and public administration, 211; education, 392; engineering, 417; mines, 597; fine arts, 125; graduate, 357; journalism, 320; law, 134; medicine, 72; short course in agriculture (first term), 20. The total enrollment for the summer session of 1930 was 2449, of whom 1229 were men and 1220 women. The total annual enrollment of all classes of students, including those in correspondence and extension courses, was 8368. There were 434 faculty members. The endowment of the university was approximately \$2,500,000, and the total income from all sources was \$4,212,686. The libraries contained approximately 326,000 volumes. President, Walter Williams, LL.D.

MIXED CLAIMS COMMISSION. See ARBITRATION, INTERNATIONAL.

MOCQUEREAU, mòk'kè-rô', DOM ANDRÉ. A French musical scholar, died in Solesmes, France, Jan. 25, 1930. Born in Tessoualle, near Cholet, June 6, 1849, he received his education in Paris, and while still very young appeared as cellist in Dancal's chamber-music concerts. In 1875 he entered the order of the Benedictines of Solesmes. There he became intensely interested in Gregorian music, to the study and elucidation of which he devoted his whole life. In 1889 he began the publication of his famous *Paléographie musicale*, a collection of liturgical chants of the Roman Catholic Church in all their forms and in all epochs, with photographic reproductions of medieval manuscripts. In 1904 Pope Pius X issued an order that all reprints of Gregorian music appearing thereafter in the *Editio Vaticana* must conform to the versions given in the *Paléographie*. Besides this monumental work, of which 13 volumes had appeared to 1928, he wrote: *L'Art grégorien* (1895); *Notes sur l'influence de l'accant et du cursus tonique latins dans le chant ambrosien* (1897); *Méthode de chant grégorien* (1899); *Le nombre musical grégorien ou rythmique grégorienne* (1908); *Le nombre musical grégorien* (published in two volumes, 1908-27).

MOHLER, ALBERT L. A former American railroad official, died in Chicago, Ill., June 6, 1930. He was born in Ephrata, Pa., in 1850, and was educated in the common schools. In 1868 he entered railway service as clerk for the Chicago & Northwestern Railway. In 1882 he became general freight agent for the St. Paul, Minneapolis & Manitoba Railway (later the Great Northern). He served as assistant general manager and general manager of several western railroads until 1897, when he became president and general manager of the Oregon Railroad & Navigation Co., remaining in that position until 1904. From 1904 to 1911, he was general manager of the Union Pacific Railroad Company and, after 1905, also vice president. In 1911 he was elected president of the Union Pacific and the Oregon Short Line Railroad Companies. He retired from the railway business in 1916.

MOHLER, J(OHN) FREDERICK. An American physicist and educator, died in Carlisle, Pa., Jan. 28, 1930. He was born in Boiling Springs, Pa., Oct. 30, 1864, and was graduated from Dickinson College in 1887. From 1887 to 1890 he was instructor in mathematics and science at Wilmington Conference Academy, Dover, Del., and from 1890 to 1894, instructor in mathematics at the Wesleyan Academy, Wilbraham, Mass. In 1896 he became professor of physics at Dickinson College, where he remained until his death. His researches included investigations on the surface tension of water below 0° C., measurement of the pressure in the electric-light spark, and the discovery that the pressure surrounding the electric arc changed the wave length of the light emitted. He also discovered the relation of the shift of spectral lines to the atomic volume, as well as a peculiarity in the light spectrum of magnesium. The M.A. degree was conferred on him by Dickinson College in 1890 and the Ph.D. degree by Johns Hopkins University in 1897. He was the author of *A Manual of Practical Physics* (1897) and numerous articles in scientific journals.

MOLUCCA ARCHIPELAGO. See DUTCH EAST INDIES.

MONACO, món'à-kô. A principality on the Mediterranean coast, surrounded on the land sides by the French Department of Alpes Maritimes. Area, 370 acres; population, according to the census of 1928, 24,927. It is chiefly known for its gambling resort, Monte Carlo (population in 1928, 11,055). Other towns are Monaco (2085) and La Condamine (11,787). Under the constitution of Jan. 7, 1911, the Government consists of the Prince, assisted by a Council of State and a National Council elected by universal suffrage. Revenue is mainly derived from the gambling concession. The ruler in 1930 was Prince Louis II, born July 12, 1870, who succeeded his father, Prince Albert, June 26, 1922.

HISTORY. Political disturbances, which threatened to result in the abdication of Prince Louis, were apparently terminated in 1930 by two elections in which the principality's voters decided overwhelmingly in favor of maintaining the dynasty. Factors in the situation were the marital difficulties of Prince Pierre and his wife, Charlotte, adopted daughter of Prince Louis, local discontent with the administration of the

Casino, and an agitation for the establishment of a republic. Prince Pierre was granted a decree of separation from Princess Charlotte by a Monagasque court in Paris, Mar. 20, 1930. He was Count de Polignac of France before his marriage to Charlotte in 1920. On May 7, Prince Louis issued a decree annulling the election of March 30, in which his supporters had been successful, on the ground that the subsequent election of the entire National Council by the electors chosen March 30 had been carried out contrary to the Constitution. In the second election on May 18, the party of Eugene Marquet, Mayor of Monte Carlo, who supported the Prince, again swept the field, receiving a majority of 100 out of a national vote of 540.

Marquet became head of the Council of State, but was removed by Prince Louis following the failure of a leading real estate company headed by Marquet's brother. Upon his return to the principality from Paris on Dec. 22, 1930, Prince Louis was greeted with a hostile demonstration by the populace. On December 26, he dismissed both the State and Municipal Councils and announced that constitutional guarantees would remain suspended in part until his subjects had repented their unruliness. His assumption of dictatorial powers was believed to have had the support of the French Foreign Office.

MONEY. The table on page 497 from the annual report of the director of the United States Mint shows the distribution of the stock of money in the United States on June 30, 1930, June 30, 1929, Oct. 31, 1920, June 30, 1914, and Jan. 1, 1879.

MONEY RATES. See FINANCIAL REVIEW.

MONGOLIA. A vast and indefinite tract of territory lying to the west of Manchuria and divided into two political divisions, Inner Mongolia, which is administratively a part of China, and Outer Mongolia, a soviet republic in close relations with Soviet Russia. In 1928 the Nationalist government of China made provinces of the former special administrative districts of Jehol, Suiyuan, and Chahar into which Inner Mongolia had been divided. Chengteh, Kweisui, and Kalgan are the respective provincial capitals. The total area is about 1,875,000 square miles, although some authorities place it as low as 1,367,000 square miles. Population, variously estimated at 750,000 to 2,000,000. Outer Mongolia has an area of about 714,000 square miles and a population estimated at 670,000 (including 7000 Chinese and 90,000 Russians). The capital is Urga (population, 30,000).

Mongolia is inhabited by nomadic Mongol and Kalmyk tribes, but latterly the Chinese have emigrated in considerable numbers. The chief occupation is stock raising and the principal exports are furs, skins, hides, horns, and wool. The soil is naturally fertile but needs irrigation to be productive. Gold, iron, copper, silver, and tin are found, but are not worked extensively. Since 1917 there has been a motor-car freight service across the Gobi Desert. See CHINA.

MONOPLANES. See AERONAUTICS.

MONTAGUA VALLEY. Border territory under dispute between Guatemala and Honduras. For treaty settlement in 1930, see GUATEMALA, under *History*.

MONTANA. POPULATION. According to the Fifteenth Census, the population of the State on

Apr. 1, 1930, was 537,606. At the census taken Jan. 1, 1920, it was 548,889. The capital is Helena.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crop in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|--------------|------|-----------|-------------|--------------|
| Wheat | 1930 | 3,913,000 | 33,698,000 | \$16,332,000 |
| | 1929 | 4,226,000 | 40,688,000 | 38,741,000 |
| | 1930 | 2,135,000 | 2,381,000 * | 25,893,000 |
| Hay | 1929 | 2,082,000 | 2,527,000 * | 30,762,000 |
| | 1930 | 526,000 | 9,205,000 | 2,854,000 |
| | 1929 | 554,000 | 9,418,000 | 4,803,000 |
| Corn | 1930 | 271,000 | 3,252,000 | 2,146,000 |
| | 1929 | 301,000 | 3,612,000 | 3,034,000 |
| | 1930 | 480,000 | 1,776,000 | 2,327,000 |
| Flaxseed ... | 1929 | 343,000 | 1,098,000 | 3,074,000 |
| | 1930 | 226,000 | 3,729,000 | 1,529,000 |
| | 1929 | 251,000 | 4,016,000 | 2,731,000 |
| Potatoes ... | 1930 | 29,000 | 2,204,000 | 2,424,000 |
| | 1929 | 34,000 | 1,980,000 | 3,366,000 |
| | 1930 | 60,000 | 690,000 | 1,690,000 |
| Dry beans .. | 1929 | 60,000 | 660,000 | 2,376,000 |
| | 1930 | 45,000 | 564,000 * | |
| | 1929 | 38,000 | 386,000 * | 2,815,000 |

* Tons.

Farms in the State numbered 47,563 in 1930, as against 46,904 in 1925 and 57,677 in 1920.

MINERAL PRODUCTION. The production of copper, with regard to which Montana held in 1928 third rank among the States, increased to 297,725,973 pounds for 1929, from 248,262,027 for 1928. By value, the product of 1928 was \$35,749,732. An average price of 17.6 cents a pound in 1929, well above the 14.4 cents average of 1928, indicated for the product of 1929 a total value in excess of \$52,000,000. The mining of lead also rose, to 39,213,707 pounds for 1929, from 33,700,000 for 1928, when the year's product was valued at \$1,958,059. Of zinc were mined 136,351,734 pounds in 1929, a decline from the 165,660,189 pounds, in value \$10,105,272, of 1928. Gold production, 54,758 fine ounces, was somewhat lower for 1929 than the 58,196 ounces of 1928; in value it was about \$1,100,000 for 1929 and was \$1,203,020 for 1928. The output of silver rose to 12,716,977 fine ounces for 1929, from 10,853,276 for 1928, when this product attained the value of \$6,349,166. Petroleum production diminished, being 3,183,000 barrels for 1929, as against 4,015,000 for 1928; in value, it was \$5,700,000 (estimated) for 1929 and \$6,400,000 for 1928. Coal production rose slightly to 3,407,256 net tons for 1929, from 3,324,195 for 1928; and to \$7,561,000 in value, from \$7,550,000. The output of natural gas reached, for 1928, 6,277,000 M cubic feet, in value \$1,446,000. The aggregate value of the mineral product of the State was, for 1928, \$74,752,309; for 1927, \$68,264,687.

FINANCE. State expenditures in the year ended June 30, 1929, as reported by the U.S. Department of Commerce, were: for maintenance and operation of governmental departments, \$6,981,214 (of which \$1,764,139 was for local education); for interest on debt, \$395,502; for permanent improvements, \$4,360,797; total, \$11,737,513 (of which \$4,820,363 was for highways, \$610,303 being for maintenance and \$4,210,000 for construction). Revenues were \$11,839,078. Of these, property and special taxes formed 19.5 per cent; departmental earnings and remuneration to the State for officers' services, 6.3; sales of licenses, 36.4 (including taxes of \$2,661,875 on sales of gasoline). The State's funded debt outstanding on June 30, 1929, was \$5,629,711. Net of sinking-fund assets, it was \$3,284,841. On property bearing an assessed valuation of

LOCATION, OWNERSHIP, AND PER-CAPITA CIRCULATION OF UNITED STATES MONEY, JUNE 30, 1930
 [From Annual Report Director of the Mint, 1930]

| Kind of money | Total | Money held in the Treasury | | | Money outside of the Treasury | | |
|----------------------------|------------------------|--|--|---|--|------------------------|-------------------------|
| | | Amount held in trust against gold and silver certificates (and Treasury notes of 1890) | Reserve against United States notes (and Treasury notes of 1890) | Held for Federal Reserve banks and agents | Held by Federal Reserve banks and agents | In circulation | Per capita ^d |
| Gold coin and bullion | \$3,493,522,533 | \$1,489,989,479 | \$156,039,088 | \$1,796,239,235 | \$684,107,489 | \$357,235,684 | \$2.90 |

*The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

†This total includes \$8,675,623 of gold deposited for redemption of Federal Reserve notes, and \$28,226,376 deposited for redemption of national-bank notes, against which \$20,758,412 of notes in process of redemption are a charge, \$1,900 deposited for retirement of additional circulation (act of May 30, 1908), and \$7,691,499 deposited as a reserve against postal savings deposits.

* Includes money held by the Cuban agency of the Federal Reserve Bank of Atlanta.

* Population of continental United States (estimated) June 30, 1930, 123,156,000; June 30, 1929, 119,788,000; Oct. 31, 1920, 107,491,000; Mar. 31, 1917, 103,716,000; June 30, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

* Includes United States money in circulation in foreign countries and the amount held by the Cuban agency of the Federal Reserve Bank of Atlanta.

† Does not include gold bullion or foreign coin other than that held by the Treasury, Federal Reserve banks, and Federal Reserve agents. Gold held by Federal Reserve banks under earmark for foreign account is excluded, and gold held abroad for Federal Reserve banks is included.

* These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

NOTE.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of \$150,039,088 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury. Federal Reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal Reserve bank. Federal Reserve notes are secured by the deposit with Federal Reserve agents of a like amount of gold coin and such discounted or purchased paper as is eligible under the terms of the Federal Reserve act. Federal Reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal Reserve notes in actual circulation. Lawful money has been deposited with the Treasurer of the United States for retirement of all outstanding Federal Reserve bank notes. National-bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of national-bank notes secured by Government bonds.

\$428,381,209 were levied during the year State taxes aggregating a total sum of \$1,825,191.

The value of gold, silver, copper, lead, and zinc produced from Montana mines in 1930, according to estimates of the U. S. Bureau of Mines, was about \$32,943,350, a decrease of more than 54 per cent from the record value of \$71,779,547 in 1929. The unusually large decrease in the output of the five metals was caused by the marked curtailment of metal output combined with a sharp decline in metal prices. The curtailment of the copper production in Montana was particularly notable and resulted in a decrease of nearly 100,000,000 pounds from the record output in 1929. There were also marked decreases in the output of zinc, lead, gold, and silver. The value of the gold output decreased from \$1,131,949 in 1929 to about \$870,300 in 1930. The output of silver decreased from 12,716,977 ounces in 1929 to about 7,760,000 ounces in 1930, a decrease of nearly 5,000,000 ounces; it was the lowest output since 1921. The decrease in the silver output combined with the decline in the average price of silver from 53.3 cents an ounce in 1929 to 38.5 cents an ounce in 1930 resulted in a decrease in the value of the output from \$6,778,149 in 1929 to about \$2,987,600 in 1930. Most of the silver produced in Montana is recovered from copper ore and the output varies directly with the copper output. Due to the curtailment in the production of copper ore there was a large decrease in the output of silver from the mines at Butte, and particularly from the group operated by the Anaconda Copper Mining Co., which reported a decrease of about 38 per cent. The copper output decreased from 297,725,973 pounds in 1929 to about 198,200,000 pounds in 1930, and the value from \$52,399,771 to about \$24,576,800, the lowest output and value since 1922. The decrease of nearly 100,000,000 pounds of copper, combined with the decline in price from 17.6 cents a pound in 1929 to 12.4 cents a pound in 1930, resulted in a decrease of more than 53 per cent in the value of the output. Despite the marked decline in the output of copper the State regained its position, ranking second as a producer of copper in the United States. The Anaconda Copper Mining Co., as in the past, produced most of the State's copper from its mines at Butte, but decreases from the property operated by this company accounted for nearly all the decrease in the State output.

The production of lead decreased from 39,213,707 pounds valued at \$2,470,464 in 1929 to about 23,300,000 pounds valued at \$1,211,600 in 1930, the lowest output and value since 1921. The decrease of about 40 per cent in the production of lead was due to curtailment at all the leading producers of lead in the State. The output of zinc recovered from ore mined in Montana decreased from 136,351,734 pounds in 1929 to about 70,150,000 pounds in 1930, and the value from \$8,999,214 to about \$3,297,050, the lowest output and value since 1921 and a decrease of more than 63 per cent from the value of the output in 1929. The electrolytic zinc plants near Great Falls and Anaconda were operated continuously, treating concentrate from Anaconda and Butte and considerable custom material, chiefly from Utah, Idaho, and Montana. Nearly 64 per cent of the total output of zinc from Montana mines was produced from three properties at Butte, and most of the remainder represented the output of the East Helena fuming plant and the Block P mine,

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 5230.60. There were built, in 1930, 5.84 miles of additional first track.

EDUCATION. Pursuant to a resolution of the Legislature of 1929, the State Board of Education conducted, through a commission of superintendents, principals, and supervisors, a survey of secondary education, on the basis of which the commission drafted a bill for the reform of the system. The number of individuals of school age (from 6 to 21 years) in the State was reported for 1930 as 154,413. There were enrolled in the public schools, in the year 1929-30, 120,337 pupils. Of these, 95,550 were in common schools or elementary grades, and 24,787 were in high schools. The expenditures of the year for public-school education totaled \$14,969,486. The approximate average salaries of teachers, for the year, were: in rural elementary schools, \$1000; urban elementary schools, \$1200; junior high schools and initial grades of high schools, \$1350; other high-school grades, \$1500.

POLITICAL AND OTHER EVENTS. The discovery of apparently important chromite mineral areas in southern Montana was reported in August by Prof. Edward Sampson of Princeton University. It was stated to be situated in Stillwater and Sweetgrass counties, near the northeastern corner of Yellowstone Park. Its possible commercial value lay in the use of chromite as an alloy to steel, in the production of rustless steel and chrome plating. The wool raising industry of the State, organized under the Montana Coöperative Wool Association, operated under the Federal Farm Board and attained a quota of 12,000,000 pounds, of which the governmental agencies undertook to dispose. Montana joined with Colorado, Utah, Wyoming, and New Mexico in mandamus proceedings in the courts of the District of Columbia to compel the Secretary of the Interior to reinstate applications and file other applications made under the Leasing Act of 1920. This act to permit the development of petroleum deposits on Federal lands had been suspended in its operation in these mountain States by an executive order of Mar. 12, 1929, to which Montana, like the other States, took exception as adverse to its welfare. The Great Northern and Northern Pacific railroads sought permission of the Interstate Commerce Commission in October to abandon plans that they had filed for extensions in Montana to cost some \$15,000,000.

ELECTIONS. United States Senator Thomas J. Walsh, Democrat, was reelected, defeating Albert J. Galen, Republican candidate, on November 4 by a vote unofficially reported as 104,735 to 66,510. One Republican and one Democratic Representative were reelected. The popular vote approved an issue of \$3,000,000 of State bonds for the building of State institutions.

OFFICERS. Governor, J. E. Erickson; Lieutenant-Governor, Frank A. Hazelbaker; Secretary of State, W. E. Harmon; Treasurer, F. E. Williams; Superintendent of Public Instruction, Elizabeth Ireland.

JUDICIARY. Supreme Court: Chief Justice, Lew L. Callaway; Associate Justices, John A. Matthews, Albert J. Galen, S. C. Ford, Albert H. Angstman.

MONTANA, STATE UNIVERSITY OF. A State institution for the higher education of men and women in Missoula, Mont.; founded in 1895. The enrollment for the autumn of 1930 was 1393, of

whom 791 were men and 602 women. These were distributed as follows: Arts and sciences, 917; business administration, 69; education, 24; forestry, 99; journalism, 96; law, 63; music, 26; pharmacy, 54; music specials, 28; shorthand and typewriting specials, 5; and unclassified, 12. In the 1930 summer session, 556 students were registered, of whom 160 were men and 396 women. The faculty had 98 members. The productive funds and income for the year amounted to \$480,241. There were about 183,000 volumes in the library, including government documents. President, Charles H. Clapp, Ph.D.

MONTENEGRO, mōn'tā-nā'grō. A former Balkan kingdom incorporated as a province of Yugoslavia in 1921. In 1929 the territory was abolished as an administrative subdivision of Yugoslavia and was absorbed in one of the nine new banats established by the dictatorship. See YUGOSLAVIA.

MONTSEERAT, mōnt'sē-rāt'. One of the presidencies of the Leeward Islands. See LEEWARD ISLANDS.

MOON. See ASTRONOMY.

MOONEY CASE. See CALIFORNIA under *Political and Other Events*.

MOORE, ADDISON WEBSTER. An American educator and philosophical scholar, died in London, England, Aug. 25, 1930. He was born in Plainfield, Ind., July 30, 1866, and was graduated from De Pauw University with the A.B. degree in 1890 and the A.M. degree in 1893. After studying at Cornell University during 1893-94, he was an assistant in philosophy at the University of Chicago during 1895-97 and associate during 1897-98, receiving his Ph.D. degree from that institution in 1898. Until his retirement as professor emeritus he was connected with the University of Chicago, serving as instructor from 1898 to 1902, assistant professor from 1902 to 1904, associate professor from 1904 to 1909, and professor from 1909 to 1929. In 1918 he was lecturer on philosophy at Harvard University. He was president of the Western Philosophical Association in 1911 and of the American Philosophical Association in 1917. For some years he was associated with John Dewey, to whose philosophical ideas he gave his support. His works include: *Functional versus Representational Theories of Knowledge in Locke's Essay* (1902); *Existence, Meaning, and Reality in Locke's Essay and in Present Epistemology* (1903); and *Pragmatism and Its Critics* (1910). He was co-author of *Studies in Logical Theory* (1903) and *Creative Intelligence* (1916).

MOORE, ALEXANDER POLLOCK. An American publisher and diplomat, died in Los Angeles, Calif., Feb. 17, 1930. Born in Pittsburgh, Pa., Nov. 10, 1867, he attended Carry University there during 1877-81. He entered newspaper work in 1878 and was, successively, reporter, city editor, managing editor, and publisher. He was part owner of the Pittsburgh *Telegraph* and *Chronicle-Telegraph*, managing editor of the Pittsburgh *Press*, and, after 1904, editor-in-chief of the Pittsburgh *Leader*. In 1912 he married Lillian Russell, American actress, who died in 1922. He was a member of the Republican party, but supported the Roosevelt progressive movement. In 1928 he purchased the Boston *Advertiser* and the New York *Daily Mirror*, selling the latter within a few months. He began his diplomatic service as ambassador to Spain by appointment of President Harding in 1923, serving until 1925. He went to Peru as American ambassador in 1928

and, at the time of his death, was ambassador-designate to Poland, having been appointed by President Hoover in January, 1930, to serve as the first ambassador to that country.

MORAVIANS. A religious denomination comprising, in the United States, three branches: The Moravian Church (Unitas Fratrum); the Evangelical Union of Bohemian and Moravian Brethren in North America; and the Independent Bohemian and Moravian Brethren Churches. It was formed in Bohemia in 1457 under the leadership of John Huss and Jerome of Prague, and opposed the efforts of Austria and the Roman Catholic authorities to suppress it. At the beginning of the Reformation, it had more than 400 churches. In 1741 Moravians, settling at Bethlehem, Pennsylvania, founded the first Moravian Church in the United States. The doctrine is evangelical, without a creed peculiar to itself, and in its polity the denomination follows a modification of the episcopacy, having a ministry of three orders: Bishops, presbyters, and deacons.

THE UNITAS FRATRUM, the largest branch, is organized in two coordinate provinces; the Northern, with a provincial synod meeting every fifth year; and the Southern, of which the provincial synod meets every third year. The church maintains the following four educational institutions: Linden Hall, Lititz, Pa.; Moravian College and Theological Seminary, and Moravian Seminary and College for Women, Bethlehem, Pa.; and Salem Academy and College for Women, Winston-Salem, N. C. Missionary workers are maintained in southern California and Alaska, and in Nicaragua, the West Indies, Jamaica, Labrador, Surinam, South America, the Himalayas, and Unyamwesi, Central Africa. The official periodical, *The Moravian*, is published weekly in Bethlehem, Pa. On Jan. 1, 1930, there were 145 churches; 170 ministers; 27,181 communicant members, although the actual membership was estimated at 37,838; and 137 Sunday schools with 24,033 pupils.

A meeting of the Northern Province was held in Bethlehem, Pa., June 12-20, 1930. Among the important decisions reached were the inauguration of steps toward the actual union of all the spiritual descendants of John Huss and the Bohemian-Moravian Reformation, active in scattered parts of North America. A world conference of Moravians was to be held in Herrnhut, Saxony, in the spring of 1931 for the purpose of reestablishing the International Moravian Church, known as the Unitas Fratrum, on a somewhat different administrative basis than heretofore.

THE EVANGELICAL UNION OF BOHEMIAN AND MORAVIAN BRETHREN IN NORTH AMERICA, of which the first congregation was organized in 1864 in Wesley, Texas, is under the direction of a synod which meets each year on July 6, the day of the death of John Huss.

THE INDEPENDENT BOHEMIAN AND MORAVIAN BRETHREN CHURCHES were founded in 1858 in College Township, Iowa. In 1926 there were three churches with one minister and 356 members and three Sunday schools with 381 scholars.

MORMONS. See LATTER-DAY SAINTS, CHURCH OF JESUS CHRIST OF.

MOROCCO. The largest of the Barbary States, occupying the northwestern corner of the continent of Africa. Morocco is divided into three zones: First and most important, the French

protectorate, including approximately 85 per cent of both area and population, with Rabat as the political capital and Casablanca as the leading port and commercial centre; second, the Spanish protectorate, a narrow strip of land extending for about 300 miles from the Atlantic Ocean along the Mediterranean, with Ceuta, Melilla, and Tetuan as the principal localities; and third, the international Tangier zone ruled in accordance with the terms of the Paris protocol of July 25, 1928, adhered to by France, Great Britain, Spain, and Italy. The total area is about 218,525 square miles, of which the area claimed by Spain for her zone in the north was 8000 square miles; for her southern zone, 95,000 square miles; and for Ifni on the west coast, 800 square miles. In 1930 the area effectively held by the French was estimated at 200,000 square miles.

A census of the French zone taken in March, 1926, placed the population at 4,016,882 native Moslems, 107,552 native Jews, 74,558 French, and 104,712 foreigners, making a total of 4,229,146. That of the Spanish zone was estimated at 1,070,400 and that of the Tangier zone at about 80,000. The largest towns in the French zone, with their populations according to the census of 1926, are Marrakesh, 149,263; Casablanca, 106,608; and Fez, 18,172. In the Spanish zone, the largest town is Tetuan, with a population of 43,000. The population of Tangier is approximately 60,000. The chief languages are French, Spanish, Moorish, Arabic, and Berber dialects. In 1926 there were in the French zone 199 French schools and 92 Moslem schools.

PRODUCTION, ETC. Agriculture is the predominant industry, the cultivated area of the French zone totaling 8,920,000 acres. The chief crops are cereals, beans, chickpeas, cumin and coriander, olives, linseed, almonds, grapes, and other fruits. There are 3,700,000 acres of forests. Livestock in 1928 included 1,813,643 cattle, 8,035,239 sheep, 2,912,167 goats, 283,096 horses and mules, and 114,463 camels. French settlers controlled about 1,780,000 acres of cultivated land in 1927. In that year construction of numerous irrigation projects was begun. Phosphate production in the French Zone reached 1,337,100 tons in 1928 and lead and manganese are produced in exportable quantities. Manganese deposits are sufficient to render France eventually independent of foreign supplies. Fishing is an important industry in both French and Spanish zones.

In 1929, exports of the French territory decreased to 1,231,000,000 francs; imports rose to 2,550,000,000 francs. The bulk of the trade was with France and Algeria. In the Spanish Zone (1927), imports totaled 103,000,000 pesetas, including large military supplies, and exports, 22,000,000 pesetas (1 peseta exchanged for about \$0.17 in 1927). Imports and exports of the Tangier Zone for 1928 were 128,625,862 francs and 37,782,253 francs, respectively.

The 1930 estimates of revenue and expenditure for French Morocco totaled 802,421,620 francs and 802,281,729 francs, respectively. With the help of a subvention from the Spanish Treasury, the budget for the Spanish Zone for 1928 balanced at 55,913,441 pesetas. For the Tangier Zone, the 1930 budget provided for revenues of 25,423,500 francs and expenditures of 25,349,569 francs. In 1928, 1529 vessels of 1,455,204 tons entered the port of Tangier and 1996 vessels of 2,804,249 tons the ports of the French Zone.

Agadir, in French Morocco, became a free port on Jan. 1, 1930. There were about 1500 miles of railway in Morocco in 1929, of which 1427 miles were in the French Zone and about 72 miles in the Spanish Zone. Motor highways extended 2764 miles in the French Zone, 350 miles in the Spanish, and about 65 in Tangier. Airplane lines connect Toulouse, Casablanca, Tangier and Rabat; Casablanca and Dakar; and Seville and Larache.

GOVERNMENT. The Tangier Zone is permanently neutralized and demilitarized and is governed by an international control organization. The French Zone constitutes a protectorate, under a French and native administration. The office of Sultan continues, but the Sultan is obliged to follow the advice of the French Resident General in all matters. The position of War Minister is held by the officer commanding the French troops in Morocco. The Spanish Zone is a protectorate, governed by the Spanish High Commissioner. Sultan in 1930, Sidi Mohammed, succeeded his father Moulay Youssef, Nov. 18, 1927. French Resident General, Lucien Saint (appointed Jan. 2, 1929); Spanish High Commissioner, General Conde de Jordana; Administrator of the Tangier Zone, M. Le Fur.

MOTION PICTURES. What artistic progress the cinema made during 1930 was chiefly due to two factors. In the first place, the producers began to realize that their medium was still that of the motion picture, rather than of the photographed stage play, despite the addition of dialogue. Second, the producers gave evidence of increasing their stock of dramatic courage. They seemed more willing than usual to take chances on an occasional work that offered possibilities for distinction, even though it lacked the essentials for box office success. They seemed, in a word, to be beginning to understand their medium and to have an interest in improving the quality of their product.

It cannot be said that this zeal gave any sign of growing into a general cinematic renaissance. The creative average remained low and the general run of the films continued to be commonplace and imitative in quality and uneventful in narrative. In addition, there was, despite the newfound determination to make real motion pictures, a return to the stage for plot material that threatened to turn the cinema from a creative medium to a mere recording instrument. Broadway stage plays, whether successes or failures, were hastily bought up by the screen magnates to be turned into films. Also the producers went to the past of the theatre for material and were to be found presenting photoplays based on such venerable stage works as *Charley's Aunt*, *East Lynne*, *The Girl of the Golden West*, and *Common Clay*.

Yet despite the reliance on the stage for its plot material, the cinema had undeniably, in its

production methods, returned to the old-time cinema values of movement, visual design, atmospheric lighting, and all of the other dynamic pictorial qualities peculiar to the motion picture. The struggle between the two trends in cinema manufacture, between the emphasis on the stage and the emphasis of the screen, had to a certain extent resulted in a compromise. The technique is that of the motion picture and the material is that of the theatre. The tendency, however, was decidedly towards accenting the cinematic qualities, towards providing the camera with all the possibilities for ranging freely and widely.

The picture which was generally conceded to be the most distinguished of the year was Lewis Milestone's production of the Remarque war novel, *All Quiet on the Western Front*. The film was a faithful version of the book, and it possessed powerful and impressive cinematic qualities. It was generally expected that the grimness of the story would keep it from any extensive popularity, but it turned out to be one of the most successful pictures of the year. Late in the year it achieved additional fame when, due to the bitter opposition of the Hitlerites, the film, despite its sympathetic treatment of the German viewpoint, was barred from Germany.

The year's best example of the possibilities for a successful amalgamation of the qualities of stage and screen in a real motion picture was provided in *Laughter*. Here was a photoplay directed with all possible regard for cinematic qualities, which at the same time did not neglect the qualities of good dramatic writing. No work written directly for the screen has possessed such sparkling dialogue. *Laughter* was a good play, as well as a superior motion picture, and it demonstrated that good plays can be written directly for the screen; that the conventions of the cinema in such matters are no more impossible to overcome than are those of the theatre.

Laughter, by the way, was another film which its producers expected to be a critical, rather than a popular success, and yet which turned out to be both. Among the other pictures which rebelled, in one way or another, against the Hollywood conventions were *Men Without Women*, which was not based on the Hemingway short stories, but was a grim tragedy of men trapped in a sunken submarine; a faithful picturization of the stage play, *Journey's End*, which also had no women in the cast; *Seven Days Leave*, an adaptation of Sir James M. Barrie's *The Old Lady Shows Her Medals*, and the English-language version of the German picture, *The Blue Angel*, a morbid tragedy of a romantic old man who fell in love with a cabaret singer.

One of the best of the year's motion pictures was a melodrama called *Her Man*, which was based, with considerable freedom, on the Frankie and Johnnie legend. Filled with the determination to keep the children interested in the films, an adaptation of *Tom Sawyer* was offered, which proved to be one of the most successful attempts to capture the spirit and the letter of an important novel that the cinema had yet devised. Other important works included the typical melodramas, *Street of Chance* and *For the Defense*; D. W. Griffith's production of *Abraham Lincoln*, a picturesque biography of the legendary Emancipator; *The Man from Blankley's*, John Barrymore's first farce since the early days of his career; *The Royal Family*, a romantic comedy said to be based on the Barrymores; the lunatic

comedy, *Animal Crackers*, starring the Marx Brothers, and such works as *Morocco*, *The Playboy of Paris*, *The Devil to Pay*, *The Dawn Patrol*, *Holiday*, *Derelict*, *Outward Bound*, *Raffles*, *Romance*, and *The Social Lion*.

Hell's Angels, the spectacular aviation drama, which took three years to produce and was said to have cost four million dollars was finally presented, where it proved to be an exciting spectacle, marred by a trivial story. It was declared by the financial experts on screen matters that there was little chance for the picture to return its production cost.

The year 1930 marked a decline in the manufacture of pictures in color. Mr. Ziegfeld's musical comedy *Whoopee* was transferred to the screen in that manner, and so were *Follow Thru*, *Song of the West*, *Viennese Nights* and a few others. On the whole, however, the tendency seemed to be to go back to the conventional black and white. Color was chiefly employed in film musical comedies, and there was a decided decline in the presentation of musical shows, also. The producers found that the public was losing interest in such works, and thereupon songs were dropped from pictures, innumerable composers were sent away from Hollywood and theme songs disappeared. It was typical of the revolt against filmed melody that the most recent starring vehicle of Maurice Chevalier, the most popular of the singing stars, contained but two numbers, played casually during the early part of the film. Irving Berlin was brought to Hollywood to write a musical comedy for Douglas Fairbanks, but the film, *Reaching for the Moon*, emerged with but one minor song left. Ernst Lubitsch's *Monte Carlo* was perhaps the most generally admired of the recent singing films.

The larger screen, which was intended to fill the entire proscenium of the bigger theatres, rather than a fraction of it, and which was supposed to provide, also, a suggestion of the third dimension, continued in the experimental stage. Several new processes were offered during the year, but they were presented tentatively and briefly. After a week's use in the New York theatres, the film houses reverted to the conventional-size screen. It was said that the exhibitors in the smaller towns protested against the arrival of the big screen, which meant a new expense to them before they had recovered from the cost of installing their new sound devices.

In August Lon Chaney (q.v.) known in the cinema as "the man with a thousand faces" died, shortly after his first talking picture, *The Unholy Three*, had been released. Chaney, who had been one of the last of the screen stars to hold out against the encroachment of the microphone, was famous for his fantastic and complicated disguises, but he was also recognized as one of the most brilliant actors of the cinema. His gift for grotesque make-up, his genuine pantomimic skill and his preference for macabre characterizations made him an almost legendary figure in Hollywood. With his death, Charles Chaplin, who had not surrendered to sound as Chaney finally had, remained the only screen adherent of silence. Incidentally the only important silent film to be shown in New York during the year was the Russian *Storm over Asia*.

Greta Garbo made her first appearance in dialogue during the year and, although there were those who expressed disappointment at her deep contralto tones, it was generally agreed that she

had lost little of her appeal through the advent of audibility. She was, however, faced with a rival with the coming of a striking German actress, named Marlene Dietrich, who seemed to possess many of the qualities of Miss Garbo. Among the other players who scored successes during 1930 were Fredric March, Ruth Chatterton, Wallace Beery, Mary Astor, Helen Twelvetrees, Nancy Carroll, Stuart Erwin, Jack Oakie, Kay Francis, and William Powell. The successful directors included Lewis Milestone, John Cromwell, Tay Garnett, Harry d'Arrast and Josef von Sternberg. Not the least of the triumphs were those scored by those animated cartoon comedies, *Silly Symphonies* and *Micky Mouse*.

Motion-picture theatres in the United States on Dec. 31, 1930, numbered 22,731, or 35 per cent of the world total of about 62,365. Of the American theatres, 12,500, or 55 per cent, were wired for sound and 10,231 were for silent pictures.

MOTOR BOATING. The popularity of speed-boat racing in 1930 was testified to by the large number of records broken during the year. The highest speed ever attained by a boat of any kind was reached by Sir Henry Segrave (q.v.) in *Miss England II* on Lake Windermere, England, June 13, when he was clocked at 98.76 miles an hour over a mile measured course. In the third lap of the same test, half of the step under the fore part of the hull was torn away, and the boat capsized, killing Sir Henry and one of his two mechanics. The Harmsworth Trophy was successfully defended by Gar Wood at Detroit on September 1 against Miss Marion B. Carstairs, British girl pilot. Wood established a new heat record of 77.39 miles an hour for the 30-nautical mile course in his *Miss America IX*. Two records for the Gold Cup races were smashed at Red Bank, N. J., in August. Richard Loynes of California established a new lap record at a speed of 63.64 miles an hour and in the first heat, Richard Hoyt, defending champion, set a new time of 61.69 miles an hour. The final race was won by Victor Klierath, of Port Washington, L. I., in *Hotsy Totsy*. *Hotsy Totsy*, with Richard Hoyt at the wheel, also took the National Sweepstakes at Red Bank, and the Chesapeake free-for-all.

About 142 outboard motor-boat speed records were established during the year. Ray Pregenzer, with an F-class motor, reached 50.934 miles an hour on Lake Fox, Wis. J. E. Wilkinson of Boston won the Albany to New York outboard marathon with a record average time of 39.13 miles an hour in *The Flash*. Colgate won the intercollegiate outboard championship.

MOUNT HOLYOKE COLLEGE. An institution for the higher education of women in South Hadley, Mass.; founded in 1837. The registration for the autumn session of 1930 was 1046. For the summer session 24 students were registered, German being the only course given. The faculty, including professors, associate professors, assistant professors, instructors, and chief administrative officers, numbered 131; and there were 48 assistants, graduate assistants, curators, and

secretaries. New appointees numbered 25, including 8 of the rank of professor and lecturer and 17 of the rank of instructor. The productive funds amounted to \$4,237,979 and the income for the year was \$1,213,245. The total amount of gifts and bequests during the year 1929-30 was \$684,047. There were 113,000 volumes in the library. President, Mary Emma Woolley, Litt.D., L.H.D., LL.D.

MOZAMBIQUE. See PORTUGUESE EAST AFRICA.

MUIRHEAD, mür'héd, DAVID. A British painter, died in London, Apr. 21, 1930. He was born in Edinburgh in 1867, and studied art at the Royal Scottish Academy in Edinburgh and at the Westminster Art School in London. His first exhibitions were at the Royal Scottish Academy and in Glasgow. In 1895 he exhibited at the Royal Academy in London; in 1896, at the New English Art Club; and in 1898, at the British Artists' Exhibition. After that time most of his work was exhibited at the New English Art Club. He chose as his medium landscape and figure painting, endowing his subject with poetical feeling and delicate perception. His more notable landscape paintings include: "Autumn"; "The Fen Bridge"; "The Avenue"; "Church in the Fens"; "A Woodland Pool"; "The Windmill at Cley"; "The Ouse near Huntingdon"; "The Cornfield"; and "The Harbour, Stonehaven." Among his figure paintings are: "The Lost Piece of Money"; "The Sisters"; "Night Piece"; "The Letter"; and "Blue and Silver." Examples of his work are found in the Tate Gallery in London, the Luxembourg Gallery in Paris, the National Gallery of Ottawa, and most of the public galleries of the English provincial cities. He was elected an associate of the Royal Academy of Arts in 1928 and was also an associate of the Royal Society of Painters in Water-Colours.

MULTIPLE SCLEROSIS. See MEDICINE, PROGRESS OF.

MUNICIPAL GOVERNMENT. Dallas, Texas, adopted the council-manager plan by a popular vote of two to one on October 10, effective May 1, 1931. By size it will stand fifth among American cities having the manager plan. It had had commission government for 23 years. Thirty Texas cities preceded it in becoming a manager city. Hereafter, in place of five commissioners, one designated mayor, it was to have nine councilmen and a manager. Six of the councilors must reside each in a specified district but all nine will be elected at large. The council will designate one of its members as mayor and will appoint an attorney, auditor, supervisor of utilities, judge of the city court, a city planning and zoning commission, a park board and a civil service commission, the latter being a new body in Dallas. Other department heads will be appointed by the manager. There will be a purchasing agent. The initiative, referendum and recall are retained.

Another large city to adopt the manager plan was Oakland, California. Besides these two adoptions, there were 16 others in the United States, including Covington, Lexington, and Newport, Ky., and Mamaroneck, N. Y., and two in Ireland—Dublin and Dun Laoghaire, with populations of about 400,000 and 35,000. At the end of 1930, the number of cities under the plan totaled 425, with 408 in the United States, 14 in Canada, and three in Ireland. At St. Paul, Minn., the manager

plan was defeated for a second time but in both 1929 and 1930 it had a majority although not the requisite 60 per cent. The manager plan was also defeated at Appleton, Wis., and 11 smaller places. Proposals to abandon the manager plan were defeated at Bellows Falls, Brattleboro, and St. Johnsbury, Vt., Kenosha, Wis., and Gainesville, Texas. In New Jersey, long a stronghold of the commission plan and with few manager cities as yet, Teaneck voted for and Metuchen against having a manager, while Union City adopted commission government. For a list of manager cities, with a spot map for those in the United States and a review of the history and status of the manager plan, as of Dec. 1, 1930, see *Public Management*, January, 1931, the official organ of the International City Managers' Association (Chicago).

Among counties, the plan was adopted by a two to one vote in Arlington County, Va., but was defeated in Greene County, Ga., the defeat being partly due to the complicated wording of the ballot. Two articles on "Why Some Cities Have Abandoned Manager Charters," by Arthur W. Bromage, of the University of Michigan, appeared in *National Municipal Review* for September and November. A supplement to the August issue of the same journal presented "A Model County Manager Law," drafted by a committee of the National Municipal League. *Kansas Municipalities* for September contained a list of 62 cities which had changed their form of government (period not stated). Of 59 cities that had given up the mayor-and-council plan, 47 changed to a commission and 12 to a council and manager. Three commission cities also changed to the council-manager plan.

City-County Consolidation, in effect for decades in a few cases, was defeated wherever proposed for several years past (see outline of the Greater Pittsburgh plan and its effect in the 1929 YEAR BOOK). The same fate met the proposed merger of the city and country of St. Louis, when a state constitutional amendment was voted down in November, 1930, 376,000 to 278,000, or by a majority of 98,000.

The recall, not often used in American cities, and rarely in large ones, ousted from office the mayor of Detroit, who had been elected in November, 1929, as a reform candidate and who took office on January 1. It was alleged that he had become the tool of politicians and made appointments and removals against the public good. One of his appointees, as commissioner of public works, displaced an engineer who for many years had served in various engineering positions. The new appointee, who was not an engineer, soon dismissed the city engineer, also long in the service of the city, but the dismissed man was reinstated under a civil service ruling. These and other acts of the mayor, some of which affected police administration, led business men and others to demand his recall. The heat and bitterness of the recall campaign was increased by the mysterious shooting of one of the leading workers for the recall. Court attempts to stop the recall election failed. The majority for recall was 31,000 in a vote of 200,000. This vote, under the law, made a second election necessary, at which the mayor automatically became a candidate. The recall was affirmed by a large majority, the leading candidate receiving 107,000 votes, the defeated mayor 94,000, a recent ex-mayor about 83,000 and a communist 3000. The mayor of Culver City, Okla., was recalled on December 17 by a vote of 824 to 536

after eight months' service on charges of "general inefficiency, incompetency and waste of funds."

Atlanta, Ga., was the scene of unusual municipal interest, including convictions for bribery and graft, a controversy over population, and a reduction in the number of city councilmen. According to an article in the *National Municipal Review* for December, ten persons had already been tried and nine convicted while still others were under indictment. These included members of the city council, the city clerk and other city employees and some persons not in the city government. The population controversy arose because the U. S. Bureau of the Census refused to recognize the Greater Atlanta provided for by State legislation (see 1929 YEAR BOOK) comprising Atlanta and extensive outlying territory, the whole divided into boroughs, but Greater Atlanta having no power of taxation and the council set up having only advisory powers. One or more other Southern cities that would have been outranked by the proposed Greater Atlanta protested against its recognition in the census returns. The controversy was in a Federal court at the close of the year.

The city government scandals centered attention on the desirability of making a change in the government of the city to the extent of reducing the size of the bicameral council and transferring some of its committee functions to the heads of administrative departments. The new plan, devised by the mayor-elect, was approved on December 3 by a popular vote of 5291 to 2086, but must go to the State Legislature. If approved, the number of city wards will be cut from 13 to 6. The bicameral council would consist of 12 councilmen, two elected by each ward, and six aldermen, elected at large. The general council, as now, would vote on all matters except the expenditure of money. All appropriation bills are first acted on by the common council then go to the aldermanic board for concurrence or nonconcurrence. Two-chambered councils were once common in the United States but have been given up by almost every city that once had them.

IRELAND. The Dail enacted a Greater Dublin bill by a majority of 21 and the former town clerk, Gerald J. Sherlock, became city manager. In choosing members of the city council the electorate is divided into classes in accordance with their rate or tax payments.

ECUADOR. A cablegram of December 17 gave the meagre information that by the election of a perfect Guayaquil had become the first South American city under the city manager plan.

CHINA. For recent changes in municipal government of China, including brief summaries of the nationalistic municipal code of 1928 and the municipal act of 1930, consult *National Municipal Review*, December, 1930, article by Ray Chang, secretary to the mayor of Tientsin. Under the new act cities are put in two classes. Each city is divided into four self-governing units, which from greatest to least are: district, precinct, sub-precinct, and neighborhood, the latter comprising only five houses. Each city has a mayor, administrative board and advisory council. The mayor is appointed by the "supervising authority." Under him are departments of social welfare, public safety, finance and public works. Other departments may be created, with the approval of the "higher authority."

BIBLIOGRAPHY. Municipal studies of importance published during the year include: Fairlie, *County Government and Administration* (New

York); MacDonald, *American City Government and Administration* (New York); *Municipal Index for 1930* (New York); Studensky, *Public Borrowing* (New York); Studensky and others, *Government of Metropolitan Areas in the United States* (New York); Sly, *Town Government in Massachusetts* (Cambridge). See TEXAS under *Political and Other Events*.

MUNICIPAL LEAGUE, NATIONAL. See NATIONAL MUNICIPAL LEAGUE.

MUNICIPAL OWNERSHIP. Continuation of construction work on the subway system of New York City and the proposed purchase by the city of all the privately-operated rapid transit systems, the whole to form a unified transit system, was the most outstanding feature of municipal ownership activities during the year. Next in importance came three changes from private to public ownership of waterworks and an increase in toll bridges, both publicly and privately owned. In comparison, changes in the ownership of other municipal utilities were at a standstill, with what may prove to be only temporary setbacks in the extension of municipal electric light and power systems at San Francisco and Los Angeles.

RAPID TRANSIT. At the very end of the year a tentative agreement for the purchase by New York City of such of the rapid transit system as was not already owned by it was announced. If the plan should be officially accepted on both sides and authorized by the Legislature it would result in a unified rapid transit system, with five-cent fare, operated by a public corporation known as the Board of Transit Control. The unified system would include all the subways and elevated lines of the Brooklyn-Manhattan Transit Corporation, the Interborough Rapid Transit Company and the Manhattan Railway Company.

WATERWORKS. The largest privately-owned waterworks in the United States changed to municipal ownership on March 3, when San Francisco paid the Spring Valley Water Company \$41,000,000 for its plant. Two companies built works in 1856-59 and were consolidated in 1865. Official agitation for municipal ownership began as early as 1871 when the mayor of that year made a declaration to that effect. Within a decade one or more engineering reports on municipally-owned works were made. The city charter, adopted by popular vote in 1898, called for municipal ownership of all public utilities—partly fulfilled as regards electric lights and street railways. Twenty years afterwards a bond issue for a city-owned gravity water-supply system was authorized by popular vote, with the understanding that the plant of the water company would be bought by the city. The large impounding reservoir and the hydro-electric plant forming part of the project have been in use for a number of years and portions of the large aqueduct have also been completed. (See earlier YEAR BOOKS.) In 1910, 1915, 1921 and 1927, bond issues for the purchase of the company's distributing system lacked the requisite two-thirds majority, although receiving actual majorities. On May 1, 1928, the bond issue for purchase was carried, but nearly two years passed before the bonds were marketed and other necessities for the transfer were met.

Another change to public ownership in one of the few cities of 100,000 population or more still under private ownership of waterworks was consummated on October 24 when the Passaic Valley Water Commission, representing the cities of Paterson, Passaic, and Clifton, N. J., with 1930 cen-

sus populations of 138,000, 63,000, and 46,000, took over the property of the Passaic Consolidated Water Company. A price of \$14,000,000 had been set by a condemnation board. Each side expressed dissatisfaction with the price and legal proceedings were in view but a compromise on \$13,000,000 was made. Elizabeth, N. J., a third city of over 100,000 population, arranged for municipal ownership, effective on or about April 1, 1931, when just under \$4,000,000 was to be paid to the Elizabethtown Water Company for its property. The city agrees to buy 2,700,000 gallons daily for ten years from the supply works of the company. The bulk of the water needed, which totaled about 19,000,000 gallons a day, was to come from the Wanaque reservoir of the North Jersey Water District, through an extension from the supply mains of the city of Newark.

GAS AND ELECTRIC UTILITIES. In the gas and electrical utilities field there was little change in the general status since earlier YEAR BOOKS (see 1929 issue for details as to electric light plants). At both San Francisco and Los Angeles large bond issues for extensions of municipally-owned electric light and power plants were defeated: at San Francisco, \$65,000,000 by a vote of 2 to 1 on August 6; at Los Angeles, \$13,300,000 on November 4. At San Francisco, most of the money was to be used to buy the local distribution systems of the Pacific Gas & Electric Co. and the Great Western Power Co. The bond issue was opposed by the business interests and a large group of improvement clubs and was supported by the board of supervisors (city council) and labor organizations. At Los Angeles \$11,000,000 was proposed for improvements in the municipal electrical distribution lines and stations and \$2,300,000 for an electric transmission line from Boulder Dam to the city. Crisp County, Georgia, said to be "running the only county-owned power plant in the United States and selling power 10 per cent below previously prevailing private rates," faced a cut of 35 per cent by the private company with which it was competing. The state utility commission comes to its aid by ordering the company to show cause why it did not make the same reduction in rates in the other parts of the state.

TOLL BRIDGES. After long-continued efforts to get rid of toll roads and toll bridges, with almost complete success wherever they had flourished (or languished) demands of motor traffic in excess of readily available public funds were bringing back toll bridges. Many if not most of these were costly structures, some over large streams, like the Philadelphia-Camden bridge over the Delaware, and the Fort Lee bridge over the Hudson River from upper New York to the New Jersey shore. These two and some others were under public ownership. "The trend of late years," says P. K. Schuyler, President, Federal Bridge Company, New York City, in *Engineering News-Record*, Dec. 4, 1930, p. 880, "seems to have been toward public ownership," being most marked in Alabama, Arkansas, California, Kentucky, Louisiana, New York, North and South Carolina, Tennessee, Washington, and West Virginia. Of 296 toll bridges in use on Aug. 1, 1930, says Mr. Schuyler, 90 or 31 per cent are publicly owned. The number of toll bridges increased from 233 on Oct. 1, 1927, to 296 on Aug. 1, 1930, with 51 more under construction.

BIBLIOGRAPHY. Bird and Ryan, *Public Ownership on Trial: A Study of Municipal Light and Power in California* (New York); McGraw Cen-

tral Station Directory, McGraw Street Railway Directory, Brown's Gas Directory (all New York) cover the whole country; The Bonbright Survey (New York) shows by condensed tables of symbols and by maps, ownership of electric light and power systems supplying incorporated places of 2500 and over; *The Municipal Index* (New York) lists municipally-owned plants, only, and gives a few data concerning towns of 4500 population and over.

MUNICIPAL PLANNING. See CITY AND REGIONAL PLANNING.

MUNRO, NEIL. A British novelist, died in Helensburgh, Dumbartonshire, Scotland, Dec. 22, 1930. He was born in Inveraray, Argyllshire, June 3, 1864. After serving as reporter and editor on the *Glasgow Evening News*, he turned to the writing of tales and romances dealing with life in the Scottish Highlands. Among his books are: *The Lost Pibroch* (1896); *John Splendid* (1898); *Gilian the Dreamer* (1899); *Doom Castle* (1901); *The Shoes of Fortune* (1901); *Children of Tempest* (1903); *The Daft Days* (1907); *The Clyde* (1907); *Fancy Farm* (1910); *Ayrshire Idylls* (1913); *The New Road* (1914); *Jaunty Jock* (1918).

MUNROE, KERR. An American writer of books for boys, died in Miami, Fla., June 16, 1930. He was born near Prairie du Chien, Wis., Sept. 15, 1850, and was educated in the public schools of Appleton, Wis., and Cambridge, Mass. Having studied at the engineering school of Harvard University, he assisted in the explorations of routes for the Santa Fe and Northern Pacific railways in 1867-68, there gaining material for many of his tales. He served as the first editor of *Harper's Round Table* during 1879-82. After 1883, he lived in southern Florida, a district that was often reflected in his writing. His books include *The Flamingo Feather* (1887); *Dorymates* (1889; new ed., 1903); *Cab and Caboose* (1892; new ed., 1913); *Canoemates* (1892; new ed., 1903); *Raftmates* (1893, 1903); *The Fur Seal's Tooth* (1893); *At War with Pontiac* (1895); *With Crockett and Bowie* (1897); *Under the Great Bear* (1900); *The Belt of Seven Totems* (1901); *The Outcast Warrior* (1905); *For the Mikado* (1906). He also edited *Eminent Men of Our Time*.

MUSIC. GENERAL NEWS. With the death of the wife and the son of Richard Wagner, Cosima and Siegfried (qq.v.) and the participation for the first time of Arturo Toscanini as conductor, 1930 was a significant year in the history of the Wagner festivals at Bayreuth. Despite Siegfried Wagner's illness and death, the 1930 festival was held as scheduled. Toscanini conducted the opening performance, *Tannhäuser* on July 22, and *Tristan und Isolde* on July 23, winning high praise and sustaining his reputation as one of the greatest Wagner conductors, although a non-German. He was the first conductor whose musical career was not largely associated with Germany or Austria to hold a Bayreuth baton. Mr. Toscanini conducted the five performances of *Tannhäuser* and the three of *Tristan und Isolde*; Dr. Karl Muck, despite his 71 years, conducted the

five performances of *Parsifal*. The two performances of the *Ring des Nibelungen* cycle were conducted by Karl Elmendorff. Mr. Toscanini accepted an invitation to return to Bayreuth for the 1931 festival.

After the close of the 1930 series on August 21, there was some speculation as to the future artistic direction and management of these festivals. It was rumored that Toscanini might become chief artistic director of Bayreuth, but this was denied, and November brought the definite announcement that the general direction of the 1931 festival would be in the hands of Winifred Wagner, assisted by Dr. Albert Knittel and Herr Fries.

Before going to Bayreuth, Mr. Toscanini took the Philharmonic-Symphony Orchestra of New York, which had become his principal medium of artistic activity since his resignation from the musical direction of La Scala in 1929, on a European tour. The conductor and the players sailed from New York on the *De Grasse* on April 23, and, beginning with two concerts in Paris, gave 23 performances in 15 cities in less than five weeks. Besides Paris, Milan, Rome, Vienna, and Berlin heard two concerts each; one concert each was given in Zurich, Turin, Florence, Munich, Budapest, Prague, Leipzig, Dresden, and Brussels. The tour closed with four concerts in London, June 1-4.

The International Society for Contemporary Music held its eighth festival early in September at Liège, Belgium, presenting, as usual, works chosen by an international jury from entries submitted by the Society's various national branches. The only American work performed was a *Sinfonietta* for orchestra by Bernard Wagenaar.

Even before the onset of the unfavorable economic conditions prevailing through a large part of the year, there had been much unemployment among instrumental musicians in America, which was attributed largely to the lessening of the demand for orchestras in theatres, etc., owing to their replacement by reproducing musical devices. On January 13, the American Federation of Musicians began a nation-wide advertising campaign to organize a protest against the substitution of "canned music" for "living music" in motion picture theatres. The unemployment situation, however, was still serious by the end of the year.

On December 11, it was announced that seven of the principal concert bureaus of the United States were taking part in a merger with the Columbia Broadcasting System, to become effective Jan. 1, 1931, under the collective title of Columbia Concerts Corporation. The seven bureaus had already formed an alliance in October with the title of the Producing Music Managers' Association. The aims of these alliances included coöperation between the radio and the concert fields, the assuring of first-class artists for the radio, and, when it was sufficiently perfected, for television, and, in the concert field itself, a co-ordination of activities eliminating wastes of time and money, and a stimulation and extension of the demand for the best music in the United States.

In April, the discovery was announced of an apparently unrecorded minuet and music for a one act ballet, *Billeting* or *The Love Test* by Mozart, unearthed by Ludwig Satz in the archives of the Steyr Musical Society. On June 5, the discovery was reported at Eisenach of an

unrecorded Bach clavier concerto in C minor.

A number of large philanthropic gifts were made during the course of the year for musical purposes. The family of the late Jacob and Rosa Stern of San Francisco formed a \$100,000 fund, of which the income was to go for the next ten years to the composer Ernest Bloch to afford him freedom and leisure for his creative work. After this period, the fund was to be used for the establishment of a chair of music and musical scholarship in the University of California. The Finnish government appropriated 50,000 marks for the recording of works of the greatest living Finnish composer, Jan Sibelius.

In Great Britain, a project for Government support of opera was announced in November by the Chancellor of the Exchequer, Philip Snowden. The Government proposed to contribute £5000 for the rest of the fiscal year (until Apr. 1, 1931), and £17,500 annually for the next five years. The Government-directed British Broadcasting Corporation was to contribute £7500 annually and His Majesty's Voice Gramophone Company, £5000. Under this project, the "grand" London international season of opera at Covent Garden in the spring was to continue, while there were to be other London seasons and opera for at least two weeks of each year in six of the other chief British cities. The "original language" plan would be continued at least in the international season, but opera in English would be sponsored and all possible aid given to the development of British artists and a British ensemble.

ARTISTS. Ignace Jan Paderewski, whose proposed American tour in the season of 1929-30 had been prevented by illness, landed in New York on October 6 for his seventeenth concert tour of the United States, which was to last six months and include seventy-five recitals. The noted statesman-pianist, who observed his seventieth birthday on November 6, began his tour with a recital in Syracuse on October 21, and gave New York recitals on November 1 and 29, in addition to an appearance as soloist in a young people's concert of the New York Philharmonic-Symphony Orchestra under the direction of his friend, Ernest Schelling. Mr. Paderewski's playing showed no signs of advancing years, as compared with his American appearances in other recent seasons, and he gave cause for admiration not only at his strength and endurance but for his distinct achievements as a great interpretative artist.

On January 24, Amelita Galli-Curci made her last appearance with the Metropolitan Opera Company, intending henceforth to devote herself primarily to concert work. She sailed immediately afterwards on a European tour, which was interrupted in March, but the soprano made a successful tour of Great Britain during the autumn months.

José Iturbi, the Spanish pianist, who had won a sensational success in his first appearance in the United States, returned to Europe on January 17. In the autumn he began his second American tour, which continued the successes of his first American season. Gregor Piatigorsky, Russian cellist, who had made an excellent impression on his first American tour, gave his first New York recital on January 24 and returned to Europe a week later. Another Russian artist who completed his first American tour in January was Nathan Milstein, violinist, who deserves mention, al-

though he won somewhat less acclaim than was accorded the performances of Iturbi or Piatigorsky.

Another cellist who won praise in his first appearance as a recitalist was Alfred Wallenstein, first cellist of the Philharmonic-Symphony who played in New York on October 14. Severin Eisenberger, fifty-one-year-old Polish pianist known in Austria and Germany, made an unheralded New York debut, on April 6, and was highly praised, one critic considering him a musician "of the great line of Reisenauer and d'Albert."

Among artists returning to America after an absence of several years were Artur Schnabel, pianist, who paid a short visit mainly in order to play in the Boston Symphony's Brahms festival in March, and Erika Morini, young Hungarian violinist, who reappeared in America in the autumn for the first time since 1924, and impressed as a matured, able musician. Serge Prokofieff, Russian composer, conductor and pianist, appeared with several American orchestras in all three capacities.

The two remarkable boy violinists, Yehudi Menuhin and Ruggiero Ricci, continued to be subjects for public notice in 1930. Menuhin, who celebrated his thirteenth birthday in January, pursued his career tranquilly, giving as before, a strictly limited number of performances in the winter, sailing for Europe in April to rest and to study with Adolf Busch, playing in various European cities in the autumn, and returning to America in December. A tribute to Menuhin's musicianship was the announcement that several of the foremost orchestras of Europe would be at his disposal to accompany him in concerto programmes.

Young Ricci, ten years old, showed during 1930 that his first successes had been no accident, especially when he played the Beethoven concerto with mature musicianship in New York with the Manhattan Symphony on November 30. But he figured in the news more frequently as the subject of a long legal dispute over his custody, in which his parents tried to recover him from his guardian, Elizabeth Lackey, the assistant of his teacher, Louis Persinger. In December, controversy ended in favor of the parents, and Mr. Persinger issued a statement disclaiming further responsibility for his artistic future.

CHAMBER MUSIC. Mrs. Elizabeth Sprague Coolidge again sponsored an important festival of chamber music, given from October 12 to 16 in the Field Museum in Chicago. As usual, Mrs. Coolidge invited several European musicians especially for this festival, including Harriet Cohen, English pianist; Emma Lubbecke-Job, German pianist, of Frankfurt; and the Brosa Quartet, of London, headed by Antonio Brosa, all appearing in America for the first time.

The Brosa Quartet (Antonio Brosa and David Wise, violins; Leonard Rubens, viola, and Antonio Pini, cello), gave a few concerts in other cities of the United States in October and November, and received praise after a New York concert on November 9 as a group of well-equipped, unusually sensitive and well-matched musicians. Miss Cohen also made a few other American appearances before returning to England.

After Jacques Gordon's resignation as a concertmaster of the Chicago Symphony, the Gordon Quartet moved its headquarters from Chicago to a music centre at Falls Village, near Norfolk, Conn., which was inaugurated with two festival

programmes presented on August 22-23. Mr. Gordon's group went on tour later in the autumn.

CHORAL SOCIETIES. One of the busiest schedules among American choral organizations was pursued in 1930 by the Society of the Friends of Music of New York, which specialized in music for chorus and orchestra under the direction of Artur Bodanzky, a conductor of the Metropolitan Opera Company. While its 1930 programmes were largely devoted to classic and romantic music, it presented the first American performance of an important choral work, the *Festival Mass* by the late Czech composer, Leos Janacek, on October 26.

The Friends of Music also revived three works which had not been heard in New York for some time, giving Cherubini's *Requiem in C minor*, January 12; Handel's oratorio *Alexander's Feast*, February 2; and Carissimi's oratorio *Jephthe* on November 23. Handel's oratorio *Joshua* received what was believed to be its first New York performance on November 30 at the First Presbyterian Church, under the direction of Dr. William C. Carl.

In its concert January 16 the Schola Cantorum of New York, conducted by Hugh Ross, gave the first American performances of Arthur Bliss's pastoral *Lie Struven the White Flocks* and the chorus *Rasga o Coracao* by the Brazilian composer, Hector Villa-Lobos. The latter work was praised for its combination of song based on Brazilian Indian themes over a rhythmically infectious orchestral accompaniment. The Schola also gave the first American performance of a *Requiem in C minor*, believed to be by Haydn.

On March 26, the Schola Cantorum gave the first performance anywhere of a *Concerto Spirituale* by the Russian composer, Arthur Lourie, for piano with double chorus, barytone, bass, and double-bass, preceded by a prologue for barytone solo and brass instruments. The piano was considered as the soloist, rather than the voices. The work, markedly religious in subject and mood, was considered interesting, but it was felt that the composer had not entirely solved the problems of his novel form. New York's senior major chorus, the Oratorio Society, devoted its concert of May 5 to Bach's B minor Mass, under Albert Stoessel's direction, and was one of the many American choruses singing Handel's "Messiah" in the Christmas period.

On the whole, the year probably saw an increase in the number of American choral societies singing masterpieces in this field. There were performances of major works of Bach in various parts of the United States, including one of the *St. Matthew Passion* by the Brahms Chorus of Philadelphia under N. Lindsay Norden on April 16, and of the *B minor Mass* by the Los Angeles Oratorio Society under John Smallman. Among the new choruses organized during the year was the Chicago A Capella Choir, which gave its first concert on April 17 under the leadership of Noble Cain.

The Don Cossack Russian Male Chorus, composed of former officers of the Tsar's armies singing under Serge Jaroff's direction, made a very successful first American tour in November and the first half of December.

Prominent among Negro choruses were the Hall Johnson Choir, which furnished the mainstay of the singing of spirituals which was a feature of New York's most successful play of the year, *The Green Pastures*, and the Hampton Institute

Choir, which toured Europe during May and June.

One of Europe's best-known choruses, the Toonkunst of Amsterdam, celebrated its hundredth anniversary in May with programmes including the winning work in a prize contest, Rudolf Mengelberg's cantata *Weinlese*. Late in the year, the Vienna Society of the Friends of Music gave the first performance of a cantata by Hans Pfitzner, *Das dunkle Reich*.

FESTIVALS. The forty-ninth festival at Lindsborg, Kansas, was held from April 13 to 20, with programmes including, among other features, performances of Handel's *Messiah* and Bach's *St. Matthew Passion* by the Bethany Oratorio Society and recitals by Albert Spalding, Marie Sundelius, and Arthur Hackett. The annual Mozart Festival at Harrisburg, Pa., so named from the fact that Mozart's *C minor Mass* is a set opening feature on the programme, was held under the direction of Ward-Stephens May 8 to 10. Other choral works performed were Pierne's *Children of Bethlehem* and *St. Francis of Assisi*.

The thirty-seventh festival at Ann Arbor, Mich., was held from May 14 to 17 under the general direction of Earl V. Moore; Frederick Stock and the Chicago Symphony also took part. The major choral works performed were Honegger's *King David*, Bach's *Magnificat in D* and the Verdi *Requiem*.

The twenty-fourth Bach Festival at Bethlehem, Pa., was given by the Bach Choir under Dr. J. Fred Wolle on May 16 and 17. On the first day, 10 Bach cantatas were performed; the second, according to custom, was devoted to the *B minor Mass*. In the Mass, the employment of individual soloists was resumed after three years in which the solos had been sung by the corresponding groups in the chorus.

The seventh annual Westchester County Musical Festival, and the first in the new County Centre at White Plains, N.Y., was held on May 22, 23, and 24 with Albert Stoessel as musical director. The three programmes consisted of choral music sung by the festival chorus of 2000 members of county choral societies, vocal solos and orchestral works. Guest artists were Lucrezia Bori, of the Metropolitan Opera Company, Richard Crooks, tenor, Donald Pirnie, barytone, and Percy Grainger, who, besides appearing as piano soloist, conducted two of his orchestral works, *Spoon River* and *To a Nordic Princess*. A children's concert on May 22 was given by over 2000 singers and 180 instrumentalists, pupils of Westchester schools.

Another May event was the twenty-second North Shore Festival at Evanston, Ill., the last under Dean Lutkin's direction, with participants including the Chicago Symphony under Stock, adult, children's, and boys' choruses, and various soloists.

This was an off-year for the biennial Cincinnati May Festival, but late in September the appointment was announced of Eugene Goossens as musical director of this historic series.

Some 3000 singers, representing 46 churches in 35 cities, and 300 instrumentalists took part in the Talbott Musical Festival on June 20 and 21 at Ithaca, N. Y. The festival took its name from Mrs. H. E. Talbott, the principal sponsor of the Westminster Choir, which was transferred from Dayton to the newly-established Westminster Choir School at Ithaca.

The seventy-first annual festival at Worcester, Mass., was held from October 1 to 4 with Albert

Stoessel as musical director. Among important works performed were the Bach *Magnificat*, Delius's *Sea Drift*, Parker's *Hora Novissima*, and Verdi's *Te Deum*. The boy violinist, Ruggiero Ricci, was one of the soloists.

Among Canadian events of this type were the Great West Folksong Festival at Calgary, Alberta, March 19-23, the Highland and Scottish Music Festival at Banff, August 20-September 1, and the Quebec Folksong and Handicraft Festival, October 16-18.

Among the European festivals with the greatest international appeal may be ranked the annual Wagner-Mozart series in Munich, and the Salzburg festival, which includes both musical and dramatic performances. The 1930 Munich festival began on July 26 and closed September 1.

In the Salzburg festival, also in August, Clemens Krauss conducted a restudied production of *The Marriage of Figaro*; Franz Schalk conducted *Fidelio* and *Der Rosenkavalier*. Bruno Walter conducted *Don Pasquale* and *Iphigenia in Aulis*. Symphony concerts by the Vienna Philharmonic, cathedral concerts and "serenades" were also included in the musical part of this festival.

The series of festivals of modern music, formerly held at Donaueschingen, and later moved to Baden-Baden, was transferred this year to Berlin and named *Neue Musik 1930 Berlin*, with programmes including music for home performance and for amateurs, music for teaching and for radio broadcasting and scenic plays with music.

Among the most prominent British festivals of the year were the Three Choirs Festival, held this year in Hereford, and the thirty-third triennial festival at Norwich in October, in which Arthur Bliss's war symphony *Morning Heroes* was one of the principal novelties. In a class by itself is the annual Dolmetsch festival of early music on early instruments, held in 1930 at Haslemere from August 25 to September 6.

In Tokyo, a series of four concerts, October 6-10, celebrated the twenty-fifth anniversary of the career of Koscak Yamada, composer and conductor, who had been prominent in fostering the spread of music of the Occidental type in Japan.

ORCHESTRAS. The Boston Symphony Orchestra began its fiftieth season on October 10. As a part of the semi-centennial celebration, Sir George Henschel, the orchestra's first conductor (1881-84) was invited to direct the opening pair of concerts. Except for the substitution of Wagner's prelude to *Die Meistersinger* for Weber's *Jubilee Overture* at the close, Henschel's programme for October 10 and 11, 1930, was the one offered for the Boston Symphony's first concert, on October 22, 1881, including Beethoven's *Consecration of the House* overture, the air *Che farò* from Gluck's *Orfeo*, Haydn's symphony in B flat (B. & H. 12), a recitative and aria from Bruch's *Odysseys*, and the ballet music from Schubert's *Rosamunde*. The soloist, who had been Annie Louise Cary in 1881, was Margaret Matzenauer. Henschel, warmly received, gave a performance that belied his 80 years, proving still a vigorous, able leader.

With the concerts of October 17-18, Dr. Serge Koussevitsky began the presentation of works composed by prominent American and European musicians especially for the orchestra's anniversary. All these works were heard for the first time anywhere, except for the Stravinsky symphony, whose performance on December 19 had been postponed a week and therefore followed a performance

by the Brussels Philharmonic on December 13. A festival overture presented anonymously on October 31 was revealed to be by Koussevitzky himself.

In contrast with the opening months of 1929, the Philharmonic-Symphony Orchestra of New York pursued its schedule in 1930 according to plan. On January 19, Willem Mengelberg completed his eight weeks as conductor, and was followed for five weeks by Bernardino Molinari, Arturo Toscanini began the second part of his Philharmonic-Symphony season on February 27, when he conducted the world premiere of Ildebrando Pizzetti's *Rondo Veneziano* in the presence of the composer, who was paying his first visit to the United States.

In June, it was announced that Erich Kleiber, general music director of the Berlin State Opera, Unter den Linden, would be the conductor for the first six weeks of the new season, beginning October 2. Mr. Kleiber was received with but moderate enthusiasm at first, but became much better liked as the season went on, and won praise from the critics for presenting, for the first time in America, three excerpts from one of the most important modern operas, Berg's *Wozzeck*, on October 16. Soon after Mr. Kleiber's last concert, on November 10, it was announced that he would return for the corresponding period for 1931.

Mr. Toscanini resumed the leadership of the Philharmonic-Symphony for the next two weeks. On November 24 he began a fortnight as guest conductor of the Philadelphia Orchestra, while Leopold Stokowski took charge of the Philharmonic-Symphony. This exchange helped to vary the repertoire, but did not meet with unanimous approval, as far as New York was concerned. Mr. Toscanini resumed his Philharmonic-Symphony appearances December 15.

The Philharmonic-Symphony gave two series of children's concerts and one for "young people" under the direction of Ernest Schelling, who also conducted children's concerts in Boston and Philadelphia. Its out-of-town concerts were limited to Philadelphia, Baltimore, and Washington.

The Manhattan Symphony Orchestra, conducted by Henry Hadley, gave nine concerts in 1930 in its regular subscription series, in addition to free concerts at St. George's Church, and continued its policy of giving at least one American work on each programme. During the summer, Dr. Hadley appeared in Japan as guest conductor with the Tokyo Symphony. The New York Conductorless Symphony Orchestra, described by its title, gave three concerts and planned a new season beginning in the autumn, but suspended its activities due to unfavorable economic conditions.

The Philadelphia Orchestra began the year under the direction of Ossip Gabrilowitsch, who had become a regular conductor of this, as well as of the Detroit Symphony Orchestra. He remained in charge through March 1. During the next three weeks, the orchestra was led by three guests, Tullio Serafin, and Artur Bodanzky, of the Metropolitan Opera Company, and Emil Mlynarski. Mr. Stokowski resumed charge of the orchestra with the concert of March 28.

On April 11, 12, and 14 in Philadelphia and April 22 and 23 in New York, the Philadelphia Orchestra and the League of Composers, of New York, coöperated in the first stage performance of Stravinsky's *Le Sacre du Printemps* and the

American premiere of Schonberg's one-act opera *Die Gluckliche Hand*, with Mr. Stokowski conducting. These productions aroused intense interest, although Schonberg's "drama with music" did not prove, on the whole, convincing—Lawrence Gilman described it as "a wholly sincere and tragically futile work." The mimed production of *Le Sacre* was very creditable, but there were those who felt that, although originally a ballet, is still found its most effective interpretation as a purely symphonic work.

In the new season, Mr. Stokowski conducted the orchestra from the beginning of October to November 22, then, after the five warmly acclaimed concerts under Toscanini, returned to conduct from December 12 to 22. On December 12, he presented the first American public performance by the French inventor-musician, Maurice Martenot, on an electrical instrument named "ondes musicales," somewhat analogous in its principle to Theremin's "ether wave" instruments, although independently devised. The programme included a symphonic poem written for this instrument and orchestra by a Greek composer, Dimitri Levidis. Alexander Smallens, assistant conductor, directed the year's last pair of concerts.

During Mr. Gabrilowitsch's absence in Philadelphia, the Detroit Symphony was conducted by Victor Kolar, associate conductor, and Eugene Goossens and Bernardino Molinari as guests. Mr. Gabrilowitsch conducted the early spring concerts and those in the autumn.

The Cleveland Orchestra played mainly under its regular conductor, Nikolai Sokoloff, except in January, when the associate conductor, Rudolph Ringwall, and E. Fernandez Arbos held the baton, and a pair of April concerts under Victor Kolar. On February 20, 21, and 22, the Cleveland Orchestra and the Neighborhood Playhouse gave their third annual series of New York performances of mimed interpretations of symphonic music. The works "visualized" by a company of mimes and dancers were Loeffler's *A Pagan Poem*, Rabaud's *La Procession Nocturne* and Werner Janssen's *New Year's Eve in New York*. The orchestra gave a New York concert on December 2.

Among novelties given by the Cincinnati Symphony in 1930 under Fritz Reiner were Daniel Gregory Mason's *Third Symphony*, in its world premiere, and Ravel's *Musnet Antique*, both on November 7, and Lazar's *Tziganes* November 28.

The Chicago Symphony Orchestra continued throughout the year under Frederick A. Stock, the St. Louis Symphony continued its régime of guest conductors, including Bernardino Molinari, Eugene Goossens, Georg Szell and E. F. Arbos. On the Pacific Coast, the Seattle Symphony played under Karl Krueger, The Portland Symphony under Willem van Hoogstraten, and the Los Angeles Philharmonic under Artur Rodzinski. In the spring, Alfred Hertz closed his 15 years' career as conductor of the San Francisco Symphony, and was succeeded in the autumn by the English conductor, Basil Cameron. Late in the fall, for reasons of economy, the orchestra was somewhat reduced in numbers.

Other changes of conductors took place in the Omaha Symphony, where Sándor Harmati was succeeded by an American conductor, Joseph Littau, and in the Baltimore Civic Orchestra, where George Siemonn succeeded Gustav Strube. The twelfth season of summer concerts at the

Lewisohn Stadium in New York took place from July 7 to August 31, Willem van Hoogstraten conducting the Philharmonic-Symphony for five weeks and Albert Coates for three. Special features included two performances of Beethoven's *Ninth Symphony* and two of Verdi's *Requiem*, two of a Wagner programme with soloists, two partly devoted to singing by the Hall Johnson Negro Choir and two in part to dancing by Anna Duncan; three full evenings devoted to the Denishawn Dancers, and one to the appearance of George Gershwin as pianist and conductor in his own works.

The Hollywood Bowl summer concerts, near Los Angeles, were conducted by Alfred Hertz, Willem van Hoogstraten, Karl Krueger, Pietro Cimini, Bernardino Molinari and E. Fernandez Arbos. The San Francisco Symphony played in summer concerts in the city and the nearby town of San Mateo, under Molinari, Van Hoogstraten, Rodzinski, Arbos, Gaetano Merola, Antonia Brico and Mr. Hertz, who bade farewell to San Francisco in this series with Beethoven's *Ninth Symphony*.

A new series of summer concerts had a successful first season in Philadelphia, with Alexander Smallens as regular conductor and Coates, Van Hoogstraten, Eugene Ormandy, Josef Pasternack, and Karl Krueger as guests.

London's orchestras more than held their own during the year. The principal resident London organizations were the British Broadcasting Corporation orchestras, of which Adrian Boult had become musical director, numbering 119 men; the London Symphony, which engaged Mengelberg as a semi-permanent conductor, beginning with the autumn; and the Lincoln Philharmonic under various guests. Besides these London had an unusual wealth of foreign visitors, including the New York Philharmonic-Symphony, the Vienna Philharmonic under Furtwangler, and the Amsterdam Concertgebouw under Mengelberg. The earlier part of the year brought Londoners an unusual amount of music by Mahler, whose *Symphony of a Thousand*, his eighth was played by the B. B. C. orchestra on April 15. The annual series of London Promenade concerts were given by the B. B. C. orchestra under Sir Henry Wood for eight weeks beginning August 8. The B. B. C., in cooperation with the Halle Orchestra of Manchester, under Sir Hamilton Harty, inaugurated a June series of promenade concerts in Manchester, Liverpool, and Leeds.

OPERA. During 1930, the Metropolitan Opera Company of New York gave 182 performances of 46 works by 26 composers, 20 operas by 10 Italian composers were heard 74 times; 10 operas by 9 French composers, 38 times; 14 operas by 5 German and Austrian composers, 58 times; and two operas by Russian composers, 12 times.

Three operas were produced for the first time in the United States. Rimsky-Korsakoff's *Sadko* was introduced on January 25, in French, and had been given eight times by the close of the season.

On November 29, a less-known Russian work, Moussorgsky's comic opera *The Fair at Sorochintzy*, as edited, completed, and orchestrated by Nikolai Tcherepnine, who came to New York to supervise the production, was performed. The *Fair at Sorochintzy* was given in Italian, with a ballet performance based on Moussorgsky's symphonic poem, *A Night on the Bald Mountain*.

The only modern novelty of the year was *Le Preziose Ridicole*, a one-act opera by Felice Latuada, an Italian composer previously unknown in America, with a book based on Molière's classic play, *Les Precieuses Ridicules*. *Le Preziose Ridicole* had not found favor in Berlin earlier in the autumn, but was unexpectedly well received in New York.

The most significant revival of the year was that of Wagner's *Der Fliegende Holländer* on November 2, with Maria Jeritza, Friedrich Schorr, Ivar Andresen, and Rudolf Laubenthal in the leading rôles. This work had not been given at the Metropolitan for 22 years, although it was performed in New York by the late Wagnerian Opera Company in 1923 and 1924.

Beethoven's *Fidelio* was restored to the Metropolitan's active list on January 29, after a season's absence. Charpentier's *Louise*, which had left the Metropolitan in 1922 with Geraldine Farrar, returned to it on March 1 with Lucrezia Bori as the heroine, but the work proved to have aged considerably in the intervening years. Donizetti's *L'Elisir d'Amore* was successfully revived on March 21, after a lapse of 10 years. Verdi's *La Forza del Destino* was restored to the active list on November 22, after an absence of two seasons.

Among the Metropolitan's débutantes of 1930 was Elisabeth Ohms, a dramatic soprano of Dutch origin, who came from the Munich opera to sing leading Wagnerian rôles, as well as Leonore in *Fidelio*. She proved to be a well qualified, if not a remarkably great singing-actress, and was a useful acquisition to the company. The Metropolitan's Wagnerian forces also profited by the arrival in the autumn of Ivar Andresen, basso, of the Dresden Opera, who had been a notable member of the Bayreuth roster in 1927 and 1928. Antonin Trantoul, French tenor, sang several leading rôles in the late winter and early spring, but, while an artistic operatic actor, his voice did not have the calibre required for the Metropolitan's vast spaces, and he did not return for the new season. Siegfried Tappolet, Swiss basso, was engaged in March to fill the gap left by the early departure of Michael Bohnen, and was reëngaged for 1930-31.

Outside of its home auditorium, the Metropolitan gave 11 performances in Brooklyn, 23 in Philadelphia, and 28 in other cities, making a total of 234 performances for the year (considering a double bill as a single performance). Adding 25 "opera concerts" gives a sum of 259 for the company's public offerings in 1930. The home season was the longest so far, lasting 25 weeks, including one added to the subscription season of twenty-four in order to avoid beginning the annual spring tour in Holy Week.

In the autumn, the Metropolitan began an experiment in suburban opera, giving *La Bohème* and *Tosca* on December 2 and 16 in the new County Centre in White Plains, with a success that led to the probability of two more performances in the spring. Another city visited by the Metropolitan for the first time was Hartford, Conn., where *Tosca* was presented November 25.

In its new opera house on Wacker Drive, the Chicago Civic Opera Company gave 95 performances of 41 operas by 23 composers; 21 operas by Italian composers were given 52 times; 10 operas by six French composers, 16 times; eight operas by four German composers, 23 times; one opera by a Czech composer (in German), once; and one

by an American composer (in French) three times. Verdi was the most represented composer, with 18 performances of six works, followed by Wagner with 10 performances of five works. The most spectacular novelty of the season was *Camille* by Hamilton Forrest, a young Chicago composer, the libretto in French being based upon the novel by Dumas. This was first performed on December 10, with Mary Garden in the title rôle.

Ernest Moret's *Lorenzaccio*, in French, opened the season on October 27, with Vanni-Marcoux in the title rôle. The book is based on a play by Musset, with Lorenzo de' Medici as a protagonist.

The third novelty of the year was Smetana's *The Bartered Bride*, given on Christmas Day in German, with Maria Rajdl, Theodore Strack and Alexander Kipnis as principals, and Emil Cooper conducting. The principal revival of the year was Wagner's *Die Meistersinger*, given on November 20 in a highly-praised performance under Egon Pollak's direction. Manuel de Falla's ballet *El Amor Brujo* was mimed for the first time in Chicago on November 22. The company made several additions to its German wing, whose development had been a feature of recent seasons, with Lotte Lehmann and Maria Rajdl, sopranos; Eduard Habisch and Hans Herrmann Nissen, barytones. Two well-known American singers, Paul Althouse, tenor and John Charles Thomas, barytone, made their Chicago Opera débuts in the autumn.

The German Grand Opera Company began its second tour in Washington on January 6 and closed it in Denver on March 2 after traveling as far as the Pacific Coast and appearing in eighteen cities. A new York engagement was to follow, but this was given up, it was announced, owing to inability to obtain a suitable theatre.

The Philadelphia Civic Opera Company, under the musical direction of Alexander Smallens, closed in the spring after a season which had included its second presentation of Wagner's *Ring* cycle. It was decided to disband, owing to inability to continue without incurring a deficit, or asking for an unfeasibly large amount of contributions. This left as the only resident Philadelphia operatic organization the Philadelphia Grand Opera Company, which is affiliated with the Curtis Institute of Music. Emil Mlynarski is the regular conductor, and Eugene Goossens, as guest, conducted four performances.

After completing its third tour in January, the American Opera Company, presenting operas in English, among them a recent American work, Clarence Loomis's *Yolanda of Cyprus*, planned for a fourth season, but later decided to suspend operations for the time being until business conditions should improve. San Francisco again had a two weeks' season, beginning September 11th, with the appearance of Maria Jeritza in Strauss's *Salome* as one of its features. Two weeks of opera followed in Los Angeles.

The principal American summer operatic activity again was the series at Ravinia, Ill., near Chicago, under the management of Louis Eckstein; 35 works were presented in 10 weeks, including Vittadini's *Anima Allegra* and Smetana's *The Bartered Bride* as novelties in a repertoire in Italian, French, German, and Spanish. In the "Zoo" summer opera at Cincinnati, Wagner, including *Tannhäuser* and *Parzifal*, was heard as well as works of the familiar Italian list. In St. Louis, the outdoor municipal summer

series had a repertoire of popular light operas or operettas.

The London season of opera at Covent Garden began on April 28 and continued into July. The repertoire offered German opera, including Wagner and Johann Strauss's *Die Fledermaus* and Italian opera.

Besides the Opera and Opera-Comique, Paris had an unusual amount of foreign opera in 1930, such as a Russian season from May to July at the Champs Elysses Theatre and another beginning in November, and a visit by a German company including well-known singers in the spring at the Opera.

The three Berlin opera houses took part in their second festival weeks, or *Kunstwochen*, in May and June, with features including a Wagner series, a Richard Strauss series, and the first performance of Berlioz's *The Trojans* with an abridged and revised book by Dr. Julius Kapp.

Germany outstripped other European countries in its offerings of new works, both German and foreign. At the Berlin State Opera, Unter den Linden, the first public performance of *Columbus*, book by Paul Claudel, French Ambassador to the United States, and music by Darius Milhaud, met a mixed reception on May 3, hoots and jeers mingling with applause. It was more quietly received, however, in later performances. The work was hardly an opera in the usual sense, but rather an allegorical play with music playing a subordinate part. *Transatlantic* by the American composer, George Antheil, was first produced at Frankfurt-am-Main on May 25, becoming the first American work to be given in a German state opera house. A majority of the audience received it enthusiastically, although there were dissenters. The scene was distinctly American in atmosphere, with modern American paraphernalia as a background, the music, described as "uncompromisingly American," made use of jazz motifs and took advantage of modern technical possibilities. Another German première receiving international attention was that of *Fremde Erde* by the Austrian composer, Karol Rathaus, given under Kleiber's direction of December 10 at the Berlin State Opera, Unter den Linden. Its latter scenes were laid in New York.

La Scala at Milan began its new season on December 7 under a woman general manager, Anita Colomba, whose first presentation was Verdi's nearly forgotten opera *I Lombardi*. Signorina Colomba succeeded to the control of La Scala after the death of Angelo Scandiani in June. The Scala was to coöperate with other leading Italian opera houses, such as the Royal Opera of Rome, the San Carlo of Naples and Carlo Felice of Genoa through the exchange of artists and scenery. Among the Italian operas first produced during the year was Pizzetti's *Lo Straniero*, given in Rome on April 30 with Gino Marinuzzi conducting. Its musical style was described as resembling that of *Fra Gherardo*, with music closely wedded to the text with a prevailing effect of dramatic recitative.

NANSEN, nän'sen, FRIDTJOF. A Norwegian explorer, scientist, author, and statesman, died in Oslo, May 13, 1930. He was born in Store Frøen, Oct. 10, 1861, and was educated at the University of Christiania (later Oslo). In 1882 he visited the eastern part of Greenland to obtain zoölogical specimens, and in the same year was appointed curator of the Natural History Museum in Bergen. In 1888 he returned to Greenland and, with five companions, crossed the ice-capped interior on skis from the east to the west coast. As a result of this experience he wrote *The First Crossing of Greenland* (1890) and *Ekimo Life* (1891). In 1890 he became curator of the Museum of Comparative Anatomy at the University of Christiania, and during 1893-96 carried out his memorable Arctic expedition in an attempt to reach the North Pole. His ship *Fram* had been especially built to withstand the terrific pressure of colliding ice-floes, and after it had drifted with the Poleward current as far north as possible he and a single companion, Lieut. F. H. Johansen, started on their long trek with dog sledges, reaching 86° 14' N., the farthest latitude until then attained. They came within 272 statute miles of the North Pole and 184 miles nearer to it than any explorers had been before. This adventure he described in *Farthest North* (2 vols., 1897) and *The Norwegian North Polar Expedition, 1893-96: Scientific Results* (6 vols., 1900-06).

In 1897 Dr. Nansen became professor of zoology at the University of Christiania, and in 1901 director of the central laboratory of the International Commission for Systematic Study of the Ocean, which had been organized on his initiative in 1892. His researches in the latter field

were recorded in *The Oceanography of the North Polar Basin* (1902) and *The Bathymetrical Features of the North Polar Seas* (1904). He also took an active part at this time in the movement which led to the peaceful separation of Norway and Sweden, setting forth his views in *Norway and the Union with Sweden* (1905). He served as first minister of his country to Great Britain from 1906 to 1908. He then became professor of oceanography at the University of Christiania, and until the outbreak of the World War was engaged in conducting oceanographic expeditions. In 1910 he visited the northeastern North Atlantic Ocean from Ireland to Iceland; in 1912, the North Atlantic around Spitzbergen; in 1913, the Arctic Ocean and Siberia; and in 1914, the eastern North Atlantic Ocean, touching Portugal, Madeira, and the Azores. During this period he published *In Northern Mists: Arctic Exploration in Early Times* (2 vols., 1911) and *Through Siberia, the Land of the Future* (1914).

In 1917 Dr. Nansen headed a commission which visited the United States to conclude a commercial agreement by which Norway might be assured of essential imports. In 1918 he was appointed chairman of the Norwegian Association for the League of Nations and later was chosen delegate for Norway to the League's Assembly. In 1920 he was requested by the first Council of the League to investigate problems in connection with the repatriation of prisoners of war, and under his supervision 450,000 prisoners were returned to their homes from Russia, Siberia, central Europe, and the Balkan States. During 1921-23 he had general charge of the Russian famine relief sponsored by European Red Cross societies in the Volga Valley and South Ukraine region, for which in 1922 he received the Nobel Peace Prize. He also supervised the relief work of the League of Nations among Russian, Greek, and Armenian refugees.

Dr. Nansen was an ardent advocate of international arbitration, and in 1927 became Norway's representative on the disarmament committee of the League of Nations. Prior to his death he had again become interested in exploration and was planning a survey of the North Polar Basin from a dirigible. He was the recipient of honorary degrees from the Universities of Christiania, Oxford, Cambridge, and St. Andrews. In 1918 he was elected rector magnificus of the University of Christiania, and in 1925 lord rector of St. Andrews University, Scotland. He also was decorated by Great Britain with the Grand Cross of the Royal Victorian Order and was a fellow of the Royal Geographical Society. In addition to the works mentioned he wrote: *Spitzbergen* (1922); *Russia and Peace* (1923); *Sporting Days in Wild Norway* (1925); *Hunting and Adventure in the Arctic* (1925); *Adventure and Other Papers* (1927); and *Armenia and the Near East* (1928), the result of his study of the Armenian problem for the League of Nations.

NATIONAL ACADEMY OF DESIGN. An institution in New York City; established in 1825 and incorporated in 1828 for the purpose of "the cultivation and extension of the arts of design." The academy holds two exhibitions of contemporary art each year, to which an artist of

any country may submit his work. The works which are accepted by the jury of selection are exhibited without charge to the artists; members of the academy may exhibit one work without approval by the jury. The total number of associate members in 1930 was 158; the number of academicians was 145, including 109 painters, 26 sculptors, 6 architects, and 2 engravers. The following academicians were elected in 1930: Gertrude Fiske, Bryson Burroughs, Cyrus E. Dallin, Harvey Wiley Corbett, Sherry E. Fry. The associate members elected were: D. Putnam Brinley, Alphaeus P. Cole, Arthur Hill Gilbert, Harry Hoffman, Roy Mason, Emma Fordyce MacKae, Herman Dudley Murphy, Bonnie MacLeary, William Mitchell Kendall, Kerr Eby, John Taylor Arms, George Wharton Edwards. The officers in 1930 were: President, Cass Gilbert; first vice president, H. W. Watrous; second vice president, Robert Aitken; corresponding secretary, Charles C. Curran; assistant corresponding secretary, Albert P. Lucas; recording secretary, Hobart Nichols; and treasurer, Henry Prellwitz. The council members were: Louis Betts, Ernest L. Ipsen, Sidney Dickinson, Chauncey F. Ryder, Eugene Savage, and James Earle Fraser. Headquarters are at Amsterdam Avenue and 109th Street, New York City.

NATIONAL ACADEMY OF SCIENCES. A body of American scientists incorporated by act of Congress, approved by President Lincoln in 1863, for the purpose of investigating, examining, experimenting, and reporting upon any subject of science or art when called upon by any department of the government. The actual expense of such investigations, examinations, experiments, and reports are met from appropriations made for the purpose, without compensation for any services to the government. Membership in the academy is limited to 300 active members and 50 foreign associates. New members are elected on nominations from the 10 sections: Mathematics, astronomy, physics, engineering, chemistry, geology and palæontology, botany, zoology and anatomy, physiology and pathology, anthropology, and psychology. The following new members were elected in 1930: Comfort Avery Adams; James Waddell Alexander; Eugene Thomas Allen; Harry Bateman; Isaiah Bowman; George Perkins Clinton; William Weber Coblentz; Paul Sophus Epstein; Vernon Lyman Kellogg; Frederick George Keyes; Karl Spencer Lashley; Berthold Laufer; Samuel Colville Lind; Frank Elmore Ross; and Alfred Henry Sturtevant.

The academy's annual meeting was held in Washington Apr. 28-30, 1930, and its autumn meeting in Berkeley, Palo Alto, and Pasadena, Calif., September 18-23. These meetings were devoted to the transaction of business and the presentation of scientific papers by academicians or persons introduced by them. At the annual dinner held in the academy building on Apr. 29, 1930, presentation was made of five medals for outstanding contributions to scientific research. The Agassiz Medal for Oceanography was awarded to Johannes Schmidt of the physiological department of Carlsberg Laboratory, Copenhagen, Denmark, in recognition of his contributions to oceanography; the Public Welfare Medal was awarded posthumously to Stephen Tyng Mather (q.v.) for his distinguished service in connection with the development of the National Park System; the Daniel Giraud Elliot Medal

for 1927 was awarded to Erik A. Son Stensio of the Naturhistorika Riksmuseum, Stockholm, Sweden, for his work, *The Downtonian and Devonian Vertebrates of Spitzbergen, part i, Family Cephalaspidae*; the Elliot Medal for 1928 was presented to Ernest Thompson Seton for his work, *Lives of Games Animals*, (vol. iv); and the Mary Clark Thompson Medal was presented to William Berryman Scott in recognition of his distinguished work in palæontological research.

The academy publishes a series of *Memoirs*, consisting of monographs by academicians or sponsored by them and reports of investigations conducted for the Government. The *Proceedings*, issued monthly, are devoted to condensed reports of the most recent scientific discoveries. The officers in 1930 were: T. H. Morgan, president; Frederick E. Wright, vice-president; R. A. Millikan, foreign secretary; David White, home secretary; Joseph S. Ames, treasurer. Headquarters are at B and 21st Streets, Washington.

NATIONAL BANKS. See BANKS AND BANKING.

NATIONAL CIVIC FEDERATION, THE. This movement was organized in 1900 to seek the solution of some of the great problems related to social and industrial progress. It provides especially for the discussion of questions of national import, aids in the crystallization of enlightened public opinion, and promotes legislation when desirable. The 45 members of the executive committee represent the public, employers, and wage earners. The various committees and departments are organized to conduct the activities of the federation.

The organization's active departments and committees in 1930 included the following: Commission on industrial inquiry, composed of four committees on plan and scope, study of anti-trust legislation, study of injunctions in industrial disputes, and study of forms of employee organization and of employment contracts; department on subversive activities, which carried on its programme of opposition to recognition of the Soviet Government, making a study of subversive propaganda promoted by that government in American colleges and universities, public schools, churches, and other institutions; department on industrial relations, which seeks a *modus vivendi* between employers and wage earners; industrial welfare department, whose object is to secure improvements in working and living conditions of wage earners voluntarily by employers; woman's department; and department on active citizenship, which aims to interest citizens in participating actively in their political party organizations. As a result of replies received to a questionnaire sent to 25,000 individuals and organizations, the committee on study of anti-trust legislation of the commission on industrial inquiry recommended the amendment of the anti-trust laws, including the Sherman Act, Clayton Act, and Federal Trade Commission Act, and drafted such amendments for early submission to Congress. There also was drafted by the committee on study of injunctions in industrial disputes a bill restricting the use of injunctions in industrial disputes wherein employers have been coöperating with labor.

The executive council of the federation for 1930 included the following: Elihu Root, honorary president; W. N. Doak, honorary secretary; Matthew Woll, acting president; Samuel McRoberts, treasurer; Ralph M. Easley, chairman,

executive council; Wheeler P. Bloodgood, chairman, commission on industrial inquiry; Maude Wetmore, chairman, woman's department; Charles L. Edgar, chairman, industrial welfare department; John Hays Hammond, chairman, department on active citizenship; Marcus M. Marks, chairman, industrial round table department; Peter J. Brady, chairman, committee on Russian affairs; Gertrude Beeks Easley, secretary, executive council; and Mrs. Coffin Van Rensselaer, executive secretary, woman's department. Headquarters, 1 Madison Avenue, New York City.

NATIONAL DEFENSE. See MILITARY PROGRESS; NAVAL PROGRESS.

NATIONAL EDUCATION ASSOCIATION OF THE UNITED STATES. An organization of persons actively engaged in educational work and others interested in education; organized Aug. 26, 1857, at Philadelphia under the name of the National Teachers' Association and on June 30, 1907, incorporated by Congress under its present name. In July, 1920, at the annual meeting the association was reorganized, and provision was made for a representative assembly composed of delegates from State and local educational associations. The other governing bodies are a board of directors, an executive committee of five, a board of trustees, departmental organizations, standing and special committees, and a staff at headquarters which is held responsible for carrying out the decisions of the governing bodies. In 1930 there were 19 departments, each having its own officers, as follows: Adult education, business education, classroom teachers, deans of women, educational research, elementary school principals, kindergarten-primary education, lip reading, rural education, school health and physical education, science instruction, secondary school principals, social studies, superintendence, supervisors and directors of instruction, supervisors and teachers of home economics, teachers colleges, visual instruction, and vocational education. There were also more than 15 standing and special committees actively at work on professional problems.

The association's sixty-eighth annual meeting was held in Columbus, Ohio, June 28-July 4, 1930, with an estimated total attendance of more than 10,000. There were held, in addition to the general session, meetings of the representative assembly, the departments of the association, and a number of allied organizations, at which the progress of the year in education was reviewed. Among the important resolutions adopted on this occasion was that urging the establishment of a department of education, with a secretary in the President's cabinet, and the efficient integration in this department of the educational activities of the Federal Government. The 1931 convention was scheduled to be held the first week in July in Los Angeles, Calif. The association's department of superintendence held its winter convention in Atlantic City, N. J., the last week in February. The subject of the year book, prepared for presentation at this meeting, was "Supervision," while "Articulation of the Units of American Education" had been selected as the theme of the 1931 year book. *The Journal of the National Education Association* is the organization's monthly publication. It also pub-

lishes an annual volume, *Proceedings*, and numerous reports on its activities. Research bulletins containing statistical information on educational subjects are issued regularly. The enrollment of the association on Jan. 1, 1930, was 205,681. Officers elected for 1930-31 were: President, Willis A. Sutton, Atlanta, Ga.; secretary, J. W. Crabtree, Washington; and treasurer, Henry Lester Smith, Bloomington, Ind. Headquarters for the association are maintained at 1201 Sixteenth Street, N. W., Washington.

NATIONAL GUARD. See MILITARY PROGRESS.

NATIONAL KINDERGARTEN ASSOCIATION. An organization founded and incorporated in New York City in 1909, with the object of helping to secure the advantages of kindergarten education for all of the children of the United States. The association is supported entirely by private subscriptions which amount annually to approximately \$45,000. These funds are used for the purpose of promoting a knowledge of, and an interest in the value of the kindergarten as an integral part of the public-school system. By the end of 1930 the association had been instrumental in securing the establishment of 1636 kindergartens. Where no adequate provision has been made in the school laws for the maintenance of kindergartens, the association has worked to stimulate an effort to secure the enactment of improved laws and has been instrumental in obtaining their passage in 16 States.

The association has secured kindergarten training for one child for each dollar that it has ever received. It supports no classes but arouses communities to support them for their own children, and during 1928, 1929, and 1930, through the generosity of its members, it was able to set aside a fund from which to aid in the purchase of equipment of 48 classes which otherwise could not have been opened. The officers in 1930 were: President, Maj. Bradley Martin; honorary president, Hon. P. P. Claxton; first vice-president, Mrs. Henry Phipps; second vice-president, Mrs. Charles Cary Rumsey; secretary, Mrs. Roger C. Aldrich; executive secretary, Miss Bessie Locke; and treasurer, Julian M. Gerard. Headquarters are at 8 West Fortieth Street, New York City.

NATIONAL MUNICIPAL LEAGUE. An organization which acts as a central clearing house for current information on improvements in State and local government throughout the United States; founded in 1894 and incorporated in 1923. Its aim is to promote efficient and democratic government in city, county, State, and nation. Under its direction, committees of experts are constantly at work developing sound principles of governmental methods and administration. Those active in 1930 were as follows: Committee on government of metropolitan areas; national committee on municipal standards; national committee on municipal reporting; committee on park and playground administration; committee on election administration; committee on organized citizens' participation in city government; citizen organization for municipal activity; committee on county-manager plan; and committee on model administrative code. During the year the committee on government of metropolitan areas published its report of a nation-wide survey of metropolitan government.

financed through a grant of \$10,000 from the Russell Sage Foundation. The committee on election administration, headed by Prof. Charles E. Merriam of the University of Chicago as chairman, also prepared a report which was published in 1930 as the *Model Election Administration System*, and the committee on county-manager plan, of which Prof. John A. Fairlie of the University of Illinois was chairman, prepared a *Model County Manager Law*.

The thirty-sixth annual meeting of the league was held in Cleveland Nov. 10-12, 1930, under the general title of the National Conference on Government. The Governmental Research Association, the National Association of Civic Secretaries, the Proportional Representation League, the American Legislators' Association, the Ohio Municipal League, and the Ohio State Conference on City Planning cooperated in this conference. The league publishes the *National Municipal Review*, which records from month to month the current improvements in State and local governments, and various reference pamphlets and books such as *Public Borrowing* and *The Government of Metropolitan Areas*. The officers of the league elected for 1931 were: President, Richard S. Childs of New York; first vice president, Louis Brownlow of Fair Lawn, N. J.; honorary vice presidents, H. L. Brittain of Toronto, Harry F. Byrd of Winchester, Va., Samuel S. Fels of Philadelphia, John M. Gries of Washington, D. C., A. R. Hatton of Northwestern University, John R. Haynes of Los Angeles, A. Lawrence Lowell of Harvard University, C. E. Merriam of the University of Chicago, W. M. Munro of Pasadena, Calif., J. C. Nichols of Kansas City, Mo., Frank L. Polk of New York, Thos. H. Reed of the University of Michigan, Chester H. Rowell of Berkeley, Calif., Miss Belle Sherwin of Washington, D. C., Mrs. F. Louis Slade of New York, and A. Leo Weil of Pittsburgh; treasurer, Carl H. Pforzheimer; secretary, Russell Forbes; honorary secretary, Clinton Rogers Woodruff; editor of the *National Municipal Review*, H. W. Dodds; and public relations secretary, Howard P. Jones. Headquarters are at 261 Broadway, New York City.

NATIONAL RECREATION ASSOCIATION (formerly named PLAYGROUND AND RECREATION ASSOCIATION OF AMERICA). An association organized in 1906 by Theodore Roosevelt, Jacob A. Riis, Luther H. Gulick, and others for the purpose of binding together in a national movement the efforts growing up in various parts of the country to provide safe and adequate areas where children might play under experienced leadership. A staff of field workers is maintained to assist cities in organizing year-round recreation programmes for children, adults, and the community as a whole, to strengthen existing programmes, and to help secure State legislation for facilitating the development of municipal recreation. The association publishes a monthly magazine, *Playground and Recreation*, maintains a bulletin service, and publishes pamphlets and books pertaining to recreation.

The community drama service of the association supplies practical suggestions and literature to amateur dramatic groups and prepares programmes for holiday and special-day celebrations. The community music service promotes this form of recreation and provides an exchange for community music information. The national physical education service is active in sponsoring

physical education legislation. The association maintains a bureau which gives assistance to Negro groups in securing recreation opportunities and, in cooperation with the U. S. Department of Agriculture, has assigned three full-time workers to help in the training of rural leaders for recreation. The officers of the association for 1930 were: President, Joseph Lee; treasurer, Gustavus T. Kirby; secretary, Howard S. Braucher. Headquarters are at 315 Fourth Avenue, New York City.

NATIONAL RESEARCH COUNCIL. A co-operative organization of American scientists interested in pure and applied science, including engineering and industry. It was established in 1916 by the National Academy of Sciences, at the request of President Wilson, for the purpose of coordinating the research facilities of the United States for work on war problems involving scientific knowledge. By executive order of the President the council was reorganized by the academy in 1918 as a permanent body, its essential purpose being to promote scientific research and the application and dissemination of scientific knowledge for the benefit of the national strength and well-being. The council maintains close cooperation with governmental scientific bureaus and has the formal recognition and cooperation of 77 national scientific and technical societies, its membership being composed in large part of appointed representatives of these societies.

The activities of the council are conducted by 11 divisions, each of which has a chairman and from 20 to 25 members. These divisions fall into two groups. One group comprises seven divisions of science and technology, representing physics, mathematics, and astronomy; engineering and industrial research; chemistry and chemical technology; geology and geography; the medical sciences; biology and agriculture; and anthropology and psychology. The other group is of four divisions of general relationships: government relations; foreign relations; States relations; and educational relations. Each of these divisions maintains a number of administrative and technical committees which have immediate charge of the work of the division. The council also maintains a special research information service.

The financial support of the council is derived, first, from a gift of \$5,000,000 from the Carnegie Corporation of New York to the National Academy of Sciences, part of which sum has been devoted to the erection of a building in Washington, D. C., to house the academy and the council, the income from the remainder being used for the purposes of the council; and second, from other gifts from various sources mostly made for the specific support of particular undertakings. These sources include the Rockefeller Foundation, General Education Board, the Spelman Fund, Commonwealth Fund, Bureau of Social Hygiene, and numerous individuals and industrial concerns. The council maintains two regular series of publications: bulletins, of which 81 had been issued up to the end of 1930, and the reprint and circular series, of which 97 had appeared. It issues, in addition, miscellaneous publications and an annual report.

The general administrative officers of the council for 1930-31 were: Chairman, George K. Burgess, director, United States Bureau of Standards; first vice-chairman, T. H. Morgan, presi-

dent, National Academy of Sciences, and professor of biology, California Institute of Technology, Pasadena, Calif.; second vice-chairman, John C. Merriam, president, Carnegie Institution of Washington, Washington, D. C.; third vice-chairman, Simon Flexner, director, Rockefeller Institute for Medical Research, New York City; permanent secretary, Vernon Kellogg, National Research Council, Washington, D. C.; treasurer, J. S. Ames, treasurer, National Academy of Sciences, and president, Johns Hopkins University, Baltimore, Md. George E. Hale, honorary director of the Mount Wilson Observatory, Pasadena, Calif., was honorary chairman. Headquarters of the council are on B Street, between 21st and 22nd Streets, Washington, D. C.

NATIONAL SAFETY COUNCIL. A non-profit cooperative association, not only national but international in scope, devoted to the conservation of human life through a continuous campaign of accident prevention. In 1930, there were 5500 members including industrial corporations, firms, individuals, public officials, schools, Chambers of Commerce, clubs, and civic organizations; about 70 per cent of the memberships were industrial concerns. Allied to accident prevention is the council's work in improving health conditions and preventing vocational diseases in industry. The organization was formed as a result of a meeting of the Association of Iron and Steel Electrical Engineers in Milwaukee in 1912.

Affiliated with the National Safety Council are 60 local councils in as many communities throughout the United States. They carry on intensive safety work in approximately 12,000 plants in 150 different lines of industry, reaching more than 10,000,000 people. Safety campaigns are also carried on in the schools under the auspices of the education division of the council, which receives financial support from the National Bureau of Casualty and Surety Underwriters and maintains a trained staff devoting its entire time to teaching accident prevention fundamentals.

The council publishes *The National Safety News*, for industries; *Public Safety*, for public officials, police chiefs, etc.; *Safety Education*, for schools; and *The Safe Worker*, which is distributed each month to 200,000 workers. It also issues *Safe Practices and Health Practices* pamphlets for industry and carries on extensive work through 27 sections represented in the industrial division, for the exchange of new ideas, new plans and new practices among members. During 1930 more than 750,000 copies of the Annual Safety Calendar were distributed; and each month 47 different posters were distributed, the poster circulation for the year being around 2,225,000 copies.

The nineteenth annual safety congress was held in Pittsburgh in October, 1930, with an attendance of approximately 7000 delegates and visitors. The officers elected for 1931 were: President, C. W. Bergquist, Chicago; managing director, W. H. Cameron, Chicago; treasurer, Harvey Ellerd, Chicago; vice-president for industrial safety, C. L. Close, New York City; vice-president for membership, George Opp, Detroit; vice-president for business administration, G. T. Hellmuth, Chicago; vice-president for public safety, Edward Dana, Boston; vice-president for territorial councils, John E. Long, Albany; vice-president of education, A. W. Whitney, New York City; vice-president for health, Dr. C. E. A.

Winslow, New Haven, Conn.; and vice-president for finance, J. L. Banash, Chicago. Executive offices of the council are at 20 North Wacker Drive, Chicago.

NATURAL GAS. See GAS, NATURAL.

NAVAL PROGRESS. The most important feature of the year 1930 was the Naval Treaty of London for the further limitation of naval armaments. Among the most notable points of the treaty are those that concern:—The reduction in total tonnage of capital ships and submarines; the limitation of cruiser, destroyer leader, and destroyer tonnage; definite rules for replacements, and disposal of surplus vessels; definitions of aircraft carriers, cruisers, destroyer leaders, and destroyers; limitation of sizes of destroyers and submarines; and amendments to international law as regards the operation of submarines.

In the large light cruisers laid down during the year there was seen a general tendency to increase armor protection at the expense of very high speed; and to improve their anti-aircraft defense as regards anti-aircraft guns, deck protection, and protection against the effects of gas bombs. One result of the new treaty was the flying-deck cruiser which was being carefully studied. Much was done, especially in the United States, to improve the safety of submarines and of their crews. Naval aviation was receiving increased attention—especially in the navies of the United States and Japan.

In the following condensation of the London Treaty an attempt is made to follow the text closely enough to give fully all the features of importance, omitting details that are of minor importance or of interest only to the naval authorities and not to the general public. All tonnages are expressed in standard tons of 2240 pounds (1016 kilos), the metric equivalent in tons of 1000 kilos being omitted for brevity.

The Treaty of London, between the United States, Great Britain, Japan, Italy, and France, for the limitation and reduction of naval armaments, was signed at London, Apr. 22, 1930; and was a few weeks later approved by the governments of the United States, Great Britain, and Japan. It consists of five parts. Parts 1, 2, 4, and 5 concern all five nations; Part 3 concerns only the United States, Great Britain and Japan, which agreed, among themselves, to the provisions of this part. When ratified by the governments of the United States, Great Britain, and Japan, the Treaty was to come into force as respects these nations. When ratified by the governments of France and Italy, Parts 1, 2, 4 and 5 were to come into force as respects these two nations.

PART I

Article I. Defers the laying down of capital ships as replacements of existing ships (except ships accidentally lost or destroyed) in the years 1931–36 as provided in the Treaty of Washington; France and Italy are permitted to lay down the capital ships authorized for the years 1927 and 1929.

Article II. The United States, Great Britain, and Japan agree to dispose, by scrapping or other approved method (see Part II, Annex 2), capital ships as follows: United States—*Florida, Utah, and Arkansas* (or *Wyoming*); Great Britain—*Benbow, Iron Duke, Marlborough, Emperor of India, and Tiger*; Japan—*Hiei*. The following ships may be retained by their respective owners for training purposes after being reduced to the condition described in Part II, Annex 2, Sect. V:—*Arkansas* (or *Wyoming*), *Iron Duke, Hiei*. Subject to the conditions of the Washington treaty, other capital ships may be retained. The right of replacement is not lost by delay in exercising that right.

Article III. The expression, "aircraft carrier," is newly

THE LONDON NAVAL CONFERENCE—A GROUP OF DELEGATES

The Figures Standing Include Dwight W. Morrow, Secretary of the Navy Charles Francis Adams, Hugh S. Gibson, and Ambassador Charles G. Dawes of the United States Delegation. Those Seated Include Senator David A. Reed, Senator Joseph T. Robinson, and Secretary of State Henry L. Stimson of the United States Delegation; Prime Minister Ramsay MacDonald and Foreign Minister Arthur Henderson of Great Britain; Foreign Minister Aristide Briand and Ambassador Aimé de Fleuriau from France

defined, so as to "include any surface vessel of war, whatever its displacement, designed for the specific and exclusive purpose of carrying aircraft and so constructed that aircraft can be launched therefrom and landed thereon." The fitting of landing-on or flying-off decks on capital ships, cruisers, or destroyers, that are not designed or fitted exclusively as aircraft carriers, shall not cause them to be classified as aircraft carriers. No existing capital ship shall be fitted with a landing-on platform or deck.

Article IV. No aircraft carrier of 10,000 tons or less, mounting a gun of greater calibre than 6.1 inches, shall be acquired by, or constructed by or for any of the signatory nations. From the coming into force of this treaty no aircraft carrier of 10,000 tons or less, mounting a gun in excess of 6.1-inch calibre, shall be constructed within the jurisdiction of any of the high contracting parties.

Article V. An aircraft carrier must not be constructed for carrying a more powerful armament than is provided in Art. IV of this treaty or in Art. IX-X, of the Washington treaty except that, in the said Art. IX-X, the calibre of 6-inch guns may be increased to 6.1 inches.

PART II

Article VI. 1. The rules of the Washington treaty (Ch. 2, Part 4) for determining standard displacement shall apply to all surface vessels of each of the signatory nations.

2. "The standard displacement of a submarine is the surface displacement of the vessel complete (exclusive of water in the non-water-tight structure) fully manned, engined, and equipped ready for sea, including all armament and ammunition, equipment, outfit, provisions for crew, miscellaneous stores, and implements of every description that are intended to be carried in war, but without fuel, lubricating oil, fresh water, or ballast water of any kind on board."

3. "Each naval combatant vessel shall be rated at its displacement tonnage when in standard condition. The word 'ton' except in the expression 'metric tons' shall be understood to be the ton of 2240 pounds (1016 kilos)."

Article VII. No submarine which exceeds 2000 tons displacement or carrying a gun of over 5.1 inches calibre may be constructed by or for any signatory nation. Any such nation may retain, buy, or build not more than three submarines of over 2000 tons. France may retain as one of these a submarine of 2880 tons, already launched, carrying 8-inch guns. Submarines possessed on Apr. 1, 1930, carrying guns of over 5.1 inches, if the displacement is not over 2000 tons, may be retained. After the coming into force of this treaty, no submarine of over 2000 tons or carrying a gun of over 5.1 inches calibre shall be constructed within the jurisdiction of any signatory government except as provided in this article.

Article VIII. Subject to any special agreements which may submit them to limitation, the following vessels are exempt from limitation:

(a) Naval surface combatant vessels of 600 tons or less.

(b) Naval surface combatant vessels exceeding 600 tons but not exceeding 2000 tons, provided they have none of the following characteristics: (1) Mount a gun of over 6.1 inches; (2) or more than 4 guns of over 3 inches; (3) or are designed or fitted to launch torpedoes; (4) or are designed for a speed of more than 20 knots.

(c) Naval surface vessels, not specifically built as fighting ships, which are employed on fleet duties, or as transports, or in some other way than as fighting ships, provided they have none of the characteristics listed in the foregoing paragraph (b) nor any of the following: (5) are protected by armor plate; (6) are designed or fitted to launch mines; (7) are fitted to receive airplanes on board from the air; (8) mount more than one catapult (or similar apparatus) on the centre line, or more than two—one each side; (9) or, if fitted within the restrictions of (8), are designed or adapted to operate at sea more than three airplanes.

Article IX. Rules for replacement in Annex I (following Art. XIII) are for vessels of war of 10,000 tons or less except airplane carriers whose replacement is governed by the provisions of the Washington treaty.

Article X. Within one month after the laying down or completing of vessels (except capital ships, aircraft carriers, and vessels exempt from limitation by Article VIII) for any party to this treaty, that party shall furnish to each of the other parties to this treaty the following information:

(a) Date of laying the keel; classification of vessel; standard displacement in tons; length at water line; extreme beam at or below water; mean draft at standard displacement; calibre of largest gun.

(b) Date of completion and particulars of foregoing paragraph (a) as for that date. The information to be given for capital ships and aircraft carriers is governed by the Washington treaty.

Article XI. Subject to the provisions of Article II of this treaty the rules for disposal contained in Annex 2,

Part II of this treaty shall be applied to all vessels of war to be disposed of under this treaty and to the aircraft carriers as defined in Article III.

Article XII. 1. Subject to supplementary agreements, the special vessels of the lists given in Annex 3 may be retained and their tonnage shall not be included in tonnage subject to limitation.

2. Any other vessel built, acquired, or adapted to serve the purpose for which these vessels are retained shall be charged to the appropriate combatant category unless exempt from limitation under the terms of Article VIII.

3 and 4. Special arrangement for replacement of Japanese vessels retained.

Article XIII. Existing ships of various types which, prior to Apr. 1, 1930, have been used as stationary training establishments or hulks, may be retained in a non-seagoing condition.

ANNEX 1

RULES FOR REPLACEMENT

Section I. Except as provided in Section III and in Annex 3, a vessel shall not be replaced until it becomes "over age." A vessel shall be deemed over age when the following number of years have elapsed since the date of its completion:

(a) For a surface vessel exceeding 3000 tons but not exceeding 10,000 tons standard displacement: (1) if laid down before Jan. 1, 1920,—16 years; (2) if laid down after Dec. 31, 1919,—20 years.

(b) For a surface vessel not exceeding 3000 tons: (1) if laid down before Jan. 1, 1921,—12 years; (2) if laid down after Dec. 31, 1920,—16 years.

(c) For a submarine—13 years.

The keels of replacement tonnage shall not be laid down more than three years before the year in which a vessel to be replaced becomes "over age," but this is reduced to two years for a vessel not exceeding 3000 tons. The right of replacement is not lost by delay in laying down replacement tonnage.

Section II. Except as otherwise provided in this treaty, a vessel or vessels whose retention would cause the maximum tonnage permitted in the category to be exceeded shall, on the completion or acquisition of the replacement tonnage, be disposed of in accordance with Annex 2.

Section III. In the event of loss or accidental destruction, a vessel may be immediately replaced.

ANNEX 2

RULES FOR DISPOSAL OF VESSELS OF WAR

[These rules are of such length and detail that they have been omitted in this summary. In general terms they are supposed to render the vessel valueless for war purposes.]

ANNEX 3

SPECIAL VESSELS THAT ARE RETAINED (SEE ART. XII).

United States may retain the minelayers *Aroostook* and *Oglala* (4,950 tons), *Baltimore* (4,413), *San Francisco* (4,083), monitor *Cheyenne* (2,800), gunboat *Helena* (1,392), yachts *Isabel* (938) and *Niagara* (2,600), destroyer tenders *Bridgeport* (11,750), *Dobbin* (12,450), *Melville* (7,150), and *Whitney* (12,450), submarine tender *Holland* (11,570), and naval transport *Henderson* (10,000). Total tonnage 91,496.

France may retain the minelayers *Castor* (3,150 tons), *Pollux* (2,461), seaplane carrier *Commandant Teste* (10,000), a net layer (2,293), and 17 dispatch vessels of 600 to 644 tons. Total tonnage, 28,644.

British Commonwealth of Nations may retain the mine layer *Adventure* (6,740), Australian seaplane carrier *Albatross* (5,000), monitors *Erebus* (7,200), *Terror* (7,200), *Marshal Soult* (6,400), Indian marine sloop *Olive* (2,021), and submarine depot ship *Medway* (15,000). Total tonnage 49,561.

Italy may retain the seaplane carrier *Miraglia* (4,880 tons), monitors *Faa di Bruno* (2,800), *Monte Grapha* (605), *Montello* (605), ex-monitors *Monte Cengio* (500), *Monte Novoglio* (500), and sloop *Campania* (2,070). Total tonnage 11,960.

Japan may retain the minelayers *Aso* (7,180), *Tokima* (9,240), old cruisers *Asama* (9,240), *Yakumo* (9,010), *Idzumo* (9,240), *Iwate* (9,240), *Kasuga* (7,080), and gunboat *Yodo* (1,320). Total tonnage 61,430.

PART III

The provisions of this part are agreed to, as among themselves, by the United States, Great Britain and Japan.

Article XIV. The naval combatant vessels of the agreeing nations (other than capital ships, aircraft carriers, and all vessels exempt from limitations under Article VIII) shall be limited, during the term of this treaty, as

provided in this Part III and, in the case of special vessels, as provided in Article XXII.

Article XV. For the purposes of this Part III, the definition of cruiser and destroyer categories shall be as follows:

Cruisers are defined as surface vessels of war, other than capital ships or aircraft carriers, the standard displacement of which exceeds 1850 tons (1880 metric tons) or with a gun above 5.1 inches (130 m.m.) in calibre. The cruiser category is divided into the following sub-categories: (a) cruisers carrying a gun above 6.1 inches calibre; (b) cruisers carrying a gun not above 6.1 inches. Destroyers are defined as surface vessels of war of which the standard displacement does not exceed 1850 tons and with a gun not above 5.1 inches calibre.

Article XVI. 1. The completed tonnage in the cruiser, destroyer, and submarine categories, which is not to be exceeded on Dec. 31, 1936, is given in the following table:

| Categories | United States | Great Britain | Japan |
|---------------------------|---------------|---------------|---------|
| Cruisers: | | | |
| (a) guns over 6.1 in. . . | 180,000 | 146,800 | 108,400 |
| (b) guns 6.1 in. or less | 143,500 | 192,200 | 100,450 |
| Destroyers | 150,000 | 150,000 | 105,450 |
| Submarines | 52,700 | 52,700 | 52,700 |

2. Vessels which cause an excess tonnage in any category of this table shall be disposed of gradually during the period ending Dec. 31, 1936.

3. The maximum number of cruisers in sub-category (a) shall be as follows: For the United States, 18; for Great Britain, 15; for Japan, 12.

4. Only 16 per cent of destroyer categories shall exceed 1500 tons. Destroyers completed or building on April 1, 1930, in excess of this percentage may be retained, but no other destroyers exceeding 1500 tons shall be constructed or acquired until reduction to 16 per cent is effected.

5. Not more than 25 per cent of the total tonnage in the cruiser categories may be fitted with a landing-on deck or platform for aircraft.

6. The submarines referred to in Art. VIII, par. 2 and 3, will be counted as part of the submarine tonnage of the nations concerned.

7. The tonnage of any vessels retained under Art. XIII or Annex 2, Part II of this treaty shall not be included in the tonnage subject to limitation.

Article XVII. A transfer of tonnage may be made between destroyers and cruisers of sub-category (b), not to exceed 10 per cent of the tonnage of the category or sub-category into which the transfer is made.

Article XVIII. The United States contemplates the completion of 15 cruisers of sub-category (a) by 1935. For each of the remaining three she may substitute 15,166 tons of cruisers in sub-category (b). Subject to this, the sixteenth, seventeenth, and eighteenth cruiser will not be laid down before 1933, 1934, and 1935 respectively nor completed before 1936, 1937, 1938.

Article XIX. Except as provided in Art. XX, the tonnage laid down in any category subject to limitation in accordance with Art. XVI shall not exceed the amount necessary to reach the maximum allowed tonnage of the category, or to replace vessels that become "over age" before Dec. 31, 1936. But replacement tonnage may be laid down for cruisers and submarines that become over age in 1937, 1938 and 1939 and for destroyers that become over age in 1937 and 1938.

Article XX. Describes special concessions to Great Britain in replacing undesirable cruisers and to Japan in replacing submarines, destroyers and cruisers.

Article XXI. If, during the term of the present treaty, the requirements of the national security of one of the three nations signatory to Part III are, in the opinion of its government, materially affected by new construction of any power other than those signatory to Part III of this treaty, with respect to vessels limited by Part III, this signatory power will notify the other parties to Part III as to the increase required in its own tonnages, specifying the proposed increases and the reasons therefor and shall be intitled to make such increase. The remaining signatories may make a proportional increase in their own fleets and promptly advise with each other as to the situation thus presented.

PART IV

"Article XII. The following are accepted as established rules of international law.

"1. In their action with regard to merchant ships, submarines must conform to the rules of international law to which surface vessels are subject.

"2. In particular, except in case of persistent refusal to stop on being duly summoned, or of active resistance to visit or search, a warship—whether surface vessel or submarine boat may not sink or render incapable of navigation a merchant vessel without having first placed passengers, crew, and ship's papers in a place of safety.

For this purpose the ship's boats are not regarded as a place of safety unless the safety of the passengers and crew is assured, in the existing sea and weather conditions, by the proximity of land, or the presence of another vessel which is in a position to take them on board.

"The high contracting parties invite all other powers to express their assent to the above rules."

PART V

"Article XXIII. The present treaty shall remain in force until Dec. 31, 1936, subject to the following exceptions: (1) Part IV shall remain in force without any limit of duration. (2) The provisions of Art. III, IV, and V and Art. II, so far as may relate to aircraft carriers, shall remain in force for the same period as the Washington treaty.

"Unless the high contracting parties should agree otherwise by reason of a more generally known agreement limiting naval armaments, to which they all become parties, they shall meet in conference in 1935 to frame a new treaty to replace and carry out the purposes of the present treaty, it being understood that none of the provisions of the present treaty shall prejudice the attitude of any of the high contracting parties at the conference agreed to."

Articles XXIV, XXV, and XXVI refer to details of ratification. The treaty comes into force as regards the United States, Great Britain, and Japan when ratified by them; and into force—except Part III—as regards France and Italy, when ratified by them. (The Treaty was ratified by the governments of the United States, Great Britain, and Japan in 1930. See each country under *History*.)

NOTE—Paragraphs and lesser parts enclosed in quotation marks are quoted verbatim from the text of the treaty.

NAVIES OF THE WORLD IN 1930

ARGENTINA. The light cruisers *Veinticinco de Mayo* and *Almirante Brown*, sister ships of 6800 tons (standard), were completed in 1930. The former was reported to have made a maximum speed of 33.5 knots. Three submarines, the *Salta*, *Santa Fé*, and *Santiago del Estero*, were laid down at the Tosi yard at Taranto in 1928 and were nearing completion at the end of 1930. The displacements are 775/920 tons; speeds, 17.5/9 knots; armament: one 4-inch gun, six 21-inch torpedo tubes.

AUSTRALIA. The naval budget was being reduced. The destroyers *Paramatta*, *Warrego*, *Yarra*, and *Swan*, and the depot ship *Penguin* were ordered to be sold. The officers of the navy were reduced in number by about twelve; and as a further measure of economy the Commonwealth Naval College at Jervis Bay, N. S. W., was closed and the cadets transferred to Flinders Naval Depot, Victoria. The consolidation effected a saving of \$150,000 per year but there was no change in the educational course.

BRAZIL. Late in 1929, the Brazilian government approved the proposal for a new schoolship and the necessary credits were voted. The vessel was to be a four-masted sailing ship fitted with auxiliary propulsion by Diesel engines. The principal details are approximately as follows: length, 295 feet; beam, 42.5 feet; draft, 22 feet; speed with motors, 10.5 knots; armament: four 4-inch guns and four 3-pounder anti-aircraft guns.

CANADA. The destroyers *Saguenay* and *Skeena* were under construction at the Woolston yard of John I. Thornycroft & Co., near Southampton, England. Both were launched in 1930 and were to be completed in 1931. The principal details are: length between perpendiculars, 309 feet; beam, 32.5 feet; displacement, 1320 tons; armament: four 4.7-inch guns, two 2-pounders, five machine guns, and eight 21-inch torpedo tubes on quadruple mounts.

CHILE. It was reported that the Chilean government had decided to order a 10,000-ton light cruiser in England. The vessels under construction for the Chilean navy during 1930 were the submarine tender *Araucano* and the oil-fuel

ships *Maipo* and *Rancagua* of 7715 tons displacement—all built in England and were completed, or very nearly so, at the end of the year. The *Araucano* is a coal-burning steamer of 9000 tons and was launched at the Vickers-Armstrong Works, Barrow, late in 1929. Her principal details are: length, 390 feet; beam, 55 feet; mean draft, 16.5 feet; armament: two 4.7-inch guns, two small anti-aircraft guns; speed, 13 knots. She is fully equipped for the repair and maintenance of a squadron of submarines and has excellent accommodation for their officers and crew. The battleship *Almirante Latorre* was being modernized in England during the year.

CHINA. The Chinese building programme, published late in 1929, differed materially from the one reported about a year before and given in the YEAR BOOK for 1929, p. 550. It consisted of two battleships of 12,000 tons, four light cruisers of 5000 tons, two auxiliary vessels (type not stated), twelve river gunboats, two transports, two mine-layers, two hospital ships. If the battleships were designed to operate in the rivers and the cruisers to chase piratical craft, the programme seemed to be a very practical one. Only gunboats had been laid down. The river gunboat *Min Chuan* was completed early in 1930 at the Kiangnan Dock and Engineering Works near Shanghai. The principal details are: length over all, 106.7 feet; breadth (molded), 26 feet; draft, 6 feet; displacement, 460 tons; horsepower, 2000; speed, 18 knots; armament: two 4.7-inch guns—one forward and one aft, three 6-pounders, six machine guns. Other boats of similar type were built in 1928-29. A larger boat, the *Yat Sen*, of about 900 tons, was laid down early in 1930.

COLOMBIA. Three gunboats, designed for service on the Magdalena River, were completed by Yarrow and Company in England early in 1930. Their names are *Cartagena*, *Santa Marta*, and *Baranguilla*, and the principal details are: length, 137.75 feet; beam, 23.5 feet; armament: one 3-inch and four machine guns; speed, 16 miles per hour (14 knots).

DENMARK. The Socialist government of Denmark had taken up the question of naval armament and was making drastic changes. Believing that so small and poor a country could not afford to support an adequate naval armament to insure its defense, the government decided to reduce and reorganize its naval force. According to the proposed plans, the reorganized force was to consist of: 6 ships of surveillance and inspection (total tonnage, 8000); 18 to 24 smaller units (total tonnage, 3000) with the same duties; 2 depot ships; 12 seaplanes; and some small torpedo boats and mining craft. The personnel of the navy was to be reduced by the retirement or discharge of 10 deck officers, 30 warrant and petty officers, and 100 men. This would effect a reduction of 250,000 crowns. The coast-defense battleship *Niels Juel* (4200 tons) and the small cruiser *Hejmdal* (1313 tons) were to be sold as well as some older vessels. The small destroyer *Hvalen* was launched at the royal dockyard, Copenhagen, during 1930. It had a displacement of 300 tons, a speed of 30 knots, and was to be armed with two 3-inch guns and eight torpedo tubes.

FINLAND. The vessels of the naval building programme, which consists of four armored coast-defense ships of about 4000 tons, three submarines of 450 tons, one submarine of about 100 tons, and four small, fast torpedo boats, were be-

ing constructed as rapidly as practicable. The two coast-defense ships, two of the 450-ton submarines, the smaller submarine, and some of the small torpedo boats had been laid down. One of the larger submarines was launched at Abo, Finland, in 1930.

FRANCE. The French naval budget for 1930-31, as approved by the parliament, provided for the expenditure of 2,722,741,389 francs (1 franc = \$0.039179), an increase of nearly 40 million francs upon the figures of the previous budget. To this should be added a supplementary credit of 120 millions and part of the special credit of 300 millions, which was designed to be used in anticipating work on future programmes of construction already planned, and the building of coast-defense submarines and of oil-storage tanks.

The budget for 1930-31 provided for 3487 deck officers, 672 other officers, 244 flying officers, and 12 non-flying officers of the navy air force. An enlisted force of 57,500 men was authorized.

The complete list of vessels to be laid down in 1931 had not been published at the end of 1930. There was considerable discussion in the French press as to vessels of the large cruiser class and it was possible that no definite decision had been reached by the naval authorities. The 10,000-ton light cruiser *Algérie*, which was commenced at Brest in December, 1930, differed greatly from all previous French light cruisers of the 10,000-ton class. The protection had been notably increased. Special armor, 3.5 to 5.5 inches thick, was to protect the vitals and the decks were armored against air attack. Her 8-inch guns, of a new and more powerful type, are mounted in pairs in four turrets as are those of her predecessors. The anti-aircraft guns are of 4-inch calibre and are eight in number. The increase in weights due to armor and armament forced a decrease in speed to 32 knots—3 knots less than the speed of the almost wholly unprotected vessels of the *Tourville* class. The battleships of the *Jean Bart* (23,467 tons) class have been thoroughly modernized; work on the last to be completed was finished in 1930. Similar repairs and modifications were being made on the three ships of the *Lorraine* (23,550 tons) class.

The vessels completed in 1930 were: the light cruiser *Colbert* (10,000 tons), aircraft tender *Comdt. Teste* (10,000), cruiser mine-layer *Pluton* (5600), oil-fuel ship *Niger* (15,500), the destroyer leaders, *Bison* and *Lion* (2780), the destroyers *Frondeur*, *Foudroyant*, and *Fougucux* (1600), the submarines *Pascal*, *Pastcur*, *Henri Poincaré*, and *Poncellet* (1550/2000), and the submarines *Monge* and *Actéon* (1570/2000). The vessels under construction in 1930 and those of which the construction was authorized, but probably not commenced, are listed in the following table.

FRANCE: WARSHIPS BUILDING IN 1930

| Class and name | Tons | Reported condition on Dec. 31, 1930 |
|---------------------|--------|-------------------------------------|
| Light cruisers: | | |

GERMANY. The naval budget for 1930-31 amounted to 194 million marks (1 mark = \$0.2382). It provided a credit of 9,700,000 marks for continuing the construction of the hull of the armored cruiser *Admiral Scheer*, 8,100,000 marks for her guns, and 400,000 for her torpedoes. The budget proposals called for a first installment on the construction of *Ship B* (similar to the *Admiral Scheer*), but the request was refused by the Reichstag. A fourth installment of 4,700,000 marks was made for the construction of the cruiser *Leipzig*, 4,700,000 marks toward completing her guns, and 400,000 for her torpedoes. The sum of 4,800,000 marks is allotted to the gunnery school ship *Ersatz-Drache*; this vessel appeared as a tender (type not stated) in the budget of 1929-30 and a first installment of 1 million marks was allotted for commencing construction. The usual amounts for personnel, general maintenance, repairs, etc., were approved. Aside from the request for laying down *Ship B*, the budget as presented was voted without modification. The light cruiser *Köln*, of 6000 tons displacement, was completed in 1930.

There were building for the German navy in 1930: the *Admiral Scheer* (10,000 tons—fully described in the YEAR BOOK for 1929, p. 551), the light cruiser *Leipzig*, the gunnery school ship *Ersatz-Drache*, and some small craft. The *Leipzig*, which was launched in October, 1929, probably would be completed in 1931. She was the latest of five 6000-ton cruisers built by the German navy under the restrictions of the Versailles treaty which limited the tonnage of new German cruisers to 6000 and their number to eight. These vessels, the *Emden* (launched, 1925), *Königsberg* (1927), *Karlsruhe* (1927), *Köln* (1928), and *Leipzig* (1929), while of the same general type, differ materially in details—each being an improvement upon its predecessor. In the *Emden*, some gain in weight was effected by electric welding; in other respects her structural features were mostly of the usual type. Her length on the water line is 493.75 ft.; beam, 46.75 ft.; mean draft, 17.5 ft. The battery consists of: eight 6-inch, 45 calibre guns in pairs in four turrets—two forward, two aft—on the midship line, turrets No. and No. 3 being elevated to fire over Nos. 1 and 4; two 3.46-inch anti-aircraft guns; 18 machine guns; four 19.7-inch, above-water torpedo tubes. The engines are geared turbines developing about 46,500 horse power and a speed of 29 knots. The boilers use coal and oil. The *Königsberg*, *Karlsruhe*, and *Köln* differ from the *Emden* in many respects. The water-line length is 554.5 ft.; the beam is 49.9 ft.; and the maximum draft, at 6000 tons displacement, is 17.9 ft. The armament consists of: nine 6-inch, 50 cal. guns in three triple-gun turrets,—one forward, two aft—the latter placed in echelon; four 3.46-inch anti-aircraft guns mounted singly on the superstructure; 12 19.7-inch, above-water torpedo tubes in triple mounts. The weight of the hull was further reduced by practically complete electric welding and the use of an improved quality of steel and other metals. The propelling machinery consists of geared turbines driving twin screws and Diesel engines driving a third (midship) screw. The Diesel engines are used for cruising purposes. The boilers are oil-fired. The total horse power is 65,000 and the speed about 32 knots. A mine-laying port is in the stern under the overhang.

The *Leipzig* differs from her predecessors of the *Königsberg* type in several important features.

The use of the highest grade of steel, of some lighter metals, and of electric welding was carried still further. Bulges on the side give better anti-torpedo protection and may be used as reserve feed tanks. The dimensions are: water-line length, 544.5 ft.; beam 53.3 ft.; mean draft at 6000 tons, 15.5 feet. The battery consists of nine 6-inch guns said to be more powerful than those of the *Königsberg* class. The four 3.46-inch, anti-aircraft guns are on twin mounts—both guns and mounts being of improved type. The machinery is similar to that of the *Königsberg* class, but the Diesel engines are of a new and lighter type; they are designed to develop 12,000 horse power at full power and give a speed of 18 knots. At 14 knots these engines will give a cruising range of over 4000 miles without using the reserve supply in the bulge tanks. The horse power of the turbine engines is about 60,000, so that the total power is 72,000; and the expected speed is 32 to 33 knots with all engines in operation. All five of these cruisers have armored water-line belts 3 to 4 inches thick as well as armor on the turrets and conning tower, but the protection of the *Leipzig* was said to be superior to that of the others.

GREAT BRITAIN. The naval budget for the fiscal year, (Apr. 1 to Apr. 1) 1930-31, provided for an expenditure of £51,739,000. It was £4,126,000 less than the budget of 1929-30 and was the smallest since the war. The authorized personnel on Apr. 1, 1930, consisted of 5767 commissioned officers in service and 675 others, 530 cadets at Dartmouth, 905 warrant officers, 79,143 enlisted men, 378 marine officers, 37 marine warrant officers, and 9619 enlisted men—a total personnel of 97,054. During the ensuing year this total was to be reduced to about 94,000. The building programme of 1929-30 was reduced by the cancellation of 2 cruisers, 2 destroyers, 3 submarines, 2 sloops, 1 net-layer, and 1 target tower. The programme for 1930-31 consisted of 3 cruisers of about 6500 tons armed with 6-inch guns, 1 destroyer leader, 8 destroyers, 3 submarines, 4 sloops, 1 net-layer, and 1 target tower.

The estimated expenditure on the Singapore naval base was raised to £800,000—an increase of £220,000 over the estimates of 1929-30. The floating dry dock at the base was in service and had docked the cruiser *Cumberland* (10,000 tons). The naval aviation allotments were reduced £33,000 below the £1,300,000 of the previous budget. There were 82 naval officers qualified as observers and 120 officers acting as pilots in active service; 20 others were under instruction. Catapults for launching planes were installed on the battleship *Resolution* and the large cruiser *Frobisher*, but were said not to have given satisfaction. Trials with catapults are being continued on the aircraft carrier *Ark Royal*.

The battleship *Valiant* and the battle cruiser *Hood* were undergoing modernization in 1930 and the work was approaching completion at the end of the year, if not completed. The *Barham* was the only British capital ship which had not been modernized since the World War; work on her was reported to have been planned. The vessels under construction for the British navy in 1930 and those of which the construction was authorized, but probably not commenced, are listed in the table in the second column.

The tonnages of certain vessels given in these tables differ from the figures for 1929 chiefly because of the change from normal to standard tons, as required by the London Naval Treaty.

GREECE. The Greek naval budget for 1930-31 provided for an increase of 11,339,070 drachmas in the ordinary expenditure and 14,514,250 drachmas in the extraordinary expenditure above the

corresponding figures in the budget for 1929-30. The total of the budget was about 437 million drachmas (1 drachma = 1.3 cents). The principal increases in the ordinary expenditure were: 5.5 millions for personnel, 4 millions for aviation, 10.5 millions for mobile material, maintenance, etc., and 11 millions for pay; the principal reduction was 8 millions on naval instruction. The principal items of increase in the extraordinary expenditure concerned naval aviation and amounted to a total of nearly 7 millions. It was therefore apparent that much greater attention was being given to naval aviation. According to the *London Engineer*, the Greek government had finally agreed to take over and complete the battleship *Salamis*, modernize, and complete her. Earlier reports from Greece left the matter in some doubt. The four submarines of the *Nereus* type (730/930 tons) had been completed in France and turned over to the Greek naval authorities. The only vessels under construction for the navy in 1930 were two destroyer leaders (see YEAR BOOK for 1929, p. 552) of 1450 tons building in Italy.

ITALY. The naval budget for the fiscal year 1930-31 provided for an expenditure of 1,475,966,000 lire (1 lira = 5.263 cents). The programme of construction consisted of 29 vessels, viz: 1 light cruiser of 10,000 tons; 2 light cruisers of about 5100 tons; 4 destroyers of 1240 tons; 4 submarines (mine-layers) of 1390 tons; 6 submarines (mine-layers) of 810 tons; 12 submarines (coast defense) of 610 tons. As in most navies the recent light cruisers of 10,000 tons were reported to have much better armor protection with a consequent reduction in speed. The *Zara* and *Fiume*, sister ships, and both launched in 1930, were designed to develop a speed of about 32 knots instead of 35.5 as in the *Trento* and *Trieste*. The designed horse power is 95,000 instead of the 150,000 in the *Trento* class. The hull is shorter and deeper, and hull, machinery, and battery have much greater armor protection—a 5.5-inch belt from forward to after turret, 5-inch turret fronts, and 4.7-inch transverse bulkheads. The *Gorizia* and *Bolzano* were believed to be similar to the *Zara* and *Fiume* in all essential respects. No information concerning the *Pola*, which was authorized by the programme for 1930-31, had been published.

One of the 5250-ton cruisers, the *Alberto da Giussano*, had her trials in June, 1930, less than two months after launching. The speed during the four hours trial was 38.77 knots with 100,000 horse power. In September the mean speed developed during five hours was 39.3 knots, the maximum reached being 40.7 knots. The designed speed was 37 knots with 95,000 horse power. It is noteworthy that all the larger submarines of the new programme were mine-layers. The vessels under construction for the Italian Navy in 1930 and those of which the construction was authorized, but probably not commenced, are listed in the accompanying table.

JAPAN. The amount of the naval budget for 1930-31 was 265,200,000 yen. As that for 1929-30 was 269,120,000 yen, there was a reduction of 3,920,000 for the current year. The new naval programme called for:—(1) acceleration of the work of modernizing all battle ships; (2) augmenting the elevation of their guns; (3) substituting, as far as possible, light cruisers carrying 6-inch guns for those having 5.5-inch guns. A new type of light cruiser of 8000 to 9000 tons, carry-

ing 6-inch guns, was to be developed. The tonnage of submarines and light cruisers was to be maintained to the limit of the treaty. The reduction in submarines was to be compensated by the increase of aircraft; 25 per cent of all vessels were to be

fitted to carry planes; catapults were to be placed on all combatant vessels which could carry them. The new six-year programme of construction called for the expenditure of 215,000,000 yen.

During 1930 the number of airplane squadrons was increased to seventeen and the navy department was being urged to extend the number of squadrons to twenty-eight at a cost of 60 million yen. A preparatory school for aviation cadets was created at Yokosuka; the number of cadets was between 70 and 80, the entrance age 15 to 17 years, and the duration of the course three years. The work of developing and equipping the great naval aviation base at Tateyama was accelerated during 1930. The vessels that were under construction for the Japanese navy in 1930 and those of which the construction was authorized, but probably not commenced, are listed in the accompanying table:

NETHERLANDS. The national parliament, early in 1930, approved the naval budget which allots 12,500,000 florins (1 florin = \$0.402) in four annual installments for the construction of a new cruiser of 5250 tons, 32 knots speed and carrying six 5.9-inch guns. The necessity of a greater protection for the Netherlands East Indies was laid before parliament with the explanatory notes on the budget and a supplementary budgetary allowance of 700,000 florins was voted later in the year. Of this, the sum of 250,000 was to be added to the

first installment on the new cruiser and the remainder was to be used for commencing the construction of a gunboat, for East Indian service, which would be armed with three 6-inch guns and have a speed of about 15 knots.

NORWAY. During 1930 the navy department laid down a new mine-layer of about 1700 tons which was also to be specially fitted for instruction of the naval personnel in mining work. The armament was to consist of 4.7-inch guns, an anti-aircraft gun, and torpedo tubes.

PERSIA. According to reports the Italian naval commission, which had been asked to advise the government in regard to the organization of a naval force, had recommended the forming of a flotilla of six gunboats and some small craft. This was to form the nucleus of the Persian naval establishment. A naval academy and schools of instruction were in prospect.

PERU. The naval and air budget for 1930 amounted to £823,396 sterling as compared with £675,717 in 1929 and £565,229 in 1928. The increase was due to the development of the combined air force (naval and land) which was controlled by the minister of marine and aviation. In the preceding years the land air force was under control of the minister of war.

POLAND. The old German marine schoolship *Prinz Eitel Friedrich*, of 1570 tons, was taken over from France and renamed *Dar Pomorza*. She had been thoroughly repaired and refitted and, in 1930, was taken to Gdynia where she replaced the *Lwow* as the Polish naval schoolship. The new Polish destroyers *Wicher* and *Burza*, of 1500 tons, that were supposed to be completed in 1929, were delayed in construction and not finished until 1930. The work on the submarines *Rys*, *Wilk*, and *Zbik*, of 980/1250 tons, was also delayed. The first two were completed in 1930 and the *Zbik* was to be finished in 1931.

PORTUGAL. The minister of marine presented to the council of ministers a long report on the condition of the navy and recommendations for reorganization. The recommended programme of construction was designed to be completed in four periods of about three years each. The vessels of the first period are to be 2 gunboats of 2000 tons and 2 of 1000 tons, 4 destroyers of 1500 tons, 2 submarines of 800 tons, and 1 aircraft tender carrying 12 planes; the vessels of the second period are to be, 1 cruiser of 5000 tons, 2 destroyers of 1500 tons, and 4 submarines of 800 tons; those of the third period, 1 cruiser of 5000 tons, 2 gunboats of 2000 tons and 2 of 1000, 2 destroyers of 1500 tons, and 2 submarines of 500 tons; and those of the fourth period, 2 gunboats of 1000 tons, 4 destroyers of 1500 tons, 4 submarines of 500 tons, and 1 submarine tender. The total cost of the programme was estimated to be about \$60,000,000.

RUMANIA. The government decided to build a naval base on the Black Sea; a British admiral and two French officers were asked for their advice and opinions concerning it.

RUSSIA. Competent observers who have been able to examine the conditions of Russian ships during the past year report no improvement—probably a steady degeneration. During the year 1929, the destroyers *Voikoff* and *Trotsky* were lost with all hands in the well-protected waters of the Gulf of Finland; while the battleships *Pariskaya Kommuna* of 23,000 tons and the armored cruiser *Profintern* of 7600 tons were seriously injured by a storm while cruising in the Baltic. Such things

could never happen in a navy of the third rate as regards seamanship, discipline, and condition of ships. Repairs of serious importance were effected under the direction of German foremen, assisted by German workmen, in the naval dockyards.

SPAIN. The naval budget for 1930 provided for the expenditure of 109 million pesetas (1 peseta = about 10.5 cents), an increase of 1 million over the amount allotted in 1929. The new programme of construction, announced late in 1929, proposed the construction of 2 light cruisers of 10,000 tons, 12 submarines, 3 destroyer leaders of 1650 tons, 1 oil-fuel ship, 3 gunboats of 250 tons, and several small craft. The estimated cost of the programme was 800 million pesetas. This programme was a modification and extension of previous undertakings. The light cruiser *Miguel de Cervantes* was completed in February, 1930. Shortly afterwards she was seriously injured by collision with a pier; the resulting necessary repairs were completed late in summer. In the spring of 1930 work on the 10,000-ton cruisers *Baleares* and *Canarias* was temporarily stopped as a measure of economy. The destroyer leaders *José Luis Diaz* and *Almirante Ferrandiz* were completed and commissioned late in 1929; the *Lepanto* had her trials, (speed attained, 38.65 knots) and was commissioned in 1930; the *Alcala Galiano* was launched in December, 1929, and the *Almirante Valdez* in the summer of 1930; the *Almirante Antequera* and the *Almirante Miranda* were laid down at the works of the Sociedad Espanola de Construcción Naval at Cartagena in 1929. All these destroyer leaders are of the same class and have a displacement of 1650 tons. The submarines *C.5* and *C.6* were completed in 1930. Some improvements were made in aviation organization and instruction during 1930.

SWEDEN. According to the Swedish press, the law of 1925 cut down the numbers of the personnel too far to leave a sufficient force to carry on the work of the navy. This condition was to be accentuated still further as aviation was developed and the vessels building were completed. These consist of the airplane carrier *Gottland* (5500 tons, laid down in 1929 or 1930), the destroyers *Claes Horn* and *Claes Uggle* (974 tons, laid down 1928), the submarine *Ulven* (700/850 tons, laid down 1928), two small submarines, and two to four vedette boats.

TURKEY. The very extensive repairs and alterations of the *Yavuz Sultan Selim* were completed early in 1930 and her trials in August were regarded as very satisfactory. The vessels under construction during 1930 are listed and described in the YEAR BOOK for 1929, p. 555.

UNITED STATES. The naval appropriation bill for 1930-31 as passed by the Senate amounted to \$380,669,386. In the Senate-House conference this sum was reduced by \$103,875, leaving a balance of \$380,565,511. On June 30, 1930, there were, on the active list of the navy, 5492 line officers, 2062 staff officers, 1148 chief warrant officers and 283 warrant officers. The appropriation act for 1929-30 provided for an enlisted force of 84,500. This was insufficient completely to man all the ships—the average complement of the different ships being about 12 per cent short, notwithstanding that a large number of cruisers, destroyers, and submarines were condemned and put out of commission. The same provisions for officers and men were made in the appropriation act for 1930-31. The appropriation acts for 1929-30 and 1930-31 provided for an average of 1020 com-

missioned marine officers, 155 marine chief warrant and warrant officers, and 18,000 enlisted men.

Pursuant to the terms of the London Naval Armaments Treaty of 1930, the navy department presented to Congress a new programme of construction. This included: 1 airplane carrier of 13,800 tons to cost not more than \$27,650,000, including armor, armament, ammunition, and 114 airplanes; 1 flying deck cruiser, of 10,000 tons and armed with 6-inch guns, to cost not more than \$20,780,000, including armor, armament, ammunition, and 36 airplanes; 1 cruiser, of 7500 tons and armed with 6-inch guns, to cost not more than \$16,005,000, including armor, armament, ammunition, and 6 airplanes; 1 destroyer leader of 1850 tons and 10 destroyers, to cost not more than \$47,000,000; and 4 submarines of 1100 tons to cost not more than \$17,600,000. The department desired to let the contracts, on July 1, 1931, for the airplane carrier, the destroyer leader, the destroyers, and the submarines; the contract for one cruiser to be let in January, 1932, and the contract for the other cruiser before Apr. 1, 1932.

The vessels under construction in 1930 are listed in the subjoined table which gives the tonnage of each and its status as regards completion at the end of the year. Four 10,000-ton light cruisers were completed and commissioned in 1930: the *Pensacola*, February 6; the *Northampton*, May 17; the *Houston*, June 17; and the *Chester*, June 24. Three 10,000-ton cruisers were launched: the *Augusta*, February 1; the *Chicago*, April 10; the *Louisville*, September 1. Of the six others of the same class, the *Portland* and the *Indianapolis* were laid down in 1929; and the *New Orleans*, the *Astoria*, the *Minneapolis* and the *CL-38* were laid down in 1930. The fleet submarine *V.5* (2760/3960 tons, was completed and commissioned on May 15, and a sister boat, the *V.6*, was completed in July. The aircraft carrier *CV.4* (about 13,800 tons) and the submarine *V.7* were laid down in 1930.

UNITED STATES: WARSHIPS BUILDING IN 1930
[Includes vessels of the new building programme presented to Congress in December, 1930]

| Class and name | Tons | Date, or estimated future date, of completion |
|---------------------|--------|---|
| Light cruisers: | | |
| <i>Pensacola</i> | 10,000 | Completed Feb. 9, 1930 |
| <i>Northampton</i> | " | Completed May 17, 1930 |
| <i>Houston</i> | " | Completed June 17, 1930 |
| <i>Chester</i> | " | Completed June 24, 1930 |
| <i>Augusta</i> | " | To be compl. Feb. 1, 1931 |
| <i>Chicago</i> | " | " |
| <i>Louisville</i> | " | To be compl. Feb. 14, 1931 |
| <i>Portland</i> | " | To be compl. Aug. 15, 1932 |
| <i>Indianapolis</i> | " | " |
| <i>New Orleans</i> | " | To be compl. June 2, 1931 |
| <i>Astoria</i> | " | To be compl. Oct. 2, 1933 |
| <i>Minneapolis</i> | " | To be compl. Oct. 2, 1933 |
| <i>CL-38</i> | " | To be compl. Feb. 11, 1934 |
| Flying deck cruiser | " | Proposed |
| Light cruiser | 7,500 | " |
| Aircraft carriers: | | |
| <i>Ranger</i> | 13,800 | To be compl. Mar. 1, 1934 |
| <i>CV-5</i> | " | Proposed |
| Fleet submarines: | | |
| <i>V-5</i> | 2,760 | Completed May 15, 1930 |
| <i>V-6</i> | " | Compl. Sept. 1, 1930 |
| <i>V-7</i> | " | To be compl. Aug. 1, 1932 |

The United States continues to lead the world in naval aviation. So great was her preëminence in everything, except aircraft carriers, that pertains to this important service, that no other country was in her class as respects naval aviation. As regards carriers she was considerably inferior to England, slightly superior to Japan, and much

superior to France and Italy. There were on hand June 30, 1930, 928 service planes, 32 experimental planes, and 29 obsolete planes; in July, 53 of the older service planes were transferred to the obsolete list and 27 obsolete planes were withdrawn from use and destroyed. In 1931, the number of service planes probably would reach 1000 and thereafter would be maintained at that figure, or above it. The 1930 allowance of planes for the naval reserve, which were not included in the 1000-plane programme, was 124. The full 1000-plane strength was to be attained with a saving of more than \$20,000,000 on the estimated cost—an achievement highly creditable to the Naval Bureau of Aeronautics.

All battleships and large light cruisers of the navy, as well as many other vessels, for years had been equipped with catapults for the launching of planes from their decks. The older models largely had been replaced by the new gunpowder type and this work probably would be completed in 1931. Few catapults had been installed on fighting ships of other countries. Of those that had been tried, many had given much trouble; but all the principal European navies as well as the Japanese were endeavoring to develop a satisfactory type. Until they do so they will have to lower their planes over the side and let them "take off" from the water. The American catapults were the result of many years experiment and trials. The *U.S.S. Akron* (Airship *ZRS.4*) probably would be completed in June, 1931; construction of *ZRS.5* was likely to be commenced in 1931 as an allotment of \$1,000,000 appeared in the budgetary estimates. The personnel of the navy on duty June 30, 1930, in connection with naval aviation is shown below:

U. S. NAVY: OFFICERS AND ENLISTED MEN ON AVIATION DUTY

| Classification | Officers | Enlisted men | Total |
|-------------------------|----------|--------------|--------|
| Pilots | 614 | 244 | 858 |
| Student pilots | 184 | 160 | 344 |
| Observers | 9 | . | 9 |
| Student observers | .. | .. | .. |
| Flight orders | 45 | 765 | 810 |
| Non-flyers | 167 | 9,599 | 9,766 |
| Total | 1,019 | 10,768 | 11,787 |

In the Marine Corps flying force there were on June 30, 1930, 127 officers and 1148 men. Of these, 82 officers and 24 men were pilots. Compare the foregoing with the British report (see paragraphs under the head of Great Britain on page 521) that gives 120 officers acting as pilots and 29 under instruction. The number of observers is unimportant, as they are not usually aviators and may be quickly trained. How many air-force (non-naval) pilots were acting in this capacity in the British naval air force was not stated; but they cannot be as efficient in *naval* aviation as were officers that had received a naval education and training. France had no more naval aviators than Great Britain—probably fewer. The exact figures for Japan and Italy were not published, but it was reasonably certain that they possessed less than half as many trained naval aviators as the United States. Four regular navy aviators (3 officers, 1 enlisted man) and 3 regular marine aviators (all officers) were killed in accidents during the fiscal year 1929-30. The total number of deaths from flying accidents during the year, including aviators, naval reserve and marine reserve aviators in service, student aviators, non-aviators, and those on flight orders, was 18; in 1928-29, the total deaths were 31. The number of hours of

flying per fatal accident was 19,070; hours per death (in some accidents more than one were killed), 14,832. The corresponding figures for 1928-29 were 11,288 and 6558. The gain in safety was thus very marked.

NAVAL RESERVES. See NAVAL PROGRESS.
NAVAL TREATY OF LONDON. See NAVAL PROGRESS and GREAT BRITAIN under *History*.

NAVIES. See NAVAL PROGRESS.

NEBRASKA. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 1,377,963. The population on Jan. 1, 1920, was 1,296,372. The capital is Lincoln.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|-------------|------|-----------|-------------|---------------|
| Corn | 1930 | 9,171,000 | 235,695,000 | \$120,204,000 |
| | 1929 | 9,144,000 | 237,744,000 | 164,043,000 |
| Wheat ... | 1930 | 3,810,000 | 73,275,000 | 38,656,000 |
| | 1929 | 3,548,000 | 56,555,000 | 55,902,000 |
| Hay | 1930 | 4,689,000 | 6,434,000* | 36,763,000 |
| | 1929 | 4,580,000 | 6,224,000* | 57,131,000 |
| Oats | 1930 | 2,485,000 | 80,017,000 | 22,405,000 |
| | 1929 | 2,480,000 | 86,304,000 | 32,796,000 |
| Potatoes .. | 1930 | 94,000 | 9,400,000 | 7,990,000 |
| | 1929 | 92,000 | 8,924,000 | 9,816,000 |
| Sugar beets | 1930 | 81,000 | 1,132,000* | |
| | 1929 | 92,000 | 1,054,000* | 7,332,000 |
| Barley ... | 1930 | 725,000 | 22,330,000 | 7,816,000 |
| | 1929 | 647,000 | 18,892,000 | 9,446,000 |
| Rye | 1930 | 333,000 | 4,995,000 | 1,898,000 |
| | 1929 | 262,000 | 3,694,000 | 2,807,000 |

* Tons.

Farms in the State numbered 129,532 in 1930, the total having increased from the 127,734 of 1925 and the 124,417 of 1920. Irrigated lands totaled 528,680 acres in 1929 as against 442,690 in 1919.

MINERAL PRODUCTION. Distinctly secondary in the industrial activity of the State, mineral production made no conspicuous development in 1928. Outside of the digging of sand and gravel to the total value of \$1,265,001 for 1928 and \$1,370,605 in 1927, no mineral industry was listed as reaching \$1,000,000 a year. Clay products totaled \$794,851 for 1928, and \$819,494 for 1927. Stone, cement, and some pumice were also produced. The total value of the mineral products was, for 1928, \$3,454,700; for 1927, \$3,541,792.

FINANCE. State expenditures in the year ended June 30, 1928, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$12,264,152 (of which \$1,333,037 was for local education); for interest on debt, \$140,390; for permanent improvements, \$8,573,976; total, \$20,978,518 (of which \$8,738,832 was for highways, \$2,385,277 being for maintenance and \$6,353,555 for construction). Revenues were \$23,632,325. Of these, property and special taxes formed 46.5 per cent; departmental earnings and remuneration to the State for officers' services, 9.1; sales of licenses, 20.0 (including taxes of \$3,999,702 on sales of gasoline). The State's funded debt outstanding on June 30, 1928 was nil, indebtedness consisting then only of certain yet unpaid warrants. On property bearing an assessed valuation of \$3,283,382,472 were levied in the year State taxes of \$11,945,279.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 6174.36. No construction of additional railway line or trackage during the year 1930 was reported.

EDUCATION. Through the establishment of the Nebraska State Reading Circle an effort was made to bring the school pupils of the State into contact with books considered desirable for them to read as an adjunct to their education. The circle was an organization under professional leadership. An investigation made into the qualifications of the rural teachers, according to G. W. Rosenlof, director of teacher-training, revealed that about 20 per cent of these teachers possessed at least one year of preparation beyond the high-school level. There were enrolled in the public schools of the State, in the academic year 1928-29, 325,204 pupils, out of an estimated population of 416,644 individuals of school age (from 5 to 21 years). Of the enrolled, 151,889 were in graded elementary schools, 106,767 in one-teacher rural schools, and 66,548 in high schools. The year's expenditures for public-school education were: current, 23,404,782; total, including capital outlay and debt service, 27,363,923. The year's salaries of teachers averaged \$1464 for men and \$1239 for women in city and village schools; \$770 for men and \$763 for women in rural schools.

LEGISLATION. A special session of the Legislature was held in March. It repealed the old Bank Guaranty Act, under which all State banks had been required to contribute regular assessments on the basis of their daily deposits, to a fund for the reimbursement of depositors in banks that failed. This law had been found unserviceable, and at the time of its repeal the fund for bank depositors was estimated to show a deficit of \$20,000,000, while about 65,000 depositors were awaiting restitution from it. A new act was passed, relieving all State banking institutions of assessments, both special and regular, except a levy of $\frac{3}{40}$ of one per cent, to continue 10 years.

POLITICAL AND OTHER EVENTS. The campaign of Senator George W. Norris for the Republican nomination to succeed himself was marked by an effort to invalidate his primary vote by placing in nomination to run against him an obscure individual of the same name. This second George W. Norris was a grocer doing business in Broken Bow. Had his candidacy been allowed, the allocation of votes as between the two would have been legally impossible, and the candidate favored by the regular, as opposed to the progressive Republican vote, William M. Stebbins, might have secured the nomination. The confusion was made possible by a feature of the election law, prohibiting the appearance of anything besides the name of the candidate on the primary ballot. The State Supreme Court ruled out the second Norris on the ground that his certificate of nomination, which had been filed at the last possible moment, had not actually been placed in the hands of the Secretary of State until the morning of the day after the time had expired. Senator Norris easily won in the primary on August 12. In September the Senate committee on campaign funds sought to find out whence the instigation of the grocer Norris to enter as a candidate had come; an assistant vice-chairman of the Republican National Senate campaign committee, Victor Seymour, denied having promoted the grocer's candidacy but later resigned from the committee.

The State Supreme Court rendered in July a decision to the effect that when the Legislature had increased a budget estimate of the Governor's and had passed the increase by a vote of at least three to two, the Governor might not veto the

increase. The effect of the decision was to release some \$500,000 of vetoed appropriations, largely for public buildings. The State act to fix the weight of loaves of bread, passed in 1927, was declared unconstitutional by a statutory Federal court of three judges, and a Federal injunction against its enforcement was issued on January 3. The law was judged inequitable because it penalized bakers for shrinkage occurring in their loaves after these had been in the hands of retailers for 12 hours.

The Omaha Grain Exchange reopened its pit for trading in future contracts for grain, after an interval of 13 years, on June 16. The pit had been closed by Federal authority in 1917.

ELECTIONS. Senator George W. Norris, Republican, was reelected, defeating Gilbert M. Hitchcock, Democrat, by a vote unofficially reported as 242,760 to 170,133. The Democratic candidate for Governor, Charles W. Bryan, won narrowly by 217,704 votes (unofficial) to 213,940 for Governor Arthur J. Weaver, Republican. Two Republicans and four Democrats were elected to the House of Representatives, the Democrats gaining two seats. A referendum vote approved a measure to permit municipal electric-power plants to extend their services beyond the bounds of their home municipalities. A constitutional amendment providing for the liability of stockholders of insolvent State banks was approved by popular vote. A proposed amendment to authorize the issue of \$8,000,000 in State bonds to reimburse depositors of insolvent banks was rejected.

OFFICERS. Governor, Arthur J. Weaver; Lieutenant-Governor, George A. Williams; Secretary of State, Frank Marsh; Treasurer, W. M. Stebbins; Auditor, L. B. Johnson; Attorney-General, C. A. Sorensen; Superintendent of Public Instruction, C. W. Taylor.

JUDICIARY. Supreme Court: Chief Justice, Charles A. Goss; Associate Justices, William B. Rose, James R. Dean, W. H. Thompson, George A. Eberly, Edward E. Good, George A. Day.

NEBRASKA, UNIVERSITY OF. A State institution of higher education in Lincoln, Nebr., founded in 1869. The enrollment for the autumn of 1930 was 6327, of whom 3835 were men and 2492 women. The enrollment was distributed as follows: Agriculture, 599; arts and sciences, 1805; business administration, 782; dentistry, 114; engineering, 698; graduate, 405; law, 145; medicine, 322; nursing, 117; pharmacy, 94; teachers, 1295. Included in the arts and sciences and teachers colleges were 455 students of the school of fine arts and 189 of the school of journalism. There were 2665 students enrolled in the summer session of 1930, of whom 902 were men and 1763 were women. The faculty numbered 388. The total income for the year was \$4,573,698. The library contained 254,000 volumes. A new department of agricultural engineering was created, and by purchase, the university school of music was added as a part of the school of fine arts. Chancellor, Edgar A. Burnett, D.Sc.

NEBULÆ. See ASTRONOMY.

NECROLOGY. The following list contains the names of notable persons who died in 1930. Articles will be found in this volume, in their alphabetical order, on those whose names are given below without other text.

Aakjaer, Jeppe.

Acheson, William McCarthy. An American engineer, died in Albany, N. Y., Jan. 25, 1930. He was born in Cohoes, N. Y., July 16, 1878, and was a student at Rensselaer Polytechnic Institute from 1895 to 1898.

From the waterworks department of Troy, N. Y., he went to Panama as engineer in the Isthmian Canal Service (1904-10), after which he was supervising engineer and, later, division engineer for the New York State Highway Department in Buffalo. In 1915-16 he held the same position in the Syracuse Division of the State Highway Department and, after serving as chief engineer for the Crescent Portland Cement Company (1916-1917), he returned in 1917, and again during 1919-23, to the State Highway Department in Syracuse. From 1923 to 1927, he was division engineer for the Bureau of Highways and the Bureau of Canals in the New York State Department of Public Works and, after 1927, chief engineer of the department. After 1922, he also lectured on engineering at Syracuse University. During the World War, he served as captain, and later as major, with the corps of Engineers, U. S. Army. In 1917 he was at the Royal Engineers School, Chatham, England. In 1920 he was promoted to the rank of Lieutenant-colonel in the Engineers' Reserve Corps, U. S. A.

Adam, George Jefferys. A British journalist, died in Paris, France, Mar. 21, 1930. He was born in Edinburgh, Scotland, Sept. 6, 1883. He began his newspaper career in 1901 with Reuters Agency; joined the Paris staff of the London *Times* in 1912; and after 1921 served as European correspondent for the New York *Herald* and New York *Sun*. In addition to achieving a reputation as a war correspondent, he was an able interpreter of French history and politics. His books include: *Behind the Scenes at the Front* (1915); *History of France* (with his wife, Pearl H. Adam, 1921); *A Book about Paris* (1927); *Treason and Tragedy* (1929); and *Georges Clemenceau, 1841-1929* (1930).

Adamowski, Joseph.

Adams, Ephraim Douglass.

Adcock, (Arthur) St. John.

Ahmed Mirza.

Albani, Emma (Marie Louise Emma Cecile Lajeunesse).

Albee, Edward F. An American theatrical manager, died Mar. 11, 1930, at Palm Beach, Fla. He was born in Machias, Me., Oct. 8, 1857. After spending seven years with the road show of P. T. Barnum, he became associated in 1883 with B. F. Keith, in Boston. Together, they developed the vaudeville circuit. At the death of Mr. Keith in 1914, Mr. Albee became president of the Keith-Albee Vaudeville Circuit. In 1927 the Keith-Albee Circuit merged with the Orpheum Circuit, and in 1928 the Radio Corporation of America became a part of the organization, then the Radio-Keith-Orpheum Corporation. Mr. Albee retired in 1929.

Alden, Isabella MacDonald.

Alexander, George.

Allardyce, Sir William Lamond. A British colonial official, died in London, June 10, 1930. He was born Nov. 14, 1861, and was educated at the Oxford Military College. He entered the government service as a clerk and interpreter in the Provincial Department, Fiji Islands, in 1879 and served successively as Acting Resident Commissioner of Rotumah (1881), Stipendiary Magistrate of Fiji (1882), member of the Native Regulation Board and Commissioner of the Supreme Court (1889), Assistant Native Commissioner (1890), Extraordinary Member of the Executive Council (1893), Native Lands Commissioner and member of the Legislative Council (1894), Native Commissioner (1895), Acting High Commissioner for the Western Pacific (1901), and Receiver-General and Colonial Secretary for the Fiji Islands (1902-1904). He also edited a native newspaper, *Na Mata*, from 1890 to 1899. In 1904 he was transferred to the Falkland Islands, where he remained as governor until 1914. In 1915 he became Governor of the Bahamas; in 1920, Governor of Tasmania; and in 1922, Governor of Newfoundland, holding the latter post until 1928. The order of Companion of St. Michael and St. George was conferred on him in 1902, and in 1916 he was created a Knight Commander of St. Michael and St. George and in 1927 a Knight of the Grand Cross of St. Michael and St. George.

Allen, Harry S. An American clergyman, died in Philadelphia, Pa., Nov. 8, 1930. He was born in Butler, Pa., in 1854 and was graduated from Wooster College in 1874, later studying for the Presbyterian ministry at the Western Theological Seminary in Pittsburgh. After holding several pastorates he became in 1893 president of the Presbyterian Ministers' Fund. During his administration the assets of this fund were increased from \$517,000 to more than \$19,000,000.

Allen, Maj. Gen. Henry Tureman, U. S. A., Ret.

Allen, Kenneth. An American civil engineer, died in White Plains, N. Y., Sept. 7, 1930. He was born in New Bedford, Mass., Apr. 6, 1857, and was graduated from the Rensselaer Polytechnic Institute in 1879. After spending a few years in railroad engineering work in the West, he became in 1883 assistant engineer of the

Philadelphia water department, and in 1886 a member of the firm of Breithaupt & Allen, consulting engineers, in Kansas City, Mo. From 1890 to 1893 he was engineer in charge of the topographical survey of the Connelville coke region for the H. C. Frick Coke Company, and until 1899, when he became a member of the firm of Hill, Quick & Allen in Baltimore, held several public engineering posts in Eastern cities. He again relinquished private practice in 1902 to become engineer and superintendent of the water department of Atlantic City, N. J. In 1906 he was appointed division engineer of the Baltimore Sewerage Commission; in 1908, engineer of the Metropolitan Sewerage Commission of New York City; in 1915, engineer of the Bureau of Sewer Plan; and in 1916, engineer of sewerage disposal and then sanitary engineer to the Board of Estimate and Apportionment of New York City. At the time of his death he was sanitary engineer of the New York Sanitation Commission and president of the State Sewerage Works Association.

Amira, Karl von.

Anderson, the Rt. Rev. Charles Palmerston.

Andrée, Salomon August.

Ansorge, Konrad. A German pianist, died in Berlin Feb. 13, 1930. He was born in Buchwald near Liebau, Silesia, Oct. 15, 1862, and studied piano at the Leipzig Conservatory during 1880-84 and under Liszt during 1885-86. After a concert tour through Europe and North and South America he returned to Berlin in 1895, where he taught for several years at the Klindworth-Scharwenka Conservatory. His compositions include a Requiem for male chorus and orchestra, several orchestral pieces, string sextet, two string quartets, and three sonatas.

Appell, Paul Emile.

Appleton, John Howard. An American chemist and educator, died in Providence, R. I., Feb. 18, 1930. He was born in Portland, Me., Feb. 3, 1844, and was graduated from Brown University in 1863, becoming assistant instructor in analytical chemistry there the same year. From 1868 to 1872, he was professor of chemistry applied to arts and from 1872 to 1914, professor of chemistry at Brown University. In 1914 he became emeritus professor. He was also, for a time, State sealer of weights and measures for Rhode Island and chemist for the State Board of Agriculture. His books, of a popular nature because of their attractive form and clearness of exposition, include *The Young Chemist* (1878); *Short Course in Qualitative Analysis* (1878); *Quantitative Analysis* (1881); *Laboratory Year Book* (1883-92); *Beginner's Hand Book of Chemistry* (1884); *Advanced Quantitative Analysis* (1889); *Medical Chemistry* (1889); *Lessons in Chemical Philosophy* (1890); *Metals of the Chemist* (1891); *Report Books for Chemical Work* (1891); *Carbon Compounds* (1892); *Chemistry of Non-Metals* (1897); *Easy Experiments of Organic Chemistry* (1898).

Arcoverde de Albuquerque Cavalcanti, Joachin, Cardinal. A prelate of the Roman Catholic Church, died in Rio de Janeiro, Brazil, Apr. 18, 1930. He was born in Pernambuco Jan. 17, 1850, and as Archbishop of Rio de Janeiro, was created a Cardinal Priest in 1905.

Arnold, John Oliver.

Arnold, Sir Thomas Walker.

Asano, Soichiro. A Japanese industrialist, died in Tokyo, Nov. 9, 1930. He was born in Toyama-ken in 1848. The foundation of his fortune was laid in the '70s, when he converted coal-tar and other refuse of the Yokohama Gas Works, then unutilized, into profitable materials. He next became interested in cement manufacture and oil refining, and in 1895 promoted, with others, the Toyo Steamship Company. At the time of his death he was president of this company and of the Asano dockyards in Tokyo.

Ashford, Emma Louise (Hindle). An American composer, died in Nashville, Tenn., Sept. 22, 1930. She was born in Newark, Del., Mar. 27, 1850. Specializing in the study of organ and church music, she was for many years organist and choir director in churches in Nashville. She also composed more than 400 anthems, cantatas, and sacred songs and duets, and compiled *Favorite Organ Voluntaries*, *Organ Praise Series*, and *Ashford's Hymn Voluntaries*. She was married in 1867 to John Ashford, who later became connected with Vanderbilt University.

Ashton, James Williamson, First Baron of. A British manufacturer, died in Lancaster, May 27, 1930. He was born Dec. 31, 1842. He was high sheriff of Lancashire in 1885 and was a member of Parliament for the Lancaster division of North Lancashire from 1886 to 1895. In 1895 he was created first baron of Ashton. Lord Ashton was a wealthy manufacturer, having made his fortune by the manufacture of linoleum. His last years he spent as a recluse, although he contributed generously to philanthropic enterprises.

Atwood, Charles Edwin. An American neurologist, died in New York City, Feb. 19, 1930. He was born in

Shoreham, Vt., July 21, 1861, and was graduated from Cornell University in 1880, receiving the M.D. degree from Bellevue Hospital Medical College in 1888. He was assistant physician in the Hudson River State Hospital during 1885-87 and in the Utica State Hospital from 1887 to 1892. He was first assistant physician in the Society of the New York Hospital, Bloomingdale, from 1892 to 1905 and assistant neurologist in the Vanderbilt Clinic, Columbia University, from 1892 to 1914. In 1905-06 he studied in Vienna and in London. From 1907 to 1917, he was neurologist for the New York City Hospital and Schools, Randall's Island. Dr. Atwood was associate editor for the *American Journal of Insanity* during 1887-92 and he was editor of the department of nervous diseases for the *Medical Review of Reviews* for a time. His works include *Multiple Neuritis Associated with Insanity*; *Causation of Insanity*; *Treatment of Habits*; *The Longevity of Idiots*.

Auer, Leopold.

Baird, Rear Admiral George Washington, U. S. N., Ret. An American naval officer, died Oct. 4, 1930, in Washington, D. C., where he was born Apr. 22, 1843. Following an academic education, he studied engineering, was appointed third assistant engineer in the United States Navy in 1862, and saw service during the Civil War. Promoted through successive grades up to 1905, he was then retired with the rank of rear admiral. He was a past president of the American Society of Naval Engineers.

Baker, Thomas Rakestraw. An American scientist and educator, died in Winter Park, Fla., Mar. 10, 1930. He was born in Chester Co., Pa., Feb. 27, 1837. On his graduation from the First Pennsylvania State Normal School in 1860, he became professor of mathematics at the Agricultural (later State) College of Pennsylvania. In 1867 he was called to the First Pennsylvania State Normal School as professor of natural science and two years later attended the University of Göttingen, from which he received the Ph.D. degree in 1871. On his return to the United States he resumed his connection with the First Pennsylvania State Normal School, holding this post until 1886. During 1889-92 he was identified with the development of the phosphate industry of Florida, and in 1892 became professor of natural science at Rollins College where he remained until his retirement in 1911. From 1909 until the time of his death he was director of the Rollins College Museum, which had been established in his honor to house his scientific specimens. His publications include: *Elements of Physics* (1881); *A Short Course in Chemistry* (1883); and *Questions in Physics and Chemistry* (1884).

Baldwin, William Delavan. An American manufacturer and financier, died in Yorktown Heights, N. Y., Sept. 26, 1930. He was born in Auburn, N. Y., Sept. 5, 1856. From 1872 to 1882 he was with D. M. Osborne & Co., manufacturers of harvesting machinery, becoming manager of the company's European business. He then was made treasurer of Otis Bros. & Co. and, after the formation of the Otis Elevator Company, acted as president from 1898 to 1918 and as chairman of the board from 1918 until his death. He was also president for several years of the Westchester County Park Commission, which was successful in beautifying this part of New York State.

Balfour, Arthur James, First Earl of.

Barnes, William.

Barnett, George.

Barnhardt, Brig. Gen. George Columbus. An American soldier, died in El Paso, Texas, Dec. 10, 1930. He was born in Gold Hill, N. C., Dec. 28, 1868, and was graduated from the U. S. Military Academy in 1892. In the World War he commanded the 329th Infantry and later was commander of the 178th Infantry brigade.

Barry, The Rt. Rev. Mgr. William (Francis).

Barton, William Eleazar.

Beit, Sir Otto (John). A British capitalist, died in London Dec. 7, 1930. Born Dec. 7, 1865, he became associated with his brother, Alfred, in the development of South African mining enterprises. He was a director of the British South Africa Company and Rhodesia Railways, Ltd., and founded the Beit Memorial Fellowship for Medical Research.

Bemis, Edward Webster.

Benson, Louis FitzGerald.

Benton, John Robert. An American engineer and educator, died in Gainesville, Fla., Jan. 8, 1930. He was born in Concord, N. H., June 6, 1876, and was graduated from Trinity College in 1897. In 1900 he received the Ph.D. degree from the University of Göttingen. After 1905 he was professor of physics and electrical engineering and, after 1910, also dean of the college of engineering at the University of Florida. He was the author of several books on electrical-engineering subjects, his last publication being *An Introductory Textbook on Electrical Engineering* (1928).

Bernhardi, Friedrich von.

Bettelheim, Anton.

Bhopal, H. H. Nawab Sultan Jahan Begum, Begum of.

Bianchi, Michele. An Italian cabinet minister and a leader of the Fascist party, died in Rome, Feb. 8, 1930, at the age of 47. As a journalist and sub-editor in 1919 of the *Popolo d'Italia*, official paper of the Fascisti, and as secretary of the Fascist party in 1922, he had an important share in the party's growth and victory. Premier Mussolini appointed him Minister of Public Works in his cabinet in September, 1929.

Bienaimé, Amédée Pierre Léonard. Chief of Staff, French Navy, retired, died Mar. 15, 1930, in Paris, where he was born Feb. 26, 1843. He was educated at the lycée Bonaparte. During 1883-96 he took part in the conquest of Madagascar, planting the French flag at Tamatave, at Majunga, and at Marovoay. He was promoted rear admiral in 1895 and vice admiral in 1900. In 1901 he was made Chief of Staff of the French Navy and, the following year, was chosen prefect of Toulon. He retired from the Navy in 1904. In 1905-06 he served as deputy for the Department of the Seine, representing the Nationalist party. Admiral Bienaimé was the author of *Etude pratique sur la perforation des murailles cuirassées* and *Etude sur l'artillerie navale*.

Birkenhead, Frederick Edwin Smith, First Earl of.

Black, Van-Lear. An American capitalist, died at sea Aug. 18, 1930. He was born in Cumberland, Md., Dec. 18, 1875, and was chairman of the board of the A. S. Abell Company, publishers of the *Baltimore Sun*, and of the Fidelity and Deposit Company of Maryland, with which he had started as a clerk in 1894. He was also a promotor of travel by airplane, having flown more than 200,000 miles between 1926 and the time of his death.

Black, William Henry. An American educator, died in Marshall, Mo., June 23, 1930. He was born in Centreville, Ind., Mar. 19, 1854, and was graduated from Waynesburg College, Pa., in 1876 and from Western Theological Seminary in 1878. After his ordination to the Presbyterian ministry, he served as pastor in Pittsburgh, Pa., during 1877-81 and in St. Louis, Mo., during 1881-90. He became president of the Missouri Valley College in 1890, which position he held until his resignation in 1925. He was moderator of the General Assembly of the Cumberland Presbyterian Church in 1888; chairman of the Cumberland Presbyterian Committee on Fraternity and Union; and a member of the World Conference of Edinburgh Associations which met in Edinburgh, Scotland, in 1925. He received the D.D. degree from Cumberland University in 1888, and the LL.D. degree from Westminster College in 1903, and the Litt.D. degree from Waynesburg College in 1915. His works include: *Sermons for the Sabbath School* (1886); *God Our Father* (1889); *Womanhood* (1890); *Outline Life of Paul* (1894); *The Life and Times of Moses* (1901); *The Hebrew Monarchy—A Harmony* (1902); *The Life of Jesus* (1906); *Tripsacal* (1906); and *The Division and Fall of the Hebrew Monarchy—A Harmony* (1910).

Blass, Robert. A German opera singer, died in Berlin Dec. 9, 1930, at the age of 63. In 1902 he came to the United States and for several years was the principal basso for Wagnerian rôles at the Metropolitan Opera House, New York City.

Bliss, Gen. Tasker Howard, U. S. A., Ret.

Blohm, Herman. A German engineer, died in Hamburg, Mar. 12, 1930, at the age of 81. With Ernest Voss, he founded the shipbuilding firm, Blohm and Voss in 1877 on the island of Steinwarder in the Elbe. Included among their ships were the ocean liners, *Majestic*, *Leviathan*, *Bremen*, and *Europa*.

Blum, Léon. A French physician, died in Strassburg, Mar. 7, 1930. Born in Fegersheim, Bas-Rhin, Dec. 7, 1878, he was educated at the University of Strassburg and in 1901 began the practice of medicine. In 1919 he became professor of clinical medicine in the faculty of medicine at the University of Strassburg. He did important research work in diabetes and wrote on that subject and on nutrition. His books include *L'Origine des corps acétoniques*; *Recherches sur les diurétiques et le rôle des substances minérales dans l'organisme*.

Bok, Edward William.

Bolito (Ryall), William.

Bolona, Francisco J. An Ecuadorian statesman, died in Quito Nov. 7, 1930, at the age of 48. Educated as a physician, he had abandoned his practice in favor of politics, and at the time of his death was Minister of Agriculture and Social Welfare in the cabinet of President Ayora.

Bols, Lt.-Gen. Sir Louis Joan. A British soldier and Governor of Bermuda, died in Bath, England, Sept. 14, 1930. He was born Nov. 23, 1867. Entering the British Army in 1887, he served in Burma during 1891-92; was with the Chitral Relief Force in India in 1895; and as a result of his service in the Boer War was made

a companion of the Distinguished Service Order in 1900. At the outbreak of the World War he was lieutenant-colonel of the Dorset regiment and appointed to the General Staff. During 1914-17 he served with distinction in France and Flanders, being appointed commander of the 24th Division in 1917 and being promoted to the rank of major-general. In Palestine and Syria during 1918-19 he was Lord Allenby's chief of staff, after the signing of the Versailles Treaty serving as administrator in this region. He was created a companion of the Order of the Bath in 1915, a knight commander of St. Michael and St. George in 1918, and a knight commander of the Order of the Bath in 1919. He became Governor and commander-in-chief of Bermuda in 1927.

Bond, Maj.-Gen. Sir Francis George. A British soldier, died in Stowe, Camberley, England, Aug. 15, 1930. He was born Aug. 10, 1856. After attending Marlborough College he joined the Royal Engineers in 1876, and served in the Zulu War in 1879 and in Egypt in 1882. He also took part in the Hazara Expedition in 1891 as field engineer of the 1st Brigade. During 1897-98 he was on the northwestern frontier of India with the Tirah Expeditionary Force, and served in South Africa during 1900-01 as deputy assistant adjutant-general and chief staff officer in the eastern Transvaal. He later served in India becoming commander of the Indian Southern Brigade in 1911. Retiring from active service in 1913, on the outbreak of the World War he was made assistant director of quartering at the War Office and in 1917 director of quartering. Among the honors which were bestowed on him were: Companion of the Bath (1902); Companion of St. Michael and St. George (1918); knight of Grace of the Order of St. John of Jerusalem (1918); and knight commander of the Order of the British Empire (1919).

Bonchill, Capt. Ralph. See Stratemeyer, Edward.

Bonner, Geraldine. An American author, died in New York City June 17, 1930. She was born in Staten Island, N. Y., in 1870 and was taken to the West when 10 years old, where she lived for two years in Colorado mining camps and then in San Francisco. She did her first writing in 1887 for the San Francisco *Argonaut*, of which her father, John Bonner, was editor, and was later dramatic critic and foreign correspondent for this paper. Several of her novels are based on these early western impressions, including *Hard Pan* (1900)—whose title she sometimes used as a pseudonym; *The Pioneer* (1905); *The Emigrant Trail* (1909); and *Treasure and Trouble Therewith* (1917). She also was the author of the mystery stories: *The Castlecourt Diamond Case* (1906); *The Girl at Central* (1914); *The Black Eagle Mystery* (1916); *Miss Maitland, Private Secretary* (1919); and *The Leading Lady* (1925), and collaborated in writing the plays *Sham* (with Elmer B. Harris, 1908) and *Sauce for the Goose* (with Harry Hutcheson Boyd, 1909).

Borodin, Ivan Parthenievitch. A celebrated Russian naturalist, died in Moscow in April, 1930. He was born in Novgorod in 1847 and attended the University of St. Petersburg. In 1887 he became professor of botany at that institution, and three years later was appointed director of the Forest Institute where he remained until 1920, attracting students from all parts of Europe by his prestige. He was also director of the Borodin Biological Fresh-Water Station, which he founded in 1897. His researches centred chiefly upon an investigation of the effect of light on the higher cryptogams.

Bostock, Hewitt.

Boyd, Maj.-Gen. Sir Gerald Farrell. A British soldier, died in London Apr. 14, 1930. He was born Nov. 19, 1877, and was educated at St. Paul's School. In 1895 he enlisted with the Devonshire Regiment as a private, and served with distinction during the Boer War, becoming sergeant in 1899, 2nd lieutenant in 1900, and lieutenant in 1902. During the World War he again displayed unusual valor and was rapidly promoted from major of the Royal Irish Regiment to brigadier general of the General Staff in the 5th Army Corps, brigadier commander of the 170th Infantry Brigade, and division commander of the 46th (North Midland) Division. He led the latter division when on Sept. 29, 1918, it swam the Schelde and broke through part of the Hindenburg line, routing four German divisions. After the War he was general officer in command of the Dublin District, and from 1923 to 1927 was commandant of the Staff College in Quetta, India. He became military secretary to the British Secretary of State for War in 1927. He was created a Companion of the Distinguished Service Order in 1902, Companion of St. Michael and St. George in 1918, Companion of the Bath in 1919, and Knight Commander of the Bath in 1923.

Boy-Ed, Karl.

Boynton, Frank David. An American educator, died in Bay Shore, Long Island, June 17, 1930. He was born in Potsdam, N. Y., Apr. 29, 1868, and was gradu-

ated from the Potsdam State Normal School in 1887 and from Middlebury College in 1891. He was principal of the Union School and Academy of Webster, N. Y., from 1891 to 1893 and principal of the high school in Ithaca, N. Y., from 1893 to 1900. In 1900 he became superintendent of the Ithaca public schools, and was active in matters connected with the New York State Department of Education. He was president of the New York State teachers' association in 1904 and of New York State council of superintendents in 1909. He was also active in the National Education Association, serving on the executive committee of the department of superintendence from 1924 to 1927, as vice president in 1928, and as president in 1929.

Brabrook, Sir Edward (William). A British barrister and sociologist, died in Wallington, Surrey, Mar. 20, 1930. He was born Apr. 10, 1839, and after working in an insurance office was called to the bar in 1866. He was appointed assistant registrar of the Friendly Societies in 1869, and served as chief registrar from 1891 to 1904. He also was interested in anthropology and archeology, acting as president of the Anthropological Institute during 1895-97, of the Folk Lore Society during 1901-02, of the South-Eastern Union of Scientific Societies during 1920-21, and of the Sociological Society in 1927. He was created a Companion of the Bath in 1897 and was knighted in 1905. He was an authority on thrift and social insurance, his works including: *Provident Societies and Industrial Welfare* (1898); *Institutions for Thrift* (1905); and *Building Societies* (1906).

Bradley, Glenn Danford. An American educator, died in Toledo, Ohio, Jan. 4, 1930. He was born in Kinderhook, Mich., Apr. 12, 1884. After receiving from the University of Michigan the Ph.D. degree in 1915, he became assistant professor of history and acting professor of English at the University of Toledo, and in 1917 was appointed associate professor of history and head of the history department. In 1927 he also was made director of evening sessions. He was considered an authority on the history of the Southwest, his best known works being *Winning the Southwest* (1912); *The Story of the Pony Express* (1913); and *The Story of the Santa Fé* (1920).

Brady, Nicholas Frederic. An American financier and public service official, died in New York City, Mar. 27, 1930. He was born in Albany, N. Y., Oct. 25, 1878, and was graduated from Yale University in 1899. After graduation he was associated with the New York Edison Company and in 1913 became president of the company. In 1928 the New York Edison Company was incorporated with the Brooklyn Edison Company and several other smaller electric companies, with Mr. Brady chairman of the board of directors. He was also a director in many other companies, including the Anaconda Copper Mining Company, the Chrysler Corporation, the Union Carbide & Carbon Corporation, and the National City Bank of New York.

Branker, Vice-Marshal Sir (William) Sefton.

Brandès, Marthe.

Branscomb, Lewis Capers. An American clergyman, died in Jasper, Ala., Oct. 30, 1930. He was born in Union Springs, Ala., Aug. 27, 1865, and was graduated from Southern University in 1885. The following year he was ordained to the ministry of the Methodist Episcopal Church, South, serving successively as pastor in Bessemer, Decatur, Huntsville, Talladega, and Birmingham, Ala. From 1912 to 1916 he was presiding elder of the Birmingham district; from 1916 to 1922, editor of the *Alabama Christian Advocate*; from 1922 to 1927, pastor of the First M. E. Church in Anniston, Ala.; and from 1928 to 1930, presiding elder of the Bessemer district. He was also chairman of the North Atlantic Conference's committee for the unification of American Methodism; a member of the executive committee of the Federal Council of the Churches of Christ in America; and a member of the executive committee of the board of directors of the Anti-Saloon League of America.

Brătianu, Vintilă.

Breuer, Peter.

Brickner, Walter M. An American surgeon, died in Atlantic Beach, Long Island, N. Y., July 22, 1930. He was born in New York City, Aug. 28, 1875, and was graduated from the College of the City of New York in 1893 and from the College of Physicians and Surgeons of Columbia University in 1896. He was attending surgeon at the Morrisania City Hospital and the Hospital for Joint Diseases, and associate surgeon at Mt. Sinai Hospital, New York City. During the World War he was a lieutenant-colonel with the Medical Reserve Corps, and in 1918 became chief of the surgical service at Base Hospital 3 and consultant in neuro-surgery for Base Section 2 of the American Expeditionary Force. He was a fellow of the American College of Surgeons and governor during 1927-29. He was editor-in-chief of *American Journal of Surgery* from 1905 to 1928 and

was the author of *The Surgical Assistant* (1905), and *1000 Surgical Suggestions* (1911).

Bridges, James Robertson. An American clergyman and former president of the Presbyterian College for Women, died in Montreal, N. C., July 19, 1930. He was born in St. Louis, Mo., Sept. 29, 1852, and was graduated from Hampden-Sidney College and from the Union Theological Seminary (Richmond, Va.). On being ordained to the Presbyterian ministry in 1880, he was an evangelist in Kentucky and Texas for three years, and then held pastorates in Baltimore, Md.; Leesburg and Salem, Va.; Columbia, Mo.; and Orlando, Fla. In 1899 he was elected president of the Presbyterian College for Women in Charlotte, N. C., resigning in 1911 to become editor of the *Presbyterian Standard*.

Bridges, Robert (Seymour).

Briggs, Clare A.

Bristol, William Henry. An American inventor, died in New Haven, Conn., June 18, 1930. He was born in Waterbury, Conn., July 5, 1859, and was graduated from Stevens Institute of Technology in 1884. After teaching for four years in the Workingman's School in New York City, he became an instructor in mathematics at Stevens Institute in 1886, assistant professor in 1888, and professor in 1899, resigning his chair in 1906. In 1889 he organized The Bristol Company in Waterbury, Conn., for the manufacture of his inventions, which included numerous instruments for recording pressure, temperature, and electricity, as well as apparatus for steel belt-lacing, sound amplifying, and talking moving pictures. The latter device, known as the Bristolphone, was based on the principle of synchronizing sound and action and was patented in 1917.

Browne, The Rt. Rev. George Forrest.

Browne, George Waldo. An American author, died in Manchester, N. H., Aug. 13, 1930. He was born in Deerfield, N. H., Oct. 8, 1851. For several years he was editor of the *American Young Folks*, after which he became president and manager of the Standard Book Company, Inc. He wrote more than 50 books, mostly of a historical nature for children, under his own name and the pen name, Victor St. Clair. Among these are: *The Woodranger* (1899); *Two American Boys in Hawaii* (1899); *For Home and Honor* (1902); *Japan, the Place and the People* (1904); *With Axe and Flintlock* (1907); *Ruel Durkee* (1910); *Green Mountain Pioneers* (1914); *Story of New Hampshire* (1924); *Legends of New England* (1925); and *Story of the Old Bay State* (1927).

Brumbaugh, Martin Grove.

Bryan, Rear Admiral Benjamin Chambers, U. S. N., Ret. An American naval officer, died in Washington, D. C., July 21, 1930. He was born in Throggs Neck, N. Y., Aug. 16, 1858, and was graduated from the U. S. Naval Academy in 1879. He served on the *Dolphin* during the Spanish-American War, and from 1903 to 1908 was with the bureau of steam engineering of the U. S. Navy Department. He served as head of the department of steam engineering of the Navy Yard at Philadelphia, 1908 to 1912; director of navy yards for the U. S. Navy Department, 1912 to 1915; and commandant of the naval station at Charleston, S. C., 1915 to 1922. He was also a member of the Naval Examining and Retiring Board.

Bryan, Mary Baird. The widow of William Jennings Bryan, American statesman, died Jan. 21, 1930, in Glendale, Calif. She was born in Perry, Ill., June 17, 1861, and was graduated in 1881 from the Presbyterian Academy for Young Women in Jacksonville, Ill. In 1884 she was married to William Jennings Bryan, who died in 1925. After her marriage, Mrs. Bryan studied law in order to enter into her husband's work, and was admitted to practice in the district and supreme courts of Nebraska. She completed the memoirs left unfinished by Mr. Bryan.

Burnham, Maj.-Gen. William Power, U. S. A., Ret. An American soldier, died in San Francisco, Calif., Sept. 27, 1930. He was born in Scranton, Pa., Jan. 10, 1860, and attended the Kansas State Agricultural College, U. S. Military Academy (1877-80), and the U. S. Infantry and Cavalry School (1889). During the Spanish-American War and the Philippine insurrection he served as a lieutenant colonel with the 4th Missouri Volunteers. In 1907 he was delegated to the general staff of the United States Army, and in 1912 became commandant of the Army Service Schools at Fort Leavenworth, Kansas. He served as commander of the Military District of Porto Rico from 1914 to 1917, and on the entry of the United States into the World War was assigned to command of the 164th infantry brigade of the 82d division at Camp Gordon, Ga. Later, as major general, he commanded the 82d division in France, taking part in the St. Mihiel offensive and the Battle of Meuse-Argonne. During 1918-19 he was military attaché and American delegate to the Inter-Allied Military Commission in Athens, Greece. On his return to the United States in 1919 he reverted to the rank of

colonel and was made commander of Fort McDowell on Angel Island and the Presidio in San Francisco, holding this post until 1924 when he was retired as a brigadier general.

Burns, Melvin P. An American clergyman, died in Little Rock, Ark., Sept. 21, 1930. He was born in Canada, Sept. 14, 1866, but coming to the United States in 1880 six years later was naturalized. He attended the Valparaiso (Ind.) Normal School during 1888-90 and the Little Rock University during 1890-94. He was ordained a minister in the Methodist Episcopal Church in 1890 and successively held pastorates in Stuttgart, Ark., and Casselton, N. D. He was superintendent of the Jamestown (N. D.) Conference (1899-1902), of the Fargo District (1902-04), of the Grand Forks District (1904-07), of the Minneapolis District and the Northern Minnesota Conference (1907-12), and of the Duluth District (1912-16). From 1916 until 1929 he was superintendent of the department of city work of the Board of Home Missions of the General Conference of the Methodist Episcopal Church. He was also president of the church's bureau of good-will industries and of the council of cities, and chairman of the committee for leadership training.

Burrell, Joseph Dunn. An American clergyman, died in Barcelona, Spain, Apr. 18, 1930, while touring that country. He was born in Freeport, Ill., Dec. 22, 1858, and was graduated from Yale in 1881 and from the Union Theological Seminary in 1884. In the latter year he was ordained to the Presbyterian ministry, serving as pastor in Clinton, Iowa, until 1892, when he was called to the Clason Avenue Church, Brooklyn, N. Y. During the World War he was with the Red Cross in Pontzenzen and Brest, France, and in Berlin, Germany. In 1920 he was appointed secretary of the metropolitan district of the New Era Movement of the Presbyterian Church, and in 1922 became executive secretary of the Brooklyn-Nassau Presbytery. He was also president of the Brooklyn Federation of Churches. His publications include: *The Early Church* (1894); *The Singular Death of Christ* (1900); and *A New Appraisal of Christian Science* (1906).

Byers, Maxwell Cunningham. An American railroad president, died in Baltimore, Md., Sept. 23, 1930. He was born in Pittsburgh, Pa., Feb. 2, 1878, and attended the University of Pittsburgh. His railroad experience began in 1897 as assistant engineer on various divisions of the Pennsylvania lines west of Pittsburgh. In 1902 he became assistant engineer of maintenance-of-way for the Baltimore and Ohio Railroad and the following year was promoted to engineer of the Baltimore division. He served successively as assistant engineer of maintenance-of-way, assistant to the general manager, engineer of maintenance-of-way, chief engineer, and chief engineer of operations for the St. Louis and San Francisco Railway from 1904 to 1913. In 1913 he became assistant to the president of the Great Northern Railway, and the following year entered the service of the Western Maryland Railway in the same capacity. He was appointed federal general manager of the Western Maryland, the Cumberland Valley, and the Cumberland and Pennsylvania Railroads in 1918. In 1920 he was chosen president of the Western Maryland Railroad and in 1926, chairman of the board of directors of that road.

Calkins, Mary Whitton.

Callender, Hugh Longbourne.

Callender, (William) Romaine. An American musician and inventor, died in Philadelphia, Pa., July 1, 1930. He was born in South Shields, England, Aug. 16, 1857, and attended the Mechanics Institute and Marine School in South Shields and the Literary and Philosophical Institute in Newcastle-on-Tyne. His musical education was received privately. He went to Canada in 1876, and from there to the United States in 1889. After being associated in an editorial capacity with J. B. Lippincott Company for several years, he became in 1900 principal of the Metropolitan College of Music in Philadelphia. He was the inventor of pneumatic and electric organ actions, autographic piano recording and reproducing apparatus, and apparatus for engraving music plates. He was also the author of several books on musical instruction, travel, and fiction, including *Teachers' Manual and Elementary Method* (for piano, 1911) and the novels *Prison Flower* (1912) and *Kermadec Romance* (1912).

Canterbury, Lute Archbishop of. See Davidson.

Carden, Sir Sackville Hamilton. Admiral, British Navy, retired, died in Lynton, May 7, 1930. Born May 3, 1857, he entered the British Navy in 1870 and was promoted to commander in 1894, captain in 1899, and rear-admiral in 1908. In 1910 he was made rear-admiral of the Atlantic Fleet and, during 1912-14, he was admiral superintendent of the Malta Dockyard. With the rank of vice-admiral, he was placed in command of the Eastern Mediterranean Allied Squadron at the beginning of the World War in 1914. He directed the early operations in the Dardanelles, including bom-

berdment and destruction of all forts at the entrance, but, because of ill health, resigned the command in March of 1915 and returned to England. In 1916 he was created Knight Commander of St. Michael and St. George and, on retirement in 1917, was promoted a full admiral.

Carlin, James Joseph. An American educator, died in Los Angeles, Calif., Oct. 1, 1930. He was born in Peabody, Mass., Apr. 14, 1872, and was graduated from Boston College in 1892. On entering the Society of Jesus in 1892 he served his novitiate in Frederick, Md., becoming in 1896 professor of philosophy and sciences at the Woodstock (Md.) Seminary, in 1899 professor of Latin, Greek, and English at Georgetown University, in 1904 professor of theology, sacred scripture, and canon law at Woodstock, and in 1910 lecturer on scholastic philosophy at Holy Cross College. He served as assistant to the provincial of Maryland for several years, and in 1918 was elected president of Holy Cross College, holding this office until 1925 when he went to the Philippines as president of the Ateneo de Manila, a Jesuit academy in Manila. In 1927 he was made superior of the Jesuit Mission in the Philippines.

Carneiro, Antonio.

Carr, Clarence Alfred. Rear admiral. U. S. N., retired, died in New London, Conn., Mar. 9, 1930. Born in Crawford Co., Pa., July 26, 1856, he was graduated from the U. S. Naval Academy in 1879 and from the Stevens Institute of Technology, with the M.E. degree, in 1884. Becoming assistant engineer in the U. S. Navy in 1881, he was promoted to chief engineer in 1893 and the following year was transferred to the line with the rank of lieutenant. In 1902-04 he was inspector of machinery in Seattle, Wash., fleet engineer of the Coast Squadron and in charge of steam engineering on the U.S.S. *Texas* in 1904-06, head of the department of steam engineering in the Navy Yard, Mare Island, Calif., during 1906-10; machinery inspector at Bayonne, N. J., from 1911 to 1917; and engineering officer in the Navy Yard of Philadelphia during 1917-19. Promoted through the grades, he became rear admiral in September, 1919, in the same month being made inspector of machinery in the Third Naval District, New York City. He retired in July, 1920.

Carson, Herbert William. A British surgeon, died in London, Aug. 31, 1930. He was born in 1870 and received his medical education at St. Bartholomew's Hospital, London. As senior surgeon at the Prince of Wales's General Hospital, he became recognized not only as a skillful operator but as a great teacher who attracted surgeons from all parts of the world. He was a fellow of the Royal College of Surgeons, of the Royal Society of Medicine, and of the Association of Surgeons of Great Britain and Ireland. His publications include: *Aids to Surgical Diagnosis and Modern Operative Surgery*.

Carter, Brig.-Gen. Jesse McIlvaine, U. S. A., Ret. An American soldier died in Houston, Tex., June 23, 1930. He was born in Missouri, Apr. 12, 1863, and was graduated from the U. S. Military Academy in 1886. From 2d lieutenant with the 3d Cavalry he was promoted through the grades to brigadier-general on his retirement in 1921. During 1909-13 he served on the General Staff of the U. S. Army, and on the entrance of the United States into the World War he was assigned to the Militia Bureau of the War Department, acting as its chief in 1917. He was commissioned major-general in the National Army, organizing and commanding the 11th Division from August, 1918, to February, 1919.

Casanova y Marzol, Vincenzo, Cardinal. A prelate of the Roman Catholic Church, died in Saragossa, Spain, Oct. 23, 1930. Born in Borja, Spain, in 1854, he was created a Bishop in 1907 and Archbishop of Granada in 1921, and was elevated to the rank of Cardinal-Priest in 1925.

Chaney, Lon.

Chanler, Robert Winthrop. An American artist, died in Woodstock, N. Y., Oct. 24, 1930. He was born in New York City, Feb. 22, 1873, and studied painting at the Academy Julien in Paris under Jean-Léon Gérôme. He became prominent as a mural painter, and in 1923 his panel "Giraffes" was bought by the French Government to be hung in the Luxembourg Museum.

Charost, Alexis Armand, Cardinal.

Chase, Frank Herbert. An American librarian, died in Hingham, Mass., Dec. 12, 1930. Born in Portland, Me., Apr. 22, 1870, he graduated from Yale in 1894, taking his Ph.D. degree in 1896. After acting as professor of English at Centre College (1902-04) and Beloit College (1904-11), he became associated with the Boston Public Library, serving as reference librarian from 1923 until his death.

Chilcott, Ellery.

Chisholm, George Goudie.

Christensen, Jens, Christian,

Claar, Emil.

Clark, Clarence Don.

Clark, Edgar Erastus.

Clark, Eugene Francis. An American educator, died in Hanover, N. H., Feb. 21, 1930. Born in Portland, Me., Aug. 10, 1879, he was graduated from Dartmouth College in 1901. During 1902-06 he was an instructor in the De Merritt School in Boston, becoming assistant professor of German at Dartmouth College in 1908. In 1915 he received the Ph.D. degree from Harvard University and later studied at the universities of Marburg and Freiburg. After 1918, he was secretary of Dartmouth College and professor of German in 1919. He edited the *General Catalogue of Dartmouth College, 1769-1925*.

Clarkson, Coker Fifield.

Clodd, Edward.

Coates, George James. A British painter, died in London, July 28, 1930. He was born in Melbourne, Australia, in 1869 and studied art at the Melbourne National Gallery, where he received the Victorian Gold Medal, and in Paris. He was a frequent exhibitor at the Paris Salon, the Royal Academy in London, and the Carnegie international exhibition in Pittsburgh. In 1919 he was commissioned by the Australian and Canadian Governments as portrait painter for their war memorial exhibitions. He was a member of the International Society of Sculptors, Painters, and Gravers; the National Portrait Society; the Royal Society of Portrait Painters; the Royal Institute of Oil Painters; and the Société Nationale des Beaux Arts. He was also a founder member of the London Portrait Society (1928.) His principal works are: *Stretcher Bearers*; *General Bridges and Staff*; *The Russian Lady*; *The Spanish Dancer*; and *Portrait of Lord Northcote as Governor-General*, for the Australian Commonwealth. Many of the illustrations in the *Historians' History of the World* came from his pen.

Cohn, Adolphe.

Colgate, Sidney Morse. An American industrialist, died Nov. 10, 1930, in Orange, N. J., where he was born Sept. 11, 1862. On graduating from Yale University in 1885 he became associated with Colgate & Co., the soap manufacturing firm founded by his grandfather, William Colgate, in 1806. For several years he was treasurer of this company, and in 1925 became president. Three years later, following a merger with the Palmolive-Peet Company, he became chairman of the board of the new company, known as the Colgate-Palmolive-Peet Company. During the World War he was chairman of the War Service Committee of the Soap Industry. He was also first president of the Association of American Soap and Glycerine Producers (1926) and of the Cleanliness Institute (1927).

Comstock, Anna Botsford.

Conklin, Charles. An American clergyman, died in Canton, Mass., May 27, 1930. He was born in Nyack, N. Y., Feb. 10, 1855, and attended St. Lawrence University. He was ordained a minister in the Universalist Church in 1876, his first charge being in Mt. Vernon, N. Y. From there he was called to Troy, N. Y., and to Chelsea, Mass. In 1885 he became pastor of the Church of the Redeemer in Chicago. He returned to Massachusetts in 1891, being located in Boston for the next two years and in Springfield from 1893 to 1902. In 1902 he became superintendent of the Universalist churches in Massachusetts and secretary of the Massachusetts Universalist Convention, holding this office until 1914 when he became pastor of the Beacon Universalist Church in Brookline. From 1922 until his death he was pastor of the Universalist Church in Canton.

Connelley, William Elsey.

Constantine VI. Former Patriarch of the Greek Church in Turkey, died in Athens, Greece, Nov. 28, 1930. He was Archbishop of Konitza in Epirus, and in 1906 was made Metropolitan of Trebizond. In 1924 he was elected Ecumenical Patriarch of Constantinople, but was expelled by the Turkish authorities the following year because he was a Greek national.

Cook, William Wilson.

Cooper, Bryan Ricco. An Irish statesman and soldier, died in Dublin, July 5, 1930. He was born June 17, 1884, and attended Eton and Woolwich. He entered the British Army in 1903, his first commission being as 2d lieutenant in the Royal Field Artillery. In 1905 he became a captain in the Royal Garrison Artillery, known as the Duke of Connaught's Own Shgo. During the World War he saw service with the 10th (Irish) Division in Gallipoli and Macedonia, and was later on the staff of the army in Salonika and in the war office. He was a conservative in politics, and in 1910 represented County Dublin (South) in the British House of Commons. From 1912 to 1914 he was honorary secretary of the Irish Unionist Alliance and president of its junior branch. In 1919 he became Irish press censor, and in 1926 was a member of the Irish tribunal on prices. He was elected to the Dail Eireann as an independent for

County Dublin in 1923, and was reflected in 1927. He served as chairman of the Irish Free State delegation to the Empire Parliamentary Association conference in Australia in 1926. His works include: *The Tenth Division in Gallipoli* (1917) and *The Collar of Gold* (1920).

Courtleigh, William Louis.

Cox, Henry Joseph. An American meteorologist, died in Chicago, Ill., Jan. 7, 1930. He was born in Newton, Mass., Apr. 5, 1863, and was graduated from Harvard University in 1884, entering the U. S. Army Signal Service in its weather bureau the same year. Discharged from the Army as an observer sergeant in 1891, when the Weather Bureau, as a part of the U. S. Army, became a branch of the Department of Agriculture, he remained in this work. In 1894 he became assistant in the weather bureau at Chicago, later principal meteorologist, and, after 1924, senior meteorologist. His forecasts in the Great Lakes districts were important for shipping in that region. In addition to special articles in the *Chicago Daily News*, popular weather articles in the *American Magazine*, and bulletins and reports, he wrote *Weather Bureau Records in Court*; "Lantern Slides in Teaching of Meteorology" (*Bulletin*, 3, Geographical Society, Chicago); *Recent Advances in Meteorology*; *Notes of a Meteorologist in Europe*; *The Weather Bureau and the Cranberry Industry*; *Weather and Climate of Chicago*; *Weather Forecasting in the United States* (joint author); *Influence of Great Lakes upon Movement of Storms*; *Thermal Belts and Fruit Growing in North Carolina Mountain Region*.

Craigie, Patrick George.

Cramer, W. (William) Stuart. An American clergyman, died in Lancaster, Pa., Nov. 6, 1930. He was born in Frederick Co., Md., Apr. 12, 1873, and was graduated from Franklin and Marshall College in 1898 and from the Theological Seminary of the Reformed Church in America in 1901. On ordination to the ministry of the Reformed Church in 1901 he became associate pastor of the First Reformed Church in Lancaster, Pa., and pastor in 1903. During the World War he was assistant secretary of the General Wartime Committee of Churches and was a member of the General Committee of Army and Navy Chaplains and of the Commission on the Relations of Religious Bodies in Europe. In 1924 he dedicated the memorial church in Château-Thierry, France. He was also president of the eastern synod of the Reformed Church in America during 1927-28.

Croly, Herbert.

Cunningham, Edward Henry. An American agriculturist and banker, died in Washington, D. C., Nov. 28, 1930. Born in Burlington, Wis., Dec. 14, 1869, he was secretary of the Iowa Farm Bureau Federation from 1920 to 1923, when he was appointed a member of the Federal Reserve Board as agricultural representative.

Curry, Charles Forest. An American congressman, died in Washington, D. C., Oct. 10, 1930. Born in Naperville, Ill., Mar. 14, 1858, he was elected secretary of state for California in 1899, serving until 1911 when he was elected to the 63d Congress from the third California district. His term in the 71st Congress would have expired in 1931.

Curtiss, Glenn Hammond.

Cushman, Allerton Seward.

Cutler, Condit Walker. An American physician, died July 9, 1930, in Morristown, N. J., where he was born Feb. 27, 1859. He was graduated from Rutgers College in 1879 and from the College of Physicians and Surgeons of Columbia University in 1882. In addition to his general practice he was from 1888 to 1902 physician-in-chief of the New York Dispensary and from 1892 to 1895 professor of dermatology at the University of Vermont. His works include: *Essentials of Physics and Chemistry* (1885); *Manual of Differential Medical Diagnosis* (1886); *Differential Diagnosis of the Diseases of the Skin* (1890); and *Practical Lectures in Dermatology* (1894).

Dana, Paul.

Darlington, The Rt. Rev. James Henry.

David, Eduard.

Davidson, the Most Rev. and Rt. Hon. Randall Thomas, Former Archbishop of Canterbury.

Davidson, William Meharr. An American educator, died in Pittsburgh, Pa., July 27, 1930. He was born in Jamestown, Pa., May 8, 1863, and was graduated from the Kansas State Normal School in 1886 and the Kansas State University in 1892. He was successively superintendent of public schools in Topeka, Kans. (1892-1904); Omaha, Neb. (1904-11); Washington, D. C. (1911-14); and Pittsburgh, Pa. (1914-30). He was also president of the Kansas State Teachers' Association in 1893, of the Nebraska State Teachers' Association and the department of superintendence of the National Education Association in 1911, and of the Pennsylvania State Education Association in 1923. In 1929 he was appointed a member of the Federal advisory committee to study the relations of the Federal government to education.

Davis, Lyman Edwyn. An American clergyman, died in Baltimore, Md., Aug. 13, 1930. He was born in

Perryburg, Ohio, Dec. 28, 1854. On graduation from Adrian College in 1877, he was ordained a minister in the Methodist Protestant Church, successively holding pastorates, until 1896, in Tarrytown-on-Hudson, Rockville Centre, Brooklyn, Middletown, Albany, and Saratoga, N. Y. From 1896 to 1913 he was pastor of Grace Church, Pittsburgh, Pa. In 1912 he became president of the General Conference of the Methodist Protestant Church, holding this office until 1920. He was also editor of the *Methodist Recorder* from 1918 to 1929, and at the time of his death was editor of the *Methodist Protestant Recorder*, the *Methodist Protestant* having been merged with his own organ. He was a member of the executive committee of the Federal Council of the Churches of Christ in America and of the National Reform Association, and during the World War had served as a member of the General War Time Commission of the Churches and of the National Committee on Army and Navy Chaplains. His works include: *Jonathan Twigg*; *The Scepter of Washington*; *Social Doctrines of Christianity*; *Democratic Methodism in America*; and *The Creed of Bethlehem*.

Davis, William Stearns.

Dawley, Thomas Robinson, Jr.

Deane, Walter. An American naturalist, died in Cambridge, Mass., July 30, 1930. He was born in Boston, Mass., Apr. 23, 1848, and was graduated from Harvard University in 1870. After serving for 15 years as tutor and private schoolmaster, he turned to the field of natural history, and from 1897 to 1907 he was associated with William Brewster, the ornithologist, being in charge of the Brewster Ornithological Museum in Cambridge. He was also president of the New England Botanical Club during 1908-11. He compiled and edited *Flora of the Blue Hills, Middlesex Fells, and Stony Brook and Beaver Brook Reservations of the Metropolitan Park Commission* (Boston).

Dellenbaugh, Harriet Rogers Otis. An American actress, died in New York City Nov. 15, 1930. During the '90s she was a member of the New Theatre Company, and also acted with Felix Morris, Annie Russell, James K. Hackett, William H. Crane, and Frances Starr. She was married in 1885 to Frederick Samuel Dellenbaugh, the artist and explorer.

Dennis, Alfred Lewis Pinneo.

Derennes, Charles. A French novelist and poet, died Apr. 28, 1930. He was born at Villeneuve-sur-Loir in 1882, the son of a poet. His novels include: *L'Amour fessé* (1906); *Nique et ses cousines* (1909); *Les Caprices de Nouchette* (1910); *Leur tout petit cœur* (1916); *Cassino va-t-en guerre* (1917); and *le Pèlerin de Gascogne* (1918). He wrote a series of fable books, stories of animals, which showed keen and minute observation. They are: *Vie de grillon* (1921); *la Chouette-souris* (1922); and *Émile et les autres* (1924). He was the author of the following poems: *L'Enivrant angeois* (1904); *la Tempête* (1906); *la Chanson des deux jeunes filles* (1920); *Perréphone* (1921); and *la Fontaine Souvenance* (1924).

Dessaulles, George Casimir. A Canadian senator, died Apr. 19, 1930, in St. Hyacinthe, Quebec, Canada, where he was born Sept. 29, 1827. He was educated at the seminaries of St. Hyacinthe and Quebec and later attended Georgetown University in the District of Columbia. In 1858 he was elected to the city council of St. Hyacinthe and, from 1868 to 1898, except for a period of six years, he was mayor of St. Hyacinthe. He became a member of the legislative assembly of Quebec in 1897. After 1907, he served in the Senate of the Dominion of Canada. He was a Liberal in politics.

Destinn, Emmy.

Dewa, Baron Shigeto. A retired admiral of the Japanese navy, died in Tokyo, Jan. 27, 1930. He was born in 1855 in Aizu and was graduated from the Japanese Naval Academy in 1882. He was captain of the cruiser *Takachiho* in the Chino-Japanese War, 1894-95, and was chief of the committee to bring back the cruiser *Tokiva* from England in 1899. In 1900 he was given the rank of rear admiral. Admiral Dewa was commander of the Standing Squadron, chief of the Construction Board at Yokosuka, and director of the Naval Affairs Bureau. He represented Japan at the Panama Exposition in 1915.

Dewar, Thomas Robert, First Baron of Homestall. An English distiller and sportsman, died at Homestall, in East Grinstead, Sussex, Apr. 11, 1930. He was born in Perth, Scotland, Jan. 6, 1864, and was educated in Edinburgh. His father was a distiller in Perth and, as a young man, Lord Dewar went to England to expand his father's business. In London John Dewar & Sons became one of the largest whisky-distilling firms in the world, the presidency of which he held at the time of his death. A Unionist in politics, he represented St. George's, Tower Hamlets, from 1900 to 1906. He was knighted in 1902 and created a baron in 1919. Lord Dewar was famous for his epi-

grams and after-dinner speeches, many of which are included in his book *Toasts and Maxims and Wisdom Compressed*. He also wrote *A Ramble Around the Globe*; *Prohibition in the United States, Canada, and New Zealand*; and *Experiences of the Gothenburg System*. Diekema, Gerrit John.

Dimmock, George. An American zoologist, died May 17, 1930, in Springfield, Mass., where he was born May 17, 1852. He was graduated from Harvard University in 1877, and after two years of graduate study at that institution he attended the University of Leipzig, receiving the Ph.D. degree in 1881. He also studied at the Sorbonne and the University of Paris during 1881-82, and on his return to the United States resumed the editorship of *Psyche*, an entomological journal which he had started in 1877 and which he continued to edit until 1890. His principal contributions to zoological research were an anatomical study of the early stages of beetles and of the mouth of the mosquito. His works include: *The Anatomy of the Mouth-Parts and the Sucking Apparatus of Some Diptera* (1881) and *Alpumas Oocnecellidæ de Cuba* (1906).

Dixon, Harold Bailey.

Donahue, John J. (Jack). An American actor, died in New York City, Oct. 1, 1930. He was born in Charlestown, Mass., in 1892. As a comedian and dancer he was starred in the musical comedies, *Sunny*, *Rosalie* and *Sons o' Guns*. Other successes were *Be Yourself* and *Hitchy-Koo* of 1918. He was the author of *Letters of a Hooper to His Ma*, published serially in 1930.

Dorrance, John Thompson. An American manufacturer, died in Cinnaminson, N. J., Sept. 21, 1930. He was born in Bristol, Pa., Nov. 11, 1873, and was graduated from the Massachusetts Institute of Technology in 1895 and with the Ph.D. degree from the University of Göttingen in 1897. He became associated with the Joseph Campbell Preserve Company as a chemist in 1899 and developed the manufacture of canned condensed soups. This company later became known as the Campbell Soup Company, of which Mr. Dorrance was chosen president in 1914.

Dow, Herbert Henry.

Dowling, the Most Rev. Austin.

Downer, Charles Alfred. An American educator, died in Samaden, Switzerland, Aug. 14, 1930. He was born in Jersey City, N. J., May 3, 1866, and was graduated from the College of the City of New York in 1886, taking his Ph.D. degree from Columbia University in 1901. He was professor of French at the College of the City of New York from 1904 to 1909 and professor of Romance languages at that institution from 1909 until his death. In 1926 he was president of the American Association of Teachers of French and president from 1915 to 1924 of the Fédération de l'Alliance Française of New York. He was decorated a chevalier of the Legion of Honor in 1913, and in 1926 was designated an officer of the same by Ambassador Paul Claudel on behalf of the French Government. He also was created a knight of the Order of the Crown of Italy in 1919. His works include: *Frédéric Mistral, Poet and Leader in Provence* (1900); *A First Book in French* (1910); and *A First Course in French* (1922).

Doyle, Sir Arthur Conan.

Dresslar, Fletcher Bascom. An American educator, died in Nashville, Tenn., Jan. 19, 1930. He was born in Banta, Ind., Sept. 21, 1858, was graduated from Indiana University in 1889, and in 1894 received the Ph.D. degree from Clark University. During 1882-85 and 1889-91, he taught in the rural schools of Indiana and was principal of the high school and superintendent of schools in Princeton, Ind. He was professor of psychology and education at the State Normal School of Los Angeles, Calif., 1894-97; assistant professor of science and the art of teaching at the University of California from 1897 to 1906; and associate professor there during 1906-09. He became professor of education and dean of the school of education at the University of Alabama in 1909, and during 1909-11 was specialist in school hygiene and sanitation in the Bureau of Education in Washington. After 1912 he was professor in the school of hygiene at Peabody College for Teachers. Dr. Dresslar was a member of the Permanent International Committee on School Hygiene. He wrote *Superstition and Education* (1907); *American Schoolhouses* (1911); *School Hygiene* (1913); *Rural Schoolhouses and Grounds* (1914); *Open-Air Schools* (with Sherman E. Kingsley, 1916); *Rosenwald Schoolbuildings* (1920); *Ethics of the Trees* (1921); *American Schoolbuildings* (1925). He also translated from the German *The Auxiliary Schools of Germany* (1907) and edited, with others, *Moral Training in the Public Schools* (1908).

Dubois, Fred Thomas.

Dufferin and Ava, Frederick Temple-Blackwood, Third Marquess of. An Irish peer, died in an airplane accident near Meopham, Kent, England, July 21, 1930. He was born in Ottawa, Ont., Canada, Feb.

26, 1875. On entering the British Army in 1897, he became a captain of the 9th Lancers, and served in the Boer and World Wars, being mentioned in the dispatches and receiving the Distinguished Service Order. He succeeded his brother in the title in 1918, and in 1921 became speaker of the Senate of Northern Ireland. He was also an aide-de-camp to the King and Vice Admiral of Ulster.

Du Pont, (Thomas) Coleman.

Durham, Plato Tracy. An American clergyman and educator, died in Atlanta, Ga., Feb. 10, 1930. He was born in Shelby, N. C., Sept. 10, 1873, and was graduated from Trinity College, N. C., in 1895. During 1895-96 he attended the Yale Divinity School and was graduated from Union Theological Seminary in 1899. He was professor of Biblical literature and church history at Trinity College from 1899 to 1906. Having been ordained to the ministry of the Methodist Episcopal Church, South, in 1903, he accepted a call as pastor of Trinity Church in Charlotte, N. C., in 1906, being transferred two years later to Central Church in Concord, N. C. He was chosen presiding elder of the Winston (N. C.) district in 1911 and of the Charlotte district in 1913. He was one of the founders of the Candler School of Theology at Emory University and acted as dean and professor of church history from 1914 to 1918.

Dyson, Rear Admiral Charles Wilson, U. S. N. Ret. An American naval officer, died in Washington, D. C., Oct. 25, 1930. He was born in Cambridge, Md., Dec. 2, 1861, and was graduated from the U. S. Naval Academy in 1883. Promoted through the grades, he became rear admiral in 1917 and was retired in 1925. From 1906 to 1913 he was assigned to duty in the bureau of steam engineering of the Navy Department, and in 1914 was placed in charge of the design of naval machinery. The Distinguished Service Cross was bestowed on him in recognition of his improvement of the propeller installation on many vessels.

Eames, Clare.

Eckstein, Sir Frederick, First Baron. A British financier, died in London, June 10, 1930. He was born in Stuttgart, Germany, Apr. 9, 1857. Joining his brother's firm of H. Eckstein & Co., in Johannesburg, South Africa, in 1887, he later became head of the firm and a partner in Wernher, Beit & Co., and was engaged in the direction of some of the richest gold mines in the Rand region. In 1910, when Wernher, Beit & Co. was merged with the Central Mines Investment Corporation, he was made chairman of what was perhaps the largest mine-owning company in the world. He was also chairman for many years of the Sudan Plantations Syndicate, which had been formed in 1907 to promote the raising of cotton in the Sudan. He was made a baron in 1929.

Edmonds, Richard Hathaway. An American editor, died in Baltimore, Md., Oct. 4, 1930. He was born in Norfolk, Va., in 1857. After serving as assistant editor of the *Baltimore Journal of Commerce* from 1878 to 1882, he founded the *Manufacturer's Record*, of which he was editor and chairman of the board at the time of his death. The latter publication was especially devoted to the industrial development of the South and to utilization of its resources. He was also the author of *Facts about the South*, a review of business conditions before and after the World War, and of numerous pamphlets on prohibition and kindred subjects.

Edwards, Howard. An American educator and president of Rhode Island State College, died in Kingston, R. I., Apr. 10, 1930. He was born in Fauquier County, Va., Nov. 7, 1854, and was graduated from Randolph-Macon College with the M.A. degree in 1876, later studying at the University of Leipzig and at the Sorbonne in Paris. After several years' experience as teacher and principal of secondary schools, he became professor of English and modern languages at the University of Arkansas in 1885 and at the Michigan Agricultural College in 1890. In 1906 he was elected president of the Rhode Island State College, which office he held at the time of his death. He was president of the National Association of Land-Grant Colleges in 1923. The LL.D. degree was conferred on him by the University of Arkansas in 1891, Brown University in 1914, and Michigan State College in 1927 and the Litt.D. degree by Rhode Island Normal College in 1927.

Edwards, James Harvey. An American engineer, died in New York City, Aug. 14, 1930. He was born in Oxford, N. Y., June 19, 1864. On graduation from Cornell University in 1888 he became associated with the Berlin Iron Bridge Company in East Berlin, Conn., being appointed chief engineer in 1897. In 1900, when this company was merged with the newly-formed American Bridge Company, he was appointed structural engineer, becoming assistant chief engineer the following year and chief engineer in 1927. In 1929 he was awarded a medal by the American Welding

Society in recognition of his contribution to the development of a process of welding steel in structural work.

Eijkman, Carl Ben.

Bijlman, Christian. A Dutch scientist, died in Utrecht Nov. 5, 1930, where he was connected with the university. In 1889 while director of the hygienic laboratory in Batavia, Dutch East Indies, he succeeded in producing polyneuritis in fowl by feeding them a diet consisting exclusively of polished rice. He had previously noted that this disease closely resembled the disease beri-beri occurring in human beings. This discovery won for him the Nobel Prize in Medicine in 1929.

Elliot, Hugh. A British author, died in Hampton, Middlesex, England, May 6, 1930. He was born Apr. 3, 1881, and was educated at Eton and at Trinity College, Cambridge. He served with the Coldstream Guards during the Boer War and after resigning from the army in 1902 he devoted himself to scientific and philosophical studies, and during 1915-20 edited the *Annual Register*. His works include: *Modern Science and the Illusions of Professor Bergson* (1912); *Herbert Spencer* (1917); *Modern Science and Materialism* (1919); and *Human Character* (1922). He also translated Hagenbeck's *Von Thieren und Menschen* (1909); and edited *The Letters of John Stuart Mill* (1910).

Elliott, George. An American clergyman, died in Flint, Mich., Nov. 2, 1930. He was born in Licking County, Ohio, Dec. 14, 1851, and was graduated from Cornell College in 1872. On ordination to the ministry of the Methodist Episcopal Church he held pastorates in Baltimore (1884-87), Washington (1887-94), Philadelphia (1894-1900), and Detroit (1900-07), becoming field secretary of the General Conference's Board of Home Missions and Church Extension in Chicago in 1907. In 1910 he was called to Bay City, Mich., as pastor of the Madison Avenue Church, and in 1914 to Mt. Clemens, Mich. He was preacher-at-large for the Detroit episcopal area during 1918-20 and then was appointed editor of the *Methodist Review*, which position he held at the time of his death. He wrote: *The Abiding Sabbath* (1884); *The Beauty of Jesus* (1904); *Biblical Criticism and Preaching* (1913); and *The Christmas Canticles* (1922).

Elliott, Henry Wood. An American naturalist, died in Seattle, Wash., May 25, 1930. He was born in Cleveland, Ohio, Nov. 13, 1846. In 1862 he became private secretary to Joseph Henry, secretary of the Smithsonian Institution. During 1872-74 he was detailed by special act of Congress to investigate depredations on the Seal Islands of Alaska. He served again in the latter capacity in 1890, and under authority of the act, approved by Congress in 1904, prepared the fur-seal treaty of "mutual concession and joint control" which was ratified in 1911 by Canada, Japan, Russia, and the United States. His works include: *Conditions of Affairs in Alaska* (1875, for the U. S. Treasury Department); *Monograph on the Seal Islands of Alaska* (1882, for the U. S. Fish Commission); *The Seal Islands of Alaska* (1884); and *Our Arctic Province* (1886).

Emerson, Edward Waldo.

Emerton, James H.

Erlanger, Abraham Lincoln.

Esher, Reginald Baliol Brett, Second Viscount.

Exner, Felix M.

Facts, Luigi.

Farnam, Lynnwood. An American organist, died in New York City Nov. 23, 1930. He was born in Sutton, Que., Canada, Jan. 13, 1885, and attended the Royal College of Music in London. After serving as church organist in Montreal and Boston, he came to New York in 1920 and at the time of his death was organist at the Church of the Holy Communion and also head of the organ department of the Curtis Music School in Philadelphia.

Faunce, William Herbert Perry.

Felton, Mrs. Rebecca Latimer. An American woman-suffrage leader, author, and lecturer, died in Atlanta, Ga., Jan. 24, 1930. She was born in DeKalb Co., Ga., June 10, 1835, and was graduated from the Madison (Ga.) Female College in 1852. The following year she married W. H. Felton. Making her home in Cartersville, Ga., she wrote and lectured on woman suffrage and on temperance throughout the State. In 1922, on the death of Senator Thomas E. Watson of Georgia, she was appointed by the governor of the State to serve for two days in the U. S. Senate, thus becoming the first woman to occupy that position. The honorary appointment was in recognition of Mrs. Felton's services in the cause of woman suffrage in Georgia. In addition to writing for newspapers, she wrote *Memoirs—Georgia Politics* (1911); and *Country Life in Georgia in the Days of My Youth* (1918).

Felton, Samuel Morse.

Ferguson, William J.

Ferranti, Sebastian Ziani de.

Ferris, Jean Léon Gérôme.

Fewkes, J(ease) Walter.

Fielitz, Alexander von.

Findlay, Sir John Ritchie. A British newspaper publisher, died in Edinburgh, Apr. 13, 1930. Born in Aberlour, Scotland, Jan. 13, 1866, he attended Harrow and Balliol College, Oxford. In 1898 on the death of his father, J. Ritchie Findlay, he became principal partner in Messrs. John Ritchie & Co., publishers of *The Scotsman* and its associated newspapers. He was created a Knight Commander of the Order of the British Empire in 1917 and baronet in 1925. In 1928 he was appointed Lord Lieutenant of Banffshire, the county in which his estate was located. He was particularly interested in the furtherance of art and archaeology and was chairman of the board of trustees for the National Galleries of Scotland and vice-chairman of the Scottish Ancient Monuments Board.

Fish, Frederick Perry.

Fitzgerald, Harrington. An American landscape painter, died in Williamstown, Pa., Sept. 16, 1930. He was born in Philadelphia Apr. 5, 1847, and studied under Fortuny and Gérôme in Paris. His principal works are the four panels depicting the Battle of Valley Forge in the State Capitol, Harrisburg, Pa.; "The Wreck" in the National Gallery, Washington; "On the Shore" in the Pennsylvania Museum; and "The Smugglers' Cave" in the Detroit Institute. For 30 years he was also managing editor of the *Philadelphia Item*.

Folger, Henry Clay.

Forbes, Stephen Alfred.

Ford, Frank Richards. An American consulting engineer, died in New York City, Sept. 17, 1930. He was born in Philadelphia, Pa., in 1871, and was graduated from the University of Pennsylvania in 1890. After spending several years in public utility and industrial engineering, he joined the firm of Ford, Bacon and Davis, consulting engineers, in New York in 1894. He served as a member of the New York and New Jersey Port and Harbor Development Commission from 1917 to 1921, and of the Port of New York Authority from 1921 to 1923.

Ford, George Burdett.

Foster, William Eaton. An American librarian, died in Providence, R. I., Sept. 10, 1930. He was born in Brattleboro, Vt., June 2, 1851, and was graduated from Brown University, Providence, in 1873, receiving the A.M. degree from that institution in 1876 and the Litt.D. degree in 1901. He was librarian at the public library in Hyde Park, Mass., from 1873 to 1876; cataloguer at the Turner Free Library in Randolph, Mass., during 1876-77; and librarian at the Providence Public Library from 1877 to 1930. Under his direction the Providence library became one of the most progressive in the United States and was among the first to establish art and industrial, as well as foreign and business, departments. He was president of the Massachusetts Library Club during 1894-95 and of the Rhode Island Library Association during 1903-05. His works include: *The Civil Service Reform Movement* (1881); *The Literature of Civil Service Reform in the United States* (1881); *Libraries and Readers* (1883); *Stephen Hopkins, a Rhode Island Statesman* (1884); *Town Government in Rhode Island* (1886); *The Point of View in History* (1906); *Five Men of '76* (1926); and *The First Fifty Years of the Providence Public Library* (1928).

Foucault, Mgr. Alphonse Gabriel.

Francke, Kuno.

Franklin, William Suddards.

Franko, Naham. An American musician, died in Amityville, N. Y., June 7, 1930. He was born in New Orleans July 23, 1861, and received his musical education in Berlin. In 1875 he came to New York City where he was identified with various orchestras, becoming concert-master at the Metropolitan Opera in 1883 and conductor during 1905-07. He was the first American-born musician to hold that post.

Freeman, Mary Eleanor Wilkins.

Fries, Archibald. An American railway official, died in Severna Park, Md., June 9, 1930. He was born Feb. 27, 1864, in Cincinnati, Ohio. In 1880 he became an entry clerk in the general freight offices of the Baltimore & Ohio Railroad at Cincinnati, Ohio. Remaining in the employ of the Baltimore & Ohio, he was steadily promoted, his positions including those of chief clerk in Cincinnati (1892), assistant general freight agent in Pittsburgh, Pa. (1913), and freight traffic manager in the latter place (1916). At the beginning of United States Government administration of the railroads in 1918, he was appointed traffic manager of the Allegheny region and, in 1920, general traffic manager of the Baltimore & Ohio lines. At the end of the period of federal control in 1920, he was appointed vice president of the Baltimore & Ohio and placed in charge of traffic and commercial development, with headquarters in Baltimore, Md. He held his position with the Baltimore & Ohio system until the time of his death.

Fripp, Sir Alfred Downing. An English physician, died Feb. 25, 1930, in Dorset, where he was born Sept. 12, 1865. He was educated at the University of London and at Guy's Hospital, and became a fellow of the Royal College of Surgeons. In 1897 he was elected assistant surgeon of Guy's Hospital, becoming in 1925 consulting surgeon and governor of the hospital. He was Surgeon in Ordinary to the King and to the Duke of Connaught, appointed by Edward VII and reappointed by George V. He was also surgeon to the Hospital for Women and Children in London. In the South African War, he was chief civilian medical officer of the Imperial Yeomanry Hospital in South Africa and, in the World War, was consulting surgeon to the Royal Navy. Dr. Fripp was knighted in 1903.

Fuchs, Ernst.

Furness, Horace Howard, Jr.

Gasson, Thomas Ignatius. A Roman Catholic clergyman and educator, died in Montreal, Canada, Feb. 27, 1930. He was born in Sevenoaks, Kent, England, Sept. 23, 1859, and was educated at St. Stephen's School, London; at Woodstock College, Md.; and at the Royal University, Innsbruck, Austria. He entered the Society of Jesus in 1875 and was ordained a priest in 1891. He was later appointed professor at Boston College, lecturing on poetry, rhetoric, mental philosophy, ethics, and economics. In 1907 he was elected president of the institution, serving in this capacity until 1914. His administration was marked by the purchase of a new site and the erection of a new building at Chestnut Hill in 1913. During this period he was also rector of the Church of the Immaculate Conception in Boston. In 1914 he went to Georgetown University as dean of the graduate department and professor of sociology, and in 1924 was appointed dean of studies at Loyola College, Montreal.

Gillespie, Richard Thomas. An American clergyman and educator, died in Charlottesville, Va., May 30, 1930, while attending the annual meeting of the General Assembly of the Presbyterian Church in the United States. He was born in Tirzah, S. C., Oct. 23, 1879, and was graduated from Davidson College in 1904. On completing the course at the Columbia Theological Seminary in 1908, he was ordained to the Presbyterian ministry, his first charge being the First Presbyterian Church in Florence, S. C. In 1917 he was called to the Maxwell Street Presbyterian Church in Lexington, Ky., and in 1922 to the First Presbyterian Church in Louisville, Ky. He became president of the Columbia Theological Seminary in 1925.

Gilpin, Charles Sidney.

Gladstone, Herbert John, First Viscount.

Godoy, José Francisco.

Goldstein, Eugen. A German physicist, died in Berlin Dec. 27, 1930. He was born in Gleiwitz Sept. 5, 1850, and in 1888 became associated as physicist with the Berlin observatory. His most important discoveries pertained to cathode rays and "kanalstrahlen."

Gollancz, Sir Hermann.

Gollancz, Sir Israel.

Golovin, Alexander Jakowlewitsch.

Gordon, David Stuart. Brigadier general, U. S. Army, retired, died in Washington, D. C., Jan. 28, 1930. He was born in Franklin Co., Pa., May 23, 1832. In 1861 he was appointed from Kansas to the U. S. Army as second lieutenant in the Second Dragoons, and the same year was transferred to the Second Cavalry with the rank of first lieutenant. In this branch of the Army he served during the Civil War, being brevetted major for his gallant services in the Gettysburg campaign (1863). After the Civil War, General Gordon was stationed on the frontiers, where he engaged in fighting with the Indians. For his services in a campaign against the Indians at Miners Delight in Wyoming in 1870, he was promoted in 1890 to the rank of lieutenant-colonel. In 1892 he was made a colonel and was retired in 1896. He attained the rank of brigadier general in 1904.

Gordon, John R. An American public official, died in Washington, D. C., Aug. 26, 1930, aged 58. For many years he was in charge of marine affairs for the Union Sulphur Company in New York City, and during the World War was a representative of the Food Administration in London. In 1929 he was appointed president of the Merchant Fleet Corporation, being engaged at the time of his death in effecting the consolidation of lines still under Government control.

Gosling, Harry. A British labor leader, died in London Oct. 24, 1930. Born in 1861, he served an apprenticeship as a Thames waterman and lighterman, becoming later, in 1924, Minister of Transport and Paymaster-General in the first Labor Government. For more than 30 years he was one of the leaders of the trade union movement, serving as member of the Civil Service Arbitration Board. In 1923 he was elected a member of Parliament for Whitechapel. He was the author of *Up and Down Stream* (1927).

Gracie, Sir Alexander. A British financier, died in

London, Mar. 2, 1930. He was born Nov. 14, 1860. He was a director of Cammell Laird & Co., Sheffield; the English Electric Company, London; and the Leeds Forge Company and was a member of the Scottish committee of the London, Midland & Scottish Railways. As an expert on shipbuilding engineering, his services were much sought after by various technical commissions. In 1904 he was a member of the Design Committee appointed by the Admiralty; in 1905, a member of the Royal Dockyards Reorganization Committee; and in 1912, a member of the Royal Commission on the Navy in Peace and War. He was made a member of the Royal Victorian Order in 1908 and a Knight Commander of the Order of the British Empire in 1918.

Grant, Rear Admiral Albert Weston.

Greene, Frank Lester.

Greve, Charles Theodore. An American lawyer, died Sept. 4, 1930, in Cincinnati, Ohio, where he was born Jan. 3, 1863. He was graduated from Harvard University in 1884 and from the Cincinnati Law School in 1885. On being admitted to the bar in the latter year, he was engaged in the practice of his profession in Cincinnati until his death. In 1894 he was appointed United States Attorney, but resigned four years later to become United States referee in bankruptcy, holding this office over a period of years. He also was engaged in journalism, being literary editor of the Cincinnati *Tribune* during 1894-97, and of the Cincinnati *Times-Star* during 1898-1901. From 1904 to 1917 he was professor of law at the Cincinnati Law School (later affiliated with the University of Cincinnati), and from 1919 to 1930 at the Y. M. C. A. Law School in Cincinnati. He was the author of a *Centennial History of Cincinnati* (2 vols., 1904) and was a contributor to the *NEW INTERNATIONAL ENCYCLOPEDIA*.

Griswold, The Rt. Rev. Sheldon Munson.

Guffey, James McClurg. An American oil producer, died in Pittsburgh, Pa., Mar. 20, 1930. He was born in Westmoreland Co., Pa., Jan. 19, 1839, and was educated in public and commercial schools of the State. After working for a time in Tennessee as a railroad and express clerk, he returned to Pennsylvania in 1872 and engaged in oil and gas production. He became one of the largest individual oil producers in the United States. Mr. Guffey was active in Democratic politics of Pennsylvania.

Guggenheim, Daniel.

Guggisberg, Brigadier-General Sir (Frederick) Gordon. Governor of British Guiana, died at Bexhill in Sussex, Apr. 21, 1930. He was born in Toronto, Can., July 20, 1869, and was educated at Burney's in Hampshire and at the Royal Military Academy in Woolwich. In 1889 he was commissioned in the Royal Engineers and, during 1893-96, served at Singapore. From 1897 to 1902, he was instructor in fortifications at the Royal Military Academy at Woolwich. He was assistant director of the surveys of the African Gold Coast, made by the Colonial Office in 1902-05, and director during 1905-08, the surveys proving of great value in the development of the colony. In 1910 Sir Gordon was appointed surveyor-general of Nigeria, acting until 1914. During the World War, he served with the Royal Engineers, at which time he was awarded the Distinguished Service Order and the Legion of Honor. He was governor and commander-in-chief of the African Gold Coast Colony from 1919 to 1927. The harbor of Takoradi, completed after he left the colony, was in great part his enterprise. In 1928 he was appointed governor and commander-in-chief of British Guiana. He wrote *We Two in West Africa* (with Mrs. Guggisberg, 1909) and *The Future of the Negro* (with the Rev. A. G. Fraser, 1929). In 1922 he was elevated to the knighthood.

Guthrie, Sir James.

Haas, his, Ludwig. A German statesman, died in Karlsruhe, Baden, Aug. 2, 1930. He was born in Freiburg, Baden, Apr. 16, 1875, and attended the Universities of Heidelberg, Freiburg, and Munich, becoming an advocate in 1901. He represented Baden in the German Reichstag from 1912 to 1918 and from 1920 to 1930, when he retired from political life. He was also Baden Minister of the Interior during 1918-19, and was one of the founders of the Democratic party, acting as chairman of its parliamentary division.

Habdank-Woynicz. See Woynich, Wilfred Michael.

Hadley, Arthur Twining.

Haffkine, Waldemar Mordecai Wolff.

Hagen, Johann Georg.

Hall, The Rt. Rev. Arthur Crawshaw Alliston.

Hall, Asaph, Jr.

Halpert, Samuel.

Hamann, Carl August. An American surgeon and educator, died in Cleveland, Ohio, Jan. 12, 1930. He was born in Davenport, Iowa, Jan. 26, 1868, and was graduated from the medical school of the University of Pennsylvania in 1890. On beginning his practice in Cleveland in 1893, he became associated with the medical school of Western Reserve University as professor

of anatomy. In 1913 he became professor of applied anatomy and clinical surgery and dean of the medical school.

Harding, William P. G(ould).

Hardy, Arthur Sherburne.

Hark, J(oseph) Max(imilian). An American clergyman and former president of the Moravian Seminary and College for Women, died in St. Croix, Virgin Islands, West Indies, July 24, 1930. He was born in Philadelphia, Pa., June 4, 1849, and was graduated from the Moravian College and Theological Seminary in 1870. After serving as pastor of Moravian churches in Lebanon, Philadelphia, and Lancaster, Pa., until 1893, he became principal, and later president, of the Moravian Seminary and College for Women in Bethlehem, Pa., holding that office until 1909. He was one of the founders of the Pennsylvania German Society and of the Pennsylvania Chautauqua, of which he was the first chancellor. He was the author of *The Unity of the Truth in Christianity and Evolution* (1887).

Harnack, Adolf von.

Harris, J(ames) Arthur.

Harris, Maurice Henry. An American rabbi, died in New York City, June 23, 1930. He was born in London, Nov. 9, 1859, and came to the United States at the age of 19. He was graduated from Columbia University in 1887, taking his M.A. degree at the same institution in 1888 and his Ph.D. degree in 1889. He received his rabbinical training at Emanuel Theological Seminary in New York City. He became associated with Temple Israel in New York City, then known as the Hand-in-Hand Synagogue, in 1882 and was appointed official rabbi in 1887. He was past president of the New York Board of Jewish Ministers and of the Eastern Council of Reform Rabbis, and was founder and past president of the Harlem Federation Settlement. His chief work was a three-volume biblical history, entitled *People of the Book* (1895-97). He was also the author of several popular textbooks for Jewish children, including *A Thousand Years of Jewish History* (1904); *Jews of the Middle Ages* (1907); *Modern Jewish History* (1909); and *A Confirmation Manual* (1919), and prepared *Two Chautauqua Syllabi of Jewish History and Literature from the Kabbala to Mendelssohn* (1899).

Harrison, Henry Sydnor.

Harrison, (Thomas) Alexander.

Hart, Julius.

Harvey, Sir Robert.

Haviland, Clarence Floyd. An American psychiatrist, died in Cairo, Egypt, Jan. 1, 1930. He was born in Spencerstown, N. Y., Aug. 15, 1875, and was graduated in medicine from Syracuse University in 1896. From 1897 to 1910, he was successively interne, junior physician, and assistant physician at the Manhattan State Hospital on Ward's Island, N. Y. C. In 1910 he became first assistant physician in the Kings Park State Hospital, on Long Island, N. Y., leaving there in 1915 to become superintendent of the Connecticut State Hospital in Middletown. During 1921-26 he was medical member and chairman of the New York State Hospital Commission and in 1926 returned as superintendent to the Manhattan State Hospital on Ward's Island. After 1927 he was also clinical professor of psychiatry at Columbia University. In 1914 Dr. Haviland made a survey of conditions attending the care of the insane in Pennsylvania. He contributed frequently to medical journals, and was associate editor of *The Modern Hospital*.

Hawthorne, Charles Webster.

Hayes, Maurice Richard Joseph. An Irish physician, died in Dublin, Mar. 2, 1930. He was educated at Sacred Heart College and at Mungret College in Limerick, and at the Catholic University in Dublin. In 1907 he became radiologist for Mater Misericordia Hospital in Dublin. He was a captain in the Royal Army Medical Corps in 1917, and in 1922 he was major general and director general of the Irish Free State Army Medical Service. At the time of his death, he was professor of materia medica and therapeutics at University College in Dublin and consulting radiologist at the National Maternity Hospital there. Dr. Hayes contributed to the study of X-rays, and many of his medical papers treat of that subject.

Hazen, Allen.

Heaton, Augustus Goodyear.

Hendrick, Ellwood.

Henry, Augustine. An Irish botanist, died in Dublin, Mar. 23, 1930. He was born July 2, 1857, and was educated at Queen's Colleges in Galway and in Belfast, later attending Cambridge University and Royal University, Ireland. After medical training in Edinburgh, he became attached as a medical officer to the Chinese Imperial Maritime Customs. In 1882 he was appointed medical officer to the customs station at Ichang on the Yangtze and, during his seven years there, he began a study of the flora of China, at first for its medicinal possibilities. He introduced to the western world the *Lilium Henryi* and, from central and western China, he sent to Kew, England, dried plants of a new flora.

Included in collections from the Chinese province of Hupeh in 1888 were 500 new species of plants and 20 new genera. In Hupeh he discovered the flowering tree *Davidia*. As medical officer on the island of Formosa (then a possession of China and at Mengtze and Ssemao, he made further botanical discoveries, later publishing a first account of the flora of Formosa. On his return to Ireland in 1900, he began the study of forestry, entering the French Forestry School at Nancy (1902-03). During 1907-13 he was reader in forestry at the University of Cambridge, from 1913 to 1926, professor of forestry in the College of Science at Dublin, and, after 1926, professor at University College in Dublin. During these years, he wrote with H. J. Elwes, *The Trees of Great Britain and Ireland* (published in parts between 1906 and 1913) and made frequent contributions to scientific publications, especially to the *Kew Bulletin*.

Henshaw, Henry Wetherbee.

Herschel, Clemens.

Hill, Frederick Trevor.

Hofstede de Groot, Cornelius.

Holgate, Henry. A Canadian engineer, died in Montreal, Jan. 22, 1930. He was born in Milton, Ont., Sept. 14, 1863, and was educated in the Toronto schools. Apprenticed to the Northern Railway of Canada in 1878, he remained there until 1894, engaged at first in railway construction and maintenance and, later, in bridge and structural designing. Entering the service of the Royal Electric Company of Montreal in 1894, he built and operated the Montreal Park and Island Railway. He went in 1898 to the West Indies as manager of the West India Company in Jamaica, building and operating the Hydro-Electric Tramway System in Kingston. On his return to Montreal in 1901, he formed a partnership with Robert A. Ross and, until 1911, the firm was engaged chiefly in constructing hydro-electric plants. Mr. Holgate was appointed by the Dominion Government to investigate some matters in connection with the Trent Valley Canal in 1906 and to act as chairman of a commission to report on the collapse of the Quebec Bridge in 1907. After 1911, he was president of the Cedar Rapids Power Company and was later consulting engineer for the company.

Hollis, Ira Nelson.

Holm, Frits (Vilhelm).

Holman, Alfred. An American editor, died in Bolinas, Calif., Dec. 14, 1930. He was born in Yamhill Co., Ore., July 6, 1857, and for more than 50 years was prominent in journalism on the Pacific Coast. He was reporter and assistant editor on the *Portland Oregonian* (1877-88) and editor of the *Seattle Post Intelligencer* (1888-91). In 1891 he became editor of the *Pacific Rural Press*, San Francisco, and later of the *San José Mercury* (1898-1901), of the *Sacramento Union* (1903-06), and of the *San Francisco Argonaut* (1907-24).

Holmes, Robert. A Canadian painter, died in Toronto, Ont., May 14, 1930. He was born in Cannington, Ont., in 1861, and attended the Port Perry and Hamilton Collegiate Institute, the Toronto School of Art, and the Royal College of Art in London. He was the foremost painter of Canadian flora, his work being noted for its careful detail. At the time of his death he was librarian and lecturer on the history of art at the Ontario College of Art in Toronto. He was president of the Toronto Art League during 1891-94, of the Graphic Arts Club during 1909-11, and of the Ontario Society of Artists during 1919-24. He was elected a member of the Royal Cambrian Academy in 1920.

Howard, James E.

Howse, Sir Neville Reginald.

Hoy, Col. Sir William Wilson. A railway official in South Africa, where he died Feb. 12, 1930. He was born in Kinross, Scotland, Mar. 11, 1868, and at the age of 12 (1880), entered the service of the North British Railway in Edinburgh. In 1889 he went to South Africa as a clerk in the Cape Government Railway Service, becoming assistant traffic manager in Bulawayo (1897-98), in Kimberley (1898), and in Port Elizabeth (1899). During the South African War (1900-02), he was traffic manager at Bloemfontein, with control of the Imperial Military Railways. On the transfer of the railways to civil administration, he became chief traffic manager in Johannesburg for the Central South African Railways and represented them at the International Railway Congress held in Washington, D. C., in 1905; he was assistant general manager in 1909. In the World War, he was director of military railways with the rank of Colonel, and was knighted in 1916. From 1910 to 1927, with the exception of the World War period, he was general manager of railways and harbors of South Africa and, after 1928, chairman of the Rhodesian Railway Commission. He was active in promoting railway electrification in South Africa.

Hughes, Hector James. An American civil engineer and educator, died in Cambridge, Mass., Mar. 1, 1930. He

was born in Centralia, Pa., Oct. 28, 1871. He was graduated from Harvard College in 1894 and later studied at the Lawrence Scientific School of Harvard University, from which he was graduated in 1899. From 1899 to 1902, he was successively assistant engineer of maintenance and resident engineer in charge of construction in Iowa for the Chicago, Burlington & Quincy Railroad. After serving for a few months as designer for the American Bridge Company, he returned to Harvard, in 1902, as instructor in civil engineering. He became assistant professor in 1903, associate professor in 1913, full professor in 1914, and dean of the engineering school in 1920. During 1914-18 he was also professor of civil engineering at the Massachusetts Institute of Technology. He was successful in broadening the scope of the Harvard engineering school, adopting "the industrial plan" whereby students in their junior year might spend a portion of their time working in engineering and industrial plants. In addition to a number of technical articles he was the author of *A Treatise on Hydraulics* (with A. T. Safford, 1911); *Roads and Toll Roads in America* (1913); and *Highway Engineering Education* (1914-27).

Hunt, Theodore Whitefield. An American educator, died in Princeton, N. J., Apr. 12, 1930. He was born in Metuchen, N. J., Feb. 19, 1844, and was graduated from Princeton University in 1865 and from the Princeton Theological Seminary in 1869. From 1868 to 1871 he was a tutor at Princeton, and during the next two years studied at the University of Berlin. On returning to the United States in 1873, he was appointed adjunct professor of rhetoric and English language at Princeton, becoming full professor of English language and literature in 1881 and professor emeritus in 1918. He also was ordained to the Presbyterian ministry in 1878. His works include: *Principles of Written Discourse* (1884); *English Prose and Prose Writers* (1887); *Studies in Literature and Style* (1890); *Ethical Teachings in Old English Literature* (1894); *American Meditative Lyrics* (1896); *English Meditative Lyrics* (1899); *Literature, Its Principles and Problems* (1906); *English Literary Miscellany* (1914); and *Timely Topics* (1921).

Huntington, William Edwards.

Hurlbut, Jesse Lyman. An American clergyman, died in Bloomfield, N. J., Aug. 2, 1930. He was born in New York City, Feb. 15, 1843, and was graduated from Wesleyan University in 1864. On ordination to the Methodist Episcopal ministry the following year, he successively held charges in Newark, N. J. (1865-67); Montclair, N. J. (1867-69); Paterson, N. J. (1869-72); West New Brighton, Staten Island, N. Y. (1872-74); Plainfield, N. J. (1874-77); and Hoboken, N. J. (1877-79). After 1879 he was connected with the Sunday School and tract work of his denomination, acting as general agent of the Sunday School Union (1879-84), assistant editor of publications (1884-88), and editor and secretary of the Sunday School Union and Tract Society (1888-1900). He was secretary of the Epworth League in 1889-92, and for some time was associated with Dr. J. H. Vincent in the direction of the Chautauqua Literary and Scientific Circle. In 1901 he resumed his pastoral work, being located in Morristown, N. J. (1901-04); South Orange, N. J. (1904-05); and Bloomfield, N. J. (1906-09). From 1909 to 1914 he was superintendent of the Newark district, and from 1914 until his retirement in 1918, director of the Biblical Institute of Newark. Among his works are: *Manual of Biblical Geography* (1885); *Studies in the Four Gospels* (1888); *Studies in Old Testament History* (1892); *Revised Normal Lessons* (1895); *Our Church* (1899); *Hurlbut's Story of the Bible* (1901); *Sunday Half Hours with the Great Preachers* (1905); *Handy Bible Encyclopædia* (1906); *Teacher Training Lessons* (1908); *Organizing and Building Up the Sunday School* (1909); *Hurlbut's Story of Jesus* (1915); *Story of the Christian Church* (1918); and *The Story of Chautauqua* (1921).

Huston, Abraham Francis. An American steel manufacturer, died Jan. 12, 1930, in Coatesville, Pa., where he was born July 7, 1852. After graduation from Haverford College in 1872, he entered the Lukens Ironworks, and in 1882 succeeded his father as manager of the foundry, which in 1890 was incorporated under the name, Lukens Iron & Steel Co. Becoming president of the company in 1897, he retained that office when the Lukens Steel Company was formed in 1917. In 1925 he retired from the presidency, but remained chairman of the board of directors until his death.

Hutchins, Harry Burns.

Huyck, Edmund Niles. An American manufacturer, died July 15, 1930, in Rensselaerville, N. Y., where he was born May 17, 1866. On graduation from Williams College in 1888, he entered his father's business, the name of the firm being changed a few years later to F. C. Huyck & Sons. At the time of his death he was president of this firm, which was one of the largest in the United States making paper manufacturers' felts,

and was also president of the Kenwood Mills, Ltd., in Arnprior, Ont., Canada. In 1914 he was a member of the New York State Housing Commission for Second Class Cities, and in 1918 was appointed a member of the felt section of the War Industries Board. He also served for several years as advisory commissioner to the New York State Fund for Compensation Insurance. He was the author of *Establishment Funds and Universal Health Insurance* (1916); *Industrial Medicine and Health Insurance* (1922); and *Elimination of Preventable Sickness* (1922).

Hyatt, Brig.-Gen. Charles Eliot. An American educator and president of the Pennsylvania Military College, died in Chester, Pa., Apr. 9, 1930. He was born in Wilmington, Del., Nov. 27, 1851, and was graduated from the Pennsylvania Military College in 1872 with the degree of C.E. From 1872 to 1888 he was an instructor at this institution, succeeding to the presidency upon the death of his father in the latter year. He was brevetted a brigadier-general in the National Guard of Pennsylvania in 1923.

Ibsen, Sigurd.

Irvine, Julia Josephine (Thomas).

Jaccaci, August F. An American artist, died in Châteaufort-de-grasse, France, July 22, 1930. Born in Fontainebleau, France, Jan. 28, 1856, he migrated in the '80s to the United States where he remained 80 years, becoming a citizen. He was successively art editor of McClure's and Scribner's magazines and became a decorative artist. His most important murals are those in the Capitol at St. Paul, Minn. During the World War he established the Society for the Protection of Children of the Frontier, which aided Flemish and French orphans.

Jewett, Henry.

Jhering, Hermann von.

Johnson, Clarke Howard. An American jurist, died Sept. 14, 1930, in Foster, R. I., where he was born Nov. 18, 1851. He was graduated from Brown University in 1877 and was admitted to the bar two years later, practicing in Providence. He was a member of the House of Representatives of the Rhode Island Legislature during 1879-80 and 1899-1903 and served as clerk of the House during 1881-86. From 1886 to 1903 he was a justice of the District Court of the 8th Judicial District of Rhode Island, and in 1903 was elected an associate justice of the Rhode Island Supreme Court. He became chief justice of the Supreme Court in 1913, holding this office until his retirement in 1917.

Jones, John Carleton. An American educator and former president of the University of Missouri, died in Daytona, Fla., Apr. 22, 1930. He was born near Sharpsburg, Ky., July 30, 1856. On graduation from Westminster College in 1879, he taught Latin for three years at that institution and received the M.A. degree in 1882. After a year of graduate study at Johns Hopkins University, he joined the faculty of the University of Missouri, serving as assistant professor of Latin and Greek from 1883 to 1887, as associate professor of Latin from 1887 to 1891, and as professor of Latin from 1891 to 1922. He also was appointed dean of the College of Arts and Science in 1900 and served as acting president on two occasions, during 1905-06 and in 1921. In 1923 he was elected president of the University of Missouri but held this office only a year, retiring in 1923 with the title of president emeritus. On his retirement he directed a campaign among the alumni of the university for funds to build a Memorial Union and Stadium. The Ph.D. degree was conferred on him by Westminster College in 1891 and the LL.D. degree by the University of Missouri in 1908 and Washington University in 1923. He was a contributor to the *Classical Review* and other philological and educational journals.

Jones, Mary Harris ("Mother").

Junkersfeld, Peter. An American engineer, died in Scarsdale, N. Y., Mar. 18, 1930. He was born in Campaign County, Ill., Oct. 17, 1869, and was graduated from the University of Illinois in 1895. From 1895 to 1909, he was in charge, first, of the engineering department of the Chicago Edison Company and, later, of its successor, the Commonwealth Edison Company. He was assistant to the vice-president of the company during 1909-17 and in 1916 was elected president of the Association of Edison Illuminating Companies. In 1917-19 serving in the U. S. Army he was supervising officer of cantonment and other war construction headquarters in Washington, D. C., where he was promoted to the rank of colonel and awarded the Distinguished Service Medal. He was engineering manager for Stone & Webster in New York City in 1919-22, resigning to become a member of McClellan & Junkersfeld, Inc., engineers and constructors. In 1928 that firm was incorporated with the division of construction and engineering of Stone & Webster, and Mr. Junkersfeld accepted the position of vice-president of the Stone & Webster Engineering Corporation.

Keith-Falconer, Sir Algernon Hawkins Thomond, Tenth Earl of Kintore. An English political leader, died in London, Mar. 3, 1930. He was born in Edinburgh, Aug. 12, 1852, and was educated at Eton and at Trinity College, Cambridge University. In 1880 he succeeded to his father's title, and in 1885 became the first government whip in the House of Lords. Lord Kintore was lord-in-waiting in 1885-86 and again from 1895 to 1905. He was aide-de-camp both to King Edward and to King George. When captain of the Yeomen of the Guard (1886-89), he resigned on his appointment as governor and commander-in-chief of South Australia. Lord Kintore supported the Unionist party and, in 1913, became deputy speaker of the House of Lords.

Kelsey, Clarence Hill. An American banker, died in West Orange, N. J., Apr. 30, 1930. He was born in Bridgeport, Conn., Dec. 23, 1856, and was graduated from Yale University in 1878. On receiving a degree from the Hamilton Law School in 1880, he was admitted to the New York bar and practiced law in New York City until 1883. In that year he entered the Title Guarantee & Trust Co. as office manager, becoming later secretary, vice-president, president, and, after 1923, chairman of the board of directors. He was also chairman of the board of directors for the Bond & Mortgage Guarantee Co. and a director in a number of other banking and insurance companies.

Kenny, Courtney Stanhope. An English jurist, died in Cambridge, Mar. 18, 1930. He was born in Halifax, Yorkshire, Mar. 18, 1847, and was educated at Downing College, Cambridge University. During 1882-86 he was a lecturer in law at Trinity College, Cambridge, and became university reader in English law at Cambridge in 1888, Downing professor of the laws of England in 1907, and emeritus professor in 1918; he was also a fellow of Downing College from 1885 to 1907 and was reelected in 1918. In 1885-86 he was a member of Parliament for the Barnsley Division of Yorkshire. He is best known for his lectures and books on criminal law. His works include: *History of Primogeniture; Law of Married Women; Endowed Charities; Outlines of Criminal Law* (13th ed., 1929); *Criminal Cases; Law of Torts; Contract Cases; Parliamentary Logic* (edited).

Kinkaid, Edgar Benton. An American jurist and educator, died in Atlanta, Ga., Apr. 9, 1930. He was born in Beverly, Washington County, Ohio, Mar. 14, 1862, and attended Marietta College during 1880-82. He was admitted to the bar in 1889, and became professor of law at Ohio State University in 1895. During 1897-98 he was special counsel representing the State of Ohio in important anti-trust litigation brought against the Standard Oil Company. He later served as judge of the Court of Common Pleas of Franklin County, Ohio, during 1909-15. He was an authority on pleadings, his works including: *Code Pleading*, 1895, 1898; *Kinkaid's Common Law Pleading; Kinkaid's Instructions to Jury and Judgment Entries; Probate Law and Practice; Kinkaid's Practice; Kinkaid on Torts; and Kinkaid's Jurisprudence Law and Ethics*.

Kintore, Earl of. See Keith-Falconer, Sir Algernon Hawkins Thomond, Tenth Earl of Kintore.

Kirby-Lunn, Louise.

Klotz, Lucien Louis. A French lawyer and statesman, died June 15, 1930, in Paris where in was born in 1868. Entering Parliament as Deputy for the Somme, he became Minister of Finance in the Briand Cabinet of 1910 and held the same portfolio during two other terms, concluding with the important period from 1917 to 1920 in Clémenceau's Cabinet. In 1928, while a member of the Senate, he was accused of fraud in issuing checks on banks in which he had insufficient funds. He was sentenced to two years' imprisonment but was released as a first offender after serving only two months.

Knight, John Thornton. Brigadier general, U. S. Army, retired, died in San Francisco, Calif., Jan. 15, 1930. He was born in Prince Edward County, Va., Apr. 18, 1861, and was graduated from the U. S. Military Academy in 1884 and commissioned second lieutenant in the 3d Cavalry. He was promoted through the grades reaching that of brigadier general in 1923. General Knight's service included a detail to the Virginia National Guard (1894-96); chief quartermaster in the Department of Santiago (1898-99) and in the Philippines (1899-1900); duty in the office of the Quartermaster-General in Washington, D. C. (1906-08 and 1910-12); detail to the General Staff (1908-10); service as quartermaster at the Port of Embarkation in Newport News, Va. (1917-18) and in France at Brest, Tours, and Paris (1918-19); and chief of construction service in the office of the Quartermaster-General in Washington, D. C. (1923-25). He was retired in 1925.

Komura, Kin-ichi, Second Marquis.

Köster, Adolph. A German statesman and author, died in Belgrade, Yugoslavia, Feb. 18, 1930. He was born in Verden, Hanover, Germany, Mar. 8, 1883, and at-

tended the Universities of Heidelberg, Halle, Marburg, and Zurich. Before the War he was a lecturer at the Technical University in Munich. He began his political career in 1920 as Minister of Foreign Affairs in the cabinet of Chancellor Müller. The following year he was asked by Chancellor Wirth to be Minister of the Interior. In 1923 he was sent to Latvia as German Chargé d'Affaires, and in 1928 was appointed Minister to Yugoslavia. He was the author of several novels, chief of which are: *Die zehn Schornsteine* (1909) and *Die bange Nacht* (1913).

Kriehoff, William George. An American painter, died Apr. 20, 1930, in Philadelphia, Pa., where he was born Aug. 31, 1875. He studied under William Chase in New York, specializing in portraits. Among the prominent persons whom he painted were William Howard Taft, Col. Charles A. Lindbergh, and Eva Le Gallienne. He also gained recognition through his imaginative landscapes, in which mood predominated over shape and contour. Typical of these are: "Solitude"; "Golden Rocks"; "In Arcady"; "Reflected Gold"; "Mysterious Night"; "October Mist"; and "Dreamworld."

Kumm, H. Karl William. An American explorer and geographical research worker, died in San Diego, Calif., Aug. 22, 1930. He was born in Hanover, Germany, Oct. 19, 1874, and attended Harley College, London, and the Universities of Heidelberg, Jena, and Freiburg, receiving his Ph.D. degree from the latter institution in 1903. Most of his explorations were in Africa, where he was the first white man to traverse the north-central African divide between Congo Shari and the Nile. He was founder and director of the Board for Medical Education and Research in Africa and also of the Sudan United Mission, in which 22 denominations cooperated. Under his direction missions, schools, and hospitals were established in central Africa. Following the World War, he made maps of African territories for the Paris Peace Conference. His works include: *Tribes of the Nile Valley* (1901); *Political Economy of Nubia* (1903); *The Sudan* (1907); *From Haussaland to Egypt* (1910); *The Lands of Ethiopia* (1910); and *African Missionary Heroes and Heroines* (1917).

Ladd-Franklin, Christine.

Laffeur, Eugene.

Lambert, George Washington.

Lane, Victor Hugo. An American educator and jurist, died in Ann Arbor, Mich., Jan. 24, 1930. He was born in Geneva, Ohio, May 27, 1852, and was graduated from the University of Michigan in 1874 with the degree of C.E. He decided that the law had a greater appeal to him as a profession, returned to the university, and was graduated in 1878 with the degree of J.L.B. He was admitted to the bar immediately upon graduation and began his practice in Hudson, Mich. In 1884 he moved to Adrian where four years later he became judge of the first judicial court of Michigan, comprising Lenawee and Hillsdale Counties. In 1897 he became Fletcher professor of law at the University of Michigan. One of his outstanding contributions to his alma mater was as president of the general alumni association, from 1901 to 1923. He retired from active teaching in 1927. He was the editor of Cooley's *Constitutional Limitations* (1903) and Tiffany's *Justice Guide* (1905).

Lange, Helene. A German feminist and educator, died in Berlin, May 13, 1930. She was born in Oldenburg, Apr. 9, 1848. In 1888 she became principal of the *Realkurse* for women in Berlin, which in 1893 was recognized as a *Gymnastik-Kurse*, or college for women. In 1889 she founded, with Auguste Schmidt and Marie Loeper-Housselle, the *Allgemeinen Deutschen Lehrerinnenverein* and headed the movement for the admission of women students to German universities. She also served as president of the *Allgemeinen Deutschen Frauenvereins* and was a director of the International Council of Women, devoting her energies in both these movements to securing political suffrage for women. Her works include: *Die höhere Mädchenschule und ihre Bestimmung* (1887); *Frauenbildung* (1889); *Entwicklung und Stand des höheren Mädchenschulwesens in Deutschland* (1893); *Die Frauenbewegung in ihren gegenwärtigen Problemen* (1915); and *Lebenserinnerungen* (1921). She edited the monthly journal, *Die Frau*, from 1893 until her death.

Larkin, Peter Charles.

Larrazola, Octaviano Ambrosio. A former governor and senator of New Mexico, died in Albuquerque, N. Mex., Apr. 7, 1930. Born in Allendale, State of Chihuahua, Mexico, Dec. 7, 1859, he went to the United States in 1870 under the protection of the Rt. Rev. J. B. Salpointe, Bishop of Arizona. He was a student at St. Michael's College in Santa Fé, N. Mex., in 1875-76 and taught in the public school at San Elizario, Texas, from 1878 to 1884. In 1885 he was appointed clerk for the U. S. District and Circuit Courts for the western district of Texas and, in 1886, clerk of the district court at El Paso, Texas, to which he was reelected in 1888. Admitted to the bar in 1888, he became district attorney

for the western district of Texas in 1890 and was re-elected in 1892 for a two year term. From 1919 to 1921, he was governor of New Mexico and in 1928 was elected to fill the unexpired term of Andrieus A. Jones, United States Senator, ending Mar. 4, 1929.

Latham, Third Earl of. See Wilbraham, Edward William Boote.

Lawrence, Aubrey Trevor. An English jurist, died in London, Mar. 23, 1930. Born in 1875, he was educated at Christ Church, Oxford, and in 1899 became a barrister-at-law. He was chancellor of seven dioceses, which included Sheffield (after 1914), Worcester (after 1920), Peterborough and Southwell (after 1922), Winchester (after 1924), and Leicester and Portsmouth (after 1927). He was on the staff of the Ministry of Munitions during 1915-19, honorary secretary of Lord Cave's Commission on the Property and Revenue of the Church in 1921-24, and a member of the House of Laity in the Church Assembly of 1925. He edited *Cripps on the Law of Church and Clergy and Cripps on Compensation*. In 1927 he was made a King's Counsel.

Lawrence, David Herbert.

Le Coo, Albert August von.

Lee, Jennie. An English actress, died May 3, 1930, at the age of 72, in London, her birthplace. She was married to J. P. Burnett, playwright and actor. Her first London appearance was in the rôle of Henry in Herve's comic opera *Chilperic* in 1870. She played with Mrs. Swansborough in *Pilgrim of Love*, *Orpheus* and *Eurydice*, *Edy O'Connor*, *Richard Cœur de Lion*, and *The Idle Prentice*. With E. A. Sothern, she went to America to play Mary Meredith in *Our American Cousin*. She first appeared in her most famous rôle, that of Jo in an adaptation of Dickens's *Bleak House*, at San Francisco in 1875 and, for 20 years of her career, played it all over the world. Her other rôles include Mrs. James Blackwood in *The Chetwynd Affair* (1904); Mrs. Bedwin in *Oliver Twist* (1905); and Mistress Quickly in *The Merry Wives of Windsor* (1906).

Leonard, Reuben Wells. A Canadian engineer, died in St. Catharines, Ont., Dec. 17, 1930. He was born in Brantford, Ont., Feb. 21, 1860, and from 1883 to 1901 was engaged in railroad engineering, chiefly with the Canadian Pacific Railway. He then became interested in hydro-electric development, and in 1906 became promoter and president of the Coniagas Mines, Ltd., one of the richest silver mines in the Cobalt (Ont.) area, and in 1918 of Electric Steel and Engineering, Ltd., in Welland, Ont.

Leonard, The Rt. Rev. William Andrew.

Leopold, Maximilian Joseph Maria Arnulf, Prince of Bavaria.

Lewis, Arthur.

Lissner, Moyer. An American lawyer and civic reformer, died in Los Angeles, Calif., July 29, 1930. He was born in San Francisco, Calif., June 16, 1871, and on completing the course at the Los Angeles Law School was admitted to the bar in 1899, practicing in Los Angeles. He was an effective organizer of good-government movements and an ardent supporter of the Republican and Progressive parties. Among the organizations which he founded were: the Non-Partisan City Central Committee (1906); the Lincoln-Roosevelt Republican League in California (1907); and the Good Government Organization and Good Government Fund (1909). During 1910-11 he was chairman of the California Republican State Central Committee, resigning that office in 1912 to become California chairman of the Roosevelt campaign. He was also a member from 1912 to 1916 of the executive body of the Progressive National Committee. His other activities included the presidency of the Board of Public Utilities of the City of Los Angeles (1909-11) and membership on the California Industrial Accident Commission (1915-19 and 1928-30) and on the U. S. Shipping Board (1921-25). During 1914-17 he edited the *California Outlook*.

Locke, William John.

Logan, James Addison, Jr.

Longman, Thomas Norton. A British publisher, died in King's Langley, Hertfordshire, Nov. 2, 1930. Born in 1849, he was the fifth Thomas Longman in succession to head London's oldest book firm, Longmans, Green & Co.

Lord, Daniel M. An American advertising pioneer, died in New York City May 27, 1930. He was born in Newton Corner, Mass., Sept. 29, 1844. On going to Chicago in 1868, he became associated in an advertising capacity with the *Presbyterian Interior*. A few years later he established, with A. L. Thomas, the advertising agency of Lord and Thomas, which became a leader in the Middle West. Mr. Lord was a staunch upholder of the ethics of advertising, and through his example helped to place the new profession on a higher plane. He retired in 1904.

Lord, Herbert Gardiner.

Lord, Herbert Mathew.

Loring, William Caleb.

Love, Robertus. An American journalist, died in St. Louis, Mo., May 7, 1930. Born near Irontdale, Mo., Jan. 6, 1867, he was graduated from McCune College in 1884 and attended Lincoln University the following year. After graduation he became local editor for the Louisiana (Mo.) *Press* in 1886. In the early years of his work, Mr. Love was editor of the *Daily Press* of Asbury Park, N. J. (1892-95), coast correspondent for the New York *Sun* (1895), staff writer for the St. Louis *Post-Dispatch* (1900-08), editor of the General Press Bureau of the St. Louis Exposition (1903-04) and managing editor of the bureau for the Lewis Clark Exposition (1905). He was on the editorial staff of the St. Louis *Post-Dispatch* in 1911-13 and special feature and humorous writer for the St. Louis *Republic* in 1913-16. After 1922, he was on the editorial staff of the *Post-Dispatch* and, after 1926, of the *Globe-Democrat* in St. Louis, becoming literary editor of the latter paper in 1928. He was the author of *Poems All the Way from Pike* (1904) and *The Rise and Fall of Jesse James* (1925).

Lugon, Louis Henri Joseph, Cardinal.

Lynch, James Mathew.

Lynde, Lind, Francis. An American author, died in Chattanooga, Tenn., May 16, 1930. He was born in Lewiston, N. Y., Nov. 12, 1856, and received an academy education. Until 1893 he was employed with various railroads, after which he turned to writing novels and short stories. His books include: *A Romance in Transit* (1898); *The Helpers* (1899); *The Grafters* (1904); *The Quickening* (1906); *Empire Builders* (1907); *The Taming of Red Butte Western* (1910); *The Price* (1911); *The Honorable Senator Sage-Brush* (1913); *The City of Numbered Days* (1914); *After the Manner of Men* (1916); *David Vallory* (1919); *The Wreckers* (1920); *The Girl, a Horse and a Dog* (1920); *Pirates' Hope* (1922); *The Fight on the Standing Stone* (1925); *The Tenderfoot* (1926); *The Flight of the Gray Goose* (1927).

McAdoo, William. An American judge, died in New York City, June 7, 1930. Born in Rathmelton, County Donegal, Ireland, Oct. 25, 1853, he went to the United States as a child. He was educated in the public schools of Hudson County, N. J., and, at the age of 20, began the study of law in Jersey City, working at the same time as reporter for a local newspaper. On being admitted to the New Jersey bar, he was appointed attorney for the Hudson County (N. J.) Board of Health. From 1883 to 1891, he was a member of Congress for the Seventh District, N. J. He was assistant secretary of the U. S. Navy during 1893-97, after which he went to New York City to practice law. In 1904-05 he was police commissioner for New York City and, after 1910, chief city magistrate. He wrote *Guarding a Great City* (1906) and *When the Court Takes a Recess* (1924).

McBride, Thomas Allen. An American jurist, died in Salem, Ore., Sept. 9, 1930. He was born in Yamhill County, Ore., Nov. 15, 1847, and attended McMinnville College. On being admitted to the bar in 1870, he practiced for several years in Lafayette, Ore. He was elected to the Oregon House of Representatives in 1877, and was district attorney of the 5th Judicial District of Oregon from 1882 to 1892. He then became circuit judge of the same district, serving until 1909 when he was appointed an associate justice of the Supreme Court of Oregon. At the time of his death he was chief justice of the Supreme Court.

McClintock, William E. An American engineer, died in Chelsea, Mass., Mar. 2, 1930, at the age of 81. From 1867 to 1876, he surveyed many of the principal harbors of the Atlantic coast, while connected with the U. S. Coast Survey. He was city engineer of Chelsea, Mass., during 1880-90, and in 1892 was appointed highway commissioner for Massachusetts. After the fire which almost destroyed Chelsea in 1908, Mr. McClintock was appointed chairman of the board of control to conduct the government of the city during the period of reconstruction and to direct the rebuilding of the burned areas.

McCormick, Sir William Symington. A Scottish publisher and educator, died in Barcelona, Spain, Mar. 22, 1930. He was born in Dumfries, Scotland, Apr. 29, 1859, and was educated at the universities of Glasgow, Göttingen, and Marburg. He was assistant to the professor of English in Glasgow University, English lecturer in Queen Margaret College, Glasgow, and professor of English at University College, St. Andrews University, in Dundee. At one time, Sir William was secretary to the Carnegie Trust for the Universities of Scotland and, at his death, was chairman of the University Grants Committee. He was also chairman of the Advisory Council on Scientific and Industrial Research, organized in 1915 to give government assistance to scientific research for industrial purposes. He was a partner in the publishing firm of Wilson & McCormick in Glasgow. He was one of the editors of the *Globe*

edition of Chaucer's works and wrote *Lectures on Literature* and papers and essays on Chaucer and Middle English. In 1911 he was knighted.

MacDonell, Arthur Anthony.

McGonagle, William Albert. An American railway president, died in Duluth, Minn., Aug. 2, 1930. He was born in Conshohocken, Pa., Mar. 28, 1861. On graduating from the University of Pennsylvania in 1881, he entered the engineering department of the Northern Pacific Railway, being engaged as transitman in locating the Little Falls and Dakota branch of that railroad. The following year he began his long service with the Duluth and Iron Range Railway, acting as assistant engineer from 1882 to 1890, resident engineer and superintendent of bridges and buildings from 1890 to 1901, and assistant chief engineer during 1901-02. He then became associated with the Duluth, Missabe and Northern Railway, being appointed assistant to the president in 1902, 1st vice president and general manager in 1903, and president in 1909. Following the merger of the Duluth and Iron Range and Duluth, Missabe and Northern Railways in 1930, Mr. McGonagle continued as administrative head. He was president of the American Railway Bridge and Building Association in 1895, and in 1926 was elected to the Duluth Hall of Fame.

Mackay, John Yule.

McKenna, Charles Francis. An American chemical engineer, died Apr. 25, 1930, in New York City where he was born June 4, 1861. He was graduated from St. Francis Xavier College with the A.B. degree in 1879 and the M.A. degree in 1880, and from Columbia University with the Ph.B. degree in 1883. He was employed as chemist for various industrial companies from 1885 to 1893 and as director of the Laboratory of Physical Testing in New York City from 1893 to 1895. In 1895 he became associated with the Passaic Zinc Company as chemist, and two years later began practice as a consulting chemist, specializing in the qualities of materials. The Ph.D. degree was conferred on him by Columbia University in 1894. He was the chemist member of the Municipal Explosives Commission of New York City from 1902 to 1904 and was chiefly responsible for the regulations on the handling of explosives adopted in that city. He was also president of the Institute of Chemical Engineers in 1910, and in 1918 was chairman of the subcommittee on chemical engineering of the National Defense Council.

Mackenzie, Sir Thomas.

McLean, Walter. Rear admiral, U. S. N., retired, died in Annapolis, Md., Mar. 20, 1930. He was born in Elizabeth, N. J., July 30, 1855, and was graduated from the U. S. Naval Academy in 1876. He was promoted through the grades to rear admiral in 1914. He was in command of the fourth division of the Atlantic Fleet in 1914-15 and became commandant of the Navy Yard and Station in Norfolk, Va., and the Fifth Naval District the following year. In 1919 he was retired. He had an active part in the development of modern ordnance.

McRae, Milton A.

Macy, V(alentine) Everit. An American philanthropist, died near Phoenix, Ariz., Mar. 21, 1930. Born in New York City, Mar. 23, 1871, he was graduated from the School of Architecture at Columbia University in 1893, but did not practice the profession of architecture. He was a director in the Title Guarantee & Trust Co., the Seamen's Bank for Savings, and other corporations in New York City. During the World War, he was chairman of the Shipbuilding Adjustment Board and umpire to the War Labor Board. Mr. Macy's home was in Westchester County, N. Y., where his name is associated with the reforms which he made in the public institutions of the county. From 1914 to 1924, he was Superintendent of the Poor and Commissioner of Public Welfare in the county, during which time he built a model workhouse, hospital, and almshouse and secured the passage of a new poor law. He was a trustee of the Metropolitan Museum of Art and of Teachers College, Columbia University.

Magill, Robert. A Canadian educator and industrialist, died at Battle Creek, Mich., Jan. 15, 1930. Born in County Down, Ireland, he was educated at Queen's University in Belfast and the University of Jena, Germany, taking his Ph.D. degree. He was professor of philosophy at Halifax Presbyterian College in Nova Scotia during 1903-07 and principal in 1907-08. From 1908 to 1912, he was professor of philosophy in Dalhousie University, Nova Scotia. He served as chairman of the royal commission for the regulation of the hours of labor in Nova Scotia in 1908-09, chairman of the royal commission to investigate the grain elevators in Saskatchewan in 1910-11, and chairman of the conciliation board to settle the Port Morien coal mine disputes in 1911. He was chairman of the Board of Grain Commissioners for Canada in 1912-16 and was appointed chairman of the Board of Grain Supervisors for Canada in 1917. At the time of his death, he was secretary of the Grain Exchange of Winnipeg.

Magrath, John Richard. A British educator, died in Oxford, England, Aug. 1, 1930. He was born in the Isle of Guernsey, Jan. 29, 1839, and attended Elizabeth College, Guernsey, and Oriel College, Oxford. Elected a fellow of Queen's College, Oxford, in 1860, he served as tutor and dean (1864-77), bursar (1874-78), pro provost (1877), and provost (1878-1930). He was a member of the Hebdomadal Council of Oxford (administrative board) from 1878 to 1898 and again from 1902 to 1905, and chairman of the Oxford Local Board from 1882 to 1887. In 1894 he was chosen vice chancellor of the University of Oxford, holding that office until 1898. He was also curator of the university chest (1885-1908), delegate of the university press (1894-1920), and delegate of the university museum (1903-12). The M.A. degree was conferred on him by Durham University in recognition of his service as university commissioner during 1908-09, and the D.D. degree by Columbia University. His works include: *The Fall of the Republic of Florence* (Stanhope Prize Essay, 1860); *A Plea for the Study of Theology in the University of Oxford* (1868); *Papers on University Reform* (1877); chapter on "Queen's College" in *Clark's Colleges of Oxford* (1891); *The Plemings in Oxford* (3 vols., 1904, 1913, 1924); *The Obituary Book of Queen's College, Oxford* (1910); and *The Queen's College* (2 vols., 1921).

Mahon, Gen. Sir Bryan Thomas. An Irish soldier, died in Dublin Sept. 24, 1930. He was born in Belleville, County Galway, Apr. 2, 1862, and entered the British Army in 1883. During the Boer War he led the famous flying column which went to the relief of Sir Robert Baden-Powell in the siege of Mafeking in May, 1900. At the outbreak of the World War he was appointed general officer commanding the 10th (Irish) division, which he led during the Salonika campaign of 1915-16, and was commander-in-chief of Ireland during 1916-18. In 1922 he was elected a member of the senate of the Irish Free State Parliament.

Mains, George Preston. An American clergyman, died in Altadena, Calif., Sept. 6, 1930. He was born in Newport, N. Y., Aug. 7, 1844. During the Civil War he served in the North Atlantic squadron of the United States Navy under Admiral Porter. On graduating from Wesleyan University in 1870, he was ordained to the ministry of the Methodist Episcopal Church, holding pastorates until 1896 in Ansonia, New Haven, New Britain, Bristol, and Waterbury, Conn., and in Brooklyn and Mt. Vernon, N. Y. In 1884 he was presiding elder of the New York Eastern District, and from 1889 to 1897 secretary of the New York Eastern Conference. In 1896 he became a member of the board of managers of the Methodist Episcopal Missionary Society, treasurer of the Episcopal Fund, and publishing agent of the Methodist Episcopal Church, retiring in 1916. His writings include: *Life of Francis Asbury* (1909); *Modern Thought and Traditional Faith* (1911); *Some Moral Reasons for Belief in the Godhead of Jesus Christ* (1912); *Christianity and the New Age* (1914); *Divine Inspiration* (1915); *Religious Experience* (1917); *Premillennialism* (1919); *Life's Westward Windows* (1925); *Science, Christianity, and Youth* (1926); and *Mental Phases in a Spiritual Biography* (1928).

Malten (Müller), Therese.

Markham, Charles Henry. An American railway executive, died in Altadena, Calif., Nov. 24, 1930. He was born in Clarksville, Tenn., May 22, 1861, and began his railroad service as a section laborer on the Atchafalaya, Topeka & Santa Fe Railway in 1881. Advanced through the ranks, he became president of the Illinois Central Railroad in 1911 and chairman of the board in 1926. The principal feature which he inaugurated was the electrification of the railroad's suburban service in Chicago. He also acted as president of the Ocean Steamship Company and the Central of Georgia Railway Company, subsidiaries of the Illinois Central system, from 1911 to 1919 and as chairman of the board thereafter.

Markley, Joseph Lybrand. An American educator and mathematician, died in Ann Arbor, Mich., Apr. 20, 1930. He was born in East Nantmeal Township, Chester County, Pa., Oct. 6, 1859, and was graduated from the West Chester (Pa.) Normal school in 1881, completing the scientific course there two years later. He then entered Haverford College, receiving the B.A. degree in 1885 and M.A. in 1886. He pursued graduate studies at Harvard where he served as instructor in mathematics for a year, and then joined the faculty of the University of Michigan in a similar capacity. He was made assistant professor in 1895, junior professor in 1904, and professor in 1907. In 1922 he was appointed to the chairmanship of the mathematics department, from which position he retired in 1926, one year prior to his resignation. He was a contributor to various educational journals and was associate editor of the *Bulletin of the American Mathematical Society* in 1898.

Marshall, William. A British merchant sailor, commodore of the Royal Navy Reserve, retired, and com-

modore of the Fleet of the White Star Line, died in Southampton, England, May 28, 1930. He was born at Bolton in Lancashire, Apr. 10, 1873, and was educated there. He served for two years on H.M. school ship *Conway* in Liverpool, after which he was apprenticed on the White Star Line sailing ship *Copley*, cruising all over the world during 1891-94. In 1911 he was appointed to command in the White Star Line. Having been commissioned in the Royal Navy Reserve as sub-lieutenant in 1900, he was promoted to commander in 1914, captain in 1917, commodore in 1927, and the following year was retired from the Navy Reserve. He was placed in command of the S.S. *Majestic* in 1928 and was appointed commodore of the fleet of the White Star Line in January, 1930.

Marvel, Josiah, An American lawyer, died in Greenville, Del., Oct. 11, 1930. Born near Georgetown, Del., Jan. 18, 1866, he was admitted to the bar in 1894, practicing with his brother, D. D. Marvel, in Wilmington. The inheritance tax law and the child labor law of Delaware were drafted by Mr. Marvel, and he also supervised the drafting of the income tax law and the State highway law. He was elected president of the American Bar Association at its convention in Chicago Aug. 20-23, 1930.

Mather, Stephen Tyng.

Matheson, William John. An American chemist, died off the coast of Miami, Fla., May 15, 1930. Born in Elkhorn, Wis., in 1857, he attended St. Andrews University, Scotland, and in 1876, began working on the application of coal tar dyes. He later became an officer or director of many corporations. In his will he left a bequest of \$600,000 to promote a survey of epidemic encephalitis, or sleeping sickness.

Matthew, William Diller. An American paleontologist, died in San Francisco, Calif., Sept. 24, 1930. He was born in St. John, N. B., Canada, Feb. 19, 1871. Leaving Columbia University with the Ph.D. degree in 1895, he was appointed assistant in the American Museum of Natural History, New York City. After serving as assistant curator and curator he was appointed curator-in-chief in 1922. In 1927 he went to the University of California as professor of paleontology. He was an authority on prehistoric mammals.

Maus, Marion Perry. Brigadier-general, U. S. Army, retired, died in New Windsor, Md., Feb. 9, 1930. He was born in Montgomery Co., Md., Aug. 25, 1850, and was graduated from the U. S. Military Academy in 1874. Commissioned second lieutenant in the 1st Infantry in 1874, he was promoted through the grades to the rank of brigadier-general in 1909. General Maus was in many campaigns against the American Indians, including a battle with the Apache Indians in New Mexico in 1886, for which he was awarded the Congressional Medal of Honor for distinguished gallantry in action. In 1897 he accompanied General Miles to Greece to observe the war between Greece and Turkey and the same year he represented the United States Government at the Queen's Jubilee in England. He was an inspector-general in the Spanish-American War and was in the Philippine Islands during 1903-06. Following the earthquake of 1906, General Maus was on duty in San Francisco. He was retired in 1913.

May, Sir William Henry.

Malchett, Alfred Moritz Mond, First Baron.

Ménard, Émile René.

Menohor, Maj.-Gen. Charles Thomas, U. S. A., Ret. An American soldier, died in Washington, D. C., Aug. 11, 1930. He was born in Johnstown, Pa., Mar. 20, 1862, and was graduated from the U. S. Military Academy in 1886, the Artillery School in 1894, and the Army War College in 1907. Commissioned second lieutenant in 1886, he participated in both the Spanish-American War and the Philippine insurrection. From 1901 to 1903 he was commander of the 28th battery of the Field Artillery, and from 1903 to 1907 served on the General Staff. In 1907 he returned to Cuba as provost marshal and assistant to the chief of staff in the Army of Pacification. He commanded the 5th Field Artillery during 1916-17, and on the entrance of the United States into the World War was sent to France as commander of the school of instruction for field artillery in Saumur. He was later in command of the 42d (Rainbow) Division and of the 6th Army Corps, participating in the battles of Château-Thierry, St. Mihiel, and the Argonne. After the War he became director of the Army Air Service, but resigned in 1921 after a controversy with his assistant, Col. William Mitchell, then a brigadier-general, over fundamental air policies. He was commander of the Hawaiian Division during 1922-24, of the Hawaiian Department during 1924-25, and of the 9th Corps Area in 1925, retiring the following year. He received the Distinguished Service Medal in 1919, and was decorated by the governments of France, Belgium, and Italy.

Mercer, Henry Chapman.

Merritt, Anna Lea.

Merry del Val, Raphael, Cardinal.

Messmer, The Most Rev. Sebastian Gebhard,

Meyer, Eduard.

Milburn, John George.

Mistrangelo, Alfonso Maria, Cardinal. A prelate of the Roman Catholic Church, died in Florence, Italy, Nov. 7, 1930. Born in Savona Apr. 26, 1852, he became a member of the Piarist order in 1869, becoming 40 years later (1909) its superior. In 1899 he was made Archbishop of Florence and in 1915 was elevated to the rank of Cardinal.

Mitter, Sir Binod Chandra. An Indian jurist, died in London, England, July 20, 1930, at the age of 58. He had held high office in India for more than 25 years, serving as member of the council of the Governor of Bengal from 1910 to 1917 and as standing counsel to the Government of India from 1910 to 1916. In 1917 he was appointed advocate-general to the Government of Bengal, and in 1929 was chosen a member of the judicial committee of the Privy Council of Great Britain under an act empowering the appointment of two jurists of Indian experience. He was knighted in 1918.

Mocquereau, Dom Andre.

Mohler, Albert L.

Mohler, J(ohn) Frederick.

Moldenke, Richard (George Gottlob). An American metallurgist, died in Plainfield, N. J., Nov. 17, 1930. Born in Watertown, Wis., Nov. 1, 1864, he was graduated from Columbia University. As a metallurgist associated with the iron and steel industry he became an authority on cast iron. He was the author of *The Production of Malleable Castings* (1911) and *The Principles of Iron Founding* (1917).

Molyneux, Osbert Cecil. See Sefton, Osbert Cecil

Molyneux, Sixth Earl of.

Moore, Addison Webster.

Moore, Alexander Pollock.

Mostyn, Tom. A British painter, died in Crookham, Torquay, England, Aug. 22, 1930. He was born in Liverpool in 1864 and was educated in Manchester, later studying painting under Sir Hubert von Herkomer. His works are found in the permanent galleries of Manchester, Oldham, Newcastle, Cardiff, Bradford, Liverpool, Rochdale, and Birkenhead, the more important being: "Childhood"; "Miss Importance"; "Gethsemane"; "The Domain of Arnheim"; "The Garden of Enchantment"; and "The Garden of Peace." He was a member of the Royal Institute of Oil Painters and of the Royal West of England Academy.

Mouthon, François. A French publisher, died in Nice, Jan. 27, 1930. He was born in Savoy in 1869 and studied law at Lyons University. At the age of 20, he founded *La France Libre*, a newspaper later denounced for its extravagances. He joined the staff of the *Matin* in Paris and became political director of *Le Journal*. For the last 12 years of his life, he was chief director of the last-named paper.

Muirhead, David.

Munro, Kirk.

Munro, Neil.

Murphy, Dominic J. Former American consul general, died in Stockholm, Sweden, Apr. 13, 1930. He was born in Philadelphia, Pa., May 31, 1847. After studying law he entered the civil service in 1871, serving successively, until 1889, as clerk, supervising examiner, and chief clerk in the United States Pension Office. In 1893 he became first deputy commissioner of pensions, and in 1896 commissioner of pensions. He resumed his law study and practice the following year, and in 1903 became editor and publisher of the *New Century*, a weekly journal. During 1904-1905 he was also secretary of the Isthmian Canal Commission. He entered the consular service in 1905, serving as consul at Bordeaux, France, from 1905 to 1909; at St. Gall, Switzerland, from 1909 to 1914; and at Amsterdam, the Netherlands, during 1914-15. In 1915 he was advanced to the post of consul general at Sofia, Bulgaria, where on account of the severance of Bulgarian relations with Great Britain, he represented both American and British interests during 1916-18. He also was detailed to the London consulate general in 1915 for special duty as chief of the war claims department in charge of claims against the British Government. It was largely through his efforts that in September, 1918, the Bulgarian Government was induced to ask the Allies for a separate armistice, an act which marked the beginning of the end of the World War. In 1919 he was transferred to Stockholm, Sweden, where he served as American consul general until 1924.

Murray, Howard. A Canadian educator, died in Halifax, N. S., Sept. 9, 1930. He was born in New Glasgow, N. S., in 1859, and attended Dalhousie College and the Universities of London and Edinburgh. He became tutor in classics at Dalhousie University in 1887, lecturer in 1890, and dean in 1901. He also acted as classical master at Halifax Academy during 1889-94. From 1906 to 1920 he was a member of the Advisory Board of Education for Nova Scotia, and was chairman of the board from 1920 to 1926. He was also a member of the Royal Conservation Commission of Canada from 1909 to 1921, and was chairman of the Advisory Board

of the Royal Military College of Canada. The LL.D. degree was conferred on him by Toronto University in 1907. His publications include: *The Classics: Their Use, Present Position, and Future Prospects* (1894) and *Reform of the High School Course in Nova Scotia* (1906).

Nansen, Fridtjof.

Neibitt, Wallace. A Canadian lawyer, died in Toronto, Apr. 7, 1930. He was born near Woodstock, Ont., May 13, 1858, and was educated at Woodstock College and at Osgoode Hall in Toronto. He was called to the Ontario bar in 1881 and was created a King's Counsel in 1896. In 1903 he was appointed Judge of the Supreme Court of Canada, from which he resigned in 1905. He practiced for a time in Hamilton, Ont., and, prior to his death, was counsel of Osler, Hoskin & Harcourt, barristers and solicitors. In 1906 he was elected a Benchler. The major part of his practice in later years was before the Privy Council of England.

Neville, Maj.-Gen. Wendell Cushing, U.S.M.C.

Newhouse, Samuel. An American capitalist, died near Saint Cloud, France, Sept. 22, 1930. He was born in New York City, Oct. 14, 1853. On completing his high school education he read law in the office of Edward N. Willard in Scranton, Pa., and was admitted to the bar in 1880. He then removed to Leadville, Colo., where after engaging in the freighting business for several years he became interested in mining. He subsequently operated extensive holdings in Utah and was president of the Boston Consolidated Mining Company, the Newhouse Mines and Smelters, and the Nipissing Silver Mines Company. In 1891 he founded the Denver, Lakewood and Golden Railroad, of which he was president in 1894. He also financed the Newhouse tunnel between Idaho Springs and Central City, Colo.

Newton, Edwin Tulley. A British naturalist and paleontologist, died in London, Jan. 28, 1930. He was born in Islington, London, in May, 1840, and was educated at the Royal School of Mines under Thomas Iluxley. In 1865 he became associated with Huxley as assistant naturalist to the Geological Survey, and in 1882 was appointed paleontologist to the Geological Survey and the Museum of Practical Geology, a post which he held until his retirement in 1905. His most important researches were devoted to fossil vertebrates, including the Cretaceous fishes and vertebrate fauna of Great Britain. He was elected Fellow of the Geological Society in 1873, Fellow of the Zoological Society in 1885, and Fellow of the Royal Society in 1893. He was also president of the Geologists' Association, 1896-98, and of the Palaeontographical Society, 1921-28. His works include: *The Chimeroid Fishes of the Cretaceous Rocks* (1878); *Vertebrata of the Forest Bed Series of Norfolk and Suffolk* (1882); *Gigantic Species, a Description of Gastrolites from the Eocene to Oxydion* (1886); and *Vertebrata of the Pliocene Deposits of Britain* (1891).

Nicholls, Rhoda Holmes. An American artist, died in Stamford, Conn., Sept. 7, 1930. Born in Coventry, England, in 1854, she attended the Bloomsbury School of Art in London. On her marriage to Burr H. Nicholls, an American painter, in 1884 she came to the United States. She exhibited in Rome, Turin, Munich, London, and at the Chicago, Buffalo, and St. Louis expositions. Among her works are "The Scarlet Letter," "Those Evening Bells," and "Searching the Scriptures" in the Boston Art Club and "Prima Vera, Venezia" and "Water Lilies" in the Boston Museum of Fine Arts.

Nichols, William Henry.

Normand, Mabel.

Northumberland, Alan Ian Percy, Eighth Duke of. A British peer, died in London, Aug. 23, 1930. He was born Apr. 17, 1880. In 1900 he joined the Grenadier Guards and served in the Boer War during 1901-02. He also served in the Sudan in 1908 and in the World War during 1914-16, acting during the closing months of the War as liaison officer between the Military Intelligence and the press. On succeeding to the title in 1918 he became one of England's greatest land proprietors and coal-mine owners. He also was a leader of the Conservative party in the House of Lords, chairman of the board of directors of the London *Morning Post* (since 1926), and chancellor of Durham University (since 1929). Among the honors conferred on him were: Member of the Royal Victorian Order (1919); commander of the Order of the British Empire (1919); and knight of the Order of the Garter (1925). He was buried in Westminster Abbey in accordance with an honor accorded the Dukes of Northumberland since the time of Charles II.

Noyes, Guy Lincoln. An American educator, died in Columbia, Mo., Feb. 4, 1930. He was born in Boston, Mass., Aug. 6, 1872. On graduation from the University of Vermont in 1894, with the M.D. degree, he began the practice of medicine at Burlington, Vt. He also took graduate work in the medical schools of the University of Michigan (1901) and Harvard University (1907). In 1902 he was called to the University of Michigan as ophthalmic and aural surgery demonstrator. From 1902 to 1910, he held the professorship of diseases of the

eye and ear at the University of Missouri, and in 1913 became dean of the school of medicine. During 1917-18 he served as captain in the Medical Section of the Officers Reserve Corps, U. S. Army.

Ogilvie, Sir Francis Grant. A British scientist, died in Edinburgh Dec. 14, 1930. Born in Aberdeen Aug. 8, 1858, he attended the Universities of Edinburgh and Aberdeen, and in 1880 was appointed assistant professor of natural philosophy at the University of Aberdeen. After serving as director of the Edinburgh Museum of Science and Art from 1900 to 1903, he became assistant-secretary to the Board of Education, and in 1910 secretary of the Board of Education for the Science Museum and Geological Survey. The following year he also became director of the Science Museum, relinquishing these posts in 1920 to become principal assistant-secretary of the Department of Scientific and Industrial Research. From 1925 to 1929 he was a member of the Senate of the University of London.

Oku, Yasukata, Count.

Orton, William Allen. An American plant pathologist, died in Takoma Park, D. C., Jan. 7, 1930. He was born in North Fairfax, Va., Feb. 28, 1877, and was graduated from the University of Vermont in 1897, receiving an M.S. degree there the following year and an Sc.D. degree in 1915. In 1897-99 he was assistant botanist for the Vermont Agricultural Experiment Station and instructor at the University of Vermont. He became connected with the U. S. Department of Agriculture in 1899, first conducting research in the diseases of cotton, cowpeas, and watermelons in the Southern States and, in 1907, becoming director of the office of cotton, truck, and forage crop disease investigations in the Bureau of Plant Industry. From 1912 to 1924, he was also vice chairman of the Federal Horticultural Board. In 1924 he resigned from the Department of Agriculture to become, in the same year, scientific director and general manager of the Tropical Plant Research Foundation in Washington, D. C., organized by a committee from the National Research Council for the purpose of promoting the study of plants and crops of the tropics and their diseases. Dr. Orton was the author of more than 40 bulletins and circulars on plant pathology issued by the Department of Agriculture, the Tropical Plant Research Foundation, and scientific journals.

Overman, Lee Slater.

Overton, Grant (Martin).

Pansy. (See Alden, Isabella MacDonald.)

Parks, Rear Admiral Charles Wellman, U. S. N., Ret. An American naval officer and engineer, died in Washington, D. C., June 25, 1930. He was born in Woburn, Mass., Mar. 22, 1863. Graduating from Rensselaer Polytechnic Institute in 1884, he served for four years as chief engineer on the Denver, Memphis & Atlanta Railway and as electrical engineer with the Electrical Manufacturing Company of Troy, N. Y. In 1888 he became head of the department of physics at Rensselaer Polytechnic Institute, where he remained until 1897 when he was commissioned ensign in the Civil Engineer Corps of the U. S. Navy. Promoted through the grades, he became rear admiral in 1918 and retired in 1921. He served at the navy yards in New York, Boston, and Portsmouth and at the naval station in San Juan, Porto Rico. He was twice detailed to the naval station in Hawaii, where as public works officer during 1908-09 and 1915-17 he had supervision of the completion of the dry docks in Pearl Harbor. He was public works officer at the navy yard in Philadelphia during 1912-14, and in 1918 was appointed chief of the bureau of yards and docks of the Navy Department.

Parsons, Frank Alvah.

Partridge, Edward Lasell. An American physician, died in New York City, May 2, 1930. He was born in Auburndale, Mass., Sept. 27, 1853, and was graduated from the College of Physicians and Surgeons at Columbia University in 1875. In addition to his general and obstetrical practice he served for many years as visiting physician at the New York Maternity, Nursery and Child's, Sloane Maternity, and New York Hospitals, and after 1888 as consulting physician at the New York Hospital. He was likewise professor of obstetrics at the New York Post-Graduate Medical College during 1886-87; lecturer in the same subject at the College of Physicians and Surgeons during 1888-89; and adjunct professor at the College of Physicians and Surgeons during 1892-93. He was a pioneer in the movement which led to the development of the Highlands of the Hudson River as a State reservation and served as commissioner of the Palisades Interstate Park. He was also a commissioner of the Hudson-Fulton Celebration held in 1909. In 1884 he edited *A Practical Manual of Obstetrics* and *A Manual of Obstetrics for Students and Practitioners*.

Partridge, The Rt. Rev. Sidney Catlin.

Partridge, William Ordway.

Patterson, George Washington. An American educator died in Ann Arbor, Mich., May 22, 1930. He was

born in Corning, N. Y., Feb. 1, 1864, and was graduated from Yale in 1884 and from the Massachusetts Institute of Technology in 1887. After a year of study at the Harvard Law School he joined the faculty of the University of Michigan, serving as instructor, assistant professor, and junior professor, of physics from 1889 to 1901; as junior professor of electrical engineering from 1901 to 1905; as professor of electrical engineering from 1905 to 1915; and as professor of engineering mechanics from 1915 until his death. In 1922 he also was appointed assistant dean of the college of engineering. His publications include: *Industrial Photometry* (1891); *Electrical Measurements* (with Henry Smith Carhart, 1895); and *Resolving Vectors* (1911).

Patterson, Sir Reginald Stewart. A British government official, died in London Sept. 16, 1930. He was born in India, Feb. 8, 1878. After attending Marlborough College and Trinity College, Oxford, he entered the Ministry of Education of the Egyptian Civil Service in 1901. Transferred to the Ministry of Finance four years later, he became director general of State Accounts in 1915, adviser to the Ministry of Education in 1919, and financial adviser to the Egyptian Government in 1923, holding the latter post until his retirement in 1927. Among the honors conferred on him were: Commander of the Order of the British Empire (1922) and Knight Commander of the Order of the British Empire (1926).

Pearce, Richard Mills, Jr.

Pearse, Mark Guy.

Pepper, Charles Melville. An American journalist, died in New York City Nov. 4, 1930. He was born in Bloomfield, Ohio, Nov. 11, 1859, and was graduated from the University of Wooster in 1881. After serving as Washington correspondent for the *Chicago Tribune*, 1886-95, and as staff correspondent for the *New York Herald*, 1896-97, he was in Cuba as correspondent for leading American papers until 1901. In 1903 he was appointed special Pan-American Railway Commissioner. He served as foreign trade commissioner to the U. S. Department of Commerce and Labor from 1906 to 1909, and as foreign trade adviser to the Department of State from 1909 to 1913, acting in the latter position as one of the commissioners for the Canadian reciprocity agreement of 1911. He wrote: *Tomorrow in Cuba* (1899); *Panama to Patagonia* (1906); *The West in the Orient* (1908); and *American Foreign Trade* (1919).

Percy, Alan Ian. See Northumberland, Alan Ian Percy, Eighth Duke of.

Perosi, Carlo, Cardinal.

Perry, Henry Thomas. An American missionary educator, died March 29, 1930, in Ashfield, Mass., where he was born May 6, 1838. He was graduated from Williams College in 1862 and from the Auburn Theological Seminary in 1865, being appointed a missionary to Turkey by the American Board of Commissioners for Foreign Missions of the Congregational Church in the latter year. He was stationed first in Aintab in Asiatic Turkey, and later became an instructor in exegesis, the sacred canon, and homiletics at the theological seminary in Marash. In 1876 he was transferred to Sivas, where three years later he founded the Sivas Normal School and soon afterward organized a system of primary schools throughout the State of Pontus, largely taught by graduates of the normal school. The influence of this school was felt not only in raising the educational standards of the country but in molding the thought of a new Turkey. Dr. Perry also founded the Sivas Orphan Asylum to care for more than 800 children left destitute as a result of Armenian massacres in the Sivas region, and organized trade schools in which they were trained to become self-supporting. In addition to his educational work, he was actively engaged in evangelism throughout the fifty years that he was stationed in Turkey.

Phelan, James Duval.

Phipps, Henry.

Pollock, Sir Edward James. An English jurist, died in London, Apr. 15, 1930. He was born Feb. 1, 1841, and was educated at King's College, London University. Entering the medical profession, he became a fellow of the Royal College of Surgeons in 1868. He studied law and was called to the bar by the Inner Temple in 1872. Appointed one of the three official referees of the Supreme Court of Judicature in 1897, he served in that capacity until his retirement in 1927. He was knighted in 1922.

Pomare, Sir Maui. A British government official in New Zealand and descendant of Maori chieftains, died in Glendale, Calif., June 27, 1930. He was born in Pahou, Taranaki, in 1876 and studied at Te Aute College in Hawkes Bay and the medical school of Chicago University. On his return to New Zealand he served successively as Chief Health Officer to the Maoris; Minister for Cook and other islands, and Minister representing the Maori race in the colonial cabinet (1912-28); Minister of Health for New Zealand (1923-26); and Minister of International Affairs (1928). He was created a Companion of St. Michael and St. George in 1920 and a Knight Commander of the Order of the

British Empire in 1922. He published an account of his own people, entitled *The Maori, Past and Present*.

Porter, George Frederick. An American civil engineer, died Sept. 20, 1930, in Detroit, Mich., where he was born Oct. 7, 1862. After attending the public schools of Detroit he was engaged in 1885 by Mason L. Brown, Detroit civil engineer, as a general engineering assistant. In 1894 he became associated with the Detroit Bridge and Iron Works as a draftsman on general structural iron work, and later served in the same capacity with the Keystone Bridge Company of Pittsburgh, Pa. He was one of the organizers, in 1900, of the Canadian Bridge Company in Walkerville, Ont., which during the next decade became one of the leading bridge-building firms of Canada. In 1909, he joined the staff of the board of engineers appointed by the Canadian Government to design and supervise the construction across the St. Lawrence River, near Quebec, of the largest cantilever bridge in the world. The bridge, which replaced the one which collapsed while under construction in August, 1907, was erected by the St. Lawrence Bridge Company, Ltd., a corporation formed especially to carry out the project, with Mr. Porter acting as engineer of construction. On the completion of this task in 1917 he returned to the Canadian Bridge Company, becoming chief engineer in 1919. The LL.D. degree was conferred on him by McGill University in 1921.

Porto-Riche, Georges de.

Post, Melville Davison.

Powell, Alma Webster (Hall). An American singer, died in Mahwah, N. J., Mar. 11, 1930. She was born in Elgin, Ill., in 1870, and was graduated from New York University with the LL.B. degree in 1900 and from Columbia University with the Mus.B. degree in 1909, M.A. degree in 1911, and Ph.D. degree in 1914. She studied singing both in the United States and Europe, and in 1901 made her debut in Breslau, Germany, in the *Magic Flute*, appearing during the next three years at the Royal Opera Houses of Berlin, Prague, Dresden, and Vienna. Returning to the United States in 1904, she joined the Metropolitan Opera Company, and the following year established the Powell Musical Institute in Brooklyn. In 1907 she founded the Webster-Powell Opera Company, which produced many operatic works during the next five years. She became director of the Powell and Pirani Musical Institute in 1913 and of the Powell Vocal Academy in 1920. She was married in 1901 to A. Judson Powell of Brooklyn.

Powell, Lucien Whiting. An American landscape painter, died in Washington, D. C., Sept. 27, 1930. Born in Levinworth Manor, Va., Dec. 13, 1846, he studied art in Philadelphia, New York, London, Rome, Venice, and Paris. His most famous works are "The Afterglow," representing the Grand Cañon of the Colorado, in the Corcoran Art Gallery, Washington, and "The Grand Canyon of the Yellowstone" in the National Gallery, Washington.

Pregl, Fritz. An Austrian chemist, died in Graz Dec. 13, 1930. He was born in Laibach Sept. 3, 1869. From 1904 to 1910 he was a professor of chemistry at the University of Graz and from 1910 to 1913 at the University of Innsbruck. In 1913 he returned to the University of Graz, where he became head of the Medical-Chemical Institute. He gained international recognition for his development of micro-chemical analysis. In 1923 the Nobel Prize in Chemistry was bestowed on him for his work in this field.

Primo de Rivera y Orbaneja, Gen. Miguel, Marquis de Estella.

Pschorr, Robert Franz. A German chemist, died Feb. 23, 1930, in Munich, where he was born Dec. 4, 1868. On graduation from the University of Jena in 1893, he became associated with the Chemical Institute of the University of Berlin, and in 1914 was elected to the chair of organic chemistry at the Technical School in Charlottenburg. His research work was concerned with the constitution of the alkaloids derived from phenanthrene. He was one of the editors of the *Berichte der deutschen chemischen Gesellschaft*.

Putnam, Arthur.

Putnam, George Haven.

Radcliffe, Wallace. An American clergyman, died in Washington, D. C., June 7, 1930. He was born in Pittsburgh, Pa., Aug. 16, 1842. On his graduation from Washington and Jefferson College in 1862, he was ordained to the Presbyterian ministry. His first charge was as pastor of the Woodland Presbyterian Church, Philadelphia, from 1866 to 1870. In 1871 he was called to the First Presbyterian Church in Reading, Pa., where he served in 1876 as moderator of the Synod of Pennsylvania. In 1885 he became pastor of the Fort Street Presbyterian Church in Detroit, serving in 1889 as moderator of the Synod of Michigan. Ten years later he became pastor of the New York Avenue Presbyterian Church in Washington, more popularly known as "the Church of the Presidents," from which he retired as pastor-emeritus in 1922. In 1898 he attained the dis-

tion of moderator of the General Assembly of the Presbyterian Church in the United States of America. Ratoon, Auguste.

Reed, George Edward. An American clergyman and former president of Dickinson College, died in Harrisburg, Pa., Feb. 7, 1930. He was born in Brownsville, Me., Mar. 28, 1846, and was graduated from Wesleyan University with the degrees of A.B. (1869) and M.A. (1872). His first charge, after ordination to the Methodist ministry in 1870, was as pastor in Willimantic, Conn. In 1872 he was called to St. Paul's Church, Fall River, Mass., where he served until 1875 when he assumed the pastorate of the Hanson Place Church, Brooklyn, N. Y. His other charges included the M. E. Church, Stamford, Conn. (1878-81); Nostrand Avenue Church, Brooklyn (1881-84); again Hanson Place Church (1884-87); and Trinity Church, New Haven, Conn. (1887-89). Wesleyan University honored him with the degree of S.T.D. in 1886. In 1889 he was elected president of Dickinson College, holding this office until 1911. His administration was marked by the increase of the student body from 90 to 550 students, the erection of several new buildings, and the restoration of the campus to its original beauty. He also served as State librarian of Pennsylvania from 1899 to 1903. On his resignation from the presidency of Dickinson he became pastor of Grace Church, Wilmington, Del., remaining until 1915.

Reinhardt, Gen. Walther. A German military leader and statesman, died in Berlin, Aug. 8, 1930. He was born in Stuttgart, Württemberg, Mar. 24, 1872, and attended the Herfeld Military School. Entering the Württemberg Army, he was promoted through the ranks, and during the World War served with such distinction in the Verdun offensive that he was made chief of the general staff of the 2d Army in 1916 and of the 7th Army in 1917. In 1919 he was appointed commander-in-chief of the newly formed Republican Reichswehr. He also served in that year as the last Prussian Minister of War.

Ricard, Jerome Sixtus. An American educator and astronomer, died in San José, Calif., Dec. 8, 1930. He was born in Plaisians, Drome, France, Jan. 21, 1850, and after joining the Society of Jesus came to the United States in 1873. He later became professor of philosophy and ethics at the University of Santa Clara. Becoming interested in astronomy, he took up the study of sun spots and faculae in 1900, discovering a method of using them in weather forecasting.

Rice, John Andrew. An American clergyman, died in Tulsa, Okla., June 29, 1930. He was born in Colleton Co., S. C., Sept. 25, 1862, and was graduated from South Carolina College in 1885, later completing the course at the Columbia (S. C.) Theological Seminary in 1896. He was ordained a minister in the Methodist Episcopal Church, South, in 1886, serving successively as pastor of the Bennettsville and Kingstree circuits, Darlington, S. C., and of the Washington Street Church, Columbia, S. C. In 1894 he was elected president of Columbia College, a Southern Methodist institution for women, where he remained until 1902 when he became pastor of the Court Street Church, Montgomery, Ala. From 1907 he held various pastorates in Southern churches, and during 1920-21 he was professor of Old Testament literature at the Southern Methodist University. From 1927 until his death he edited the *Oklahoma Methodist*. His works include: *The Old Testament in the Life of Today*; *The Primacy of Religion in Education*; *Why I believe in the Bible*; and *Is Christ on Trial in Tennessee?*

Ridge, William Pett.

Ridgeway, Sir (Joseph) West. A British soldier and diplomat, died in London, Apr. 16, 1930. Born May 16, 1844, he joined the Bengal Infantry at the age of 17 and served in the Afghan War in 1879-80, accompanying Lord Roberts to Afghanistan as his political secretary. He was under-secretary to the government of India in Foreign Departments from 1880 to 1884 and His Majesty's commissioner for fixing the frontier between Russia and Afghanistan in 1885. In 1886-87 he was on special diplomatic duty in St. Petersburg and in the latter year was promoted colonel for distinguished service. He was under-secretary for Ireland during 1887-93 and envoy extraordinary to the Sultan of Morocco in 1892-93. The following two years he was governor of the Isle of Man and, from 1896 to 1903, he was governor and commander-in-chief of Ceylon. In 1906 Sir West was appointed chairman of a committee to inquire into the constitutions in the Transvaal and Orange River colonies, work which prepared the way for the Union of South Africa. The same year he was created Knight of the Grand Cross of the Bath, having previously been made Knight Commander of the Bath (1891) and Knight of the Grand Cross of St. Michael and St. George (1900).

Rignano, Eugenio. An Italian philosopher and educator, died Feb. 9, 1930. He was born in Livorno, May 31, 1870. On his graduation from the University of Pisa in 1898 he devoted himself to philosophical studies and

later was appointed professor of philosophy at the University of Pavia. In 1906 he founded *Scientia*, an international journal dealing with the theoretical aspects of science and its relation to other realms of human experience. He was the Michonis lecturer at the Collège de France in 1920, and three years later was named corresponding member of the Institut de France. His works include: *On the Transmissibility of Acquired Characters*; *Hypothesis of a Centro-Epigenesis*; *Biological Memory*; *The Finalistic Aspect of Life*; *What is Life?*; *Man Not a Machine*; *Problems of the Psyche*; and *The Purpose of Man*.

Riker, Andrew Lawrence.

Riso Patrón Sanchez, Luis. A Chilean engineer, died in Santiago, May 30, 1930, at the age of 61. He represented Chile on the Chilean-Argentine boundary commission in 1902 and on the Tacna-Arica arbitration commission to determine the boundary between Chile and Peru from 1925 to 1927. His principal works are: *Reseña general sobre el estado actual de la cartografía americana* (1909) and *Diccionario geográfico de Chile* (1924).

Rivoire, André.

Rixford, Gulian Pickering. An American horticulturist, died in Los Altos, Calif., Oct. 27, 1930. He was born in East Highgate, Vt., Sept. 21, 1838, and was graduated from McGill University in 1864. Removing to California, he was connected with the San Francisco *Evening Bulletin* from 1868 to 1889 as editor and later as business manager. As an amateur horticulturist, he was instrumental in introducing into California the Casaba melon (the seeds of which were first distributed to subscribers to the *Bulletin*), the Smyrna fig, and the telephone pea. He also established the Rixford Experiment Station near Sonoma. In 1908 he became associated with the U. S. Department of Agriculture as physiologist in the bureau of plant industry, retiring in 1930.

Robertson, Rear Admiral Ashley Herman, U. S. N. An American naval officer, died in San Diego, Calif., July 13, 1930. He was born in Ashmore, Ill., Dec. 14, 1867, and was graduated from the U. S. Naval Academy in 1888. Entering the Navy as an ensign in 1890, he was promoted through the grades to rear admiral in 1918. He served on the gunboat *Castine* during the Spanish-American War and was executive officer of the *Terror* in 1905. During 1905-06 he was stationed at the U. S. Naval Academy and during the next three years served on the *Tennessee*. In 1909 he was assigned to duty at the Puget Sound (Wash.) Navy Yard, after which he successively commanded the battleships *California* and *Colorado* and the cruisers *Charleston*, *Denver*, and *San Diego* from 1913 to 1915. After serving at the Naval War College in Newport, R. I., during 1916-17, he became chief of staff of the 1st Naval District in Boston, and on the entrance of the United States into the World War was appointed commander of the *Mount Vernon* (formerly the German liner, *Kronprinzessin Cecilie*), which was used in transporting troops to France. In 1918 he commanded the *New Mexico*, the first electric-driven battleship, and the following year assumed charge of the destroyer force until his appointment as chief of staff of the Naval War College. He became commander of the 11th Naval District in San Diego in 1923, and in 1926 attained the rank of vice admiral as commander of the scouting fleet. He resumed command of the 11th Naval District in 1928, and at the time of his death was third in rank among the rear admirals of the U. S. Navy by virtue of seniority.

Robertson, James Wilson.

Robertson, Thorburn Brailsford.

Rodgers, James Linn. An American consul and foreign trade expert, died Feb. 8, 1930, in Columbus, Ohio, where he was born Sept. 10, 1861. He was educated at Ohio State University. From 1889 to 1895 he served as editor of the *Columbus Dispatch*. In 1905 President Roosevelt appointed him American consul general at Shanghai, China, because of his wide knowledge of international trade conditions. Two years later he was transferred to Havana, Cuba, where he remained 11 years, being appointed in 1916 as special representative of the State Department to the *de facto* Carranza Government in Mexico. He also served as American consul general at Montreal, Canada, from 1918 to 1921. On retiring from the consular service he became connected with the foreign department of the Foundation Company of New York.

Rogers, Flin. An American architect, died in Yonkers, N. Y., June 1, 1930. He was born in Saginaw, Mich., Feb. 4, 1882, and was graduated from the college of architecture, Cornell University, in 1906. From 1907 to 1913 he was a designer with Tracy and Swartwout, New York City; from 1913 to 1919, head designer with E. D. Litchfield, New York City; and from 1919 to 1926, a member of the firm, Litchfield and Rogers. He was engaged in private practice from 1926 until his death. Among the buildings which he helped design were: the St. Paul Public Library; a reference library for James

J. Hill; and the group of new buildings at Macalister College, St. Paul. He also designed and laid out for the government York Ship Village near Camden, N. J.

Rogers, Robert William.

Rolshoven, Julius.

Ross, Bennett Battle.

Rousseau, Rear Admiral Harry Harwood, U. S. N.

Rudolph, Robert Livingston.

Rutherford, William John. A Canadian educator, died in Saskatoon, Saskatchewan, June 1, 1930. He was born in Potadam, N. Y., Jan. 7, 1868, and was educated at the Agricultural College, Guelph, Ont. He taught animal husbandry at the Iowa State College of Agriculture and Mechanic Arts from 1903 to 1906, being called to the Manitoba Agricultural College in Winnipeg in the latter year. In 1906 he was appointed Deputy Minister of Agriculture for Saskatchewan, and the following year became dean of the college of agriculture at the University of Saskatchewan in Saskatoon. He was a member of the Dominion Conservation Commission, the Saskatchewan Educational Commission, and the Advisory Committee on Public Schools Agriculture. In 1920 he served as chairman of the Royal Commission of Inquiry into Farming Conditions in Saskatchewan, and in 1923 as member of the Royal Commission of Inquiry into the Marketing of Grain in Canada. He was the author of *Agriculture for Public Schools*.

Saltzgeber, Gaylord Miller. An American lawyer and public official, died in Van Wert, Ohio, Aug. 25, 1930. He was born in Shelby, Ohio, Mar. 14, 1846, and served during the Civil War with the 3d Ohio Cavalry. Admitted to the bar, he practiced law in Van Wert for 44 years. He was a member of the Ohio State Senate from 1876 to 1880 and U. S. Commissioner of Pensions from 1913 to 1921. He was also commander of the Ohio department of the Grand Army of the Republic in 1922 and commander-in-chief of the national organization in 1923.

Sampson, Martin Wright. An American educator, died in Pittsburgh, Pa., Aug. 22, 1930. He was born in Cincinnati, Ohio, Sept. 7, 1866, and was graduated from the University of Cincinnati in 1888. He later studied in Paris, London, Dublin, Dresden, and Munich. In 1889 he became an instructor in English at the University of Iowa, and in 1891 an assistant professor. After serving as an assistant professor at Stanford University during the next two years, he became in 1893 professor of English at Indiana University, which position he held until his transfer to Cornell University in 1907. At the time of his death he was head of the English department of the college of arts and sciences at that institution. He was joint author with E. O. Holland of *Written and Oral Composition* (1907).

Sanford, Edward Terry.

Sanfuentes Andonaegui, Juan Luis.

Scharlieb, Daine Mary Ann Dacom. A British physician, died Nov. 21, 1930, in London where she was born in 1845. Following her marriage to a barrister practicing in Madras, she decided to help relieve the plight of the women of India and studied medicine at the Madras Medical College and at the Royal Free Hospital and School of Medicine for Women in London. Returning to India in 1883, she became lecturer in midwifery and gynecology at the Madras Medical College and superintendent of the Royal Victoria Hospital for caste and Goshia women. She later practiced in London. She was created a Dame Commander of the Order of the British Empire in 1926. Her works include: *How to Enlighten Our Children* (1918); *The Welfare of the Expectant Mother* (1919); *Straight Talks to Women* (1923); *Reminiscences* (1924); and *The Psychology of Childhood* (1927).

Schildkraut, Rudolf.

Scott-Moncrieff, Charles Kenneth.

Scribner, Charles.

Seager, Henry Rogers.

Sefton, Osbert Cecil Molyneux, Sixth Earl of. A British peer, died in London, June 16, 1930. He was born Feb. 21, 1871, and succeeded to the title on the death of his brother in 1901. During 1905-07 he served as Master of the Horse, and was created a Knight of the Grand Cross of the Royal Victorian Order in 1926. He was one of the most extensive land owners in England, holding about 34,000 acres. These included the Aintree race track, on which the historic grand national steeplechase is run, and most of the land on which the city of Liverpool stands.

Segrave, Sir Henry O'Neal de Hane.

Shandon, Ignatius John O'Brien, First Baron.

Shipman, The Rt. Rev. Herbert.

Sills, Milton. An American motion picture actor, died in Santa Monica, Calif., Sept. 15, 1930. He was born in Chicago, Ill., Jan. 12, 1882, and was graduated from the University of Chicago in 1903. Three years later he started his stage career, appearing in New Palestine, Ohio, in *Dora Thorne*. During 1907-08 he played in the Donald Robertson's Art Theatre in Chicago, and in 1909 came to New York as leading man in *This Woman and This Man*. He remained on Broadway for several

seasons, appearing in *A Happy Marriage*; *The Servant in the House*; *The Fighting Hope*; *Diplomacy*; *Mother*; *The Rack*; *The Governor's Lady*; and *The Law of the Land*. His first motion picture was *The Pit* in which he appeared in 1914. Other films in which he played leading rôles are: *Behold My Wife*; *The Great Moment*; *Adam's Rib*; *A Man Desires*; *Skin Deep*; *The Sea Hawk*; *The Isle of Lost Ships*; *The Unguarded Hour*; *The Lying Truth*; *Puppets*; *The Knock-Out*; *Burning Daylight*; *The Hawk's Nest*; *The Barker*; *Hard-Boiled Haggerty*; *Valley of the Giants*; *The Sea Wolf*; and *Men of Steel*, of which he was author.

Silvain, Eugene.

Silverman, Joseph.

Simpson, Bertram Lenox (Pseudonym, Putnam Weale). A British author, died in Tientsin, China, Nov. 11, 1930. Born in 1877, he was educated for the army at Brighton College. He joined the Chinese Customs Service in 1896 and went through the siege of Peking Legations during the Boxer rebellion in 1900. During the World War he served with the British Expeditionary Forces as interpreter. In June, 1930, he was appointed commissioner of customs in Tientsin. He was the author of several sensational books, including: *The Reshaping of the Far East* (1905); *Indiscreet Letters from Peking* (1907); *The Coming Struggle in Eastern Asia* (1908); *The Fight for the Republic in China* (1917); *The Truth about China and Japan* (1919); *An Indiscreet Chronical from the Pacific* (1922); *Why China Sees Red* (1925); and *China's Crucifixion* (1928).

Simpson, Rear Admiral Edward, U. S. N., Ret. An American naval officer, died in Ruxton, Md., Sept. 6, 1930. He was born in Annapolis, Md., Sept. 16, 1860, and was graduated from the U. S. Naval Academy in 1880. He saw service during the Spanish-American War as Admiral Schley's aide in the battle of Santiago and in the Philippine insurrection during 1900-01. In 1902 he became an executive officer on the battleship *Arkansas*, and in 1905 was assigned to the bureau of ordnance of the Navy Department in Washington. He was commander of the cruiser *Montgomery* during 1908-09, and then became naval attaché at the American embassy in London where he served until 1912. During 1912-14 he was commander of the battleship *Minnesota*, and in 1915 was stationed at the Naval War College in Newport, R. I. He was commandant of the naval stations in Olongapo and Cavite, P. I., during 1916-18 and was cited for meritorious service and promoted to the rank of rear admiral. In 1919 he was appointed hydrographer of the Navy Department, and the following year became commander of the training squadron of the Atlantic Fleet. In 1921 he was stationed at Pearl Harbor, Hawaii, as commander of the 4th Naval District, and in 1923 became commander of the 12th Naval District in San Francisco. He was retired in 1924.

Singleton, Esther.

Skellern, Ross Hall.

Slate, Frederick. An American physicist and educator, died in Berkeley, Calif., Feb. 26, 1930. He was born in London, Jan. 21, 1852, and came to the United States when 12 years old. On graduation from the Brooklyn Polytechnic Institute in 1871, he was employed by the Northwestern Pacific Railroad as a civil engineer. In 1874 he became an instructor in chemistry at the University of California, where he remained until 1877 when he went to Germany for graduate study at the universities of Berlin and Strassburg. In 1879 he returned to the University of California as superintendent of the physics laboratory, and in 1891 became professor of physics, which position he held until his retirement in 1918. The University of California conferred the LL.D. degree on him in 1925. His works include: *Principles of Mechanics* (1900); *Elementary Physics* (1902); and *Fundamental Equations of Dynamics* (1918).

Slattery, The Rt. Rev. Charles Lewis.

Slivinski, Joseph.

Smith, Justin Harvey.

Smith, Sir William Edward. A British naval architect, died in Herne Bay, Kent, England, Sept. 16, 1930. He was born Apr. 4, 1850, and during 1865-68 served an apprenticeship as a shipwright in the dockyards at Woolwich and Portsmouth. In 1873, on completing the course for which he had held a fellowship at the Royal School of Naval Architecture in South Kensington, he was appointed Admiralty naval constructor. He became superintendent of construction, accounts, and shipbuilding contract work in the Admiralty service in 1902, and during the ten years that he held this office contributed materially to the development of the British Navy. He was a former lecturer on naval architecture at the Royal Naval College in Greenwich, and from 1887 until his death had been a representative of the Institution of Naval Architects. He designed the Antarctic exploration ship, *Discovery*, used by Capt. Robert F. Scott in 1900, and was a member of the technical committee for the restoration of H. M. S. *Victory* to her original condition at the battle of Trafalgar. In 1913 he was vice-chairman of the Board of Trade Committee on Load

Line for Merchant Ships, and for several years was chairman of the board of studies in civil and mechanical engineering for London University. He was created a Companion of the Bath in 1908 and was knighted in 1911.

Smith-Dorrien, Gen. Sir Horace Lockwood. Snowden, Thomas. Rear Admiral, U. S. N., retired, died in Washington, D. C., Jan. 27, 1930. He was born in Peekskill, N. Y., Aug. 12, 1857, and was graduated from the U. S. Naval Academy in 1879. He was promoted through the grades, attaining to the rank of rear admiral in 1917. In the Spanish-American War, he served on the *Dolphin*. He was in command of the presidential yacht, the *Mayflower*, in 1908-10. In 1913-14 he was at the Naval War College at Newport, R. I., and in 1915 was placed in command of the Navy Yard and Station at Portsmouth, N. H. The following year he was appointed hydrographer in the Navy Department. After serving as a squadron commander of the Atlantic Fleet during the World War, Admiral Snowden became military governor of Santo Domingo in 1919. He was retired in 1921.

Solomon, Sir William Henry. A British barrister and former Chief Justice of the Union of South Africa, died in Ruthin, North Wales, June 13, 1930. Born in Cape Colony, South Africa, in 1852, he studied at Cambridge and was called to the bar of the Inner Temple in 1876. He later achieved distinction, on his return to South Africa, before the Appeal Bench and served as Judge of the Appellate Division of the Supreme Court from 1910 to 1927. He became Chief Justice of the Union of South Africa in 1927, holding this office until his retirement in October, 1929, on account of ill health. He was knighted in 1907 and also was made a Knight Commander of St. Michael and St. George in 1913 and a Knight Commander of the Star of India in 1914. In 1928 he was appointed a Privy Councillor.

Southwick, George Rinaldo. An American gynecologist, died in Boston, Mass., Jan. 7, 1930. He was born in Sangersfield, N. Y., Sept. 4, 1859, and was graduated from Boston University with the M.D. degree in 1881, studying for the next two years at the Rotunda Hospital in Dublin and in Berlin, and Vienna. After a few years of private practice he became, in 1888, associate professor of obstetrics in the school of medicine of Boston University, and in 1898 was appointed professor of gynecology. He also was connected with the Massachusetts Homeopathic Hospital and the Westborough State Hospital for the Insane as consulting gynecologist. During 1917-18 he was president of the section of surgery and gynecology of the American Institute of Homeopathy, and at various times had been president of medical bodies in the State of Massachusetts.

Sperry, Elmer Ambrose. Spooner, William Archibald. A British educator and clergyman, died in Oxford, Aug. 30, 1930. He was born in North Staffordshire July 22, 1844, and attended Oswestry School and New College, Oxford, where he was elected scholar in 1862 and fellow in 1867. He then took orders in the Church of England, being ordained a deacon in 1872 and priest in 1875. In 1878 he became chaplain to Archbishop Tait and later served as examining chaplain to the Bishop of Peterborough during 1899-1916. In 1903 he became warden of New College, Oxford, which office he held until 1924 when he was appointed honorary fellow. The word "spoonerism," as found in the New English Dictionary, originated from his occasional lingual lapses, but the hundreds of topsyturvy phrases attributed to him were largely the invention of two generations of Oxford undergraduates. His works include: *The Histories of Tacitus* (1891); *Bishop Butler, His Life and Writings* (1901); and "Mémorial of William of Wykham" in *Typical English Churchmen* (1909).

Stahlman, Edward Bushrod. An American newspaper publisher, died in Nashville, Tenn., Aug. 12, 1930. He was born in Mecklenburg, Germany, Sept. 2, 1843, and came to the United States at the age of 11. His first work was as a laborer with the Louisville and Nashville Railroad, repairing Civil War damage. He became freight contracting agent in 1871, general agent in 1876, general freight agent in 1878, general traffic manager in 1880, and vice president in 1885. In the latter year he purchased the Nashville *Banner* to use it in a campaign against the formation of a competitive road, but five years later he had become so interested in newspaper publishing that he severed his railroad connection. During 1881-95, however, he represented the railroads of the South in matters of national legislation affecting railroad interests, and during 1891-95 was commissioner of the Southern Railway and Steamship Association of Atlanta, Ga. He developed the *Banner* into one of the leading newspapers of the South, gaining for it a reputation of fearlessness in political and civic matters.

Stedman, Charles Manly. An American congressman, died in Washington, D. C., Sept. 23, 1930. He was born in Pittsboro, N. C., Jan. 29, 1841, and was graduated from the University of North Carolina in

1861. Admitted to the North Carolina bar in 1867, he practiced in Wilmington until 1898 and in Greensboro thereafter. He was elected a member of the 62d Congress in 1910 and served thereafter in each successive Congress until his death.

Stein, Ludwig.

Sterling, Thomas.

Stimson, John Ward. An American artist and educator, died in Corona, Calif., June 13, 1930. He was born in Paterson, N. J., Dec. 16, 1850, and was graduated from Yale University in 1872. His art education was received at the École des Beaux Arts in Paris and in Italy, Holland, and England. Upon his return to the United States he began illustrating for magazines. He lectured for a year at Princeton University, and for five years was director of the art schools of the Metropolitan Museum of Art in New York City. In 1888 he founded the Artist-Artisan Institute in New York City, of which he was director for 12 years. He was also a director of the Art and Science Institute in Trenton, N. J., and an instructor in the Art Students' League in New York City. His works include: *The Law of Three Primaries*; *Principles of Vital Education*; *The Gate Beautiful*; and *Wandering Chords* (Poems).

Stockbridge, Horace Edward. An American agricultural chemist, died in Atlanta, Ga., Oct. 30, 1930. Born in Hadley, Mass., May 19, 1857, he attended the Massachusetts Agricultural College, Boston University, and the University of Göttingen. From 1885 to 1889 he was stationed in Japan as professor of chemistry and geology at the Imperial College of Agriculture and Engineering and also as chief chemist to the Japanese Government. On his return to the United States he was appointed president of the North Dakota Agricultural College and director of the North Dakota Experiment Station in 1890, holding this office until 1894. He later served as professor of agriculture at the Florida Agricultural College and as director of the State Agricultural Institutes of Florida (1897-1906). He was also one of the founders of the *Southern Ruralist* in Atlanta, Ga., and for 16 years served as its editor. During 1916-17 he was president of the Farmers' National Congress.

Story, William Edward.

Stratemeyer, Edward (Arthur M. Winfield and Capt. Ralph Bonehill). An American author, died in Newark, N. J., May 10, 1930. He was born in Elizabeth, N. J., Oct. 4, 1862, and was educated at high school and by private tutors. He was the author of stories of adventure, many of them patriotic as well, for American boys. The stories published under his own name include the following: *Old Glory Series* (1898-1902); *Soldiers of Fortune Series* (1900-04); *Mexican War Series* (1900-04); *American Boys' Life of William McKinley* (1901); *Colonial Series* (1901-06); *Pan-American Series* (1902-08); *American Boys' Life of Theodore Roosevelt* (1904); *Lakeport Series* (1904-09); and *Dave Porter Series* (1905-19). He also published under the pseudonym Arthur M. Winfield the *Rover Boys Series*, his best known books (1899-1925); *Frontier Series* (1903-07); and *Putnam Hall Series* (1905-12). As Capt. Ralph Bonehill, he wrote *Flag of Freedom Series* (1899-1905), and *Boy Hunters Series* (1906-11).

Straus, Simon William.

Stutz, Harry C.

Swallow, Silas C. An American clergyman and reformer, died in Harrisburg, Pa., Aug. 13, 1930. He was born in Plains, Pa., Mar. 5, 1839, and was ordained to the Methodist Episcopal ministry in 1862, preaching on a circuit of 16 towns. In 1897, as editor of the *Pennsylvania Methodist*, he published an exposé of Pennsylvania politicians. He also edited the *Church Forum* for a number of years. He was Prohibition candidate for State treasurer in 1897, for governor of Pennsylvania in 1898 and 1902, and for President of the United States in 1904.

Swete, E. Lyall.

Swinton, Alan Archibald Campbell.

Symons, (George) Gardner.

Taft, William Howard.

Tappan, Eva March. An American author, died in Worcester, Mass., Jan. 30, 1930. She was born in Blackstone, Mass., Dec. 26, 1854, and was graduated from Vassar College in 1875, later receiving the M.A. degree from the University of Pennsylvania in 1895 and the Ph.D. degree in 1896. Her numerous books on history and literature were widely accepted as textbooks in schools of the United States. Typical of these are: *In the Days of Alfred the Great* (1900); *In the Days of William the Conqueror* (1901); *In the Days of Queen Elizabeth* (1902); *Old Ballads in Prose* (1901); *England's Story* (1901); *Our Country's Story* (1902); *In the Days of Queen Victoria* (1908); *A Short History of England's Literature* (1905); *A Short History of America's Literature* (1906); *The Story of the Greek People* (1908); *European Hero Stories* (1910); *The Story of the Roman People* (1910); *Old-World Hero Stories* (1911); and *When Knights Were Bold* (1912). She also edited *Selections from Emerson* (1898); *The*

Children's Hour (10 vols., 1907); *The World's Story* (14 vols., 1914); *Andrew Carnegie's Own Story for Boys and Girls* (1928); and *American History Stories for Very Young Readers* (1924).

Taylor, Maj.-Gen. Harry, U. S. A., Ret.

Taylor, James Morford. An American mathematician and educator, died in Greenwich, Conn., July 31, 1930. He was born in Holmdel, N. J., Sept. 15, 1843, and was graduated from Colgate University in 1867. Two years later he became professor of mathematics at Colgate, which position he held until his retirement as professor emeritus in 1920. His mathematical textbooks, which were widely used in schools in the United States and England, include: *Elements of the Differential and Integral Calculus* (1884); *College Algebra* (1889); *Academic Algebra* (1893); *Elements of Algebra* (1900); *Plane Trigonometry* (1904); *Plane and Spherical Trigonometry* (1905); and *Five-Place Logarithmic and Trigonometric Tables* (1905).

Temple-Blackwood, Frederick. See Dufferin and Ava, Frederick Temple-Blackwood, Third Marquess of.

Tenney, Charles Daniel. An American clergyman, educator, and diplomat, died in Palo Alto, Calif., Mar. 15, 1930. He was born in Boston, Mass., June 29, 1857, and was graduated from Dartmouth College in 1878 and from the Oberlin Theological Seminary in 1882. Following his ordination as a Congregational minister in the latter year, he was sent as a missionary to China by the American Board of Commissioners for Foreign Missions. He resigned from the missionary service in 1886 to become principal of the Anglo-Chinese School in Tientsin. Later, in 1895, he founded the Imperial Chinese University in Tientsin, of which he was president until 1906. During 1894-96 he acted as American vice consul and interpreter in Tientsin, and during 1900-02 as Chinese language secretary of the Tientsin provisional government. He also organized the high and middle schools in Chihli Province, which under his supervision, from 1902 to 1906, became models for the empire. From 1906 to 1908 he was director of the students sent by the Chinese Government to study at American universities, and in 1909 was a member of the Joint International Opium Commission which met in Shanghai. He was appointed Chinese language secretary of the American Legation at Peking in 1908 and served in this capacity until 1912, when he became American consul at Nanking. In 1914 he resumed the position of secretary of the Legation at Peking, and in 1919 was appointed successively counselor and chargé d'affaires. He returned to the United States on leave of absence in 1920 and retired from the diplomatic service in 1921. He wrote: *Tenny's English Lessons* (1890); *Tenney's English Grammar* (1892); and *Geography of Asia* (1898).

Terry, Marion. A British actress, died Aug. 21, 1930, in London where she was born Oct. 16, 1856. She was the youngest of a famous stage family, which included Kate, Ellen, Florence, and Fred Terry. Her first professional appearance was at the age of 16 as Ophelia in *Hamlet* at the Theatre Royal in Manchester. She made her London debut the following year in *A Game of Rumps* at the Olympic Theatre. During the 50 years (1873-1923) that she appeared on the London stage, she acted in more than 100 plays. The more important of these are: *Money* (1880); *The Red Lamp* (1887); *The Real Little Lord Fauntleroy* (1889); *Lady Windermere's Fan* (1892, 1900, 1911); *The Two Orphans* (1894); *Quality Street* (1902); *Peter's Mother* (1906, 1919); *The Piper* (1910); *Fishpingle* (1916); and *Our Betters* (1923). She also supported E. A. Sothorn in *The Crushed Tragedian* (1878); Henry Irving in *Faust* (1888, 1894) and *The Merchant of Venice* (1894); George Alexander in *Sunlight and Shadow* (1890); Forbes-Robertson in *Michael and His lost Angel* (1896); and Sir Charles Wyndham in *The Physician* (1897) and *Captain Drew on Leave* (1905). On Nov. 16, 1907, she appeared at Windsor Castle in a command performance of *Still Waters Run Deep* before King Edward VII. Her only appearance in the United States was in 1908 when she toured in *Divorce*.

Theobald, Frederic Vincent. A British entomologist, died in Wye, Kent, Mar. 6, 1930. He was born in Kingston-on-Thames, Surrey, in 1868. On graduation from St. John's College, Cambridge, he became extension lecturer in economic zoology at that institution. In 1894, on the opening of the South-Eastern Agricultural College in Wye, he was appointed lecturer in agricultural zoology, and later vice-principal. He also was in charge of the economic zoology section of the British Museum from 1900 to 1903, and during 1900-11 prepared his famous monograph on *Insects of the World for the Colonial Office and Royal Society* (5 vols.). In 1920 he resigned from the South-Eastern Agricultural College to devote his time to research work under the Ministry of Agriculture. His works include: *The Insect and Other Allied Pests of Fruit*; *A Text-*

book of Agricultural Zoology; *Insect Life*; *The Insect Enemies of the Allotment Holder*; *The Enemies of the Rose*; and *The Plant Lice or Aphididae of Great Britain*.

Thomas, Benjamin A. An American surgeon and educator, died in Swarthmore, Pa., May 29, 1930. He was born in Valley Forge, Pa., Nov. 7, 1878, and was graduated from Swarthmore College in 1899 and from the school of medicine of the University of Pennsylvania in 1903. He was appointed assistant instructor in surgery at the University of Pennsylvania in 1906 and instructor in 1910, acting also as surgeon-in-chief of the out-patient department of the university hospital. In 1920 he became professor and vice-dean of urology in the graduate school of medicine at the University of Pennsylvania, holding this chair until his death. During the World War he was attached to the naval hospital of the United States Naval Reserve Force in Philadelphia. He also served at some time as genito-urinary surgeon at the Presbyterian Hospital in New York City and as consulting genito-urinary surgeon at the Milford Hospital in Milford, Del., and for the Pennsylvania Railroad and the Philadelphia Prison. He was co-author of *Genito-Urinary Surgery and Venereal Diseases and Applied Immunology*.

Thompson, Arthur Webster. An American railroad executive and capitalist, died in Pittsburgh, Pa., Nov. 9, 1930. He was born in Erie, Pa., May 8, 1875, and was graduated from Allegheny College in 1897. In 1900 he became associated with the Baltimore & Ohio Railroad, being advanced from assistant division engineer to third vice-president in charge of operations in 1912 and vice-president in charge of traffic and commercial development in 1916. In 1918 he was appointed by the U. S. Government Federal manager of the Baltimore & Ohio and other eastern lines. He left the railroad service in 1919 to enter the public utility field, and from 1926 to 1929 was president of the United Gas Improvement Company of Philadelphia.

Thompson, Robert Means.

Thompson, William Boyce.

Thomson, Christopher Birdwood Thomson, First Baron.

Thulstrup, Thure de.

Tirpitz, Alfred von.

Tosta, Gen. Vicente. A Honduran military leader and statesman, died in Tegucigalpa, Aug. 7, 1930, at the age of 53. He successfully led the uprising of 1919 against the Bertrand government and that of 1924 against the Gutierrez government. He was appointed provisional president of Honduras in 1924 and defeated Gen. Gregoria Ferrera who attempted to overthrow his government. The following year he became Minister of War and Marine under his successor, Dr. Miguel Paz Barahona, and at the time of his death was Minister of the Interior in the cabinet of President Colindres.

Troeistra, Pieter Jelles.

Troop J(ared) G(rassie) Carter. An American lecturer and educator, died in New York City, Feb. 6, 1930. He was born in Bridgetown, N. S., Canada, Mar. 20, 1869, and was graduated from Trinity College, University of Toronto, in 1892. After receiving the M.A. degree from Trinity in 1893, he was sent by the Dominion Government to Australia to report on possibilities of trade development between that country and Canada. From 1894 to 1897 he was editor of *The Week*, a literary and political journal established by Goldwin Smith in Toronto in 1882. In 1898 he became instructor in English at the University of Chicago, being appointed assistant professor the following year and associate professor in 1904. In 1913 he accepted a professorship of English literature at Trinity College, University of Toronto, where he remained until his resignation in 1918 to become lecturer on literary subjects for the University Extension in the United States. His repertory included reviews of books on science, the arts, politics, economics, biography, and philosophy, as well as fiction and the drama. He was an excellent critic as to technique and style of writing. He was also public lecturer for the New York Board of Education and president of the New York Public Lecture Association.

Tubby, Alfred Herbert. A British surgeon, died in London, Feb. 23, 1930. He was born May 23, 1862, and received his medical training at Christ's and Guy's Hospitals and at the Universities of London, Halle, and Leipzig. In 1894 he was elected assistant surgeon at Westminster Hospital, becoming full surgeon four years later. His interest in the orthopedic diseases of children dated from his appointment in 1900 as senior surgeon at the Evelina Hospital for Children. Two years later he became associated with the Royal National Orthopedic Hospital. He was made consulting surgeon at the Evelina Hospital in 1904 and at the Westminster and Royal National Orthopedic Hospitals in 1919. During the World War he was consulting surgeon with the British Mediterranean Expeditionary Force in 1915 and with the Egyptian Expedi-

donary Force during 1915-19, being retired with the rank of Colonel. In 1907 and again in 1921 he was president of the section devoted to diseases of children of the British Medical Association, and during 1912-13 was president of the same section of the Royal Society of Medicine. He was one of the founders of the Society for Study of Disease in Children, acting as chairman of its council for several years, and was a governor and almoner of Christ's Hospital. His works include: *Deformities, a Text-Book on Orthopedic Surgery*; *Surgery of Paralysis* (joint author); *Appendicitis*; and *A Consulting Surgeon in the Near East*.

Tucker, The Rt. Rev. Beverley Dandridge.

Turner, Outhbert Hamilton.

Turner, Herbert Hall.

Turner, James H. An American clergyman and former president of the Maryland College for Women, died in Baltimore, Md., June 25, 1930. He was born in Franklin Co., Va., in 1841, and attended the Roanoke College. At the outbreak of the Civil War he enlisted in the Tenth Virginia Cavalry, with which he served as a lieutenant until the end of the war. He entered the ministry of the Lutheran Church in 1869 and served as pastor in Blacksburg, Va., from 1872 to 1876 and in Burkittsville, Md., from 1876 to 1880. In 1880 he accepted the presidency of the Maryland College for Women, holding this office until his retirement in 1908.

Uchimura, Kanzo. A Japanese Christian leader, died in Tokyo, Mar. 28, 1930. He was born in Saitama in 1861 and was graduated from the Sapporo Agricultural College in 1881. Two years later he came to the United States to study at Amherst College, and on returning to Japan in 1888 became an instructor in the 1st Higher School in Tokyo. After his resignation from this post on account of his belief in Christianity, he became a journalist, founding in 1926 the *Japan Christian Intelligencer*. He also headed a Japanese Christian church and advocated the independence of those churches from foreign mission control. Among his works are: *How I Became a Christian and Japan and the Japanese*.

Valentine, Edward Virginius.

Vannutelli, Vincenzo, Cardinal.

Van Tyne, Claude Halstead.

Vardaman, James Kimble.

Vass, Mgr. Joseph.

Vaulx, Count Henri de la.

Vedreene, John E. An English theatrical manager, died in London, Feb. 13, 1930. He was born July 13, 1867, and was educated at Newport and at Paris. In 1904, with Granville Barker, he leased the Court Theatre in London and there produced many of the early plays of George Bernard Shaw. The Vedreene-Barker Management in 1907 leased the Savoy Theatre and there continued their productions of modern plays. From 1911 to 1919, he was in partnership with Dennis Eadie, leasing with him the Royalty Theatre. In 1920 he became manager for the Little Theatre and in 1922 for the Comedy Theatre. He retired because of ill health in 1925.

Victoria Sophia Maria, Princess of Baden and Queen of Sweden.

Volkelt, Johannes Immanuel.

Vought, Chance Milton.

Voynich, Wilfred Michael (in Polish, Habdank-Woynicz). A British bibliographer, lecturer, and authority on medieval manuscripts, died in New York City, Mar. 19, 1930. He was born in Lithuania in 1865 and was educated at the universities of Warsaw and Moscow. In 1885 he was arrested by the Russian police for participation in the Polish national movement, and after being kept in a Warsaw fortress without trial was sent into exile in eastern Siberia. Five years later he escaped to England, where he became a naturalized British subject. While in exile he acquired a working knowledge of nearly 20 languages which proved a valuable asset in his career as a London book seller and collector of rare volumes. He came to New York in 1915 and was active in a movement to establish in the United States libraries for stimulation of research in the culture of past ages. His literary discoveries were numerous, among them being the celebrated cipher attributed to Roger Bacon in which it was disclosed that this thirteenth-century philosopher and scientist knew and used the telescope and microscope. In 1929 he presented to the Library of Congress a fifteenth-century Latin translation of the letters ascribed to Phalaris, tyrant of Agrigentum, Sicily. He previously had given to the library a fourteenth-century illuminated text of the sixth book of Decretals, prepared by a committee of canonists under Pope Boniface VIII. He contributed to scientific and political periodicals and lectured extensively in the United States and Europe.

Wagner, Cosima.

Wagner, Siegfried.

Ward, Sir Joseph (George), First Baronet.

Warren, Sir (Thomas) Herbert. A British educator, died in Oxford, June 9, 1930. He was born in Bristol, Oct. 21, 1853, and was educated at Clifton College and

at Balliol College, Oxford. In 1877 he was elected a fellow and tutor of Magdalen College, and became president of the college in 1885, holding this office until 1928. He also served as vice-chancellor of the University of Oxford from 1906 to 1910 and as professor of poetry from 1911 to 1918. He identified himself prominently with British educational progress, being appointed in 1896 departmental commissioner for the Treasury to inspect the university colleges of Great Britain and serving until 1906 as a member of the consultative committee of the Board of Education. He labored incessantly to improve the type of undergraduates sent to Magdalen from the English public schools, and in recognition of the high standard which he upheld King George, in 1912, selected Magdalen as the college of the Prince of Wales. The LL.D. degree was conferred on him by Birmingham University; the D.C.L. degree, by Oxford University; and the Litt.D. degree, by Bristol University. He was created a Knight Commander of the Royal Victorian Order in 1914, and a chevalier of the Legion of Honour in 1927. His works include: *Plato's Republic* (i-v, with introduction and notes, 1888); *Education and Equality* (1895); *By Severn Sea and Other Poems* (1897); *Poems of G. J. Romanes* (with introduction, 1896); *Life of Prince Christian Victor of Schleswig-Holstein* (1903); *Magdalen College: an Historical Sketch* (1907); *Death of Virgil: a Poem* (1907); *Essays of Poetry and the Poets* (1909); *Centenary of Tennyson* (1909); *Tennyson's Earlier Poems* (1910); *Oxford and Poetry* (1911); *Robert Bridges, Poet Laureate* (1913); *R. D. Blackmore's Lorna Doone* (1914); *War and Poetry* (1915); *Crewelian Orations* (1915, 1917, 1919); *Life of Harold Tennyson* (1918); and *Virgil and Rome* (1921).

Warren, Winslow. An American lawyer, died in Dedham, Mass., Apr. 3, 1930. He was born in Plymouth, Mass., Mar. 20, 1838, and was graduated from Harvard University in 1858. After receiving a law degree there in 1861, he was admitted to the Massachusetts bar and began the practice of law in Boston. During 1861-69 he was United States commissioner and in 1894-98 was collector for the port of Boston. For many years, he was associate counsel for the Boston & Providence Railroad, after which he was engaged in trustee and advisory corporation work.

Washburn, Albert Henry.

Watase, Shozaburo. A Japanese zoölogist, died Mar. 8, 1930, in Tokyo where he was born in November, 1862. He was graduated from the Sapporo College of Agriculture in 1884 and studied zoölogy for two years at the Imperial University of Tokyo. He then continued his studies in the United States—at the Johns Hopkins University from 1886 to 1890 and at Clark University from 1890 to 1892. After serving as lecturer at the University of Chicago from 1892 to 1899, he returned to Japan as professor of zoölogy at the Imperial University of Tokyo, where he remained until 1924. The Ph.D. degree was conferred on him by the Johns Hopkins University in 1890 and the D.Sc. degree by the Imperial University of Tokyo in 1899. He was Japanese delegate to the International Zoölogical Congress held in Boston in 1907, and during 1911-19 was largely influential in securing legislation and in organizing a society relating to the preservation of the natural and historic monuments of Japan.

Watt, Sir George. A British economist, died in Lockerbie, Dumfriesshire, Scotland, Apr. 2, 1930. He was born in Old Meldrum, Aberdeenshire, Apr. 24, 1851, and was educated at Marischal College, Aberdeen, and at Glasgow University. His excellence in botanical study led to his selection in 1873 as professor of botany at Calcutta University, India, where he remained until 1884. In 1882 he was deputed to the Burma-Manipur Boundary Commission as scientific and medical officer, and two years later joined the Supreme Government Secretariat as scientific assistant secretary. He was also in charge of the Indian section at the Calcutta International Exhibition in 1884, and during 1885-86 was commissioner for India at the Colonial and Indian Exhibition in London. In 1887 he was appointed reporter on economic products to the Government of India, which office he held until 1903. He made a unique contribution to the economic development of the country through the *Dictionary of the Economic Products of India* (9 vols.) which he compiled from 1885 to 1894. He was also governor of the Imperial Institute on behalf of India during 1892; president of the pharmacological section of the Indian Medical Congress in 1894; curator of the Industrial Museum in Calcutta from 1894 to 1903; and editor of the *Agricultural Ledger* from 1892 to 1903. In 1901 he was secretary of the Central Indigenous Drugs Committee of India and edited its important report. After acting as director of the Indian Art Exhibition in Delhi in 1903, he went to London on special duty and retired from the Indian Service in 1906. He then accepted a five-year lectureship on Indian botany at the University of Edinburgh, and in 1912 visited São Thomé, Portuguese West Africa, in order to study cacao cultivation

there and patented a machine for cacao manufacture. He was created a Companion of the Order of the Indian Empire in 1886 and a knight in 1908, and received the LL.D. degree from Aberdeen and Glasgow Universities. In addition to the *Dictionary of the Economic Products of India*, his works include: *Fests and Blights of the Tea Plant*; *Rhia and China Grass*; *Lac and Lac Industries of India*; *Monograph on Primula*; *Indian Art at Delhi in 1903*; *The Wild and Cultivated Cotton Plants of the World*; and *Commercial Products of India*.

Way, Arthur S. A British classical scholar and poet, died in Ventnor, Isle of Wight, Sept. 25, 1930. He was born in Dorking, Surrey, Feb. 13, 1847, and attended Kingswood School, Bath, and Queen's College, Melbourne, Australia, where he was afterward fellow. He was classical lecturer at Queen's College, Taunton, from 1870 to 1876; vice master of Kingswood School from 1876 to 1881; and head master of Wesley College, Melbourne, Australia, from 1882 to 1892. In 1894 he became examiner in Latin to the Central Welsh Board of Secondary Education, which position he held until 1904. In 1913 he was acting head master of Mill Hill School. His translations of classical and medieval poetry include: *Odes of Horace* (1876); *Odyssey of Homer* (1880); *Iliad* (1889); *Tragedies of Euripides* (1894-98); *Epodes of Horace* (1898); *Apollonius Rhodius' Tale of the Argonauts* (1901); *Aechylus* (1906); *Prometheus and the Suppliant Maidens* (1907); *Orestes* (1908); *Sophocles* (1909, 1914); *The Nibelungenlied* (1911); *The Cyclops of Euripides* (1912); *Virgil's Georgics* (1912); *The Chanson de Roland* (1913); *Virgil's Aeneid* (1916, 1924); *Sappho and the Vigil of Venus* (1922); *Pindar* (1922); *Aristophanes* (1927); and *Odes of Bacchylides and Virgil* (1929).

Wayne, Arthur Trezevant. An American ornithologist, died at Torcher's Bluff, near Charleston, S. C., May 5, 1930. He was born in Blackville, S. C., Jan. 1, 1863, and was graduated from Charleston High School in 1880. After 1878, he was engaged in ornithological researches, rediscovering in South Carolina Swanson's Warbler (1884) and Bachman's Warbler (1901). He added tropical species to the South Carolina fauna and 44 species of birds to the avifauna of the state. Mr. Wayne was represented in ornithological nomenclature by Wayne's Clapper Rail (*Rallus Crepitans Wagneri*). He was honorary curator of the division of birds in the Charleston Museum and was the author of *Birds of South Carolina* (1910).

Weale, Putnam. See Simpson, Bertram Lenox.

Weaver, Sir Lawrence. An English architect, author, and war-time agricultural administrator, died in London, Jan. 10, 1930. He was born in Clifton, Bristol, July 2, 1876, and was educated at Clifton College. His training as an architect was followed by some 14 years of experience as manager and director of various manufacturing and contracting firms. In 1910 he turned to journalism, acting as architectural editor of *Country Life* until 1916. During the World War, after service in the Anti-Aircraft Corps of the Royal Naval Volunteer Reserve, he became controller of supplies in the food production department of the Ministry of Agriculture (1917), commercial secretary of the Board of Agriculture (1918), and director-general of the land department and second secretary of the Ministry of Agriculture (1919-22). In all these posts his great ability as an organizer was demonstrated. During this period he also founded the National Institute of Agricultural Botany and served as chairman of the council from 1919 to 1924. He was created a Knight of the British Empire in 1920, and was director of the United Kingdom exhibits at the British Empire Exhibition held in Wembley, 1923-25. At the time of his death he was director of the London Press Exchange, one of the largest advertising agencies in England. His published works include: *English Leadwork: Its Art and History*; *Small Country Houses of Today* (2 vols.); *Lutyens Houses and Gardens*; *Memorials and Monuments*; *The Story of the Royal Scots*; *Sir Christopher Wren*; *Exhibitions and Arts of Display*; and *Tradition and Modernity in Plasterwork*.

Webb, Sir Aston.

Weems, Julius Buel. An American chemist, died in Ashland, Va., Jan. 25, 1930. He was born in Baltimore, Md., Aug. 27, 1865. Following his graduation from the Maryland Agricultural College in 1888, he studied at the Johns Hopkins and at Clark Universities, receiving the Ph.D. degree from the latter institution in 1894. For the next ten years he was professor of agricultural chemistry and chemist of the experimental station at Iowa State College. In 1904 he became consulting and analytical chemist with the Agricultural Department of the State of Virginia; in 1911, investigator of farm life problems; and in 1915, chief chemist of this department.

Wesselsky, Gabriel de. A Russian journalist and diplomatist, died in Bournemouth, England, Aug. 28, 1930.

He was born in Tsarskoe Selo, Russia, in 1841 and attended the Training School of Ensigns of the Guard in St. Petersburg (later Leningrad) and the University of Heidelberg. Entering the Russian Army in 1858, he served for some time as a lieutenant in the 2d Rifles Imperial Guard. In 1864 he was appointed a secretary in the Russian Foreign Office, and the following year acted as secretary in composing the *Diplomatic History of Russia* for Alexander III, who was then heir to the throne. In 1866 he presented to Alexander II a Memoir urging an understanding with Great Britain and France to put a limit to the ambitious advances of Prussia. He embarked on his journalistic career in 1867, traveling during the next three years in the Near East. During the insurrection of Bosnia and Herzegovina against Turkey in 1875-76 he organized the International Committee of Assistance to the Bosno-Herzegovinian Refugees, with headquarters in Paris, and pleaded the cause of the insurgents in the European press. After he was charged by the Russian Government with a mission of pacification, the Bosno-Herzegovinians gave him full power to represent them, and he succeeded in obtaining from the Porte, or Turkish Government, the promise of autonomy for the provinces. Two years later, after serving in the Montenegrin and Russian armies against Turkey, he represented Bosnia and Herzegovina at the Congress of Berlin, where Austria-Hungary was authorized to occupy and administer the territory. In 1882 De Wesselsky became foreign correspondent for the *Novos Vremya*, being stationed in Vienna until 1887, in Berlin until his expulsion as an enemy in 1892, and in London until his death. He was president of the Foreign Press Association from 1896 to 1911. He successfully advocated an Anglo-Russian understanding which was culminated in 1907 and resulted in the formation of the Triple Entente of Great Britain, France, and Russia. During the World War he entered the British service in the Ministry of Information and was later attached to the staff of the Foreign Office in an advisory capacity. In 1919 he attended the Paris Peace Conference with the British delegation. His publications include: *The Problem of Asia*; *The Russian Revolution*; *Anglo-Russian Relations*; *Russia and Democracy* (1915); *The German Peril and the Grand Alliance* (1916); *Serbia's Role in History and Culture*; *Bosnia and Herzegovina*; and *The Enigma of Peterhof*.

Weyerhaeuser, Charles Augustus. An American lumber manufacturer, died Feb. 15, 1930, in Bombay, India, while on a trip around the world. He was born in Coal Valley, Ill., Apr. 2, 1866, and was educated at Phillips Academy in Andover, Mass. He began in the lumber business at Rock Island, Ill., and, at the time of his death, was president of the Potlatch (Idaho) Lumber Co., the Pine Tree Lumber Co., and managing director of other lumber companies, with an office in St. Paul, Minn. With his three brothers, he continued and expanded the vast lumber business of the West begun by his father.

Weyler, Gen. Valeriano. Marquis of Teneriffe.

Wheatley, John. A Scottish statesman, died in Glasgow, May 11, 1930. He was born in 1869, the son of an Irish laborer, and was educated in the village schools of Lanarkshire, Scotland. As a boy he worked in a mine. After 1922, he was a Labor member of Parliament for the Shettleston Division of Glasgow. He was a Minister of Health in the Labor government of 1924 and was in charge of the housing bill. His extreme views brought him into opposition with the Parliamentary Labor party, with the result that he became leader of the rebel section of the Labor Left Wing. He was the author of many pamphlets on Labor and Socialist questions.

Whibley, Charles. An English essayist, died in Hyères, France, Mar. 4, 1930, at the age of 70. He was born in Kent and was educated at the Bristol Grammar School and at Jesus College, Cambridge University. He wrote for the *National Observer*, the *Pall Mall Gazette*, and the *Outlook*. Later he contributed to *Blackwood's Magazine* an unsigned monthly article, "Musings without Method." Mr. Whibley was of the tradition of Defoe in his manner of combining literary criticism with political opinion. He was a member of the Tory party, a man of strong and settled convictions, which he expressed fearlessly. In his literary life he was greatly influenced by William Henley, whom he aided in the publication of the *Tudor Translations*. His works include *The Paganry of Life* (1900); *Literary Portraits* (1904); *American Sketches* (1908); *Studies in Frankness* (1912); *Essays in Biography* (1913); *The Letters of an Englishman* (1915); *Political Portraits* (1917); *Lord Manners and His Friends* (1925). In 1925 he edited the *Collected Essays of W. P. Ker*. He was the Leslie Stephen lecturer at Cambridge University in 1917.

Whipple, Sherman Leland. An American lawyer, died in Brookline, Mass., Oct. 20, 1930. Born in New Lon-

don, N. H., Mar. 4, 1862, he was graduated from the Yale law school in 1884. He practiced in Boston from 1885, being engaged principally as trial lawyer. In 1917 he was special counsel to the Congressional committee that investigated the leak of advance information concerning the proposed peace terms in the World War. During 1918-19 he was general counsel for the U. S. Shipping Board and the Emergency Fleet Corporation.

Whitney, Fred C. An American theatrical producer, died in Los Angeles, Calif., June 4, 1930. Born in 1865, he commenced producing comic operas in 1892, his first productions being *The Fencing Master* and *The Algerians*. Two years later he organized the Whitney Opera Company, which opened in New York with *Rob Roy*. His subsequent productions include: *Quo Vadis*; *The Normandy Wedding*; *Dolly Varden*; *When Johnny Comes Marching Home*; *Love's Lottery*; *The Rose of the Alhambra*; *The Chocolate Soldier*; and *The Spring Maid*.

Whitney, Harry Payne. An American financier and active sportsman, interested particularly in racing and polo, died Oct. 26, 1930, in New York City where he was born Apr. 29, 1872. He increased a large fortune which he inherited from his father, William Collins Whitney. He was president and director of the Whitney Realty Company and also director of the Guaranty Trust Company, Metropolitan Opera Company, Westchester Racing Association, and Sinclair Consolidated Oil Corporation.

Whytal, Russ. An American actor and playwright, died in New York City June 24, 1930. He was born in Boston, Mass., June 20, 1860, and made his first appearance on the stage in the Boston Museum in 1882, where he remained five years. He subsequently toured for some years in his own plays: *For Fair Virginia*; *Taps*; *Agatha Dene*; and *Night*. His outstanding successes on Broadway, from 1907 to 1927, were in *The Winking Hour*; *The Climax*; *The Pigeon*; *Common Clay*; *Redemption*; *The Letter of the Law*; *Spanish Love*; *Romeo and Juliet*; *The Enemy*; and *The Garden of Eden*.

Wiborg, Frank Bestow. An American printing ink manufacturer, died in New York City, May 12, 1930. He was born in Cleveland, Ohio, Apr. 30, 1855, and was graduated from Chickering Institute in Cincinnati, Ohio, in 1874. Formerly vice president of the Ault & Wiborg Co. of Cincinnati, manufacturers of printing ink, he was vice president of the New York branch of the company at the time of his death. He wrote *Travels of an Unofficial Attaché* (1904); *A Commercial Traveler in South America* (1905); and *Printing Ink—A History, with Treatise on Modern Methods of Manufacture and Use* (1926).

Wilbraham, Edward William Bootle. Third Earl of Lathom and Fourth Baron Skelmersdale. An English playwright, died in London, Feb. 7, 1930. Born May 16, 1895, he was educated at Eton and at Christ Church, College, Oxford. In 1910 he succeeded to his father's title, becoming the third Earl of Lathom. Although most of his plays were given only before private audiences, the following were produced in New York and London theatres: *Ostriches* (1925); *The Way You Look at It* (1926); *Wet Paint* (1926); *Puppence Coloured* (1927); and *Twenty Houses in a Row* (1928). Lord Lathom was often deliberately shocking, writing in the tradition of Oscar Wilde but without Wilde's lightness of touch.

Wiley, Harvey Washington.

Williams, Alfred Brockenbrough. An American editor, died in Washington, D. C., Mar. 11, 1930. He was born in Hanover Co., Va., Jan. 10, 1856, and was educated in private schools. As correspondent for the Charleston (S. C.) *News and Courier*, he went to Liberia with a ship of Negro emigrants in 1878 and so effectively exposed the mismanagement of the enterprise that it was abandoned. For the same paper, he made a study of convict camps in the South and, by his articles, did much toward destroying the leasing system. He edited the Greenville (S. C.) *News* during 1880-96 and was with the New York *Advertiser* and the New York *Times* from 1896 to 1900. In 1901 he became editor of the Richmond (Va.) *News* and, during 1903-10 he edited the Richmond *News-Leader*. From 1910 to 1915, he was editor and part owner of the *Morning Times* and the *Evening World News* of Roanoke, Va., and, in 1915-16, he was owner and editor of the Richmond (Va.) *Evening Journal*. At the time of his death, he was an associate editor of the *Southern Churchman*, a periodical for members of the Protestant Episcopal Church.

Williams, Frank Martin.

Williams, Fritz.

Williamson, James. See Ashton, James Williamson, First Baron of.

Wilson, Robert Dick. An American philologist and theologian, died in Philadelphia, Pa., Oct. 11, 1930. He was born in Indiana, Pa., Feb. 4, 1856, and attended Princeton University, Western Theological Seminary,

and the University of Berlin. He was professor of Old Testament at the Western Theological Seminary, 1885-1900, and professor of Semitic philology and Old Testament introduction at the Princeton Theological Seminary, from 1900-1929. He was also one of the founders of the Westminster Theological Seminary in Philadelphia. His writings include: *Elements of Syriac Grammar* (1890); *Hebrew Syntax* (1902); *Studies in the Book of Daniel* (1916); *Is the Higher Criticism Scholarly?* (1922); and *Scientific Old Testament Criticism* (1933).

Winfield, Arthur M. See Stratemeyer, Edward.

Winkler, Max.

Winslow, Herbert Hall. An American playwright, died in Hastings-on-Hudson, N. Y., June 1, 1930. He was born in Keokuk, Iowa, Nov. 23, 1865. In 1885 he became editor of his own publication, *Winslow's Monthly*. His first play, *The Silent Partner*, was produced in New York in 1890. Other productions included: *The Vinegar Buyer* and *Swell Elegant Jones*, which were played more than 3000 times by Ezra Kendall; *A Barrel of Money*; *A Knotty Affair*; *Down in Infamy*; *The Great Northwest*; *The Spellbinder*; *the Southerner*; *A Rolling Stone*.

Wolf, Lucien.

Wollaston, Alexander Frederick Richmond. A British explorer, naturalist, and educator, died in Cambridge, June 3, 1930. He was born in 1875 and was graduated from King's College, Cambridge, in 1896. On completing the medical course at the London Hospital in 1903, he became a member of the Royal College of Surgeons and a licentiate of the Royal College of Physicians. He began his explorations in 1905 as a member of the two-year British Museum Expedition to Ruwenzori, Central Africa, his chief object being the collection of plants and animals. He was the first to ascend what was then supposed to be the highest point of Ruwenzori and which was named in his honor Wollaston Peak. In 1909 he joined the British Ornithological Expedition to the Mima River, Dutch New Guinea, where he visited the Utaikwa River and decided on that route to the Snow Mountains for the expedition of which he was the leader in 1912. His companion was C. Boden Kloss, curator of the museum of Kuala Lumpur, Federated Malay States, and they succeeded in climbing to within 500 feet below the summit ridge of Snow Mountains.

In 1914 the Gill Memorial was awarded to Professor Wollaston by the Royal Geographical Society in recognition of his achievements, and he was planning a third expedition to Dutch New Guinea when the World War broke out. He served as surgeon on the Northern Patrol and in German East Africa and later on the Murman Coast, receiving the Distinguished Service Cross. In 1920 he was elected a fellow of King's College, Cambridge, and in 1928 was appointed tutor. He was chosen to be medical officer and naturalist on the first Mount Everest Expedition, led by Col. Howard Bury in 1921, and in 1925 received the Patron's Medal of the Royal Geographical Society for his explorations. His works include: *From Ruwenzori to the Congo*; *Pygmies and Papuans*; and *The Life of Alfred Newton, 1829-1907*.

Woodberry, George Edward.

Worman, James Henry.

Woynicz, Wilfred Michael Habdank-. See Voynich, Wilfred Michael.

Wright, Joseph.

Wylie, David Gourley. An American clergyman, died in Stony Brook, N. Y., Aug. 26, 1930. He was born in New Richmond, Ohio, May 15, 1857, and was graduated from Geneva College in 1879 and from the Union Theological Seminary in 1888. Ordained to the Presbyterian ministry, he served as pastor in New York City for more than 40 years, being called to the Canal Street Church in 1884, the Knox Church in 1886, and the Scotch Church in 1891. In 1914 he was elected general secretary of the Board of Church Erection of the Presbyterian Church in the United States of America. He was also a member of the executive committee of the General Assembly of the Presbyterian Church, secretary of the Board of National Missions of that denomination, and past president of the Lord's Day Alliance, which was organized to preserve one day a week as a day of rest. During the World War he was a member of the Presbyterian National Service Committee.

Young, Sir George. A British publicist, died July 4, 1930, in Cookham, Berkshire, where he was born Sept. 15, 1837. Educated at Eton and at Trinity College, Cambridge, he became a barrister of Lincoln's Inn in 1864. He served on the Royal Commission on Coolie Immigration to British Guiana in 1870 and on the Friendly Societies Commission during 1871-73. In 1875 he was secretary to the Factory and Workshops Acts Commission, and in 1881 to the Irish Land Acts Commission. He was appointed a charity commissioner under the Endowed Schools Acts in 1882, and served as Chief Charity Commissioner for England and Wales during 1908-06. From 1881 to 1886 he was president

of the Senate of University College, London, and subsequently assisted in the establishment of Reading University. Prior to his death he was chairman of the Maidenhead Bench and of the Berkshire Higher Education Sub-Committee. He succeeded his father as third Baronet in 1848. His publications include: *Report on Friendly and Benefit Societies, Southern and Eastern Counties of England* (1874); *The Dramas of Sophocles Rendered in English Verse, Dramatic and Lyric* (1888); *Poems from Victor Hugo* (1902); and *An English Prosody on Inductive Lines* (1928). He also edited the works of his uncle, Winthrop Mackworth Praed.

NEGRI SEMBILAN, nã'grẽ sem'belãn'. A federation of nine divisions, constituting a state in the Federated Malay States. See **FEDERATED MALAY STATES**.

NEJD. See **ARABIA**.

NEPAL, nẽ-pól'. An independent kingdom in the Himalayas between Tibet and British India, under British influence. The area is about 54,000 square miles, the population about 5,600,000. Capital, Kathmandu (80,000 inhabitants); reigning sovereign in 1930, Maharajadhiraja Tribhubana Bir Bikram. The chief products and exports are cattle, hides and skins, opium, gums and resins, jute, grains, and clarified butter. There are valuable forests in southern Nepal. The Government is a military oligarchy, under a partially hereditary Prime Minister. Prime Minister in 1930, Gen. Bhim Shamsher Jang Rana, who assumed office Dec. 16, 1929.

In April, 1930, a Nepalese army was reported marching against Lhasa, capital of Tibet, following the failure of the Dalai Lama to pay the 10,000-rupee annual tribute guaranteed Nepal by a treaty signed in 1850.

NETHERLAND EAST INDIES. See **DUTCH EAST INDIES**.

NETHERLANDS, THE, OR **HOLLAND**. A constitutional monarchy of Europe, bounded by the North Sea on the west and north; on the east by Germany, and on the south by Belgium. Capital, The Hague; reigning Sovereign in 1930, Queen Wilhelmina Helena Pauline Maria.

AREA AND POPULATION. In January, 1929, the Netherlands had a land area of 12,603 square miles and a population estimated at 7,731,172, as compared with 6,865,314 at the census of 1920. The draining of the Zuider Zee to form a new Province of 523,000 acres was started in 1924 and was scheduled for completion in 1939. In 1929, 47.14 per cent of the population was urban and 52.86 per cent rural. Births in 1928 totaled 176,028; deaths, 73,316; marriages, 59,128. Emigrants in the same year totaled 2804 (3340 in 1927), most of whom went to North America. The population of the chief cities on Jan. 1, 1929, was: Amsterdam, 743,404; Rotterdam, 577,694; The Hague, 425,119; Utrecht, 151,648; Haarlem, 115,497; Groningen, 102,789.

EDUCATION. Primary education is free and compulsory for children between the ages of 7 and 13. Of the conscripts called out in 1928, only 0.25 per cent were illiterate. In 1925-26, there were 3694 public elementary schools, with 484,264 pupils; 3740 private elementary schools, with 592,568 pupils; 195 middle-class schools, with 32,397 pupils; 603 schools for working people, with 102,655 pupils; and four public universities (Leiden, Utrecht, Groningen, and Amsterdam), with 6755 students; besides various technical, professional, and infant schools.

PRODUCTION. Intensive agriculture and animal husbandry are the main factors in Dutch national economy. In 1928, the cultivable area was about 930,000 hectares (1 hectare equals 2.47 acres),

or 28.5 per cent of the total; permanent grass and pasture, 1,278,000 hectares, or 39.1 per cent; and wood and forest, 240,000 hectares, or 7.3 per cent. Production of the chief crops in 1929, with comparative figures for 1928 in parentheses, was as follows in quintals (1 quintal equals 220.46 pounds): Wheat, 1,270,000 (1,996,191); rye, 3,374,000 (4,402,777); oats, 3,670,000 (3,599,951); barley, 791,000 (978,388); potatoes for human consumption, 25,441,500 (27,095,565); potatoes for animal consumption, 11,509,650 (11,553,980); sugar beets, 12,655,000 (22,887,210). The production of linseed in 1928 was 127,994 quintals and of flax, 138,904 quintals. The livestock census of 1921 showed 2,062,771 cattle, 1,519,245 swine, 668,211 sheep, and 363,668 horses. Butter production rose from 60,600 metric tons in 1921 to 85,300 metric tons in 1928; cheese, from 97,700 to 132,200 metric tons in the same period. A special commission, appointed in the spring of 1930 to study the agricultural depression in Holland, found that, taking 100 as a basis for the period 1924 to 1928, agricultural prices as of March, 1930, had declined by 49 per cent, while the cost of production had shown no decrease.

A total of 5154 vessels were engaged in the fisheries in 1928, the value of the herring catch being 13,068,823 florins (1 florin, or guilder equaled about \$.40).

Mineral production, except for coal, is comparatively unimportant. In 1929 the output of black coal was 11,575,000 metric tons (10,694,000 in 1928); of brown coal, 157,000 tons (197,000 in 1928); and of salt, 45,200 tons (41,900 in 1928). Coke production (1928) was 1,130,000 tons. The important Dutch shipbuilding, machinery, and textile industries are dependent upon the Dutch East Indies for a substantial part of their business. In 1929, shipments to the East Indies were valued at 172,292,000 florins, or 8 per cent of the total exports. The output of the shipyards in 1929 was 29 steamships of 55,425 tons and 48 motor vessels, of 131,092 tons. Dutch cotton spinning factories in 1928 counted 1,168,000 spindles and 54,300 looms; in the wool textile industries there were 254,000 spindles and 4800 looms. Other industrial establishments included 297 distilleries, 12 sugar refineries, 8 beet-sugar factories, 14 salt works, 172 breweries, and 3074 tobacco factories. The number of unemployed members of unemployment insurance societies in June, 1930, was 25,356, or 6.1 per cent of the total membership.

COMMERCE. Holland's consistently unfavorable balance of visible trade became more pronounced in 1929. Imports for home consumption (excluding bullion and specie) rose to 2,752,298,000 florins from 2,683,904,000 florins in 1928; exports of domestic produce increased to 1,989,490,000 florins from 1,986,185,000 florins in 1928; and the unfavorable balance of trade increased to 762,808,000 florins from 697,719,000 florins in 1928. The excess of imports is generally offset by returns on foreign investments and the earnings of Dutch shipping. Dutch investments in the Dutch East Indies in 1928 were estimated at 3,000,000,000 florins and the actual remittances to the Netherlands were about 210,000,000 florins, not including interest on the Indies State loans, aggregating over 1,000,000,000 florins, the greater part of which were in Dutch hands.

FINANCE. The budget for 1930 estimated total receipts at 648,893,000 florins, including 621,-

122,000 florins of ordinary and 27,771,000 florins of extraordinary revenue. Total expenditures were placed at 708,735,000 florins, including 611,982,000 florins of ordinary and 96,753,000 florins of extraordinary expenditures. The anticipated deficit was 59,842,000 florins. Actual returns ordinarily show an improvement over estimates. In the ordinary accounts for the years 1923-28, the combined estimates of budget deficits totaled 141,578,000 florins, while actual accounts showed a surplus of 227,721,000 florins. Including capital accounts, the estimated budget deficit for the same period of 603,657,000 florins was converted into an actual deficit of only 23,767,000 florins.

The budget for 1931, as introduced into Parliament, contemplated ordinary expenditures of 612,543,000 florins, ordinary revenues, 603,447,000 florins; extraordinary expenditures, 155,357,000 florins; extraordinary revenues, 53,859,000 florins. The anticipated total deficit was 110,594,000 florins, of which 9,096,000 florins were under ordinary and 101,498,000 under extraordinary (or capital) service.

The total public debt, which is all held internally, amounted to 2,676,308,881 florins in September, 1930, and was divided into a floating debt of 235,077,631 florins and a consolidated debt of 2,441,231,250 florins. The amount allotted for the service of the debt in 1931 was 84,792,972 florins, or 1,530,674 florins more than in 1930.

COMMUNICATIONS. A total of 24,610 vessels, with a tonnage of 33,766,000 entered the ports of the Netherlands in 1928 and 24,890 vessels of 33,679,000 tons cleared. The Dutch mercantile marine at the beginning of 1930 included 467 vessels aggregating 1,998,000 gross tons, as compared with 462 vessels of 1,961,000 tons at the beginning of 1929. Rotterdam is the chief port. A new harbor at Dordrecht, admitting ships with a draught of 26 feet at high tide, was opened by Queen Wilhelmina on Sept. 25, 1930. The opening at IJmuiden on Apr. 29, 1930, of what was said to be the largest lock in the world made Amsterdam accessible to the largest ships afloat. The lock cost \$7,500,000 and took 10 years to complete. See **CANALS**.

The two principal railways had a total length of 2278 miles (1928). In the same year all Dutch railways carried 57,578,000 passengers and reported a total income of 170,010,000 florins. Other transportation facilities included 2000 miles of canals, about 3000 miles of highways, and 1919 miles of tramway lines. The mileage of commercial air transports in 1929 was 1,233,000, passenger traffic in passenger-miles was 4,355,000, and express and mail traffic in ton-miles was 251,000,000.

GOVERNMENT. Executive power is vested in the Sovereign and legislative power conjointly in the Sovereign and the Parliament, which is called the States-General and consists of two houses. The upper House is composed of 50 members, elected by the Provinces, and the lower House of 100 deputies, elected by direct suffrage. There is a consultative State Council of 14 members, appointed by the Sovereign. Queen Wilhelmina was born Aug. 31, 1880, succeeded to the throne Nov. 23, 1890, on the death of her father, Willem III, and was crowned Sept. 6, 1898, after she became of age. The Ministry in 1930 was composed as follows: President of the Council of Ministers, Minister of the Interior and of Agriculture, Dr. Ch. J. M. Ruys de Beerenbrouck (appointed Aug. 10, 1929); Foreign Affairs, Dr. F.

Beelaerts van Blokland; Finance, Dr. D. J. de Geer; Justice, Dr. J. Donner; Colonies, S. de Graaf; Defense, Dr. L. N. Deckers; Public Works, Dr. P. J. Reymer; Labor, Commerce, and Industry, Dr. J. Th. Verschuur; Instruction, Science, and Arts, Dr. J. Terpstra. The composition of the upper Chamber following the elections of 1929 was: Catholics, 16; Social Democrats, 11; Protestant party, 7; Anti-Revolutionists, 6; Liberty Union, 6; Democrats, 4. In the lower Chamber the standing of the parties was: Catholics, 30; Social Democrats, 24; Anti-Revolutionists, 12; Christian Historicals, 11; Liberty Union, 8; Democrats, 7; other parties, 8.

HISTORY. Efforts to ameliorate the effect upon Holland of the world economic crisis was the principal concern of the nation in 1930. This was the main theme of Queen Wilhelmina's address from the throne at the opening of Parliament Sept. 16, 1930. For the first time since 1914, she delivered the address in person. The message urged that utmost care be taken to mitigate the effects of the depression in the Dutch East Indies, where active Communist propaganda had stirred native unrest.

Charges by one of the two Communist deputies that the Pope was fomenting war against Russia resulted in the deputy's ejection from the lower Chamber of Parliament October 24. The Chamber authorized the construction of a 5250-ton cruiser for service in the Dutch East Indies and of a smaller ship for the maintenance of order in the Dutch West Indies. The need for naval protection was demonstrated in 1929, when Venezuelan insurgents captured Willemstad, the capital of Curaçao, and made the Dutch governor of the island prisoner. For the reclamation of the Zuider Zee, see **RECLAMATION**.

NEUTRALS, RIGHTS OF. See **INTERNATIONAL LAW**.

NEVADA. **POPULATION.** According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 91,058. On Jan. 1, 1920, it was 77,407. Capital, Carson City.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------|------|---------|-----------|-------------|
| Hay | 1930 | 370,000 | 677,000* | \$5,911,000 |
| | 1929 | 369,000 | 638,000* | 9,470,000 |
| Potatoes | 1930 | 3,000 | 525,000 | 578,000 |
| | 1929 | 4,000 | 680,000 | 1,020,000 |
| Wheat | 1930 | 15,000 | 386,000 | 403,000 |
| | 1929 | 16,000 | 404,000 | 520,000 |

* Tons.

Farms in the State numbered 3437 in 1930; in 1925, 3883; and in 1920, 3163. The area of irrigated lands totaled 487,241 acres in 1929, as against 561,447 in 1919.

MINERAL PRODUCTION. The mine production of gold, silver, and copper was somewhat lower for 1929 than for 1928, while that of lead and zinc, particularly the latter, was higher. As higher average prices for copper, lead, and zinc prevailed in 1929, the total value of the product of the five metals rose, to \$33,030,875 for 1929, from \$31,033,776 for 1928. Copper production was 140,138,809 pounds for 1929, 158,876,883 pounds for 1928; in value, it was \$22,878,271 for 1928. Zinc production rose notably, to 16,929,749 pounds for 1929, from 6,796,713 for 1928, in which year the product was, as to total value, \$414,599. The quantity of lead mined was 19,692,568 pounds

in 1929 and 15,747,444 pounds in 1928; the value, for 1928, was \$913,352. There were produced, in 1929, 163,711 fine ounces of gold, as against 175,158 in 1928, the product of 1928 having a value of \$3,620,833. Silver production was, for 1929, 4,923,526 fine ounces, as against 5,481,574, in value \$3,206,721, for 1928. Gypsum, the only other mineral listed as producing regularly at a yearly rate in excess of \$600,000, yielded 278,405 short tons in 1928 and 327,365 in 1927; in value, \$1,424,455 for 1928 and \$1,484,171 for 1927. The aggregate value of minerals produced in the State was, for 1928, \$34,881,787; for 1927, \$26,753,295.

The value of gold, silver, copper, lead, and zinc in Nevada decreased from \$33,030,237 in 1929 to about \$17,531,800 in 1930, according to U. S. Bureau of Mines. Compared with 1929 production there were decreases in the output of all metals except lead and zinc. The gold output in Nevada decreased from \$3,384,211 in 1929 to about \$2,729,000 in 1930. The silver production decreased from 4,923,526 ounces in 1929 to about 4,174,000 ounces in 1930 and the value from \$2,624,239 to about \$1,607,000. The Tonopah district produced about 1,903,000 ounces of silver, a decrease, compared with the output of 1,965,595 ounces in 1929. The copper output decreased from 140,138,809 pounds in 1929 to about 85,189,000 pounds in 1930 and in value from \$24,664,430 to about \$10,563,400.

The lead output increased from 10,692,568 pounds in 1929 to about 23,507,000 in 1930, but the value decreased from \$1,240,632 to about \$1,222,400. The zinc recovered from ore mined in Nevada increased from 16,920,083 pounds to about 30,000,000 pounds and from \$1,116,725 in value to about \$1,410,000. This large output of zinc was surpassed only once before, in 1916.

FINANCE. State expenditures in the year ended Dec. 31, 1928, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$2,684,900 (of which \$423,247 was for local education); for interest on debt, \$92,870; for permanent improvements, \$1,420,886; total, \$4,208,656 (of which \$1,884,436 was for highways, \$560,535 being for maintenance and \$1,323,901 for construction). Revenues were \$3,933,268. Of these, property and special taxes formed 37.6 per cent; departmental earnings and remuneration to the State for officers' services, 5.9; sales of licenses, 14.5 (including taxes of \$271,678 on sale of gasoline). The State's funded debt outstanding on Dec. 31, 1928, was \$1,735,000. Net of sinking-fund assets, it was \$1,597,532. On property bearing an assessed valuation of \$205,186,046 were levied in the year State taxes of \$1,429,479.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 2122.65. No construction of line or trackage in 1930 was reported.

EDUCATION. A preliminary revision of the elementary course of study for the public schools was brought virtually to completion during the year. A similar revision of the course of high-school study was reported as less advanced but under way.

There were enrolled in the public schools of the State, in the school year 1929-1930, 18,041 pupils. Of these, 13,029 were in elementary grades or courses, and 3762 were in high schools; there were also 650 kindergarten pupils. Expenditures of the year for public-school education, capital

outlay included, totaled \$2,920,105. The average salaries of teachers for the year was \$1571.

ELECTIONS. Governor Fred B. Balzar, Republican, was reelected on November 4. The Republican majority in the Senate of the State Legislature was preserved, but the Democrats gained a bare majority in the Assembly.

OFFICERS. Governor, Fred B. Balzar; Lieutenant-Governor, Morley Griswold; Secretary of State, W. G. Greathouse; Controller, Edward C. Peterson; Treasurer, George B. Russell; Attorney-General, Gray Washburn; Superintendent of Public Instruction, Walter Anderson.

JUDICIARY. Supreme Court: Chief Justice, Edward A. Ducker; Associate Justices, Ben W. Coleman, J. A. Sanders.

NEVADA, UNIVERSITY OF. A coeducational State institution of higher education in Reno, Nev.; founded in 1874. There was an enrollment of 969 students for the autumn term of 1930, of whom 577 were men and 392 were women. These were distributed among the various departments of the university as follows: Arts and sciences, 637; normal school, 31; engineering, 218; agriculture, 43; and home economics, 40. The summer session of 1930 had a registration of 149. There were 74 members on the faculty. The productive funds of the university amounted to \$335,100, and the income for the year to \$727,650. The library contained 52,500 volumes. During the year Mackay Science Hall, the gift of Clarence H. Mackay of New York City as a memorial to his father, John William Mackay, was erected at a cost of \$415,000. President, Walter E. Clark, Ph.D., LL.D.

NEVILLE, MAJ.-GEN. WENDELL CUSHING, U. S. M. C. An American marine officer, died in Edgewater Beach, Md., July 8, 1930. He was born in Portsmouth, Va., May 12, 1870, and attended the U. S. Naval Academy from 1886 to 1890. In 1892 he was commissioned a 2d lieutenant in the U. S. Marine Corps and was promoted through the grades to major general in 1920. He served during the Spanish-American War, taking part in the battle of Guantanamo Bay for which he was brevetted a captain. He also participated in the Boxer campaign in China and the capture of Peking. After the Philippine insurrection he was appointed military governor of the province of Basilan. In 1906, as major, he commanded the marines in the occupation of Cuba by the United States forces. During the engagement at Vera Cruz, Mexico, in 1914 he commanded the 2d regiment of marines, and the following year was stationed in Peking, China, as commander of the American Legation guard. On the entrance of the United States into the World War he became commander of the 5th regiment in the 4th brigade of marines of the famous 2d division, participating in the occupation of the Toulon sector and in the Aisne-Marne offensive. Later, as commander of the 4th brigade, he participated in the battles of Soissons, St. Mihiel, and Meuse-Argonne, and after the Armistice took part in the march to the Rhine and the occupation of Coblenz. In 1923 he was appointed commander of the department of the Pacific of the U. S. Marine Corps, and in 1929 commandant of the headquarters in Washington. He received the Congressional Medal of Honor in 1914 and the Distinguished Service Medals of the Army and Navy. The French government also honored him with five Croix de Guerre (three with palms and two with bronze stars) and made him an officer of the Legion of Honor.

NEW BRUNSWICK (brūnz'wīk). One of the Maritime Provinces of Canada, bounded on the east by the Gulf of St. Lawrence and Nova Scotia, on the north by Quebec, and on the west by the State of Maine. The area is 27,985 square miles and the population on June 1, 1930, was estimated at 423,400 (387,876 at the census of 1921). The chief cities, with their populations in 1921, are Saint John, 47,166; Moncton, 17,488; and Fredericton (the capital), 8114. In 1928, there were 10,024 births, 4926 deaths, and 3138 marriages. The enrollment in the provincially-controlled schools (1928) was 82,170.

Agriculture, mining, manufacturing, fishing, and lumbering are the principal industries. In 1929, the area devoted to field crops was 908,659 acres and the yield was valued at \$23,835,000 (\$18,275,000 from 900,376 acres in 1928). There are 21,476 square miles of forests, half of which are owned by the Province. Timber cut in 1928-29 totaled 273,000,000 cubic feet, of which 56,000,000 cubic feet were manufactured into pulp and paper. The 1929-30 cut was estimated at 212,000,000 cubic feet. The fish catch in 1928 was valued at \$5,001,641. Mineral production (1929) rose to \$2,371,137, the coal output totaling 219,188 tons. Copper, antimony, and gypsum are mined also. In 1928, 794 industrial establishments, employing 17,963 persons, had a gross output valued at \$67,413,742. Port records for 1929 showed exports of \$72,851,601 and imports for consumption of \$24,764,939.

Government is vested in a lieutenant governor and a legislative assembly of 48 members elected for five years. Ordinary revenues in 1929-30 were \$6,568,750; ordinary expenditures, \$7,218,856. The net debt in 1930 was \$40,240,520. During 1929, when tourist traffic from the United States increased 22 per cent, \$5,795,745 was expended on highways. In 1930, there were 1367 miles of main highways, 3268 miles of secondary, and 8187 miles of branch and local roads. Lieutenant Governor in 1930, W. F. Todd; Premier and Attorney-General, J. B. M. Baxter.

Premier Baxter and his Conservative government were returned to power in the provincial election held June 19, 1930. The main issues were the Government's introduction of state control of liquor without reference to the people, its programme for extending the highway system, and its water-power policy. In the Dominion election of July 28, 1930, the Province returned 10 Conservatives and 1 Liberal to the House of Commons at Ottawa. See CANADA.

NEW BRUNSWICK, N. J., Two-HUNDRED AND FIFTIETH ANNIVERSARY OF FOUNDING OF. See CELEBRATIONS.

NEW CALEDONIA, kāl'e-dō'n'ā. A French colony, comprising the island of New Caledonia, the southernmost of the Melanesian Islands, lying about 875 miles east of Australia, and the following dependencies: Isle of Pines, Wallis Archipelago, Loyalty Islands, Huon Islands, and Fotuna and Alofi. The island of New Caledonia has a length greater than 248 miles and an average width of 31 miles. Area, 8548 square miles. Population, according to the census of 1926, 57,630, of whom 14,983 were free, 1281 of convict origin, and 27,490 Melanesians and Polynesians. Capital, Nouméa, with 9336 inhabitants in 1921. Coffee, copra, cotton, manioc, corn, bananas, tobacco, and pineapples form the principal agricultural products. The mineral resources include cobalt, chrome, nickel, iron, and manganese; also

antimony, mercury, silver, gold, lead, copper, and cinnabar. In 1928 the value of mineral exports was 16,549,523 francs. The other leading exports include coffee, copper, copra, guano, and preserved meats. In 1928, imports totaled 159,939,000 francs, and exports, 98,844,090 francs. The budget for 1928 totaled 27,630,200 francs. Vessels entering the ports in 1928 numbered 139, of 244,902 tons. The colony is administered by a governor assisted by a privy council, made up of officials, and by an elected council-general. Governor in 1930, M. d'Arboussier (acting).

NEWCOMB, H. SOPHIE, COLLEGE FOR WOMEN. See TULANE UNIVERSITY.

NEWFOUNDLAND, nü'fūnd-lānd'. A large island in the northeastern part of the Gulf of St. Lawrence, forming one of the British dominions. Area, 42,734 square miles; population in 1929, 270,564, as compared with 259,358 at census of 1921. Labrador, the most easterly part of North America, is a dependency of Newfoundland. It has an area of 110,000 square miles and a population in 1928 of 4086. Capital of Newfoundland, St. John's, with a population in 1929 of 58,306. Other towns, with their populations in 1921, were Bonavista, 4025; Harbor Grace, 3825; Carbonear, 3320. Between 1925 and 1929, the average annual births totaled 6947 and the deaths 3799, leaving an annual excess of births of 3148. Immigrants in 1928 numbered 13,611; emigrants, 15,573. The schools, practically all of which are conducted by the various religious bodies, numbered 1139 in 1926, with a total attendance of 59,088; expenditure on education for the year was \$977,590.

PRODUCTION. Agriculture, fishing, mining, lumbering, and manufacturing are the chief industries. Farm land is limited, totaling 188,000 acres in 1921; improved land, 89,000 acres; forests, 9,600,000 acres. The leading crops are hay, potatoes, turnips, and cabbages. Iron-ore deposits are estimated at 3,600,000,000 tons. Copper ore and pyrites are worked also. In 1929, the iron-ore output declined to 1,516,999 tons, valued at \$2,503,048. Newsprint production in 1929 totaled 253,500 tons, valued at \$15,235,000. Fifty-one Newfoundland vessels, with 932 men, were engaged in the Bank cod fishery in 1928, the catch totaling 123,675 quintals of dry fish, valued at \$989,000. The seal catch in 1929-30 was placed at about 200,000, as compared with 201,856 in 1928-29. The fishing industry was depressed in 1930 by unfavorable prices in foreign markets for salt fish.

COMMERCE. For the fiscal year ended June 30, 1929, imports totaled \$29,237,381 and exports \$36,251,990. Preliminary returns for the calendar year 1929 showed exports of \$36,200,000, or \$3,500,000 more than in 1928, and imports of \$29,000,000. Imports came mainly from Canada, \$11,800,000; the United States, \$9,900,000; and the United Kingdom, \$6,200,000. The United States, Canada, and the United Kingdom, in the order named, took the bulk of the exports. Imports were chiefly staple foodstuffs and finished manufactures; exports were iron ore, newsprint, pulpwood, and furs.

FINANCE. In the budget for the fiscal year ended June 30, 1930, receipts were estimated at \$11,070,000 and expenditures at \$11,462,000. For the preceding year, actual revenues were \$10,026,000 and expenditures \$11,133,000, the deficit totaling \$1,107,000. The net funded debt on June 30, 1929, amounted to 81,666,000 Newfoundland dollars (each equivalent to \$1 in United States

currency). An additional loan of \$6,000,000 (25 years at 5½ per cent) was floated in London in July, 1929.

COMMUNICATIONS. Railways in operation (1929) comprised 905 miles of Government line and 89 miles of private line. Highways on Jan. 1, 1930, included 731 miles suitable for motor-vehicle traffic, of which 111 miles were constructed during 1929. A fleet of 11 steamers maintained communication between the island ports and the continent. The total tonnage of vessels entered and cleared in 1928-29 was 2,936,648. Shipping registered in Newfoundland on Jan. 1, 1929, comprised 2935 vessels of all types of 154,157 tons.

GOVERNMENT. Executive power is vested in a governor, assisted by an executive council of not more than 10 members, and legislative power, in a council of not more than 24 members and an elected house of representatives of 40 members. Women have the franchise. Governor and commander-in-chief in 1929, Sir John Middleton, appointed in August, 1928. The Ministry constituted in November, 1928, was composed as follows: Prime Minister and Minister of Justice, Sir R. A. Squires; Colonial Secretary, A. Barnes; Finance and Customs, P. J. Cashin; Posts and Telegraphs, W. W. Halfyard; Ministers without Portfolios: Sir W. F. Coaker, Dr. A. Campbell, F. G. Bradley, Dr. H. M. Mosdell, P. J. Lewis, T. K. Cook. Other Ministers not in the cabinet were: Marine and Fisheries, H. B. C. Lake; Public Works, R. Hibbs; Agriculture and Mines, F. J. Downey. See **LABORATOR**.

NEW GUINEA, g'n'f. The name applied to both an island in the East Indies and to those territories in the western Pacific, including a portion of the island, which were transferred from Germany to Australia, under mandate of the League of Nations, by the Treaty of Versailles. The area of the island of New Guinea, which ranks after Australia and Greenland as the third island in size in the world, is estimated at from 310,000 to 335,000 square miles, and the population at slightly below 1,000,000. The northeastern portion, formerly Kaiser Wilhelm Island, is included in the Australian mandated area; the section west of 140° E. longitude belongs to the Dutch East Indies; and the southeastern part constitutes the colony of Papua, or British Guinea, also administered by Australia. See **DUTCH EAST INDIES, GERMAN COLONIES, and PAPUA**.

The Territory of New Guinea under Australian mandate consists of that section of the island known as North-East New Guinea, the Bismarck Archipelago (New Britain, New Ireland, Lavonagai, and the Admiralty Islands), and the Solomon Island group. Area, about 91,000 square miles. The estimated native population was 456,941 and the non-indigenous population (estimated June 30, 1929) was 3928, of whom 1808 were British and 1253 Chinese. Agriculture and mining are the principal occupations. Coffee, coconuts, cacao, kapok, fruits, yams, taro, and sago are the chief crops. Of the known considerable mineral deposits in North-East New Guinea only gold is extracted, due to the lack of transportation facilities. Pearl and shell fisheries are operated from some of the islands. In 1928-29 imports were valued at £869,514, exports at £1,146,112. Revenues totaled £350,351 and expenditures, £377,507. The net tonnage entered and cleared in the same year was 274,470 tons. The territory is administered by an Australian official from the

seat of government at Rabaul, New Britain. Administrator in 1930, Brigadier-General E. A. Wisdom.

NEW HAMPSHIRE. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 465,293. The population on Jan. 1, 1920, was 443,083. The capital is Concord.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------------|------|---------|-----------|-------------|
| Hay | 1930 | 397,000 | 536,000* | \$7,263,000 |
| | 1929 | 477,000 | 679,000* | 9,091,000 |
| Potatoes | 1930 | 11,000 | 2,365,000 | 2,483,000 |
| | 1929 | 10,000 | 1,660,000 | 2,656,000 |
| Corn | 1930 | 13,000 | 585,000 | 614,000 |
| | 1929 | 18,000 | 533,000 | 586,000 |

* Tons.

The number of farms in the State fell to 14,859 for 1930, from 21,065 for 1925 and 20,523 for 1920. By percentage, the reduction from 1925 to 1930 was 29.5, the heaviest proportionate loss incurred in the same period by any of the States.

MINERAL PRODUCTION. The chief item in the State's list of mineral products, stone, was somewhat less actively quarried in 1928, for which year the total quantity was 166,040 short tons, as against 178,300 for 1927; the yearly values of the stone product were high in proportion to the tonnage, being \$1,423,426 for 1928 and \$1,584,262 for 1927. There was in 1928 a conspicuous rise in the output of sand and gravel, to 1,636,621 short tons for that year, from 863,618 for 1927; by value, to \$1,018,547 for 1928, from \$653,214 for 1927. Clay products attained the value of \$881,023 for 1928; for 1927, of \$811,626. Crude feldspar was mined in some quantity, 30,343 long tons in 1928; by value, \$236,224. The value of the entire mineral production of the State attained \$3,816,065 for 1928; for 1927, \$3,447,105.

FINANCE. State expenditures in the year ended June 30, 1929, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$7,836,419 (of which \$610,486 was for local education); for interest on debt, \$133,372; for permanent improvements, 3,043,267; total, \$11,013,058 (of which 5,610,878 was for highways, \$3,242,536 being for maintenance and \$2,368,342 for construction). Revenues were \$692,857. Of these, property and special taxes formed 34.4 per cent; departmental earnings and remuneration to the State for officers' services, 9.2; sales of licenses, 46.3 (including taxes \$1,907,494 on sales of gasoline). The State's funded debt, outstanding and net alike, on June 30, 1929, was \$3,851,636. On property bearing an assessed valuation of \$673,175,733 were levied State taxes of \$2,990,507.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 1165.62. No construction of additional line or trackage in 1930 was reported.

EDUCATION. The practice was followed in 1930 of rendering exercise in the actual work of teaching an extensive part of the training of teachers for the rural high schools. Five of these institutions were operated under the practice departments of the normal schools at Keene and Plymouth. Thus, according to Commissioner of Education Pringle's statement in the *Journal* of the National Education Association, 18 weeks of actual teaching were provided for each of the

teachers prepared. For elementary grades a new programme of study was drawn up through the collaboration of teachers, superintendents, and the State's elementary-school agent. For the academic year 1929-30, the number of persons of school age, from 5 to 16 years, was reported as 91,549. Apart from 31,655 listed as enrolled in private schools, there were, in the public schools, 76,452 enrolled pupils. Of these, 56,230 were in elementary schools; 6064 in junior high schools; and 14,158 in high schools. The year's expenditures for public-school education totaled \$7,750,843. Salaries of divers groups of teachers, for the year, averaged as follows: men, secondary, \$2149; women, secondary, \$1467; men, elementary, \$1642; women, elementary, \$1104.

CHARITIES AND CORRECTIONS. Amended in divers respects by the State laws of 1929, the central authority in 1930 for the care and custody of persons rested in the State Board of Public Welfare. It was composed of the Governor, the secretary of the State Board of Health, and five nominee members, one chosen every year to serve five years. The Board had charge of the supervision of all neglected, delinquent or defective children. It inspected all State and county charitable and correctional institutions. It distributed aid to dependent mothers. The State institutions, with the numbers of their respective inmates as of June 30, 1930, were: New Hampshire State Hospital (insane), Concord, 1698; Laconia State School (feeble-minded children), 507; New Hampshire State Industrial School (children under custody), Manchester, 139 boys and 71 girls; New Hampshire State Prison, Concord, 151 men and 4 women; Soldiers' Home, Tilton; New Hampshire State Sanatorium (consumptives), Glencliff, 96.

LEGISLATION. The State Legislature, summoned in special session by Governor Tobey to consider a reform of the system of taxation in accordance with the report of its interim tax commission, convened on February 18 and adjourned on February 28. It failed to enact the proposed measures. The idea of the proposed reform was to reduce the tax burden of the rural part of the population, which had been found to be paying more than its estimated proper share of the State's yearly revenue of approximately \$22,000,000. To that end it had been proposed to relieve the State's subdivisions of their share of the expense of maintaining trunk thoroughfares and State-aided roads; also, to render growing timber exempt from annual taxation, to which it was subject in the same manner as real estate. In order to make good the loss that such changes would cause the State treasury, it was recommended that the Legislature impose a tax on the franchises of gas and electric utilities (including hydroelectric) and a personal and corporation income tax. Prior to the meeting of the Legislature the State Supreme Court delivered an extensive opinion in January on the features of the tax plan, suggesting desirable legal features for bills.

The urban element in the Legislature was not generally friendly to a recasting of the State's financial system that would shift burdens from the country to the cities, particularly the populous manufacturing centres. Finding it impracticable to carry out the programme, the backers of the new plan abandoned their efforts for the time being, counting on renewing them at the regular legislative session to be held during 1931.

Constitutional Convention. The eleventh constitutional convention of the State, attended by 416 delegates, convened on June 4 and adjourned on June 13. It submitted to the people by the process of referendum five amendments to the State constitution. These provided that the Legislature might allow absentees to vote at the biennial elections; that it might impose an estate tax equal to the credit allowed the State under the Federal estate tax; that the Governor might disapprove or reduce items or parts of items in appropriation bills; that the Legislature might exempt from any income tax any amount of income that it might deem it just to exempt; that members of the State House of Representatives be elected by towns or other specified places on the basis of one Representative for the first 600 inhabitants, and one for each additional 1500, places of less than 600 inhabitants having representation for a proportionate part of the time. The amendment as to income tax exemptions was designed to remove a constitutional limit on such exemptions of \$1200 for single individuals and \$2000 for married ones.

POLITICAL AND OTHER EVENTS. One of the most prominent textile companies of the State, the Amoskeag Manufacturing Company, with mills at Manchester, gave sign of improved prosperity by declaring on February 6 its first dividend subsequent to 1924 and by granting a bonus to 10,000 employees. Economic conditions in the State, however, were not consistently of the best, in 1930, and the difficulties of the Merrimac River Savings Bank at Manchester caused its temporary closing on June 9 by court order. Nashua suffered a loss of an estimated \$5,000,000 on May 4 by a fire that destroyed several industrial plants and about 200 dwellings. On the Connecticut River, between Littleton, N. H., and St. Johnsbury, Vt., the dam and hydroelectric works of the Fifteen Mile Falls development of the New England Power Association were completed and were put in operation, from the White House at Washington, by President Hoover. The dam rises 175 feet above the bed of the river and the plant was designed to furnish 140,000 kilowatts of electrical energy of which a great part was to be transmitted to Boston. The dispute between the State and the Boston and Maine Railroad over the latter's alleged failure to fulfill the agreement of 1917 with the State as to its policy of upkeep was reported in October to have been compromised.

ELECTIONS. United States Senator Henry W. Keyes, Republican, was elected to a third term. Former Governor John G. Winant, Republican, was elected to a second term in that office, despite an established precedent against repeating terms in the governorship. Albert W. Noone, Democrat, served his party by running as its candidate for both Governor and Senator. The two Representatives, Republicans, were reelected. Five proposed amendments to the State constitution, among them that to allow an estate tax and that to permit statutory income tax exemptions, were defeated.

OFFICERS. Governor, Charles W. Tobey; Secretary of State, Enoch D. Fuller; State Treasurer, Henry E. Chamberlin, succeeded, on his decease, by Charles T. Patten; Attorney-General, Ralph W. Davis; Commissioner of Education, James N. Pringle.

JUDICIARY. Supreme Court: The Chief Justice in 1930 was Robert J. Peaslee; the Asso-

ciate Justices were John E. Allen, Thomas L. Marble, Oliver W. Branch, Leslie P. Snow.

NEW HAMPSHIRE, UNIVERSITY OF. A co-educational State institution of higher learning in Durham, N. H.: founded in 1806 in Hanover, N. H., as part of Dartmouth College, transferred to Durham as State College in 1893, and made the State university in 1923. It consists of a college of liberal arts, a college of agriculture, and a college of technology. The 1930-31 enrollment was 1594, of whom 1118 were men and 476 women. The summer session had a registration of 354 students. The faculty numbered 155. The endowment amounted to \$1,253,104, and the income for the year totaled \$1,633,059. The fund accruing under the millage law of 1925, which provided an annual amount equal to one mill for each dollar for the assessed valuation of the State, amounted in 1929-30 to \$654,850. This, together with income from other sources, was sufficient for the maintenance of the institution and for the gradual construction of a complete physical plant in accordance with a comprehensive plan for the development of the university. Charles H. Blood, class of 1880, of Boston gave \$125,000 in 1930 for the construction of an infirmary and rest house for students and members of the faculty. The library contained 66,845 volumes. President, Edward Morgan Lewis, LL.D., Litt.D.

NEW HEBRIDES, hēb'ri-dez. A group of islands in Melanesia, including Espiritu Santo, Malekula, Efate or Sandwich Island, Epi, Erromanga, Tanna, and Anietyūm. The group is under the joint administration of France and Great Britain, according to conventions of February, 1906, and Mar. 18, 1922. Capital, Port Vila. The area is approximately 5700 square miles and the population about 60,000, of whom in 1928, 2051 were British and 779 French. Many missionary schools have been established, chiefly by the Presbyterian church. The area under cultivation is planted chiefly with coconuts, cacao, cotton, and coffee. Bananas, oranges, and all tropical fruits grow well. The imports in 1928 amounted to £374,797 and the exports were valued at £346,081, of which about one-fourth were British. Joint revenue in 1928, £27,932; expenditure, £28,777. Direct steamship communication is maintained with France, via Tahiti and Panama. British High Commissioner, in 1930, Sir A. G. M. Fletcher; French High Commissioner, M. d'Arbousier; British Resident Commissioner, G. A. Joy; French Resident Commissioner, M. Thaly (acting).

NEW JERSEY. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 4,041,334. The population on Jan. 1, 1920, was 3,155,900. The capital is Trenton.

AGRICULTURE. The accompanying table gives

| Crop | Year | Acreage | Prod. Bu. | Value |
|--------------------|------|---------|-----------|-------------|
| Potatoes | 1930 | 43,000 | 8,260,000 | \$7,847,000 |
| | 1929 | 44,000 | 5,340,000 | 8,544,000 |
| Hay | 1930 | 229,000 | 342,000* | 7,192,000 |
| | 1929 | 259,000 | 388,000* | 7,002,000 |
| Corn | 1930 | 175,000 | 6,300,000 | 5,985,000 |
| | 1929 | 179,000 | 6,444,000 | 6,508,000 |
| Peaches | 1930 | | 1,788,000 | 3,040,000 |
| | 1929 | | 2,600,000 | 2,990,000 |
| Sweet potatoes . . | 1930 | 15,000 | 1,995,000 | 2,894,000 |
| | 1929 | 14,000 | 1,960,000 | 2,744,000 |
| Wheat | 1930 | 52,000 | 1,222,000 | 1,063,000 |
| | 1929 | 55,000 | 1,045,000 | 1,285,000 |

* Tons.

the acreage, production, and value of the principal crops as reported for 1929 and 1930.

Farms in the State numbered 24,563 in 1930, having declined from the 29,671 of 1925 and the 29,702 of 1920.

MINERAL PRODUCTION. The yearly total of the clay products of the State, regularly forming the greater part of its entire mineral industry, declined again for 1928, to \$39,379,278, from \$43,099,769 for 1927. This reduction of output occurred chiefly in the structural classes, brick and tile, although the production of pottery also made a moderate decline. Brick and tile production for 1928 was more than \$2,000,000 below that for 1927. New Jersey mined about two-thirds of the Eastern States' yearly production (309,096,000 pounds in 1929 and 288,090,000 in 1928) of zinc. The zinc product of the State was thus, for 1929, somewhat in excess of \$13,000,000 as to value. Separate statistics were not given out by the U. S. Bureau of Mines in its yearly Preliminary Summary for the considerable cement output of the State. The mining of iron ore in 1929, to the quantity of 285,115 long tons, did not keep up the unusual pace of 1928, when 350,616 tons were mined; the yearly value of iron-ore shipments was, for 1929, \$1,157,848, and for 1928, \$1,357,877. Stone production and that of sand and gravel, both increasing in 1928, attained for that year totals in each case in excess of \$4,000,000. The total value of mineral products native to the State was, for 1928, \$70,865,363; for 1927, \$73,090,810.

FINANCE. State expenditures in the year ended June 30, 1929, as reported by the U. S. Department of Commerce were: for maintenance and operation of governmental departments, \$53,189,712 (of which \$19,347,894 was for local education); for interest on debt, \$3,745,754; for permanent improvements, \$32,865,042; total, \$90,842,857 (of which \$34,109,235 was for highways, \$7,044,031 being for maintenance and \$27,065,204 for construction). Revenues were \$91,068,090. Of these, property and special taxes formed 53.8 per cent; departmental earnings and remuneration to the State for officers' services, 5.1; sales of licenses, 28.4 (including taxes of \$8,808,518 on sales of gasoline). The State's funded debt outstanding on June 30, 1929 was \$88,216,000. Net of sinking-fund assets, was \$64,025,682. On property bearing an assessed valuation of \$6,682,073,036 were levied in the year 1929-30 State taxes totaling \$38,907,253.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 2296.70. No construction of additional line or trackage in 1930 was reported.

EDUCATION. A report on public education in the State was placed before the Legislature by a commission that had been charged to survey the subject. While no immediate extensive legislative action followed, the report was regarded as furnishing a useful basis for what might be determined later. There were enrolled in the public schools in the year ended on June 30, 1930, 898,399 pupils. Those in vocational, continuative, evening, summer, and other special schools excepted, the enrollment in the regular day schools totaled 785,225. Of this total, 113,132 were in high-school grades. The year's expenditures for public-school education were: current, \$80,376,095; total, including capital outlay and debt service, \$151,769,009. For the year, the average salary of all day-school teachers totaled \$2060.

CHARITIES AND CORRECTIONS. The central authority of the State in the administration of institutions and activities for the care or custody of persons rested in 1930 in the Department of Institutions and Agencies. It supervised, coordinated, and prepared budget requests for the divers branches of State welfare work and had authority of inspection over private, municipal, and county institutions. The Department's governing body, the State Board of Control, was composed of nine non-salaried appointees serving terms of eight years. It had the appointment of a board of managers for each of the State institutions, and likewise of the Commissioner of the Department, who served as its chief executive officer. It maintained separate divisions or bureaus for parole activities, for the investigation of improperly circumstanced children, for the planning of educative training of persons admitted to institutions and for inspection of institutions. For the mentally affected the State maintained Graystone Park State Hospital, 4015 inmates in November, 1930, and Trenton State Hospital, 2651. For mental defectives, the State School for the Feeble-Minded, Vineland, 1123 (females); State Colony for Feeble-Minded Males, New Lisbon, 503; State Colony for Feeble-Minded Males, Woodbine, 419; North Jersey Training School (females), Totowa, 437. For epileptics, the State Village for Epileptics, Skillman, 1102. For the tubercular, the State Sanatorium for Tuberculous Diseases, Glen Gardner, 415. The prisons were: State Prison, Trenton, 1475; State Prison Farm, Leesburg, 218; State Prison Farm, Bordentown, 205. There were three reformatories: New Jersey Reformatory (male), Rahway, 696; New Jersey Reformatory (male), Annandale, 319; New Jersey Reformatory (female), Clinton. Juvenile delinquents were kept at the State Home for Boys, Jamesburg, 626, and the State Home for Girls, Trenton, 281. For the shelter of veterans were the Home for Disabled Soldiers, Kearny, 56, and the Home for Disabled Soldiers, Sailors, Marines, and their Wives and Widows, Vineland, 195.

LEGISLATION. The legislative session of 1929, which had been extended for the purpose of continuing its proceedings against Mayor Hague of Jersey City, the State's chief Democratic stronghold, was prolonged until Jan. 7, 1930. The review of the proceedings as to Hague's liability to punishment for contempt of the Legislature, because of his refusal to answer its questions as to how he had made his money, was pending in the State Court of Errors and Appeals, and the Legislature could proceed no further until the court had acted. On May 19 the court finally rendered a decision favorable to Hague, confirming the legality of his refusal to answer the ten questions as to his private affairs asked in 1928.

The regular annual session of the Legislature convened on January 14 and adjourned on April 16. It revised the election laws to some extent, but abandoned a plan to alter the primary election system in such a way as to prevent the alleged and much attacked practice of Democrats' voting in the Republican primaries of Hudson County. The restrictions on building and loan associations were strengthened. Provision was made for a State bond issue of \$100,000,000, subject to approval in a referendum vote. New Jersey took the initiative among the States in passing an act to regulate advertising on roadside billboards. This act, the Jones Law, required a

license for billboards, prohibited those that might endanger traffic or damage adjacent property and laid a tax of 3 cents a square foot on billboards. It prohibited them on sites within 500 feet of highway intersections and placed their regulation in the hands of the Motor Vehicle Commissioner. Exception was made in favor of signs along the Boardwalk at Atlantic City. Regulations were enacted to restrict the locations for the establishment of radio broadcasting stations.

Paralleling legislation in New York, the Legislature abolished its Holland Tunnel Commission and transferred the powers of that commission to the Port of New York Authority, of which the membership was doubled. The salary of the Governor was raised to \$20,000, from \$10,000 a year, to start with the end of the current term. A blow was leveled at Hudson County political control by the abolition of the Hudson County Boulevard Commission and the Hudson County Park Commission, for which was substituted a single county commission of five members appointed by the Governor. The State budget was reduced to about \$28,411,000, a figure below that of the budget for the year current. In connection with the legislation for the \$100,000,000 bond issue provision was made that \$65,000,000 of its proceeds should go to highway construction, \$18,000,000 to the elimination of grade crossings, \$10,000,000 to institutional buildings, and \$7,000,000 to the purchase of water-supply sites. The Legislature renewed a proposal that the State should buy the right of way for a ship canal across the State from Raritan Bay to Bordentown, on condition that the U. S. government finance the construction of the canal. A law was passed limiting the issues of municipal bonds to 15 per cent of the assessed taxable values. It was found to leave certain municipalities in difficulties and was modified by a special session of the Legislature held for the purpose on September 8. The State Attorney-General rendered an opinion that another of the session's laws affecting bond issues, that providing for county issues of highway bonds subject to their approval by the State Highway Commission and its undertaking to reimburse, was unconstitutional.

Another extra session was called to convene on November 18, for the purpose of acting on the recommendations of the Abell Committee, which had made an extended study of the workings of the political institutions of the State.

POLITICAL AND OTHER EVENTS. The campaign of Dwight W. Morrow, Republican, banker and ex-ambassador to Mexico, for U. S. Senator, was conspicuous because of this candidate's close relations with the Federal Administration and on account of its marking his first entrance into a competition for elective office. Mr. Morrow declared himself in favor of the repeal of the Eighteenth Amendment. At Paterson on June 6 he stated it to be his opinion that Germany had been charged unfairly with the whole responsibility for the war of 1914-18. He won by an ample margin at the primaries on June 17. At the Republican State convention on June 24 he required the adoption of a platform declaration for the repeal of the Prohibition amendment.

As master appointed by the United States Supreme Court to take testimony in the action brought by New Jersey for an order to forbid New York State to divert 600,000,000 gallons of water a day, for the use of New York City, from the headwaters of the Delaware River,

Charles N. Burch conducted numerous hearings. Brig.-Gen. George B. Pillsbury, U. S. A., assistant to the Chief of Engineers, testified that diversion would not harm navigation in the Philadelphia area. Testimony was given on both sides with regard to possible detriment to oyster beds near the mouth of the river.

Testimony at great length was likewise given before Earl M. Steer, examiner for the Interstate Commerce Commission, relating to the application of New Jersey for the termination of free lightage in New York harbor.

Communists were active in Newark, and one of their meetings was raided on February 15. Nine were prosecuted on a charge of advocating the destruction of the Government. It was ruled in the Essex County Court of Quarter Sessions that certain of the defendants' witnesses, as non-believers in God, might not testify. The factory of the Michelin Tire Company at Milltown, which had employed as many as 1800 persons, was permanently shut down on September 10 because of adverse conditions in the tire industry. The Lackawanna railroad system completed the electrification of its shorter suburban routes, putting its first electric trains in operation early in September. The Erie Railroad raised its main tracks through Paterson, doing away with grade crossings at some 20 intersections with streets.

ELECTIONS. Dwight W. Morrow, Republican, was elected U. S. Senator both for the unexpired and for the ensuing full term. According to the unofficial totals he defeated Alexander Simpson, Democrat, for the full term by 584,173 votes to 393,048. His margin over the vote of Miss Thelma Parkinson, Democrat, for the short term was approximately the same. Nine Republican and three Democratic Representatives were elected. The Legislature remained strongly Republican in both branches. The popular vote approved proposals for three issues of State bonds, totaling \$100,000,000. They were: for highways and grade crossings, \$83,000,000, approval carrying an increase in the gasoline tax to 3 cents, from 2 cents; institutional buildings, \$10,000,000; acquisition of water rights, \$7,000,000.

OFFICERS. Governor, Morgan F. Larson; Secretary of State, Joseph F. S. Fitzpatrick; Treasurer, Albert C. Middleton; Comptroller, John McCutcheon; Attorney-General, William A. Stevens; Commissioner of Education, Charles H. Elliott.

JUDICIARY. Chancellor, Edwin Robert Walker; Supreme Court, William S. Gummere (Chief Justice), Thomas W. Trenchard, Charles W. Parker, Luther A. Campbell, Frank T. Lloyd, Clarence E. Case, Joseph L. Bodine, Peter F. Daly, Ralph W. E. Donges.

NEW JERUSALEM, CHURCH OF THE. An organization which is also known as the New Church, and popularly called Swedenborgian because based upon the statement of Christianity set forth in the writings of Emanuel Swedenborg, Swedish scientist, philosopher, theologian, and seer (1688-1772). The two bodies that now compose it in the United States are the General Church of the New Jerusalem and the General Convention of the New Jerusalem, while in Great Britain the General Conference of the New Church corresponds to the General Convention in the United States. The first New Church society in America was founded in Baltimore in 1792, and the General Convention of the New Jerusalem in the United States was organized in

1817. In 1890 a considerable number withdrew, forming later the General Church of the New Jerusalem.

THE GENERAL CHURCH OF THE NEW JERUSALEM. This body was organized in 1897 under episcopal government with headquarters in Bryn Athyn, Pa., where the church maintains: A cathedral church of unusual architectural interest; the Academy of the New Church, with departments from kindergarten to junior college; and theological and normal schools, with an enrollment of 285 in 1930. The General Church differs from the older bodies in the New Church mainly in its stricter attitude toward the theological writings of Swedenborg (considering them to be the Gospel or Word of the Lord at his Second Advent) and in the endeavor to establish parochial schools. It had an international adult membership in 1930 of 2012 with 3 bishops, 39 pastors, 3 ministers, and 24 societies, 15 of which were in the United States and Canada, 2 in England, and others in Sweden, Holland, Belgium, France, Natal, New South Wales, and Brazil. A native mission was carried on in South Africa, with headquarters at Alpha, Orange Free State, which reported 771 adult members (natives), 5 native pastors, and 6 native ministers. Among the periodicals published by the General Church are *New Church Life*, its official monthly magazine, *New Church Sermons*, *The Journal of Education*, and *The Bulletin*.

THE GENERAL CONVENTION OF THE NEW JERUSALEM IN THE UNITED STATES OF AMERICA. In 1930, the General Convention consisted of about 6000 communicant members, united into 89 societies, territorially organized as 12 associations and 7 independent societies. The ministerial membership was 120; and the amount expended for missions and benevolences for the year ending Mar. 31, 1930, was \$40,000. Educational institutions of the General Convention included a theological school in Cambridge, Mass., a junior college in Urbana, Ohio, and the Waltham School for Girls, Waltham, Mass. Periodicals included the *New Church Messenger*, weekly, Brooklyn, N. Y.; the *New Church Review*, quarterly, Boston, Mass.; the *New Church League Journal*, monthly, Boston, Mass.; *The Helper*, weekly, Philadelphia, Pa.; and *Sunday Afternoons*, weekly, Boston, Mass. In 1930 the Convention held its 109th annual meeting at its church in Boston, June 21-24, approximately 600 delegates and visitors from all parts of the world being in attendance. The officers elected were: President, the Rev. Paul Sperry, Washington, D. C.; vice-president, Ezra Hyde Alden, Philadelphia, Pa.; treasurer, Albert P. Carter, Boston, Mass.; and secretaries, B. W. Whittemore, Boston, and J. Woodruff Saul, Chicago.

NEW MEXICO. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 423,317. The population on Jan. 1, 1920, was 360,350. The capital is Santa Fé.

AGRICULTURE. The table on page 560 gives the acreage, production, and value of the principal crops in 1929 and 1930.

The farms in the State numbered 31,393 in 1930, as against 31,687 in 1925 and 29,844 in 1920. The area of irrigated lands totaled 551,420 acres in 1929, as against 538,377 in 1919.

MINERAL PRODUCTION. The mine production of copper again increased, attaining 97,717,262 pounds for 1929, as against 89,854,646 for 1928;

| Crop | Year | Acreage | Prod. Bu. | Value |
|----------------|------|---------|----------------------|-----------|
| Cotton | 1930 | 127,000 | 100,000 ^a | \$..... |
| | 1929 | 130,000 | 90,000 ^a | |
| Hay | 1930 | 225,000 | 419,000 ^b | 5,285,000 |
| | 1929 | 231,000 | 478,000 ^b | 8,541,000 |
| Dry beans | 1930 | 227,000 | 726,000 | 1,089,000 |
| | 1929 | 225,000 | 1,688,000 | 4,389,000 |
| Corn | 1930 | 215,000 | 3,010,000 | 2,318,000 |
| | 1929 | 209,000 | 4,180,000 | 3,720,000 |
| Wheat | 1930 | 206,000 | 1,921,000 | 1,181,000 |
| | 1929 | 305,000 | 5,742,000 | 5,495,000 |
| Grain sorghums | 1930 | 208,000 | 1,689,000 | 760,000 |
| | 1929 | 203,000 | 4,466,000 | 2,903,000 |

^a Bales. ^b Tons.

in value it was \$17,198,238 for 1929 and \$12,939,069 for 1928. Copper thus held a long lead over other mineral products of the State, in order of value for 1929. Coal, second in importance, was mined to the quantity of 2,622,769 net tons in 1929 and 2,711,851 in 1928; by value, \$8,314,000 in 1929 and \$8,636,000 in 1928. The production of zinc increased to 68,910,000 pounds for 1929, from 62,406,000 for 1928; by value, to \$4,548,000 for 1929, from \$3,806,766 for 1928. Lead, less important as to the yearly total of value produced, nevertheless made a substantial increase to 22,260,811 pounds mined in 1929, from 15,610,501 in 1928; the value for 1929 was \$1,402,431, as against \$905,409 for 1928. Gold was mined to the value of \$727,162 in 1929 and, in 1928, of \$680,360. The production of silver was 1,121,746 fine ounces for 1929, as against 827,793 for 1928; by value, \$597,784 for 1929 and \$484,259 for 1928. The aggregate value of gold, silver, copper, lead, and zinc produced was \$24,473,675 for 1929, sharply above the \$18,815,863 for 1928. Petroleum, the only other considerable mineral product, increased its yield to 1,689,000 barrels for 1929, from 943,000 for 1928; the yearly value of petroleum produced was \$2,100,000 (estimated) for 1929 and \$1,280,000 for 1928. The total value of the mineral products of the State was \$30,426,840 for 1928; for 1927, \$28,608,776.

The output of gold, silver, copper, lead, and zinc from New Mexico ores and gravels in 1930 in terms of recovered and estimated recoverable metal was estimated at 31,556 ounces of gold, 1,091,000 ounces of silver, 20,867,000 pounds of lead, 67,790,000 pounds of copper, and 68,277,000 pounds of zinc, according to the U. S. Bureau of Mines. These figures were to be compared with a production in 1929 of 35,176.5 ounces of gold, 1,121,546 ounces of silver, 22,260,811 pounds of lead, 97,717,262 pounds of copper, and 68,910,000 pounds of zinc, and showed decreases of 3,620.5 ounces (\$74,842) in gold, 30,546 ounces of silver, 1,393,811 pounds of lead, 29,927,262 pounds of copper, and 633,000 pounds of zinc. The gross value of the New Mexico metal production at average yearly prices of \$20.67 per ounce of gold, \$0.385 per ounce of silver, \$0.052 per pound of lead, \$0.124 per pound of copper, and \$0.047 per pound of zinc, in 1930 was gold \$652,320, silver \$420,035, lead \$1,085,084, copper \$8,405,960, and zinc \$3,209,019, with a total of \$13,772,418, as compared with \$24,473,675 in 1929, a decrease for 1930 of \$10,701,257, or 44 per cent. In quantity, zinc surpassed the output of copper, but in value copper continued to be the most important metal produced in New Mexico.

FINANCE. State expenditures in the year ended June 30, 1928, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments,

\$5,402,316 (of which \$1,029,596 was for local education); for interest on debt, \$281,659; for permanent improvements, \$3,970,082; total, \$9,654,057 (of which \$4,579,360 was for highways, \$1,277,050 being for maintenance and \$3,302,310 for construction). Revenues were \$8,408,434. Of these, property and special taxes formed 31.6 per cent; departmental earnings and remuneration to the State for officers' services, 11.7; sales of licenses, 27.2 (including taxes of \$1,656,706 on sales of gasoline). The State's funded debt outstanding on June 30, 1928, was \$2,998,000. Net of sinking-fund assets, it was \$2,762,481. On property bearing an assessed valuation of \$316,468,567 were levied in the year State taxes of \$2,508,496.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 2874.64. There were built, in 1930, 73.48 miles of additional first track.

EDUCATION. In addition to preparing a new course of study for the elementary schools, the authorities drew up the State's first standard course of high-school study. It was reported in the *Journal* of the National Education Association that an elementary training school for teachers had been established at Albuquerque with assistance from the Rockefeller Foundation and from Senator Bronson Cutting. There were enrolled in the public schools of the State, in 1930, 98,752 pupils. Of these, 87,004 were in elementary and 11,658 in high-school grades. The total expenditures for public-school education in the year ended June 30, 1929, were \$7,497,762.

POLITICAL AND OTHER EVENTS. New Mexico joined with Colorado, Utah, Wyoming, and Montana in bringing action in the courts of the District of Columbia for writs of mandamus to compel the Secretary of the Interior to reinstate or accept applications for filing under the Leasing Act of 1920. This act, which made it possible for petroleum operators to develop wells on Federal lands, had been suspended from operation in these States by an executive order. The suspension was unpopular with part of the inhabitants of New Mexico, who regarded it as likely to retard the growth of the State. In the Carlsbad Cavern, at Carlsbad, an extensive newly discovered area was explored. About 40 miles southwest of Carlsbad was found a cave with mortuary relics, supposedly some 2000 years old, of the so-called Basket Maker race.

ELECTIONS. Arthur Seligman, Democrat, was elected Governor, defeating C. M. Botts, Republican, by a vote unofficially reported as 61,110 to 53,077. Senator Sam G. Bratton, Democrat, was reelected by 68,064 votes to his Republican opponent Holt's 46,787 (unofficial). A Democratic Representative was likewise elected. The voters rejected proposed State constitutional amendments to allow the exchange of State public lands for Federal public lands; to empower the State Board of Education to elect the State School Superintendent; and to impose a tobacco tax.

OFFICERS. Governor, R. C. Dillon; Lieutenant Governor, Mrs. E. A. Perrault (acting); Secretary of State, Mrs. E. A. Perrault; State Auditor, Victoriano Ulibarri; Treasurer, Emerson Watts; Attorney-General, M. A. Otero; Superintendent of Public Instruction, Anastasio Montoya.

JUDICIARY. Supreme Court: The Chief Justice in 1930 was Howard L. Bickley; the Associate Justices were John C. Watson, Frank W. Parker, John F. Simms, Charles C. Catron.

NEW ORLEANS. See BRIDGES; LOUISIANA.

NEW SOUTH WALES. One of the six original States of the Commonwealth of Australia, located in the southeast part of the continent. Area, exclusive of the Federal Territory, 309,432 square miles; population, excluding aborigines, according to the census of 1921, 2,100,371; estimated, Mar. 31, 1930, 2,483,645. The Federal Territory in 1930 had an area of 940 square miles and 9045 inhabitants. Sydney, the capital, had a population in 1921, of 905,047, including suburbs and shipping; estimated Jan. 1, 1930, at 1,238,660. Other towns with their populations in 1929 were: Newcastle and suburbs, 103,180; Broken Hill, 23,260; Auburn, 18,530. The movement of population in 1929 was: Births, 52,671; deaths, 24,582; marriages, 19,535. Education is controlled by the State and instruction is compulsory between the ages of 7 and 14. At the beginning of 1929, there were 3156 government schools, with 362,549 pupils enrolled. There were 739 private schools, of which 491 were Roman Catholic, with 89,280 students.

The area under wheat, the principal crop, in 1929-30 was 3,902,200 acres, and the final official estimate of the yield was 33,948,000 bushels (49,257,000 bushels in 1928-29). Other grains, oranges and other citrus fruits, potatoes, tobacco, sugar cane, bananas, and apples are raised. The total area under cultivation in 1928 was 4,914,515 acres (4,597,296 acres in 1927) and the total value of all crops was £17,018,170 (£22,098,100 in 1927). There were in 1929 about 50,740,000 sheep, which produced 484,753,597 pounds of wool during 1928-29. Mineral production (1929) was estimated at £10,145,164 (£12,600,668 in 1928). New South Wales is the chief industrial State of the Commonwealth. In 1928-29, there were 8465 industrial establishments, employing 180,806 workers, with a total gross output valued at £185,298,575, of which £73,627,441 represented the value added by manufacture. In 1929-30, the estimated value of direct overseas exports leaving the ports of the state was £35,748,815 and the value of imports was £57,142,375. Vessels entering in 1928-29 totaled 2865 of 8,516,000 net tons.

For the year ended June 30, 1929, the state revenues totaled £51,241,737 and the expenditures £51,066,805. The gross state debt on June 30, 1930, was £270,630,848, and the interest payable upon it amounted to £13,586,793 annually. There were (1929) 5940 miles of state railways, with gross earnings for the year of £19,616,000 and operating expenses of £14,978,000. Main highways extended 14,000 miles. The great arch of the Sydney Harbor Bridge, the largest single arch in the world, was completed in August, 1930. See BRIDGES.

Executive power is vested in a governor assisted by a cabinet, and legislative power in a bicameral legislature, consisting of a legislative council and a legislative assembly. The legislative council, which must not consist of less than 21 members, is appointed for life by the Crown, and consisted of 96 members in 1930. There are 90 members in the Legislative Assembly. Governor in 1930, Sir Philip Game; Premier, T. R. Bavin. See AUSTRALIA.

HISTORY. The State Labor party, headed by J. T. Lang, won an unexpected victory in the bitterly contested election of Oct. 25, 1930. The Labor leader campaigned on a platform opposing the so-called Niemeyer programme of financial retrenchment. For repercussions of the Labor

victory in Federal politics, see AUSTRALIA under History. Asserting that the election had given him a mandate to abolish the Legislative Council, or upper house of the State Parliament, Premier Lang demanded that the Governor appoint enough new members of the Legislative Council to out-vote his opponents. The Governor refused and a new election was in prospect to determine the issue.

Settlement of the strike in the northern coal-fields, which had been closed down for 15 months, was announced in May, 1930. The union miners ended by accepting the wage agreement they had rejected in December, 1929, against the advice of their own leaders. A State Royal Commission, appointed to inquire into the condition of the industry, recommended the establishment of a coal board, with power to determine wages and hours, fix selling prices, and eliminate uneconomic mines.

NEW YORK. POPULATION. According to the Fifteenth Census the population of the State on Apr. 1, 1930, was 12,588,066. A census by the State was taken in 1925. This showed a population of 11,162,151, compared with 10,385,227 by the Federal census in 1920. The population of New York City, according to revised figures of the Census of 1930, was 6,981,927; in 1920 it was 5,620,048. The Borough of Manhattan declined in population to 1,872,145 in 1930, from 2,284,103 in 1920. The Borough of Brooklyn rose to 2,604,549 in 1930, from 2,018,356 in 1920 and became the most populous borough. The Borough of Queens had 1,079,357 inhabitants in 1930, as against 469,042 in 1920, and achieved the highest gross gain of population for any of the city's boroughs. Bronx Borough had 1,266,506 inhabitants in 1930. The capital is Albany.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|-----------|------|-----------|------------|--------------|
| Hay | 1930 | 4,408,000 | 5,666,000* | \$81,205,000 |
| | 1929 | 4,697,000 | 6,738,000* | 81,898,000 |
| Potatoes | 1930 | 251,000 | 29,116,000 | 26,204,000 |
| | 1929 | 270,000 | 24,840,000 | 36,018,000 |
| Corn | 1930 | 657,000 | 19,710,000 | 17,739,000 |
| | 1929 | 670,000 | 20,837,000 | 21,462,000 |
| Oats | 1930 | 1,077,000 | 45,234,000 | 19,903,000 |
| | 1929 | 979,000 | 24,377,000 | 14,139,000 |
| Apples | 1930 | | 27,683,000 | 22,146,000 |
| | 1929 | | 16,520,000 | 23,954,000 |
| Wheat | 1930 | 263,000 | 4,800,000 | 3,809,000 |
| | 1929 | 281,000 | 4,488,000 | 5,565,000 |
| Barley | 1930 | 144,000 | 4,608,000 | 2,857,000 |
| | 1929 | 155,000 | 3,426,000 | 2,878,000 |
| Buckwheat | 1930 | 210,000 | 3,465,000 | 2,772,000 |
| | 1929 | 198,000 | 3,168,000 | 3,168,000 |

* Tons.

The farms in the State numbered 160,120 in 1930, the total having declined from 188,754 for 1925 and 193,195 for 1920.

MINERAL PRODUCTION. The total of the State's native mineral products, with allowance for the avoidance of duplications, was \$108,025,720 for 1928; for 1927, \$112,209,533. Some of the most important of the State's mineral industries, however, pertained to the treatment of minerals imported from elsewhere and therefore did not figure in the above totals. Notably the production of pig iron exceeded in yearly value any other of the listed mineral industries, but mainly the iron ore used in this process came from outside the State. Blast furnaces shipped, in 1929, 2,626,771 long tons of pig iron and in 1928, 2,369,814;

by value, \$46,960,186 in 1929 and \$39,923,960. In close connection with the iron industry were produced from non-native coal 4,299,470 short tons of coke in 1929, and 3,802,657 in 1928; in value, \$25,305,915 for 1929 and \$25,033,649 for 1928. The production of ferro-alloys, also important, amounted to 209,688 long tons in 1928, as against 114,242 in 1927; in value, \$17,441,639 for 1928 and \$12,138,392 for 1927.

In the industries based essentially on native minerals, on the other hand, clay products held the lead, attaining \$22,474,405 for 1928 and \$25,476,896 for 1927. Cement mills shipped, in 1929, 10,742,992 barrels of cement and, in 1928, 10,983,950; by value, in 1929, \$15,597,868 and, in 1928, \$16,748,773. The stone production, mainly of the lower-cost varieties of stone, amounted for 1928 to 10,743,470 short tons, in value \$15,785,511. Sand and gravel were dug in 1928 to the value of \$12,572,634. The petroleum production rose both in quantity and in value; in quantity, to 3,346,000 barrels for 1929, from 2,603,000 for 1928; in value, to \$13,200,000 for 1929 (estimated), from \$8,750,000 for 1928. Second only to Michigan in the salt industry, New York produced, in 1929, 2,194,590 short tons of salt, as against 2,085,230 in 1928; by value \$6,470,051 in 1929 and \$6,400,933 in 1928. The output of natural gas, while secondary in proportion to the State's chief industries, was on the rise in 1928, attaining 7,224,000 M cubic feet, as against 5,908,000 M in 1927; in value it was \$4,827,000 for 1928 and \$3,841,000 for 1927. The quantity of iron ore mined rose to 875,564 long tons for 1929, from 767,743 for 1928; the value, to \$3,941,985 for 1929, from \$2,906,055 for 1928. Talc, zinc, and slate also were produced in 1928, each to a total value of over \$1,000,000.

FINANCE. State expenditures in the year ended June 30, 1929, as reported by the U. S. Department of Commerce, were: for maintenance and operation of governmental departments, \$182,389,014 (of which \$78,658,650 was for local education); for interest on debt, \$14,805,997; for permanent improvements, \$56,252,306; total, \$253,447,317 (of which \$54,608,232 was for highways, \$27,170,250 being for maintenance and \$27,437,982 for construction). Revenues were \$272,940,372. Of these, property and special taxes formed 59 per cent; departmental earnings and remuneration to the State for officers' services, 2.9; sales of licenses, 29. The State's funded debt outstanding on June 30, 1929, was \$360,764,309. Net of sinking-fund assets, it was \$255,782,785. On property bearing an assessed valuation of \$25,332,627,968 were levied in the year State taxes of \$14,699,944.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 8330.78. There were built, in 1930, 5.50 miles of first, 3.20 of second, 10.90 of third, and 7.70 of fourth track.

EDUCATION. Satisfactory progress during the year was stated in the *Journal* of the National Education Association to have occurred in the movement for the substitution of centralized rural school facilities for the one-teacher rural school. For the year 1928-1929, the population of school age was estimated at 3,658,341. There were enrolled in the public schools 2,096,337 pupils. Of these, 1,712,109 were in elementary and 384,228 in high-school grades. The year's expenditures for public-school education were: current, \$244,684,860; total, including capital outlays,

\$376,071,512. Salaries paid teachers in the year averaged \$2314 for the entire State. They differed widely, however, in different types of subdivisions; for cities, the average was \$2748; for villages, \$1907; for towns, \$1312.

CHARITIES AND CORRECTIONS. The State Department of Social Welfare, which succeeded the Department of Charities in accordance with an act of 1929, had charge of a great part but not all of the State's relations with the institutionalized. At its head were the State Board of Social Welfare, a body of 12 appointive members, appointed for terms of eight years and serving on a per-diem basis, and a Commissioner of Social Welfare, the chief departmental executive. The Department, through its respective divisions, carried on the registration and assistance of the blind, administered the law for the relief of the aged, dealt with child welfare and wayward minors, supervised public and private eleemosynary homes, administered assistance to the State's Indian wards and to non-resident dependents, and oversaw the administration of State institutions within the scope of the Department. Under its charge were: State Training School for Girls, Hudson; State Agricultural and Industrial School (delinquent boys), Industry; Thomas Indian School, Iroquois; State Hospital for the Treatment of Incipient Pulmonary Tuberculosis, Raybrook; State Reconstruction Home (indigent children), West Haverstraw; State Woman's Relief Corps Home (soldiers and soldiers' mothers, wives, widows, and daughters), Oxford; New York State Training School for Boys (under construction), Warwick. Under the system of State relief for the aged established by act of 1930, all qualified needy citizens of 70 years or over, residents of the State for 10 years, were made eligible for monetary aid to be paid by the welfare districts severally, and the function of approving such payments, with a view to their reimbursement by the State, was vested in the Department of Social Welfare. Boards of Child Welfare in the counties distributed, in 1929, \$8,139,733 in allowances for the support of 51,205 dependent children in their own homes.

The Department of Correction, headed by a commissioner appointed by the Governor, managed the State prisons and reformatories and certain institutions for special types of prisoners. From it was severed in 1930 the parole division, which was transferred to the Executive Department. The average daily penal population for the fiscal year 1929 was 10,359. The institutions under the Department of Correction were: Auburn Prison, Auburn; Clinton Prison, Dannemora; Great Meadows Prison, Comstock; Sing Sing Prison, Ossining; Dannemora State Hospital and Matteawan State Hospital (both for the criminal insane); State Reformatory, Elmira; State Training School, Albion; State Reformatory for Women, Bedford Hills; Institution for Defective Delinquents, Napanoch.

Exclusive of the criminal insane in the institutions above named, the State had in its charge on June 30, 1929, 50,156 institutionalized mental patients. These were in 14 State hospitals, serving as many districts, and the hospitals were under the control of a State Department of Mental Hygiene. They were situated at Binghamton, Brooklyn, Buffalo, Central Islip, Gowanda, Wingdale, Poughkeepsie, Kings Park, New York, Middletown, Rochester, Ogdensburg, Utica, and Willard. Institutions for mental defectives, under

the same department, were State schools for mental defectives at Syracuse, Rome, Newark, and Thiells, and the Craig Colony for Epileptics at Sonyea.

LEGISLATION. The State Legislature convened in regular annual session on January 1 and adjourned on April 11. It passed the highest budget in the history of the State, provided for a heavy bond issue to finance a building programme, altered the law for the treatment of the criminal in some respects, enacted measures of agricultural relief, old age assistance and reforestation at State expense, created a commission to treat of the disposal of the State's undeveloped water power, attempted to reshape the State's system for the regulation of public utilities, reorganized, jointly with New Jersey, the authority for constructing means of communication between the two States, initiated a constitutional amendment for ceding the State canal system, and enacted measures directly affecting New York City.

The regular budget, supplemented by special appropriation bills to cover original budget items on which Governor and Legislature had been unable to agree, totaled \$317,742,406, to be met out of the proceeds of current revenue. The expenditure in the ensuing fiscal year of some \$10,000,000 to be derived from bonds, for permanent public improvements, was also authorized.

The water-power act was the outcome of a long controversy between Governor and Legislature, which had begun under Governor Smith. The Republican majority in the Legislature at last gave way to the demands of Governor Roosevelt, similar to those of his predecessor, and passed a measure empowering the Governor to name a commission of five, to report to the next succeeding regular session a plan for the development and sale of electric current to be derived from water-power sites on and near the St. Lawrence River. The bill, moreover, declared that such sites should remain inalienably in the ownership and control of the State. It was the intention that the commission should determine whether the development of the sites by the State itself and the sale of the resulting power would be feasible, in the first place, and that only in the event that this was found impracticable should some other method of development and of sale be recommended.

The Mastick Old-Age Security Act, an advanced step in State legislation for public contribution to the support of the aged, was the product of a legislative commission and of some years of previous agitation. It provided pensions to the expected average of \$240 a year, to be paid, in half, by the State to all persons who were citizens of the State, 70 years of age or over, and unable to earn a living. The measure was to be administered by local authorities, and the grant was to become effective on Jan. 1, 1931. About 51,000 persons were estimated as likely to come under its provisions. Counties were to contribute equally with the State to the pension payments within their limits. One of the purposes of the act was to substitute monetary support for the institutionalization of aged indigents. See OLD AGE PENSIONS.

The bill for recasting the State's system for the regulation of public utilities passed the Legislature but was vetoed. The effort to change the utility law grew out of the difficulty that had been found in New York, as among other States, in maintaining State control over such corporations, in view of their tendency to take matters

away from State jurisdiction and to Federal courts. A commission was formed to study the means to meet the situation, but it divided sharply on grounds of principle, the minority standing with Governor Roosevelt in favor of supporting the public interests above all and giving little favor to the utilities, while the majority, in touch with the Republican wing of the Legislature, sought a more judicial attitude, with an ideal of impartiality between the public and the corporations. The two sections of this legislative commission made clashing recommendations. A series of bills in accordance with the majority view were introduced.

The Legislature passed a measure to create a People's Counsel, an official to be attached to the office of the Attorney-General and to present before the Public Service Commission the case of the public in any formal dispute; also a measure to establish a system of ten-year contracts between municipalities and public utility concerns, to be formed with the aid of the Commission. The Governor vetoed both these measures as not sufficiently in the public interest, and expressed the view that the Public Service Commission itself, and not a separate counsel, should press the public's interests.

A move to discard the State's canal system by surrendering it to the Federal Government was rendered possible by the report of the Chief of Engineers, U. S. Army, published on April 5, favoring such a transfer and subsequent development of the canals to a depth of 13 feet at a cost of \$26,000,000. The Governor lost no time in addressing to the Legislature a message recommending that it pass a resolution for a constitutional amendment that would permit the cession of the Erie and Oswego canals to the United States. This resolution, initiating an amendment to be ratified later, was promptly passed.

A project to build between New York City and the New Jersey shore a second vehicular tube system under the North River was held back by a conflict of functions between the two bi-State bodies having power to conduct such works. This conflict was finally settled by an agreement between the administrations and legislative leaders of both States to abolish one agency, consisting of the respective tunnel commissions of the two States, and to enlarge the remaining agency, the joint Port Authority, and transfer to it the work of the abolished commissions. The five Hoffstadter-Moffat acts, providing for this plan and authorizing the construction of the new vehicular tunnel, were duly passed. Three former members of the New York Bridge and Tunnel Commission, the abolished body, were added to the three New York members of the Port Authority, the change thus having the nature of a merger of the two.

The overcrowded condition of the insane hospitals of the State was alleged by Governor Roosevelt in a special message to require an appropriation of \$18,300,000 in order that additional quarters affording 6000 beds might be built as soon as possible. The appropriation was duly passed.

As in the three years preceding, there were important enactments for dealing with crime. The State Crime Commission continued its labors by recommending the creation of a full-time Parole Board, to replace the ex-officio board then operating. An act was accordingly passed providing for a Parole Board of three full-time members, with

a maintenance appropriation and a staff, the whole to form a division of the executive department. Other measures made appropriation for the replacement of old blocks of cells, greater allowances to prisoners for food, clothing and cash on release. A bond issue of \$50,000,000, of which much was to be spent on prison construction, was voted. The Legislature created a temporary commission of seven members to be appointed jointly by the Governor and the Legislative leaders, to formulate a policy for the treatment of the State's prisoners.

Agricultural measures carrying \$330,070 were enacted. One of these provided a system of State inspection and control of milk and cream and was designed to protect producers against irregular or "bootleg" purveying of these articles. In accordance with the policy favored by the State Reforestation Commission the Legislature proposed a constitutional amendment to permit the State to pledge its credit for the acquisition and reforestation in the course of 15 years, of 1,000,000 acres of idle lands, at the cost of \$20,000,000. The law for the elimination of railroad grade crossings was modified, it being specified that the "prevailing wages" at the place where work was done must be paid.

Four banking bills amending the law for the regulation of bankers in minor respects were enacted, in a partial response to a demand for better regulation, roused by the disclosures of 1929 in connection with the failure of the City Trust Company. The chief of these measures extended the powers of supervision of the State Superintendent of Banks to all private, unchartered bankers or firms describing themselves as in the banking business, paying interest on daily balances of less than \$7500, or accepting deposits of less than \$1000. Another act made provision to prevent ignorance on the part of bank directors of their institutions' relations with the Superintendent of Banks.

The only important fiscal legislation of the year was a further amendment of the law for the taxation of decedents' estates, supplementary to the Fearon Act of 1929. By the Mastic-Pratt Act the exemptions for small estates were raised materially and the Federal law for the taxation of estates was paralleled so as to simplify the making of returns. A companion act set up a method for apportioning the State tax among beneficiaries instead of charging it to the residuary estate. The law on libel was modified to exempt from liability editors, etc., of newspapers who had published only fair and true report of public official proceedings containing the matter giving basis to the complaint.

An important measure relating to New York City was passed but vetoed; this was a bill authorizing the Governor to appoint a commission to investigate the affairs of the City. Governor Roosevelt in rendering his veto declared that the Legislature had full power to institute an investigation of its own if it so wished and intimated that in seeking to shift the responsibility to him it was taking a needless step actuated by political purpose (the intention to embarrass him politically). A number of amendments to the Multiple Dwelling Law of 1929 were enacted, chiefly to mitigate hardships that builders alleged against the original act. New York City was authorized by act to issue \$25,000,000 of its bonds to pay the cost of purchasing lands for parks and playgrounds. The Tenth Municipal

Court District was created in Manhattan to serve specifically the district of Harlem inhabited chiefly by Negroes. The municipal Board of Trade and Transportation received power to construct under-water tunnels between the city boroughs; thus it acquired the desired authority to proceed with tunnels under the Narrows and between Manhattan and Queens. A measure to enable the city to finance a unified rapid-transit system by promoting a quasi-public corporation to issue tax-exempt bonds for costs of acquisition of lines failed of passage.

POLITICAL AND OTHER EVENTS. The industrial depression of 1930 was severely felt in New York City and the other manufacturing centres of the State. Governor Roosevelt sought to mitigate such trouble by appointing at the end of March a committee to study the situation and develop a plan for industrial stabilization and the cure of unemployment. The government of New York City maintained a public employment agency, which was swamped with applicants, but supplied situations for many of them, through the cooperation of employers. Governor Roosevelt declared on August 27, before the State Federation of Labor, in favor of legislation to assure a State-supervised system of unemployment insurance. See UNEMPLOYMENT.

In naming the members of the Water Power Commission created by the act of 1930 Governor Roosevelt was handicapped by the removal of Charles Evans Hughes to the Supreme Court and the refusal of ex-Governor Alfred E. Smith to serve. He named as chairman of the Commission Prof. Robert N. Haig and selected other members favorable to his views, including Julius Henry Cohen and ex-Lieutenant-Governor Conway. The Commission in turn appointed a board of engineering experts, headed by Gen. Edgar Jadwin, Ret. U. S. A., to advise it.

Among the chief physical changes in the State during the year was the creation, near Conklingville, at the cost of \$12,000,000, of a power dam impounding the Sacandaga River and forming a lake of 42.3 square miles in extent, approximately equal to Lake George, storing 224,000,000,000 gallons of water. A vehicular bridge over the Hudson River between Poughkeepsie and Highlands, the Mid-Hudson Bridge, was completed, and was opened on August 25. It had been built at State cost, the expenditure being about \$5,800,000. It is a high suspension bridge of 3000-foot span, and was put in operation under a system of toll charges designed to extinguish its cost. Its purpose was to supply a needed east-and-west link for highway travel across the State and to bring the cities of the Hudson valley into closer touch with one another.

A conflict over telephone rates in the State occurred when the New York Telephone Company, fortified by a favorable decision from a statutory court, declared on January 20 a sharp increase in its charges, estimated as likely to add \$14,000,000 to its yearly receipts, without the sanction of the State Public Service Commission. William A. Prendergast, chairman of the Commission, resigned soon afterward, differing with the Governor, who sought to bring the Commission to take a more aggressive policy. He was replaced by Milo R. Maltbie. The Commission meanwhile took the new telephone rates under advisement and ordered a partial reduction, which was made by the company. (See also *Legislation*, above.) Several of the chief railroad companies brought

action against the statute of 1930 requiring the payment of the "prevailing wages" on work for the elimination of grade crossings.

In New York City the business depression that marked the year was accompanied by severe unemployment and by some demonstrations of unrest. There, as in other chief cities of the Nation, the members of the Communist party paraded on March 6. Insisting on marching to the City Hall, the paraders clashed with the police in Union Square. The police dispersed the paraders, some 2000 in number, who had permission to gather in the square but no license to parade through the streets. William Z. Foster and five other leaders were arrested for inciting to disorder; he and four others received penitentiary sentences. Police Commissioner Whalen gave out on March 10 a list of persons alleged to be operating in industrial plants as Communist organizers and inciters. There went into operation as a part of the city police department in January an agency known as the Crime Prevention Bureau. Its function was to deal with delinquents and other young persons likely to be drawn into criminal lives. The method was to keep such subjects under friendly surveillance and to help them to get regular and reputable work. In the first seven months of operation the Bureau was estimated to have handled about 3000 cases likely to have gone otherwise to courts and institutions. The city authorities also conducted during the year an active service in procuring employment for workless persons, who applied to the number of many thousands.

Progress on the suspension bridge over the Hudson River to Fort Lee, during the year, took the form of constructing the 5000-foot wire cables, which were spun in their site. The first of the cables was finished early in August. The suit of the Interborough Rapid Transit Company for a ten-cent fare, sent by the U. S. Supreme Court to the State courts, in 1929, was decided against the company in the State Supreme Court (not in New York the court of highest appeal). Thereafter the city authorities sought by negotiation to agree with both the Interborough and the Brooklyn-Manhattan Transit system upon prices at which the city might acquire their subway properties for unification with the city-owned subway system then nearing completion. Preliminary work was begun in the summer on the projected Thirty-eighth Street Vehicular Tunnel, to be constructed by the city to supply a connection, under the East River, between Manhattan and the boroughs of Queens and Brooklyn. The related plan of an express highway from the Grand Army Plaza in Brooklyn to the Astoria approach of the Triborough Bridge, to cost \$40,000,000 was broached.

The first section of the elevated express highway for motor traffic, along the western edge of Manhattan Island, under construction for the government of New York City, was completed, and was opened for traffic on November 13. It extended from Canal Street to Twenty-second Street, along West Street. It consisted of a viaduct of about a mile and one-half in length, with a structure of steel framework supporting a roadway 70 feet in width. The entire first section cost about \$6,500,000.

The Municipal Assembly of New York City passed an act creating a department of city planning, to form part of the city government. The intended work of this department was to co-

ordinate different plans for the development of the city. With the Federal Secretary of the Treasury the city government reached an agreement for the removal of the old Federal Building on Park Row, the return of the site to the city, and the delivery by the city, to the Federal Government, of sites of a new Federal Office and Postal Building on the block bounded by Vesey, Barclay, and Church streets and West Broadway and a Federal Court Building near the civic centre. The carrying out of the bargain was expected to cost the city about \$1,500,000 in cash.

A police Magistrate, George F. Ewald, was forced to resign on July 14 because of charges that he had procured or sought to influence his appointment by a payment of \$10,000 made in the form of a loan from Ewald's wife to one Martin J. Healy, a Tammany district leader, in 1927. As Ewald had been appointed by Mayor Walker the case roused a demand for a general inquiry into the possibility of money payments to influence appointments to places on the lower bench. Governor Roosevelt, called upon to act, directed the Appellate Division to investigate the magistrates' courts. Acting on the reports that District Attorney Crain of New York County, though he had laid the matter of the Ewald appointment and its attending circumstances before a grand jury, had failed to press for indictments, the Governor also directed State Attorney-General Ward to supersede Crain in the investigation of the matter.

Previously to the appearance of the Ewald case Mayor Walker had sought to dismiss lightly the charges of corruption among officials during his administration, speaking of evidences of wrongdoing as mere "fingermarks on the wall." Shortly after the Ewald disclosures, however, he changed his attitude; on August 27 in a public address he pledged his efforts to do away with graft and invited complaints, promising that they would be thoroughly investigated. In June the Municipal Assembly, the Mayor concurring, had voted an increase of salaries, to the total of \$519,000, among some 200 of the better-paid officials, and this move had been widely criticized. Late in September were published figures tending to show that Superintendent of Schools William J. O'Shea and others in the public-school system had prepared textbooks that had been used to the extent of many thousand copies in the city schools and that had thus become to them a source of large royalties.

The Bank of the United States, having 61 branches in New York City, suspended on December 11, owing about \$161,000,000 to over 400,000 depositors, mostly persons of small means. The failure was called the greatest in American banking history.

Features in the business development of the city were the opening of the Chrysler Building, an office structure at Forty-second Street and Lexington Avenue, 67 stories in height, and the opening, at 80 Wall Street, of the New York Mining Exchange, a stock exchange for the securities of mining companies.

See OLD AGE PENSIONS; WORKMEN'S COMPENSATION.

ELECTIONS. Governor Franklin D. Roosevelt, Democrat, was reelected by an unprecedented plurality of some 725,000, receiving according to official report 1,770,342 votes to 1,045,341 for his Republican opponent, Charles H. Tuttle. There were elected 23 Democratic and 20 Republican

Representatives. The Republicans retained control of both houses of the State Legislature by reduced majorities. An independent candidate in favor of Prohibition, Robert Paris Carroll, ran for Governor on the demand chiefly of Republicans antagonized by the stand that Tuttle had taken against Prohibition. He received but a scattering vote of 190,666 votes (official). See PROHIBITION.

The popular vote authorized an issue of \$50,000,000 of State bonds, to be issued prior to 1936 at not over \$20,000,000 in any one year, for the construction of mental hospitals and of correctional buildings.

OFFICERS. Governor, Franklin D. Roosevelt; Lieutenant-Governor, Herbert H. Lehman; Secretary of State, Edward J. Flynn; Comptroller, Morris S. Tremaine; Attorney-General, Hamilton Ward; Commissioner of Education, Frank P. Graves.

JUDICIARY. Court of Appeals: Chief Judge, Benjamin N. Cardozo; Associate Judges, Cuthbert W. Pound, Frederick E. Crane, Irving Lehman, Henry T. Kellogg, John F. O'Brien, Irving G. Hubbs.

NEW YORK CITY. See CRIME.

NEW YORK UNIVERSITY. A nonsectarian institution for the higher education of men and women in New York City; chartered in 1831. It comprises the following divisions: At University Heights, a college of arts and pure science; college of engineering; Guggenheim School of Aeronautics. At Washington Square, the graduate school; school of law; school of commerce, accounts, and finance; Washington Square college; school of education; school of retailing; college of fine arts; university extension division; and the Institute of Education. At the Wall Street division, the graduate school of business administration and courses in the school of commerce, accounts, and finance. The Medical college is on East Twenty-sixth Street, and the dental college on East Twenty-third Street.

The enrollment for the year 1929-30 in all divisions of the university, after deducting all duplications, was 41,968. The enrollment in the different degree-conferring units was as follows: University college of arts and pure science, 1013; school of law, 1574; University and Bellevue Hospital Medical College, 507; college of engineering, 781; graduate school, 806; school of education, including both graduate and undergraduate divisions, 7234; school of commerce, accounts, and finance, including the Wall Street division, 9989; Washington Square college, 6925; graduate school of business administration, 1068; school of retailing, 1152; college of fine arts, 1727; and college of dentistry, 377. In other divisions, the enrollment was as follows: University extension division, 4105; Institute of Education, 2474; life-insurance training courses, 159; public-health (correspondence) courses, 279. The faculty numbered 1702.

The productive funds for the year 1929-30 amounted to \$6,739,848, and the income was \$236,641. The total income of \$6,988,187 was derived as follows: Student fees, \$5,855,783; dormitory rents, \$20,572; gifts, \$463,115; other income, \$412,075; and income from endowments, \$236,641. Among the gifts was \$100,000 from Mr. and Mrs. R. T. Crane, Jr., to establish the Cornelius and Florence Crane Therapeutics Endowment Fund for the medical college. In February, 1930, a 12-story building for the school of education,

erected at a cost of \$1,750,000, was dedicated at Washington Square. The libraries contained 337,479 volumes. Chancellor, Elmer Ellsworth Brown, Ph.D., LL.D.

NEW ZEALAND, zē'land. A self-governing British dominion in the southern Pacific Ocean, about 1200 miles southeast of Australia; consisting mainly of two islands, North and South islands, but comprising also Stewart Island and Catham Island and a number of small islands. Capital, Wellington.

AREA AND POPULATION. New Zealand has an area of 103,568 square miles (103,862 square miles, including outlying and annexed islands). The population on Mar. 31, 1930, was 1,488,612, or 221,114 more than at the census of 1921. In 1926, there were 63,670 Maoris. The urban population represented 51.6 per cent of the total. For the five-year period 1925 to 1929, births averaged 27,691 annually, deaths, 11,717; and the excess of births, 15,974. The average birth rate per 1000 inhabitants was 20.2 and the death rate 8.5. The chief cities, with estimated populations on Apr. 1, 1929, are: Wellington, 105,170; Auckland, 101,275; Christchurch, 87,990; Dunedin, 67,020.

EDUCATION. School attendance is compulsory between the ages of 7 and 14. In 1928, there were 254,487 pupils in primary schools, 28,942 in secondary schools, 10,963 in technical schools, and 4896 in the four universities at Dunedin, Christchurch, and Wellington (two).

PRODUCTION. Animal husbandry is the leading industry. Only 3 per cent of the total area, or 1,886,000 acres, were under cultivation in 1928; there were 16,871 acres of permanent meadow and improved pasture; 326,000 acres of trees, shrubs, and bushes; and about 13,000,000 acres of forests. Production of the leading animal products, in thousands of pounds, for 1928-29 was: Creamery butter, 5984; pork, bacon, and ham, 62,026; mutton and lamb (dressed), 433,571; beef and veal (dressed), 286,250; wool, 243,056. Cereal production is usually supplemented by imports. For the 1928-29 crop year, the wheat crop was valued at \$13,164,000; oats, \$11,637,000; hay, \$20,540,000. Production of the chief crops in 1928-29, in bushels, was: Wheat, 8,833,000 (7,100,000 in 1929-30); barley, 814,000 (708,000); threshed oats, 3,065,000 (3,150,000); corn, 456,000; potatoes, 4,615,000; peas and beans, 532,000; linseed, 46,000. Hay production totaled 703,000 long tons and grass and clover seed, 20,104,000 pounds. In 1929, livestock included 2,051,000 sheep, 3,446,000 cattle, 557,000 swine, 33,000 goats, and 299,000 horses.

Crops in 1930 were bountiful, but increased yields were more than offset by lower prices. Revenue produced by wool shrank to £8,000,000 from £16,000,000 in 1929 and the price of butter fell during the year from 169 to 100 shillings per hundredweight. At the end of 1930, the Dominion faced a serious unemployment problem and farmers were demanding a moratorium on farm mortgages.

Coal, gold, and silver are the leading mineral products, the output in 1927-28 being: coal, 2,437,000 long tons; gold and silver bullion, 532,914 troy ounces. Water-power reserves, estimated at 2,500,000 horse power, have been rapidly developed. State-developed hydro-electric horse power in use in 1928-29 totaled 157,418. Manufacturing consists mainly in the preparation of animal products for market. The factory output for the year ended Mar. 31, 1928, was valued at

\$428,000,000, of which \$158,000,000 represented the value added in process of manufacture. There were 5166 industrial establishments, employing 81,756 workers.

COMMERCE. General imports showed a marked increase in the calendar year 1929 to £48,798,000 from £44,886,000 in 1928, while exports declined to £54,186,000 from £54,660,000. The favorable balance of trade was £5,388,000 in 1929, as against £9,774,000 in 1928. The United Kingdom in 1929 was again New Zealand's best market, taking 74 per cent of all exports, as against 6.6 per cent for the United States, 6 per cent for Canada, and 4.2 per cent for Australia. The United Kingdom supplied 46.2 per cent of all imports; the United States, 19 per cent (18 in 1928); and Australia, 6.7 per cent. Imports from the United States totaled \$45,355,000, while exports to that country were \$17,779,000. Wool, butter, frozen meats, and hides and skins were the principal exports; the chief imports were automobiles, mineral oils, apparel, drugs and chemicals, electrical machinery and apparatus, and cotton and silk piece goods.

Both imports and exports showed marked recessions in 1930, exports for the year being valued at £44,940,700 and imports at £43,000,000. Imports from the United States were valued at £7,391,360 (£9,328,300 in 1929), while imports from the United Kingdom were £21,000,000 (£22,569,000 in 1929).

FINANCE. The ordinary budget for the fiscal year ended Mar. 31, 1930, estimated receipts at £25,172,000 and expenditures at £24,910,000, of which £10,568,000 was allotted for the service of the debt. Provisional returns indicated a surplus of £500,000 more than anticipated. For the 1930-31 fiscal year, however, the Government faced an estimated budget deficit of £3,000,000. Actual ordinary receipts in 1928-29 were £23,600,000 and actual ordinary expenditures £24,177,000. The public-works fund, not included in the ordinary budget, had receipts of £12,590,000 in 1928-29, mostly from loans. The gross public debt on Mar. 31, 1929, stood at £264,192,000, of which £153,515,000 were held externally.

COMMUNICATIONS. Of the 3287 miles of railway line in operation in 1929, all except 116 miles were state owned and operated. In 1928-29, the railways carried 25,575,000 passengers and 7,623,000 long tons of freight, earning gross receipts of £7,525,000. In 1930, New Zealand had 48,433 miles of highways, of which 30,629 were macadam and 16,073 unimproved earth. Motor transportation lines on Jan. 1, 1930, operated 2452 vehicles, or 12.5 per cent more than on July 1, 1929. Entrances of vessels in the foreign trade in 1928 numbered 601, of 2,181,000 net registered tons; clearances, 605, of 2,210,000 tons. The merchant marine in 1928 comprised 560 vessels, of 194,304 gross tons capacity, including 181,800 tons of steam or other power vessels. The telephone and telegraph systems are operated by the state.

GOVERNMENT. Executive power rests with a Governor General appointed by the Crown on recommendation of the Dominion government, and legislative power in the Governor General and a general assembly of two houses, namely, the Legislative Council of 41 members, appointed for seven years, and the House of Representatives of 80 members, elected for three years by direct suffrage. Governor General in 1930, Lord Bledisloe (Charles Bathurst), appointed in 1929. The Cabinet appointed December, 1928, was com-

posed as follows: Prime Minister, Minister of Finance, Stamp Duties, Postmaster-General, Sir Joseph G. Ward; Lands and Agriculture, G. W. Forbes; Justice, T. K. Sidey; Native Affairs and Cook Islands, Sir Apirana Ngata; Education, H. Atmore; Labor, Mines, and Transport, W. A. Veitch; Public Works, E. A. Ransom; Railways, Customs, State Forests, W. B. Taverner; Industries and Commerce, J. B. Donald; Internal Affairs, P. A. de la Perrelle; Defense, Marine, and War Pensions, J. G. Cobbe; Health, A. J. Stallworthy.

HISTORY. Politically, the most important development of the year was the resignation of Sir Joseph Ward (q.v.) as Premier on May 15. His death on July 7 brought to a close a distinguished political career of nearly half a century. Sir Joseph was succeeded as Prime Minister by George William Forbes, the Minister of Lands and Agriculture. A farmer and a member of Parliament for 22 years, Mr. Forbes was known as a staunch advocate of close settlement as a solution of the Dominion's unemployment problem. The reorganized Forbes Cabinet contained two new Ministers, S. G. Smith, Minister of Labor and Immigration; and A. J. Murdoch, Minister of Agriculture and Mines. In his statement of policy, Premier Forbes stressed unemployment remedies, closer land settlement, and measures for economy and sound government finance.

The Premier's first budget, approved by Parliament in July, provided for a considerable increase in tariff rates to offset anticipated losses in revenue from declining imports, to further the protection of local industry, and to provide additional preference to imports from other parts of the British Empire. The new tariff, which became effective July 22, was expected to yield an additional £800,000 in revenue. The preference accorded Canadian products was revoked following the announcement of an increase in the Canadian duty on New Zealand butter, effective October 1. Parliament also placed an ad valorem tax of 10 per cent on British and of 25 per cent on foreign sound films, increased the income-tax rate by 10 per cent, and abolished the special land tax imposed in 1929. Instead all farmers owning or occupying land of over £7500 unimproved value were made liable to income tax on the same basis as other sections of the community. A Government bill introduced into Parliament August 19 proposed to levy \$7.50 from each male worker to create an unemployment insurance fund. The number of unemployed was then estimated at about 10,000. For New Zealand's difficulties in Western Samoa, see SAMOA. See also GREAT BRITAIN under *History*. For a comprehensive study of the Dominion, consult J. B. Condliffe, *New Zealand in the Making: A Survey of Economic and Social Development* (Chicago, 1930).

NICARAGUA, nē'kà-rā'gwā. The largest of the Central American republics. It is bounded on the north by Honduras, on the east by the Caribbean Sea, on the south by Costa Rica, and on the west by the Pacific Ocean. Capital, Managua.

AREA AND POPULATION. The area is estimated at about 51,660 square miles, of which 4500 square miles are lake area. Population, according to the census of 1920, 638,118; estimated at 750,000 in 1929. The population of the east coast had a large Negro element from the West Indies. The proportion of pure white blood was about 10 per cent. The eastern and western sections differed

greatly and there was very little communication between them. The population of the principal cities at the 1920 census, with latest estimates in parentheses, was: Managua, 27,839 (50,000 in 1929); León, 38,318 (50,000); Granada, 16,773 (25,000); Matagalpa, 10,271 (7000); and Masaya, 10,287 (18,000).

EDUCATION. In 1929, about 29,819 were enrolled in the elementary schools (23,496 in government and 6323 in municipal and private schools). The enrollment in all secondary, vocational, and normal schools, was 1472. About 62 per cent of the population was illiterate.

PRODUCTION. Nicaragua is primarily an agricultural country, whose chief products are bananas, coffee, sugar, and coconuts. Corn, rice, and beans are subsidiary crops. Coffee normally accounts for about one-half the total value of exports and is the main factor in the national economy. Coffee production was estimated at 45,000,000 pounds in 1930-31 (preliminary) and 37,500,000 pounds in 1929-30; sugar, about 16,000 tons in 1930 and 10,000 in 1929. Banana shipments in 1929 totaled 4,092,388 bunches. The forests contain valuable mahogany, cedar, dyewoods, and gums, but conditions in 1930 were unfavorable for their exploitation. Mining is comparatively unimportant, the principal minerals found being gold, silver, copper, and precious stones. Gold exports were \$291,000 in 1929 (\$363,000 in 1928).

COMMERCE. Nicaraguan foreign trade declined to a total of \$22,669,966 in 1929 from \$25,043,663 in 1928, according to the report of the Collector General of Customs. Imports were valued at \$11,797,440 (\$13,350,451 in 1928) and exports at \$10,872,526 (\$11,693,212 in 1928). Exports went chiefly to the United States, \$5,752,038; Germany, \$1,292,848; France, \$894,400; and the Netherlands, \$870,893. The chief sources of imports were: United States, \$7,389,738; United Kingdom, \$1,275,800; Germany, \$1,085,920. The chief imports were cotton manufactures, iron and steel, machinery, wheat flour, and chemicals and drugs. Exports included coffee, sugar, bananas, hides and skins, mahogany, and gold and silver.

FINANCE. In his message to Congress of Dec. 15, 1929, President Moncada said that his first year in office, ending Dec. 31, 1929, would show a Treasury surplus of \$2,400,000 without taking into account the profits of the Pacific Railway and the National Bank. Total receipts were reported at \$6,000,000. The adverse effect of the depression caused by lower coffee prices and the withdrawal of American marines forced the Government to reduce the 1930 budget by \$1,000,000. Salaries of public officials were cut from 5 to 20 per cent. The bonded debt at the close of 1929 was approximately \$4,500,000. The Mortgage Bank of Nicaragua, created to facilitate agricultural loans, was opened in June, 1930. The International Acceptance Bank of New York became fiscal agent and depository of the Nicaraguan National Bank following the withdrawal of W. and J. Seligman, New York bankers, on Dec. 31, 1929. American investments in Nicaragua in 1930 were estimated at \$13,002,000.

COMMUNICATIONS. Of 166 miles of railway in operation in 1929, 147 miles were owned by the Government. For the year ended June 30, 1929, the railways carried 887,000 passengers and 115,000 metric tons of freight, earning gross receipts of \$1,324,000. Construction of 72 miles of new line from León to Sauce was commenced Apr. 1, 1930,

and another line connecting Lake Nicaragua with the Pacific (from San Jorge to San Juan del Sur) was started July 11, 1930. The Pacific Railway also commenced the construction of a highway linking the Atlantic with the Pacific. About 100 miles of motor highways were constructed during President Moncada's first 18 months in office; total mileage in 1930, 350. A total of 640 steam vessels, of 896,952 net registered tons, entered the ports in 1929 from foreign ports.

GOVERNMENT. Executive power is vested in a president, acting through a responsible ministry, and legislative power in a Congress with two chambers, the Senate of 24 members elected for six years and the Chamber of Deputies of 43 members elected for four years. At the beginning of 1930, there was a nominally Conservative majority in both houses of Congress. President in 1930, José María Moncada (Liberal), elected Nov. 4, 1928, for a four-year term.

HISTORY. The failure of the American intervention to eliminate the armed opposition of guerrilla bands was tragically attested on Dec. 31, 1930, when eight American marines were killed during a surprise attack upon a patrol of 10 between Ocotal and Apali in the Department of Neuva Segovia. These casualties brought to about 50 the number of marines killed in action against Augustino Sandino's guerrillas since the campaign against him was started in May, 1927. Sandino had been forced to leave Nicaragua in June, 1929. His return, after a year in Mexico, was followed in the latter half of 1930 by a decided increase in the number of clashes between insurgent or bandit groups and patrols of marines and national guardsmen. Sandino's effort to unite the bandit forces for a demonstration against the United States was frustrated by marine bombing planes at Saraguasca Hill. His scattered forces continued surprise attacks on national-guard and marine patrols and raids upon the isolated communities and coffee plantations of the northern Provinces. An offensive against guerrillas, carried on by the Guardia Nacional, supported by the marines, from Jan. 1 to Sept. 15, 1930, resulted in 85 "contacts," the death of 128 bandits, and the wounding of 158, according to a report of Gen. Douglas C. McDougal, commander of the Guardia. The increased efficiency of the Guardia permitted the reduction of marine forces in Nicaragua from 2215 on Sept. 1, 1929, to 1384 on Sept. 1, 1930.

The Congressional elections of Nov. 2, 1930, in which one-half of the Deputies and one-third of the Senators were elected, were held under the supervision of the National Board of Elections, of which Capt. Alfred W. Johnson, U. S. N., was chairman. Captain Johnson had been nominated for the post by the U. S. State Department, in accordance with an agreement reached by the Nicaraguan parties. The Conservatives had threatened to boycott the elections so long as a Nicaraguan was chairman of the electoral board. The voting took place without disorder, under the supervision of the Guardia and marines, and resulted in a clear majority for the Liberals in both houses of Congress. The Liberals elected seven Senators and sixteen Deputies; the Conservatives, two Senators and six Deputies. Both sides acknowledged that the election had been impartially conducted, except in the Conservative stronghold of Granada, where the Liberal victory was attributed to bribery. Martial law, which was raised on July 8, 1930, in the Departments of Estero, Neuvo Se-

govia, Jinotega, and Matagalpa to insure free elections, was reestablished Nov. 13, 1930, as a result of bandit operations.

While President Moncada had admittedly accomplished much for the material progress of Nicaragua, evidence of an apparent intention to perpetuate his power by extraconstitutional methods developed during the year. The Senate, by a vote of 17 to 7, on April 1 approved a number of amendments to the Constitution, which would extend the terms of deputies from four to six years, of Senators from six to nine years, and of the President and Vice President from four to six years. Others provided for the substitution of a literacy test for the existing system of manhood suffrage, the abolition of trial by jury, and made legal the American participation in Customs collection, the Guardia Nacional, and the election machinery. The amendments, however, failed to secure the necessary two-thirds majority in the Chamber of Deputies. Critics of Moncada contended that the general effect of the amendments would be to increase the oligarchic nature of the government.

The President was charged also with going further than any other Central American President then in office in violating the freedom of the press, imprisoning and deporting his opponents, and in otherwise ignoring constitutional rights of citizens. The Conservatives charged that Moncada had forced no less than 100 Nicaraguans to leave the country.

It was announced Oct. 13, 1930, that all topographic work had been completed in connection with the Nicaraguan Canal survey undertaken in 1929 by a force of U. S. Engineers. Other details of the survey were expected to be completed by June, 1931. At the request of the Nicaraguan Government, the engineering force also undertook a survey of a possible seaport at Nacascolo in the Gulf of Fonseca. The United States, under the treaty of 1914 with Nicaragua, was authorized to establish a naval base on the Gulf of Fonseca for the defense of the Panama Canal.

Other events of the year were the boundary negotiations with Honduras (see *HONDURAS* under *History*), the state funeral on October 12 accorded the remains of J. Santos Zelaya, former dictator, who died in New York in 1917, the ratification by Congress on April 4 of the treaty with Colombia signed Mar. 24, 1928, and the arrival in Managua on April 12 of a new United States Minister, Matthew E. Hanna.

NICHOLS, WILLIAM HENRY. An American manufacturing chemist, died in Honolulu, Feb. 22, 1930, while on a vacation in Hawaii. Born in Brooklyn, N. Y., Jan. 9, 1862, he was a student at the Polytechnic Institute of that city during 1865-68 and was graduated from the New York University in 1870. After graduation he began his work as a manufacturing chemist, copper refiner, and smelter, founding with his father the G. H. Nichols Company, which became in 1890 the Nichols Copper Company of New York City. From 1890 to 1918, he was president of the Nichols Copper Company and, after that date, director. He was president of the General Chemical Company, also of New York, from 1899 to 1907, chairman of the board of directors from 1907 to 1920, and director until his death. In 1917 he was appointed chairman of the committee on chemicals for the Council of National Defense. The Italian Government twice decorated him.

NICKEL. In view of the fact that the ores mined at Sudbury, Ontario, by the International Nickel Company carry large amounts of copper, it was not strange that the fall in the price of the latter metal during the year had a marked effect on the nickel situation. Canada, which produces some nine-tenths of the world's supply, had a production in 1930 of 103,782,009 pounds, valued at \$24,449,000, as against 110,275,912 pounds valued at \$27,115,461 in 1929. For the first three quarters of the year, production was in excess of the previous year, but with the demand falling off there was a reduction of output. A significant event of the year was the completion of the Frood Mine and plant of the International Nickel Company, which had cost over \$30,000,000. The ore of this mine is rich in copper with a normal amount of nickel, there being an increase in the former in 1930 over 1929. The International Nickel Company ships from Canada matte for refining in Wales and also for the production of Monel metal, malleable nickel and nickel products at Huntington, West Virginia.

In 1930 the imports of nickel into the United States were valued at \$12,872,163, as against \$19,418,910 in 1929. Of this total, ore and matte, 20,593,361 pounds, were valued at \$2,940,074, while nickel and alloys in the form of pig, ingots, etc., amounted to 38,323,029 pounds, valued at \$9,600,404. In 1929 ore and matte imports were 28,981,343 pounds, valued at \$2,122,277, and nickel and alloys in the forms of pig, ingots, etc., was 64,420,873 pounds valued at \$16,447,707. The United States produces a small amount of nickel, the Bureau of Mines reporting the nickel content of nickel salts and metallic nickel in 1929 at 340 tons valued at \$297,273. Besides Canada New Caledonia was the only other leading producer of nickel, but its output was small in comparison with the Sudbury district. See *METALLURGY*.

NIDAROS. The name substituted for Trondhjem, Norway, on Jan. 1, 1930. See *NORWAY* under *History*.

NIGERIA, COLONY AND PROTECTORATE OF. A West African territory, belonging to Great Britain; divided into the Northern and Southern Provinces. The area is approximately 335,700 square miles and the population, 18,960,574, of whom 10,783,303 were in the Northern Provinces (area, 258,000 square miles). There were 5200 Europeans. For administrative purposes the British portion of the mandated territory of Cameroon is attached to Nigeria. The seat of government is at Lagos. In 1928 there were 3237 Government, assisted, and non-assisted schools, with an average attendance of 139,409, besides about 31,587 Mohammedan schools with 393,039 pupils.

The chief products and exports are palm oil and kernels, cotton lint, cacao, and mahogany. Livestock on Jan. 1, 1930, included 3,350,000 cattle, 2,000,000 sheep, and 5,000,000 goats. Iron, lead, and tin are worked by the natives, and gold, silver, lignite, monazite, galena, and manganese ore are found. Nigeria ranks sixth among tin-producing countries, the total exports in 1928 amounting to 13,070 tons. For 1928, imports increased by £1,000,000 to £16,663,625 and exports rose by almost the same amount to £17,206,933. Vessels entered and cleared aggregated 3,871,850 tons. For the year ended Mar. 31, 1929, revenue totaled £6,031,270; expenditure, £7,495,058 (in-

cluding £792,396 for railway construction); the public debt, £23,559,209. In 1930 there were 1090 miles of railway line in operation, with 799 additional miles of line approaching completion.

The administration is in the hands of a governor and an executive and legislative council. Governor in 1930, Sir G. Thomson.

The special commission appointed in February, 1930, to investigate the causes of serious native riots of the preceding December, reported in August that the main cause was the widespread but unfounded belief that the Government was about to impose a tax on women. Troops fired on rioters on 13 occasions, according to the report, which found the firing unjustified. Total casualties were 20 women killed or died of wounds and 25 other women wounded.

NITRATE. See CHILE under *Production and History*.

NITROGEN, FIXATION OF. See FERTILIZERS.

NOBEL PRIZES. The Nobel Prizes for 1930 were presented in Stockholm on December 10 to the following persons who, in accordance with the will of Alfred B. Nobel, the Swedish inventor and philanthropist, were considered to have made the greatest contributions towards the progress of the world and the welfare of mankind: Sir Chandrasekhara Venkata Raman (physics); Prof. Hans Fischer (chemistry); Dr. Karl Landsteiner (medicine); Sinclair Lewis (literature); and the Most Rev. Lars Olof Jonathan (Nathan) Soederblom, Archbishop of Upsala (peace). The peace award for 1929 was also presented on this occasion to Frank B. Kellogg, former U. S. Secretary of State. The award in literature is made by the Swedish Academy; the award in physics and chemistry by the Royal (Swedish) Academy of Sciences; the award in medicine by the Caroline Institute (the faculty of medicine in Stockholm); and the peace award by a committee of five, elected by the Norwegian Storting. The prizes were each worth about \$48,000.

Sir Chandrasekhara Venkata Raman, the recipient of the prize in physics, was honored for his important discovery of the diffusion of light, whereby the light of a single color, or wave-length, shining on certain transparent substances is partly changed to other colors. The phenomenon, known as the Raman effect and first announced in 1928, has opened up an entirely new field in the study of molecular structure. Sir Chandrasekhara was born in India, Nov. 7, 1888, and was graduated from the Presidency College in Madras in 1904. After holding various scientific research positions, he was appointed in 1917 Sir Taraknath Palit professor of physics at Calcutta University. In 1924 he served for a time as research associate at the California Institute of Technology. In 1928 he was general president of the Indian Science Congress, and was knighted the following year.

The award of the prize in chemistry to Prof. Hans Fischer of Munich, Germany, was in recognition of his contributions to the chemistry of living matter through researches on human blood. He was born in Hoechst-am-Main, July 27, 1881, and attended the Universities of Lausanne and Marburg. After holding several professorships at the Universities of Munich, Innsbruck, and Vienna, he was appointed in 1921 head of the Organic Chemical Institute of the Munich Technical High School.

Dr. Karl Landsteiner, the recipient of the 1930 prize in medicine, was honored for his eminent

work as a bacteriologist and pathologist with the Rockefeller Institute for Medical Research in New York. The prize was awarded for his discovery that human blood is of four different types and that blood of one type does not always mix with blood of another type. Dr. Landsteiner was born in Vienna, Austria, June 14, 1868, and was graduated from the University of Vienna with the M.D. degree in 1891. Before becoming associated with the Rockefeller Institute in 1922, he was professor of pathology at the University of Vienna.

Sinclair Lewis, the novelist, was the first American winner of the Nobel Prize in literature. He was born in Sauk Centre, Minn., Feb. 7, 1885, and was graduated from Yale University in 1907, gaining his early writing experience as a reporter. In his novels he became noted for his delineation of American life in Middle Western cities and towns.

The Most Rev. L. O. J. (Nathan) Soederblom, the Lutheran churchman, to whom the Nobel Peace Prize for 1930 was awarded, had been untiring in his efforts to unify the churches of northern Europe in the cause of international peace. Born in Trönö, Sweden, Jan. 15, 1866, he became in 1901 professor of relative history at the University of Uppsala, and from 1912 to 1914 was professor of comparative religions at the University of Leipzig. In 1914 he was made Archbishop of Uppsala and Vice-Chancellor of the University of Uppsala. In 1925 he was one of the leaders of the Christian Conference on Life and Work held in Stockholm, and two years later was one of the moving spirits of the World Conference on Faith and Order in Lausanne, Switzerland.

Frank B. Kellogg, the winner of the Nobel Peace Prize for 1929, was co-author with Aristide Briand of the pact for the "outlawry of war" during his term as Secretary of State of the United States. He was born in Potsdam, N. Y., Dec. 22, 1856. In 1924 he was appointed Ambassador to the Court of St. James's, but was recalled the following year to serve as Secretary of State in President Coolidge's cabinet. In 1930 he was appointed a justice of the Permanent Court of International Justice at The Hague.

NON-FEDERATED MALAY STATES. A group of states in Malaysia under British protection, including Johore, Kedah, Perlis, Kelantan, and Trengganu in the Malay Peninsula. Total area, 27,355 square miles; total population, 1,149,395 in 1921 and 1,240,000 (estimated) in 1930.

NORMAL SCHOOLS. See EDUCATION IN THE UNITED STATES; UNIVERSITIES AND COLLEGES.

NORMAND, MABEL. An American motion picture actress, died in Monrovia, Calif., Feb. 23, 1930. She was born in Boston, Mass., Nov. 16, 1894, and made her motion picture debut in 1911. Later she became one of the leading players in the Keystone Comedies in many of which she played opposite Charles Chaplin. Some of the films in which she was featured were: *Extra Girl*; *One Hour Married*; *Raggedy Rose*; *Sis Hopkins*; *When Doctors Disagree*; *What Happened to Rosa*; *Head over Heels*; *Molly-O*; *Oh, Mabel, Behave*; and *Suzanna*.

NORTH CAROLINA. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 3,170,276. The population according to the census of Jan. 1, 1920, was 2,559,123. The capital is Raleigh.

AGRICULTURE. The table on page 571 gives the

acreage, production, and value of the principal crops harvested during the years 1929 and 1930.

| Crop | Year | Acreage | Prod. Bu. | Value |
|------------------|------|-----------|--------------------------|--------------|
| Tobacco .. | 1930 | 779,000 | 535,195,000 ^a | \$73,322,000 |
| | 1929 | 764,000 | 502,600,000 ^a | 91,473,000 |
| Cotton ... | 1930 | 1,031,000 | 795,000 ^b | |
| | 1929 | 1,782,000 | 735,000 ^b | 61,372,000 |
| Corn | 1930 | 2,530,000 | 51,865,000 | 48,234,000 |
| | 1929 | 2,259,000 | 50,828,000 | 50,828,000 |
| Hay | 1930 | 931,000 | 794,000 ^c | 15,080,000 |
| | 1929 | 865,000 | 836,000 ^c | 14,641,000 |
| Peanuts .. | 1930 | 232,000 | 208,800,000 ^c | 6,890,000 |
| | 1929 | 245,000 | 249,900,000 ^c | 9,996,000 |
| Potatoes .. | 1930 | 90,000 | 8,839,000 | 10,607,000 |
| | 1929 | 74,000 | 8,207,000 | 9,848,000 |
| Sweet potatoes . | 1930 | 98,000 | 9,506,000 | 8,555,000 |
| | 1929 | 78,000 | 9,126,000 | 8,213,000 |
| Wheat ... | 1930 | 343,000 | 4,288,000 | 4,674,000 |
| | 1929 | 457,000 | 5,347,000 | 7,539,000 |
| Oats | 1930 | 286,000 | 6,521,000 | 4,434,000 |
| | 1929 | 258,000 | 6,192,000 | 4,644,000 |

^a Pounds. ^b Bales. ^c Tons.

The number of farms in the State was 279,723 in 1930; in 1925, 283,482; and in 1920, 269,763.

MINERAL PRODUCTION. Stone, the chief of the State's mineral products as listed by yearly value, yielded 2,126,560 short tons in 1928 and 2,250,870 in 1927; in value, \$4,690,949 for 1928 and \$4,913,177 for 1927. The value of clay products totaled \$3,826,493 for 1928 and \$3,860,950 for 1927. A secondary but fairly steady producer of copper, North Carolina mined 8,207,000 pounds of this metal in 1928 and, in 1927, 5,443,115; by value, \$1,181,808 for 1928 and \$713,048 for 1927. Of crude feldspar were dug, in 1928, 105,560 long tons, in value \$630,042. The only other mineral industry listed as exceeding \$500,000 a year was the production of sand and gravel. The total value of the mineral products of the State was \$11,480,406 for 1928; for 1927, \$11,703,671.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 5188.79. No construction of additional line or trackage in 1930 was reported.

EDUCATION. Much work was done in the course of the year, by a committee of public information under the auspices of the State Education Association, to court the firm support of public opinion for the public-school system. The State's population of persons of school age was estimated for the academic year 1929-1930, at 1,031,947. There were enrolled in the public schools in that year 866,939 pupils. Of these, 750,002 were in the lower grades, from the first to the seventh, inclusive, and 116,937 were in grades from the eighth to the eleventh. For the year 1928-1929, the expenditures for public-school education were: current, \$27,961,532; capital outlay, \$7,979,787; debt service, \$5,689,082. For that year the salaries of teachers averaged \$821.

CHARITIES AND CORRECTIONS. General functions with regard to the care and custody of persons, under the system operating in 1930, rested in the State Board of Charities and Public Welfare; but this board exercised only investigative and supervisory duties over the charitable and penal institutions, which were directed by their several organizations. The State Board was composed of seven unremunerated members, of whom three were women. Its staff included a Commissioner of Public Welfare, a penal inspector, and directors for the divers divisions of activity. These divisions included child welfare, the organization of county work, the care of mental health and hy-

giene, and special work among Negroes. The Board administered the Mothers' Aid Fund of the State. The chief State institutions, with their populations as reported about the end of the year, were: Eastern Carolina Training School (delinquents), Rocky Mount, 90; Stonewall Jackson Manual Training and Industrial School (delinquent), Concord, 470; State Home and Industrial School for Girls (delinquent), Samarcand, 250; Morrison Training School (delinquent Negro boys); Hoffman, 165; North Carolina Home for Colored Girls (delinquent), 15; Caswell Training School (feeble-minded), Kinston, 650; North Carolina Orthopedic Hospital, Gastonia, 150; State Hospital (insane), Raleigh, 1825; State Hospital (insane), Morganton, 1857; State Hospital (insane), Goldsboro, 1727; Soldiers' Home, Raleigh, 41; Confederate Woman's Home, Fayetteville, 43; State Prison, Raleigh, 2317; State Farm Colony for Women (delinquent), Kinston, 30.

POLITICAL AND OTHER EVENTS. Senator Furnifold McL. Simmons, who had refused to support the Smith Presidential ticket in 1928 and had played a great part in carrying the State for Hoover, was heavily defeated on June 7 for the Democratic nomination to succeed himself, in the State primaries. His chief opponent was Josiah W. Bailey, upon whose record for party regularity the Simmons group made counterattacks. Bailey received a large majority in the primary election on June 7.

The State Supreme Court affirmed on August 20 the convictions brought in the Mecklenburg Superior Court in 1929 against seven agitators who had been charged with complicity in the killing of O. F. Aderholt, chief of police of Gastonia, in the course of the Gastonia textile strike. The defendants had in the meantime all jumped their bail. The Civil Liberties Union, which had made itself responsible for bail to the total of \$27,000 sought to prevent the forfeiture of the bonds but its motion to that effect was denied. A memorial to Henry Timrod the poet was dedicated in Calvary Church at Fletcher, on August 17. At Manteo was dedicated on August 18, on the site of the colony sent out by Sir Walter Raleigh, a gateway to mark the memory of Virginia Dare, reputed the first white child born in the New World of English parents.

ELECTIONS. Josiah W. Bailey, Democrat, was elected Senator on November 4, defeating George W. Pritchard, Republican, by a majority of about 120,000 in a light vote. A delegation of 10 Representatives, all Democratic, was likewise elected. A proposed amendment of the State Constitution, to authorize the classification of property for taxation at divers rates, was defeated.

OFFICIALS. Governor, O. Max Gardner; Lieutenant-Governor, R. T. Fountain; Secretary of State, J. A. Hartness; Treasurer, Nathan O'Berry; Auditor, Baxter Durham; Attorney-General, Dennis G. Brummitt; Superintendent of Public Instruction, A. T. Allen.

JUDICIARY. Supreme Court: Chief Justice, Walter P. Stacy; Associate Justices, W. J. Adams, Heriot Clarkson, George W. Connor, W. J. Brogden.

NORTH CAROLINA, THE UNIVERSITY OF. A State institution for the higher education of men and, with restrictions as to admission, of women in Chapel Hill, N. C.; founded in 1795. The enrollment in the autumn of 1930 was 2764 regular students, with 3892 in extension courses. There were 2247 registered for the 1930 summer

session. The faculty had 222 members. The productive funds of the institution amounted to \$2,232,575, and the annual income to \$1,325,938. In 1930 a new assembly hall, with seating capacity of 1800, was under construction, and a new music building was dedicated on November 14-15. The library contained 223,295 volumes.

Of particular interest during the year was the programme being developed by the Institute for Research in Social Science through an appropriation made in 1927 by the Rockefeller Foundation. The problems studied, although of regional significance, had generic value. They included eight main divisions: Local government, county, State, and municipal; southern historical backgrounds; social-economic activities, including studies in social industrial relationships and the southern coöperative movement; crime and criminal justice; the Negro field, folklore and backgrounds of the southern people; social institutions, both public welfare and child welfare; and the human geography of the South. President, Frank Porter Graham, A.M.

NORTH CENTRAL, formerly **NORTHWESTERN COLLEGE**. A coeducational institution of higher learning in Naperville, Ill.; founded in 1861. In the autumn of 1930 there was an enrollment of 511 students, of whom 271 were men and 240 women. There were 39 members on the faculty. The productive funds of the college amounted to \$963,000, and the current income for the year was \$145,898. The library contained 20,000 volumes. In 1930 a four-year course in physical education, leading to the degree of bachelor of science in physical education, was introduced for the training of coaches and physical directors in high school. The Merner Gymnasium and Field House, costing \$350,000, also was completed. President, Edward Everett Rall, Ph.D.

NORTH DAKOTA. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 680,845. On July 1, 1925, it was 641,192 according to the census taken by the State. On Jan. 1, 1920, it was 646,872. The capital is Bismarck.

AGRICULTURE. The following table gives the acreage, production, and value of principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|--------------|------|------------|------------|--------------|
| Wheat | 1930 | 9,336,000 | 99,807,000 | \$51,038,000 |
| | 1929 | 10,197,000 | 97,262,000 | 94,920,000 |
| Barley | 1930 | 2,290,000 | 40,075,000 | 10,420,000 |
| | 1929 | 2,462,000 | 34,960,000 | 14,683,000 |
| Hay | 1930 | 2,660,000 | 2,591,000* | 16,590,000 |
| | 1929 | 2,671,000 | 2,486,000* | 19,312,000 |
| Flaxseed .. | 1930 | 1,931,000 | 10,041,000 | 13,757,000 |
| | 1929 | 1,463,000 | 6,876,000 | 19,734,000 |
| Oats | 1930 | 1,838,000 | 38,598,000 | 7,720,000 |
| | 1929 | 1,876,000 | 33,768,000 | 10,806,000 |
| Rye | 1930 | 1,194,000 | 13,194,000 | 3,152,000 |
| | 1929 | 1,038,000 | 9,861,000 | 7,494,000 |
| Corn | 1930 | 1,089,000 | 19,058,000 | 10,101,000 |
| | 1929 | 1,057,000 | 16,384,000 | 11,141,000 |
| Potatoes ... | 1930 | 116,000 | 7,192,000 | 5,754,000 |
| | 1929 | 145,000 | 7,685,000 | 8,069,000 |

* Tons.

Farms in the State numbered 78,050 in 1930, as against 75,970 in 1925, and 77,690 in 1920. The area of irrigated lands totaled 8851 acres in 1929, as against 12,072 in 1919.

MINERAL PRODUCTION. Coal, which continued to rank as the State's only important mineral product, was more actively mined in 1929. Its total production for that year was 1,862,130 net tons, as against 1,649,930 for 1928. The value of the

coal mined rose with the quantity, to \$3,157,000 for 1929, from \$2,780,000 for 1928. The remaining 10 per cent or so of the yearly total value of minerals produced was contributed chiefly by clay products and by sand and gravel. The total value of the mineral products of the State was \$3,082,621 for 1928; for 1927, \$2,869,663.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 5275.58. No construction of additional line or trackage in 1930 was reported.

EDUCATION. In the effort to determine whether the system in use for the training of teachers provided the desired type, number, and quality of teachers, a survey of the training system and of its product was conducted in 1930. The State's population within the years of school age was estimated, for the year ended June 30, 1930, at 222,798. There were enrolled in the public schools 169,277 pupils. Of these, 139,580 were in the elementary and 29,697 in the high schools. The expenditures of the year for public-school education totaled \$16,069,409. The year's salaries of all teachers averaged \$109.87 a month.

CHARITIES AND CORRECTIONS. Under the administrative system in effect in 1930 the State Board of Administration exercised entire control of the State institutions, whether charitable, correctional or educational. The board was composed of three appointed and two ex-officio members, and it had an executive secretary. Under its charge was an important non-institutionalized activity, the State Children's Bureau. Seven places for the care or custody of individuals, all under the Board of Administration, had among them a population of about 3000. These institutions, with their respective populations as reported near the close of 1930, were: State Training School, Mandan, 205; State Penitentiary, Bismarck, 364; Hospital for the Insane, Jamestown, 1521; Institution for Feeble-Minded, Grafton, 567; School for the Blind, Bathgate, 32; School for the Deaf, Devil's Lake, 112; Tuberculosis Sanatorium, Dunseith, 208.

The State Capitol at Bismarck was destroyed by fire on December 28. The loss by reason of the structure was about \$1,000,000. In addition, a great part of the State records perished. Their loss threw accounts and projects into confusion. Among the collections of documents destroyed or damaged were reported to be the Land Department's records of \$55,000,000 in State investments and the records of a further \$40,000,000 of public investments in the Treasurer's office; also the plans of the Highway Department and the Tax Commissioner's records and data.

POLITICAL AND OTHER EVENTS. A group seeking the repeal of the prohibition laws of the State filed on July 8 a petition to initiate a repeal referendum. The petition carried more than 20,000 signatures, but some of these were challenged as not presented in conformity with the legal requirements. On Mount Rushmore, near where President Coolidge had spent the summer of 1927, the sculptor Gutzon Borglum carried on a work of mountain-face sculpture. Ex-President Coolidge contributed a 500-word summary of the history of the United States to be carved on the mountain, with heads of Washington, Jefferson, Lincoln, and Roosevelt. The head of Washington was unveiled on July 4.

ELECTIONS. Governor George F. Shafer, Republican, was reelected November 4, defeating Pierce Blewett, Democratic candidate. Both branches of

the Legislature remained Republican, but the conservative wing of the Republicans gained control in the two houses of the Legislature simultaneously for the first time subsequent to 1919. Three Republicans were elected to the House of Representatives. A measure to amend the State constitution so as to extend the terms for State and county officers to four years, from two years, was rejected by popular vote.

OFFICERS. Governor, George F. Shafer; Lieutenant-Governor, John W. Carr; Secretary of State, Robert Byrne; Treasurer, Berta E. Baker; Auditor, John Steen; Attorney-General, James Morris; Superintendent of Public Instruction, Bertha R. Palmer.

JUDICIARY. Supreme Court: Chief Justice, John Burke; Associate Justices, Luther E. Birdzell, A. M. Christianson, A. G. Burr, W. L. Nuessle.

NORTH DAKOTA, UNIVERSITY OF. A State institution of higher education at University Station, Grand Forks, N. D.; founded in 1883. The enrollment for the autumn of 1930 was 1604, of whom 1015 were men and 589 women. These were distributed as follows: Graduate, 76; liberal arts, 624; commerce, 98; education, 371; engineering, 232; law, 72; medicine, 60; specials, 70. For the summer session of 1930 the total registration was 529, of whom 242 were men and 287 women. The faculty numbered 139. The income for 1930 was derived as follows: State appropriations for maintenance, \$534,200; Federal land funds, \$64,000; student fees, \$60,000; all other sources, \$15,000; receipts for buildings and permanent improvements, \$14,000; receipts for extension work, \$21,500. Grounds, buildings, and equipment were valued at \$2,400,000. The library contained 98,131 volumes. President, Thomas Franklin Kane, Ph.D., LL.D.

NORTHERN EPIRUS. See GREECE under *History*.

NORTHERN TERRITORIES. See GOLD COAST.

NORTHERN TERRITORY. A territory of the Commonwealth of Australia, situated in the central and northern part of the island continent; divided for administrative purposes into two territories, North Australia and Central Australia. Area, 523,620 square miles; population, according to the census of 1921, exclusive of aborigines, 3867; estimated Jan. 1, 1930, at 4470. The aborigines are estimated to number about 20,000. Principal town and port, Darwin. Agriculture has not been developed chiefly because the climate is unsuitable for Europeans. Stock raising and mining are the chief occupations. The value of all minerals produced in 1927-28 was £14,627. The overseas imports in 1929-30 were valued at £39,104, exports, £57,054. Revenues in 1927-28 totaled £142,902; expenditure, £459,756; the public debt (June 30, 1928) was £3,564,630. Government Resident for North Australia, R. H. Weddell; for Central Australia, J. C. Cawood.

Lake Eyre, in Central Australia, which is covered with encrusted patches of crystal salt, was explored in December, 1929, by C. T. Madigan, who drove an automobile truck for miles across the surface. He estimated the quantity of salt in North Lake Eyre at 3,000,000,000 tons.

NORTH POLE. See POLAR RESEARCH.

NORTHWESTERN UNIVERSITY. A co-educational institution of higher learning in Evanston and Chicago, Ill.; founded in 1851. It is composed of a college of liberal arts, a graduate school, and schools of engineering, commerce,

journalism, music, education, and speech in Evanston; and schools of law, medicine, dentistry, commerce, and journalism in Chicago. For the autumn term of 1930 there was an enrollment of 12,392, of whom 6000 were registered in evening classes in Chicago. For the summer session of 1930, 2500 students were enrolled. The faculty numbered 657 members of the rank of instructor or above. The endowment as of June 30, 1930, was \$25,525,618, and the income from these funds for the fiscal year 1929-30 was \$749,760. In the various libraries of the university there were approximately 350,000 bound volumes and 175,000 pamphlets. President, Walter Dill Scott, Ph.D., LL.D.

NORTHWEST PROVINCES. THE PRAIRIE PROVINCES OF CANADA. See CANADA.

NORTHWEST TERRITORIES. A vast area in northern Canada, largely uninhabited and only partially explored, lying north and west of Hudson Bay and Strait, north of the Prairie Provinces, and east of Yukon Territory. Total area, 1,309,882 square miles (1,258,217 square miles of land and 51,465 of water); population, estimated June 1, 1930, at 9600, mostly Eskimos and Indians. Fur production in 1926-27 was valued at \$2,981,829. The Territories were divided in 1920 into three provisional districts, namely, Mackenzie, Keewatin, and Franklin. They are administered by a commissioner, deputy commissioner, and five councilors appointed by the Governor General. Expenses of Government in 1928 were \$392,378. Commissioner in 1930, William W. Cory.

NORWAY. A constitutional monarchy of northwestern Europe, occupying the western and northern half of the Scandinavian Peninsula and separated from Sweden by the Kjølen Mountains, with an extreme length of 1110, and an extreme width of 250 miles; formerly united with Sweden, but separated, June 7, 1905. Capital, Oslo; reigning King in 1930, Haakon VII.

AREA AND POPULATION. With an area of 125,086 square miles, Norway reported a census population of 2,809,000 on Dec. 31, 1930, as compared with 2,649,775 at the census of 1920. During the years 1924 to 1928, the average annual number of births was 53,338 and of deaths, 30,336, the annual excess of births being 23,002. Emigrants during the same period averaged 9109 annually, of whom 68 per cent went to the United States. Oslo, the capital, had 258,483 inhabitants at the 1920 census. Estimated populations of other leading cities in 1928 were: Bergen, 96,772; Nidaros (formerly Trondhjem), 55,218; Stavanger, 47,179.

EDUCATION. Primary education is compulsory, the school age being from 6½ to 14 years in urban districts and 7 to 14 years in rural districts. During 1926-27 the number of pupils in elementary schools was 394,018 and in secondary schools, 23,447. There is only one university, that at Oslo, which had 3457 students in 1928.

PRODUCTION. As Norway is a largely barren and mountainous country, lumbering, fishing, and manufacturing vie with agriculture as the chief factors in the national economy. In 1928, only 1,704,000 acres, or 2.4 per cent of the total area, was cultivable; there were 622,000 acres of permanent meadows, and 17,531,000 acres of forests. The production of the chief crops in 1929 and 1928, respectively, in quintals (1 quintal equals 220.46 pounds) was: Wheat, 198,000 (217,277); rye, 143,000 (126,271); barley, 1,175,000 (1,117,697); oats, 1,806,000 (1,840,482). The potato crop in 1928 totaled 9,503,244 quintals. Imports of

wheat and potatoes have shown a steady increase, despite the expansion of domestic production of cereals, except rye, and of potatoes. The final crop report for 1930 showed a yield above average for cereals, fruit, and berries. Livestock in 1928 included 1,654,447 sheep, 1,220,875 cattle, 293,258 goats, 282,709 swine, and 182,401 horses.

The value of the sea fisheries in 1929 was 81,300,000 crowns (1 crown equaled \$0.2668 in 1929), as compared with 72,500,000 crowns in 1928 and 58,000,000 in 1927. Cod fisheries yielded 31,400,000 crowns; and herring, 21,100,000 crowns. The 1930 cod catch of 60,400,000 pieces was the lowest in six years. Whale-oil production in 1929-30 totaled 1,720,775 casks, as compared with 1,214,871 casks in 1928-29. The value of wrought and partly wrought timber exported in 1928 was 38,203,300 crowns, of wood pulp and paper, 187,088,300 crowns. In 1929, exports of rough and dressed lumber, logs, and hewn lumber were estimated at 340,000,000 board feet, as against 328,600,000 board feet in 1928.

Mineral production in 1928 was valued at 29,052,000 crowns, including pyrites, 15,840,000 crowns; iron ore, 9,373,000 crowns; copper ore, 1,466,000 crowns; silver ore, 517,000 crowns. Metals produced, in order of their value, were: aluminum, 37,602,000 crowns; ferro-alloys, 29,288,000 crowns; nickel, 1,677,000 crowns; electric iron, 941,000 crowns; silver, 868,000 crowns. In 1927, there were 10,548 manufacturing establishments, the most important lines being the production of wood products, machinery and metal work, and food products. A general decline in industrial and commercial activity was experienced in 1930 as a result of the world economic crisis. The number of registered unemployed on Oct. 1, 1930, was 23,300, or 2000 more than a year earlier.

The estimated national income of Norway in 1929 was 2,181,000,000 crowns (\$581,890,800), as compared with 2,153,000,000 crowns (\$574,634,700) in 1928. Estimates placed the national wealth in 1929 at 7,914,000,000 crowns (\$2,111,455,200), as against 8,053,000,000 crowns (\$2,149,345,700) in 1928. Compared with 1913, the national wealth and income were estimated to have increased 89 and 134 per cent, respectively, by 1929.

COMMERCE. Total imports in 1929 were valued at 1,066,546,000 crowns, as compared with 1,023,361,000 crowns in 1928, while domestic exports amounted to 742,770,000 crowns, as against 670,329,000 crowns in 1928. The unfavorable balance of trade was 323,770,000 crowns in 1929 and 339,200,000 crowns in the previous year. The heavy adverse balance of trade is normal in Norwegian economy, being rectified by earnings of the shipping industry, immigrant remittances, etc.

Leading imports were motor and other vehicles, breadstuffs, textile manufactures, and raw minerals, while the chief exports were animal products, timber, wood pulp, paper manufactures, wrought metals, and minerals. Germany, the United Kingdom, and the United States, in the order named, were the principal sources of imports. Exports went chiefly to the United Kingdom, Germany, and the United States, also in the order named. Preliminary figures for 1930 placed imports at 1,067,000,000 crowns and exports at 683,000,000 crowns.

FINANCE. The approved budget for the fiscal year ended June 30, 1930, balanced at 388,400,000 crowns (1 crown equaled \$0.2668 in 1929). Ac-

tual revenues, however, amounted to 410,500,000 crowns and expenditures to 395,800,000 crowns, leaving a surplus of 14,700,000 crowns for the year. The actual surplus in 1928-29 was only 211,000 crowns. The 1929-30 increase over the revenue estimates was due largely to greater income from taxes, indicating a definite improvement in the country's economic situation during the year. The budget for 1930-31, as presented to the Storting (Parliament), was estimated to balance at 374,700,000 crowns (about \$100,419,000). The budget included proposals for a reduction of the tax on personal income and on business earnings.

The national debt on Jan. 1, 1930, was estimated at 1,582,058,000 crowns—a decrease of 52,767,000 crowns since June 30, 1928. Of the total debt, 789,109,000 crowns represented the internal debt, including a floating debt of 15,608,000 crowns. The debt was incurred partly through capital investments in state railways, the construction of telegraph lines, and water-power developments and partly as a result of budgetary deficits.

SHIPPING. In the size of her mercantile fleet, Norway ranked sixth among the nations of the world in 1930. On July 1, 1930, the merchant fleet consisted of 1562 steamers of 2,366,225 tons; 325 motorships of 1,098,300 tons; and 11 sailing vessels, of 4101 tons. In 1928, 8937 vessels, of 6,148,319 net tons, entered Norwegian ports, and 8953 vessels, of 6,164,673 tons, cleared.

INTERNAL COMMUNICATIONS. Of 2383 miles of railway line in operation on June 30, 1928, 2154 miles were government owned and operated. For the year ended June 30, 1928, the state railways reported total receipts of 80,132,690 crowns and total expenses of 81,324,051 crowns. Private railways had receipts of 3,922,806 crowns and expenses of 3,595,550 crowns. The highway mileage in 1930 was estimated at 23,344 miles, of which only about 50 miles were surfaced outside of the cities. The Government operated 18 wireless telegraph stations, including one at Svalbard.

GOVERNMENT. Executive power is vested in the King, who acts through a cabinet or council of state, and legislative power in the Parliament or Storting of 150 members, elected for three years by universal suffrage without distinction as to sex. When assembled, the Storting divides itself into the Lagting and Odelsting, comprising one-fourth and three-fourths of the membership of the Storting, respectively. The two sections function much as the upper and lower Houses of bicameral Parliaments. As a result of the elections held in November, 1927, the following parties were elected for the period 1928-30: Labor party, 59; Conservatives and Moderate Liberals, 31; Liberals, 31; Agricultural party, 28; Communists, 3. King Haakon VII was born Aug. 3, 1872, and elected King Nov. 18, 1905, upon the secession of Norway from its union with Sweden. The members of the cabinet appointed Feb. 13, 1928, were as follows: Prime Minister and Foreign Affairs, J. L. Mowinkel; Education and Ecclesiastical Affairs, S. M. Hasund; Justice, H. M. Evjenth; Agriculture, H. J. Aarstad; Public Works, O. M. Mjelde; Social Affairs, T. Værland; Finance, P. Lund; Defense, T. Anderssen-Rysst; Commerce and Industry, L. Oftedal.

HISTORY

POLITICAL TRENDS. The general elections of Oct. 20, 1930, were fought on the issue of capitalism versus radical socialism. The Norwegian

Labor party, with a programme only slightly less radical than communism, had made sensational gains at the elections of 1927, increasing its representation in the Storting from 34 to 60. Gaining control of the Government early in 1928, Labor introduced aggressive legislation as the first step in its programme of converting Norway into a Socialist community. Two weeks later it was voted out of office by a combination of the alarmed bourgeois parties. The Labor platform announced in April, 1930, at the opening of the electoral campaign, was even more radical. It called for a levy on capital, the nationalization of the banks, and the reduction of the military and naval establishments to the level of militia and coast-guard units. A plain hint that Labor would not hesitate to establish a minority dictatorship under favorable conditions was given at the Labor party meeting.

The election resulted in the loss of 11 seats by Labor and the elimination of the Communist party, which held three seats in the former Storting. The Conservatives, on the other hand, gained 13 seats, the Radicals 3, and the Agrarians lost 3. The composition of the new Storting was: Labor, 48; Conservatives, 44; Radicals, 34; Agrarians, 24. The gains registered by two of the three bourgeois parties left the Government of Premier Mowinckel (Radical) in a much stronger position. The reaction to the setback of the Labor party was a general increase in optimism in business circles and a distinct upward movement of prices on the Oslo Stock Exchange.

At the opening of Parliament, Jan. 23, 1930, Labor's motion of lack of confidence in the Government was rejected by the combined votes of the other parties. The issues in dispute were Labor's proposals for a further reduction of the military budget and for a change in the tax laws. The Mowinckel government's programme submitted to the Storting May 28 provided for the reduction of the military and naval budget by 14,000,000 kroner to 32,000,000 kroner. The compulsory three-months-service period was to be retained. It also called for the revision of statutes governing labor difficulties, reconsideration of the temperance laws, and the passage of legislation enabling women to apply for higher government posts.

A Storting committee appointed to examine the advisability of restoring the former name of Trondhjem, which became Nidaros on Jan. 1, 1930, split on its recommendations. The Lagting on February 5 voted 57 to 55 in favor of restoring the old name, which was objected to by extreme nationalist elements because of its Danish antecedents.

FOREIGN RELATIONS. The foreign relations of Norway in 1930 were marked by that country's election to a nonpermanent seat on the Council of the League of Nations during the September Assembly of the League, the signing at Oslo on November 1 of a nationality treaty with the United States, and the formal statement of Norway's claims to lands in the Antarctic by the Norwegian Consul General in New York at the Williamstown Institute of Politics on August 5. The treaty with the United States provided that persons of Norwegian or American birth, who had so-called "dual nationality" and previously might have been called upon legally for military service in either or both countries, in the future could be called upon for service only in the country in which they have established a per-

manent residence. In defending Norwegian claims in the Antarctic, as against British, American, and other claims, the Norwegian spokesman, Consul General Wilhelm Morgenstjerne, revealed that Norway had submitted her contentions in a note delivered to the State Department in Washington, Apr. 29, 1929. He pointed out that approximately 100 Norwegian whalers, with about 8000 men, were engaged in the whaling industry in the Antarctic regions in 1930, and that Norway accordingly had the major economic interests in that area. Negotiations were carried on with Denmark during the year in an effort to end the practice of smugglers in using neutral territory in the Cattegat to deliver spirits destined for Norway.

A tariff conference held in Oslo by representatives of Sweden, Norway, Denmark, Belgium, and Holland closed on Dec. 22, 1930, with complete agreement on all main points. The purpose of the conference was to prevent the raising of tariff barriers between the participating countries.

OTHER EVENTS. The year was marked also by the celebration from July to October of the 900th anniversary of the introduction of Christianity into Norway by King Olav, who later became the national saint of the Norwegian people. The twenty-fifth anniversary of Norway's independence from Sweden was celebrated May 17, and on November 18 the nation observed the silver jubilee of King Haakon's accession to the Throne. The later ceremonies in Oslo were attended by the King and Queen of Denmark and Prince George of Great Britain. The death of Dr. Fridtjof Nansen (q.v.), famous Norwegian explorer and humanitarian, occurred in Oslo May 13. He was buried with official ceremonies on Constitution Day, May 17. Another notable death of the year was that of Sigurd Ibsen (q.v.), only son of Henrik Ibsen and a former Prime Minister of Norway, who died April 14 at Freiburg. For Norway's withdrawal of claims to the Sverdrup Islands in the Canadian Arctic, see **SVERDRUP ISLANDS**. See also **ICELAND**; **SVALBARD**; **POLAR RESEARCH**.

NORWEGIAN LITERATURE. See **SCANDINAVIAN LITERATURE**.

NOTRE DAME, UNIVERSITY OF. A Roman Catholic institution for the higher education of men in Notre Dame, Ind.; founded in 1842. The enrollment for the autumn term of 1930 was 3272, representing an increase of 218 over 1929-30. The summer session enrollment was 1087. There were 167 faculty members. The endowment amounted to \$1,000,000, and the income for the year was \$64,675. During 1930 the construction of a new law building and stadium was completed. The library contained 143,181 volumes. President, the Rev. Charles L. O'Donnell, C.S.C., Ph.D.

NOVA SCOTIA, nō'vā skō'shā. The easternmost of the Maritime Provinces of Canada. Area, 21,428 square miles; estimated population on June 1, 1930, 553,900 (523,837 at census of 1921). Halifax, with 58,372 inhabitants in 1921, is the capital. Other large towns are Sydney, 22,545, in 1921; Glace Bay, 17,007; Dartmouth, 7899; Amherst, 9998; and New Glasgow, 8974. In 1928, births totaled 10,899; deaths, 6195; marriages, 3256. Besides nine universities and colleges, there were (1928) 3319 schools, with 112,898 pupils.

Agriculture is the chief occupation, with fruit-raising as the most profitable branch. Field crops in 1929 were valued at \$20,945,000 and the fruit crop, mostly apples, totaled about 2,500,000 bar-

rels. The fisheries, which yielded a catch valued at about \$12,000,000 in 1929, rank second in importance in Canada. The important mineral areas include about 1000 square miles of coal fields and about 10,250 square miles classed as gold districts. Mineral production in 1930 was valued at \$30,890,956 (\$30,524,392 in 1928), the coal output reaching 7,063,879 tons (6,743,504 tons in 1928). Salt, lead, zinc, copper, manganese, and other minerals are found. The estimated forest area is over 12,000 square miles and the value of forest products in 1927 was \$8,885,293. There were (1928) 1167 industrial establishments, employing 19,222 persons, and with a gross production value of \$84,948,608. The hydraulic turbine horse power installed in 1929 was 109,124 (74,356 in 1928). Exports passing through Nova Scotian ports in 1929 totaled \$59,679,784 and imports for consumption were \$32,821,746. There are 1451 miles of railway and 18,000 miles of highway.

Executive power is vested in a legislature consisting of a lieutenant-governor, appointed by the Federal Government, and an assembly of 38 members elected for five years. For the fiscal year ended Sept. 30, 1929, revenues totaled \$7,390,410 and expenditures were \$7,288,486. The estimated revenue for 1929-30 was \$8,263,064 and the estimated expenditure, \$8,640,068. The bonded indebtedness in 1928 was \$43,757,113. In the Dominion general election held July 28, 1930, the Province returned 10 Conservatives and four Liberals to the House of Commons at Ottawa. Lieutenant-Governor in 1930, James C. Tory; Premier, Provincial Secretary, Treasurer, and Minister of Natural Resources, E. N. Rhodes.

Legislation authorizing the sale of alcoholic liquors under Government control was in operation in 1930. In a plebiscite held Oct. 31, 1929, the Province voted 77,341 to 64,071 against continuing the Nova Scotia Temperance Act and 87,651 to 53,082 in favor of the sale of liquor under Government control. See CANADA.

NOVAYA ZEMLYA (No'va Zem'bla). An archipelago to the north of European Russia belonging to Soviet Russia and administered by a Soviet commissioner in Archangel.

NUTRITION. See FOOD AND NUTRITION.

NYASALAND PROTECTORATE. A British protectorate in south central Africa, occupying the southern and western shores of Lake Nyasa. Land area, 37,890 square miles; population (Jan. 1, 1929), 1877 Europeans, 1085 Asiatics, and 1,326,165 natives. Zomba is the seat of government and Blantyre and Limbe in the Shire Highlands are the chief white settlements. There were 2562 native schools (1928), with an average attendance of 80,662. Coffee, tobacco, cotton, and tea are the chief export crops. In 1928 imports totaled £869,463 and exports £706,757 (excluding specie and goods in transit). In the same year government receipts were £374,967 and expenditures, £407,377. The public debt on Jan. 1, 1929, was £789,759. Construction of a 2½-mile bridge across the Zambezi River to provide direct railway connections between Blantyre in the protectorate and the port of Beira in Portuguese East Africa was commenced in 1930.

Its completion was scheduled for 1933 at a cost of between £1,500,000 and £2,000,000. The territory is administered for the Colonial Office by a governor and commander-in-chief, aided by executive and legislative councils, both consisting of nominated members. Governor in 1930, T. S. W. Thomas.

OATS. Oats production in 1930 for 33 countries reporting to the International Institute of Agriculture, Rome, not including the Soviet Republics and countries of the southern hemisphere, was estimated at 3,518,014,000 bushels, or 1.7 per cent below the yield of these countries in 1929 and slightly below the annual average for the five years 1924-28. The area devoted to the crop, 97,221,000 acres, was 1.2 per cent above that of 1929 and only .9 per cent below the average of the five-year period. The 1930 production of the leading countries exclusive of the United States was reported as follows: Canada, 455,978,000 bushels; Germany, 377,008,000 bushels; France, 302,749,000 bushels; Poland, 162,590,000 bushels; England and Wales, 93,870,000 bushels. Argentina in the crop year 1929-30 reported a production of 68,294,000 bushels, and Chile of 10,403,000 bushels. In Canada the area of 13,223,000 acres was only 6 per cent above the area of 1929, but the yield was greater by nearly 52 per cent.

In the United States the 1930 crop escaped the severe drought of the summer and the grain was of high quality, being good in color and heavy in weight. The yield per acre averaged 33.7 bushels or three bushels more than in 1929 and 2.7 bushels above the average of the preceding 10 years. A larger acreage than in any recent year was cut for hay in the drought area, but the acreage harvested for grain, 41,598,000 acres, was 4 per cent above the grain acreage of 1929. According to estimates published by the U. S. Department of Agriculture the total crop amounted to 1,402,026,000 bushels, compared with 1,228,369,000 bushels in 1929 and an average of 1,372,000,000 bushels during the past five years. The average farm price Dec. 1, 1930, was 32.4 cents per bushel or 11.1 cents below the corresponding price the year before, and on this basis the total value of the 1930 crop was \$453,973,000, or \$79,834,000 under the value of the smaller crop of 1929.

Oats is a crop grown in every State. The production of the leading States was reported as follows: Iowa, 239,655,000 bushels; Minnesota, 171,351,000 bushels; Illinois, 153,062,000 bushels; Wisconsin, 108,680,000 bushels; and Nebraska, 80,017,000 bushels. The average yield per acre ranged from 15 bushels in Florida to 48 bushels in Washington. On Aug. 1, 1930, 66,965,000 bushels of oats, or 5.4 per cent of the 1929 crop, were still held on farms. The Department of Agriculture determined from 3081 farm reports that the cost of producing an acre of oats in 1929 was \$17.87, or 54 cents per bushel.

During the fiscal year ended June 30, 1930, the exports of oats by the United States amounted to 4,635,000 bushels of grain and 41,244,000 pounds of oat meal, flaked and rolled oats. These exports were over 50 per cent less than in the preceding fiscal year. The imports were only 152,000 bushels. A class of U. S. Army officers under the direction of the Department of Agriculture studied the methods and details of grading oats according to the Federal standards to qualify as inspectors for the Army.

OBERLIN COLLEGE. A nonsectarian institution for the higher education of men and

women in Oberlin, Ohio; founded in 1833. The registration for the first semester of 1930-31 was 1662, while that for the summer session of 1930 was 161. The faculty had 277 members. The productive funds of the institution as of Aug. 31, 1930, amounted to \$17,791,481, and the income for the year was \$1,643,335. The library contained 323,216 bound and 207,324 unbound volumes. President, Ernest Hatch Wilkins, Ph.D., Litt.D., LL.D.

OCEANIA, *O'shē-an'la*, FRENCH ESTABLISHMENTS IN. A French colonial possession consisting of groups of small islands scattered throughout a wide area of the eastern Pacific. The total area of the Establishments is estimated at 1520 square miles: population in 1926, 35,862, of whom 29,644 were natives. The principal island is Tahiti, which contains the chief town, Papeete, with a population of 5569, of whom 2126 were French. Tahiti forms a part of the Society Islands. The other groups are the Marquesas Islands, Tuamotu Islands, Leeward Islands, the Gambier, Tubuai, and Rapa groups, and a number of outlying islands. Various tropical fruits are grown and exported. Pearls, mother-of-pearl, and phosphates are important products. For the island of Tahiti, imports in 1928 totaled 52,752,715 francs and exports, 46,250,276 francs. The budget of the Establishments for 1929 balanced at 14,197,100 francs. A New Zealand steamship service connects Tahiti with San Francisco, New Zealand, and Australia. The administration is in the hands of a governor assisted by an administrative council. Governor in 1930, L. J. Bouge, appointed Apr. 30, 1928.

OHIO. POPULATION. According to the Fifteenth Census, the population of the State on Apr. 1, 1930, was 6,646,097. The population on Jan. 1, 1920, was 5,759,394. The capital is Columbus.

AGRICULTURE. The following table gives the acreage, production, and value of the principal crops in 1929 and 1930:

| Crop | Year | Acreage | Prod. Bu. | Value |
|-------------|------|-----------|--------------|---------------|
| Corn | 1930 | 3,483,000 | 88,816,000 | \$ 59,507,000 |
| | 1929 | 3,518,000 | 128,407,000 | 100,157,000 |
| Hay | 1930 | 2,822,000 | 2,469,000 * | 42,921,000 |
| | 1929 | 3,062,000 | 5,018,000 * | 50,146,000 |
| Wheat ... | 1930 | 1,613,000 | 28,716,000 | 21,818,000 |
| | 1929 | 1,646,000 | 32,093,000 | 37,227,000 |
| Oats | 1930 | 1,790,000 | 64,440,000 | 22,554,000 |
| | 1929 | 1,689,000 | 49,826,000 | 22,422,000 |
| Potatoes . | 1930 | 105,000 | 9,450,000 | 10,895,000 |
| | 1929 | 106,000 | 10,494,000 | 16,266,000 |
| Tobacco .. | 1930 | 45,800 | 46,876,000 * | 5,704,000 |
| | 1929 | 52,800 | 40,881,000 * | 6,623,000 |
| Barley ... | 1930 | 122,000 | 3,355,000 | 1,678,000 |
| | 1929 | 103,000 | 2,420,000 | 1,476,000 |
| Sugar beets | 1930 | 80,000 | 277,000 * | |
| | 1929 | 20,000 | 174,000 * | 1,814,000 |

* Tons. * Pounds.

Farms in the State numbered 219,659 in 1930, the total having declined from 244,703 for 1925 and 256,895 enumerated at the census of 1920.

MINERAL PRODUCTION. The total value of the product of minerals native to the State was \$211,041,279 for 1928; for 1927, \$226,962,529. The chief components of this total, for 1928, were clay products, natural gas, coal, and cement, in the order of the value of the total product of each. Clay products, in which industry Ohio ranked foremost among the States, furnished nearly 40 per cent of the total value of mineral products for 1928, but were nevertheless about 11½ per cent below the corresponding product for 1927; the total of clay products of the State being, for 1928, \$81,848,422, as against \$92,595,130 for 1927. Brick and tile furnished, in 1928, \$47,867,039 of the total; pottery, \$33,981,383. The natural gas output, on the other hand, rose considerably, to 56,341,000 M cubic feet for 1928, from 51,381,000 M for 1927; in value, to \$32,090,000 for 1928, from \$28,881,000 for 1927. The production of coal fell to 15,641,225 net tons for 1928, from 15,799,967 for 1927, but subsequently increased to 23,689,477 net tons for 1929; by value it was \$35,733,000 for 1929, as against \$26,439,000 for 1928 and \$30,376,000 for 1927. Shipments of cement from the mills of Ohio, 9,364,338 barrels for 1928, declined slightly to 9,144,085 barrels for 1929; in value they were \$14,928,183 for 1928 and \$13,427,778 for 1929. The production of petroleum was on a slowly declining scale; it fell to 7,015,000 barrels for 1928, from 7,593,000 for 1927, and diminished further to 6,708,000 for 1929; the value of the yearly product was \$14,100,000 (estimated) for 1929, \$14,470,000 for 1928, and \$14,970,000 for 1927. The output of stone, 13,717,410 short tons for 1928, in value \$14,195,607, while large as to totals, consisted in great part of the less valued grades. The State maintained its lead in the production of lime, of which the total quantity was 1,013,676 short tons for 1928; in 1929 Ohio produced 956,000 short tons (estimated); in value the total was \$8,919,596 for 1928 and \$7,800,000 (estimated) for 1929. There were produced in 1928, 413,948 short tons of gypsum, in value \$3,805,795. The salt production of 1928 was 1,308,110 short tons, in value \$2,988,862; it rose to 1,449,360 short tons for 1929, in value \$3,199,903.

The mineral industry of the State was largely augmented by the production of pig iron from non-native ores. The blast furnaces shipped 9,266,936 long tons of pig iron in 1928, while the shipments of 1929 rose to 9,446,984; by value the yearly products were \$156,883,186 for 1928 and \$163,480,003 for 1929. Closely connected with this industry was the production of coke, of which the quantity was 7,786,199 short tons for 1928 and, for 1929, 8,521,132, from byproduct ovens, a considerable production of bee-hive coke not included; the value of coke produced was \$33,908,863 for 1928 and \$35,202,383 for 1929. The substantial industry in ferro-alloys produced 87,221 long tons in 1928, in value \$3,652,022.

FINANCE. State expenditures in the year ended Dec. 31, 1928, as reported by the United States Department of Commerce, were: for maintenance and operation of governmental departments, \$44,094,360 (of which \$4,198,513 was for local education); for interest on debt, \$820,236; for permanent improvements, \$11,260,033; total, \$56,274,574 (of which \$19,576,973 was for highways, \$12,236,209 being for maintenance and \$7,340,764 for construction). Revenues were \$75,370,133. Of these, property and special taxes formed 28.2 per cent; departmental earnings and

remuneration to the State for officers' services, 8.6; sales of licenses, 47.8 (including taxes of \$15,472,000 on sales of gasoline). The State's funded debt outstanding on Dec. 31, 1928, was \$15,645,620. Net of sinking-fund assets, it was \$14,625,935. On property bearing an assessed valuation of \$13,497,743,790 were levied in the year State taxes of \$3,374,436.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan. 1, 1930, was 8810.14. There were built, in 1930, 14.28 miles of first, 17.55 of second, and 4.49 of third track.

EDUCATION. The State Department of Education gave much of its attention during the year to inaugurating what was styled a system of guidance. The purpose of this system was described as the coordination of educational procedures with the complex social and economic structure of the State and Nation.

CHARITIES AND CORRECTIONS. The State Department of Public Welfare, organized in 1921, brought near to completion in 1930 ten years of highly concentrated direction of a wide variety of State activities in dealing with its wards. The department had at its head a single director. Its functions included the conducting of 21 State institutions; the administration of the pay-patient law; through a division of charities, the regulation of local and private institutions, whether of confinement or of child-care; through a division of probation and parole, supervision of these forms of restriction upon released culprits; criminal investigation and classification; execution of laws as to pardons and paroles; through a manufacturing and sales organization, the conduct of prison industries supplying State, county and local institutions; through a commission for the blind, work for the prevention of blindness, for the employment of blind persons, and for the assistance of the aged and infirm blind. The average daily institutionalized population was, for the year ended Oct. 31, 1930, 32,313. The State institutions under the Department of Public Welfare were: State hospitals (mental) at Athens, Cleveland, Columbus, Dayton, Lima, Longview, Massillon, and Toledo; Ohio Hospital for Epileptics; Institution for the Feeble-Minded, Columbus; Institution for the Feeble-Minded, Orient; Ohio State Sanatorium; Ohio Soldiers' and Sailors' Home; Madison Home; Boys' Industrial School; Girls' Industrial School; Ohio Penitentiary, Columbus; London Prison Farm; Ohio State Reformatory; Ohio Reformatory for Women; Bureau of Juvenile Research.

POLITICAL AND OTHER EVENTS. In the Ohio State Penitentiary at Columbus a fire swept through four crowded blocks of cells on the evening of April 21 and caused the death of 322 convicts. The prison, which was designed to hold 1500, was reported as having at the time some 4300 inmates. Those who had been let out from their cells on account of the risk rioted within the prison inclosure but were subdued by a force of the National Guard. The surviving convicts, however, greatly excited by the belief that the safety of the victims had been disregarded, later resumed the mutiny and were entirely subdued only after the lapse of several days. It was later reported that the fire had been set by convicts intending to make their escape while it was under way. See **CRIME** under *Prisons*.

A site on the river front at Columbus was purchased in separate parcels by the State in the

course of the year, to furnish a place for a new State office building to be erected.

The city council of Cleveland voted on January 13 to remove from office the municipality's city manager, William R. Hopkins. Charged with usurpations of power, failure to provide properly for the municipal light plant and negligence in a real-estate transaction, Hopkins retorted at a public hearing that his removal was inspired by his opposition to a rise in gas rates. Daniel E. Morgan was appointed city manager to succeed him. A new union terminal building for the use of railroads entering the city was completed and was dedicated on June 28. It was to be used by the New York Central, the Erie, the Wheeling and Lake Erie, the Baltimore and Ohio, the New York, Chicago and St. Louis, and the Chesapeake and Ohio. The terminal was reported to have cost \$220,000,000. It was topped by a tower 700 feet in height, reputed to be the tallest in the country, outside of New York City.

Cleveland, among several other American cities, was disturbed on March 6 by demonstrations on behalf of the unemployed, stirred up by Communist leaders. A crowd estimated at 10,000 persons invaded Public Square after holding a scheduled meeting and became disorderly. They were dispersed by a large body of mounted police, and about a hundred were more or less injured by clubbing or trampling. At Forest Hill, the 400-acre Rockefeller estate, John D. Rockefeller, Jr., undertook the development of a model community of residences, apartments, shops and offices, designed to cost \$75,000,000 in the aggregate. It was intended to provide homes at about \$25,000 each for persons able to afford them, and was to be run on a profit basis.

One of the large industrial units of the State, the Youngstown Sheet and Tube Company, voted by a large majority of its stock on April 11 to combine with the Bethlehem Steel Company. The projected combination was estimated as likely to have assets of approximately \$1,000,000,000. A minority opposed to the merger obtained a State court injunction against the proposal on December 29.
